## INTERNAL RATING SYSTEM – SOVEREIGN, FINANCIAL INSTITUTION, CORPORATE AND SPECIALISED FINANCING PORTFOLIOS

The IRBA for sovereigns, financial institutions, corporates and specialised financing portfolios is based on a consistent rating procedure in which RISK has the final say regarding the rating assigned to the counterparty and the Global Recovery Rate (GRR) assigned to transactions. Credit Conversion Factors (CCF) of off-balance sheet transactions are automatically assigned according to counterparty and transaction type.

The generic process for assigning a rating to each segment is as follows:

- for large corporates and specialised financing, an analysis is carried out by the unit proposing a rating and a Global Recovery Rate to the Credit Committee, using the rating models and tools developed by RISK. The rating and Global Recovery Rate are validated or revised by the RISK representative during the Credit Committee meeting. The committee decides whether or not to grant or renew a loan and, if applicable, reviews the counterparty rating at least once a year;
- for financial institutions, the analysis is carried out by analysts in the RISK Function. Counterparty ratings and Global Recovery Rates are determined during review committees by geographical area to ensure comparability between similar banks;
- for sovereigns, the ratings are proposed by the Economic Research Department and approved at Country ratings Committee meetings which take place generally three times per year. The committee comprises members of Executive Management, representatives of Economic Studies and the RISK function;
- for small and medium-sized companies (other than retail customers), a score is assigned by the RISK analysts.

For each of these sub-portfolios, the risk parameters are measured using a model certified and validated by the RISK teams, based mainly on an analysis of the Bank's historical data. The model is supported as far as possible by tools shared Group-wide to ensure consistent use. The method is supplemented by expert judgement provided it can be justified. However, the expert judgement remains irreplaceable, with each of the scores and each of the GTRs relying on the judgement, which may deviate, subject to justification, from the strict application of the models.

The method for assessing risk parameters is based on a set of common principles, and particularly the “two pairs of eyes” principle which requires at least two people, at least one of whom has no commercial involvement, to give their opinion on each counterparty rating and each transaction Global Recovery Rate.

The same definition of default is used consistently throughout the Group for each asset class, in accordance with regulations.

The chart hereafter presents a breakdown by PD range of non-defaulted loans and commitments for the asset classes: central governments and central institutions, corporates for all the Group's business lines, measured using the internal ratings-based approach (see Table 27: *Indicative mapping of internal counterparty rating with agency rating scale and average expected PD*).

This exposure represented EUR 1,139 billion at 31 December 2023 compared with EUR 1,165 billion at 31 December 2022.

The majority of commitments are towards borrowers rated as good or excellent quality, reflecting the heavy weighting of large multinational groups and financial institutions in the Bank's client base. A significant proportion of commitments to non-Investment Grade borrowers are highly structured or secured by high quality guarantees implying a high recovery rate in the event of default. They include export financing covered by export credit insurance written by international agencies, project finance, structured finance and transaction financing.

**FIGURE 8: IRBA EXPOSURE BY PD RANGE – SOVEREIGN, FINANCIAL INSTITUTION, CORPORATE AND SPECIALISED FINANCING PORTFOLIOS**

## SOVEREIGN, FINANCIAL INSTITUTION, CORPORATE AND SPECIALISED FINANCING PORTFOLIOS

The following table presents the breakdown by PD range of loans and commitments for the asset classes: Central governments and central banks, Institutions and Corporates for all the Group's business lines using the advanced IRB Approach. This exposure represented EUR 1,150 billion at 31 December 2023, including EUR 1,139 billion of non-defaulted loans and EUR 11 billion of defaulted loans, compared with EUR 1,175 billion at 31 December 2022, including EUR 1,165 billion of non-defaulted loans and EUR 10 billion of defaulted loans.

The table also gives the average rates of the main risk parameters in the Basel framework:

- average probability of default weighted by exposure at default: average PD<sup>1</sup>;
- weighted average of Credit Conversion Factor (CCF) for off-balance sheet items: average CCF<sup>2</sup>;
- average Loss Given Default weighted by exposure at default: average LGD<sup>3</sup>;
- average of residual maturities (in years) weighted by the exposure at default: average maturity.

The average risk weight (average RW) is defined as the ratio between risk-weighted assets and the exposure at default (EAD), resulting from the parameters defined above.

The column "Estimated loss amount" presents the expected loss at a one-year horizon.

(\*) Add-on included.

(\*\*) The expected losses and provisions are not directly comparable data: the expected one-year losses are statistical estimates through the cycle (TTC) whilst the provisions for credit risk are calculated according to the IFRS 9 standard (see note 1.f.5 Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders' equity to the consolidated financial statements as at 31 December 2023).

(\*) Add-on included.

(\*\*) The expected losses and provisions are not directly comparable data: the expected one-year losses are statistical estimates through the cycle (TTC) whilst the provisions for credit risk are calculated according to the IFRS 9 standard (see note 1.f.5 Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders' equity to the consolidated financial statements as at 31 December 2023).

(\*) Add-on included.

(\*\*) The expected losses and provisions are not directly comparable data: the expected one-year losses are statistical estimates through the cycle (TTC) whilst the provisions for credit risk are calculated according to the IFRS 9 standard (see note 1.f.5 Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders' equity to the consolidated financial statements as at 31 December 2023).

(\*) Add-on included.

(\*\*) The expected losses and provisions are not directly comparable data: the expected one-year losses are statistical estimates through the cycle (TTC) whilst the provisions for credit risk are calculated according to the IFRS 9 standard (see note 1.f.5 Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders' equity to the consolidated financial statements as at 31 December 2023).

Most of the Group's central government and central bank counterparties are of very high credit quality and based in developed countries, meaning that they have very good internal ratings and very low average Loss Given Default.

The majority of the Group's corporate commitments concerns counterparties of excellent or good quality, reflecting the large part of multinationals in BNP Paribas' customer base. Other commitments are mainly structured transactions or transactions secured by high-quality assets, reflected in their average LGD levels.

On average, the probability of default excluding counterparty default stands at 0.65%. It is 1.23% for Corporates.

## INTERNAL RATING SYSTEM SPECIFIC TO RETAIL CUSTOMERS

Retail customers are characterised by a high degree of granularity, small unit volumes and a standard risk profile.

The majority of retail borrowers are assigned a behavioural score which serves as a basis to determine the probability of default and, for each transaction, the Global Recovery Rate (GRR) and exposure at default (EAD). These parameters are calculated every month on the basis of the most up-to-date information. They are supplemented by different scores that are made available

to the commercial function. The latter has no involvement in determining risk parameters. These methods are used consistently for all retail customers. The general principles of the rating system are set out in the *Rating System* paragraph in the section *Credit Risk Management Policy*.

Scoring techniques are used to assign retail customers to risk groups presenting the same default risk characteristics. This also applies to the other credit risk parameters: EAD and LGD.

The chart below shows a breakdown by PD range of non-defaulted loans and commitments in the retail book for all the Group's business lines, measured using the internal ratings-based approach (see Table 27: Indicative mapping of internal counterparty rating with agency rating scale and average PD).

These exposures represented EUR 275 billion at 31 December 2023, stable compared with 31 December 2022.

**FIGURE 9: IRBA EXPOSURE BY PD RANGE – RETAIL PORTFOLIO**

### RETAIL PORTFOLIO

The following table gives the breakdown by PD range of the retail loans and commitments for all of the Group's business lines using the advanced IRB Approach. Total exposure represented EUR 282 billion as at 31 December 2023 compared with EUR 289 billion as at 31 December 2022.

(\*) Add-on included.

(\*\*) The expected losses and provisions are not directly comparable data: the expected one-year losses are statistical estimates through the cycle (TTC) whilst the provisions for credit risk are calculated according to the IFRS 9 standard (see note 1.f.5 Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders' equity to the consolidated financial statements as at 31 December 2023).

(\*) Add-on included.

(\*\*) The expected losses and provisions are not directly comparable data: the expected one-year losses are statistical estimates through the cycle (TTC) whilst the provisions for credit risk are calculated according to the IFRS 9 standard (see note 1f.5 Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders' equity to the consolidated financial statements as at 31 December 2023).

(\*) Add-on included.

(\*\*) The expected losses and provisions are not directly comparable data: the expected one-year losses are statistical estimates through the cycle (TTC) whilst the provisions for credit risk are calculated according to the IFRS 9 standard (see note 1.f.5 Impairment of assets at amortised cost and debt instruments at fair value through equity to the consolidated financial statements at 31 December 2023).

Most of the mortgage exposures concern Commercial & Personal Banking in France, Commercial & Personal Banking in Belgium and Commercial & Personal Banking in Luxembourg. Mortgages are issued according to strict and well-defined procedures. Average probability of default on retail clients' non-defaulted loans is 1.34%. The low average Loss Given Default level reflects the guarantees put in place when the mortgages were granted. Most of the Revolving exposures and Other

exposures relate to consumer loans subsidiaries that have a wider range of customers in terms of credit quality and a lower level of guarantees.

## CREDIT RISK: STANDARDISED APPROACH

For exposures under the standardised approach, BNP Paribas uses the external ratings from External Credit Assessment Institutions (ECAIs) Standard & Poor's, Moody's, Fitch Ratings, Cerved and Banque de France recognised by the supervisor.

The Group uses the correspondence tables published by the EBA and the ACPR to compare the external ratings and weighting rates used to calculate risk-weighted assets specific to each exposure class:

The ratings supplied by Standard & Poor's, Moody's and Fitch Ratings are mainly used for exposures to Central governments and central banks, Regional and local authorities, Public sector entities and Multilateral development banks, Institutions and Corporates. The ratings supplied by the Banque de France are mainly used for corporate exposures and exposures secured by a mortgage on a real estate asset.

The ratings supplied by Cerved are mainly used for Corporate exposures.

When there is no directly applicable external rating, the issuer's senior unsecured rating may, if available, be obtained from external databases and used for risk-weighting purposes in some cases.

As at 31 December 2023, standardised approach exposure represented 21% of the BNP Paribas Group's total gross exposures to credit risk of the Group. This breakdown is down compared to 31 December 2022.

The following table shows a summary of standardised risk-weighted exposures broken down by regulatory asset class. The equity exposures weighted using the standardised approach consist primarily of asset value guarantees given to fund unit holders.

(\*) Exposures in the property development sector for which risk profile may be influenced by market conditions.

Excluding the foreign exchange effect, loan outstandings processed according to the standardised method recorded a sharp decrease in 2023, mainly due to the disposal of Bank of the West (-EUR 99.9 billion), partially offset by an increase in CPBS, in particular on Corporate Clients (+EUR 7.7 billion) with the acquisition of Stellantis and on Institutions (+EUR 2.7 billion) mainly in Europe.

The following table gives the breakdown by standard asset class, the distribution by risk weight of the loans and commitments in the book for all the Group's business lines using the standardised approach. Exposure at default was EUR 312 billion at 31 December 2023 compared to EUR 394 billion at 31 December 2022.

(\*) Exposures to counterparties without a credit rating from external rating agencies.

(\*\*) Exposures in the property development sector for which risk profile may be influenced by market conditions.

The following chart shows the breakdown by risk weight of EAD outstandings relating to credit risk for all the Group's business lines, measured using the standardised approach.

**FIGURE 10: STANDARDISED EXPOSURE AT DEFAULT BY RISK WEIGHT**

## CREDIT RISK: EQUITIES UNDER THE SIMPLE WEIGHTING METHOD

### Exposure

Exposures under the simple weighting method at 31 December 2023 amounted to EUR 13.6 billion, versus EUR 12.1 billion at 31 December 2022.

### Scope

The equities held by the Group outside trading portfolios are securities “conferring residual and subordinated rights on issuer’s assets or income, or securities representing a similar economic nature”. They encompass:

- listed and unlisted equities, including shares in investment funds;
- embedded options of convertible bonds, redeemable or exchangeable for equities;
- equity options;
- super subordinated notes;
- private funds on given commitments;
- equity holdings hedge;
- shares of consolidated entities using the equity method.

The scope of exposures processed according to the simple weighting method does not include the following items:

- stakes higher than 10% in credit or financial institutions, mainly consolidated by the equity method or held as financial assets at fair value through equity, are exempt from the equity deduction, being weighted at a flat rate of 250% (exposure of EUR 4.9 billion at 31 December 2023 compared with EUR 4.6 billion at 31 December 2022);
- exposures in the form of units or shares of undertakings for collective investment (UCI) treated according to the transparency approach in accordance with the provisions of Articles 132 to 132c of Regulation (EU) No. 2019/876 (exposure of EUR 5.6 billion at 31 December 2023 compared with EUR 5.2 billion at 31 December 2022).

### Accounting principles and valuation methods

Accounting principles and valuation methods are set out in note 1.f to the consolidated financial statements – *Financial assets and liabilities*.

### Total gains and losses

Total unrealised gains and losses recorded in shareholders’ equity are set out in note 5.c to the consolidated financial statements – *Financial assets at fair value through equity*.

## Risk-weighted assets

The simple weighting method gives the following risk weights for the calculation of risk-weighted assets:

- 190% for investments held for medium/long-term valuation purposes within the activity of the Principal Investments business, as well as private equity exposures in diversified portfolios in line with the Bank's business line activities;
- 290% for exposures in the form of listed securities, including primarily investments related to the Bank's business line activities. In addition, some exposures relating to Principal Investments are also included in this category;
- 370% for all other exposures in the form of equities, primarily including entities consolidated using the equity method (including the Group's insurance entities in the prudential scope that are included in Table 47: *Insurance undertakings (EU INS1)*). Furthermore, this risk weight is also applied to unlisted investments in non-diversified portfolios.

The increase of +EUR 5 billion in risk-weighted assets in 2023 is mainly linked market effects for the entire portfolio.

The Group does not use the simple weighting method for specialised lending portfolios.

**TABLE 47: INSURANCE UNDERTAKINGS (EU INS1)**

|                                   |  | a                | b                |
|-----------------------------------|--|------------------|------------------|
| <i>In millions of euros</i>       |  | 31 December 2023 | 31 December 2022 |
| 1                                 | Holdings in insurance companies <sup>(*)</sup> (before 370% risk weight) | 4,824            | 4,561            |
| <b>TOTAL RISK-WEIGHTED ASSETS</b> |  | <b>17,847</b>    | <b>16,876</b>    |

(\*) Significant financial holdings in insurance companies consolidated by the equity method within the prudential scope, benefiting from the provisions of Article 49 of Regulation (EU) No. 575/2013 on exemptions from deduction from regulatory capital of holdings in an insurance company. Under the provisions of Article 48 of Regulation (EU) No. 575/2013, a potential deduction from regulatory capital would have a limited impact with a decrease of less than 10 basis points in the CET1 ratio.

## EXPOSURES, PROVISIONS AND COST OF RISK [Audited]

Impaired exposures (stage 3) related to assets at amortised cost and financing and guarantee commitments given, as well as the guarantees received as collateral are presented in note 5.f *Impaired exposures*. The definition of impaired loans (stage 3) is presented in note 1.f.5 *Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders' equity*, *Definition of default* paragraph.

The following table shows the carrying amount of performing and non-performing<sup>1</sup> financial assets included in the prudential consolidation scope.

An exposure is deemed to be non-performing when it falls into one of the following categories:

- exposures in default;
- 90 days past-due exposures which are not in default;
- restructured loans (see the *Restructured loans* section) during the one-year minimal period required before returning to performing status.

In this part, in accordance with the Implementing Regulation (EU) No. 2021/637, the scope of the tables in this section includes the following items:

- current accounts with central banks (cash accounts are not considered);
- loans and receivables and debt securities at amortised cost;
- loans and receivables and debt securities at fair value through equity;
- loans and receivables and debt securities at fair value through profit or loss excluding the trading portfolio;
- financing and guarantee commitments outside the trading portfolio.

Exposures in default include impaired loans and receivables (stage 3) and doubtful loans and receivables and debt securities at fair value through profit or loss outside the trading book.

The classifications used for exposures shown are taken from financial reports intended for the supervisory authority<sup>2</sup> and so differ from the exposure classes usually used within the context of Pillar 3. The classification includes:

- central banks;
- public administrations including mainly central governments, regional or local authorities and international organisations;
- credit institutions including credit institutions and multilateral development banks;
- other financial corporations including institutions (notably supervised investment companies and clearing houses) and corporations (mainly investment funds, pension funds and insurance companies);
- non-financial corporations including mainly corporations and small and medium enterprises (SME);
- households: mainly non-SME retail portfolio.

In addition, in accordance with Appendix III and V of Implementing Regulation (EU) No. 2021/451 regarding supervisory reporting of financial institutions, the assets of activities held for sale<sup>3</sup> for the items listed above, are presented on a separate line in the tables.

<sup>1</sup> At 31 December 2023, the Group's non-performing loans ratio was 2.2%, compared with 2.1% at 31 December 2022. This ratio is used by the European Banking Authority to monitor non-performing outstandings in Europe. It is calculated on the basis of gross outstanding of loans, receivables and deposits with central banks, not netted of guarantees received.

<sup>2</sup> Appendices III and V of Implementing Regulation (EU) No. 2021/451 on supervisory reporting.

<sup>3</sup> See note 9.e *Discontinued activities* to the consolidated financial statements.

(\*) Within the European Union, the European Free Trade Association (EFTA) and the United Kingdom.

In accordance with Implementing Regulation (EU) No. 2021/637, the table below (EU CQ5) shows the breakdown of loans and receivables with the scope of non-financial corporations. It does not take into account all exposures to central governments and central banks, credit institutions, financial companies and households. These on-balance sheet and off-balance sheet exposures contribute to all Group risks, mainly credit risk. The breakdown by sector – as defined by European Regulation No. 1893/2006 establishing the statistical classification of economic activities NACE rev. 2 – is based on the borrower's declaration.

These same balance sheet exposures of continuing activities, broken down by sector, are included in Table 108: *Credit quality of exposures by sector and residual maturities* of section 5.11 *Environmental, social and governance risks* of this chapter. In the latter, exposures include, however, debt securities and equity instruments not held for trading.

**TABLE 51: BREAKDOWN OF LOANS AND ADVANCES AND PROVISIONS TO NON-FINANCIAL CORPORATIONS BY INDUSTRY (EU CQ5) [Audited]**

Industry risks are monitored in terms of gross exposure<sup>1</sup> and risk-weighted assets. Certain sectors, defined in line with the principles of the Group's Risk Appetite Statement, are subject to enhanced monitoring and specific reviews. Their monitoring is

<sup>1</sup> Gross credit risk exposures across all regulatory exposure classes. They amounted to EUR 1,829 billion at 31 December 2023.

carried out on a wider scope, taking into account all the exposures of the Business Groups and entities relating to these sectors as defined by the monitoring and the internal risk management nomenclature.

- the leveraged finance sector:

As at 31 December 2023, the Group's exposure to Leverage Buy-Out transactions with financial sponsors ("LBO") amounted to EUR 12.7 billion, or 0.7% of the Group's gross on-balance sheet and off-balance sheet commitments, compared with EUR 18.4 billion, or 0.9% as at 31 December 2022. This reduction is partly due to lower new production in the context of higher interest rates and to slowdown in the M&A market. These exposures are very granular with an average amount of EUR 12 million per loan (EUR 24 million taking into account all exposures related to the business groups). This portfolio has proven resilient in the current economic environment, despite an increase at the end of the year in defaulted assets (EUR 762 million compared to EUR 361 million in 2022) and stage 3 provisions amounting to EUR 156 million (compared to EUR 125 million at end 2022).

- the shipping sector:

the shipping sector covers a set of segments with very different dynamics: bulk, oil and gas tankers, container carriers, oil services and cruises. In 2023, these different segments were affected in very heterogeneous ways by the evolution of the macro-economic environment. The cruise segment benefitted from a progressive recovery of demand but remains with the burden of banking debt and export finance repayments that were delayed during the pandemic. Some signs of slowdown of the maritime container transport are visible since the second half of 2022, however this segment is still doing very well. Lastly, the dry bulk and tanker segments remain subject to high market volatility and have suffered both positive and negative impacts from the consequences of the invasion of Ukraine and the Middle East conflict. LNG and Floating Storage and Regasification Units (FRSUs) benefited from the collapse of Russian natural gas exports to Europe via pipeline and the lasting change in the geopolitical context.

The shipping industry has to face new environmental constraints (International Maritime Organisation (IMO) standards) involving investment efforts. A growing number of new orders concern hybrid LNG (Liquefied Natural Gas) propulsion or other technologies with a reduced impact on the environment.

At 31 December 2023 gross exposure of the shipping finance sector was EUR 19.6 billion, *i.e.* 1.1% of the Group's gross on-balance sheet and off-balance sheet credit exposures, compared to EUR 21.5 billion or 1.1% at 31 December 2022. Most of this exposure is borne by Corporate and Institutional Banking (more than 90%, like last year), with good geographical diversification of the client base. Doubtful loans account for 2.4% of the Group's exposure to the shipping finance segment (compared to 3.2% of doubtful loans at 31 December 2022) and stage 3 provisions were EUR 175 million (compared to EUR 230 million in provisions at 31 December 2022);

- the aviation sector:

business activity in this sector is evenly split between airlines and aircraft leasing companies. The gross exposure is EUR 14.5 billion at 31 December 2023, *i.e.* 0.8% of the Group's total gross on- and off-balance sheet commitments, versus EUR 14.4 billion, *i.e.* 0.7% of the Group's total gross commitments at 31 December 2022. Origination continues to be concentrated on leading airlines and the latest technology aircrafts with lower environmental impact. The direct and indirect consequences of the invasion of Ukraine have not had a significant impact on the cost of risk of this portfolio yet. Thus, the amount of doubtful loans remains low and strongly decreased at 31 December 2023 representing 2% of the sector's outstandings (versus 5.2% in 2022). As aircraft financing is a highly collateralised business, stage 3 provisions are limited and represent EUR 58 million at 31 December 2023, compared to EUR 111 million at 31 December 2022;

- the commercial real estate sector:

The commercial real estate sector covers a set of segments with very different dynamics: logistics, office real estate, residential, hotels, shopping centers, but all segments are affected by rising rates which are driving down valuations. The Group expects values to stabilise in 2024, but they will not return to their 2022 level until 2027, except for the best assets. More specifically, the office sector is undergoing a change in use following the widespread adoption of work-from-home and some assets may experience a high vacancy rate. Overall, the portfolio is predominantly investment grade.

At 31 December 2023, the gross exposure to the commercial real estate sector is EUR 71.7 billion, (EUR 82.6 billion at 31 December 2022 o/w EUR 11.2 billion in Bank of the West), *i.e.* 3.9% of the Group's total gross on- and off-balance sheet commitments (4.2% of total commitments in 2022). This exposure is mainly in Europe and highly diversified between the various market segments, countries and entities of the Group. Defaulted assets represent 2.4% of the sector's total gross exposure (compared to 1.5% in 2022). On commercial real estate, stage 3 provisions amounted to EUR 583 million as at 31 December 2023 (EUR 411 million as at 31 December 2022). The provisions for stages 1 and 2 amount to EUR 298 million at 31 December 2023, *i.e.* an exposure coverage rate of 0.4%.

- the Power sector:

The activity of this sector includes the generation, transportation, and distribution of electricity.

A strong demand for electricity is expected in the coming years due to the need for electrification of many economic sectors, particularly as part of the decarbonisation of the economy.

The strong geopolitical tensions and the consequences of the Russia-Ukraine conflict caused a sharp rise in electricity market prices in 2022, mainly in Europe. In 2023, the decrease in prices has reduced clients' need for liquidity, even though market volatility remains high due to new geopolitical tensions.

To meet the future demand for electricity and the gradual phase-out of fossil fuels, the "Renewables" segment will continue to expand, but certain adjustments have been made necessary regarding the economic parameters of new investments, in a context of inflation and increased costs related to the development of these assets.

As at 31 December 2023, gross exposure to the electricity sector amounted to EUR 55.2 billion (or 3.0% of the Group's total on- and off-balance sheet gross exposure), compared with EUR 55.3 billion as at 31 December 2022 (2.8% of gross exposure in 2022). 81% of counterparties have good credit quality (investment grade rating), and the amount of outstanding on doubtful customers is low, representing 0.7% of the sector as at 31 December 2023 (compared to 0.4% in 2022). Stage 3 provisions amounted to EUR 87 million as at 31 December 2023 (compared to EUR 74 million last year).

The Group remains diversified, with no sector accounting for more than 10% of corporate lending exposure and more than 4.0% of total credit exposure as at 31 December 2023.

At 31 December 2023, non-performing loans were stable compared to 31 December 2022, following the sale of Bank of the West and the sale of doubtful portfolios in Italy and Personal Finance, offset by an increase at CPBS in France and Global Banking Americas.

The main effects explaining changes in the amount of doubtful outstandings in 2023 (EU CR2-B) are presented in note 5.f *Impaired financial assets (stage 3)*.

The cost of risk and the change in impairment in respect of credit risk are presented in note 1.f.6 *Cost of risk* to the consolidated financial statements.

The following table shows the carrying amounts of the financial assets and commitments at amortised cost and fair value through equity subject to impairment provisions for credit risk (*i.e.* excluding instruments at fair value through profit and loss) broken down by stage of impairment and by BNP Paribas internal rating in the prudential scope. Financial assets subject to impairment are recognised in the following accounting categories:

- amounts due from central banks (excluding cash);
- debt securities at fair value through equity or at amortised cost;
- loans and advances at amortised cost;
- financing and guarantee commitments given (off-balance sheet).

**TABLE 52: BREAKDOWN OF FINANCIAL ASSETS SUBJECT TO IMPAIRMENT BY STAGE AND INTERNAL RATING** [Audited]

| Stage 1                                      | 272,732                          | 155,360 | 104,403 | 1,064   |           | 533,559   | (269)       | 533,290            |
| Stage 2                                      | 2,040                            | 3,920   | 14,494  | 6,105   |           | 26,559    | (301)       | 26,258             |
| Stage 3                                      |                                  |         |         |         | 1,658     | 1,658     | (313)       | 1,345              |
| TOTAL  | 933,314                          | 458,951 | 507,294 | 27,785  | 27,834    | 1,955,178 | (18,700)    | 1,936,478          |

Financial assets subject to impairments were down by EUR 99 billion, a decrease of 5% compared to 31 December 2022. This change is mainly due to the disposal of the activities of Bank of the West in the first quarter of 2023, for which outstandings amounted to EUR 80 billion on the balance sheet (presented in "Assets held for sale") and EUR 22 billion in financing and guarantee commitments (including EUR 6 billion rated 4 to 5 and EUR 14 billion rated 6 to 8) at 31 December 2022.

Excluding the disposal of the Bank of the West activities, financial assets subject to impairments were up by EUR 4 billion compared to 31 December 2022. This change mainly relates to financial assets and commitments rated 6 to 8 (+EUR 6 billion), while financial assets and commitments rated 9 to 10 decreased by EUR 2 billion.

Loans and receivables at amortised cost classified in stage 1 increased by EUR 9 billion, while outstandings classified in stage 2 decreased by EUR 14 billion, notably as a result of a less pronounced deterioration in activity than initially anticipated during the first half of 2023 (see note 3.g *Cost of risk* in the notes to the consolidated financial statements). Outstandings transferred

from stage 2 to stage 1 mainly concern the least risky outstandings among those previously classified in stage 2 (outstandings rated 4 to 5 and 6 to 8 notably).

## RESTRUCTURED LOANS [AUDITED]

When a borrower is bordering on or is in financial difficulties, he may receive a concession from the bank that would otherwise not have been granted if the borrower had not met with financial difficulties. The concession may be:

- a change to the contract terms and conditions;
- partial or total refinancing of the debt.

The loan is then said to be “restructured”. It must retain the status of “restructured” during a period of observation, known as a probation period, for at least two years. The concept of restructuring is described in the accounting principles (note 1.f.5 *Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders’ equity* to the consolidated financial statements as at 31 December 2023) and is aligned with by Article 47 of Regulation 575/2013.

According to the principles for identifying the restructured exposure amounts for the Group as a whole, for the non-retail business, exposures are identified individually during the loan process, notably during committees. As for restructured exposures for retail customers, they are usually identified via a systematic process requiring the use of algorithms whose parameters are validated by the RISK and Finance & Strategy Functions.

Information on restructured loans is reported to the supervisory authority on a quarterly basis.

The following table shows the gross value and impairment amounts of performing and non-performing loans that have been restructured.

**TABLE 53: CREDIT QUALITY OF RESTRUCTURED LOANS (EU CQ1) [Audited]**

## CREDIT RISK MITIGATION TECHNIQUES

Credit risk mitigation techniques are divided into two main categories:

- funded credit protection (collateral) pledged to the Bank is used to secure timely performance of a borrower's financial obligations;
- unfunded credit protection (personal guarantee) is the commitment by a third party to replace the primary obligor in the event of default. Thus, public guarantee mechanisms are considered as personal guarantees. By extension, credit insurance and credit derivatives (purchased protection) fall into this category.

The amount of personal guarantees and collateral recognised on loans and receivables and debt securities in the prudential reporting scope amounted to EUR 552 billion at 31 December 2023.

Credit Risk Mitigants (CRM) are taken into account in accordance with the regulation. In particular, their effect is assessed under conditions characteristic of an economic downturn.

For the scope under the IRB approach, personal guarantees and collaterals are taken into account, provided they are eligible, by decreasing the Loss Given Default (LGD) parameter corresponding to an increase in the Global Recovery Rate (GRR) that applies to the transactions of the banking book. The value taken into consideration takes account, where relevant, of currency and maturity mismatches and, for funded credit protection, of a haircut applied to the market value of the pledged asset based on a default scenario during an economic downturn. The amount of unfunded credit protection to which a haircut is applied depends on the enforceable nature of the commitment and the risk of simultaneous default by the borrower and guarantor.

For the scope under the standardised approach, unfunded credit protection is taken into account provided it is eligible, by applying the more favourable risk weight of the guarantor to a portion of the secured exposure adjusted for currency and

maturity mismatches. Funded credit protection is taken into account as a decrease in the exposure, after adjustment for any currency and maturity mismatches and a discount to take account of volatility in market value for financial security collaterals.

The assessment of the credit risk mitigating effect follows a methodology that is approved for each activity and is used throughout the Group. These techniques are monitored in accordance with the monitoring and portfolio management procedures described in the Credit risk management policy section.

(\*) Excluding derivatives and securities financing transactions subject to counterparty risk exposures.

(\*\*) In accordance with the Group's IRBA methodology, the impact of risk mitigation techniques is treated only by reducing LGD (no substitution approach).

The main providers of unfunded credit protection (personal guarantees) are the guarantee institutions in the Commercial & Personal Banking of CPBS mortgage business (mainly housing loans in France) and, since 2020, States or public organisms that have set up public guarantee mechanisms to counter the public health crisis.

As at 31 December 2023, 78% of exposure to property loans is concentrated in the Group's two main Domestic Markets (France, Belgium). In view of the specific features of these markets (amortising long-term financing, primarily at fixed rates), the LTV (Loan-to-value) ratio is not a main monitoring indicator at Group level.

## FUNDED CREDIT PROTECTION

Funded credit protection is divided into two categories:

- financial collateral:  
this consists of cash amounts (including gold), shares in collective investment funds, equities (listed or unlisted) and bonds;
- other diverse forms of collateral:  
these include real estate mortgages or ship mortgages, pledge of equipment or inventories, transfer of commercial receivables or any other rights to an asset of the counterparty.

To be considered as eligible, funded credit protection must fulfil the following conditions:

- the value of the collateral must not be highly correlated with the risk on the obligor (in particular, shares of the obligor are not eligible);
- the pledge must be documented;
- the pledged asset must be traded on a liquid secondary market to enable rapid resale;
- the Bank must have a regularly updated value of the pledged asset;
- the Bank must have a reasonable level of comfort in the potential appropriation and realisation of the asset concerned.

In the Retail Banking business, the presence or absence of a particular type of collateral may, depending on the coverage ratio, lead to assigning the exposure to particular LGD class on a statistical basis.

## UNFUNDED CREDIT PROTECTION

Guarantors are subject to the same rigorous credit risk assessment process as primary obligors and are assigned risk parameters according to similar methods and procedures.

Guarantees are granted by the obligor's parent company or by other entities such as financial institutions. Other examples of guarantees are credit derivatives, guarantees from public insurers for export financing or private insurers.

Consideration of a guarantee consists of determining the average amount the Bank can expect to recover if the borrower defaults and the guarantee is called in. It depends on the amount of the guarantee, the risk of simultaneous default by the borrower and the guarantor (which is a function of the probability of default of the borrower, of the guarantor, and the degree of correlation between borrower and guarantor default, which is high if they belong to the same business group or the same sector and low if not) and the enforceable nature of the guarantee.

## OPTIMISING CREDIT RISK MANAGEMENT THROUGH CDS (EU CR7)

As part of its role of optimising credit risk management for CIB, Portfolio Management (PM) sets up hedges using credit derivatives, and mainly credit default swaps (CDS). These CDS are used as part of an active management policy, the main aim being to hedge migration and concentration risks and manage major exposures. The underlying assets are loans made to large corporates by CIB Global Banking, and occasionally those made by the Commercial & Personal Banking activity.

These hedges are put on by CIB to hedge exposures mainly treated under the IRB approach. Provided they are eligible, they have the effect of decreasing the estimated Loss Given Default for the underlying asset, and, therefore, reducing its consumption in terms of risk-weighted assets. The reduction in risk-weighted assets resulting from hedging operations via CDS concerns only the corporate asset class, and represents EUR 165 million as at 31 December 2023 compared to EUR 238 million as at 31 December 2022 (EU CR7).

| <b>080 TOTAL</b>                            | <b>227</b>  | <b>(29)</b>                  | <b>270</b>  | <b>(35)</b>                  |

(\*) The amount of assets held for sale are included in the amounts of collateral presented in the table above.

Collateral obtained by taking possession includes assets obtained in exchange for cancellation of the receivable, whether on a voluntary basis or on foot of legal proceedings.

## 5.5 Securitisation in the banking book

Securitisation means a transaction or scheme, whereby the credit risk associated with an exposure or pool of exposures is tranching, having the following characteristics:

- payments made in the transaction or scheme are dependent upon the performance of the exposure or pool of exposures;
- the subordination of tranches determines the distribution of losses during the life of the risk transfer.

Any commitment (including derivatives and liquidity lines) granted to a securitisation operation must be treated as a securitisation position. Most of these commitments are held in the prudential banking book (section 5.5). Commitments held in the trading book are set out in section 5.7 *Market risk*.

The securitisation transactions discussed below concern:

- the programmes originated by the Group for its own account, securitising its credit exposures ("originator" role) which are recognised as efficient under Basel 3 regulatory framework;
- the programmes that the Group has structured on behalf of its clients ("sponsor" role where clients' assets are securitised), in which it has retained positions;
- the programmes to which the Group has subscribed without having a role in structuring the operation ("investor" role).

Securitisation positions deducted from own funds, amounting to at -EUR 270 million at 31 December 2023, are now included in this whole section 5.5.

## BNP PARIBAS SECURITISATION ACTIVITIES

The Group's activities in each of its roles as originator, sponsor and investor, are described below:

**TABLE 58: SECURITISED EXPOSURES AND SECURITISATION POSITIONS (HELD OR ACQUIRED) BY ROLE**

| BNP Paribas<br>role<br><i>In millions of<br/>euros</i> | 31 December 2023  |  |  | 31 December 2022  |  |   |

(\*) Securitised exposures originated by the Group correspond to the underlying exposures recognised on the Group's balance sheet and off-balance sheet which have been securitised.

(\*\*) Securitisation programmes meeting the Significant Risk Transfer (SRT) criteria, see next paragraph.

(\*\*\*) Securitisation positions correspond to tranches retained and off-balance sheet commitments granted by the Group in securitisation transactions originated or arranged by the Group, as well as tranches acquired by the Group in securitisation transactions arranged by other parties.

### PROPRIETARY SECURITISATION (ORIGINATOR)

The Group acts as an originator by securitising its own credit exposures in order to obtain new sources of financing and improve the liquidity of its balance sheet, and to reduce its risk and capital requirements.

Where the purpose of the transaction is solely to reduce risk, the Group will favour so-called "synthetic" securitisation transactions, ensuring the risk transfer of exposures (mortgages, consumer loans, corporate loans, etc.) through credit derivatives or guarantees. These transactions are initiated mainly by Corporate & Institutional Banking in collaboration with the Commercial, Personal Banking & Services business lines.

In the context of securitisation transactions carried out for financing purposes, the Group will favour so-called "cash" or "traditional" securitisations, characterised by the sale of securitised exposures to a specially created entity. These operations are initiated by ALM Treasury in collaboration with the businesses whose exposures are securitised in exchange for liquid assets eligible for central bank financing or included in the global liquidity reserve (see paragraph *Wholesale funding and liquidity reserve monitoring indicators* in section 5.8 *Liquidity risk*).

### Risk transfer of own account securitisation transactions

The capital requirement of securitised credit exposures and securitisation positions depends on the risk transfer level of the transaction.

When the exposures securitised by the Group in the context of own-account securitisation transactions meet the Basel eligibility criteria, in particular that of significant risk transfer as defined in Regulation (EU) No. 2017/2401, they are excluded from the calculation of credit risk-weighted assets and the securitisation transaction is said to be efficient. In this case, only the positions retained by the institution and any commitments granted to the structure after securitisation are subject to risk-weighted assets calculation.

Exposures securitised through proprietary securitisation transactions that do not meet Basel eligibility criteria (inefficient securitisations) remain in their original prudential portfolio. Their capital requirement is calculated as if they were not securitised and is included in section 5.4 *Credit risk*.

### Efficient securitisations

Exposures retained in securitisation positions originated by BNP Paribas amounted to EUR 42.8 billion at 31 December 2023, corresponding to positions in thirty efficient securitisation programmes under Basel rules.

At 31 December 2023, the main securitisation transactions recognised as efficient are the following:

- a synthetic transaction initiated in 2023 by Commercial & Institutional Banking concerning an EUR 3.2 billion portfolio of large corporate loans in France;

- a synthetic transaction initiated in 2023 by Commercial & Personal Banking in France concerning an EUR 1.8 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2023 by Commercial & Personal Banking in France concerning an EUR 1.5 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2023 by Commercial & Personal Banking in Belgium concerning an EUR 2.1 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2023 by Commercial & Institutional Banking concerning an EUR 9.5 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2023 by Commercial & Personal Banking in France concerning an EUR 1.3 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2022 by Commercial & Institutional Banking concerning an EUR 0.9 billion portfolio of large corporate loans in France;
- a synthetic transaction initiated in 2022 by BNL bc concerning an EUR 1.3 billion portfolio of corporate loans;
- a synthetic transaction initiated in 2022 by Commercial & Institutional Banking concerning an EUR 5.7 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2022 by Commercial & Institutional Banking concerning an EUR 3.0 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2021 by Corporate & Institutional Banking concerning an EUR 1.1 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2021 by Commercial & Institutional Banking concerning an EUR 2.2 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2021 by BNL bc concerning an EUR 1.3 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2020 by Commercial & Personal Banking in France concerning an EUR 0.9 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2019 by Commercial & Personal Banking in Belgium concerning an EUR 1.2 billion portfolio of large corporate loans;
- a synthetic transaction initiated in 2019 by Commercial & Institutional Banking concerning an EUR 2.3 billion portfolio of large corporate loans in France.

The Group has not set up own account securitisations of revolving exposures with an anticipated repayment clause.

At 31 December 2023, there were no assets awaiting securitisation.

| <b>TOTAL</b>        | <b>6,767</b> | <b>55,330</b> | <b>62,097</b> | <b>8,884</b> | <b>41,188</b> | <b>50,072</b> |

(\*) This breakdown is based on the predominant underlying asset of the securitisations.

## Inefficient securitisations

Inefficient securitisation transactions are mainly carried out for refinancing purposes. These operations, which do not result in any risk transfer within the meaning of Regulation (EU) No. 2017/2401, do not have a diminishing effect on the calculation of risk-weighted assets. Securitised exposures are included in customer loans and subject to credit risk-weighted assets calculation.

As at 31 December 2023, BNP Paribas originated 31 securitisation transactions, for a total amount of EUR 70.5 billion of securitised exposures. The main transactions concern: Commercial & Personal Banking in Belgium (EUR 31.4 billion), BNP Paribas Personal Finance (EUR 7.3 billion), Commercial & Personal Banking in France (EUR 27.8 billion) and BNL bc (EUR 0.1 billion). In 2023, two transactions without a significant risk transfer were completed by Commercial & Personal Banking in France, for a total amount of EUR 13 billion. The relevant exposures are therefore included in the section on credit risk (see section 5.4 *Credit risk*).

## Credit quality of securitised exposures

The table below presents all exposures securitised by BNP Paribas as part of efficient and ineffective securitisation transactions carried out as originator:

**TABLE 61: EXPOSURES SECURITISED BY THE INSTITUTION – EXPOSURES IN DEFAULT (EU SEC5)**

(\*) Underlying exposures of effective and ineffective securitisation transactions.

## SECURITISATION ON BEHALF OF CLIENTS (SPONSOR)

As part of their third-party securitisation activity, Corporate & Institutional Banking enables its large corporate and institutional clients to obtain attractive financing conditions directly from the financing markets, through multiple-seller conduits (short-term refinancing markets) or specific structured operations (medium and long-term refinancing).

**TABLE 62: SECURITISED EXPOSURES BY BNP PARIBAS AS A SPONSOR(\*) BY UNDERLYING ASSET CATEGORY<sup>(\*)</sup>**

| Securitised exposures<br><i>In millions of euros</i> | 31 December 2023 |           |               | 31 December 2022 |           |               |

| <b>TOTAL</b>   | <b>35,470</b>    |           | <b>35,470</b> | <b>31,353</b>    |           | <b>31,353</b> |

(\*) This breakdown is based on the predominant underlying asset of the securitisation.

The financing structures thus put in place are accompanied by liquidity lines and, where appropriate, by the granting of guarantees by the Group, which are subject to a capital requirement. Commitments and positions retained or acquired by BNP Paribas on securitisation programmes as sponsor, amounted to EUR 35.5 billion at 31 December 2023.

### Short-term refinancing

At 31 December 2023, two consolidated multi-seller conduits (Starbird and Matchpoint) were sponsored by the Group. These conduits, by seeking refinancing on the local short-term commercial paper market, are able to provide CIB clients, large corporates and institutions with an attractive financing solution in exchange for some of their assets (trade receivables, finance leases for automobiles or various equipment, credit card receivables, etc.).

BNP Paribas provides each of these conduits with a liquidity line which amounted to EUR 33.7 billion at 31 December 2023, compared with EUR 28.9 billion at 31 December 2022.

### Medium/long-term refinancing

In Europe and North America, the Group's structuring platform provides financing solutions to its clients, based on products adapted to current conditions in terms of risk and liquidity. Altogether, the facilities granted by the Group through these transactions amounted to EUR 1.8 billion at 31 December 2023, compared with EUR 2.0 billion at 31 December 2022.

## SECURITISATION AS INVESTOR

The securitisation positions of BNP Paribas as an investor amounted to EUR 23.0 billion at 31 December 2023, with an increase of EUR 2.0 billion compared to 31 December 2022 (EUR 21.0 billion).

Investments made by the Group in third-party securitisation transactions are mainly concentrated in Capital markets, a joint-venture between Global Banking and Global Markets with an exposure of EUR 23.7 billion at 31 December 2023 compared to EUR 20.6 billion at 31 December 2022. Capital Markets is involved in setting up, then financing and hedging (as a "swap" supplier) structured asset financing operations initiated by its clients, including mainly institutions, large companies or private equity platforms.

Investor securitisation exposures also include historical positions within the BNP Paribas Fortis entity managed in run-off. This portfolio, housed in the Corporate Center, amounted to EUR 0.3 billion at 31 December 2023 compared with EUR 0.4 billion at 31 December 2022.

The table below shows the securitisation vehicles set up on behalf of the Group or its customers.

| <b>VEHICLES INCLUDED IN THE PRUDENTIAL CONSOLIDATION SCOPE</b> | See note 9.k <i>Scope of consolidation</i> (reference t) to the consolidated financial statements. |  |

(\*) The category is based on the predominant underlying asset of the securitisation.

(\*\*) Efficient securitisation.

(See note 1 to the consolidated financial statements – *Summary of significant accounting policies applied by the Group*.)

The accounting classification of securitisation positions in the banking book is shown in Table 9: *Prudential balance sheet by risk type (EULI1-B)*.

Securitisation positions classified as “Financial assets at amortised cost” are measured using the method described in note 1.f.1 *Financial assets at amortised cost* to the consolidated financial statements: the effective interest rate used to recognise interest income is measured on the basis of an expected cash flow model. From the outset, these positions are subject to an impairment calculation for expected credit risk losses (see note 1.f.5 *Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders’ equity* to the consolidated financial statements).

Securitisation positions classified on an accounting basis as “Financial assets at fair value through equity” are measured using the method described in note 1.f.2 *Financial assets at fair value through shareholders’ equity* to the consolidated financial statements. Changes in fair value determined according to the principles listed in note 1.f.10 *Determination of fair value* to the consolidated financial statements (excluding revenue recognised using the effective interest method) are presented in a specific subsection of shareholders’ equity along with expected credit risk losses calculated using the methods described in note 1.f.5 *Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders’ equity* to the consolidated financial statements. Upon disposal, amounts previously recognised in recyclable equity are transferred to the profit and loss account.

Securitisation positions classified on an accounting basis as “Financial instruments at fair value through profit or loss” are measured using the method described in note 1.f.7 *Financial instruments at fair value through profit or loss* to the consolidated financial statements.

Proceeds from the sale of securitisation positions are recognised in accordance with rules for the category of origin of positions sold.

Synthetic securitisations in the form of credit derivatives (credit default swaps) or guarantees received follow accounting rules appertaining respectively:

- to trading portfolio derivatives. These are measured at fair value through profit or loss (see note 1.f.7 *Financial instruments at fair value through profit or loss* to the consolidated financial statements);
- to financial guarantees received, which cannot be considered as forming an integral part of secured assets. If it is virtually certain that a loss caused by a defaulting debtor will be offset by the guarantor, the guarantee is then recognised as a reimbursement asset (right to reimbursement for expected credit losses) and expected credit losses on the asset are, at the same time, recognised in profit or loss. The overall impact in terms of profit or loss is the same as if the guarantee had been recognised in the measurement of expected credit losses, with the difference that the guarantee received is shown as a reimbursement asset rather than as a reduction in the expected credit losses on the asset.

Assets awaiting securitisation are classified as:

- financial instruments at amortised cost or at fair value through equity and in the prudential banking book in the case of exposures resulting from the Bank’s balance sheet, for which the Bank will be originator in the future securitisation within the meaning of Basel 3;
- financial instruments at fair value through profit or loss and in the prudential banking book in the case of exposures purchased and put into warehousing, for which the Bank will be sponsor in the future securitisation within the regulatory meaning.

## SECURITISATION RISK MANAGEMENT

---

The risk management framework for securitisation is part of the risk management described in section 5.3 *Risk management*.

The business lines represents the first line of defence with responsibility for understanding all the risks incurred in order to ensure correct evaluation. The RISK Function acts independently, as a second line of defence.

Positions taken are monitored to measure changes in individual and portfolio risks.

The monitoring of securitised assets covers credit, counterparty, market and liquidity risks on the underlying assets.

### CREDIT RISK ON SECURITISED ASSETS

Securitisation assets outside the trading book are subject to specific approval by the Credit Committees. For new transactions, a credit proposal is prepared by the business, and a comprehensive risk analysis is carried out by the RISK analysts before presentation to the Credit Committee. All approvals are subject to an annual review. Exposures are monitored to ensure that they do not exceed the limits set by the Credit Committees.

The risk exposure of securitisation tranches is intrinsically linked to that of the underlying assets, whether for securitisation or re-securitisation. Through the customary governance of Credit Committees, the Group monitors changes in the quality of underlying assets for the entire duration of the programme concerned.

## COUNTERPARTY RISK ON SECURITISATION RELATED TO INTEREST RATES OR FX DERIVATIVES

Securitisation-related derivative instruments are also subject to the approval of the Credit Committees. BNP Paribas integrates counterparty risk into the securitisation structure. The principles are the same as those described above in respect of credit risk.

## MARKET RISK WITHIN THE BANKING BOOK

On fixed rate ABS positions, a macro hedge consisting of fixed/variable rate swaps is put in place to cover interest rate risk. The hedge is recorded in accordance with the rules of hedge accounting.

## LIQUIDITY/FUNDING RISK

Securitisation positions are financed internally by the ALM – Treasury or via conduits sponsored by BNP Paribas.

**TABLE 65: BANKING BOOK SECURITISATION POSITION QUALITY**

| <i>In millions of euros</i> | Securitisation positions held or acquired (EAD) |                  |
|-----------------------------|---|------------------|
|                             | 31 December 2023                                | 31 December 2022 |
| <b>Tranche quality</b>      |   |                  |
| Senior tranche              | 99,482  | 90,899           |
| Mezzanine tranche           | 1,548   | 1,150            |
| First-loss tranche          | 241   | 203              |
| <b>TOTAL</b>                | <b>101,271</b>                                  | <b>92,252</b>    |

At 31 December 2023, 98.2% of the securitisation positions held or acquired by the Group were senior tranches, compared with 98.5% at 31 December 2022, reflecting the high quality of the Group's portfolio.

## RISK-WEIGHTED ASSETS

The revised securitisation framework came into force on 1 January 2019 with the application of Regulation (EU) No. 2017/2401 and Regulation (EU) No. 2017/2402. It provides for:

- the creation of a specific status for programmes known as Simple, Transparent and Standardised, which comply with certain conditions:
  - the portfolio of underlying assets, which must be uniform in terms of asset type, may not include a re-securitisation position nor defaulting asset at origination,
  - the programme must be traditional and the payment of the interest for the securitisation positions must be based on standard benchmark interest rates,
  - investors must have sufficient information on the portfolio of underlying assets, specifically, information on the histories of defaults and losses.

Subject to eligibility in terms of applicable risk-weight and concentration of the underlying asset portfolio, these programmes may benefit from preferential weightings;

- new approaches for the calculation of risk-weighted assets related to applicable securitisation positions according to the specificities of the underlying portfolio:
  - **internal ratings-based approach (SEC-IRBA):** the risk-weight applicable to the securitisation position depends on the one hand on the characteristics of the securitisation programme and on the other hand on the capital charge of the underlying portfolio calculated as credit risk,
  - **standardised approach (SEC-SA):** the risk-weight applicable to the securitisation position depends on the characteristics of the securitisation programme, the capital charge of the underlying portfolio calculated as credit risk and the proportion of assets in default in this portfolio,
  - **external ratings-based approach (SEC-ERBA):** the risk-weight applicable to the securitisation position is given directly by a correspondence table defined in Regulation (EU) No. 2017/2401, based on the external rating of the tranche, its subordination rank and its maturity. BNP Paribas uses the external ratings of the Standard & Poor's, Moody's, Fitch and DBRS rating agencies,
  - in other cases, Regulation (EU) No. 2017/2401 provides for the deduction of CET1 own funds.

Risk-weighted assets corresponding to securitisation positions held or acquired by the Group amounted to EUR 16.6 billion at 31 December 2023, or 2.4% of Group total risk-weighted assets, compared with EUR 15.8 billion at 31 December 2022 (2.1% of Group total risk-weighted assets).

(\*) The Group opted for the deduction of CET1 capital instead of the 1,250% weighting.

(\*\*) After application of the regulatory ceiling. Capital requirements correspond to 8% of risk-weighted assets.

Guarantees on securitisation positions amounted to EUR 142 million as at 31 December 2023, compared with EUR 188 million at 31 December 2022.

## 5.6 Counterparty credit risk

Counterparty credit risk is the translation of the credit risk embedded in financial transactions, investments and/or settlement transactions between counterparties. Those transactions include bilateral contracts such as over-the-counter (OTC) derivative contracts as well as contracts settled through clearing houses. The amount of this risk may vary over time in line with changing market parameters which then impacts the replacement value of the relevant transactions.

Counterparty risk lies in the event that a counterparty defaults on its obligations to pay the Bank the full present value of the flows relating to a transaction or a portfolio for which the Bank is a net receiver. Counterparty credit risk is also linked to the replacement cost of a derivative or portfolio in the event of counterparty default. Hence, it can be seen as a market risk in case of default or a contingent risk.

In respect of counterparty risk, the RISK function is structured according to five main priorities:

- measuring exposure to counterparty credit risk;
- checking and analysing these exposures and the limits that apply to them;
- implementing mechanisms to reduce risk;
- calculating and managing credit valuation adjustments (CVA);
- defining and implementing stress tests.

### COUNTERPARTY CREDIT RISK VALUATION

---

#### COUNTERPARTY EXPOSURE CALCULATION

Exposure to counterparty risk is measured using two approaches:

##### Modelled exposure – Internal model method

With regard to modelling counterparty risk exposure, the exposure at default (EAD) for counterparty risk is calculated based on the Effective Expected Positive Exposure (EEPE) indicator multiplied by the alpha regulatory factor as defined in article 284-4 of Regulation (EU) No. 575/2013. The Effective Expected Positive Exposure (EEPE) is measured using an internal exposure valuation model to determine exposure profiles. The model was developed by the Group and approved by the supervisor.

The principle of the model is to simulate the main risk factors, such as commodity and equity prices, interest rates and foreign exchange rates, affecting the counterparty risk exposure, based on their initial respective values. The Bank uses Monte-Carlo simulations to generate thousands of time trajectories (corresponding to thousands of potential market scenarios) to define potential changes in risk factors. The diffusion processes used by the model are calibrated on the most recent historic data set over a four-year period.

Based on all the risk factor simulations, the model assesses the value of the positions from the simulation date to the transaction maturity date (from one day to more than thirty years for the longest-term transactions) to generate an initial set of exposure profiles.

Exposure may be reduced by a Master Agreement, and may also be covered by a Credit Support Annex (CSA). For each counterparty, the model aggregates the exposures taking into consideration any netting agreements and credit support annexes, as well as the potentially risky nature of the collateral exchanged.

Based on the breakdown of exposure to the counterparty, the model determines the following in particular:

- The average risk profile, the Expected Positive Exposure (EPE), from which the EEPE (Effective Expected Positive Exposure) is calculated:

the Expected Positive Exposure (EPE) profile is calculated as the average of the breakdown of counterparty exposures at each point in the simulation, with the negative portions of the trajectories set to zero (the negative portions correspond to situations where BNP Paribas Group is a risk for the counterparty). The EEPE is calculated as the first-year average of the non-decreasing EPE profile: at each simulation date, the value taken is the maximum of the EPE value and the value on the previous simulation date.

- The Potential Future Exposure (PFE) profile:

the Potential Future Exposure (PFE) profile is calculated as a 90% percentile of the breakdown of exposure to the counterparty at each point in the simulation. This percentile is raised to 99% for hedge fund counterparties. The highest Potential Future Exposure value (Max PFE) is used to monitor maximum limits.

Since 1 January 2014, date of entry into force of Regulation (EU) No. 575/2013, the system for measuring exposures to counterparty risk takes into account:

- extension of the margin periods of risk in accordance with article 285 of the CRR;

- inclusion of the specific correlation risk;
- determination of a stressed EEPE calculated based on a calibration reflecting a particular period of stress.

## Non-modelled exposure – Method SA-CCR

For non-modelled counterparty credit risk exposures, the derivative exposure at default is calculated using the standardised approach for counterparty credit risk (Standardised Approach for Counterparty Credit Risk – SA-CCR) in accordance with Article 274 of Regulation (EU) No. 2019/876.

The exposure at default of a netting set using the standardised approach to counterparty risk is based on:

- the replacement cost (RC), calculated in accordance with Article 275;
- potential future exposure (PFE), calculated in accordance with Article 278;
- the regulatory factor alpha, set in accordance with Article 274.

The exposure at default on securities financing transactions (SFTs) is calculated using the Financial Collateral Comprehensive Method in accordance with Article 223 of Regulation (EU) No. 575/2013.

## LIMIT/MONITORING FRAMEWORK

Limits reflecting the principles of the Group's Risk Appetite Statement are defined for the counterparty credit risk. These limits are set in accordance with the type of counterparty (banks, institutional investors, asset managers, corporates, clearing houses, etc.) and the type of exposure used to measure and manage counterparty risk:

- the highest value of potential future exposures (Max PFE) for modelled exposures;
- the exposure value calculated using the standardised approach for non-modelled exposures.

The exposure of each counterparty is calculated to verify compliance with credit decisions.

These limits are defined and calibrated as part of the risk approval process. They are approved in the following committees (listed in ascending order of discretionary authority): Local Credit Committee, Regional Credit Committee, Global Credit Committee, General Management Credit Committee.

These measures are complemented by sets of directives (covering contingent market risk sensitivities per counterparty which are extracted from the market risk system) which provide further tools in the monitoring of counterparty credit risk and the prevention of systemic risk concentrations.

## MITIGATION OF COUNTERPARTY CREDIT RISK

As part of its risk management, the BNP Paribas Group implemented three counterparty risk mitigation mechanisms:

- the signature of netting agreements for OTC transactions;
- clearing through central counterparties, in the case of OTC or listed derivative transactions;
- Bilateral initial margin exchange.

### Netting agreements

Netting is used by the Bank in order to mitigate counterparty credit risk associated with derivative trading. The main instance where netting occurs is in case of trade termination: if the counterparty defaults, all the trades are terminated at their current market value, and all the positive and negative market values are summed to obtain a single amount (net) to be paid to or received from the counterparty. The balance ("close-out netting") may be collateralised with cash, securities or deposits.

The Bank also applies settlement netting in order to mitigate counterparty credit risk in cases of currency settlement. This corresponds to the netting of all payments and receipts between the Bank and one counterparty in the same currency to be settled in the same day. The netting results in a single amount (for each currency) to be paid either by the Bank or by the counterparty.

Transactions affected by this are processed in accordance with bilateral or multilateral agreements respecting the general principles of the national or international framework. The main forms of bilateral agreements are those issued by *Fédération bancaire française* (FBF) and on an international basis by the International Swaps and Derivatives Association (ISDA).

### Trade clearing through central counterparties

Trade clearing through central counterparties (CCPs) is part of BNP Paribas usual capital market activities. As a global clearing member, BNP Paribas contributes to the risk management framework of the CCPs through payment to a default fund as well as daily margin calls. The rules which define the relationships between BNP Paribas and the CCPs of which it is a member are described in each CCP's rulebook.

For Europe, the United Kingdom and the United States in particular, this scheme enables the reduction of notional amounts through the netting of the portfolio, on one hand, and, on the other, a transfer of the risk from several counterparties to a single central counterparty with a robust risk management framework.

In its clearing for third parties activity, BNP Paribas requests as well, and on a daily basis, the payment of margin calls from its clients.

Since default by one or more clearing houses would affect BNP Paribas, it has introduced dedicated monitoring of these central counterparties and closely tracks concentrations with them.

### **Bilateral initial margin exchange**

Regulation (EU) No. 648/2012 (EMIR) stipulates the establishment of additional constraints for players in the derivatives markets, including the obligation to exchange collateral for contracts that are not centrally cleared. An initial guarantee deposit must be made by the Bank's most significant financial and non-financial counterparties. The purpose of this exchange is to mitigate the counterparty credit risk associated with over-the-counter derivative trading that is not centrally cleared. The Bank's transactions with sovereign borrowers, central banks, and supranational entities are excluded from this system.

If the counterparty defaults, all the trades are terminated at their current market value by the Bank. The initial guarantee deposit hedges the variation in the value of transactions during this liquidation period. The initial deposit reflects an extreme but plausible estimate of potential losses corresponding to a unilateral interval of confidence of 99% over a ten-day period, based on historic data including an episode of significant financial tensions.

The initial deposit must be bilaterally traded on a gross basis between the Bank and the counterparty. It is kept by a third party so as to guarantee that the Bank immediately has access to the counterparty's deposit and that the Bank's deposit be protected in case the counterparty defaults.

### **CREDIT VALUATION ADJUSTMENTS (CVA)**

The valuation of financial OTC trades carried out by BNP Paribas as part of its trading activities (mainly Global Markets) includes Credit Valuation Adjustments (CVA). CVA is an adjustment of the trading portfolio valuation to take into account each counterparty's credit risk. It is the fair value on any expected loss arising from counterparty exposure based on the potential positive value of the contract, the counterparty default probability and the estimated recovery rate in case of default.

The majority of counterparty credit risk exposures on derivatives are related to the Group's interest rate, credit and foreign exchange activities, all underlying assets, and all business lines combined.

The credit valuation adjustment is not only a function of the expected exposure but also the credit risk level of the counterparty, which is linked to the level of the Credit Default Swaps (CDS) spreads used in the default probability calculation.

In order to reduce the risk associated with the credit quality deterioration embedded in a financial operations portfolio, BNP Paribas uses a dynamic hedging strategy, involving the purchase of market instruments such as credit derivative instruments. (See *CVA risk management* in the section *Counterparty risk management*).

### **Risk related to the volatility of CVAS (CVA risk)**

To protect banks against the risk of losses due to CVA variations, Regulation (EU) No. 575/2013 introduced a dedicated capital charge, the CVA charge. This charge aims at capitalising the risk of loss caused by changes in the credit spread of a counterparty to which the BNP Paribas Group is exposed. The CVA charge is computed by the Group using mainly the advanced method and relies on the Bank's model on market risk (see section *CVA Risk* hereafter).

### **STRESS TESTS AND WRONG WAY RISK**

The BNP Paribas counterparty risk stress testing framework is consistent with the market risk framework (see section 5.7 *Market risk related to trading activities*). As such, the counterparty stress testing framework is implemented in conjunction with the market risk stress testing and employs consistent market shifts where scenarios are shared. Testing also comprises factors specific to counterparty risk such as deteriorations in counterparty credit quality.

Such risk analysis is present within the Executive Management reporting framework which shares some common forums with the market risk reporting set up such as the Financial Markets Risk Committee (FMRC), core risk committee for market and counterparty credit risk. Both counterparty and market risk stress testing frameworks are governed by the Stress Testing Steering Committee.

Wrong Way Risk (or unfavourable correlation risk) is the case of exposure to a counterparty being inversely correlated with the counterparty's credit quality.

Such risk can be split in two parts:

- General Wrong Way Risk (GWWR), which corresponds to the risk that the probability of default by counterparty is positively correlated with general market risk factors;
- Specific Wrong Way Risk (SWWR), which corresponds to the risk arising when future exposure to a specific counterparty is positively correlated with the counterpart's probability of default due to the nature of the transactions with the counterparty or of the collateral received.

BNP Paribas' monitoring and analysis of General Wrong Way Risk is performed through stress tests that highlight the risk factors negatively correlated with the counterparty's credit quality. It combines a top-down approach and a bottom-up approach:

- for the top-down approach, the GWWR policy defines the generic rules and criteria to be used to detect GWWR. These criteria are based on the countries of incorporation of the counterparties, the region of which they are part and the industries in which they are involved. Derivative positions, structured financing, and collateral that counterparties may have with BNP Paribas have been defined as the situations where GWWR should be analysed and reported;
- the GWWR framework relies upon a robust bottom-up approach with the expertise of the counterparty credit analysts specifically needed to define the most impacting scenarios at portfolio level (the approach consists of the use of stressed market parameters reflecting extreme but realistic conditions).

When a legal link between the exposure underlyings and the counterparty is established, the SWWR is subject to prescribed regulatory capital treatment.

## EXPOSURE TO COUNTERPARTY CREDIT RISK

The table below shows exposure to counterparty credit risk (measured as the exposure at default) by Basel asset class on derivative contracts and securities lending/borrowing transactions, after the impact of any netting agreement. Bilateral transactions between the Bank and customers (bilateral counterparty risk) are distinguished from transactions related to the clearing activities of the Bank, including essentially exposures to central counterparties (CCP).

(\*) Corporates asset class includes other risky assets (EUR 3 million at 31 December 2022).

(\*\*) Institutions asset class comprises credit institutions and investment firms, including those recognised in other countries, it also includes some exposures to regional and local authorities, public sector agencies and multilateral development banks that are not treated as central government authorities.

For bilateral counterparty credit risk, the share of exposures under the IRB approach represented 98% at 31 December 2023 (stable compared with 31 December 2022).

The following table summarises the exposures to counterparty credit risk with a breakdown by product. An indication of the Group's business volume on derivative financial instruments booked in the trading portfolio is presented in note 5.a *Financial instruments at fair value through profit or loss* to the consolidated financial statements.

## BILATERAL COUNTERPARTY CREDIT RISK

The bilateral counterparty risk corresponds to the contracts treated bilaterally (or over-the-counter) by BNP Paribas with its clients.

The exposure at default (EAD) is primarily measured with the aid of internal models (see paragraph *Counterparty exposure calculation*). For the perimeter not covered by internal models (limited mainly to subsidiaries BNL and TEB), EAD is calculated using the standardised approach to counterparty credit risk. Risk-weighted assets linked to counterparty credit risk are computed by multiplying EAD by an appropriate weighting according to the approach used (standardised or IRBA).

The following table shows a summary, by approach, of the regulatory exposures of counterparty credit risk and associated risk-weighted assets for the entire scope of the BNP Paribas Group's bilateral activities, which represents the bulk of counterparty credit risk exposures.

Since 30 June 2021, exposures not modelled are calculated according to the provisions of Article 274 of Regulation (EU) No. 2019/876 (SA-CCR method) and no longer using the "Mark-to-market" valuation method.

**TABLE 71: BILATERAL COUNTERPARTY CREDIT RISK EXPOSURES AT DEFAULT BY APPROACH (EU CCR1)**

## COUNTERPARTY CREDIT RISK FOR EXPOSURES TO CENTRAL COUNTERPARTIES ASSOCIATED WITH CLEARING ACTIVITIES

The capital requirements related to central counterparties (CCP) exposures correspond to an extension of the bilateral counterparty credit risk perimeter to clearing activities; it covers the cleared part of the OTC derivatives, repo portfolio as well as the listed derivatives portfolio.

It is equal to the sum of the following three elements:

- a charge resulting from exposures generated by clearing activities (proprietary and client clearing);
- a requirement resulting from the non-segregated initial margins posted to the CCP;
- a requirement resulting from the default fund contribution of the central counterparties.

For central counterparties (CCP), Regulation (EU) No. 575/2013 distinguishes qualifying central counterparties (QCCP) from non-qualifying central counterparties. Qualifying central counterparties correspond to central counterparties authorised or recognised in accordance with Regulation (EU) No. 648/2012.

The table below presents the breakdown of the risk-weighted assets by method and category of exposure to central counterparties.

**TABLE 74: EXPOSURES TO CCPS (EU CCR8)**

## CVA RISK

The CVA risk measures the risk of losses caused by changes in the credit valuation adjustments resulting from credit spread changes associated with the counterparties to whom the Group is exposed (see paragraph *Credit Valuation Adjustments (CVA)*).

Using the standardised approach, the capital requirement for credit valuation adjustment risk (CVA) is calculated according to the supervisory formula.

Using the IRB approach, the CVA risk capital charge is the sum of two elements:

- CVA VaR charge, which represents the own funds requirement measured from a VaR computation on CVA sensitivities to credit spreads;
- CVA SVaR charge, which represents the own funds requirement measured from a stressed VaR computation on CVA sensitivities to credit spreads.

**TABLE 75: CVA RISK CAPITAL CHARGE (EU CCR2)**

|  | a                | b            | a                | b            |

| <b>4 Standardised approach</b>           | <b>370</b>       | <b>200</b>   | <b>530</b>       | <b>327</b>   |
| <b>5 TOTAL</b>                           | <b>52,000</b>    | <b>5,189</b> | <b>45,976</b>    | <b>6,464</b> |

(\*) The EAD in advanced approach has been adjusted on the previous closing date on a specific counterparty. This change has no impact on the associated RWA.

## CVA RISK MANAGEMENT

CVA sensitivities to credit spreads are partially offset by the recognition of hedges. These hedges correspond to credit derivatives on certain identified counterparties or indices composed of identifiable counterparties.

Instruments authorised as hedges in the calculation of the capital requirements for credit valuation adjustment risk form a subset of the credit derivatives used as hedges by the Global Markets business in the management of its CVA.

## COUNTERPARTY CREDIT RISK MANAGEMENT

### CREDIT RISK MITIGATION TECHNIQUES

In the context of liquidity management and counterparty credit risk management, the BNP Paribas Group systematically monitors the collateral guarantees received and given, for both the portion hedging the contracts' market value (variation margin) and the risk of an adverse change in these market values in the event of a counterparty default (initial margin). The collateral given and received used in derivative contracts is mainly comprised of cash, and to a lesser extent, debt securities. The impact of the collateral received in clearing contracts is shown in the consolidated financial statements in note 5.o *Offsetting of financial assets and liabilities*.

As a general rule, when EAD is modelled in EEPE and weighted according to the IRB approach, the LGD (Loss Given Default) is not adjusted according to the collateral received since it is already taken into account in the "Effective Expected Positive Exposure" computation (see section *Bilateral counterparty risk*).

Collateral guarantees used in the standardised approach to reduce the EAD totalled EUR 690 million at 31 December 2023, compared with EUR 490 million at 31 December 2022.

The table below shows the breakdown of the collateral posted and received in respect of initial margins, margin calls as well as amounts in cash and in securities of repurchase agreements and securities lending and borrowing.

<sup>(1)</sup> Internal model method related to bilateral counterparty model (excluded CCP clearing).

## 5.7 Market risk

Market risk is the risk of incurring a loss of value due to adverse trends in market prices or parameters, whether directly observable or not.

Observable market parameters include, but are not limited to, exchange rates, prices of securities and commodities (whether listed or obtained by reference to a similar asset), prices of derivatives, and other parameters that can be directly inferred from them, such as interest rates, credit spreads, volatilities and implied correlations or other similar parameters.

Non-observable factors are those based on working assumptions such as parameters contained in models or based on statistical or economic analyses, non-ascertainable in the market.

In fixed-income trading books, credit instruments are valued on the basis of bond yields and credit spreads, which represent market parameters in the same way as interest rates or foreign exchange rates. The credit risk arising on the issuer of the debt instrument is therefore a component of market risk known as issuer risk.

Liquidity is an important component of market risk. In times of limited or no liquidity, instruments or goods may not be tradable or may not be tradable at their estimated value. This may arise, for example, due to low transaction volumes, legal restrictions or a strong imbalance between demand and supply for certain assets.

The market risk related to banking activities encompasses the interest rate and foreign exchange risks stemming from banking intermediation activities.

Market risk is presented in this section in two parts:

- market risk linked to trading activities and corresponding to trading instruments and derivative contracts;
- market risk linked to banking activities encompassing the interest rate and foreign exchange risks stemming from banking intermediation activities.

## CAPITAL REQUIREMENTS AND RISK-WEIGHTED ASSETS

Within the BNP Paribas Group, market risk is primarily handled using the internal model approach.

At 31 December 2023, the increase in market risk-weighted assets is mainly related to the update by EBA of the list of closely correlated currencies. Thus, since 1 October 2023, the correlation of the euro with the US dollar and the yuan renminbi, among others, is no longer applied in the context of the calculation of foreign exchange risk under the standardised method.

(\*) VaR, SVaR and IRC include all the components taken into account in the calculation of RWA.

(\*\*) Incremental Risk Charge.

(\*\*\*) Comprehensive Risk Measure.

The market risk calculated using the standardised approach covers the market risk of some entities of the Group that are not covered by internal models. The standardised approach is used to calculate foreign exchange risk and raw materials risk for the banking book (see section 5.7 *Market risk related to banking activities*).

## MARKET RISK RELATED TO TRADING ACTIVITIES

### INTRODUCTION

Market risk arises mainly from trading activities carried out within Corporate & Institutional Banking (CIB), mainly within Global Markets and encompasses different risk factors defined as follows:

- interest rate risk is the risk that the value of a financial instrument will fluctuate due to changes in market interest rates;
- foreign exchange risk is the risk that the value of an instrument will fluctuate due to changes in foreign exchange rates;
- equity risk arises from changes in the market prices and volatilities of equity shares and/or equity indices;

- commodities risk arises from changes in the market prices and volatilities of commodities and/or commodity indices;
- credit spread risk arises from the change in the credit quality of an issuer and is reflected in changes in the cost of purchasing protection on that issuer;
- option products carry by nature volatility and correlation risks, for which risk parameters can be derived from option market prices observed in an active market.

Trading activities at BNP Paribas are directly related to economic relations with business line customers, or indirectly as part of market-making activities.

## MARKET RISK MANAGEMENT ORGANISATION

The market risk management system aims to track and control market risks as well as control financial instrument valuation whilst ensuring that the control functions remain totally independent from the business lines.

Within RISK, three departments are responsible for monitoring market risk:

- RISK Markets and Financial Institutions (RISK MFI) covers Global Markets and Securities Services activities;
- RISK ALM-T covers ALM-Treasury activities;
- RISK Commercial, Personal Banking and Services (RISK CPBS) covers Domestic Markets and Europe-Mediterranean activities.

This mission consists of defining, measuring and analysing risk factors and sensitivities, as well as measuring and controlling Value at Risk (VaR), the global indicator of potential losses. RISK ensures that all business activity complies with the limits approved by the various committees and approves new activities and major transactions, reviews and approves position valuation models and conducts a monthly review of market parameters (MAP review) in association with the Valuation and Risk Control Department (V&RC).

Market Risk and financial instrument valuation monitoring is structured around several formal committees:

- the Financial Market Risk Committee (FMRC) is the main committee governing the risks related to Capital Market activities. It is responsible for addressing, in a coherent manner, the issues related to market and counterparty risk. The FMRC follows the evolution of the main exposures and stress risk and sets the high level trading limits. The committee meets approximately monthly. It is chaired by either the Group Chief Executive Officer or by a Bank's Deputy Chief Operating Officer;
- the Product and Financial Control Committee (PFC) is the arbitration and pricing decision-making committee regarding financial instrument valuation matters. The committee meets quarterly and discusses the conclusions of the CIB Financial Control teams and their work to enhance control effectiveness and the reliability of the measurement and recognition of the results of market transactions. It is chaired by the Group Chief Financial Officer and brings together the Directors of Finance & Strategy – Accounting, Corporate & Institutional Banking and RISK;
- at business line level, the Valuation Review Committee (VRC) meets monthly to examine and approve the results of Market parameters review (MAP review) and any changes in reserves. The Valuation Review Committee also acts as the referee in any disagreements between trading and control functions. The committee is chaired by the Senior Trader and other members include representatives from trading, RISK, the CIB Valuation and Risk Control Group (V&RC) team, and Finance & Strategy. Any disagreement is escalated to the PFC;
- the Valuation Methodology Committee (VMC) meets quarterly per business line to monitor model approvals and reviews, follow up relevant recommendations and present model governance improvements. This committee is chaired by RISK MFI and includes representatives from trading, research, and the valuation and risk control (V&RC) team of CIB and Finance & Strategy. Any disagreement can be escalated to the PFC, which can make an arbitrage decision.

As part of BCBS 239 Principles for effective risk data aggregation and risk reporting by the Basel Committee, a quarterly reconciliation process ensures that the entire trading portfolio of Front Office systems is correctly represented in the Group's RISK and Finance & Strategy systems, and in particular:

- that the dividing line between trading activities and banking activities is observed;
- that the internal market risk model is exhaustive: each portfolio and entity generating market risk relating to trading activities corresponds to a capital requirement.

This quarterly process is structured around the Effective Coverage of Portfolios Committee (EC) which validates the reconciliation results and any corrective and prevention actions undertaken subsequent to any discrepancies observed.

## VALUATION CONTROL

Financial instruments in the prudential trading book are valued and reported at market or model value through P&L, in compliance with applicable accounting standards. Such can also be the case of financial instruments classified in the banking book.

Portfolio valuation control is described in the Charter of Responsibility for Valuation, which sets out the division of responsibilities. These governance policies and practices also apply to all ALM Treasury activities.

In addition to the charter, the relevant valuation controls are detailed in specific policies. The main processes that together form the valuation control governance mechanism are set out below.

### **Transaction accounting control**

This control is under the responsibility of middle-office teams. However, the most complex transactions are controlled by RISK.

### **Market Parameter (MAP) review – Independent Price Verification**

Price verification is managed jointly by Valuation and Risk Control (V&RC) and RISK. Daily controls are performed on the most liquid parameters and a comprehensive and formal review of all the market parameters is performed at month end. The types of parameters controlled by V&RC are listed precisely; these are essentially the parameters for which an automatic control against external sources can be implemented (security prices, vanilla parameters); this may include the use of consensus price services. RISK is in charge of controlling valuation methodologies as well as the most complex parameters that are very dependent on the choice of models.

The general principles of the Market Parameter review are described in the Charter of Responsibility for Valuation as well as specialised global policies such as the Global Marking and Independent Price Verification Policy and MAP Review Principles. The specific methodologies are described in documents known as the MAP Books organised by product lines and regularly updated. The responsibilities of RISK and V&RC are defined for each point in time and the conclusions of the Market Parameter reviews are documented in the MAP review finding documents.

The outcome of the Market parameter review is the estimation of valuation adjustments communicated to the middle-office, which enters it in the accounting records. The results are communicated to the Trading management during the Valuation Review Committees. The opinion of the control functions prevails, however, significant and persistent disagreement can be escalated to the PFC.

### **Model Approval and Reviews**

The governance of model controls is described in the Valuation Methodology Control Policy (VMCP).

Front office quantitative analysts design and propose the methodologies used to value the product and measure the risks that are used to take trading decisions. The research team and IT are responsible for the implementation of these models in the systems.

The independent control of the valuation models falls under the responsibility of RISK and includes:

- model validation, by which a formal decision to approve or reject a model is taken, including following any modification of the valuation methodology called a “Valuation Model Event”. In all cases, the approval decisions are taken by a senior RISK analyst during a specific VMC. The review required by the validation process can be fast track or comprehensive; in the latter case, the reasons and conditions for approval are detailed in a model approval document;
- the review of models can be conducted at inception (linked to approval) or during the life of a model (re-calibration); it consists of an examination of the suitability of the model used to value certain products in the context of a given market environment;
- the control of the use and implementation of models, consists of continuous control of the correct parameterisation and configuration of the models as well as their suitability for the relevant products.

### **Reserve and other valuation adjustments**

RISK defines and calculates “reserves”. These are adjustments to the market or model value affecting both the accounting valuation and regulatory capital. They can be considered either as the exit cost of a position or as a premium for risks that cannot be diversified or hedged, as appropriate.

The reserves primarily cover:

- the bid-offer spreads and liquidity risk;
- the model or market parameters uncertainties;
- the reduction of non-hedgeable risks (smoothing digital or barrier pay-offs).

A general valuation adjustment policy exists. Reserve methodologies are documented by RISK for each product line and these documentations are updated regularly. The analysis of reserve variations is reported at the monthly VRC.

Reserve methodologies are improved regularly and any change is a Valuation Model Event. Reserve improvements are generally motivated by the conclusion of a model review or by the calibration to market information during the Market parameter review process.

Additional Valuation Adjustments (AVA) are calculated in accordance with the Commission delegated Regulation (EU) No. 2016/101.

This delegated regulation supplements the requirements of article 105 of the CRR with regard to regulatory technical standards for prudent valuation of financial instruments in the trading portfolio. It specifies that the scope of application of these requirements covers all instruments measured according to article 34 of the CRR, based on the proportion of the accounting valuation change that impacts Tier 1 capital.

The regulatory technical standards set out the definitions and a framework for measurement and control for the elements of valuation uncertainty that must be considered when determining a prudent valuation under article 105. The standard also sets a target level of valuation certainty: the Bank must be 90% confident that it could liquidate the instrument at a better price than the prudent valuation.

To apply these requirements, the first step is to define Prudent Valuation Adjustments (PVA). These adjustments correspond to the different types of risks and costs that could lead to exit costs, relative to the mid-market value (or the expected value). The main categories are the liquidation cost, the risk related to uncertainties regarding market prices, concentration risk and valuation model risk. PVAs are calculated for each exposure on a granular level.

Based on these PVAs and for each exposure and risk type, BNP Paribas calculates the AVA (Additional Valuation Adjustments) that may be necessary, in addition to the reserves already taken into account in the valuation for the same exposure and risk type, to achieve the target valuation certainty level.

For some types of risk, the calculation of AVAs includes a diversification effect. This reflects the fact that the amount of the additional adjustments that are necessary with respect to all positions are less than the sum of the additional adjustments that may be required for the positions or risks taken individually.

The AVA amounts are deducted from Common Equity Tier 1 capital.

## **Day One profit or loss**

Some transactions are valued with non-observable parameters. Accounting norms require the recognition of any Day One P&L where these parameters are used. The deferred net margin on reserves is recognised through profit or loss in proportion to the anticipated duration of the transaction or the period for which the inputs will be non-observable.

RISK works with Finance, middle-offices, and business lines on the process of identifying and handling these profit and loss items, in order to determine whether a type of parameter or transaction is observable or not in accordance with the observability rules, which are moreover duly documented and approved in the Valuation Methodology Committee.

The P&L impact of the P&L deferral is calculated by the middle-office or the Finance teams, according to the scope.

The accounting treatment of the deferred margin is explained in note 1.f.10 *Determination of fair value* to consolidated the financial statements.

## **MARKET RISK EXPOSURE**

Market risk is first analysed by systematically measuring portfolio sensitivity to various market parameters. The results of these sensitivity analyses are compiled at various aggregate position levels and compared with market limits.

### **Risk monitoring set up and limit setting**

The Group uses an integrated system to follow the trading positions on a daily basis and manage VaR calculations. This system not only tracks the VaR, but also detailed positions and sensitivities to market parameters based on various criteria (such as by currency, product, counterparty). This system is also configured to include trading limits, reserves and stress tests.

Responsibility for limit setting and monitoring is delegated at three levels, which are, in order of decreasing importance: FMRC, followed by the Head of the business line and finally the manager of a trading portfolio. Limits may be changed either temporarily or permanently, in accordance with the level of delegation and the prevailing procedures. Appropriate escalation mechanisms are in place to ensure that the independent view from the RISK Function on the level of limits is heard.

### **Core risk analysis and reporting to Executive Management**

RISK reports, through various risk analyses and dashboards, to Executive Management and business lines' Senior Management on its risk analysis work (limit, VaR monitoring, core risk analysis, etc.). The reporting and diffusion of the main summary reports on risk are carried out by the MFI MI (Markets and Financial Institutions - Management Information) team within RISK.

The following reports are generated on a regular basis:

- weekly "Main Position" reports for each business line (equity derivatives, commodities, credit G10 rates and FX & Local Markets), summarising all positions and highlighting items needing particular attention; these reports are mainly intended for business line managers;
- monthly local "bottom-up" stress testing reports for Executive Management identifying key risk concentrations around the globe;
- supporting documentation for the FMRC comprising markets and risk event summaries, global counterparty exposure summary, VaR/Stressed VaR evolution, market and counterparty risk stress testing and capital evolution summaries, market and counterparty risk backtesting;
- geographical and global risk dashboards;
- reports on valuation adjustments in the trading book, in particular regarding market and CVA sensitivities.

## VaR (Value at Risk)

The VaR is a statistical measure indicating the worst loss expected for a given portfolio over a given time horizon and within a given confidence interval under normal market movements. It is not a maximum loss and it can potentially be exceeded in some cases, for example in the event of abnormal market conditions.

The BNP Paribas VaR calculation uses an internal model which has been approved by the banking supervisor. The BNP Paribas VaR methodology aims to accurately compute a one-day Value at Risk at the 99% confidence level.

The VaR calculation is based on a Monte-Carlo approach, which not only performs normal or log-normal simulations but also accounts for the non-normality often observed in financial markets as well as correlation between risk factors. An equally weighted one-year rolling window of historical market data (updated fortnightly) is used to calibrate the Monte-Carlo simulation.

The principal groups of simulated factors include: interest rates, credit spreads, exchange rates, equity prices, commodities prices, and associated volatilities. Changes in risk factors are proportional (share prices, volatility, CDS spreads) or absolute (rates excluding OIS, spreads, repo rates, correlations).

The valuation method used varies depending not upon the product but upon the type of risk we are capturing. To generalise, the methods used are either sensitivity based or full revaluation based on grid interpolation to incorporate both linear and, especially for derivatives, non-linear effects. In both cases, BNP Paribas calculates the general and specific risk as a whole, taking into account the diversification effect by correlating market parameters.

The algorithms, methodologies and sets of indicators are reviewed and improved regularly to take into account the capital market evolution.

The scope of the BNP Paribas internal model covers the majority of capital market activities (Global Markets, ALM Treasury). As an indication, market risk based on the standardised approach (excluding securitisation positions in the trading book) represented less than 5% of the total market risk capital requirement at 31 December 2022, including foreign exchange risk.

VaR is a statistical measure that does not take into account losses outside a given confidence interval and does not apply to losses related to intraday market movements. Other risk measures, such as Stressed VaR (SVaR), IRC and CRM, complement the BNP Paribas Group's market risk monitoring and management system.

### Evolution of the VaR (1-day, 99%)

The VaR set out below are calculated from an internal model, which uses parameters that comply with regulations in place. They correspond to measurements taken into account within the framework of monitoring market limits. They are based on a one-day time horizon and a 99% confidence interval.

In 2023, total average VaR for BNP Paribas was EUR 31 million (with a minimum of EUR 23 million and a maximum of EUR 44 million), after taking into account the -EUR 39 million netting effect between the different types of risks. These amounts break down as follows:

**TABLE 84: VALUE AT RISK (1-DAY, 99%)** [Audited]

| <i>In millions of euros</i>   | Year to 2023           |           |                        |              | Year to 2022 |              |
|-------------------------------|------------------------|-----------|------------------------|--------------|--------------|--------------|
|                               | Minimum <sup>(*)</sup> | Average   | Maximum <sup>(*)</sup> | Last measure | Average      | Last measure |
| Interest rate risk            | 19                     | 28        | 44                     | 31           | 24           | 27           |
| Credit risk                   | 8                      | 11        | 33                     | 9            | 11           | 10           |
| Foreign exchange risk         | 5                      | 10        | 21                     | 7            | 7            | 9            |
| Equity price risk             | 9                      | 14        | 28                     | 11           | 15           | 12           |
| Commodity price risk          | 3                      | 7         | 13                     | 5            | 17           | 7            |
| Netting effect <sup>(*)</sup> |                        | (39)      |                        | (30)         | (40)         | (36)         |
| <b>TOTAL VALUE AT RISK</b>    | <b>23</b>              | <b>31</b> | <b>44</b>              | <b>33</b>    | <b>34</b>    | <b>30</b>    |

(\*) Note that the minimum and maximum figures shown above for the various risk types are computed on a standalone basis (i.e. independently from each other as well as the total VaR). While the minimum or maximum for each risk type may not necessarily be observed on the same date, minimum/maximum netting effects are not considered relevant.

(\*\*) For minima and maxima, total VaR cannot be read as the sum of VaR by risk type.

The VaR (1 day, 99%) stood at a low level throughout 2023 thanks to prudent management.

## Backtesting the VaR

RISK continuously tests the accuracy of its internal model through a variety of techniques, including in particular a regular comparison over a long-term horizon between actual daily losses on capital market transactions and one-day VaR.

This backtesting consists of making a comparison between the daily global trading book VaR and the actual result except fees and commissions. In accordance with the regulation, BNP Paribas supplements this “actual backtesting” method with a comparison between the daily VaR and the hypothetical result generated by the trading book, which is also known as “hypothetical backtesting”. The hypothetical result includes all components of the actual result, calculated on the previous day’s positions, only incorporating changes in market parameters. A backtesting event is declared when a real or hypothetical loss exceeds the daily VaR amount. The confidence interval selected for calculating daily VaR is 99%, which in theory means the observation of two to three events per year.

The number of events is calculated at least quarterly and is equal to the highest of the number of excesses for the hypothetical and actual variations in the portfolio value.

**FIGURE 11: COMPARISON BETWEEN VAR (1-DAY, 99%) AND DAILY TRADING REVENUE (EU MR4)**

In 2023, only one backtesting event at Group level was noted:

- 15 March 2023: this hypothetical loss was due to a market rally on 16 March, in an unfavourable context for Silicon Valley Bank and Credit Suisse, which resulted in cumulative losses within different business lines of the Bank.

## Quarterly change in VaR

**FIGURE 12: QUARTERLY CHANGE IN VAR (1-DAY, 99%)**

## Distribution of daily revenue

The following histogram presents the distribution of the actual daily trading revenue of BNP Paribas, including intra-day revenues, fees and commissions. It indicates the numbers of trading days during which the revenue reached each of the levels marked on the x axis, in millions of euros.

**FIGURE 13: DISTRIBUTION OF ACTUAL DAILY TRADING REVENUE**

Trading activities generated an actual positive result for 99% of the trading days in 2023 (versus 95% in 2022).

## Evolution of the VaR (10-day, 99%)

The VaR set out below are calculated from an internal model, which uses parameters that comply with the method recommended by the Basel Committee for determining estimated Value at Risk. They correspond to measurements taken into account within the framework of monitoring market limits. These are based on a ten-day time horizon and a 99% confidence interval, extrapolated from 1-day VaR amounts with the same confidence interval, by multiplying by a factor equal to the square root of ten.

In 2023, total average VaR (10-day, 99%) for BNP Paribas is EUR 99 million (with a minimum of EUR 71 million and a maximum of EUR 141 million), after taking into account the -EUR 123 million netting effect between the different types of risks. These amounts break down as follows:

**TABLE 85: VALUE AT RISK (10-DAY, 99%)** [Audited]

| <i>In millions of euros</i>   | Year to 2023            |           |                         |              | Year to 2022 |              |
|-------------------------------|-------------------------|-----------|-------------------------|--------------|--------------|--------------|
|                               | Minimum <sup>(**)</sup> | Average   | Maximum <sup>(**)</sup> | Last measure | Average      | Last measure |
| Interest rate risk            | 59                      | 90        | 139                     | 98           | 76           | 86           |
| Credit risk                   | 27                      | 36        | 106                     | 29           | 34           | 32           |
| Foreign exchange risk         | 17                      | 31        | 68                      | 22           | 22           | 28           |
| Equity price risk             | 27                      | 43        | 89                      | 35           | 48           | 39           |
| Commodity price risk          | 10                      | 22        | 40                      | 16           | 53           | 22           |
| Netting effect <sup>(*)</sup> |                         | (123)     |                         | (95)         | (125)        | (113)        |
| <b>TOTAL VALUE AT RISK</b>    | <b>71</b>               | <b>99</b> | <b>141</b>              | <b>105</b>   | <b>106</b>   | <b>95</b>    |

(\*) Note that the minimum and maximum figures shown above for the various risk types are computed on a standalone basis (i.e. independently from each other as well as the total VaR). While the minimum or maximum for each risk type may not necessarily be observed on the same date, minimum/maximum netting effects are not considered relevant.

(\*\*) For minima and maxima, total VaR cannot be read as the sum of VaR by risk type.

## Stressed VaR

Stressed VaR is calibrated over a specified full twelve-month period, including a crisis period. This period applies across the Group, which must have comprehensive market data to calculate the risk measurements and remain relevant when applied to the current trading book. An expert committee reviews the period on a quarterly basis in accordance with a quantitatively informed approach among the three scenarios that generate the maximum stressed risk measures.

The current reference period for calibrating stressed VaR is from 3 January 2008 to 31 December 2008.

BNP Paribas uses the same calculation method as for calculating VaR, with market parameters determined based on this reference period.

The SVaRs presented below are based on a one-day time horizon and a 99% confidence interval and correspond to measurements taken into account within the framework of monitoring market limits.

The SVaR (1-day, 99%) experienced a downward trend in the second half of 2023 due to the activity in domestic and emerging markets.

**TABLE 86: STRESSED VALUE AT RISK (1-DAY, 99%)**

| <i>In millions of euros</i> | Year to 2023 |         |         |              | Year to 2022 |              |
|-----------------------------|--------------|---------|---------|--------------|--------------|--------------|
|                             | Minimum      | Average | Maximum | Last measure | Average      | Last measure |
| Stressed Value at Risk      | 60           | 75      | 113     | 70           | 75           | 70           |

## Incremental Risk Charge (IRC)

The IRC approach measures losses due to default and ratings migration at the 99.9% confidence interval (i.e. the maximum loss incurred after eliminating the 0.1% worst events) over a capital of one year, assuming a constant level of risk. The scope to which IRC applies mainly includes plain vanilla credit products (bonds and CDS, excluding securitised products) from the trading book.

The calculation of IRC is based on the assumption of a constant level of risk over the one-year capital horizon, implying that the trading positions or sets of positions must be rebalanced during the one-year horizon in a manner that maintains the initial risk level. Positions that have reached maturity or are in default are thus rolled over at the beginning of the liquidity horizon.

The model, developed internally, is built around a rating-based simulation for each obligor, which captures both the risk of the default as well as the risk of rating migration. The dependency between debtors is integrated into a multi-factor asset return model, resulting in the rating migration, potential default and changes in credit spreads.

The performance of each debtor depends on four factors:

- a specific factor;
- three systemic factors including one global factor, one geographical factor among three regions and one sector factor among twelve, one of which is dedicated to sovereign entities.

The model is calibrated quarterly over the period from 1 February 2010 to the end of the quarter preceding the calculation date based on the CDS spread data series, and the price of corporate and institutional shares.

The simulated returns are used to calculate the probability of change in rating – which is assigned to a credit rating scenario, then a credit spread – and to define a price variation grid associated with each debtor within a credit rating scenario. Positions that can be broken down by debtor are thus valued in the various simulated scenarios. Non-linear products such as credit index options are revalued directly.

IRC was up, with an average of EUR 288 million in 2023. This increase is linked to the increase in the risk of positions in European and US credit index options.

### **Comprehensive Risk Measure (CRM) for credit correlation portfolio**

CRM is an additional capital charge to the IRC which applies to the credit correlation portfolio (excluding securitisation products) from the trading book. It measures potential losses from a variety of specific price change risks (spread, correlation, recovery, credit migration, *etc.*) at the 99.9% confidence interval (*i.e.* the maximum loss incurred after eliminating the 0.1% worst events) over a capital and liquidity horizon or rebalancing frequency of one year, assuming a constant level of risk over this horizon.

The corporate correlation activity is an activity that consists of trading and risk managing mainly bespoke corporate CDOs and their hedges using single name CDS, CDS indices and index tranches. This activity falls under the structured credit activity trading within the Global Credit business line of Global Markets.

The valuation framework uses both market observable prices (particularly used for CDS, index and index tranches) and data established based on models for the implicit correlations and recovery rates, the same model of returns and dependency between debtors, similar to that used for the IRC. The calibration is carried out on an annual basis. The correlation portfolio comprises of complex non-linear products. Each product is revalued directly in the various simulated scenarios.

## Summary of measures taken into account within the framework of monitoring market limits

**TABLE 87: IMA VALUES FOR TRADING PORTFOLIOS (EU MR3)**

|                                   |               | a                |                  |

(\*) Incremental Risk Charge.

(\*\*) Comprehensive Risk Measure.

## Securitisation positions in trading book outside correlation portfolio

For securitisation positions treated as financial assets at fair value for accounting purposes, changes in market value, except accrued interest on fixed-income securities, are recognised in the profit and loss account under “Net gain/loss on financial instruments at fair value through profit or loss”.

For ABS positions outside the correlation book, the standardised capital charge applies (as per the standard method for banking books). The capital requirements are determined on the basis of the asset's external rating. The capital calculation is based on the second-worst rating of the three rating agencies.

**TABLE 88: BREAKDOWN OF TRADING BOOK SECURITISATION POSITIONS OUTSIDE CORRELATION BOOK BY ASSET TYPE (EU SEC2)**

## MARKET RISK STRESS TESTING FRAMEWORK

A range of stress tests are performed to simulate the impact of extreme market moves on the value on the global trading books. Stress tests cover all market activities applying a range of stressed market conditions.

### Scenarios

The fundamental approach of the current trading book stress testing framework combines “bottom-up” and “top-down” stress testing:

- Macro Level Scenarios (top-down) comprise the evaluation of a set of global level stress test. These scenarios assess the impact of severe market moves on BNP Paribas trading positions related to large regional or market shock events. They can be based on historical events or forward-looking hypothetical scenarios. Scenarios include events such as an emerging markets crisis, credit crunch and a stock market crash, and some are based on past crises.

The official macro stress tests scenarios currently comprise a range of eight different stress tests. The results of these scenarios are reviewed at each Financial Markets Risk Committee (FMRC). The scenarios are:

- scenario 1: Unexpected Rate Hike, driving short-term rates higher with a flattening of the interest rate curve,
- scenario 2: Stock Market Crash, with a flight to quality assets leading to a drop and a steepening of the interest rate curve,
- scenario 3: Emerging Market Crisis, generic and not one specific region,
- scenario 4: Credit Crunch, leading to general risk aversion,
- scenario 5: Euro Crisis, low GDP expectations, potential threat of a country leaving the euro and a significant weakening of the currency,
- scenario 6: Energy Shock driven by geopolitical turmoil with serious consequences on energy markets,
- scenario 7: Crisis in the United States, linked to an event such as a US debt ceiling deadlock,
- scenario 8: Risk-On scenario: rally in equity and emerging markets, low implied volatility and drop in implied volatility in all markets (effectively a return to risky assets);
- Micro Level Scenarios (bottom-up): instead of looking at the effect on the global portfolio, these types of scenarios aim to highlight risk exposures on specific trading desks, regions, or risk concentrations. This bottom-up approach enables the use of more bespoke stress scenarios (such as complex product dislocations or idiosyncratic risk) and hence allows the detection of areas of potential losses which may not be easily achieved under the global macroeconomic scenario. This bottom-up process also facilitates the classification of risk areas into those where there may be less liquidity or where the risk may be more structural in nature.

### Process

It is the combination of such top-down and bottom-up scenarios that leads to the construction of the FMRC Adverse scenario for the trading books. The official top-down stress scenarios are presented at each FMRC meeting along with the FMRC Adverse global stress scenarios and any bottom-up stress tests on complex products yielding significant results.

The results of all stress tests are reviewed regularly by Executive Management and sent to the Board of directors.

The scenarios take market liquidity into account by simulating the drying up of certain assets or product liquidity as the stress event unfolds. To understand this process, it can be simplified by considering an approach where the time horizon for the stress shock can vary between different instruments/assets (hence more advanced scenarios can take certain idiosyncratic factors into account). Moreover, it may sometimes be required to quantify the impact of a stress event occurring with re-hedging assumptions factored into part of the exposure under stress.

Stress testing is governed by the Stress Testing Steering Committee (STSC). The committee meets approximately monthly and sets the direction of all internal risk departmental stress scenario developments, infrastructure, analysis and reporting. The STSC governs all internal stress testing matters relating to both market and counterparty risk and decides upon the detailed definition of the FMRC Stress Tests.

Stress testing is the core element of the tail risk analysis, which is also captured through the stressed Value at Risk, the Incremental Risk Charge and the Comprehensive Risk Measure. Furthermore, the risk of a rare event used in the form of the

“average loss in addition to VaR” (Expected Shortfall) in allocating capital in respect of market risk between business lines is an additional element allowing tail risk in the management and monitoring of market risk to be taken into account.

## MARKET RISK RELATED TO BANKING ACTIVITIES

---

Interest rate and foreign exchange risks related to banking intermediation activities and investments are managed by the cross-functional ALM Treasury Department. At Group level, the ALM-Treasury Department is directly overseen by the Group Senior Executive Advisor. BNP Paribas SA's ALM Treasury Department exercises functional authority over the ALM Treasury teams of each entity or group of entities covering the entire Group perimeter. Strategic decisions are made by the Asset and Liability Committee (ALCo), which oversees ALM Treasury's activities. These committees have been set up at Group, entity or group of entities level.

The foreign exchange risk gives rise to a weighted assets calculation under Pillar 1. The interest rate risk falls under Pillar 2.

### FOREIGN EXCHANGE RISK

#### Calculation of risk-weighted assets

Foreign exchange risk relates to all transactions part of the banking book.

Group entities calculate their net position in each currency, including the euro. The net position is equal to the sum of all asset items less all liability items plus off-balance sheet items (including the net forward currency position and the net delta-based equivalent of the currency option book), less structural, non-current assets (long-term equity interests, property, plant and equipment, and intangible assets) subject to exemption. These positions are converted into euros at the exchange rate prevailing on the reporting date and aggregated to give the Group's overall net open position in each currency. The net position in a given currency is long when assets exceed liabilities and short when liabilities exceed assets. For each Group entity, the net currency position is balanced in the relevant currency (*i.e.* its reporting currency) such that the sum of long positions equals the sum of short positions.

The rules for calculating the capital requirement for foreign exchange risk are as follows:

- matched positions in currencies of Member States participating in the European Monetary System are subject to a capital requirement of 1.6% of the value of the matched positions;
- CFA and CFP francs are matched with the euro, and are not subject to a capital requirement;
- positions in closely correlated currencies are subject to a capital requirement of 4% of the matched amount;
- other positions, including the balance of unmatched positions in the currencies mentioned above, are subject to a capital requirement of 8% of their amount.

The amounts involved are set out in Table 85: *Market risk under the standardised approach (EU MR1)*.

#### Foreign exchange risk and hedging of net income generated in foreign currencies [Audited]

So-called "operating" foreign exchange risk exposure relates to net earnings generated by activities conducted in currencies other than the functional currency of the entity concerned. The Group's policy is to hedge the variability of its net income due to currency movements. To this end, earnings generated in a currency other than the functional currency of a given entity of the Group are hedged locally.

#### Foreign exchange risk and hedging of net investments in foreign operations [Audited]

The so-called "structural" foreign exchange position of an entity relates to investments in currencies other than the functional currency. This position mainly results from the capital endowment of the branches and equity investments in foreign currencies financed by buying the investment currency. This structural foreign exchange position, adjusted for any intangibles, constitutes patrimonial exposure.

The Group's policy is to hedge portfolio exposure to liquid currencies, while at the same time maintaining the solvency ratio's limited sensitivity to exchange rate fluctuations. For this, borrowings in the same currency as the investment are used as an alternative to financing by purchasing the currency in question. Borrowings are recognised as hedges of investments.

### INTEREST RATE RISK [Audited]

|  |
|--|
| Interest rate risk in the banking book, or global interest rate risk, is the risk of variability in results as a result of mismatches in interest rates, maturities and nature between assets and liabilities in the banking book. This risk arises in non-trading portfolios. |
|--|

## Organisation of the Group interest risk management

The Board of directors assigns responsibility to the Chief Executive Officer for management of interest rate risk in the banking book. The Board of directors is informed quarterly on the principles governing interest rate policy and the Group's position through the Internal Control, Risk Management and Compliance Committee (CCIRC).

The Chief Executive Officer delegates management responsibility to the Group ALM Treasury Committee (Asset and Liability Management Committee). The permanent members of the Group ALM Treasury Committee are the Group Senior Executive Advisor (Chairman), the Delegate Deputy Chief Operating Officers, the Group Chief Risk Officer, the Group Chief Financial Officer, the Group ALM Treasury Head. The Head of General Inspection and the Head of Compliance are also invited. This committee is responsible for tracking interest rate risk monitoring indicators, proposing the Group's interest rate risk profile and assigning limits.

ALM Treasury is responsible for the analysis of the management proposals and operational implementation of decisions related to managing the interest rate risk of the banking book as part of its delegated management.

The RISK Function participates in the Group ALM Treasury Committee and the local ALM Treasury Committees (ALCo) and oversees implementation by ALM Treasury of the relevant decisions made by these committees. It also provides second-line control by reviewing the models and risk indicators, monitoring the level of risk indicators and ensuring compliance with the limits assigned.

The banking book consists of the Group's total bank balance sheet, excluding trading book transactions. This includes intermediation transactions (deposits, loans, *etc.*), non-commercial balance sheet items (equity, fixed assets, *etc.*) and banking book risk management activities, including derivatives used for the management of interest rate risk on the banking book (notably when they are ineligible for hedge accounting under IFRS).

Banking book interest rate risk in each BNP Paribas entity is systematically transferred to ALM Treasury, through internal analytic contracts or lending/borrowing transactions. For the Group as a whole, ALM Treasury is responsible for managing the interest rate risk transferred in this way.

Decisions concerning the management of interest rate risk are made and monitored during monthly or quarterly committee meetings by entity or group of entities, attended by representatives of local ALM Treasury, Group ALM Treasury, FINANCE & STRATEGY and RISK Functions and senior management of the entities and/or businesses.

## Measurement of interest rate risk

Rate positions are measured taking into account the specific features of the risks managed. Hence, the Group has defined the concepts of standard rate risks and structural rate risks. The standard rate risk corresponds to the general case, namely when it is possible to define uniquely the most appropriate hedging strategy for a given transaction. The structural rate risk is the interest rate risk for equity and non-interest-bearing current accounts: the investment of these balance sheet items generates regular revenues but are sensitive to interest rate levels. However, it is not possible to define a single hedging strategy to fully neutralise this sensitivity. In this case, the Group included all the possible so-called "neutral" management strategies in terms of interest rate risk.

Interest rate risks are analysed in terms of interest rate gaps that measure for each future period the potential rate characteristic mismatches between assets and liabilities (fixed rate and indexation type). In the interest rate gaps, the optional effects, in particular linked to behavioural options, are embedded and translated into their delta equivalent. Value indicators are also used.

The maturity split is determined on the basis of the contractual terms of the transactions and observations of customer behaviour. For Retail Banking products, behavioural models are based on historical or forward data and econometric studies. These possible management strategies notably relate to early redemption and savings accounts. Moreover, the maturities of non-interest-bearing current accounts and of equity are calculated according to a more conventional approach defining a range of investments taking into account the objective of stabilising results and stability of deposits. For current accounts, average maturities are less than five years and the proportion invested beyond 10 years is negligible.

Incorporating dynamic changes in balance sheet items, the interest rate risk is measured through indicators of the sensitivity of revenues to interest rate changes on a going concern basis. This enables the partial or zero correlation between customer interest rates and market interest rates to be taken into account on the one hand, and the volume sensitivities to interest rates on the other hand, which create a risk to future revenues.

The choice of indicators and risk modelling are reviewed by RISK. The results and the adjustments following these reviews are presented and monitored to the committees on a regular basis.

The interest rate risk measurement indicators are consistently presented to the ALCos and serve as the basis for operating risk management decisions.

## Risk limits

Interest rate risk indicators span the entire banking book as at 31 December 2022.

The interest rate gaps are subject to interest rate risk limits across all time horizons. These limits are calibrated based on the nature of the risks (standard or structural) at Group and entity level. They are reviewed annually.

The Group's revenue sensitivity indicator is subject to limits and a warning threshold relative to the overall sensitivity level, also broken down by division and the main entities. Moreover, the Group regularly monitors the impact of stress scenarios on its revenues.

Economic hedges transactions that do not qualify for hedge accounting under IFRS are subject to specific limits.

### Sensitivity of revenues to global interest rate risk

Net interest income sensitivities are calculated on the total banking book, over one-, two- and three-year rolling timeframes notably, for a parallel, instantaneous and definitive increase and decrease in market rates on all currencies over all the terms of  $\pm 50$  basis points ( $\pm 0.5\%$ ). These sensitivities are measured as deviations from the NII projection for the central rate scenario corresponding to future interest rates expected by the markets at estimation date (e.g. forward rates seen at the end of December 2023 for sensitivities at the end -2023). Other scenarios are also used to measure NII sensitivities, including instantaneous, parallel and definitive shocks of  $\pm 200$  basis points.

The sensitivities include the direct impacts of market rates and business trends. Indirect effects on commercial activity linked to changes in outstandings and customer rates, are also taken into account. Thus, for the sake of prudence, increases in sight non-interest-bearing current account balances, observed during the period of low or negative interest rates, are considered as situational to the low interest rates environment, and are assumed to decrease gradually when short-term rates return to sufficiently positive levels. Having maintained interest rates at significant positive levels, has gradually led to sensitivities levels that existed before the low interest rate environment, as illustrated below by end -2023 sensitivities (end -December interest rates being punctually at lower levels compared to previous and subsequent weeks).

**TABLE 90: SENSITIVITY OF REVENUES TO GLOBAL INTEREST RATE RISK BASED ON A 50 BASIS POINTS INCREASE OR DECREASE IN THE INTEREST RATES (EU IRRBB1A) [Audited]**

| <i>In millions of euros</i> | <b>31 December 2023</b> |                         |

### Sensitivity of the value of the net assets of the banking intermediation activity

As the assets and liabilities of the Group's banking intermediation business are not intended to be sold, they are not recognised or managed on the basis of their theoretical economic value measured by discounting future cash flows. Similarly, the theoretical economic value of the net assets does not affect the Group's capital.

However, pursuant to the regulatory requirements and calculation methods laid down by the European Banking Authority (EBA), the ratios of sensitivity of the theoretical economic value of the net assets of the intermediation business in relation to Tier 1 capital are regularly calculated through 6 interest rate scenarios defined by the EBA (i.e. parallel up/down, steepening/flattening, short rates up/down). Moreover, the EBA defines thresholds for risk-free rates by maturity (interpolated yield curve between -1.5% for the overnight rate and 0% for the 50-year yields) These ratios are compared to the -15% threshold used by the supervisor to identify situations where the interest rate risk in the banking book could be material.

The ratios at end-December 2023 are presented in the table below and are significantly below the materiality threshold of -15%. In the event of parallel down interest rate scenario, the ratio decreases compared to end-December 2022 and stands at -5.4%.

**TABLE 91: SENSITIVITY OF TIER 1 CAPITAL ECONOMIC VALUE TO THE 6 REGULATORY STRESS TEST SCENARIOS (EU IRRBB1B)**

|                             |   | 31 December 2023                    |              |   |
|-----------------------------|---|-------------------------------------|--------------|---|
|                             |   | Interest rates shock <sup>(*)</sup> |              | Change in the economic value as a percentage of equity (Tier 1) |
| <i>In millions of euros</i> |   | Overnight rate                      | 10-year rate |   |
| 1                           | Parallel up   | 2.00%                               | 2.00%        | 0.3%  |
| 2                           | Parallel down   | -2.00%                              | -2.00%       | -5.4%   |
| 3                           | Steeper (decrease in short term rates, increase in long term rates)   | -1.70%                              | 0.80%        | 1.3%  |
| 4                           | Flattener (increase in short term rates, decrease in long term rates) | 2.10%                               | -0.40%       | -3.1%   |

| 6                           | Short rates down  | -2.50%                              | -0.20%       | 2.4%  |

(\*) Change in interest rate level (OIS swaps) applied for each scenario and application of floor rates (for the euro).

## HEDGING OF INTEREST RATE AND FOREIGN EXCHANGE RISKS

Hedges initiated by the Group consist mainly of interest rate or currency hedges using derivative financial instruments (swaps, options and forwards).

Depending on the hedging objective, derivative financial instruments used for hedging purposes are qualified either as fair value hedges, cash flow hedges, or hedges of net investments in foreign operations. Each hedging relationship is formally documented at inception. The documentation describes the hedging strategy, identifies the hedged item and the hedging instrument, and the nature of the hedged risk; and describes the methodology used to test the expected (prospective) and actual (retrospective) effectiveness of the hedge.

### Global interest rate risk

The Bank's strategy for managing global interest rate risk is mainly based on closely monitoring the sensitivity of the Bank's net income to changes in interest rates, factoring in all interest rate risks. The aim is to ensure the stability and regularity of the interest margin. This monitoring is based on an extremely accurate assessment of the risks incurred so that the Bank can determine the hedging strategy, after taking into account the effects of netting the different types of risk. These hedging strategies are defined and implemented by entity and by currency.

The hedges can comprise swaps and options and are typically accounted for as fair value hedges or cash flow hedges. They may also take the form of government securities and are classified on an accounting basis as “Financial assets at amortised cost” or “Financial assets at fair value through equity”.

2023 was characterised by a marked slowdown in the rise of price indices due to less difficult logistics and more restrictive policies of main central banks. The latter ones continued to reduce their balance sheets and to increase their key rates during the first three quarters of the year (+2.00% in Europe, +1.75% in the United Kingdom, +1.00% in the United States of America). To the extent that the outlook related to price increase returns to commonly accepted levels of 2.00% and that the outlook related to economic activity displays a relative slowdown, financial markets began to anticipate declines in key interest rates in 2024 from the last quarter of 2023, particularly in Europe and the United States.

Bonds' interest rates rose from January to October (10-year Bund from 2.00% to 3.00%, US 10-year debt from 3.30% to 5.00%) before a contraction until the end of the year (the 10-year Bund interest rate having ended below 2.00% and the US 10-year debt at 3.80%).

### **Structural foreign exchange risk [Audited]**

Currency hedges are contracted by the ALM Treasury in relation to the Group's investments in foreign currencies and its future foreign currency revenues. Each hedging relationship is formally documented at inception. The documentation describes the hedging strategy, identifies the hedged item and the hedging instrument, and the nature of the hedged risk and describes the methodology used to test the expected (prospective) and actual (retrospective) effectiveness of the hedge.

A hedging relationship is applied and documented for investments in subsidiaries and branches financed by foreign currency loans so as to record movements in exchange rates symmetrically and avoid impacts on the profit and loss account. In this context, these instruments are designated as net investment hedges. The amount of these loans stood at EUR 16 billion at 31 December 2023, compared with EUR 23 billion at 31 December 2022. The changes in value related to exchange differences recognised directly in equity with respect to these hedges amounted to +EUR 339 million in 2023, compared with - EUR 303 million at 31 December 2022.

During the 2023 financial year, no net investment hedging relationships were disqualified.

The amount recorded in the profit and loss account for 2023 with respect to the ineffective portion of hedges of net investments is immaterial.

### **Hedging of financial instruments recognised in the balance sheet (Fair Value Hedge)**

Fair value hedges of interest rate risks relate either to identified fixed-rate assets or liabilities, or to portfolios of fixed-rate assets or liabilities. Derivatives are contracted to reduce the exposure of the fair value of these instruments to changes in interest rates.

Individual assets hedging consists mainly of securities classified as “Financial assets at amortised cost” or “Financial assets at fair value through equity”; individual liabilities hedging consists mainly of fixed-income securities issued by the Group.

Hedges of portfolios of financial assets and liabilities, constructed by currency, relate to:

- fixed-rate loans (property loans, equipment loans, consumer credit and export loans);
- fixed-rate deposits (mainly demand deposits and funds deposited under home savings contracts).

To identify the hedged amount, the residual balance of the hedged item is split into maturity bands, and a separate amount is designated for each band. The maturity split is determined on the basis of the contractual terms of the transactions and historical observations of customer behaviour (early redemption assumptions and estimated default rates).

Demand deposits, which do not bear interest at contractual rates, are qualified as fixed-rate medium-term financial liabilities. Consequently, the value of these liabilities is sensitive to changes in interest rates. Estimates of future cash outflows are based on historical analyses.

For each hedging relationship, expected hedge effectiveness is measured by ensuring that for each maturity band, the fair value of the hedged items is greater than the fair value of the designated hedging instruments.

Actual effectiveness is assessed on an *ex-post* basis by ensuring that the monthly change in the fair value of hedged items since the start of the month does not indicate any over-hedging.

### **Cash flow hedge**

In terms of interest rate risk, the Group uses derivative instruments to hedge fluctuations in income and expenses arising on floating-rate assets and liabilities. Highly probable forecast transactions are also hedged. Hedged items are split into maturity bands by currency and benchmark interest rate. After factoring in early redemption assumptions and estimated default rates, the Group uses derivatives to hedge some or all of the risk exposure generated by these floating-rate instruments.

In terms of foreign exchange risk, the Group hedges against variability in components of consolidated net income. In particular, the Group may hedge future revenue flows (especially interest income and fees) derived from operations carried out by its main subsidiaries and/or branches in a currency other than their functional currencies. As in the case of interest rate hedges, the effectiveness of these hedging relationships is documented and assessed on the basis of forecast maturity bands.

The table below concerns the scope of BNP Paribas SA's medium- and long-term transactions and shows the amount of hedged future cash flows (split by forecast date of realisation), which constitute the majority of the Group's hedging transactions.

**TABLE 92: HEDGED CASH FLOWS** [Audited]

| Period to realisation<br><i>In millions of euros</i> | 31 December 2023 |              |                   |        | 31 December 2022 |              |                   |       |
|--|------------------|--------------|-------------------|--------|------------------|--------------|-------------------|-------|
|  | Less than 1 year | 1 to 5 years | More than 5 years | Total  | Less than 1 year | 1 to 5 years | More than 5 years | Total |
| Hedged cash flows                                    | 2,993            | 6,716        | 887               | 10,596 | 1,769            | 4,090        | 739               | 6,598 |

In 2023, no cash flow hedges were declassified on the grounds that achieving these future earnings would no longer be highly probable.

## 5.8 Liquidity risk

Liquidity risk is the risk that the Bank will not be able to honour its commitments or unwind or settle a position due to the market environment or idiosyncratic factors (*i.e.* specific to BNP Paribas), within a given timeframe and at a reasonable cost.

Liquidity risk reflects the risk of the Group being unable to fulfil current or future foreseen or unforeseen cash or collateral requirements, across all time horizons, from the short to the long term.

This risk may stem from the reduction in funding sources, drawdown of funding commitments, a reduction in the liquidity of certain assets, or an increase in cash or collateral margin calls. It may be related to the bank itself (reputation risk) or to external factors (risks in some markets).

The Group's liquidity risk is managed under a global liquidity policy approved by the Group's ALM Treasury Committee. This policy is based on management principles designed to apply both in normal conditions and in a liquidity crisis. The Group's liquidity position is assessed on the basis of internal indicators and regulatory ratios.

## LIQUIDITY RISK MANAGEMENT POLICY

 [Audited]

### OBJECTIVES

The objectives of the Group's liquidity management policy are to secure a balanced financing structure for the development of BNP Paribas business activities, and to ensure it is sufficiently robust to cope with crisis situations.

The liquidity risk management framework relies on:

- management indicators:
  - by volume, to ensure that businesses or activities comply with their liquidity targets set in line with the Group's funding capacity,
  - by price, *via* internal liquidity pricing;
- the definition of monitoring indicators which enable assessment of the Group's liquidity position under normal conditions and in crisis situations, the efficiency of actions undertaken and compliance with regulatory ratios;
- the implementation of liquidity risk management strategies based on diversification of funding sources with maturities in line with needs, and the constitution of liquidity reserves.

The Group's liquidity policy defines the management principles that apply across all Group entities and businesses and across all time horizons.

### GOVERNANCE

As for all risks, the Group Chief Executive Officer is granted authority by the Board of directors to manage the Group's liquidity risk. The Chief Executive Officer delegates this responsibility to the Group ALM Treasury Committee.

The Internal Control, Risk Management and Compliance Committee (CCIRC) reports quarterly to the Board of directors on liquidity policy principles and the Group's liquidity position.

The Group ALM Treasury Committee is responsible for:

- proposing the Group's liquidity risk profile at the CCIRC and the Board of directors, for review and decision;
- monitoring compliance with regulatory liquidity ratios;
- defining and monitoring management indicators and calibrating the quantitative thresholds set for the Bank's businesses;

- defining and monitoring liquidity risk indicators and associating quantitative thresholds to them if necessary;
- defining and overseeing implementation of liquidity risk management strategies, including monitoring of business lines, under normal and stressed conditions.

In particular, the Group ALM Treasury Committee is informed about funding programmes and programmes to build up liquidity reserves, simulations in crisis conditions (stress tests), and about all events that may arise in crisis situations.

The Group ALM Treasury Committee is tasked with defining the management approach in periods of crisis (emergency plan). This framework is based on:

- supervision of the emergence of a crisis by monitoring the market position and complying with thresholds set for a series of indicators;
- governance of the activation of crisis management mode and the associated responsibilities;
- identification of possible actions for managing a crisis.

The Group ALM Treasury Committee meets every month under normal conditions and more often in stressed conditions or to deal with specific issues.

The permanent members of the Group ALM Treasury Committee are the Group Senior Executive Advisor (Chairman), the Delegate Deputy Chief Operating Officers, the Chief Risk Officer, the Group Chief Financial Officer and the Group ALM Treasury Head. Other members represent the RISK Function, Finance & Strategy Function and ALM Treasury. The Head of General Inspection and the Head of Compliance are also invited.

Across the Group, ALM Treasury is responsible for the operational implementation of the Group ALM Treasury Committee's liquidity management decisions. The ALM Treasury Committees in entities or groups of entities are responsible for local implementation of the strategy decided by the Group ALM Treasury Committee to manage the Bank's liquidity risk.

ALM Treasury is responsible for managing liquidity for the entire Group across all maturities. In particular, it is responsible for funding and short-term issuance (certificates of deposit, commercial paper, *etc.*), for senior and subordinated debt issuance (MTNs, bonds, medium/long-term deposits, covered bonds, *etc.*), preferred share issuance, and loan securitisation programmes for the Group. ALM Treasury is tasked with providing internal funding to the Group's divisions, operating entities and business lines, and investing their surplus cash. It is also responsible for building up and managing liquidity reserves, which comprise assets that can be easily sold in the event of a liquidity squeeze.

RISK participates in the Group and local ALM Treasury Committees and oversees implementation by ALM Treasury of the relevant decisions made by these committees. It provides second-line control by reviewing the models and risk indicators (including liquidity stress tests), monitoring risk indicators and ensuring compliance with the limits assigned.

Finance is responsible for producing the regulatory liquidity indicators, as well as the internal monitoring indicators. Finance oversees the consistency of the internal monitoring indicators with the objectives defined by the Group ALM Treasury Committee. Finance takes also part in the Group and local ALM Committees.

## LIQUIDITY RISK MANAGEMENT AND SUPERVISION

---

Internal liquidity risk management and internal monitoring are based on a large range of indicators at various maturities. These indicators are measured on a regular basis by currency and maturity, both at Group level and entity level.

### BUSINESS LINES' INTERNAL MONITORING INDICATORS [Audited]

The management indicators relate to funding needs of Group's Business Lines under normal and stressed conditions. These indicators are part of the Group's budget management framework, with targets and regular (monthly) monitoring of the deviations from the objectives set.

#### Funding needs of the Group's businesses

The funding needs associated with the activity of the Group's businesses are managed in particular by measuring the difference between commercial funding needs (customer loans and overdrafts, trading assets, *etc.*) and commercial funding resources (customer deposits, sale of the Group's debt securities to customers, trading liabilities, *etc.*). This indicator makes it possible to measure the business lines' liquidity consumption under a normal business scenario.

It is supplemented by indicators to measure the funding needs of the business lines in one month and one year depending on the assumptions defined by European regulations in force (Liquidity Coverage Ratio) and (Net Stable Funding Ratio).

In addition to this commercial funding need indicators, the Group closely monitors the liquidity reserves and the refinancing provided by ALM Treasury, as well as the Group's structural resources (*i.e.* net own funds).

The overall management of the business funding needs, the Group's structural resources, funding and liquidity reserves made by the ALM Treasury allows the Group to achieve a structurally robust liquidity situation able to resist severe liquidity stresses.

Business lines' consumption of liquidity is thus integrated in the Group's budget process, wherein each business line estimates its future liquidity needs, in keeping with its profitability targets and capital consumption objectives. During the iterative budget

process, liquidity consumption objectives are allotted to the business lines, taking into account the funding provided by ALM Treasury and structural resources, in line with the Group's overall target. This process is regularly renewed, monitored and adjusted as appropriate throughout the year by the Group ALM Treasury Committee.

### Internal liquidity pricing

All of the Group's assets and liabilities are subject to internal liquidity pricing, the principles of which are decided by the Group ALM Treasury Committee and aim to take account of trends in the cost of market liquidity and the balance between assets and liabilities within the Group's development strategy.

### Change in the liquidity position

At end -2023, the businesses had a net liquidity surplus, as in 2022 (deposits higher than loans). Group's net equity is added to this surplus leading to an overall liquidity surplus.

In this context, the funding provided by ALM Treasury is used to finance the liquidity reserve, while also correcting the structural differences between assets and liabilities (by maturity term) and covering TLAC (Total Loss-Absorbing Capacity) requirements, as well as future Minimum Requirement for own funds and Eligible Liabilities (MREL).

The Group maintains a large surplus in liquidity.

## WHOLESALE FUNDING AND LIQUIDITY RESERVE MONITORING INDICATORS [Audited]

### Sources of wholesale funding

The Group adopted a broad definition of wholesale funding, covering all funds excluding those provided by:

- retail customers, professionals and corporates;
- institutional clients for their operating needs (e.g. portion needed for custody management);
- monetary policy and funding secured by market assets.

This definition is broader than market funding. For example, it includes medium- to long-term debt placed in funds for individuals and, in the short-term portion, non-operating deposits in the Securities Services business.

The Group has a conservative policy for the management of its wholesale funding by ensuring that it does not depend on very short-term funding and diversifying these funding sources.

Thus, wholesale funding with an original maturity of less than one month, so-called very short-term wholesale funding, is systematically "sterilised" by being placed in immediately-available deposits in central banks so that it is not used to fund the Group's business.

The Group ensures that short-term wholesale funding (with original maturity of between one month and one year) is diversified in terms of counterparty, industry and residual maturity. Any excess concentration on one of these criteria is systematically "sterilised" and placed in central bank deposits.

Medium- to long-term wholesale market funding (with original maturity over one year) is diversified in terms of investor type, distribution network, funding programme (secured or unsecured), and by geographical area to ensure diversification. Furthermore, the Group aims to optimise the term structure of its funding operations.

At end of 2023, sterilised very short-term wholesale funding totalled EUR 70.9 billion (leading to the sterilisation of an equivalent amount in the Group's liquidity reserve), diversified short-term wholesale funding totalled EUR 137.4 billion and diversified medium-to long-term wholesale funding totalled EUR 217.7 billion.

### TABLE 93: BREAKDOWN OF THE WHOLESALE FUNDING BY CURRENCY [Audited]

The breakdown of funding by currency corresponds to the Group's needs and to a diversification objective.

| 31 December 2023                             |                  |                |               |                |
|--|------------------|----------------|---------------|----------------|
| <i>In millions of euros</i>                  | EUR              | USD            | Other         | Total          |

|------------------------------|----------------|---------------|-----------------|----------------|-----------------|--------------|----------------|

Total medium- to long-term wholesale funding outstandings stood at EUR 217.7 billion at 31 December 2023 against EUR 180.5 billion at 31 December 2022.

Wholesale funding raised by the Group in the markets with an initial maturity of over 1 year reached EUR 71.7 billion in 2023, compared to EUR 51.9 billion in 2022.

### Wholesale funding trends based on regulatory changes

In addition to the Group's liquidity management targets, use of wholesale funding also satisfies regulatory requirements relating to Recovery and Resolution, with the application of the Total Loss Absorbing Capacity (TLAC) and Minimum Requirement on own funds and Eligible Liabilities (MREL) requirements (see paragraph *Recovery and resolution in Capital adequacy and capital planning* in section 5.2).

At 31 December 2023, BNP Paribas issued a total of EUR 80.3 billion (outstanding principal) of non-preferred senior debt (of which EUR 71.9 billion in debt is eligible for TLAC and MREL). This debt is composed of: public issues and private placements in various currencies with different maturities.

The main characteristics of these debt instruments are:

- issues under EMTN and US MTN programmes, non-preferred senior bonds (see article L.613-30-3-I-4 of the French Monetary and Financial Code) or unstructured debt;
- initial maturities of more than one year;
- subject to conversion or impairment before senior preferred debt but after subordinated debt;
- documentation mandatorily stating that this debt belongs to the new statutory category.

In addition, as at 31 December 2023, BNP Paribas issued a total of EUR 19.5 billion in senior preferred vanilla debt, eligible for the MREL requirement.

To meet the TLAC and MREL ratio requirements, the Group plans to issue EUR 18.5 billion of senior debt (senior preferred and senior non-preferred) in 2024, subject to market conditions. The Group had completed 19.7% of its issue programme for this category of debt as at 29 January 2024.

### MLT secured wholesale funding

MLT secured wholesale funding is measured by separating out assets representing securities and loans. Funding obtained from central banks is not included in the table below.

**TABLE 96: MLT SECURED WHOLESALE FUNDING**

|                             | 31 December 2023               |                                | 31 December 2022               |                                |

(\*) Amounts gross of haircuts.

(\*\*) Amounts net of haircuts.

MLT secured wholesale funding (outside of monetary policy) represents 7.1% of total MLT wholesale funding in 2023 (7.0% in 2022). The Bank carefully manages its proportion of secured funding and the associated overcollateralisation in order to protect creditors holding unsecured debt.

Covered bonds and securitisation programmes are the main sources of the Group's secured financing. On average, covered bonds are collateralised by 114% and securitisation programmes by 115%.

### Medium- to long-term liquidity position

The medium-to long-term liquidity positions are measured regularly at Group level by entity and by currency to evaluate the medium-to long-term resources and uses. To this end, each balance sheet item is given a maturity in an economic approach using models and conventions offered by ALM Treasury and reviewed by the RISK Function, or a regulatory approach by

applying standardised weightings of the Net Stable Funding Ratio (NSFR). For example, despite their immediate availability, the current accounts of retail customers and those linked with corporates' cash management activities always remain highly stable, even through the most severe financial crises, thus constituting stable medium- to long-term funding sources in both an economic and a regulatory approach.

## Stress tests and liquidity reserve

Liquidity stress tests are performed regularly on various maturities (one day to twelve months) based on market factors and/or factors specific to the Group and using different scenarios: idiosyncratic (*i.e.* specific to BNP Paribas), systemic crisis (affecting financial institutions), and combined crisis scenarios.

For each crisis scenario considered, borrowings and liabilities are expected to only partially renew, while loan amortisations are expected to be replaced by new loans to protect the commercial franchise, off-balance sheet financing commitments are expected to be used, and market assets are expected to lose their market liquidity. Commitment renewal and utilisation are differentiated in intensity and in time, based on client type (individuals, small and medium enterprises, corporates, financial institutions, *etc.*) and/or the type of underlying for secured borrowings and loans (repos/reverse repos). Stress scenarios also cover calls for additional collateral (*e.g.* increased margin calls for collateralised derivatives, impact of "rating trigger" clauses).

The liquidity reserve consists of Group assets held by ALM Treasury and the capital market businesses. The liquidity reserve comprises:

- deposits with central banks;
- available assets that can be immediately sold on the market or through repurchase agreements (bonds or shares);
- available securities and receivables that can be refinanced with central banks (*e.g.* through securitisation, transforming less liquid assets into liquid or available assets) (see section 5.5 *Proprietary Securitisation (originator)*).

The global liquidity reserve (counterbalancing capacity) is calculated net of the payment systems' intraday needs and in keeping with prudential rules, in particular US rules, under which certain liquid assets are only recognised as available after a certain time period. Transferability restrictions are also taken into consideration in the calculation of the Group's liquidity reserve. These restrictions may stem from local regulations which limit transfers between entities of a group, non-convertible currencies or jurisdictions with foreign exchange control.

The table below shows its trends.

**TABLE 97: BREAKDOWN OF GLOBAL LIQUIDITY RESERVE (COUNTERBALANCING CAPACITY)**

| <i>In millions of euros</i>  | Average 2023   | 31 December 2023 | 31 December 2022 |
|--|----------------|------------------|------------------|
| Total eligible assets  | 614,152        | 618,359          | 591,242          |
| Utilisations   | (146,390)      | (138,791)        | (124,649)        |
| Transferability  | (5,078)        | (5,700)          | (5,943)          |
| <b>GLOBAL LIQUIDITY RESERVE</b>  | <b>462,683</b> | <b>473,867</b>   | <b>460,651</b>   |
| of which liquid assets meeting prudential regulation requirements (HQLA) | 408,476        | 402,700          | 418,900          |
| of which other liquid assets   | 54,207         | 71,167           | 41,751           |

The Group's liquidity reserve stood at EUR 473.9 billion at end-2023, of which EUR 70.9 billion sterilising very short-term wholesale funding.

The Group's liquidity reserve at 31 December 2023 increased by EUR 13.2 billion compared to end-2022.

## REGULATORY LIQUIDITY RATIOS

### Scope of application

The prudential liquidity scope defined by the BNP Paribas Group for monitoring and overseeing liquidity ratios on a consolidated basis is the one defined for its capital ratio adequacy, with the exception of jointly controlled entities which are consolidated under the equity method in the prudential liquidity scope (see Scope of application in section 5.2 *Capital management and capital adequacy*).

### Liquidity Coverage Ratio – LCR

The 30-day Liquidity Coverage Ratio (LCR) came into force on 1 October 2015 setting the minimum coverage ratio for net cash outflows over a one-month time horizon, in a crisis situation, at 100% from 1 January 2018. The Group measures its liquidity requirements in accordance with the requirements of the Delegated Act adopted by the European Commission in January 2015,

and has adapted its management process in keeping with this regulation. The management indicators for the businesses' funding needs and the internal pricing terms therefore reflect the standardised assumptions set by the LCR and allow the Group to monitor compliance with this requirement.

The Group's LCR for the period ending 31 December 2023 stood at 148%, *versus* 129% at 31 December 2022.

**TABLE 98: SHORT-TERM LIQUIDITY RATIO (LCR)<sup>(1)</sup> – ITEMISED (EU LIQ1)**

|   | a                | b              | c              | d              | e              | f              | g              | h              |

<sup>(1)</sup> The data presented in this table are calculated as the rolling average over the twelve latest month-end values.

## Qualitative information on LCR (EU LIQ-B)

The Group's rolling month-end average LCR over the last 12 months stands at 137%, which corresponded to a liquidity surplus of EUR 107 billion compared with the regulatory requirement. The Group ratio averaged between 134% and 137%.

After application of the regulatory haircuts (weighted values), the Group's rolling month-end average liquid assets over the last 12 months amounted to EUR 398 billion, and mainly consist of central bank deposits (50% at the end of March) and government and sovereign bonds (50%).

Rolling month-end average cash outflows over the last 12 months under the thirty-day liquidity stress scenario amount to EUR 291 billion, a large part of which corresponds to thirty-day deposit outflow assumptions of EUR 247 billion. Reciprocally, cash inflows on loans under the thirty-day liquidity regulatory stress scenario amount to EUR 68 billion.

Cash flows on financing transactions and collateralised loans, representing repurchase agreements and securities exchanges, record net rolling month-end average outflows over the last 12 months of EUR 1 billion, given the regulatory haircuts applied to collaterals. Flows linked to derivative instruments and regulatory stress tests record net outflows of EUR 18 billion after netting of cash outflows (EUR 48 billion) and inflows (EUR 30 billion).

Lastly, the rolling month-end average drawdown assumptions on financing commitments over the last 12 months amounted to EUR 49 billion.

There was no excessive imbalance on any significant currency.

## SCHEDULE OF THE BANK'S PRUDENTIAL BALANCE SHEET

This schedule presents cash flows according to contractual payment dates within the prudential scope (see Scope of application in section 5.2 *Capital management and capital adequacy*) in line with the rules defined for the liquidity ratio.

The securities in the trading book listed at fair value through profit or loss are presented with “not determined” maturities, as the securities’ contractual maturity is not representative of the Group’s planned holding period. Likewise, derivative financial instruments listed at fair value through profit or loss, derivatives used for hedging purposes and remeasurement adjustments on interest-rate risk hedged portfolios are presented with “not determined” maturities.

In the following table and in the event of an early repayment option, the rules applied are the most conservative:

- if the option is at the hands of both parties, the repayment date is the next contractual date for the exercise of the option;
- if the option is at the hands of the counterparty, the date for the repayment of assets is the date of final maturity while that used for liabilities is the next contractual date for the exercise of the option;
- if the option is at the hands of the Group, the repayment date is the next contractual date for the exercise of the option, for both assets and liabilities;
- in the case of subordinated debt, the redemption date used is the final maturity date.

**TABLE 100: CONTRACTUAL MATURITIES OF THE PRUDENTIAL BALANCE SHEET (EU CR1-A)** [Audited]**31 December 2023**

For liquidity risk management, the above contractual schedule is supplemented by economic analyses taking into account customer behaviour or market liquidity of certain assets (e.g. securities), under normal conditions and stress situations.

To this end, the Group uses a set of tools to anticipate and manage its economic liquidity, in particular as previously stated:

- medium and long-term liquidity situations;
- stress tests and the liquidity reserve;
- monitoring regulatory liquidity ratios.

The following table presents the details of Table 100: *Contractual maturities of the prudential balance sheet* for equity instruments and debt securities issued by the Group in the medium and long term, excluding early redemption options.

**TABLE 101: CONTRACTUAL MATURITIES OF CAPITAL INSTRUMENTS AND MEDIUM LONG TERM DEBT SECURITIES IN THE PRUDENTIAL SCOPE**

(\*) Accounting value before any prudential adjustments.

Tables providing details of instruments recognised as capital (CET1, AT1 and Tier 2), as well as debt instruments eligible for TLAC ratio (senior non-preferred debt), as required (EU CCA) by implementing Regulation (EU) No. 2021/637, are available in the BNP Paribas Debt section of the Investor Relations website: <https://invest.bnpparibas/recherche/dette/documents/informations-sur-les-programmes-et-les-emissions>.

Some debt instruments shown above have an early redemption ("call") option exercisable by the Group (Issuer). The following table shows the maturity schedule for debt and other subordinated liabilities by considering, where appropriate, the next date on which the option may be exercised ("call date"). Calls may only be exercised after authorisation from the regulator. The maturity dates shown hereafter are purely contractual and do not foresee the Group's call policy.

(\*) The economic maturity is defined as either the contractual maturity or the next call date when the instrument has an early redemption option.

(\*\*) Accounting value before any prudential adjustments.

## ENCUMBRANCE OF GROUP ASSETS AND ASSETS RECEIVED BY THE GROUP

Assets on the balance sheet and financial instruments received in guarantee used as pledges, guarantees or enhancement of a Group transaction and which cannot be freely withdrawn are considered to be encumbered.

The encumbrance of assets is central to the Group's businesses and has two aims:

- to trade in derivatives or repurchase agreements, including the payment of margin calls to secure transactions (see paragraphs on *Bilateral initial margin exchange* and *Counterparty credit risk management* in section 5.6 *Counterparty credit risk*);
- to obtain funding, by issuing secured debt, in particular asset-backed securities (see *Proprietary securitisation (originator)* in section 5.5 *Securitisation in the banking book*), covered bonds (see paragraph on *MLT secured wholesale funding* in this section) or by participating in monetary policy, thus diversifying and optimising its funding structure.

Thus, the encumbrance of assets can be distinguished from the transfer of assets shown in note 5.p *Transfers of financial assets* to the consolidated financial statements insofar as it only comprises the following transactions:

- securities recognised in the Bank's balance sheet, which have been sold or loaned, on a temporary basis, by the Bank under repurchase agreements (repos and securities lending) but which are not derecognised in the Bank's balance sheet once the transaction is complete;
- assets securitised by the Bank (within efficient and inefficient programmes), which continue to be recognised in the Bank's balance sheet under the applicable consolidation rules contained in the accounting standard, to hedge the issue of asset-backed securities.

Based on the definitions above, guarantees given to clearing houses or central banks in the context of monetary policy, along with asset portfolios hedging the issue of secured bonds, fall within the scope of the encumbrance of assets but do not fall within the scope of asset transfers. The same applies to repurchase agreements (repos) and loans in the case of securities that are not recognised in the Bank's balance sheet (because they were previously received under reverse repos and securities borrowing) and to securities received under repurchase agreements (reverse repos) and securities borrowings.

## ENCUMBRANCE OF ASSETS AND COLLATERAL RECEIVED

The monitoring of encumbered assets and assets received is carried out within the prudential scope defined in the section *Scope of application* in section 5.2 *Capital management and capital adequacy*.

The amounts of encumbered and unencumbered assets and collateral received are shown in the following table according to the provisions of Execution Regulation (EU) 2021/637. Thus, all data presented in the table are calculated as the median of the four quarter ends of the corresponding year. Each total line is thus calculated as the median of the four values of the total at each end of quarter, not as the sum of the median values for the year.

The median ratio of encumbered assets relative to Group balance sheet assets was 14.6% in 2023, compared to 19.5% in 2022.

(\*) Assets of extremely high liquidity and credit quality.

(\*\*) The encumbered assets of Bank of the West are presented under "Other assets" following the application of IFRS 5 relating to groups of assets and liabilities held for sale, in accordance with prudential balance sheet presentation conventions. At 31 December 2022, EUR 15 billion in loans and advances were encumbered out of a total of EUR 56 billion, and EUR 6 billion of fixed-income securities were encumbered out of a total of EUR 21 billion.

The other encumbered assets mainly comprised loans and advances (often used when issuing asset-backed securities issues or guaranteed bonds) and amount to EUR 86 billion. The balance, grouped under line 123 "of which other assets", comprises guarantee deposits and bank guarantees paid in respect of derivatives (recognised in the Accrued income and other assets category) amounting to EUR 92 billion.

The other unencumbered assets amount to EUR 434 billion. They mainly include intangible assets, goodwill, current and deferred tax assets, and assets ineligible for financing programmes under normal business conditions.

**Encumbered and unencumbered collateral received**

| 014        | <i>of which: Other sources of encumbrance</i>                      | 276,463   | 393,876   | 296,113   | 439,003   |

(\*) Other than encumbered secured bonds and securities backed by encumbered assets.

Encumbered assets, collateral received and own fixed-income securities are mainly issued by general government entities, raising EUR 460 billion and make it possible to obtain EUR 411 billion of financing.

In median data as at 31 December 2023, Fixed-Income Credit and Commodities and Prime Solutions & Financing businesses as well as Securities Services represent 68% of the Group's encumbered assets (EUR 238 billion) and 100% of the collateral received (EUR 548 billion), *i.e.* 88% of the encumbrance (EUR 784 billion). These are mainly repos and derivatives activities. The other encumbered assets are mainly held through financing activities of ALM Treasury.

Encumbered assets and received and encumbered collateral are denominated mainly in euros or dollars (for a median amount of 38% and 43%, respectively, over the year).

## 5.9 Operational risk

Operational risk is the risk of incurring a loss due to inadequate or failed internal processes, or due to external events, whether deliberate, accidental or natural occurrences. Management of operational risk is based on an analysis of the "cause – event – consequences" chain.

Internal processes giving rise to operational risk may involve employees and/or IT systems. External events include, but are not limited to floods, fire, earthquakes and terrorist attacks. Credit or market events such as default or fluctuations in value do not fall within the scope of operational risk.

Operational risk encompasses fraud, Human Resources risks, legal risks, non-compliance risks, tax risks, information system risks, conduct risks (risks related to the provision of inappropriate financial services), risk related to failures in operating processes, including loan procedures or model risks, as well as any potential financial implications resulting from the management of reputation risk.

## REGULATORY FRAMEWORK

Operational and non-compliance risks come under a specific regulatory framework:

- Directive 36/2013/UE (CRD 4) and Regulation (EU) No. 575/2013 (CRR) governing prudential supervision and the methods for calculating the amount of capital requirements to cover the operational risk;
- French Ministry of Finance Decree of 3 November 2014, which defines the roles and responsibilities of the RISK Function (covering all types of risks) and an internal control system which ensures the efficiency and quality of the Bank's internal operations, the reliability of internal and external information, the security of transactions, as well as compliance with applicable laws, regulations and internal policies.

Banking regulation divides operational loss events into seven categories: (i) internal fraud, (ii) external fraud, (iii) employment practices and safety (such as an anomaly arising from recruitment management), (iv) clients, products and business practices (such as product defects, mis-selling, professional misconduct, *etc.*), (v) damage to physical assets, (vi) business disruption and system failures, (vii) execution, delivery and process management (data entry error, error in documentation, *etc.*).

Effective management of non-compliance risk aims to ensure compliance with applicable laws, regulations, rules of ethics and instructions, protect the Group's reputation, that of its investors and that of its customers, ensure ethical professional behaviour, prevent conflicts of interest, protect customers' interests and market integrity, fight against money laundering, corruption and the financing of terrorist activities, as well as ensure compliance with financial embargoes.

## ORGANISATION AND OVERSIGHT MECHANISM

---

### KEY PLAYERS AND GOVERNANCE

The general internal control system at BNP Paribas underpins management of operational, non-compliance and reputation risks as part of its dual-level system to ensure periodic and permanent control.

Within BNP Paribas, the control functions providing the second line of defence are Compliance, RISK and LEGAL. General Inspection provides a third line of defence responsible for periodic controls. These four Group oversight and control functions are organised according to a hierarchical reporting principle by all their teams worldwide, guaranteeing their independence and resource autonomy.

The governance of the Group's internal control system is described in the section *Internal control* in chapter 2 *Corporate governance and internal control*.

Within the RISK Function, the second line of defence in terms of operational, technological and information protection risks (cybersecurity) is provided by Operational Risk Officers in the operating entities in accordance with the operational risk management system defined and supervised by RISK Operational Risk Management (RISK ORM).

The operational risk management and control system for the Group as a whole is structured around a dual-level system with the following participants:

- on the first level of defence: operational staff, notably the Heads of operating entities, business lines and functions, who are on the front-line of risk management and implementation of systems to manage these risks;
- on the second line of defence: the functions exercising second-level control that are responsible for the organisation and proper functioning of the risk management system and its compliance with laws and regulations for their domain of expertise as defined in their Responsibility Charter. These teams are, in particular, responsible for:
  - coordinating, throughout the scope of responsibilities, the definition and implementation of the permanent control and operational risk identification and management system, its standards and methodologies, reporting and related tools;
  - acting as a second pair of eyes, independently of the Heads of operating entities, to scrutinise operational risk factors and the functioning of the operational risk and permanent control system, and issuing warnings, where appropriate.

Issues relating to operational risk, permanent control and the emergency plan to ensure business continuity in those situations specified in the regulatory standards are regularly submitted to the Group's Executive Committee. The Group operating entities and subsidiaries implement this governance structure within their organisations, with the participation of Executive Management.

For its part, Compliance is in charge of supervising the non-compliance and reputation risk control system (see section 5.3).

## OBJECTIVES AND PRINCIPLES

To meet this dual requirement of the management and control of operational risk, BNP Paribas has developed a permanent iterative risk management process based on the following elements:

- identifying and assessing operational risks;
- formalisation, implementing and monitoring of the risk mitigation system (procedures, checks and all organisational elements designed to help to control risk, such as segregation of tasks, management of access rights, *etc.*);
- producing measurements of known and potential risks and calculating the capital requirement for operational risk;
- reporting and analysing oversight information relating to operational risk and the permanent control system;
- managing the system through a governance framework that involves members of management, preparing and monitoring action plans.

This system encompasses two major pillars:

- the identification and assessment of risk and of the control system based on the libraries of risks and controls defined by the Group's business lines and functions. Each entity must take into consideration those risks and, if necessary, enhance them when assessing the intrinsic and residual risks in accordance with the standard Group scoring grid;
- the risk management system is underpinned by procedures, standards and generic control plans consistent with the above-mentioned risk libraries, and which each entity must apply, unless an exception is authorised, and enhance according to their own characteristics.

## SCOPE AND NATURE OF RISK REPORTING AND MEASUREMENT

Group Executive Committees, and those of operating entities (business lines, functions and subsidiaries), are tasked with monitoring the management of operational and non-compliance risk and permanent control in the areas falling within their remit, in accordance with the Group's operational risk framework. The committees validate the quality and consistency of reporting data, examine their risk profile in light of the tolerance levels they have set in keeping with the Group Risk Appetite Statement, and assess the quality of risk control procedures according to their objectives and the risks they incur. They monitor the implementation of risk mitigation techniques.

Operational risk management has developed a system of data collection of actual or potential incidents using an approach structured by organisational process and business unit (activities in a country and a single legal entity) focusing on the cause-and-effect chain behind events. This information is used as the basis for risk mitigation and prevention measures.

The most significant information is brought to the attention of staff at various levels of the organisation, up to and including executive managers and supervisory bodies, in line with a predefined information reporting process.

## SPECIFIC COMPONENTS LINKED TO OPERATIONAL RISK

---

By its nature, operational risk covers numerous areas related with the Group's usual business activity and is linked to specific risks such as non-compliance, reputation, legal, fiscal and cybersecurity risks which are monitored in specific ways.

### NON-COMPLIANCE AND REPUTATION RISK

#### Definitions

Non-compliance risk is defined in French regulations as the risk of legal, administrative or disciplinary sanctions, of significant financial loss or reputational damage that a bank may suffer as a result of failure to comply with national or European laws and regulations, codes of conduct and standards of good practice applicable to banking and financial activities, or instructions given by leaders, particularly in application of guidelines issued by a supervisory body.

The non-compliance risk is a sub-category of operational risk. Moreover, certain of its implications can involve more than a purely financial loss and may actually damage the institution's reputation.

Reputation risk is the risk of damaging the Group's image, the trust placed in a corporation by customers, counterparties, suppliers, employees, shareholders, supervisors and any other stakeholder whose trust is an essential condition for the corporation to carry out its day-to-day operations.

Reputation risk is primarily contingent on all the other risks borne by the Group, specifically the effective or potential materialisation of a credit, market risk, an operational, non-compliance, environmental, social or legal risk, as well as any violation of a law, a regulation of the Group's Code of conduct or procedure.

#### Group organisation

Responsibility for controlling the risk of non-compliance lies primarily with the activities and business lines. In this context, and in accordance with international standards and French regulations, Compliance manages the system for monitoring non-compliance risks for the scope of all of the Group's businesses in France and abroad.

The system for managing non-compliance risks is based on a permanent control system, structured around the following axes:

- general and specific procedures;
- processes for identifying and assessing risks, monitoring, reporting information and alerts, coordinated to ensure overall consistency and effectiveness;
- the deployment of risk prevention and detection tools (systems for combating money laundering, the financing of terrorism and corruption, detection of market abuse, etc.);
- training and awareness-raising initiatives for all Group employees.

Reputation risk management is based on the following elements:

- individual responsibility of employees: the Group's employees have an essential role in managing reputation risk. Any employee confronted with the actual or potential occurrence of a credit, market or operational risk (including in the area of IT and cybersecurity, a non-compliance, legal or social risk, and/or the violation of a law or regulation, or of the Group's Code of conduct or procedures), that could lead to a reputation risk for the Group or one of its entities, must communicate, immediately and without delay, his or her concern to his or her line manager or to a more senior manager. This individual responsibility is one of the key elements of the Group's Code of conduct, which is at the heart of every action and guides all employees in their decisions, at all levels of the organisation. The employee awareness programme also reiterates the responsibility of each individual and guides them, in particular through information on identifying, controlling and managing reputation risk, the Group's values and its ethics standards;
- permanent control: identifying and managing reputation risk are part of the objectives of the permanent control system. Implementation of the procedures and recommendations of the periodic control, the results of the controls and reports from the whistleblowing system are closely monitored. Reputation risk is also taken into account in the process for validating exceptional transactions, new businesses, and new products. The Group has procedures for conflicts of interest, market integrity, adequacy and appropriateness of offers to clients, best execution of their orders, anti-money laundering, terrorist financing and corruption, compliance with international sanctions and embargoes, and social and environmental responsibility that, along with the Code of conduct, are conducive to effective management of reputation risk;
- corporate engagement: the Corporate Engagement Department is made up of the Corporate Social and Environmental Responsibility and Group Communication functions. It defines and implements the Group's strategy of engagement in the main sectors related to the future of the society, such as economic development, the environment and energy transition; social integration and regional development; diversity and respect for human rights. These areas are particularly relevant to the protection against risk to the Group's reputation. Furthermore, one of the major missions of Corporate Communication is to protect the reputation of the Group and its entities, as well as being a source of information for employees and the public, whose trust is essential for the Group.

Compliance Function is centrally responsible for coordinating initiatives related to reputation risk management.

The Group's reputation risk management framework, like the entire internal control system, is under the responsibility of the Group Supervisory and Control Committee (GSCC), which is chaired by the Chief Executive Officer (see chapter 2 *Corporate governance and internal control*, section *Internal control*).

## LEGAL RISK

The LEGAL Function is an independent function of the BNP Paribas Group and is hierarchically integrated with all the Group's legal teams. LEGAL is responsible for managing legal risks and is responsible for interpreting the laws and regulations applicable to the Group's activities and providing legal advice and guidance to the Group in a manner that meets the highest standards of excellence and integrity. The LEGAL Function provides Executive Officers and the Board of directors with reasonable assurance that legal risks are monitored, controlled and mitigated at the Group level. It is responsible for the prevention and management of legal risks within the Group through its advisory and control roles.

Legal risk refers to the potential loss to the BNP Paribas Group, whether financial or reputational, which impacts or could impact one or more entities of the BNP Paribas Group and/or its employees, business lines, operations, products and/or its services, and results from:

- non-compliance with a law or regulation or a change in law(s) or regulation(s) (including a change in the interpretation or application of a law or regulation by a court or competent authority and any requirement of any regulatory or supervisory authority);
- a dispute (including all forms of alternative/extrajudicial dispute resolution and court orders) or an investigation or inquiry by a regulatory or supervisory authority (with implications for LEGAL);
- a contractual deficiency;
- a non-contractual matter.

The LEGAL Function is responsible for:

- every failure or deficiency in a legal process that may involve the risk of a penalty, reputational risk or financial loss, in all areas;
- management of risk relating to a conflict with a counterparty, a customer, a third party or a regulatory body, resulting from a deficiency or default that could be attributable to the Group in the course of its operations.

## Strategic and preventive missions

In its strategic missions, LEGAL is responsible for:

- defining the Group's legal policy and overseeing its consistency;
- providing legal advice to the Executive Management, business lines and functions;
- contributing to the Bank's influence on regulatory, legislative or market initiatives.

In its prevention missions, LEGAL is responsible for ensuring:

- the Group's legal security in connection with its commercial activities or proprietary businesses;
- the protection of the Group's legal interests, including through the management of the Group's disputes and conflicts;
- the legal protection of the Group's managers or employees in the ordinary course of their business.

## TAX RISK

BNP Paribas ensures compliance with the tax regulations in force in the various countries where the Group operates and which apply to the sectors of activity covered by the several Group entities, such as banking, insurance and other financial services.

The tax mission is carried out by TAX, which has global powers in order to ensure, in particular, control of tax risk at the Group level. RISK, FINANCE & STRATEGY and Compliance are involved as the second line of defence in monitoring the tax risk according to the domain concerned (transactions carried out by the Group, obligations related to the tax situation of clients, tax returns made by the Group).

TAX is composed of the Group Tax Department (GTD) and the tax departments on which the GTD is based in certain businesses and in the main geographical areas where the Group operates (there are tax correspondents in the other geographical areas where the Group operates).

In ensuring the coherence of the Group's tax practices and the global tax risk monitoring, the Group Tax Department:

- has drawn up principles and guidelines that business lines must follow to limit tax risks;
- has implemented a process of feedback aimed at contributing to the master of local and global tax risk;
- oversees tax-related operational risks by defining an adequate system for managing these risks, in particular by drawing up and validating control plans;
- oversees the internal audit recommendations falling within tax mission's scope of responsibility.

## CYBERSECURITY AND TECHNOLOGY

The use and protection of data and technologies are determining factors for the Bank's activity and its transformation process.

While the Bank continues the roll-out of Digital Banking (for the Group's customers and partners) and Digital Working (for the Group's employees), it must incorporate new technology and innovative risk management practices, and establish new working practices. This introduces new technology risks in the cybersecurity area. In that context, the Group deploys significant resources to identify, measure and control these risks.

Technology management and information systems security is part of the Group's cybersecurity strategy. This strategy is focused on the preservation of the most sensitive data, regularly adapting both its internal processes and procedures, and its employee training and awareness to contend with increasingly sophisticated and varied threats.

To reinforce its technology and the protection of data, the Group has adopted a comprehensive approach in cybersecurity management through its three lines of defence:

- operating entities are the first line of defence. Since 2015, the Group has introduced across all of the entities a transformation programme based on the international standard NIST (National Institute of Standards and Technology). This programme is regularly updated taking into account new threats and recent incidents identified around the world;
- as a second line of defence, the team dedicated to managing cybersecurity and technological risk within RISK ORM and under the responsibility of the Group Chief Operational Risk Officer, is tasked with the following in relation to Operational Risk Officers:
  - presenting the Group's cybersecurity and technology risk position to the Group Executive Committee, the Board of directors, and the supervisory authorities,
  - monitoring the transformation programme across the entire Group,
  - integrating the cybersecurity and technology risk aspects into all major projects within the Group,
  - ensuring that policies, principles and major projects take aspects of cybersecurity and technology risk into consideration,
  - monitoring existing risks and identifying new threats likely to have a negative impact on the Group's business,
  - overseeing third-party information systems risks within a strengthened framework,
  - conducting independent assessment campaigns on priority objectives,
  - taking measures to assess and improve the Group's ability to respond to failings and incidents;
- as the third line of defence, the role of General Inspection is to:
  - assess the processes put in place to manage ICT risks (related to information and communication technologies), as well as associated controls and governance,
  - check for compliance with laws and regulations,
  - propose areas of improvement to support the mechanisms put in place.

The Group is responding to new technological and cybersecurity risks as follows:

- ITC risks linked to availability and continuity:

BNP Paribas relies heavily on communication and information systems across all its business activities. Any breach in the security of these systems could lead to failures or interruptions in the systems used to manage customer relations or to record transactions (deposits, services and loans) and could incur major costs to recover and verify compromised data. The Group regularly manages, and revises its crisis management and recovery plans by testing its data recovery services and the robustness of its information systems, using various scheduled stress scenarios;
- security risks:

the Bank is vulnerable to cybersecurity risk, or risk caused by malicious and/or fraudulent acts, committed with the intention of manipulating information (confidential, bank/insurance, technical or strategic data), processes and users, which may result in material losses for the Group's subsidiaries, employees, partners and customers. The Group continually reassesses the threats as they evolve and mitigates risks detected in a good time by means of taking effective counter measures;
- IT change-related risks:

the Group's information systems are changing rapidly in the light of digital transformation. These risks, identified during the systems' design or modification phases, are regularly assessed to ensure that the proposed solutions are consistent with the needs of the Group's business lines;
- data integrity risks:

confidentiality of customer data and transaction integrity are areas covered by the same systems set up in response to Regulation (EU) No. 2016/679 of 27 April 2016 (General Data Protection Regulation – GDPR) intended to provide the Group's customers with a service that meets their expectations;
- third-party information systems risks:

the Bank is exposed to risks of financial default, breaches or operational capacity constraints when it interacts with third parties, including customers, financial intermediaries and other market operators. The Group's three lines of defence constitute the management framework of these risks at every step of integration until the end of the relationship with such third parties.

## OPERATIONAL RISK EXPOSURE

The chart below shows the losses linked to operational risk, according to the event classification defined in the current regulation.

**FIGURE 14: OPERATIONAL LOSSES – BREAKDOWN BY EVENT TYPE (AVERAGE 2015-2023)<sup>(\*)</sup>**

(\*) Percentages correspond to average loss by type of event for the 2015-2023 period.

The breakdown of losses by type of operational risk for the period 2015-2023 is rebalanced following the exit from the reference period of the comprehensive settlement with the US authorities in 2014.

The main type of operational risk incidents remains the “Clients, products and business practices” category, followed by process failures, including errors in executing or processing transactions, and then external fraud.

BNP Paribas Group pays the utmost attention to analyse its operational risk incidents to continuously improve its control system.

## CAPITAL REQUIREMENT CALCULATION

Operational risk-weighted assets are calculated by multiplying the capital requirement by 12.5.

### APPROACH ADOPTED

BNP Paribas uses a hybrid approach combining the advanced measurement approach (AMA), standardised approach, and basic indicator approach.

In terms of net banking income, most legal entities within the Group’s prudential scope of consolidation use the advanced measurement approach. This includes most retail banking activities in the domestic networks and private banking, as well as Corporate & Institutional Banking.

### Advanced Measurement Approach (AMA)

**Under the AMA for calculating capital requirements, the Bank uses an** operational risk internal model based on the four components required by regulations, namely:

- internal historical loss data from operational risk;
- external loss data from operational risk;
- environmental and internal control factors;
- analysis of forward-looking scenarios, known as potential incidents in the BNP Paribas Group.

BNP Paribas’ internal model in place since 2008 includes the following features:

- an aggregated annual loss distribution, meaning that the frequency and severity of losses from operational risks are modelled using an actuarial approach and according to distributions calibrated with available risk data;
- it uses historical data as well as prospective scenarios to calculate capital requirements, with a predominance for scenarios because they can be shaped to reflect severe and less frequent operational risks;
- the model is faithful to its operational risk input data, so that its results can be used easily by each of the Group’s business lines. Most of the assumptions are therefore included in the data themselves;
- it is prudent in its capital requirement calculations: the input data are thoroughly reviewed, and any supplemental risk data are added if needed to cover all relevant operational risks within the Group.

Regulatory AMA capital requirements are calculated as VaR (Value at Risk), or the maximum potential loss over one year, at a 99.9% confidence level to calculate regulatory capital requirements. Capital requirements are calculated at an aggregated level using risk data from all Group entities in the AMA perimeter, then allocated to business lines and individual legal entities.

### Fixed-parameter approaches

BNP Paribas uses fixed-parameter approaches (basic or standard) to calculate the capital requirements for entities in the Group's prudential consolidation scope that are not covered by the internal model:

- **basic approach:** the capital requirement is calculated as the average over the past three years of a financial aggregate based on net banking income (the exposure indicator) multiplied by a unique alpha parameter set by the regulator (15% weighting);
- **standardised approach:** the capital requirement is calculated as the average over the past three years of a financial aggregate based on net banking income multiplied by factors set by the regulator and corresponding to each business category. For the purposes of this calculation, all the Group's business lines are broken down into eight regulatory business categories.

## RISK-WEIGHTED ASSETS AND CAPITAL REQUIREMENT

TABLE 104: OPERATIONAL RISK CAPITAL REQUIREMENT AND RISK-WEIGHTED ASSETS (EU OR1)

|                               |                                     | a                   | b             | c             | d                    | e            |                        |
|-------------------------------|-------------------------------------|---------------------|---------------|---------------|----------------------|--------------|------------------------|
|                               |                                     |                     |               |               |                      |              | 31<br>December<br>2022 |
|                               |                                     |                     |               |               |                      |              | 31 December 2023       |
|                               |                                     | Relevant Indicators |               |               | Capital requirements |              |                        |
| <i>In millions of euros</i>   |                                     | Year-3              | Year-2        | Last year     | RWAs                 |              | RWAs                   |
| 1                             | Basic indicator approach            | 1,654               | 2,002         | 2,602         | 3,911                | 313          | 4,280                  |
| 2                             | Standardised approach               | 4,937               | 5,921         | 6,135         | 10,215               | 817          | 12,073                 |
| 3                             | of which subject to TSA             | 4,937               | 5,921         | 6,135         | 10,215               | 817          | 12,073                 |
| 4                             | of which subject to ASA             |                     |               |               |                      |              |                        |
| 5                             | Advanced measurement approach (AMA) | 32,613              | 34,475        | 32,171        | 44,771               | 3,582        | 45,302                 |
| <b>TOTAL OPERATIONAL RISK</b> |                                     | <b>39,205</b>       | <b>42,397</b> | <b>40,908</b> | <b>58,897</b>        | <b>4,712</b> | <b>61,656</b>          |

The -EUR 2.8 billion decrease in risk-weighted assets due to operational risk in 2023 is driven by the decrease in risk-weighted assets according to the standardised approach, notably due to the sale of Bank of the West during the first quarter of 2023. A decrease is also observed on the risk-weighted assets calculated according to the AMA method induced by the update of risk scenarios.

## RISK MITIGATION TECHNIQUES AND INSURANCE POLICIES

BNP Paribas Group deals with its insurable risks with the triple aim of protecting its balance sheet, its profit and loss account and its staff. Its insurance set-up is based on risk identification and assessment, underpinned by risk mapping and by analysis of operational loss profile, both historical and forward-looking.

The Group purchases insurance from leaders in the insurance market, covering computer crime, fraud, theft, business disruption, liability and other risks for which it may be held responsible. In order to optimise costs whilst effectively managing its exposure, the Group retains some well-identified risks whose impact in terms of frequency and cost is known or can be adequately estimated.

In selecting insurers, the Group pays close attention to the credit rating and claims paying ability of the companies concerned. Detailed information on risks incurred by BNP Paribas as well as risk assessment visits, enable insurers to assess the quality risk prevention within the Group, as well as the safeguard measures put in place and upgraded on a regular basis in light of new standards and regulations.

## 5.10 Insurance risks [Audited]

### BNP PARIBAS CARDIF GROUP RISK MANAGEMENT SYSTEM

---

Risk management is a process that allows identification, measurement, monitoring, management and reporting of both the risks arising from the external environment as well as intrinsic risks inherent to the BNP Paribas Cardif group. The objective is to guarantee the solvency, business continuity, and development of the BNP Paribas Cardif group, under satisfactory conditions of risk and profitability.

Within the framework of the provisions of article L.354-2 of the French Insurance Code, the BNP Paribas Cardif group conducts a forward-looking assessment of its solvency and risks every year under the Solvency II framework, in particular:

- the definition and evaluation of a capital requirement specific to the risk profile;
- the level of capital that the BNP Paribas Cardif group wishes to hold to cover this specific requirement; the forward-looking solvency ratios under the medium-term plan;
- the resilience of these ratios in stress test cases.

Depending on the observed solvency ratio levels and the forecasts made under ORSA (Own Risk and Solvency Assessment), remedial actions may be undertaken to adjust own capital.

The risk typology adopted by the BNP Paribas Cardif group is changing in pace with methodological work and regulatory requirements. It is presented according to the main categories as follows:

- underwriting risk: underwriting risk is the risk of a financial loss caused by a sudden, unexpected increase in insurance claims that may result from inadequate pricing and provisioning assumptions due to internal or external factors, including sustainability risks. Depending on the type of insurance business (life, non-life), this risk may be statistical, macroeconomic or behavioural, or may be related to public health issues or disasters;
- market risk: market risk is the risk of a financial loss arising from adverse movements of financial markets. These adverse movements are notably reflected in price fluctuations (foreign exchange rates, bonds, equities and commodities, derivatives, real estate, *etc.*) and derived from fluctuations in interest rates, credit spreads, volatilities and correlations;
- liquidity risk: liquidity risk is the risk of being unable to fulfil current or future foreseen or unforeseen cash requirements coming from insurance commitments to policyholders, because of an inability to sell assets in a timely manner and at an acceptable cost without having a significant impact on market prices; and/or get access to alternative financing instruments in a timely manner;
- credit risk: credit risk is the risk of loss or adverse change in the financial situation resulting from fluctuations in the credit standing of issuers of securities, counterparties, and any debtors to which the BNP Paribas Cardif group is exposed, in the form of counterparty risk. Among the debtors, risks related to financial instruments (including the banks in which the BNP Paribas Cardif group holds deposits) and risks related to receivables generated by the underwriting activities (premium collection, reinsurance recovering, *etc.*) are divided into two categories: assets credit risk and liabilities credit risk;
- operational risk: operational risk is the risk of loss resulting from inadequate or failed internal processes, IT failures or from external events, whether accidental or natural. It includes legal, tax and non-compliance risks, but excludes risks arising from strategic decisions and reputational risks.

The BNP Paribas Cardif group is exposed mainly to credit, underwriting, and market risks. The BNP Paribas Cardif group closely monitors its exposures, taking into account these various risks and the adequacy of its capital with regard to regulatory solvency requirements. It endeavours to contain potential losses in adverse scenarios at acceptable levels.

The risk strategy is implemented and monitored through an organisation tailored to the broad risk classes and supported by *ad hoc* governance structures. The governance and risk management systems are presented in sections B. System of Governance and C. Risk profile of the BNP Paribas Cardif group's Solvency and Financial Condition Report (SFCR), available on the institutional website at <https://www.bnpparibascardif.com/en>.

The solvency requirements for the BNP Paribas Cardif group under Solvency II are shown in section 5.2 *Capital management and capital adequacy*.

## MARKET RISK

Market risk arises mainly in the Savings business, where technical reserves represent most of the BNP Paribas Cardif group insurance subsidiaries liabilities.

Interest rate risk management for the general insurance funds and the asset diversification policy have driven investment in real estate assets, equities and fixed- or floating-income securities, including government bonds particularly in the Eurozone countries.

Market risk falls into four categories:

- interest rate risk:

Euro funds in underwritten life insurance policies are measured based on either a contractual fixed rate or a variable rate, with or without a minimum guaranteed return. All of these policies give rise to an interest rate and asset value risk, corresponding to the risk that the return on admissible assets is less than the contractual return payable to policyholders or return payable defined in consideration of the market expectations and the positioning of the market players. In France, the average rate guaranteed by Cardif Assurance Vie in 2023 is below 0.1%;

- liquidity risk:

liquidity risk with a 24-month horizon is managed by the Asset Management Department. Asset-liability matching analyses over the medium to long term are also carried out regularly by Asset-Liability Management in order to supplement the measurement of the financial risks incurred. They are based on medium- and/or long-term profit and loss account and balance sheet projections prepared using a range of economic scenarios. The results of these reviews are analysed in order to determine any adjustments to required assets (through strategic allocation, diversification, use of derivatives, etc.);

- spread risk:

limits by issuer and rating type (Investment Grade, non-Investment Grade) are monitored regularly. Issuer credit quality is also reviewed frequently;

- change in the value of assets:

The exposure to the risk of a decline in the value of assets (interest rate, spread, equities, real estate) for contracts with a profit-sharing clause is mitigated by the variable fees model (VFA), with changes in the value of financial assets adjusting the cash flows from execution for the share accruing to policyholders and the margin on contractual services for the share accruing to the insurer.

## GROUP BNP PARIBAS CARDIF INVESTMENTS

The BNP Paribas Cardif group manages EUR 158.3 billion at net book value and at market value, through its subsidiaries in France, mainly Cardif Assurance Vie, representing EUR 127.7 billion, its subsidiaries in Italy, mainly Cardif Vita, representing EUR 18.5 billion and its subsidiary in Luxembourg, Cardif Lux Vie (EUR 7.9 billion). BNP Paribas Cardif group investments break down as follows:

**TABLE 105: BREAKDOWN OF BNP PARIBAS CARDIF GROUP INVESTMENTS  
(EXCLUDING INVESTMENTS IN UNIT-LINKED CONTRACTS)**

# INSURANCE UNDERWRITING RISK

---

Underwriting risk arises mainly from the surrender, the longevity and the mortality risk in the savings business line, and in creditor insurance contracts for the protection business.

There are three types of underwriting risk:

## SAVINGS – SURRENDER RISK

Savings contracts include a surrender clause allowing policyholders to request reimbursement of all or part of their accumulated savings. The insurer is thus exposed to the risk of surrender volumes being higher than the forecasts used for ALM purposes, leading to potential capital losses on asset disposals needed to finance excess surrenders.

BNP Paribas Cardif adopted a monitoring framework and tools to reduce the surrender risk:

- expected short-, medium- and long-term liability flows are regularly estimated and any liquidity gaps with expected asset flows are identified and controlled in order to reduce the risk of large-scale instant asset disposals. Changes in assets and liabilities are projected over periods of up to forty years, in order to identify treasury mismatches and over or under covered maturities giving rise to a liquidity risk. These analyses are then used to determine the choice of maturities for new investments and the assets to be sold;
- the guaranteed revaluation of policies is completed by a participating benefit feature, partly discretionary, that raises the total return to a level in line with market benchmarks and reduces the risk of an increase in surrenders. The policyholders' surplus reserve is the mechanism in France that enables the surplus actually paid out to be pooled and spread between generations of policyholders and to manage the performance of contracts over time;
- the return on financial assets may be protected through the use of hedging instruments.

Average redemption rates for BNP Paribas Cardif group general funds stood in France<sup>1</sup> at 7.9% (compared to 6.7% in 2022), in Italy at 21.1% (compared 9.4% in 2022) and in Luxembourg at 23.8% (compared to 22.5% in 2022).

## SAVINGS – UNIT-LINKED CONTRACTS WITH A MINIMUM COVERAGE

The insurer's liabilities are covered by the assets held, which are used as a valuation reference. The consistency of this coverage is controlled at monthly intervals.

Certain unit-linked commitments provide for the payment of a death benefit at least equal to the cumulative premiums invested in the contract, whatever the conditions on the financial markets at the time of the insured's death. The risk on these contracts is both statistical (probability of a claim) and financial (market value of the units).

The capital guarantee is generally subject to certain limits. In France, for example, most contracts limit the guarantee to one year (renewable annually), an age limit of eighty to benefit from the guarantee and a maximum of EUR 1 million per person insured.

The minimum coverage reserve, included in liabilities for the remaining coverage, is (re)assessed every quarter and takes into account the probability of death, based on a deterministic scenario, and stochastic analyses of changing financial market prices. The reserve amounted to EUR 4.9 million at 31 December 2023 (*versus* EUR 18.9 million at 31 December 2022).

## PROTECTION

These risks result mainly from the sale of creditor insurance, as well as activities as individual death and disability, extended warranty, theft, accidental damage, third party liability, annuity policies in France, and health, with geographic coverage in many countries.

Creditor insurance mainly covers death, disability, critical illness, work disability, loss of employment and financial loss risks for revolving credit, personal loans and mortgage loans. The insurance book comprises a very large number of policies representing low risks and low premiums. Margins depend on the size of the insurance book, effective pooling of risks and tight control of administrative costs. The term of these contracts is usually equal to the term of the underlying loan and the premium is either deducted once upon issuance of the policy (single premium) or deducted regularly throughout the term of the policy (regular or periodic premiums).

Other contracts (individual death and disability, extended warranty, theft, accidental damage, and annuity policies in France, civil liability, health) are either for personal risk (death, accidental death, hospitalisation, critical illness, healthcare expenses) or property & casualty risk and/or responsibilities (accidental damage, breakdown or theft of consumer goods or vehicles, civil liability, etc.). The individual sums insured under these contracts are generally low, whether they are indemnities or lump-sum payments.

---

<sup>1</sup> On the main general fund.

Lastly, principally through its expanding entity, Cardif IARD in France, motor contracts (material damage, civil liability, car assistance) and comprehensive household coverage are also underwritten. This type of insurance coverage is also developing in the international market, namely in Latin America.

The governance set up to prevent and control actuarial risks in France and internationally is based on guidelines and tools that describe the principles, rules, methods and best practices to be followed by each actuary throughout the policies' life cycle, the tasks to be performed by the actuaries and their reporting obligations. It also sets out the practices that are excluded or that are allowed only if certain conditions are met.

Risks underwritten must comply with delegation limits set at various local and central levels depending on the estimated maximum acceptable losses, the estimated Solvency II capital requirements and the estimated margins on the policies concerned. The experience acquired in managing geographically diversified portfolios is used to regularly update risk pricing databases comprising a wide range of criteria such as loan type for creditor insurance, the type of guarantee and the insured population, *etc.* Each contract is priced by reference to the profitability and return-on-equity targets set by the Executive Management of the BNP Paribas Cardif group.

Reinsurance is a complementary element of the underwriting risk management system. Its objective is to protect the BNP Paribas Cardif group against three main risks:

- the so-called "peak" risk from exposure to an individual risk exceeding a certain threshold, called "retention". The peak risk can be managed by reinsurance which may take the form of surplus or excess of loss treaties;
- the so-called "claim accumulation" risk, which corresponds mainly to the disaster risk associated with exposure to a single low occurrence event, but very strong financial impact (concentration risk). This risk can be reinsured in the form of a catastrophe excess of loss treaty;
- risk on new products, linked to insufficient mutualisation, wrong definition of the technical databases or uncertainty over the insured portfolio data. This risk can be reinsured in the form of quota share, stop loss or excess of loss treaties, depending on the level of risk identified.

Risk exposures are monitored periodically by the Executive Committee of the BNP Paribas Cardif group through the Commitment Monitoring Committees that are based on a two-pronged approach:

- quarterly monitoring of loss ratios at each accounting quarter end;
- supplemented by monitoring of the portfolio characteristics according to a schedule based on the type of product (monthly, quarterly or annually).

Contract pricing for annuity contracts are based on mortality tables applicable under insurance regulations, adjusted in some cases by portfolio-specific data which is certified by independent actuaries. The result is a low annuity risk.

Underwriting risks are covered by various reserves in accordance with IFRS 17:

- a reserve for the cash flows related to the future coverage period, including an adjustment for non-financial risks;
- a reserve for the contractual service margin yet to be recognised;
- a reserve for all incurred claims whether reported or not, including an adjustment for non-financial risks.

The level of confidence used to determinate the non-financial risk adjustment corresponds to the 70% quantile for the main countries.

## 5.11 Environmental, social and governance risk

The publications under this section cover the environmental, social and governance (ESG) risk factors that may directly affect credit institutions through their impacts on the business activity of the customers.

From a general perspective, the Group is integrating the ESG-related risk factors into the Group's risk management framework, as potential driver of existing financial risks. Given the evolving nature of these methodologies, data and regulations related to ESG, the Group's set-up may also be gradually adapted, as relevant.

The tools rolled out and continuously improved within the Group cover the risk factors regarding the three pillars "E", "S", and "G". The environmental and climate-related ones are the most developed. The Supervisors and other external stakeholders pay particular attention to identifying and managing these types of risks, considering their potential impacts on the banking sector.

## BUSINESS STRATEGY AND PROCESSES

---

### IMPACT OF ESG RISK FACTORS ON BUSINESS STRATEGY AND PROCESSES

In its ambition to be a leader in sustainable finance and in the wake of its 2022-2025 Strategic Plan, built around the pillars Growth, Technology & Sustainability (GTS), BNP Paribas has set itself the objective of directing financial flows towards a more sustainable economy. The Group consequently supports all its customers (corporates and individuals) in their transition.

Three strategic pillars have been identified to accelerate the implementation of the Group's sustainable development commitments: firstly, the alignment of lending portfolios with the commitment to carbon neutrality through sector-specific objectives, integrating customer transition. Secondly, supporting clients towards a sustainable, low-carbon economy, thanks to the mobilisation of the Group's networks of internal experts on ESG issues through the Low-Carbon Transition Group. Thirdly, strengthening the internal expertise, the management tools, the processes and mechanisms enabling to support the evolving needs of stakeholders and the training of employees, including the Sustainability Academy.

In this context, the Group continuously strengthens its ESG risk management framework. The Group monitors the potential impact of ESG risk factors on the conduct of its business, counterparties and investments on its own behalf or on behalf of third parties. Initially focused on the sectors most sensitive from an ESG perspective, the assessment of these ESG risks is gradually strengthened following the development of the methods for measuring and analysing these factors and their impact on financial risks, in particular those relating to credit risk. Thus, the Group relies in particular on:

- financing and investing policies which set ESG criteria governing the Group's decisions to allocate financial services in some ESG sensitive areas, in particular those related to sensitive industrial areas (see section Commitment 3 *Systematic integration and management of Environmental, social and governance risks (ESG)* in chapter 7);
- the Global Credit Policy, supplemented by specific credit policies. The policy requires that client engagement be grounded on solid ESG assessment. The latter must be performed in accordance with the defined ESG framework, notably integrating the questions from the ESG Assessment (see appendix 5: *ESG Assessment (ESG-A)*) for large corporates. It takes into consideration clients' reports and performance indicators, that could be their transition plans or external data assessing the transition, as relevant. The Group works directly with its clients to identify, assess, and manage the ESG risks.

Finally, the Group has considerably expanded its training offer towards employees to further support the consideration of ESG issues in its global risk management. It now covers a broad spectrum ranging from general awareness-raising on the ESG issues related to the energy transition, the protection of biodiversity and respect for human rights, training on ESG risk management setups and the offer of sustainable finance products. The creation of the Sustainability Academy in 2022 enabled to accelerate this process (see section Commitment 6 *A learning company supporting dynamic career path management* in chapter 7).

## OBJECTIVES, TARGETS AND LIMITS RELATED TO ESG RISKS AND OPPORTUNITIES

BNP Paribas has implemented a comprehensive ESG risk management approach developed in compliance with the United Nations Sustainable Development Goals (SDGs). It reflects a commitment at the highest level of the Group to combine performance, responsibility, ethics, and transparency. BNP Paribas' approach to corporate social responsibility (CSR) embeds environmental and social risks on a short, medium, and long-term scale as displayed in its CSR policy management dashboard in line with the Growth-Technology-Sustainability (GTS) 2025 Strategic Plan (see section 7.1 *Strategy* in chapter 7).

The Group strategy aims to contribute to directing capital flows towards the transition to a more sustainable economy through banking and financial services. In that regard, the Group also pays specific attention to actions and practices that facilitate the alignment of its loan portfolio with the Net-Zero in 2050 objective. By joining the Net-Zero Banking Alliance (NZBA) in 2021, the Group has committed to extending the alignment scope to a greater number of sectors and to a higher ambition: to finance a carbon-neutral world by 2050, which corresponds to a limited increase in temperature of 1.5°C compared to the pre-industrial era.

In May 2023, the Group has published its Climate report<sup>1</sup>. It illustrates its progress in supporting the transition of clients in developing renewable and low-carbon energies, supporting the energy transition of individuals and improving energy efficiency within its operating scope. The Climate report presents the transition in the financing of low-carbon energy, now the majority in its energy financing portfolio, and the intermediate targets for reducing greenhouse gas emissions intensity of its credit portfolios in the oil and gas sectors (matched by reductions in its financing for this sector), electricity generation, automotive, steel, aluminium and cement sectors. In 2024, the Group will extend the scope to new sectors by defining new targets for reducing greenhouse gas emissions (see section Commitment 3 *Systematic integration and management of Environmental, social and governance risks (ESG)* in chapter 7).

In addition, the objectives, targets and limits to assess and address social risks are developed in the strategy and in the Group's vigilance plan. The Group's vigilance plan is implemented to identify and prevent the risk of serious violations of human rights and fundamental freedoms, of harm to human health and safety, and to the environment throughout its business operations. The actions related to the Group's vigilance Plan are defined by the CSR Department, prepared jointly with the stakeholders in the main business lines and functions. These actions aim to cover all the Group's business lines, functions and countries of operation. For more information, refer to section 7.7 *Vigilance plan* in chapter 7.

Furthermore, the Group is committed to respecting and promoting internationally recognised human rights standards as defined in the International Charter of Human Rights, the OECD Guidelines for Multinational Enterprises, and the United Nations Guidelines on Business and Human Rights. The Group also recognises the fundamental conventions established by the International Labour Organisation (ILO), integral parts of the *ILO Declaration on Fundamental Principles and Rights at Work*, as well as the principles of international humanitarian law applicable in situations of armed conflict.

The Group has been an active member of the United Nations Global Compact since 2003. The principles of the Global Compact, the Sustainable Development Goals (SDGs) and the OECD Guidelines for Multinational Enterprises serve as a framework for BNP Paribas to effectively guide its corporate responsibility approach, particularly in terms of human rights

<sup>1</sup> <https://invest.bnpparibas/document/rapport-climat-2022>.

protection. As a founding member of the Principles for Responsible Banking (2019), the Group committed itself to aligning its business model and practices to help achieve the SDGs.

BNP Paribas complies with international covenants and local regulations of the countries in which the Group operates.

Finally, the Group also monitors social issues related to health, safety at work and impact on communities as part of its assessment process using the *ESG Assessment* tool. (see section Commitment 3 *integration and management of environmental, social and governance risks* (ESG) in chapter 7).

## GOVERNANCE

---

### MANAGEMENT BODY SETTING ESG RISKS AND OPPORTUNITIES FRAMEWORK

The Board of directors validates the Group's strategy on energy and climate-related matters, with the support of two specialised Committees (as described in the Governance section at 5.3 *Risk Management*):

- the Corporate Governance, Ethics, Nominations and CSR Committee (CGEN);
- the Internal Control, Risk management and Compliance Committee (CCIRC).

For environmental-related risks and opportunities in all fields, the Chief Executive Officer and the Chief Operating Officer submit a strategy proposal to the Board of directors, then subsequently oversee the management of the Group and its performance.

The Chief Executive Officer is responsible for the climate strategy, for which the definition and implementation through the Group's commitments is managed by the Head of Company Engagement, a member of the Group Executive Committee, in its role as CSR supervisor. The Company Engagement Department, the CSR Department (which is part of the Company Engagement Department), the operating entities and functions are responsible for the implementation of the Group's climate strategy.

Since 2021, the Group's ESG governance system has been extended to cover all aspects of the Company and restructured to better incorporate environmental and climate-related issues in the definition of the strategy, its oversight and management of the associated risks. This framework is based on well-defined governance, with responsibilities shared between the Group and operating entities in order to facilitate operational integration of the ESG policies, targets and risk framework. This governance is led by:

- the sustainable finance strategic Committee, which aims to validate the Group's climate strategy and the implementation of the policy of aligning the loan portfolio with the Paris Agreement. The main associated indicators are discussed at regular meetings chaired by the Chief Executive Officer within the framework of this Strategic Committee. The topics related to sustainable financing discussed by the members of the Committee are then transmitted to the business lines and functions through their representatives;
- the sustainable finance infrastructure Committee aims at industrialising ESG processes, data and reporting. Its mission is to meet the growing needs of customers, regulators and investors. Around the Deputy Chief Executive Officer, it brings together key contributors from different business lines and functions;
- the ESG Regulatory Committee at Executive Management level was set up to assess the operational consequences of the main new regulations.

### ESG RISK CONTROLLING AND REPORTING FRAMEWORK

The Group General Management has settled an internal control framework which main objective is to ensure the global risk management and to give a reasonable assurance that related objectives are achieved (see section 2.4 *Internal Control* in chapter 2). The BNP Paribas Group's internal control monitors all types of risks to which the Group may be exposed, including those resulting from ESG factors. It is applied at the Group level and at the level of directly or indirectly controlled entities.

Environmental and social risk factors are progressively being integrated into the usual reporting processes, considering progress on internal analyses related to ESG issues as well as regulatory developments. At the Board of directors' level, the CCIRC reviews the Risk Appetite Statement (RAS), which contains metrics resulting from targets set within the NZBA commitments.

Finally, environmental and social risk-related objectives are considered in the remuneration policy (see section 1. *Corporate governance* in chapter 2).

## ENVIRONMENTAL, SOCIAL AND GOVERNANCE RISK MANAGEMENT FRAMEWORK

---

## DEFINITIONS AND FRAMEWORK

The ESG risk management framework of the Group has been built on the ground of voluntary actions and commitments as well as regulatory requirements and supervisory expectations.

The long-standing voluntary actions with respect to international and European policy framework encompass good practices on both environmental and social fields and include the following principles:

- application of internationally recognised human rights standards as defined in the Bill of Human Rights: the United Nations Declaration of Human Rights, the International Covenant on Economic, Social and Cultural Rights and the International Covenant on Civil and Political Rights. This commitment is expressed at the highest level in the BNP Paribas Declaration on Human Rights, signed by the Group's Chief Executive Officer and promoting the respect of these rights within BNP Paribas' sphere of influence;
- adoption of social and environmental goals aligned with global standards such as the United Nations Sustainable Development Goals and those of the financial community such as the Principles for Responsible Banking (PRB) and the Principles for Responsible Investment (PRI);
- actions following the framework of the United Nations Global Compact (Advanced level) and the United Nations Women's Empowerment Principles. The Group also complies with ILO Conventions concerning social and labour aspects and the internationally accepted OECD Guidelines for multinational enterprises;
- commitment to align greenhouse gas (GHG) emissions arising from its credit activities with the path required to achieve carbon neutrality in 2050. By joining the Net-Zero Banking Alliance (NZBA) and engaged to align thanks to the methodology guidance developed by the NZBA, the Group has been able to assess the trajectory of its portfolio on the following sectors: power generation, oil and gas (upstream and refining), automotive, cement, aluminium and steel;
- application of the 4<sup>th</sup> version of the Equator Principles (EP4) related to project finance activities. The Group works with its customers to identify, assess, and manage the environmental and social risks and impacts linked with major industrial and infrastructure projects. Any potential negative impact of these projects on communities, ecosystems or climate must be avoided, mitigated and/or offset.

With respect to legislative and regulatory requirements, the Group abides by those in relation to the French Duty of Care law requiring, in particular, a vigilance plan to be established and implemented to identify and prevent the risk of serious violations of human rights and fundamental freedoms, and of harm to human health and safety and to the environment.

Specific actions aiming at further embedding the ESG into the risk management framework are handled within the ESG Methodologies, Analyses and Risk Management program.

## IDENTIFICATION OF ESG RISK, ASSESSMENT AND LIMITS

The Group does not consider the ESG risks as risk types *per se* but rather as risk factors which may potentially favour, trigger or worsen any types of risk, and notably credit, market or operational risks.

Accordingly, ESG risk factors are incorporated in the Group's existing risk management framework and processes.

Given the still evolving feature of the ESG topics, projects are ongoing to further identify and integrate these risk factors into the risk management framework, for instance in the Risk Appetite framework, and in the risk identification process:

- the Group Risk Appetite Statement (RAS), which is defined consistently with the strategy of BNP Paribas, includes principles dedicated to ESG risk factors. These principles, coupled with dedicated metrics, define the risk tolerance of the Group on these dimensions. The Group Risk Appetite Statement ESG section has been further reinforced in 2023 and now integrates 5 metrics with limits to control the Group achievements with respect to its commitments on Thermal Coal and Oil & Gas financing for 2025 and 2030. In addition, complementary indicators, resulting from the definition of the Net-Zero targets setting regarding the Oil & Gas, the Power, the Low-Carbon Financing and the Automotive sectors are part of the Risk Appetite Statement for monitoring purposes;
- the Group Risk Identification process (Risk ID) (see Appendix 5 *Risk identification & assessment process ("Risk ID")*) has been adapted and enriched to capture ESG dimensions and to inform the capital adequacy assessment and the resilience tests.

The importance devoted by the Group to better taking into account ESG aspects in its risk management framework is attested by the fact that, in BNP Paribas 2023 Financial Institutions Global Risks Landscape<sup>1</sup>, 13 among the 32 global risks retained and detailed in this work have an ESG dimension (see the table below). This document is meant to be used by Risk ID contributors who have to appreciate the extent to which these global risks could have direct or indirect negative impacts for the Group.

|  | Time<br>horizons <sup>(1)</sup> | Severity | Trend | Type | Systemic Emerging |
|--|---------------------------------|----------|-------|------|-------------------|
|--|---------------------------------|----------|-------|------|-------------------|

<sup>1</sup> BNP Paribas Financial Institution Global Risks Landscape is a document, produced annually and presented to the Group RISK Anticipation Committee, that proposes a panorama of the global risks (uncertainties, vulnerabilities, trends and threats) of all natures (economic, technological, business, geopolitical socio-political & environmental, etc) that should be taken into account when trying to anticipate scenarios that could lead to direct or indirect damages for financial institutions, in the short, medium and longer term.

|  | Time horizons <sup>(1)</sup> | Severity       | Trend | Type       | Systemic | Emerging |
|--|------------------------------|----------------|-------|------------|----------|----------|
| Technology and digital                               |                              |                |       |            |          |          |

(1) Time horizons are defined as follows: Short term from 0 to 3 years; Medium term from 3 to 10 years, Long term from 10 to 30 years.

Risk ID process has been designed to favour anticipation and to promote a forward-looking approach when updating the Risk inventory of the Group, which is the final outcome of the process. The risk inventory is made of a set of “severe but plausible” elementary scenarios (the “risk events”) that reflect the ways the risk types faced by the Group could materialise.

For each risk event, Risk ID methodology requires to identify the risk factors that underpin its materialisation, those that favour, trigger or worsen the event. ESG-related are among the risk factors that shall be considered by contributors to the Risk ID process.

Because in Risk ID, ESG risks are considered as risk factors, BNP Paribas risk driver taxonomy that is used as a reference in Risk ID approach encompasses a comprehensive set of risk factors covering environmental, social and governance risk topics.

With regard to the way horizons are considered, if Risk ID contributors are asked to identify and assess scenarios that represent concerns in the coming 3 to 4 years (short to medium term), they are also invited to anticipate scenarios that could materialise in the longer term.

To do so, four features in the Risk ID methodology enable to qualify the probability and the time horizon of each risk event, notably those that are favoured, triggered or worsened by ESG risk factors:

- the intrinsic frequency, *i.e.*, recurrence time, of the risk event (this corresponds to the number of years between two risk events of the same magnitude);
- the imminence of the risk event that qualifies the probability that the risk event occurs in the coming three years;
- the probable evolution of the materiality of the risk event in the coming year;

- the relative materiality of the risk event on a 30-year horizon.

This approach enables the Group to consider in its risk inventory both frequent, probable risk events and unusual, long-term, less probable but more severe risk events. In addition, there are several other components of ESG assessment that provide information to the risk identification process:

- the country and sovereign risks assessment: BNP Paribas takes into consideration the countries' Environmental, Social, and Governance performances when gauging the overall "country risks" and is assessing the sovereign counterparties' exposure to ESG risks and to more specific transition and physical climate & environment risks. Country risk is an essential component in the assessment of the creditworthiness of the Group's counterparties; sovereign risks are central to the analysis of the risks associated with the Group's exposures to public and banking counterparties. More precisely, the assessment of sovereign ESG risks is based on an internal methodology and on data from recognised external sources (international organisations such as UN agencies, NGFS - Network for Greening the Financial System, World Bank), updated annually;
- sectoral analysis: sectoral analyses and heatmaps on climate-related risks are being developed by the Group. Climate transition risk heatmap and climate physical risk heatmap stand as a key tools to appreciate the materiality of the ESG risks, as it enables to map the Group's exposures to sectors considered as vulnerable to climate transition and/or physical risk factors, and to assess potential concentrations thereof;
- in the credit risk framework with the ESG Assessment deployment (see Appendix 5 *ESG Assessment (ESG-A)*), aiming at strengthening and further documenting monitoring process on ESG aspects both at counterparty and transaction levels.

With respect to social risk factors and similarly to climate and environmental-related risks, they are incorporated as risk factors in the Group's process for identifying and assessing risks incurred by the Group, thus enabling the identification and assessment of elementary severe but plausible scenarios that are triggered, favoured or aggravated by social risk factors. (See section Commitment 3 *Systematic integration and management of Environmental, social and governance risks (ESG)* in chapter 7 and Appendix 5 *ESG Assessment (ESG-A)*).

## MEASUREMENT, MONITORING & MITIGATION

In order to support the Group's Sustainable Finance ambitions, actions related to ESG data and information systems are subject to a specific "Data & Systems" stream, under the Group Sustainable Finance Infrastructure Committee's umbrella.

In this context, the following framework has been set up to collect ESG needs within the Group:

- identification and prioritisation of the various ESG use-cases conducted by the Group Data Office and ITG Architecture for the Group Entities and Functions. At the end of 2023, 48 use cases have been identified, of which 38 are under analysis;
- identification of data needs for each use-case: definition of the sourcing strategy either via the purchase from external ESG data providers or internal sourcing relying on the Group's existing processes;
- in case of external sourcing, integration, storage and distribution of the data by the impACT platform, the Group ESG data platform;
- deployment of the ESG Data Management system: classification of data into data families, update of the ESG data catalogue and the ESG data dictionary into We Data (Group data management tool), implementation of data quality indicators to measure data completeness, data validity.

Feedback loops are organised with data providers to address data quality issues and remediation;

- implementation of a governance to define the data collection instructions, the data management and estimation rules, in order to optimise the quality, the exhaustivity and the freshness of ESG data.

As highlighted in the section related to business strategy and processes, since 2011, BNP Paribas has gradually been incorporating ESG issues in its risk management framework, notably drawing on the following:

- financing and investment policies, named "sector policies", have been established in particular for sectors extensively associated to ESG issues;
- provisions relating to social and environmental responsibility (including climate) have been added in the General Credit Policy and specific policies, and are progressively reinforced;
- adherence to the Equator Principles on project financing;
- integration of ESG criteria in collateral valuation policies;
- integration of ESG criteria into supply chain management;
- integration of ESG criteria into asset management activities;
- offering of enhanced ESG training programs for all staff of the Group (see section Commitment 2 *Ethic of the highest standards* in chapter 7);
- dedicated programmes to reinforce the integration of ESG into the risk management framework;
- active participation in open-source initiatives for methodology development regarding climate risk analyses, for instance, BNP Paribas is one of the founding members of the Open-Source Climate Risk (OS-Climate) initiative.

Besides, tools to enhance forward-looking assessment capabilities are being developed. In particular, climate scenarios analyses are being expanded, covering climate-related risk factors, in that respect:

- use of traditional regulatory and internal stress tests to measure the consequences of a crisis scenario on an institution's solvency and liquidity situation. Gradually, this scenario analysis framework has been enriched for use in analysing the consequences of global warming and the energy transition on asset portfolios. Progress has been made in the integration of longer horizons (e.g. 50 years), to project the evolution in the breakdown of sectors in the institution's balance sheet, differentiated scenarios according to a detailed sectoral segmentation and to take into account specific factors such as the cost of carbon emissions, technological innovation and physical risks. Improvements to the climate scenario analyses framework initiated in 2022, which include the development of a long-term strategy for the dynamic balance sheet projection in line with the different transition risk scenarios;
- climate scenarios addressing transition risk and physical risk have been included in the ICAAP, reflecting the increasing importance of climate in the Bank's strategy, climate being one of the pillars of the new 2022-2025 strategic plan. Consistent with this pivotal role of climate change and energy transition, these scenarios are part of a more general treatment of climate-related risks and opportunities in the ICAAP, which are documented in a dedicated section of the ICAAP. This section includes a description of how climate change and energy transition are embedded in Group processes, of how the ICAAP infrastructure increasingly addresses climate-related risks and of the outcome of climate scenarios;
- climate scenario analyses in the ICAAP are not limited to credit risk and also include:
  - an assessment in an adverse scenario of losses calculated from operational risk events for which climate risk has been identified as a risk factor,
  - a reputation risk scenario, in which the impacts of climate-related controversies on the revenues of various business lines are assessed.

Those different scenarios enable the Group to determine the materiality and sensitivity of climate risk factors to risks it is exposed to and for which climate risk can be a relevant risk factor and to assess the impact of climate scenarios on its business model. This concerns in particular business risk, credit risk and operational risk. Climate risk scenarios remain exploratory in nature and cover time horizons that far exceed horizons used for capital planning. As a result, although integrated in the ICAAP for risk management purposes, climate scenarios are not used to calculate an impact on the Group's capital position,

- for further information on the Group's developing climate stress testing infrastructure, please also refer to section 5.3 *Risk Management* which provides information on the Group's stress testing infrastructure, including relating to climate.

The Group does not calculate a capital charge linked to climate-related risk, which is considered a risk factor of risks such as business, credit or operational risk. The Group is, however, able to assess the contribution of events that can be triggered or worsened by climate risk to its internal capital requirement. The assessment relies on the Group's risk identification process.

The Group's resilience to environmental and social risk is underpinned by its diversified, integrated business model. The diversity of the business lines, the business sectors in which the Group operates and the geographic areas in which it is established is a key asset to mitigate risks of all kinds, whether they are climate, related to biodiversity or other environmental risks.

In parallel with internal climate scenario analyses, the Group continues to participate in supervisory climate stress test exercises. Notably, the Group participates in the "One-off Fit-for-55 climate scenario analysis" for which EBA launched in July a public consultation on draft templates for collecting data to carry out its climate scenario by the end of 2023. A cross-fertilisation occurs between internal climate scenario analyses and climate-related exercises mandated by supervisors.

Several other elements can be highlighted as contributing significantly to the Group's resilience to environmental risks:

- the integration of the transition to carbon neutrality at the core of the 2025 strategic plan and the commitment to align its activities with a carbon neutrality trajectory by 2050. Formalised by the Group's membership in the Net-Zero Banking Alliance, BNP Paribas Cardif's membership in the Net-Zero Asset Owner Alliance and BNP Paribas Asset Management's membership in the Net-Zero Asset Manager Initiative, those commitments contribute to supporting the reduction in the Group's exposure to economic players responsible for generating the highest GHG emissions, and thus its exposure to transition risks, particularly those related to changes in public policies aimed at reducing emissions;
- expansion of teams dedicated to supporting customers in their transition (e.g. Low-Carbon Transition Group);
- enhancement of the Group's capabilities to assess and manage environmental risks and incorporate them in its decision-making processes as described in other chapters.

Regarding social risks, activities of the corporate clients may introduce social risks related to the respect of human rights particularly in the area of workers' rights, and may have a negative impact on local communities. Hence, the Group encourages clients to manage their own activities with respect to human rights. It also endeavors to identify, assess, monitor and encourage the improvement of the current and future performance of clients operating in sensitive sectors through the application of its investment and financing policies. This set-up has been further strengthened with the deployment of the ESG assessment of the Group's customers on five dimensions, including social (health, safety and impact on communities). In case of suspicion or identification of serious human rights abuses by a BNP Paribas customer or a company in its portfolio, the Group conducts in-depth due diligences with the company concerned.

In addition, the adherence to international and European policy framework, which incorporates principles on the social field, can also contribute to reduce potential social risks. For example, as a signatory member of the Equator Principles, the Group ensures that any negative impacts of a project finance on communities, ecosystems or the climate are avoided and, if necessary, remedied; and encourages clients to obtain the Free, Prior and Informed Consent (FPIC) of the local communities impacted by their projects.

Further information is displayed in the Commitment 3 *Systematic integration and management of Environmental, social and governance risks (ESG)* and Commitment 8 *Combat Social Exclusion and Support HR* in chapter 7.

## MEASURING THE POTENTIAL RISK OF CLIMATE CHANGE

Despite the developments in recent years in terms of standardising methodologies for the quantitative analysis of ESG factors and their impact on traditional financial risks, they must be interpreted with caution, taking into account their limitations. In the response to the public consultation of its Report on prudential disclosures for ESG<sup>1</sup> of January 2022, the EBA underlines the difficulties relating to these methodologies, namely the low historical depth, the unavailability of standardised and comparable data on the various geographies and sectors of activity, the multiplicity of methods and scenarios used to estimate missing data, among others.

The tables presented in this section should be read in conjunction with the methods and definitions used and described in the accompanying narrative. In the absence of a reference proposed by the supervisory authorities, the Group has chosen to refer, whenever possible, to European definitions or regulatory exercises. When this was not possible, the information was produced on the basis of forward-looking plans and projections, prepared in good faith by the Group based on internal definitions and estimates. The Group constantly adapts its methodologies taking into account the development of knowledge, the availability of data, the establishment or updating of recognised guidelines and standards.

Certain factors, which are external to the Group, may cause variations in the forecasts taken into account to prepare forward-looking plans and projections, such as changes in climate scenarios, changes in economic conditions or geopolitical risks. The information contained in this section may, therefore, be significantly revised in future publications.

As a result, the tables presented in this section can only be assessed on the date of publication of this document and must be interpreted taking into account the uncertainties related to the methodologies, projections and data used.

| 56                          | TOTAL  | 458,665  | 27,334           | 63,234                            | 13,330   | (9,278)          | (1,470)                           | (6,998)   | 382,655             | 40,536               | 32,178     | 3,295                                | 3 |

(\*) In accordance with Commission Delegated Regulation (EU) 2020/1818 supplementing Regulation (EU) 2016/1011 as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks – regulation on climate benchmarks: the sectors listed in Annex I, sections A to H and section L, of Regulation (EC) No. 1893/2006.

(\*\*) Amounts supplemented by additional data.

The Group's total exposure to non-financial corporates stands at EUR 454 billion at 31 December 2023 including loans and advances, debt securities and equity instruments not held for trading. The table shows a mapping of exposures by sector with the detail of those considered to significantly contribute to climate change and may not, under any circumstances, be interpreted as an exposure to transition risk as such.

The exposure towards companies excluded from Paris-aligned benchmarks<sup>1</sup> stands at EUR 25 billion and is mainly composed of exposure towards companies active in fossil fuel. These companies have been identified through a double screening based on:

1. the identification of counterparts belonging to oil, gas and coal sectors as identified in the Group's internal activity referential or according to the NACE code declared by the counterpart;
2. the identification of counterparts deriving their revenue from the fossil fuel value chain as per defined in the Climate Benchmark Standard Regulation<sup>2</sup> obtained from an external data provider.

The environmentally-sustainable outstandings relate to the exposures identified as aligned to the climate change mitigation objective in relation with the Regulation EU 2020/852. They only cover financial instruments with general purpose, granted to European corporates subject to the Non-Financial Reporting Directive. The alignment share is calculated on the basis of the ratio of EU Taxonomy aligned turnover disclosed by these counterparts. The methodology is detailed in section 7.9 *Activities aligned within the meaning of the European Taxonomy* in chapter 7.

Financed GHG emissions of our non-financial counterparts are not disclosed, as authorised by the regulations during the phasing-in period to June 2024, as the quality of the underlying data coming from our clients is still not available with a sufficient quality as not required by regulation yet. Hence, more than two-thirds of the portfolio would rely on low quality estimated data, based on geographical and sectorial average, not taking into consideration the specific situation of our clients even in the most emitting sectors.

Internally within the risk identification process (Risk ID), the bank identifies the climate change risk drivers, including three drivers related to the transition, and how they materialise into the traditional financial (e.g. credit risk) and non-financial risks (e.g. legal risk, operational risk).

In particular, it highlights how credit exposure to sector highly sensitive to the transition (e.g. Power generation sector, fossil fuel extraction) could materialise through transmission channel (e.g. new climate-related regulations, shifts in prices and asset values) into credit risk, which is the most salient risk for the banking book.

The Group has adapted its Credit risk management by taking into account ESG risks and transition risk in particular into the Global Credit policy and into the specific credit policies when it is relevant.

(\*) For counterparties among the top 20 carbon emitting companies in the world

The identification of the counterparties making up the list of the 20 most carbon-intensive firms worldwide is based on the public list provided by the Climate Accountability Institute as for 2018<sup>1</sup>. This list shows limits as notably it only contains companies active in fossil fuel activities compared to the others proposed in the EBA instructions, nevertheless it is also the most recent and the one for which the Group has computed the highest exposure.

The assets included in the table are composed of loans and advances, debt securities and equity instruments not held for trading granted to these business groups. They are compared to the gross carrying amount of the assets included in the banking book, excluding financial assets held for trading and held for sale.

After matching on a name-by-name basis the Climate Accountability Institute list with the internal third parties referential at business group level, the related carrying amount, corresponding to the financing of 11 of them, has been aggregated and stands at EUR 6 billion at end-December 2023.

The environmentally-sustainable gross carrying amount relates to the exposures identified as aligned to the climate change mitigation objective in relation with the Regulation EU 2020/852. They only cover financial instruments with general purpose, granted to European corporates subject to the Non-Financial Reporting Directive. The alignment share is calculated on the basis of the ratio of EU Taxonomy aligned turnover disclosed by these counterparts. The methodology is detailed in section 7.9 *Activities aligned within the meaning of the European Taxonomy* in chapter 7.

| 10 of which Level of energy efficiency (EP score i <sup>n</sup> kWh/m <sup>2</sup> of collateral) estimated | 142  | 9             | 47            | 61            | 18            | 5   | 2             |              |            |              |   |              |              |              |                |      |

The Group's total portfolio of loans collateralised by immovable properties stands at EUR 206 billion at 31 December 2023 including loans collateralised by both commercial and residential immovable properties and collateral obtained by taking possession. Its repartition by energy efficiency is displayed in two forms: its value in kWh/m<sup>2</sup> and in label (A to G) of the collateral as defined in the Energy Performance of Buildings Directive<sup>1</sup> and the Energy Efficiency Directive<sup>2</sup>. The Energy Performance Certificates (EPCs) provides information on the energy efficiency of the collateral, which enables to:

- support/advice clients on their home purchase and during their home sustainable transition,
- integrate EPC-related information into the credit decision process and credit risk management framework,

<sup>1</sup> Directive 2010/31/EU.

<sup>2</sup> Directive 2012/27/EU.

- improve the accuracy of financial risk measures performed in climate scenario analyses.

The availability of Energy Performance Certificates across Europe is nevertheless not homogeneous, as it strongly relies on geographical specificities, such as national data protection laws in Belgium, or real estate local market practices for instance. Moreover, open-source data bases are sometimes available, barely covering a whole country and often showing with poor data quality, as only updated at the last sale of the assets, often more than two years ago.

As Energy Performance Certificates are based on EU regulations, data for real estate collaterals located outside of the European Union cannot be obtained except in a case where a mapping with the EU EPC label exists.

As in most cases no mapping exists, the columns corresponding to the EPC label of real estate collaterals located outside of the EU have been left blank and only the energy efficiency in kWh/m<sup>2</sup> has been filled in with estimates, when relevant.

As a result, Energy Performance Certificates (EPCs) are either:

- collected by entities, during the loan origination process. In this case they are considered as reported data.
- obtained from central national databases. When a 1-to-1 matching with the financed counterpart is possible, EPC data is considered as reported. When the matching is deduced (based on the address for example), EPC data is considered as estimated.
- estimated on the basis of proxies or rules (based on the mean energy efficiency for a region or a country for example).

Loans guaranteed by a mutual guarantee fund, especially the “*Crédit Logement*” framework in France, do not fall under the definition of loans collateralised by immovable property and are not reported in this table.

Should these loans have been reported, the total gross carrying amount of real estate loans at 31 December 2023 would have increased by EUR 78 billion, of which EUR 7 billion in the “0; < 100” bucket, EUR 26 billion in the “> 100; <= 200” bucket, EUR 27 billion in the “> 200; <= 300” tranche, EUR 13 billion in the “> 300; <= 400” bucket, EUR 3 billion in the “> 400; <= 500” bucket, and EUR 2 billion in the “> 500” bucket.

## ALIGNMENT METRICS BY SECTOR

To achieve the banking's sector ambition to align its climate commitments with the objectives of the Paris Agreement and to pursue a warming target limited to 1.5°C, BNP Paribas signed the Net Zero Alliances in 2021.

As part of its 2025 strategic Plan, the Group has published a Climate Report in May 2023 which illustrates notably its progress in supporting the alignment of its portfolio with its Net-Zero commitment for different sectors: oil and gas, electricity generation, automotive, steel, aluminium and cement.

At 31 December 2023, the Group's commitments and progress update for these six sectors, which meet the requirement to disclose alignment metrics, are reported in the Commitment 3 *Systematic integration and management of Environmental, social and governance risks (ESG)* of chapter 7. These metrics though they met most of the disclosure requirements do not exactly respect all definitions and criteria defined by EBA as they are measured according to NZBA framework.

In the first semester 2024, for the first ESG Pillar 3 disclosure requirement, the Group has noted some adjustments which are in the process of being assessed and prioritised and is working towards alignment with the reporting requirements:

- in terms of sector: the inclusion of the coal sector in the perimeter of the “Upstream oil & gas” sector;
- in terms of portfolio amounts disclosed: the disclosure of the gross carrying amount of the portfolios instead of the total exposure including drawn and committed undrawn amounts;
- in terms of precise scope of counterparts: the use of NACE codes to map the counterparts included in each sector instead of internal sectorial approach;
- in terms of target date: the use of a rolling target (3 years after the year of reference) instead of fixed targets.

# BANKING BOOK – INDICATORS OF POTENTIAL CLIMATE CHANGE PHYSICAL RISK

TABLE 111: EXPOSURES SUBJECT TO POTENTIAL PHYSICAL RISK

| 31 December 2023   |  |        |     |     |     |    |   |  |       |
|--|--|--------|-----|-----|-----|----|---|--|-------|
| Gross carrying amount  |  |        |     |     |     |    |   |  |       |
| of which exposures sensitive to impact from climate change physical events               |  |        |     |     |     |    |   |  |       |
| Breakdown by maturity bucket   |  |        |     |     |     |    |   |  |       |
| of which exposures sensitive to impact from chronic climate change events                |  |        |     |     |     |    |   |  |       |
| of which exposures sensitive to impact from acute climate change events                  |  |        |     |     |     |    |   |  |       |
| of which exposures sensitive to impact both from chronic and acute climate change events |  |        |     |     |     |    |   |  |       |
| Average weighted maturity (in years)   |  |        |     |     |     |    |   |  |       |
| > 5 years > 10 years   |  |        |     |     |     |    |   |  |       |
| < 5 years < 10 years < 20 years > 20 years   |  |        |     |     |     |    |   |  |       |
| In millions of euros   |  |        |     |     |     |    |   |  |       |
| 1  | A – Agriculture, forestry and fishing                                    | 12,989 | 51  | 5   | 4   |    | 4 |  | 60    |
| 2  | B – Mining and quarrying   | 7,623  |     |     |     |    |   |  |       |
| 3  | C – Manufacturing  | 92,356 | 1   |     |     |    | 3 |  | 1     |
| 4  | D – Electricity, gas, steam and air conditioning supply                  | 19,080 |     |     |     |    |   |  |       |
| 5  | E – Water supply; sewerage, waste management and remediation activities  | 2,528  |     |     |     |    |   |  |       |
| 6  | F – Construction   | 25,615 | 164 | 8   | 8   | 1  | 3 |  | 181   |
| 7  | G – Wholesale and retail trade; repair of motor vehicles and motorcycles | 69,868 | 73  | 4   | 1   |    | 3 |  | 79    |
| 8  | H – Transportation and storage   | 29,001 | 1   |     |     |    | 4 |  | 2     |
| 9  | L – Real estate activities   | 61,308 | 594 | 207 | 323 | 10 | 7 |  | 1,135 |
| 10   | Loans collateralised by residential immovable property                   | 13,749 | 208 | 45  | 62  | 3  | 4 |  | 319   |
| 11   | Loans collateralised by commercial immovable property                    | 55,591 | 874 | 189 | 262 | 13 | 4 |  | 1,337 |

| 14 | TOTAL   | 458,665 | 1,395 | 189 | 233 | 12 |   | 1,828 |

The table before shows the potential exposures sensitives to physical risks.

**Disclaimer:** Given the current lack of stability of the models, the data gaps and the guidelines uncertainty, the Bank has opted for the disclosure of impacts using the physical risk scenarios of the 2022 European Central Bank Climate stress test. The results of the flood, heat wave and drought scenarios of the ECB's 2022 climate stress test have been adjusted to reflect the materiality of chronic physical risk factors over the horizon of the estimated duration of the credit portfolios, by only retaining exposures to non-financial companies to match the model expected by EBA. These figures are not comparable with other banks publications having taken other disclosure options and are published for information only. Those figures are an attempt to flag exposures potentially sensitive to physical risk events and should not be understood as direct or integrated risks.

The Group expects that the instructions and working assumptions will be clarified with a common methodology to be applied for future years. It should also be noted that these analyses are based on an adjusted version of the ECB scenarios initially presenting a time horizon of 2050, to reflect the materiality of the chronic physical risk factors to the expected duration of the credit portfolios, all other things being equal.

Physical risks are defined as the risks of any negative financial impact on the institution stemming from the current or prospective impacts of physical effects of environmental factors on its counterparties or invested assets.

The presentation of assets subject to climate change physical risks in the Group's balance sheet requires the definition of methodologies and hypotheses to identify the corresponding counterparties.

Two physical risk scenarios were retained by the European Central Bank for its 2022 climate stress test exercise. They are based on anticipating today the levels of expected chronic heat levels and an acute river flooding event forecast for 2050. The acute extreme climate events are managed through this thirty-year anticipation of severe events that are plausible in 2050. No chronic physical risk events have been specifically covered in the 2022 ECB climate stress test.

In the ECB drought and heat risk scenario, the economic effects of a severe drought and heatwave in Europe were modelled. Extended periods of hot weather can lead to sizeable output losses across several economic sectors, for example through the decrease in labour productivity for outdoor professional activities. Through their exposure to these vulnerable industries, banks could sustain losses. To limit the scope of the exercise, the scenario only models the shocks to sectoral gross value-added growth. The scenario calibration is based on NGFS (Network for Greening the Financial System) estimates for labour productivity shocks due to heat stress across relevant countries in 2050. Thus, the key transmission channel of heatwave risk to the economy is through labour productivity. For example, a severe heatwave can weaken the productivity of construction workers or that of farmers who face harsher working conditions.

For this drought risk scenario, BNP Paribas provided its corporate exposures not secured by real estate with headquarters in France, Belgium, Italy, Germany and Luxembourg.

River flooding has historically been a major source of physical risk in Europe and, with a rise in extreme levels of precipitation being associated with climate change, this risk is expected to increase. The floods during the summer of 2021 show the consequences of heavy rainfall on both human lives lost and physical capital being destroyed or severely impaired. Under the river flooding scenario used by the ECB in its 2022 climate stress test, it is assumed that severe floods sweep across Europe on the first day of projection. While the probability of such an event is very low, it allows relevant flood risk scenarios to be created across the European Union. Flood risk is different across Europe and can vary significantly even within a few kilometers. Therefore, the flood risk scenario accounts for within-country variation in risks. As such, shocks to residential and commercial real estate exposures are estimated at NUTS3 regional level ("*Nomenclature des Unités Territoriales Statistiques*" – the level 3 being departments for France), according to a specific flood risk level.

The flood risk scenario was developed based on insights from the work carried out by the European Commission's Joint Research Centre on flood risk, as well as from granular geospatial flood risk data collected for the purposes of the ECB economy-wide climate stress test based on the Four Twenty-Seven dataset.

For this flood risk scenario, BNP Paribas provided its commercial real estate exposures located in France, Belgium and Italy.

## BANKING BOOK – MITIGATION ACTIONS

In accordance with EBA instructions, publications relating to the GAR (Green Asset Ratio) presented below in tables 112 to 114 are based on the alignment with the taxonomy of the counterparty's turnover for the financing component without determined allocation.

The methodology for identifying eligible and aligned assets is described in section 7.9 *Aligned activities within the meaning of European taxonomy* of chapter 7. The Group has chosen to publish the GAR according to the interpretation of the European Commission published on 21 December 2023. As a result, no financial instrument whose use of funds is allocated has been reported in the numerator of the GAR, either with respect to companies, local governments or households.

Due to its methodological imbalance and operational complexity, the GAR cannot reflect all the financing of the transition to a low-carbon economy for the Group. As a result, an additional ratio of the share of aligned assets eligible assets is presented in the section 7.9 *Activities aligned within the meaning of European taxonomy*.

**TABLE 112: SUMMARY OF KEY PERFORMANCE INDICATORS (KPIs) ALIGNED WITH THE TAXONOMY**

|                  | a                          | b                         | c   | d   | e  | f |

For consistency purpose, the figures presented in the tables of this section correspond to the alignment information presented in the section 7.9 *Aligned activities within the meaning of European taxonomy* of chapter 7, in application of the Commission Delegated Regulation (EU) 2021/2178 of 6 July 2021 and of the Draft Commission Notice of 21 December 2023. Therefore, the Group did not apply in this section the simplified approach recommended by EBA. As such, only gross carrying amounts of general purpose financing instruments towards European non-financial companies subject to NFRD (Non-Financial Reporting Directive 2014/95/EU of 22 October 2014), and identified as aligned, have been included in the ratio's numerator.

The detail of covered assets and the methodology as well as the limitations of the Green Asset Ratio are presented in the section 7.9 *Aligned activities within the meaning of European taxonomy* of chapter 7, as well as an internal complementary ratio. The table with the gross carrying amounts in absolute values is accessible in the ESG regulatory indicators dedicated document, on the Group Investors Relationships website.

It should be noted that the Green Asset Ratio, due to its unbalanced methodology and its operating complexity, cannot reflect for the Group the entirety of the instruments financing transition to a low-carbon economy.

Firstly, the EU Taxonomy alignment covers only companies subject to the NFRD, European households and specialised financings granted to European local administrations. The regulation excludes from the analysis financings granted to SMEs and non-EU companies. Neither does not allow either to include in the analysis of project financings set up in dedicated vehicles, not subject to NFRD, even if they relate to financing of European low-carbon infrastructures. Moreover, the ratio's scope limited to large corporations subject to NFRD regulation, appears too restrictive as regards to the Group's diversified business model.

As such, the unbalance between the assets subject to alignment analysis for the numerator and all covered assets in the denominator sets a structural cap to the GAR at 55% for 2023. This cap is as much lower as the business model is diversified in terms of clients, products and geographies.

The taxonomy's alignment criteria are by definition ambitious, since they correspond to science-based thresholds compatible with the EU carbon neutrality goal by 2050. However, by proposing only an aligned or non-aligned outcome, the transition pathway is not taken into account, although it is part of long-term effort already engaged by the Group and its clients.

Lastly, climate performance criteria are completed by multiple supplementary conditions, aiming at ensuring that no significant harm is caused towards one of the other environmental objectives of the Taxonomy. The assessment of these latter conditions is complex, including issues both of normative interpretation and of information access. Most of the information to be collected by banks from their clients are not standardised yet, which slows down the activities alignment assessment by companies, and the bank's data collection for each criteria is not operant as of today.

**TABLE 115: OTHER CLIMATE CHANGE MITIGATION ACTIONS NOT COVERED BY THE TAXONOMY**

The table shows the loans and bonds, held in the banking book, measured on a gross carrying amount basis, and that contribute to mitigating climate change risks according to the ESG internal classification principles of the Bank.

Bonds outstanding stood at EUR 3.9 billion at 31 December 2023 (versus EUR 2.7 billion at 31 December 2022) and are identified by a third part as aligned with key green bond principles defined by the International Capital Market Association. Each bond in the banking book portfolio is analysed according to the different criteria collected by external information in order to select only the bonds which finance low-carbon and/or climate resilient projects or climate transition projects.

Reported obligations are only those recorded in assets for which the business model is to collect the contractual cash flows and hold the asset until maturity.

Loans outstanding stood at EUR 44 billion at 31 December 2023 (versus EUR 26 billion at 31 December 2022) measured on the basis of the gross carrying amount. They have been identified by the Group as corresponding to loans with a specified climate mitigation purpose based on the transactions tagging process deployed by the Group in the credit process. The internal principles on which the tagging is done are based on the Loan Market Association principles. The outstanding also includes Sustainability-Linked Loans granted to financial and non-financial corporations, whose loan agreement contains at least one performance indicator related to climate change mitigation.

## Appendix 1: Sovereign exposures

The BNP Paribas Group is exposed to sovereign risk, which is the risk of a State defaulting on its debt, *i.e.* a temporary or prolonged interruption of debt servicing (interest and/or principal). The Group is thus exposed to credit, counterparty or market risk according to the accounting category of the financial asset issued by the sovereign State.

Exposure to sovereign debt mainly consists of securities. The Group holds sovereign bonds as part of its liquidity management process. Liquidity management is based in particular on holding securities eligible as collateral for refinancing by central banks and includes a substantial share of highly rated debt securities issued by governments, representing a low level of risk. Moreover, as part of its assets and liability management and structural interest rate risk management policy, the Group also holds a portfolio of assets including sovereign debt instruments, with interest-rate characteristics that contribute to its hedging

strategies. In addition, the Group is a primary dealer in sovereign debt securities in a number of countries, which leads it to take temporary long and short trading positions, some of which are hedged by derivatives.

Sovereign exposures held by the Group are presented in the table hereafter in accordance with the method defined by the EBA for the 2014 stress tests covering a scope which includes sovereigns as well as local and regional authorities.

(1) Book value after revaluation and before any impairment provision.

(2) Market value.

(3) Sovereign counterparty risk: direct exposure to a sovereign counterparty. This excludes exposure to a non-sovereign counterparty fully or partly covered by a sovereign counterparty.

(4) Positions held with a non-sovereign counterparty, exposing BNP Paribas to a credit risk on a sovereign third party. For example, sale of a CDS to a non-sovereign third party as a hedge against a sovereign's default. This excludes exposures to non-sovereign counterparties fully or partly covered by a sovereign government.

## Appendix 3: Countercyclical capital buffer and G-SIB buffer

### COUNTERCYCLICAL CAPITAL BUFFER

The calculation and the amount of the BNP Paribas countercyclical capital buffer are given in the tables below in accordance with the instructions of Commission Delegated Regulation (EU) No. 2015/1555 of 28 May 2015.

#### INSTITUTION-SPECIFIC COUNTERCYCLICAL CAPITAL BUFFER (EU CCYB2)

|   | a                |                  |
|---|------------------|------------------|
| In millions of euros                                | 31 December 2023 | 31 December 2022 |
| 010 Total risk-weighted assets                      | 703,694          | 744,851          |
| 020 BNP Paribas countercyclical capital buffer rate | 0.40%            | 0.09%            |
| 030 Countercyclical capital buffer requirement      | 2,813            | 682              |

At 31 December 2023, the BNP Paribas countercyclical capital buffer rate is 0.40% against 0.09% at 31 December 2022.

The countercyclical capital buffer is calculated as the weighted average of the countercyclical buffer rates that apply in the countries where the relevant credit exposures of the Group are located. The weight applied to the countercyclical buffer rate in each country is the share of own funds requirements in total own funds requirements relating to relevant credit exposures in the territory in question.

In the context of the public health crisis, many countries have reduced the countercyclical buffer rate applicable to relevant credit exposures located in their territory. At 31 December 2023, BNP Paribas' countercyclical capital buffer rate of 0.40% is mainly due to the rates applicable in France (0.5%) and United Kingdom (2.0%). This rate is expected to be around 0.69% at 31 December 2024 due to the activation or increase in requirements announced by certain European countries (see table below).

**GEOGRAPHICAL DISTRIBUTION OF CREDIT EXPOSURES RELEVANT FOR THE CALCULATION OF THE COUNTERCYCLICAL CAPITAL BUFFER (CCYB1)**

## G-SIB BUFFER

The measurement approach of the global systemic importance is indicator-based. The selected indicators reflect the size of banks, their interconnectedness, the use of banking information systems for the services they provide, their global cross-jurisdictional activity and their complexity. The methodology is described in a document published in July 2013 by the Basel Committee, entitled Global systemically important banks: updated assessment methodology and the higher loss absorbency requirement (BCBS 255).

The Group received notification from the *Autorité de contrôle prudentiel et de résolution* (ACPR), dated 27 November 2023, that it was on the 2023 list of global systemically important financial institutions in sub-category 3, corresponding to its score in the database at end 2022.

As a result, the G-SIB buffer requirement for the Group, applicable from 1 January 2024 remains unchanged at 1.5% of the total exposure amount.

### SYSTEMIC RISK BUFFER (G-SIB)

# Appendix 5: Environmental, social and governance risk

## ESG ASSESSMENT (ESG-A)

---

The ESG analysis of large corporate clients has been expanded to all sectors, thanks to a new risk assessment tool: the ESG Assessment (ESG-A). This assessment aims to perform a systematic ESG analysis as part of the credit process by integrating ESG criteria within the other criteria included in the assessment of the clients' credit profile.

The ESG-A covers the environmental (climate, biodiversity), social (health and safety at work and impact on communities) and governance (business ethics) dimensions through a set of questions, supplemented by an analysis of the controversies affecting the client. The questionnaires developed in this context are specific to each sector in order to better integrate the challenges and issues specific to related activities.

Overall, ESG Assessment enables to:

- assess clients' compliance with sectoral policies;
- assess the maturity of the clients' ESG strategy and its implementation as well as their capability to monitor their ESG key material issues and publish performance indicators;
- determine whether actions plans have been undertaken;
- identify if some commitments have been taken by the clients on specific topics;
- get a sense of forward-looking ESG path of the clients.

The deployment of ESG-A, included in the credit files of all large corporates business groups whatever the business sectors, enables the RISK Function to exercise greater control over the ESG dimensions during credit committees, on a documented basis. Currently designed for large companies, this framework has been adapted and will be extended to additional customer segments (corporates with a turnover above EUR 50 million and financial institutions) starting from 2024.

This ESG-A which is being rolled-out for corporate clients covers the performance assessment of the counterparty and includes questions on the way ESG-related issues are tackled by the Bank's clients. This set of questions cover, for example, the following aspects:

- Environment:
  - existence of GHG emission reduction targets set with a clear deadline,
  - use of sectorial standard metric to measure GHG intensity,
  - existence of a Net-Zero emission target or carbon neutrality target,
  - extent of physical risk exposure and actions to mitigate it,
  - the way biodiversity matters are addressed by the company;
- Social:
  - existence of a health & safety management system,
  - ability to disclose/provide performance indicators with regards to health & safety aspects to workers relying on frequency and/or severity rates,
  - commitment to disclose or provide health & safety indicators for workers and subcontractors;
- Governance:
  - existence of a Code of conduct in place to address ethical considerations, deployment of a whistleblowing system,
  - relevant employees' compensation (such as top management variable compensation) linked to ESG performance,
  - transparency: check if company's extra-financial information (*i.e.* indicators or policies) are audited by an external third party.

As previously mentioned, the questionnaire aims at guiding the assessment and dialogue with the client, and, among other things, it enables evaluation of a counterparty's governance capability to identify and monitor ESG key material issues as well as to publish ESG performance indicators.

## RISK IDENTIFICATION & ASSESSMENT PROCESS (“RISK ID”)

BNP Paribas’ risk identification & assessment process (Risk ID) is part of the Group risk management framework. Risk ID is a fully integrated process, involving business lines, the RISK Function and the other control functions throughout the Group. It serves to maintain up-to-date the Risk Inventories, both at local and Group levels. The Risk ID process aims to identify and assess all risks to which the Group is or could be exposed in a forward-looking way.

The Risk ID process covers:

- all sets of activities and exposures, on and off-balance sheet, as well as new products and activities;
- all risk types and all geographies;
- all business lines and legal entities.

As part of the Group’s Risk ID process, all business lines are requested to keep up to date their Risk Inventory (that is ultimately contribution to the Group Risk Inventory). This inventory consists in identifying a set of elementary severe but plausible scenarios (“risk events”) corresponding to the way the risk types the Group is or might be exposed to could materialise. Each scenario is briefly described and attached to one of the 101 risk types of the Group reference risk type taxonomy, and is associated with a selection of risk factors (identified from the 115 proposed in the Group reference risk driver taxonomy) that are liable to trigger, favor or worsen the scenario. There can be up to five risk factors for a given scenario. A scenario can be linked to individual counterparties, to one (or several) specific sector(s), and all activities are covered

ESG dimensions are captured *via* risk factors. To this end, among the 115 risk factors proposed in the risk factor taxonomy, 13 pertain to ESG categories, of which:

- 9 are totally or partially related environmental concerns (columns “Climate” & “Nature” in the table below);
- 5 are totally or partially related to social concerns (column “Social”);
- 3 are totally or partially related to governance concerns (column “Governance”).

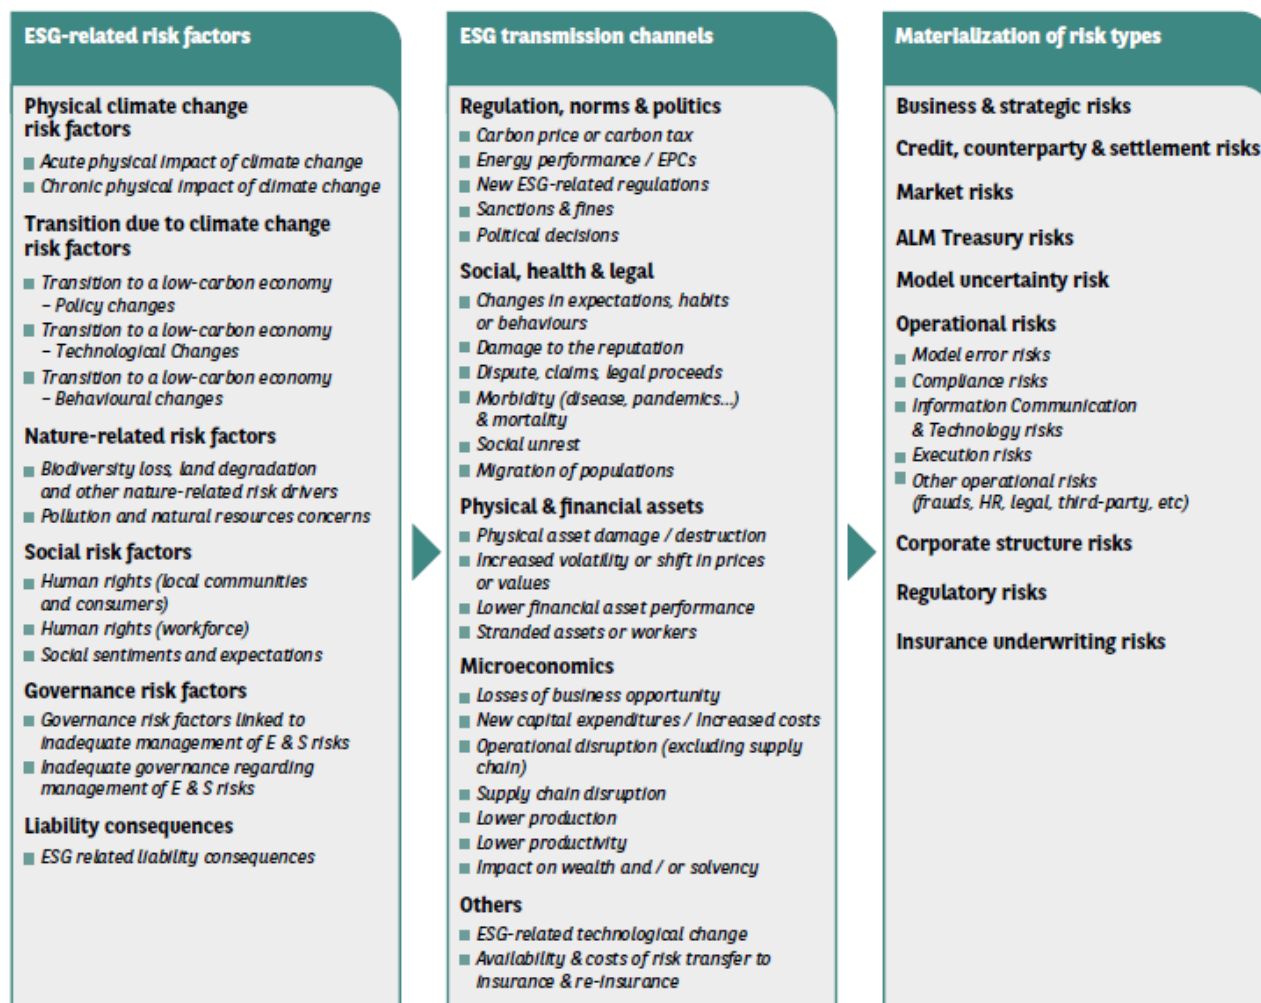

These ESG-related risk factors have been designed in line with EBA and ECB recommendations. They are used in the Risk ID process to assess, in a forward-looking way, how they could give rise to elementary scenarios, corresponding to the virtual materialisation of any kind of financial or non-financial risks.

BNP Paribas taxonomy of ESG risk factors are presented in the following table.

| Level 1 risk factor                               | Level 2 risk factor                           | Level 3 risk factor   | Climate | Nature | Social | Governance |
|---|---|---|---------|--------|--------|------------|
| Environmental, social and governance risk factors | Physical climate change risk factors          | 1 Acute physical impact of climate change                                 | ✓       |        |        |            |
|   |   | 2 Chronic physical impact of climate change                               | ✓       |        |        |            |

|   | Nature-related risk factors                   | 6 Biodiversity loss, land degradation & other nature-related risk factors |         | ✓      |        |            |
|   |   | 7 Pollution and natural resources concerns                                |         | ✓      |        |            |
|   | Social risk factors                           | 8 Human rights (local communities and consumers)                          |         |        | ✓      |            |
|   |   | 9 Human rights (workforce)  |         |        | ✓      |            |
|   |   | 10 Social sentiments and expectations                                     |         |        | ✓      |            |
|   | Governance risk factors                       | 11 Inadequate governance regarding management of E & S risks              | ✓       | ✓      | ✓      | ✓          |
|   |   | 12 Non-compliance with corporate gov. frameworks or codes                 |         |        |        | ✓          |
|   | Liability                                     | 13 ESG related liability consequences                                     | ✓       | ✓      | ✓      | ✓          |

Besides, a better understanding of the transmission channels that explain how ESG risk drivers could lead to direct or indirect damage to the Group enhances the ability to seize and model the possible impacts of ESG risk drivers. Consequently, in Risk ID approach, whenever an ESG risk driver is considered as favouring, triggering and or worsening a risk event. Associated transmissions channels must be identified. They have to be selected from the first version of the BNP Paribas reference taxonomy of ESG transmission channels.

The following graph illustrates the manner BNP Paribas accounts for the fact that ESG risk drivers are likely to contribute, *via* pre-identified transmission channels, to the materialisation of, potentially, any type of risk.

Not all transmission channels are relevant to for all ESG risk factors. For each of the ESG risk factors, only a sub-set of the transmission channel ensemble is applicable and could play a role in the causal chain leading to the materialization of a financial or non-financial risk, ultimately leading to a direct or indirect damage to the Group. The following compatibility matrix illustrates this state of affairs.

## ESG RISK FACTORS

|                              |    | Physical  |   | Transition                  |                                    |                                  | Nature  |  | Social                                 |                          |                                    | Governance   |   | Liability                          |
|------------------------------|----|---|---|-----------------------------|------------------------------------|----------------------------------|---|--|--|--------------------------|------------------------------------|--|---|------------------------------------|

# "6 INFORMATION ON THE PARENT COMPANY FINANCIAL STATEMENTS 31 DECEMBER 2023

## 6.1 BNP Paribas SA financial statements

On 1<sup>st</sup> November 2023, the retroactive merger from 1<sup>st</sup> January of Exane SA into BNP Paribas SA was completed by absorption. On that date, Exane SA was dissolved by operation of law without liquidation.

The legal disappearance of Exane led to the closure of six branches following the transfer of their assets and liabilities to BNP Paribas SA branches in each country in Europe. Thus, the 2023 financial statements are prepared taking this legal transaction into account.

# Notes to the parent company financial statements

## NOTE 1 SUMMARY OF SIGNIFICANT ACCOUNTING PRINCIPLES APPLIED BY BNP PARIBAS SA

*BNP Paribas SA's financial statements have been prepared in accordance with generally accepted accounting principles applied to credit institutions in France, set out in ANC (French Accounting Standards Authority) Regulation No. 2014-07 of 26 November 2014 and its amending regulations since that date.*

### AMOUNTS DUE FROM CREDIT INSTITUTIONS AND CUSTOMERS

Amounts due from credit institutions include all subordinated and unsubordinated loans made in connection with banking transactions with credit institutions, with the exception of debt securities. They also include assets purchased under resale agreements, whatever the type of assets concerned, and receivables corresponding to securities sold under collateralised repurchase agreements. They are broken down between demand loans and deposits, and term loans and time deposits.

Amounts due from customers include loans to customers other than credit institutions, with the exception of loans represented by debt securities issued by customers, assets purchased under resale agreements, whatever the type of assets concerned, and receivables corresponding to securities sold under collateralised repurchase agreements. They are broken down between commercial loans, customer debit accounts, and other loans.

Amounts due from credit institutions and customers are recorded in the balance sheet at nominal value plus accrued interest not yet due.

Outstanding loans and confirmed credit facilities are broken down into sound loans, including sound restructured loans, and doubtful loans. The same analysis is performed for credit risks attached to forward financial instruments whose present value represents an asset for the Group.

Credit risks are monitored using BNP Paribas SA's internal credit risk rating system. This system is based on two key parameters: the probability of default by the counterparty, expressed as a rating, and the overall recovery rate determined by reference to the type of transaction. There are 12 counterparty ratings: 10 covering sound loans and two covering doubtful loans and loans classified as irrecoverable.

Doubtful loans are defined as loans where the Bank considers that there is a risk that the borrowers will be unable to honour all or part of their commitments. The definition of default is consistent with the Basel definition, which takes into account the EBA guidelines of 28 September 2016, in particular the applicable thresholds for overdue amounts and probationary periods.

Loans overdue for more than 90 days, as well as loans subject to litigation are considered as doubtful. When a loan is classified as doubtful, all other loans and commitments to the debtor are automatically assigned the same classification.

The Bank recognises an impairment for doubtful accounts on these loans, in an amount corresponding to the difference between the gross loan value and present value of the future cash flows (from principal, interest, and any realised guarantees) that are deemed recoverable, using a discount rate equal to the original effective interest rate (for fixed-rate loans), or the most recent contractual interest rate (for floating-rate loans). The guarantees considered here include mortgages and pledges on assets, as well as credit derivatives acquired by the Bank as a protection against credit losses in the loan book.

These impairments are determined on an individual or collective basis based on statistical models for loan portfolios with similar risks and not impaired individually.

If a loan is restructured because the borrower is facing financial difficulties, the Bank calculates a discount equal to the difference in present value between the old and new repayment terms. These discounts are recognised as a deduction to assets and reversed through income on an actuarial basis over the remaining term of the loan. If any instalments on a restructured loan are not paid, the loan is reclassified as doubtful or irrecoverable.

In the case of doubtful loans where the borrower has resumed making regular payments in accordance with the original repayment schedule, the loan is reclassified as sound. Similarly, doubtful loans that have been restructured, where the restructuring terms are satisfied and for which the credit risk is no longer proven, are also reclassified as sound.

Irrecoverable loans include loans to borrowers whose credit standing is such that after a reasonable time classified as doubtful loans, no reclassification as a sound loan is foreseeable, loans where an event of default has occurred, almost all restructured loans where the borrower has once again defaulted, and loans classified as doubtful for more than one year that are in default and are not secured by guarantees covering a substantial portion of the amount due.

Impairments for credit risk on doubtful loans are deducted from the carrying amount of the assets on the balance sheet. Provisions recorded under liabilities include provisions related to off-balance sheet commitments, loss provisions relating to interests in real-estate development programmes, provisions for claims and litigation, and provisions for unforeseeable industry risks.

Additions to and recoveries of provisions and impairment, losses on irrecoverable loans, recoveries on loans covered by provisions and discounts calculated on restructured loans are recorded in the profit and loss account under “Cost of risk”.

The interest received from the repayment of the carrying amount of loans that have been written-down, as well as the reversals of discounting effects and the discount on restructured loans, are recognised under “Interest income”.

## REGULATED SAVINGS AND LOAN CONTRACTS

Home savings accounts (*Comptes Épargne Logement* – “CEL”) and home savings plans (*Plans d'Épargne Logement* – “PEL”) are government-regulated retail products for individuals sold in France. They combine a savings phase and a loan phase which are inseparable, with the loan phase contingent upon the savings phase.

These products contain two types of obligations for BNP Paribas SA: an obligation to pay interest on the savings for an indefinite period at a rate set by the government on inception of the contract (in the case of PEL products) or at a rate reset every half-year using an indexation formula set by law (in the case of CEL products); and an obligation to lend to the customer (at the customer's option) an amount contingent upon the rights acquired during the savings phase at a rate set on inception of the contract (in the case of PEL products) or at a rate contingent upon the savings phase (in the case of CEL products).

BNP Paribas SA's future obligations with respect to each generation (in the case of PEL products, a generation comprises all products with the same interest rate at inception; in the case of CEL products, all such products constitute a single generation) are measured by discounting potential future earnings from at-risk outstandings for that generation.

At-risk outstandings are estimated on the basis of a historical analysis of customer behaviour, and equate to statistically probable outstanding loans and the difference between statistically probable outstandings and minimum expected outstandings, with minimum expected outstandings being deemed equivalent to unconditional term deposits.

Earnings for future periods from the savings phase are estimated as the difference between the reinvestment rate and the fixed savings interest rate on at-risk savings outstanding for the period in question. Earnings for future periods from the loan phase are estimated as the difference between the refinancing rate and the fixed loan interest rate on at-risk outstanding loans for the period in question.

The reinvestment rate for savings and the refinancing rate for loans are derived from the swap yield curve and from the spreads expected on financial instruments of similar type and maturity. Spreads are determined on the basis of actual spreads on fixed-rate home loans in the case of the loan phase and on products offered to retail clients in the case of the savings phase.

In order to reflect the uncertainty of future interest-rate trends, and the impact of such trends on customer behaviour models and on at risk outstandings, the obligations are estimated using the Monte-Carlo method.

When the sum of BNP Paribas SA's estimated future obligations with respect to the savings and loan phases of any generation of contracts indicates a potentially unfavourable situation for BNP Paribas SA, a provision is recognised, with no offset between generations, in the balance sheet under “Provisions”. Movements in this provision are recognised as interest income and expense in the profit and loss account.

## SECURITIES

The term “Securities” covers interbank market securities, treasury bills and negotiable certificates of deposit, bonds and other “fixed-income” securities (whether fixed- or floating-rate), equities and other variable-income securities.

Securities are classified as: “Trading securities”, “Securities available for sale”, “Equity securities available for sale in the medium term”, “Debt securities held to maturity”, “Equity securities held for long-term investment”, or “Investments in subsidiaries and affiliates”.

From 1<sup>st</sup> January 2018, trading securities acquired or disposed of under agreements whose terms require delivery of the securities within a period defined by regulation or by an agreement on the relevant market are recorded in the balance sheet on the settlement date. This change has no impact on the opening income statement or equity. Other categories of securities acquired or disposed of under the same conditions are recorded on the transaction date.

When a credit risk has occurred, fixed-income securities held in the “Available for sale” or “Held to maturity” portfolio are classified as doubtful, based on the same criteria as those applied to doubtful loans and commitments.

When securities exposed to counterparty risk are classified as doubtful and the related provision can be separately identified, the corresponding charge is included in “Cost of risk”.

### **Trading account securities**

“Trading account securities” are securities bought or sold with the intention of selling them or repurchasing them in the near future, as well as those held as a result of market-making activities. These securities are valued individually at market value if they meet the following criteria:

- they can be traded on an active market (*i.e.* a market where third parties have continuous access to market prices through a securities exchange, brokers, traders, or market-makers);
- the market prices reflect actual, regularly-occurring transactions taking place under normal competition conditions.

“Trading account securities” also include securities bought or sold for specific asset-management objectives (especially in terms of sensitivity) for trading books comprised of forward financial instruments, securities, or other financial instruments taken globally, as well as borrowed securities. When the latter are not backed by cash, they are presented in the balance sheet as a deduction from the debt representing the value of the borrowed securities. In the same way, financial instruments received as fully-owned collateral under financial guarantee contracts with the right of re-use, recorded in the balance sheet and revalued according to the rules applicable to trading securities, are presented with a deduction from the liability representing the restitution commitment.

Changes in the market value of these securities are recognised in income. “Trading account securities” cannot be reclassified into another category and must follow the valuation rules for this category until they are sold, fully redeemed, or recognised as a loss and consequently removed from the balance sheet.

In the case of exceptional market circumstances necessitating a change in investment strategy, “Trading securities” can be reclassified as “Securities available for sale” or “Debt securities held to maturity” depending on the new strategy adopted.

If fixed-income securities classified as “Trading securities” can no longer be traded on an active market, and if the Bank has the intention and ability to hold these securities for the foreseeable future or until maturity, they can be reclassified as “Securities available for sale” or “Debt securities held to maturity”.

The accounting rules for the new category would apply to reclassified securities as of the reclassification date.

If the market in which securities classified as “Trading account securities” were purchased can no longer be considered active, the securities will be valued using methods that take into account the new market conditions.

### **Securities available for sale**

The “Securities available for sale” category includes securities not classified into one of the other categories.

Bonds and other fixed-income securities are valued at the lower of cost (excluding accrued interest) or probable market prices. This is generally determined on the basis of stock market prices. Accrued interest is posted to the profit and loss account under “Interest income on bonds and other fixed-income securities”.

For fixed-income securities available for sale that have been purchased on the secondary market, any difference between cost and redemption price is recognised in income using the actuarial method over the remaining life of the securities. On the balance sheet, their carrying amount is amortised to their redemption value over their remaining life.

Equities are valued at the lower of cost or probable market prices. This is generally determined on the basis of stock market prices for listed equities, or BNP Paribas SA's share in net equity, calculated on the basis of the most recent financial statements available, for unlisted equities. Dividends received are recognised in the profit and loss account under “Income on variable-income securities” on a cash basis.

The cost of securities available for sale that have been sold is determined on a first in, first out (FIFO) basis. Disposal gains or losses, and additions to and reversals of lower of cost and market provisions are reflected in the profit and loss account under “Gains (losses) on securities available for sale”.

In the case of exceptional circumstances necessitating a change in investment strategy, or if the securities can no longer be traded on an active market, securities classified as “Securities available for sale” may be reclassified as “Debt securities held to maturity” and must be identified within this portfolio. These securities would then be recognised according to the method used for “Debt securities held to maturity”.

### **Equity securities available for sale in the medium term**

Equity securities available for sale in the medium term comprise investments made for portfolio management purposes, with the aim of realising a profit in the medium term without investing on a long-term basis in the development of the issuer's business. This category includes venture capital investments.

Equity securities available for sale in the medium term are recorded individually at the lower of historic cost and fair value. Fair value takes into account the issuer's general business outlook and the planned holding period. The fair value of listed shares is determined by reference to the average stock market price determined over a one-month period.

### **Debt securities held to maturity**

Fixed-income securities with a specified maturity (mainly bonds, interbank market securities, treasury bills, and other negotiable debt securities) are recorded under “Debt securities held to maturity” to reflect BNP Paribas SA's intention of holding them to maturity.

Bonds classified under this heading are financed by matching funds or hedged against interest-rate exposure for their remaining lives.

The difference between cost and the redemption price of these securities is recognised in income using the actuarial method over the remaining life of the securities. On the balance sheet, their carrying amount is amortised to their redemption value over their remaining life.

Interest on debt securities held to maturity is recorded in the profit and loss account under “Interest income on bonds and other fixed-income securities”.

An impairment is recognised when a decline in the credit standing of an issuer jeopardises redemption at maturity.

If a significant portion of the “Debt securities held to maturity” is sold or reclassified into a different category, the sold or reclassified securities cannot be returned to the “Debt securities held to maturity” category at any time during the current financial period or the following two financial years. All the securities classified as “Debt securities held to maturity” would then be reclassified as “Securities available for sale in the medium term”.

If exceptional market circumstances necessitate a change in investment strategy, and “Trading account securities” and “Securities available for sale” are reclassified as “Debt securities held to maturity”, the sale of any “Debt securities held to maturity” prior to the maturity date would not invoke the reclassification clauses in the above paragraph if the sale occurred because the securities had once again become tradable on an active market.

### **Equity securities held for long-term investment, investments in subsidiaries and affiliates**

Equity interests include investments in subsidiaries and affiliates in which BNP Paribas SA exercises significant influence over management and investments considered strategic to BNP Paribas SA's business development. This influence is deemed to exist when BNP Paribas SA holds an ownership interest of at least 10%.

“Equity securities held for long-term investment” are shares and related instruments that BNP Paribas SA intends to hold on a long-term basis in order to earn a satisfactory long-term rate of return without taking an active part in the management of the issuing company, but with the intention of promoting the development of lasting business relationships by creating special ties with the issuer.

Other investments in affiliates consist of shares and other variable-income securities in companies over which BNP Paribas SA has exclusive control (*i.e.* companies likely to be fully consolidated into the Group).

These types of securities are recorded individually at the lower of cost and fair value.

Fair value for each security is determined on the basis of available information, including discounted future cash flows, net revalued assets and/or multiples commonly used to assess future yields. For securities listed on an active market, the fair value is considered to be the average market price over the previous one-month period.

For simplicity, listed securities acquired for less than EUR 10 million may be valued on the basis of the average closing stock market price in the month prior to closing.

Disposals, gains or losses and provision movements are recorded in the profit and loss account under “Net gains or losses on disposals of long-term investments”.

Dividends are recognised as soon as payment has been approved by the Annual General Meeting or when they are received if the shareholders' decision is unknown. They are recorded under “Income on equities and variable-income securities”.

### **Treasury shares**

Treasury shares held by BNP Paribas SA are classified and valued as follows:

- treasury shares held, purchased under a market-making agreement or acquired in connection with index arbitrage transactions are recorded under “Trading securities” at market price;
- shares held for allocation to employees are recorded in the securities available for sale category. Shares granted to employees of BNP Paribas SA subsidiaries and branches are re-invoiced to them, in accordance with the applicable local provisions;
- treasury shares held to be granted to employees are not impaired, but a provision is recognised for these shares based on the services provided by the employees who will receive the shares;
- treasury shares that are intended to be cancelled or that are not being held for either of the above reasons are included in long term investments. Treasury shares intended to be cancelled are stated at cost. All others are stated at the lower of cost and fair value.

### **FIXED ASSETS**

Buildings and equipment are stated at acquisition cost or at the adjusted value determined in accordance with France's finance laws of 1977 and 1978. Revaluation differences on non-depreciable assets, recorded at the time of these statutory revaluations, are included in share capital.

Fixed assets are initially recognised at purchase price plus directly attributable costs, together with borrowing costs where a long period of construction or adaptation is required before the asset can be brought into service.

Software developed by BNP Paribas SA, that fulfils the criteria for capitalisation, is capitalised at direct development cost, which includes external costs and staff costs directly attributable to the project.

Subsequent to initial recognition, fixed assets are measured at cost less accumulated depreciation or amortisation and any impairment losses.

Fixed assets are depreciated or amortised using the straight-line method over the useful life of the asset. Depreciation and amortisation expenses are recognised in the profit and loss account under “Depreciation, amortisation, and provisions on property, plant and equipment and intangible assets”.

The portion of recognised depreciation or amortisation that exceeds the economic amount, mainly calculated on a straight-line basis, is recorded in the balance sheet as a liability under “Regulatory provisions: accelerated depreciation and amortisation”. BNP Paribas SA does not calculate the deferred tax effects of accelerated depreciation and amortisation.

Where an asset consists of a number of components which may require replacement at regular intervals, or which have different uses or generate economic benefits at different rates, each component is recognised separately and depreciated using a method appropriate to that component. BNP Paribas SA has adopted the component-based approach for property used in operations.

The depreciation periods used for office property are as follows: 80 years or 60 years for the shell (for prime and other property respectively); 30 years for facades; 20 years for general and technical installations; and 10 years for fixtures and fittings.

Depending on its type, software is amortised over a period of no more than eight years for infrastructure developments and three years or five years in the case of software developed primarily for the purpose of providing services to customers.

Depreciable fixed assets are tested for impairment if there is an indication of potential impairment at the balance sheet date. Non-depreciable assets are tested for impairment annually.

If there is an indication of impairment, the new recoverable amount of the asset is compared with the carrying amount. If the asset is found to be materially impaired, an impairment loss is recognised in the profit and loss account. This loss is reversed in the event of a change in the estimated recoverable amount or if there is no longer an indication of impairment, with the exception of goodwill and residual merger premium (see below) allocated to goodwill. Impairment losses are taken into account in the profit and loss account under “Depreciation, amortisation, and provisions on property, plant and equipment and intangible assets”.

- Goodwill in the business is now presumed to have an unlimited period of use. It is therefore non-amortisable, without any required justification. However, this is a refutable presumption, meaning that if there is a limited period for use, the goodwill must be amortised over its actual or fixed period of use (10 years) if it is not possible to reliably assess this period. In addition, if goodwill is not amortised, it must now be tested for impairment annually regardless of whether there is any indication of impairment.
- The merger premium is allocated to the various assets contributed as a result of mergers and similar transactions up to the limit of identified unrealised gains. The amount is allocated in the dedicated sub-accounts of the assets concerned, according to the amortisation, depreciation and provisioning rules for these assets.
- After allocation to the different underlying assets (see above), the net balance of the residual merger premium is carried to goodwill.

Gains and losses on disposals of property, plant and equipment, and intangible assets used in operations are recognised in the profit and loss account under “Net gains or losses on disposals of long-term investments”.

## **AMOUNTS DUE TO CREDIT INSTITUTIONS AND CUSTOMERS**

Amounts due to credit institutions and customers are presented according to their initial term or type: demand accounts and time deposits for credit institutions; regulated savings accounts and other deposits for customers. These sections include securities and other assets sold under repurchase agreements depending on the type of counterparty. Accrued interest is recorded on a separate line. Savings accounts with special arrangements are presented as the centralised share with the Caisse des Dépôts et Consignations, less the savings deposits collected.

## **DEBT SECURITIES**

Debt securities are presented according to the nature of their support: savings certificates, interbank market securities, negotiable debt securities, bonds and similar securities, excluding subordinated notes classified as subordinated debt.

Accrued interest on debt securities is recorded on a separate line of the balance sheet and is debited to the profit and loss account.

Bond issue and redemption premiums are amortised using the yield-to-maturity method over the life of the bonds. Bond issuance costs are amortised using the straight-line method over the life of the bonds.

## **PROVISIONS FOR INTERNATIONAL COMMITMENTS**

Provisions for international commitments are based on the evaluation of non-transfer risk related to the future solvency of each of the countries at risk and on the systemic credit risk incurred by debtors in the event of a constant and durable deterioration in the overall situation and economies of these countries. Additions and reversals of these provisions are reflected in the profit and loss account under “Cost of risk”.

## **PROVISIONS FOR NON-BANKING TRANSACTIONS**

BNP Paribas SA records provisions for clearly identified contingencies and charges whose timing or amount is uncertain. In accordance with current regulations, these provisions for non-banking transactions may be recorded only if the Bank has an

obligation to a third party at year-end, there is a high probability of an outflow of resources to the third party, and no equivalent economic benefits are expected in return from the third party.

## **COST OF RISK**

The “Cost of risk” line item includes expenses arising from the identification of counterparty and credit risks, litigation, and fraud inherent to banking transactions conducted with third parties. Net movements in provisions that do not fall under the category of such risks are classified in the profit and loss account according to their type.

## **FORWARD FINANCIAL INSTRUMENTS**

Forward financial instruments are purchased on various markets for use as specific or general hedges of assets and liabilities, or for transaction purposes.

The Bank's commitments related to these instruments are recognised off-balance sheet at nominal value. The accounting treatment of these instruments depends on the corresponding investment strategy.

### **Derivative financial instruments held for hedging purposes**

Income and expenses related to forward derivative financial instruments held for hedging purposes and designated to one instrument or a group of homogeneous instruments are recognised in income symmetrically with the income and expenses on the underlying instrument, and under the same accounting heading.

Income and expenses related to forward financial instruments used to hedge overall interest rate risk are recognised in income on a *pro rata* basis.

### **Derivative financial instruments held for trading purposes**

Derivatives held for trading purposes can be traded on organised markets or over-the-counter.

Derivatives held within a trading book are valued at market value on the balance sheet date. The corresponding gains or losses (realised and unrealised) are recognised in income. They are recognised in the profit and loss account under “Gains (losses) on trading account securities”.

The market value is determined from either:

- the listed price, if one is available;
- a valuation method using recognised financial models and theories, with parameters calculated from transaction prices observed on active markets, or from statistical or other quantitative methods.

In both cases, BNP Paribas SA makes conservative value adjustments to account for modelling, counterparty, and liquidity risks.

Some complex derivatives, which are typically custom-made from combined instruments and highly illiquid, are valued using models where certain parameters are not observable on an active market.

The margin generated during the trading of these complex financial instruments is deferred and reversed in profit or loss over the period during which the valuation parameters are expected to be unobservable. When parameters that were originally unobservable become observable, or when the valuation can be substantiated in comparison with recent similar transactions in an active market, the unrecognised portion of the day one profit is released to the profit and loss account.

### **Derivative financial instruments held within an isolated open position**

Depending on the nature of the instruments, gains and losses on contracts representing isolated open positions are recognised in income when the contracts are settled or on a *pro rata* basis. Derivatives are measured at market value on the balance sheet date and a provision for unrealised losses is recognised for each group of homogeneous contracts.

## **CORPORATE INCOME TAX**

A charge for corporate income tax is taken in the period in which the related taxable income and expenses are booked, regardless of the period in which the tax is actually paid. When the period in which the income and expenses are booked differs from that in which the income is taxed and expenses deducted, BNP Paribas SA recognises a deferred tax, whose amount is calculated according to the liability method, with the basis taken to be all temporary differences between the book value and tax basis of balance sheet items, and applying applicable future tax rates once these have been approved. Deferred tax assets are recognised in accordance with the likelihood of their being recovered.

Following the recommendations of Pillar 2 of the Organisation for Economic Cooperation and Development (OECD) on the reform of international taxation, on 14 December 2022, the European Union adopted Directive 2022/2523 establishing a minimum taxation of international groups with respect to corporate income tax, applicable from 1 January 2024. Following the example provided for the consolidated financial statements prepared under French rules in application of ANC Regulation 2020-01 amended by ANC Regulation 2023-02, BNP Paribas SA does not recognise deferred taxes related to the Pillar II/GloBE rules. Given the information available, the impact of the Pillar II reform would be negligible for BNP Paribas SA when it is adopted.

## EMPLOYEE PROFIT-SHARING

As required by French law, BNP Paribas SA recognises employee profit-sharing in the income statement in the year in which the employee entitlement arises. The amount is reported under “Salaries and employee benefit expenses” in the profit and loss account.

## EMPLOYEE BENEFITS

BNP Paribas SA employees receive each of the following four types of benefits:

- termination benefits, payable primarily in the case of early termination of an employment contract;
- short-term benefits, such as salary, annual leave, incentive plans, profit-sharing and additional payments;
- long-term benefits, including compensated leaves of absence, long-service awards, and other types of cash-based deferred compensation;
- post-employment benefits, consisting mainly in France of supplementary pension benefits paid by the BNP Paribas SA pension funds and end-of-career bonuses, and in other countries by pension plans, some of which are funded by pension funds.

### Termination benefits

Termination benefits are employee benefits payable as a result of a decision by BNP Paribas SA to terminate a contract of employment before the legal retirement age or by an employee to accept voluntary redundancy in exchange for a benefit. Termination benefits due more than 12 months after the balance sheet date are discounted.

### Short-term benefits

The Group recognises an expense when it has used services rendered by employees in exchange for employee benefits.

### Long-term benefits

Long-term benefits are benefits (other than post-employment benefits and termination benefits) which do not fall wholly due within 12 months after the end of the period in which the employee renders the associated services. The actuarial techniques used are similar to those used for defined-benefit post-employment benefits, except that actuarial gains and losses are recognised immediately, as are the effects of any plan amendments.

This category relates to compensation paid in cash and deferred for more than twelve months, which is accrued in the financial statements for the financial years during which the employee rendered the corresponding services. If this deferred variable compensation is subject to the employee's continued presence at the vesting date, the services are presumed to be rendered during the vesting period and the corresponding compensation expense is recognised on a *pro rata* basis over that period. The expense is recognised under salary and employee benefits expenses with a corresponding liability in the balance sheet. It is revised to take account of any non-fulfilment of the continued presence or performance conditions, and changes in the BNP Paribas share price, for deferred compensation indexed to the share.

If there is no continued presence condition, the deferred variable compensation is immediately provisioned in the financial statements of the year to which it refers; the liability is then revised on each reporting date until settlement, to account for any performance conditions, and for deferred compensation indexed to the BNP Paribas share price, to changes in the share price.

In France, the changes brought about by the pension reform enacted on 14 April 2023 constitute an amendment to the plan for retirement benefits for which the impact recognised in the income statement is not material.

### Post-employment benefits

The post-employment benefits provided to BNP Paribas SA employees in France include both defined-contribution plans and defined-benefit plans.

Defined-contribution plans, such as *Caisse Nationale d'Assurance Vieillesse* and supplemental national and trade union plans that pay pensions to former BNP Paribas SA employees in France, do not give rise to an obligation for BNP Paribas SA and consequently do not require a provision. The amount of the employer's contributions payable during the period is recognised as an expense.

Only defined-benefit plans, such as the retirement packages paid for by BNP Paribas SA's retirement fund, give rise to an obligation for BNP Paribas SA. This obligation must be measured and recognised as a liability by means of a provision.

The classification of plans into these two categories is based on the economic substance of the plan, which is reviewed to determine whether BNP Paribas SA has a legal or constructive obligation to pay the agreed benefits to employees.

Post-employment benefit obligations under defined-benefit plans are measured using actuarial techniques that take demographic and financial assumptions into account. The amount of the obligation recognised as a liability is measured on the basis of the actuarial assumptions applied by the Group, using the projected unit credit method. This method takes into account various parameters, tailored to the country in question, such as demographic assumptions, the probability that employees will leave before retirement age, salary inflation, a discount rate, and the general inflation rate. The value of any plan assets is deducted from the amount of the obligation. When the value of the plan assets exceeds the amount of the obligation, an asset is

only recognised if it represents a future economic benefit in the form of a reduction in future contributions or a future partial refund of amounts paid into the plan.

The amount of the obligation under a plan, and the value of the plan assets, may show significant fluctuations from one period to the next due to changes in actuarial assumptions, thereby giving rise to actuarial gains and losses. Actuarial gains and losses and the effect of limits on assets are recognised in full in profit or loss; the expected gains from investments are calculated at the discount rate of the corresponding commitments.

## **RECOGNITION OF INCOME AND EXPENSES**

Interest and fees and commissions qualified as interest are recognised on an accrual basis on a *pro rata* basis. These include the commissions charged by the Bank as part of an overall loan package (*i.e.* application fees, commitment fees, participation fees, *etc.*). The marginal transaction costs that the Bank must pay when granting or acquiring loans are also spread out over the effective life of the corresponding loan.

Fees and commissions not qualified as interest that relate to the provision of services are recognised when the services are performed or, for ongoing services, on a *pro rata* basis over the length of the service agreement.

## **FOREIGN CURRENCY TRANSACTIONS**

Foreign exchange positions are generally valued at the official year-end exchange rate. Exchange gains and losses on transactions in foreign currency carried out in the normal course of business are recognised in the profit and loss account.

Exchange differences arising from the conversion of assets held on a long-term basis, including equity securities held for long-term investment, the capital made available to branches, and other foreign equity investments denominated in foreign currencies and financed in euros, are recognised as translation adjustments for the balance sheet line items recording the assets.

Exchange differences arising from the conversion of assets held on a long-term basis, including equity securities held for long-term investment, the capital made available to branches, and other foreign equity investments, denominated and financed in foreign currencies, are recognised symmetrically as translation differences for the corresponding financing.

## **TRANSLATION OF ACCOUNTS EXPRESSED IN FOREIGN CURRENCIES**

Monetary and non-monetary foreign currency-denominated assets and liabilities of foreign branches are translated into euros at the year-end exchange rate. Translation adjustments regarding the capital made available to branches outside of France are included in "Accrued income" and "Accrued expenses".

## NOTE 2 NOTES TO THE 2023 PROFIT AND LOSS ACCOUNT

### 2.A NET INTEREST INCOME

BNP Paribas SA includes in "Interest income" and "Interest expense" all income and expenses from financial instruments measured at amortised cost according to the effective interest rate method (interest, commission and expenses) and from financial instruments measured at fair value that do not meet the definition of a derivative instrument. The change in fair value on financial instruments at fair value through profit or loss (excluding accrued interest) is recognised under "Gains (losses) on trading account securities".

Interest income and expense on derivatives accounted for as fair value hedges are included with the revenues generated by the hedged item.

## 2.H INCOME TAX

| <i>In millions of euros</i> | Year to<br>31 December<br>2023 | Year to<br>31 December<br>2022 |
|-----------------------------|--------------------------------|--------------------------------|
| Current tax expense         | (1,077)                        | (674)                          |
| Deferred tax                | 394                            | (269)                          |
| <b>INCOME TAXES</b>         | <b>(683)</b>                   | <b>(943)</b>                   |

The basic tax consolidation agreements between BNP Paribas SA and the subsidiaries belonging to its tax group are designed to be tax neutral for every party. Each Group subsidiary recognises in its own books, over the full term of its consolidation, corporate income tax income or expense, additional contributions and all current or future taxes covered by the scope of tax consolidation just as they would if they were not part of a tax group. BNP Paribas SA, as the parent company, records the impact of Group tax savings from tax consolidation in France in current tax expense.

The fifth resolution of the Shareholders' Combined General Meeting of 16 May 2023, which replaced the fifth resolution of the Shareholders' Combined General Meeting of 17 May 2022, authorised BNP Paribas SA to buy back shares representing up to 10% of BNP Paribas SA's issued capital at a maximum purchase price of EUR 89 per share (previously EUR 88). The shares could be acquired for the following purposes: for subsequent cancellation in accordance with conditions set by the Shareholders' Combined General Meeting of 16 May 2023, to fulfil the Bank's obligations relative to the issue of shares or share equivalents, for stock option plans, for bonus share awards, or for granting or selling shares to employees under an employee profit-sharing plan, employee share ownership plan or Corporate Savings Plan and to cover any type of share award to the employees of BNP Paribas SA and companies controlled exclusively by BNP Paribas SA within the meaning of article L.233-16 of the French Commercial Code; to be held in treasury for subsequent remittance in exchange or in payment for acquisitions, mergers, spin-offs or asset transfers; within the scope of a market-making agreement compliant with the Code of Ethics recognised by the Autorité des Marchés Financiers (French Financial Markets Authority – AMF); or for asset and financial management purposes.

This authorisation was granted for a period of 18 months.

At 31 December 2023, BNP Paribas SA held 603,827 treasury shares classified as "Equity securities held for long-term investment".

BNP Paribas SA also held 118,144 treasury shares classified as "Securities available for sale" and intended to be used for free share awards to Group employees, granted or sold as part of an employee profit-sharing plan, employee share ownership plan, or Company Savings Plan.

#### Redeemable subordinated debt

The redeemable subordinated debt issued by BNP Paribas SA is in the form of medium and long-term debt securities equivalent to ordinary subordinated debt; these issues are redeemable prior to the contractual maturity date in the event of liquidation of the issuer, and rank after the other creditors but before holders of participating loans and participating subordinated notes.

These debt issues may contain a call provision authorising the Group to redeem the securities prior to maturity by repurchasing them in the stock market, *via* a public tender or exchange offers, or (in the case of private placements) over the counter, subject to regulatory approval.

Debt issued by BNP Paribas SA *via* placements in the international markets may be subject to early redemption of the capital and early payment of interest due at maturity at the issuer's discretion on or after a date stipulated in the issue particulars (call option), or in the event that changes in the applicable tax rules oblige the BNP Paribas Group issuer to compensate debt-holders for the consequences of such changes. Redemption may be subject to a notice period of between 15 and 60 days, and is in all cases subject to approval by the banking supervisory authorities.

In 2022, three subordinated debt issued were repaid at or before maturity. These transactions resulted in a EUR 1,107 million reduction in the amount of redeemable subordinated debt. In addition, two new subordinated debt were issued for an amount of EUR 1,583 million in 2022.

In 2023, five subordinated debt issued were repaid at or before maturity. These transactions resulted in a EUR 411 million reduction in the amount of redeemable subordinated debt.

The following table gives the maturity schedule for redeemable subordinated debt at 31 December 2023:

| <i>In millions of euros</i>  | <b>Outstanding at 31/12/2023</b> | <b>2024</b> | <b>2025</b> | <b>2026</b> | <b>2027</b> | <b>2028</b> | <b>2029 to 2033</b> | <b>After 2033</b> |
|------------------------------|----------------------------------|-------------|-------------|-------------|-------------|-------------|---------------------|-------------------|

## Undated subordinated debt

### Undated super subordinated notes

BNP Paribas SA has issued Undated super subordinated notes which pay a fixed, fixed adjustable or floating-rate coupon and are redeemable at the end of a fixed period and thereafter at each coupon date or every five years.

On 3 January 2022, BNP Paribas SA redeemed the July 2006 issue for an amount of EUR 150 million. These notes paid a 5.45% fixed-rate coupon.

On 12 January 2022, BNP Paribas SA issued Undated super subordinated notes in the amount of USD 1,250 million. This issue pays a fixed-rate coupon of 4.625%. These notes could be redeemed at the end of a period of five years. If not redeemed in 2027, a coupon will be paid semi-annually indexed to the rate of the US Treasury bill with a constant five-year maturity (CMT rate).

On 19 February 2022, BNP Paribas SA redeemed the June 2007 issue for an amount of USD 1,100 million. These notes paid a 7.195% fixed-rate coupon.

On 14 March 2022, BNP Paribas SA redeemed the December 2016 issue, for an amount of USD 750 million. These notes paid a 6.75% fixed-rate coupon.

On 17 June 2022, BNP Paribas SA redeemed the June 2015 issue for an amount of EUR 750 million, at its first call date. These notes paid a 6.125% fixed-rate coupon.

On 16 August 2022, BNP Paribas SA issued Undated super subordinated notes in the amount of EUR 2,000 million. This issue pays a fixed-rate coupon of 7.75%. These notes could be redeemed at the end of a period of seven years. If not redeemed in 2029, a coupon will be paid semi-annually indexed to the rate of the US Treasury bill with a constant five-year maturity (CMT rate).

On 6 September 2022, BNP Paribas SA issued Undated super subordinated notes in the amount of USD 1,000 million. This issue pays a fixed-rate coupon of 6.875%. These notes could be redeemed at the end of a period of 7.25 years. If not redeemed in 2029, a coupon will be paid semi-annually indexed to the five-year European mid-swap rate.

On 17 November 2022, BNP Paribas SA issued Undated super subordinated notes in the amount of USD 1,000 million. This issue pays a fixed-rate coupon of 9.25%. These notes could be redeemed at the end of a period of five years. If not redeemed in 2027, a coupon will be paid semi-annually indexed to the rate of the US Treasury bill with a constant five-year maturity (CMT rate).

On 11 January 2023, BNP Paribas SA issued Undated super subordinated notes in the amount of EUR 1,250 million. This issue pays a fixed-rate coupon of 7.375%. These notes could be redeemed at the end of a period of seven years. If the notes are not redeemed in 2030, a mid-swap rate EUR five-year coupon will be paid half-yearly.

On 28 February 2023, BNP Paribas SA issued Undated super subordinated notes in the amount of SGD 600 million. This issue pays a fixed-rate coupon of 5.9%. These notes could be redeemed at the end of a period of five years. If not redeemed in 2028, a coupon will be paid semi-annually indexed to the rate of the Singapore Treasury bill with a constant five-year maturity (SORA rate).

The following table summarises the characteristics of these various issues:

| Issue date                              | Currency | Amount<br>in<br>original<br>currency<br>(in millions) | Coupon<br>frequency | Rate and term<br>before first call date |            | Rate after first call date     | 31 December<br>2023 | 31 December<br>2022 |

BNP Paribas has the option of not paying interest due on these Undated super subordinated notes. Unpaid interest is not carried forward.

For the notes issued before 2015, this non-payment is subject to the absence of any payment on BNP Paribas SA ordinary shares or on Undated super subordinated note equivalents in the previous year. This interest must be paid when dividends are paid on BNP Paribas SA's ordinary shares.

The contracts relating to these Undated super subordinated notes contain a loss absorption clause. Under the terms of this clause, in the event of insufficient regulatory capital, the nominal value of the notes may be reduced in order to serve as a new basis for the calculation of the related coupons until the capital deficiency is made up and the nominal value of the notes is increased to its original amount.

#### Undated floating-rate subordinated notes

The Undated floating-rate subordinated notes (TSDIs) and other Undated subordinated notes issued by BNP Paribas SA are redeemable on liquidation of the Bank after repayment of all other debts but ahead of Undated participating subordinated notes. They confer no rights over residual assets.

Characteristics of Undated floating-rate subordinated notes:

| Issue date                                      | Currency | Amount in original currency<br>(in millions) | Rate                  | Date of call or interest step-up | Interest rate reset | 31 December 2023 | 31 December 2022 |
|---|----------|--|-----------------------|----------------------------------|---------------------|------------------|------------------|
| October 1985                                    | EUR      | 305  | TMO – 0.25%           | -                                | -                   | 254              | 254              |
| September 1986                                  | USD      | 500  | 6-month Libor +0.075% | -                                | -                   | 248              | 255              |
| August 2023                                     | USD      | 1,500  | 8.500%                | August 2028                      | CMT<br>±4.354%      | 1,358            | -                |
| <b>UNDATED FLOATING-RATE SUBORDINATED NOTES</b> |          |  |                       |                                  |                     | <b>1,860</b>     | <b>509</b>       |

Payment of interest is obligatory on the TSDIs issued in October 1985 (representing a nominal amount of EUR 305 million), but the Board of directors may postpone interest payments if the Ordinary General Meeting of the Shareholders notes that there is no income available for distribution in the twelve months preceding the interest payment date. Interest payments are cumulative and are payable in full once dividend payments resume.

Payment of interest is obligatory on the TSDIs issued in September 1986 (representing a nominal amount of USD 500 million), but the Board of directors may postpone interest payments if the Ordinary General Meeting of shareholders approves a decision not to pay a dividend in the 12 months preceding the interest payment date. Interest payments are cumulative and are payable in full once dividend payments resume. The bank has the option of resuming payment of interest arrears, even where no dividend is paid out.

The instruments issued by BNP Paribas SA in August 2023 in the amount of USD 1,500 million are contingent convertible securities recorded for accounting purposes as TSDIs. Payment of the interest is made on a discretionary basis and may be cancelled in full or in part upon notification by the regulator based on its assessment of the issuer's financial and solvency situation. The amounts of interest on the bonds will not be cumulative once coupon payments resume.

#### Undated participating subordinated notes

Undated participating subordinated notes issued by BNP Paribas SA in July 1984 in a total amount of EUR 337 million are redeemable only in the event of the liquidation of BNP Paribas SA, but may be bought back on the terms specified in the French act of 3 January 1983. The number of notes in circulation was 1,434,092 at 31 December 2023.

BNP Paribas SA's annual contribution to the European Union's Single Resolution Fund may be made, in part, in the form of an irrevocable payment commitment (IPC) guaranteed by a cash deposit of the same amount. When the an institution's resolution involves the fund, the latter may call on all or part of the IPC received.

The irrevocable payment commitment is qualified as a contingent liability. It gives rise to provisioning if the probability of a call by the fund becomes greater than 50%. As it is estimated to be below this threshold, no provision was recorded by BNP Paribas SA at 31 December 2023.

These commitments amounted to EUR 946 million at 31 December 2023 (*versus* EUR 724 million at 31 December 2022).

The cash paid as collateral is subject to a remuneration and is recognised as an asset at amortised cost.

## 4.C FINANCIAL INSTRUMENTS GIVEN OR RECEIVED AS COLLATERAL

### FINANCIAL INSTRUMENTS GIVEN AS COLLATERAL

| <i>In millions of euros, at</i>  | 31 December 2023 | 31 December 2022 |
|--|------------------|------------------|
| <b>Financial instruments (negotiable securities and private receivables) lodged with central banks and eligible for use at any time as collateral for refinancing transactions after haircut</b> | <b>66,096</b>    | <b>80,379</b>    |
| ▪ Used as collateral with central banks  | 14,832           | 34,368           |
| ▪ Available for refinancing transactions   | 51,264           | 46,011           |
| <b>Other financial assets pledged as collateral for transactions with credit institutions, financial customers or subscribers of covered bonds issued by the Group</b>                           | <b>271,709</b>   | <b>173,847</b>   |

As at 31 December 2023, the Bank had EUR 66,096 million of financial instruments (negotiable securities and private receivables) deposited or pledged with central banks for use at any time as collateral for refinancing transactions (vs. EUR 80,379 million as at 31 December 2022). This amount includes EUR 57,106 million deposited with the Banque de France (vs. EUR 70,683 million at 31 December 2022) under the Banque de France's Comprehensive Collateral Management system to cover Eurosystem monetary policy transactions and intraday loans. As at 31 December 2023, the Bank had EUR 14,832 million of collateral deposited with central banks (EUR 34,368 million as at 31 December 2022).

The other assets that the Bank has pledged as collateral with credit institutions and financial customers totalled EUR 41,715 million at 31 December 2023 (vs. EUR 40,500 million at 31 December 2022), included in particular financing for BNP Paribas Home Loan SFH.

## 5.B SOCIAL COMMITMENTS

### Defined-contribution plans

In France, BNP Paribas SA pays contributions to various nationwide basic and top-up pension plans. BNP Paribas SA has set up a funded pension plan under a company-wide agreement. Under this plan, employees will receive an annuity on retirement in addition to the pension paid by nationwide schemes.

Since defined-benefit plans have been closed to new employees in most countries outside France, they are offered the benefit of defined-contribution pension plans. Under these plans, the Group's obligation is essentially limited to paying a percentage of the employee's annual salary into the plan.

The amount paid into defined-contribution post-employment plans in France and other countries for the year 2023 was EUR 407 million, compared with EUR 376 million for the year 2022.

### Defined-benefit plans

Existing legacy defined-benefit plans within BNP Paribas SA are valued independently using actuarial techniques by applying the projected unit cost method in order to determine the expense arising from rights vested in employees and benefits payable to retired employees. The demographic and financial assumptions used to estimate the present value of these obligations and of plan assets take into account economic conditions specific to each country.

Provisions set up to cover obligations under defined-benefit post-employment plans totalled EUR 106 million at 31 December 2023 (against EUR 120 million at 31 December 2022), comprised of EUR 52 million for French plans and EUR 54 million for other plans.

BNP Paribas recognised EUR 508 million of retirement plan assets (recognised surplus and reimbursement rights) at 31 December 2023 as compared to EUR 561 million at 31 December 2022.

### Pension plans and other retirement benefits

#### Pension plans

In France, BNP Paribas pays a top-up banking industry pension arising from rights acquired to 31 December 1993 by retired employees and active employees in service at that date. At The Group's residual obligations for these employees were recognised on the balance sheet in full.

The defined-benefit plans previously granted to some Group senior managers have all been closed to new employees and converted into top-up type schemes. The amounts allocated to residual beneficiaries, subject to their presence within the Group at retirement, were fixed when these schemes were closed. These pension plans have been outsourced to insurance companies. The market value of the related plan assets in these companies' balance sheets breaks down as 77% bonds, 8% equities, 13% property assets and 2% other financial instruments.

In BNP Paribas SA's foreign branches, pension plans are based either on pensions linked to the employee's final salary and length of service (United Kingdom), or on annual vesting of rights to a capital sum expressed as a percentage of annual salary and remunerated at a predefined rate (United States).

Some plans are managed by independent fund managers. At 31 December 2023, 86% of the gross obligations under these plans related to plans in the United Kingdom, the United States and the Netherlands. The market value of the related plan assets was split as follows: 74% bonds, 12% equities, and 14% other financial instruments.

#### Other post-employment benefits

BNP Paribas SA employees also receive various other contractual post-employment benefits, such as indemnities payable on retirement. In France, the obligations for these benefits are funded through a contract held with an insurer that is independent from BNP Paribas SA.

The law of 14 April 2023 modified the age criteria and number of quarters required to liquidate pension rights. The provisions of this law were taken into account, with the impact of a decrease in the value of commitments of EUR 19 million.

#### Post-employment healthcare benefits

In France, BNP Paribas SA no longer has any obligation in relation to healthcare benefits for its retired employees.

Among BNP Paribas SA's foreign branches, there are several healthcare benefit plans for retired employees, mainly in the United States. Provisions for obligations under these plans amounted to EUR 15 million at 31 December 2023, compared to EUR 13 million at 31 December 2022.

Obligations under post-employment healthcare benefit plans are measured using the mortality tables applicable in each country and assumptions about trends in healthcare costs. They also build in assumptions about healthcare benefit costs, including forecast trends in the cost of healthcare services and in inflation, which are derived from historical data.

### Provision for voluntary departure, early retirement plans, and headcount adaptation plans

The Bank has implemented a number of voluntary redundancy plans and a headcount adaptation plan for employees who meet certain eligibility criteria. The obligations to eligible active employees under such plans are provided for when the plan is the subject of an agreement or a bilateral draft agreement.

Provisions for these plans totalled EUR 41 million at 31 December 2023 (EUR 66 million at 31 December 2022).

## 6.F NON-COOPERATIVE STATES AND TERRITORIES

Authorisation from the Group's Compliance Department must be obtained through a special procedure before BNP Paribas SA or Group subsidiaries that report to BNP Paribas SA can open a location in a State considered "uncooperative" as defined by article 238-O A of the French General Tax Code and the Order issued on 3 February 2023 amending the list of non-cooperative States. In accordance with BNP Paribas' "best interests" ethics principle, and to ensure that the Group's internal control mechanisms are applied consistently, these locations are subject to the Group's regulations on Risk Management, anti-money laundering, corruption, financial embargoes, and terrorism financing.

## 6.2 Appropriation of income for the year ended 31 December 2023 and dividend distribution

At the Annual General Meeting of 14 May 2024, the Board of directors will propose an appropriation of net income for the year ended 31 December 2023 and dividend distribution under the following terms:

*In millions of euros*

|                                  |               |
|----------------------------------|---------------|
| Net income                       | 9,620         |
| Unappropriated retained earnings | 37,655        |
| <b>TOTAL TO BE APPROPRIATED</b>  | <b>47,275</b> |
| Dividend                         | 5,278         |
| Retained earnings                | 41,997        |
| <b>TOTAL APPROPRIATED INCOME</b> | <b>47,275</b> |

The total proposed dividend to be paid to BNP Paribas SA shareholders is EUR 5,278 million, which corresponds to EUR 4.60 per share (with a par value of EUR 2.00) based on the number of existing shares at 31 December 2023.

## 6.3 BNP Paribas SA five-year financial summary

|   | 2019          | 2020          | 2021          | 2022          | 2023          |
|---|---------------|---------------|---------------|---------------|---------------|
| <b>Financial position at year-end</b>   |               |               |               |               |               |
| a) Share capital ( <i>in euros</i> )  | 2,499,597,122 | 2,499,597,122 | 2,468,663,292 | 2,468,663,292 | 2,294,954,818 |

## 6.6 Statutory Auditors' report on the financial statements

For the year ended 31 December 2023

*This is a free translation into English of the Statutory Auditors' report issued in French and is provided solely for the convenience of English speaking readers. This report includes information specifically required by European regulations or French law, such as information about the appointment of Statutory Auditors. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.*

To the Shareholders,

### Opinion

In compliance with the engagement entrusted to us by your Annual General Meeting, we have audited the accompanying financial statements of BNP Paribas SA for the year ended 31 December 2023.

In our opinion, the financial statements give a true and fair view of the assets and liabilities and of the financial position of the Company at 31 December 2023 and of the results of its operations for the year then ended in accordance with French accounting principles.

The audit opinion expressed above is consistent with our report to the Financial Statements Committee.

### Basis for opinion

#### Audit framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under these standards are further described in the "Responsibilities of the Statutory Auditors relating to the audit of the financial statements" section of our report.

#### Independence

We conducted our audit engagement in compliance with the independence rules provided for in the French Commercial Code (*Code de commerce*) and the French Code of Ethics (*Code de déontologie*) for Statutory Auditors for the period from 1 January 2023 to the date of our report, and, in particular, we did not provide any non-audit services prohibited by article 5(1) of Regulation (EU) No. 537/2014.

### Justification of assessments – Key audit matters

In accordance with the requirements of articles L.821-53 and R.821-180 of the French Commercial Code relating to the justification of our assessments, we inform you of the key audit matters relating to the risks of material misstatement that, in our professional judgement, were the most significant in our audit of the financial statements, as well as how we addressed those risks.

These matters were addressed as part of our audit of the financial statements as a whole, and therefore contributed to the opinion we formed as expressed above. We do not provide a separate opinion on specific items of the financial statements.

## Identification and assessment of credit risk on customer loan portfolios

*(See Notes 1, 2.f, 3.b and 3.k to the financial statements)*

| Description of risk  | How our audit addressed this risk  |
|--|--|
| <p>As part of its banking intermediation activities, BNP Paribas is exposed to credit risk.</p> <p>It recognises impairment losses to cover known credit risks which are inherent to its operations.</p> <p>Impairment losses either take the form of individual impairment losses recognised against the related on- and off-balance sheet commitments or of collective impairment losses recognised against loan portfolios presenting similar risks which are not individually impaired. Collective provisions are determined using statistical models which require judgement at each stage of the calculation, particularly with respect to building similar portfolios and determining the inputs for the applicable risks and the obligating event of the provisions.</p> <p>Under certain circumstances, additional collective provisions for international commitments are recognised in order to take into account any risks identified by BNP Paribas which are not covered by the individual or collective provisions described above.</p> <p>At 31 December 2023, total balance sheet outstandings due from customers exposed to credit risk amounted to EUR 404 billion while total impairment losses stood at EUR 5 billion.</p> <p>In an environment still marked by considerable uncertainty relating to the macro-economic climate, we deemed the assessment of credit risk and the measurement of impairment losses to be a key audit matter insofar as management is required to exercise judgement and make estimates as regards credit granted to companies.</p> | <p>We assessed the relevance of BNP Paribas' control system and tested the manual and computerised controls for identifying and measuring impairment.</p> <p>We also examined the most significant outstandings and/or portfolios at the reporting date as well as on the credit granted to companies operating in more sensitive economic sectors or geographic regions.</p> <p>During our work, we focused on:</p> <ul style="list-style-type: none"> <li>▪ Counterparty business ratings: we assessed the risk level of a sample of outstandings under surveillance. During our work, we paid particular attention to the geographical regions and sectors impacted by the macro-economic climate, which remains uncertain;</li> <li>▪ measuring provisions recorded individually: we verified that a periodic review of the counterparties under surveillance had been carried out by BNP Paribas and, based on a sample, assessed the assumptions and data used by management to estimate impairment;</li> <li>▪ measuring collective provisions: assisted by our credit risk experts, we assessed the methods used by BNP Paribas across the various business lines, as well as the effectiveness of the data quality controls.</li> </ul> <p>In addition, we examined the disclosures in the notes to the financial statements with respect to credit risk.</p> |

## Valuation of financial instruments

(See Notes 1, 2.d, 3.c, 3.h, 3.i and 6.c to the financial statements)

| Description of risk  | How our audit addressed this risk   |
|--|---|
| <p>As part of its trading activities, BNP Paribas holds financial instruments (assets and liabilities) which are recognised in the balance sheet at market value.</p> <p>Market value is determined according to different approaches, depending on the type of instrument and its complexity: (i) using directly observable quoted prices; (ii) using valuation models whose main inputs are observable; and (iii) using valuation models whose main inputs are unobservable.</p> <p>The valuations obtained may be subject to additional value adjustments to take into account certain specific trading, liquidity or counterparty risks.</p> <p>The techniques adopted by management to measure these instruments may therefore involve significant judgement as regards the models and data used.</p> <p>At 31 December 2023, the market value of trading securities represented EUR 116 billion, the bank's negative net position on firm transactions was valued at EUR 263 million and the market value of the bank's net short position on conditional transactions was valued at EUR 8.3 billion.</p> <p>In light of the materiality of the outstandings and the judgement used to determine market value, we deemed the measurement of financial instruments to be a key audit matter, in particular the measurement of instruments requiring the use of unobservable inputs.</p> | <p>Assisted by our valuation experts, we verified that the key controls used by BNP Paribas with respect to the valuation of financial instruments function properly, in particular those relating to:</p> <ul style="list-style-type: none"> <li>▪ the approval and regular review by management of the risks of the valuation models;</li> <li>▪ the independent verification of the valuation inputs;</li> <li>▪ the determination of value adjustments.</li> </ul> <p>Based on a sample, our valuation experts:</p> <ul style="list-style-type: none"> <li>▪ analysed the relevance of the assumptions and inputs used;</li> <li>▪ analysed the results of the independent review of the inputs by BNP Paribas;</li> <li>▪ performed independent counter valuations using our own models.</li> </ul> <p>We also analysed, on a sample basis, any differences between the valuations obtained and collateral calls with counterparties.</p> <p>In addition, we examined the disclosures in the notes to the financial statements with respect to the valuation of financial instruments.</p> |

## Measurement of equity investments, other equity securities held for long-term investment and investments in subsidiaries and affiliates

(See Notes 1, 3.c and 3.e to the financial statements)

| Description of risk   | How our audit addressed this risk  |
|---|--|
| <p>Equity investments, other equity securities held for long-term investment and investments in subsidiaries and affiliates are recognised on the balance sheet at a carrying amount of EUR 53 billion.</p> <p>They are measured individually at the of lower cost or value in use.</p> <p>Value in use is determined, for each investment, using a valuation approach based on available information including discounted future cash flows, net asset value and the related multiples commonly used to assess future yields.</p> <p>When their carrying amount exceeds value in use, an impairment loss is recognised for the difference.</p> <p>Given their materiality in the balance sheet and the sensitivity of the models used to the assumptions underlying the estimated values, we deemed the measurement of these investments to be a key audit matter.</p> | <p>Our audit work consisted in:</p> <ul style="list-style-type: none"> <li>▪ assessing, using sampling techniques, the justification for the valuation methods and data used by management to estimate values in use;</li> <li>▪ testing, using sampling techniques, the accuracy of the calculation of values in use used by the company.</li> </ul> <p>Lastly, we reviewed the disclosures on equity investments, other equity securities held for long-term investment and investments in subsidiaries and affiliates in the notes to the financial statements.</p> |

## General IT controls

| Description of risk  | How our audit addressed this risk  |
|--|--|
| <p>The reliability and security of IT systems plays a key role in the preparation of BNP Paribas SA's financial statements. We thus deemed the assessment of the general IT controls of the infrastructures and applications that contribute to the preparation of accounting and financial information to be a key audit matter.</p> <p>In particular, a system for controlling access rights to IT systems and authorisation levels based on employee profiles represents a key control for limiting the risk of inappropriate changes to application settings or underlying data.</p> | <p>For the main systems used to prepare accounting and financial information, assisted by our IT specialists, our work consisted primarily in:</p> <ul style="list-style-type: none"> <li>▪ obtaining an understanding of the systems, processes and controls which underpin accounting and financial data;</li> <li>▪ assessing the general IT controls (application and data access management, application changes/developments management and IT operations management) on key systems (in particular accounting, consolidation and automatic reconciliation applications);</li> <li>▪ examining the control for the authorisation of manual accounting entries;</li> <li>▪ performing additional audit procedures, where appropriate;</li> <li>▪ taking into account the cybersecurity risk increased by the crisis in Ukraine and the widespread use of remote working.</li> </ul> |

### Specific verifications

In accordance with professional standards applicable in France, we have also performed the specific verifications required by French legal and regulatory provisions.

#### Information given in the management report and in the other documents provided to the shareholders with respect to the Company's financial position and the financial statements

We have no matters to report as to the fair presentation and the consistency with the financial statements of the information given in the Board of Directors' management report and in the other documents provided to the shareholders with respect to the Company's financial position and the financial statements, with the exception of the item described below.

Concerning the fair presentation and the consistency with the financial statements of the information about payment terms referred to in article D.441-6 of the French Commercial Code, we have the following matter to report:

As indicated in the management report, this information does not include banking transactions and related transactions, as the Company has decided that such transactions do not fall within the scope of the required information.

#### Report on corporate governance

We attest that the corporate governance section of the Board of Directors' management report sets out the information required by articles L.225-37-4, L.22-10-10 and L.22-10-9 of the French Commercial Code.

Concerning the information given in accordance with the requirements of article L.22-10-9 of the French Commercial Code relating to remuneration and benefits paid or awarded to corporate officers and any other commitments made in their favour, we have verified its consistency with the financial statements, or with the underlying information used to prepare these financial statements, and, where applicable, with the information obtained by your Company from controlled companies within its scope of consolidation. Based on this work, we attest to the accuracy and fair presentation of this information.

Concerning the information given in accordance with the requirements of article L.22-10-11 of the French Commercial Code relating to those items the Company has deemed liable to have an impact in the event of a takeover bid or exchange offer, we have verified its consistency with the underlying documents that were disclosed to us. Based on this work, we have no matters to report with regard to this information.

#### Other information

In accordance with French law, we have verified that the required information concerning the purchase of investments and controlling interests and the identity of shareholders and holders of the voting rights has been properly disclosed in the management report.

## **Other verifications and information pursuant to legal and regulatory requirements**

### **Presentation of the financial statements to be included in the annual financial report**

In accordance with professional standards applicable to the Statutory Auditors' procedures for annual and consolidated financial statements presented according to the European single electronic reporting format, we have verified that the presentation of the financial statements included in the annual financial report referred to in paragraph I of article L.451-1-2 of the French Monetary and Financial Code (*Code monétaire et financier*) and prepared under the Chief Executive Officer's responsibility, complies with this format, as defined by European Delegated Regulation No. 2019/815 of 17 December 2018.

On the basis of our work, we conclude that the presentation of the financial statements to be included in the annual financial report complies, in all material respects, with the European single electronic reporting format.

### **Appointment of the Statutory Auditors**

We were appointed Statutory Auditors of BNP Paribas SA by your Annual General Meetings held on 23 May 2006 for Deloitte & Associés, 26 May 1994 for PricewaterhouseCoopers Audit and 23 May 2000 for Mazars.

At 31 December 2023, Deloitte & Associés, PricewaterhouseCoopers Audit and Mazars were in the eighteenth, the thirtieth and the twenty-fourth consecutive year of their engagement, respectively.

### **Responsibilities of management and those charged with governance for the financial statements**

Management is responsible for preparing financial statements giving a true and fair view in accordance with French accounting principles, and for implementing the internal control procedures it deems necessary for the preparation of financial statements that are free of material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern, and using the going concern basis of accounting, unless it expects to liquidate the Company or to cease operations.

The Financial Statements Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risk management systems, as well as, where applicable, any internal audit systems relating to accounting and financial reporting procedures.

The financial statements were approved by the Board of Directors of BNP Paribas SA.

### **Responsibilities of the Statutory Auditors relating to the audit of the financial statements**

#### **Objective and audit approach**

Our role is to issue a report on the financial statements. Our objective is to obtain reasonable assurance about whether the financial statements as a whole are free of material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions taken by users on the basis of these financial statements.

As specified in article L.821-55 of the French Commercial Code, our audit does not include assurance on the viability or quality of the Company's management.

As part of an audit conducted in accordance with professional standards applicable in France, the Statutory Auditors exercise professional judgement throughout the audit. They also:

- identify and assess the risks of material misstatement in the financial statements, whether due to fraud or error, design and perform audit procedures in response to those risks, and obtain audit evidence considered to be sufficient and appropriate to provide a basis for their opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of the internal control procedures relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management and the related disclosures in the notes to the financial statements;

- assess the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of the audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the Statutory Auditors conclude that a material uncertainty exists, they are required to draw attention in the audit report to the related disclosures in the financial statements or, if such disclosures are not provided or are inadequate, to issue a qualified opinion or a disclaimer of opinion;
- evaluate the overall presentation of the financial statements and assess whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.

## **Report to the Financial Statements Committee**

We submit a report to the Financial Statements Committee which includes, in particular, a description of the scope of the audit and the audit programme implemented, as well as the results of our audit. We also report any significant deficiencies in internal control that we have identified regarding the accounting and financial reporting procedures.

Our report to the Financial Statements Committee includes the risks of material misstatement that, in our professional judgement, were the most significant for the audit of the financial statements and which constitute the key audit matters that we are required to describe in this report.

We also provide the Financial Statements Committee with the declaration provided for in article 6 of Regulation (EU) No. 537/2014, confirming our independence within the meaning of the rules applicable in France, as defined in particular in articles L.821-27 to L.821-34 of the French Commercial Code and in the French Code of Ethics for Statutory Auditors. Where appropriate, we discuss any risks to our independence and the related safeguard measures with the Financial Statements Committee.

# "7 A COMMITTED BANK: INFORMATION CONCERNING THE ECONOMIC, SOCIAL, CIVIC AND ENVIRONMENTAL RESPONSIBILITY OF BNP PARIBAS

## BNP PARIBAS' COMPANY PURPOSE AND CONSIDERATION OF SOCIAL AND ENVIRONMENTAL ISSUES

---

BNP Paribas' company purpose was adopted by the Board of directors at the end of 2019, and was published in early 2020.

**"We are at the service of our clients and the world we live in.**

The BNP Paribas Group was formed by banks that have been deeply embedded in the European and global economies over the last 200 years. They have adapted to the challenges of their times and helped clients and other stakeholders during moments of great change.

BNP Paribas' mission is to contribute to responsible and sustainable growth by financing the economy and advising clients according to the highest ethical standards.

We offer secure, sound and innovative financial solutions to individuals, professional clients, enterprises and institutional investors while striving to address the fundamental challenges of today with regard to the environment, local development and social inclusion.

We are engaged with our clients to create a better future.

**We are mobilising resources that have a positive impact.**

At BNP Paribas, we want to be a long-term partner for our clients. We want to support their projects, manage their investments and savings, and, through insurance, protect people, their goods and property.

Our employees aim to deliver services that have purpose and relevance for clients and the world around them. They do this most clearly through their daily mission in the Company but also through corporate volunteering.

We are working with stakeholders and have adopted social and environmental goals aligned with global standards such as the United Nations Sustainable Development Goals and those of the financial community such as the Principles for Responsible Banking and the Principles for Responsible Investment.

We ensure that ethics and our commitment to economic, social, civic and environmental responsibility are integrated into our business operations. This commitment is reflected in our organisation and the procedures and policies governing our activities.

We innovate in order to be a leader in sustainable finance.

We take action to support causes by bringing together financial solutions, stakeholder partnerships, employer and procurement initiatives, support for solidarity-based projects, philanthropy, volunteering and intrapreneurship programmes.

We are developing the tools to measure our environmental and social impact and we are focusing on actions that involve all employees.

**BNP Paribas. The bank for a changing world."**

## Summary

### HALFWAY THROUGH THE GTS 2025 STRATEGIC PLAN, 2023 CEMENTS BNP PARIBAS' POSITION AS A LEADER IN GREEN FINANCE

---

**As a leading financial institution, BNP Paribas considers environmental, social and governance challenges to be a major focus of its business model and its social and environmental responsibility.**

For over a decade, BNP Paribas has integrated environmental and social criteria into its financing and investment policies to direct its business model towards the support of the energy and ecological transition, by making pioneering commitments to restrict the financing of activities that are most harmful to the environment and the climate.

The Group has participated in numerous collective efforts to structure sustainable finance in line with the 2015 Paris Climate Agreement Goals.

BNP Paribas' Social and Environmental Responsibility (CSR) strategy is based on an in-depth analysis of its environmental, social and governance (ESG) issues through a materiality matrix developed in consultation with its stakeholders<sup>1</sup>, backed by a scientific framework<sup>2</sup> and benchmark principles<sup>3</sup>. These environmental, social and governance issues are integrated at the heart of BNP Paribas' company purpose (see 7.1 *Strategy*).

This strategy allows it to consolidate a leading position in sustainable finance thanks to numerous solutions to support its clients' transition, including sustainable bonds, positive impact loans, sustainability-linked loans (SLL) and sustainability-linked bonds (SLB), socially responsible savings, inclusive financial offers, dedicated offers for energy efficiency home renovation, sustainable mobility offers, etc.

**In 2023, BNP Paribas was the world leader with USD 62.5 billion in ESG loans and bonds<sup>4</sup>.**

#### **In 2023, BNP Paribas accelerated the shift from financing fossil fuels to low-carbon energy**

At 30 September 2023, **BNP Paribas' credit exposure to low-carbon energy production stood at EUR 32 billion** (including EUR 28.8 billion for renewable energy), up EUR 3.8 billion in one year. This represents **65% of energy production-related credit exposure**, and an increase of 10 points in one year. Faced with this momentum, **the objective set in 2023 to reach at least EUR 40 billion in credit exposure to low-carbon energies representing 80% of outstanding energy production by 2030 was put forward two years, to the end of 2028. The new objective is now 90% by 2030.**

Please note that this is a stock of loans granted over a number of years which customers will repay over a number of years. The major action taken from 2023 to accelerate new low-carbon loans and the divestment of fossil fuels will make it possible to achieve the 2028 and 2030 objectives.

At the same time, the Group is continuing its trajectory of reducing financing for the sectors that emit the most greenhouse gases, with a EUR 1.4 billion decrease in its credit exposure for oil exploration-production, EUR 1 billion for gas exploration-production and EUR 3.1 billion for refining between the end of September 2022 and the end of September 2023.

**The Group has amended its oil and gas policy: it no longer grants financing for the development of new oil or gas projects, regardless of the financing terms, nor to non-diversified players in oil exploration and production.**

<sup>1</sup> See 7.6 EFPS and 7.7 Vigilance plan.

<sup>2</sup> Based primarily on publications by the IPCC (Intergovernmental Panel on Climate Change), the IPBES (Intergovernmental Science and Policy Platform on Biodiversity and Ecosystems) and the IEA (International Energy Agency).

<sup>3</sup> Based primarily on the United Nations Sustainable Development Goals and Guiding Principles on Business and Human Rights, and on the fundamental conventions of the ILO (International Labour Organization).

<sup>4</sup> Source: Dealogic.

Also in 2023, BNP Paribas modified **its mining policy to exclude any project financing related to the extraction of metallurgical coal**, in addition to its commitment to phase out thermal coal.

BNP Paribas Asset Management and BNP Paribas Cardif have also set decarbonisation targets for their investment portfolios and updated their environmental footprint measurement this year. Within the framework of their activities, they are engaging in dialogue on ESG issues with the corporate clients in which they invest, in order to preserve and improve the medium- and long-term value of investments made on behalf of third parties, and encourage the transition. BNP Paribas Asset Management encourages these corporate clients to make robust ESG commitments through their voting rights policies.

Through all of these actions, the Group is continuing its focus on the immense transformation effort that the entire economy must make.

## BNP PARIBAS IS ON TRACK TO ACHIEVE ITS SUSTAINABILITY OBJECTIVES UNDER THE GTS 2025 PLAN

Aware of the necessity to integrate its CSR strategy into its business model in order to achieve its ambitious environmental, social and governance targets, in 2022, the Group launched its 2025 strategic plan entitled GTS (*Growth, Technology, Sustainability*). The Sustainability component is built around three strategic areas to serve its clients and society:

- aligning the Group's portfolios with trajectories compatible with collective carbon neutrality by 2050: BNP Paribas has published **financed targets to reduce its emissions by 2030 for three new industrial sectors (steel, aluminium, cement) in its climate report<sup>1</sup>**. These are added to the objectives of the first three sectors (energy production, oil and gas, automotive). The 2023 results for a reduction in the intensities of financed greenhouse gas emissions are in line with the intermediate alignment objectives of the loan portfolio, which are part of a Net-Zero emissions trajectory for 2050;
- supporting clients in the transition to a sustainable and low-carbon economy is enabled by the ever-widening range of sustainable finance products. For the second consecutive year, **in 2023 BNP Paribas was the world leader in green bonds at USD 25.6 billion<sup>2</sup>**. This was made possible thanks to the expertise of its employees and in particular the 200 specialist bankers of the Low-Carbon Transition Group;
- strengthening an ESG culture, with a particular emphasis on the **ESG Assessment** roll-out for almost all of the Group's 3,000 largest corporate clients, and on increasing ESG knowledge in the Group thanks to the *Sustainability Academy*, which enabled more than 86,000 employees to take training courses on these topics in 2023.

## THE OBJECTIVES OF THE GTS 2025 PLAN ARE ROLLED OUT THROUGH QUANTITATIVE INDICATORS WITH OBJECTIVES FOR 2025

BNP Paribas has set its own specific targets in terms of sustainable finance that can be found within the 10 indicators of the Group's CSR dashboard. The monitoring of this CSR dashboard is carried out on an annual basis by the Group's Executive Committee and Board of directors. At the end of 2023, the Group can highlight results that are in line with its objectives (see 7.1 *Strategy*).

## A LEADER IN GREEN FINANCE, ENERGY AND THE ECOLOGICAL TRANSITION

In 2023, BNP Paribas consolidated its **leading position in ecological transition financing**. Examples include the following:

- in terms of the energy transition, BNP Paribas was a major player in the Baltic Power project in Poland. The loan of more than EUR 4.4 billion is enabling the construction of the first offshore wind farm in Polish waters: it includes 76 wind turbines that will provide renewable energy to more than 1.5 million households from 2026. This was the largest offshore wind project in Europe in 2023;

<sup>2</sup> Source: Dealogic.

- in terms of mobility, BNP Paribas participated in the financing of AESC (Automotive Energy Supply Corporation), a Japanese company and world leader in the design and production of batteries, for the construction of a gigafactory in France costing more than EUR 800 million. The plan is for 9 GWh of batteries to power 200,000 Renault electric vehicles per year from 2025;
- in terms of the circular economy, CPBF financed a foundry sand regeneration installation project reaching EUR 3.3 million. This innovative project will enable La Fonte Ardennaise, a major player in the foundry industry worldwide, to recycle 90% of black moulding sand, and thus save natural resources, stop the landfilling of sand waste and reduce CO<sub>2</sub> emissions by 20,000 t/year;
- the BNP Paribas Climate Impact Infrastructure Debt is a fund launched in 2023 which aims to raise EUR 500-750 million from institutional investors. With an initial investment from BNP Paribas Cardif, it will support projects working for the energy transition in Europe focused on renewable energy, clean mobility and the circular economy, including new sectors such as batteries, hydrogen and carbon capture.

## Financing of innovative solutions and research

BNP Paribas supports innovation in areas related to the ecological transition. Through its Ecological Transition Capital investment line, **at the end of 2023, BNP Paribas had already invested EUR 87.2 million in 12 innovative companies**, including CarbonWorks in France (CO<sub>2</sub> capture and recovery using microalgae) and Protix in the Netherlands (manufacturing for insect-based animal feed), and in eight funds.

In addition, the BNP Paribas Solar Impulse Venture fund invested in four innovative companies in 2023, including Hello Watt, which helps individuals reduce their carbon footprint through home renovations for energy efficiency.

BNP Paribas Asset Management acquired a majority stake in IWC (International Woodland Company), based in Denmark, which specialises in investment and advisory services for sustainable forestry, agriculture and natural ecosystems, as well as carbon credits and conservation projects.

At the end of 2023, a multi-year partnership was launched with the Naturalis Biodiversity Center, marking a new chapter in BNP Paribas' approach to protecting and restoring biodiversity. Bringing together more than 150 scientists, this institution is one of the main biodiversity knowledge and research centres in the world.

## COMMITMENT TO SOCIETY AT THE HEART OF BNP PARIBAS' OBJECTIVES

Three years after launching the very first impact bonds in France and in the European Union, BNP Paribas is crossing a second milestone with the BNP Paribas European Impact Bonds Fund 2, managed by BNP Paribas Asset Management and with a target size of EUR 70 million. Nine new impact bonds were launched in 2023 for a total amount of EUR 28 million, in which the fund invested EUR 13 million. These include the EUR 2.9 million impact bond operated by Andes, which aims to combat food waste and food insecurity on a large scale by recovering unsold food which does not meet standards.

With regard to impact investments, through its own budget of EUR 200 million or funds on behalf of third parties, the Group opts for direct equity investments in companies with a strong social and/or environmental impact. The 16 new investments (excluding reinvestments) made in 2023, for a total of nearly EUR 56 million, included the following:

- Ecov, a shared mobility operator in areas where public transport is limited or non-existent;
- Urbilog, an iconic player in digital accessibility for people with disabilities (visual, auditory, motor, specific cognitive disorders, etc.).

**2023 also marks the 30<sup>th</sup> year of the partnership between BNP Paribas and Adie** (Association for the Right to Economic Initiative), which was renewed for three years. Since 1993, EUR 192 million in cumulative financing has been granted by CPBF to its partner, supporting nearly 40,000 entrepreneurs, (of which 22% do not have a diploma, 32% are under 30 years old and 46% are women) with more than 47,000 micro-loans granted by Adie.

In addition, BNP Paribas **co-developed the first ISLF+** (inclusive & sustainability-linked financing) with its historical partners: Adie in France, PerMicro in Italy and *Banco da Família* in Brazil. In particular, they provide dedicated technical support and/or subsidised rates to these microfinance players, depending on the achievement of social, environmental and/or just transition objectives.

Attentive to the societal challenges of the countries in which it operates, and to disadvantaged populations in particular, BNP Paribas has continued its efforts in terms of financial inclusion. Nickel, a Group subsidiary present in five European countries, offers opening a bank account with an IBAN and a payment card. It allows everyone, including people without access to traditional banking services, to pay and be paid. **In 2023, Nickel reached nearly 3.7 million accounts**, and of the people helped: 77% have an income of less than EUR 1,500 per month; 30% are unemployed, without regular income or living on benefits; and 30% do not have their own address.

Lastly, the BNP Paribas Foundation has also reinforced its actions, notably with a budget of EUR 20 million from the funds supporting the share buyback programme operated by the Group. This amount was paid to more than 90 organisations working in three current priority areas: the fight against extreme poverty and violence against women, integrating disadvantaged people into society (supporting refugees, equal opportunities, integration into the workplace) and climate and biodiversity. For example, there has been support for *Les Restos du Cœur* in France and its German equivalent *Tafel*, for food banks in France and Belgium, for the Abbé Pierre Foundation, for the *Fédération nationale Solidarité Femmes* and expanding support to associations for disadvantaged neighborhoods from France into Italy, as well as support for the IUCN and The Transition Institute 1.5°.

## SUPPORTING OUR EMPLOYEES BY OFFERING THEM AN ENVIRONMENT AND PATHWAYS ADAPTED TO THEIR EXPECTATIONS

In 2023, against a complex economic and geopolitical backdrop, the Group continued its actions to:

- protect its employees by providing assistance wherever they may need it (Ukraine, Türkiye, Morocco, Middle East), and by deploying its prevention, health and well-being at work offer throughout the world through the *We Care* programme;
- widely promote its diversity and inclusion policy in all its areas, particularly during its *Inclusion Days*, which provided an opportunity to raise employee awareness on equal opportunities, prejudice, disability and financial inclusion, and measure employees' perception of these issues as part of the general *Conduct & Inclusion* survey re-run in 2023;
- reach the ambitious target in terms of gender equality of 37% women in senior management<sup>1</sup> in 2023;
- develop the skills of its employees, particularly in IT, Data, Digital, and Sustainable Finance jobs, while offering them career development opportunities within the Group notably during the *Career Days*.

The Group employee engagement score<sup>2</sup> measured around the themes of pride in belonging to the Group, adherence to the strategy and involvement in work reached a high level of nearly 85 out of 100 in 2023.

## THE GROUP'S CSR ACTIONS AND RESULTS ARE RATED POSITIVELY

The relevance, ambition and comprehensive nature of its CSR strategy have earned BNP Paribas several awards recognising its ambition and achievements:

- Euromoney **Best Bank for Sustainable Finance** in 2023;
- one of the best financial institutions in all extra-financial rating agency rankings, and an A rating from CDP for the first time in 2023. BNP Paribas is the only large diversified bank to be awarded this top rating (see 7.1 *Strategy*);
- **member of the Global 100 most sustainable companies in the world** prepared by Corporate Knights, for the 10<sup>th</sup> year running;
- **recognised for its commitments to combat deforestation** in the Forest500 2023 ranking by the NGO Global Canopy.

<sup>1</sup> The Group's Senior Management Position (SMP) population is composed of employees holding approximately 3,000 positions considered to have the most significant impact from a strategic, commercial, functional and expertise point of view.

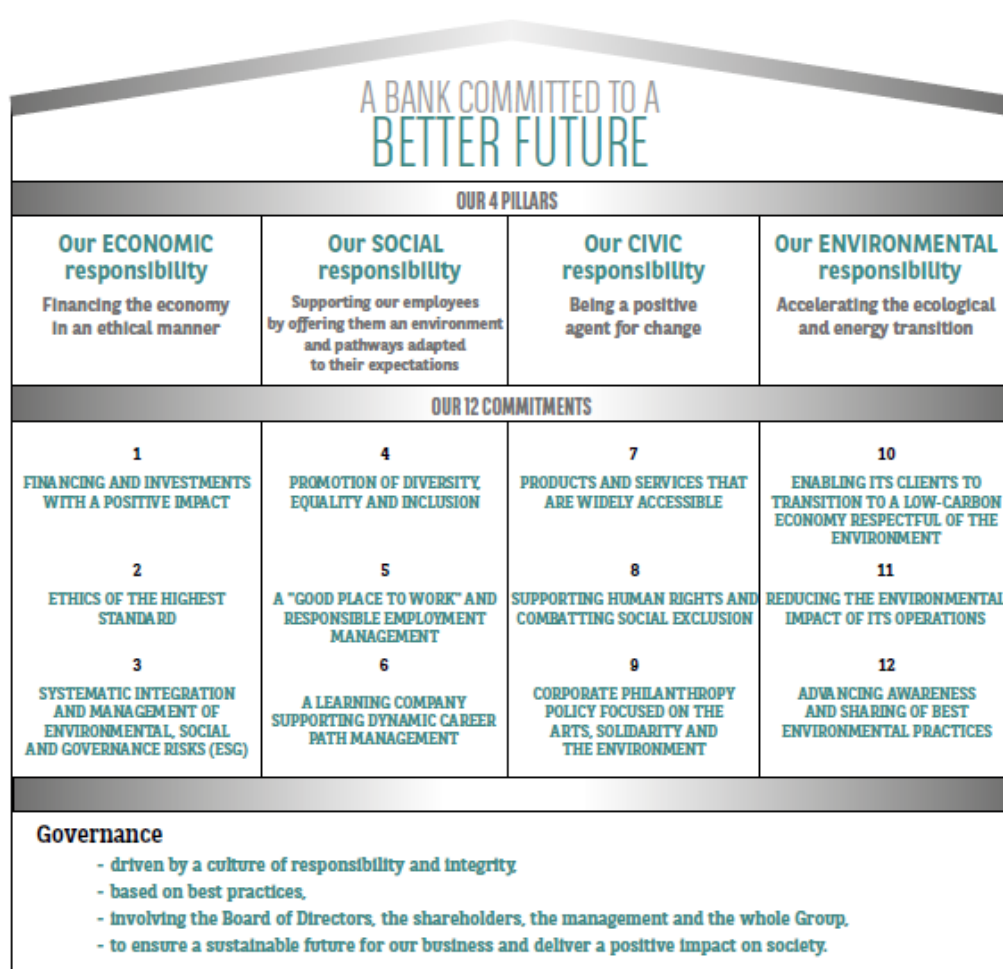

<sup>2</sup> Measured from surveys carried out during 2023 by the Group's various business lines and entities, covering 86% of the Group's workforce at 31/12/2023, and for which 69% of the employees questioned responded.

# 7.1 Strategy

## THE CORPORATE SOCIAL RESPONSIBILITY (CSR) STRATEGY

The Group's CSR strategy, in line with the 17 United Nations Sustainable Development Goals, consists of supporting all clients, individuals, companies and institutions in their transition to a carbon-neutral economy that makes reasonable use of the planet's resources, allows the inclusion of the most vulnerable and respects human rights.

It is structured around four pillars and 12 commitments that reflect the Bank's CSR challenges, as well as its concrete achievements. This strategy, which is part of a process of continuous improvement, aims to contribute to building a more sustainable world while ensuring the Group's stability and performance. This ambition is reflected in the GTS 2025 strategic plan (*Growth, Technology, Sustainability*), of which Sustainability issues are one of the pillars. Its deployment involves all of the Group's business lines, networks, subsidiaries and countries, under the aegis of governance organised at the highest level of the Bank.

## THE CSR POLICY MANAGEMENT DASHBOARD

The GTS 2025 strategic plan defines quantified CSR objectives. The indicators were renewed at the beginning of the plan (2022) in order to reflect a higher ambition and cover broad areas: the energy transition, biodiversity, social inclusion, employee training, etc. which correspond to the four pillars of the aforementioned strategy. The scope of consolidated financial reporting and extra-financial reporting is the same.

The achievement of these CSR objectives determines the payment of 20% of the amount of the loyalty plan awarded in 2023 to more than 8,200 key Group employees (see *A competitive compensation policy*, Commitment 5). The achievement of the CSR objectives is also included for one third in the calculation of 15% of the variable compensation awarded for 2023 to the Group's corporate officers. These CSR objectives taken into account for corporate officers are those that correspond to the loyalty plan payments to the Group's key employees during the year (see chapter 2, *Compensation and benefits awarded to the Group's directors and corporate officers*).

| Pillar                           | Indicator  | 2022 Results                 | 2023 Results                 | 2025 Objectives |
|----------------------------------|--|------------------------------|------------------------------|-----------------|
| Our economic responsibility      | 1 Amount of sustainable loans (in billions of euros)   | 87                           | 117                          | 150             |
|                                  | 2 Amount of sustainable bonds (in billions of euros)   | 32                           | 67                           | 200             |
|                                  | 3 Amount of assets under management in open-ended funds distributed in Europe under article 8 & 9 according to the SFDR (in billions of euros) | 223                          | 254                          | 300             |
| Our social responsibility        | 4 Share of women among the SMP population ( <i>Senior Management Position</i> )  | 35.2%                        | 37.1%                        | 40%             |
|                                  | 5 Number of solidarity hours performed by employees over two rolling years (#1MillionHours2Help)   | 1,126,142 (in 2021 and 2022) | 1,268,515 (in 2022 and 2023) | 1,000,000       |
|                                  | 6 Share of employees who completed at least four training courses during the year  | 97.4%                        | 98.2%                        | 90%             |
| Our civic responsibility         | 7 Number of beneficiaries of products and services supporting financial inclusion (in millions)  | 3.3                          | 3.9                          | 6               |
| Our environmental responsibility | 8 Amount of the support enabling our clients to transition to a low-carbon economy (in billions of euros)                                      | 44                           | 104                          | 200             |
|                                  | 9 Amount of financing to companies contributing to protecting terrestrial and marine biodiversity (in billions of euros)                       | 1.8                          | 4.3                          | 4               |
|                                  | 10 Greenhouse gas emissions in teqCO2/FTE  | 1.65                         | 1.56                         | 1.85            |

### Dashboard definitions

**Amount of sustainable loans:** amount of loans at the end of 2023, drawn and undrawn, identified as sustainable by an internal classification system, granted by BNP Paribas to its clients. The Group's transaction classification principles are based on external market standards such as those of the Loan Market Association and the European Taxonomy in Europe.

**Amount of sustainable bonds:** cumulative amount at the end of the year of all types of bonds identified as sustainable according to the guidelines of the ICMA (International Capital Market Association) issued by corporate clients, financial institutions and sovereign clients, and arranged by BNP Paribas (total amount divided by the number of bookrunners).

**Amount of assets under management at year-end in open-ended funds distributed in Europe under articles 8 and 9, according to SFDR.** These are BNP Paribas Asset Management funds.

**Share of women among the SMP population:** the Group's Senior Management Position population is composed of employees holding approximately 3,000 positions considered to have the most significant impact from a strategic, commercial, functional and expertise point of view. The percentage is calculated on the basis of SMP positions occupied.

**Number of solidarity hours performed by employees:** as part of the #1MillionHours2Help programme including the long-term corporate volunteering set up under the Diversity and Inclusion Agreement in France.

**Share of employees who completed at least four training courses during the year,** including mandatory training such as compliance.

**Number of beneficiaries of products and services promoting financial inclusion:** number of Nickel accounts opened since the creation and number of beneficiaries of microloans distributed by microfinance institutions financed by the Group (*pro rata* of the financing) at the end of the year.

**Amount of support for our clients in the transition to a low-carbon economy:** cumulative amount at year-end of financial support identified as contributing to the transition to a low-carbon economy, according to an internal classification system. This amount covers part of the amounts of indicators 1 (sustainable loans) and 2 (sustainable bonds), as well as the financial support provided in some cases in the form of private placements, financial advice and IPOs.

**Amount of financing to corporate clients contributing to the protection of terrestrial and marine biodiversity:** cumulative amount at the end of the year of financial products and services (loans, bonds, *etc.*) that help protect terrestrial and marine biodiversity. The contribution to the protection of biodiversity is identified by an internal classification system<sup>1</sup>. This amount covers part of the amounts of indicators 1 (sustainable loans) and 2 (sustainable bonds).

**Greenhouse gas emissions in  $\text{teqCO}_2/\text{FTE}$  (kWh buildings and business travel):** greenhouse gas emissions for scope 1 (direct emissions from the combustion of fossil fuels), scope 2 (indirect emissions from the purchase of energy) and, for a part of scope 3 (emissions related to employee business travel), in proportion to the number of Group employees (FTE).

## 2023 RESULTS

2023 was once again marked by geopolitical and economic events that negatively impacted economic activity. Despite this difficult backdrop, BNP Paribas is pursuing its ambitious economic, social, civic and environmental objectives, and is moving towards achieving the objectives of its CSR dashboard for 2022-2025, primarily due to its position as a leader in sustainable finance.

In a sustainable lending market (particularly sustainability-linked loans) which is down by around 30% year-over-year according to Dealogic, BNP Paribas is resilient and has maintained its 5<sup>th</sup> position worldwide for SLL according to (Dealogic). It has also succeeded in achieving strong growth in its specialised business lines, and home renovations for energy efficiency (indicator No. 1).

Despite the bond issue market suffering a sharp decline in 2022, and remaining low in volume in 2023, BNP Paribas confirmed its position as global and EMEA leader in sustainable bonds in 2023 according to Dealogic (indicator No. 2).

Thanks to positive inflows, the amount of assets under management in BNP Paribas Asset Management's open-ended funds distributed in Europe and classified under articles 8 and 9 of the SFDR regulation (indicator No. 3) increased by 14%, with 21 new funds launched in 2023.

On the three social objectives, the Group is perfectly in line with its 2025 objectives. The number of women in management is increasing, and has reached 37% of the SMP population (indicator No. 4). The million solidarity hours was exceeded by more than 25% thanks to employee engagement (indicator No. 5). Finally, the number of training courses completed exceeded the target and was even higher than last year, with 98% of employees having completed four training sessions (indicator No. 6).

The growth of Nickel, whose services are now available in Germany, meant that the large increase in the number of beneficiaries of products and services promoting financial inclusion was able to continue (indicator No. 7), with more than 700,000 new accounts opened. The number of microfinance institutions financed by the Group remains stable.

The indicator relating to support for clients in the transition to a low-carbon economy (indicator No. 8) has seen significant growth this year, given that the sector is dynamic and that a number of Group entities are better able to pinpoint energy transition projects. It continues to be fed by the work of the 200 specialised bankers in the Low-Carbon Transition Group.

The indicator relating to biodiversity (indicator No. 9) increased significantly this year thanks to better identification of biodiversity issues and associated indicators, in a year in which biodiversity became a focal point. For example, BNP Paribas has participated in SLLs with objectives relating to the protection of biodiversity, and participated in bond issues including the financing of actions aimed at preserving the quality of natural environments (see details in Commitment 10).

Lastly, the level of greenhouse gas emissions per employee in BNP Paribas' operating scope (indicator No. 10) improved following the sale of Bank of the West, which was one of the Group's highest-emitting entities. On a like-for-like basis, this indicator is stable, reflecting the Group's efforts to continue to reduce its energy consumption (-15% on a like-for-like basis worldwide), despite a strong recovery in business travel.

<sup>1</sup> Examples: implementation of more biodiversity-friendly practices in the upstream supply chains of agricultural commodities, increase in the share of agricultural commodities that do not contribute to deforestation, rehabilitation of quarries after use, *etc.*

## RESULTS ACKNOWLEDGED BY EXTRA-FINANCIAL RATING AGENCIES AND EXTERNAL STAKEHOLDERS

The following table displays the most recent evaluations from the main extra-financial rating agencies and the inclusion of BNP Paribas in the related extra-financial indexes. In 2023, the Group maintained its leading position in ratings, with scores well above the average for the banking sector.

| Rating agencies   | Rating (year of latest rating)    | Comments/Related indices  |
|---|-----------------------------------|---|
| FTSE Russell  | 4.4/5 (2023)                      | In the top 11% of the banking industry <i>FTSE4Good Global Index Series</i>   |
| Moody's ESG   | 70/100 (2023)                     | Above-average for the sector and 2 <sup>nd</sup> in the Diversified banks category <i>Euronext-Vigeo Eiris: World 120, Europe 120, Euro 120 and France 20</i> |
| S&P Global ( <i>Corporate Sustainability Assessment</i> ) | 73/100 (2023)                     | In the top 4% of the banking industry (1% for the environment) <i>DJSI World – DJSI Europe</i>  |
| MSCI  | AA (2023)                         | Above average for financial institutions<br>Leader in the environmental sector (10/10 compared to 5/10 for the sector average)                                |
| Sustainalytics  | Medium risk – 24.6/40 (Feb. 2024) | Above-average performance for the Banks sector and Diversified banks sub-sector   |
| ISS   | C + (2023)                        | Prime status, in the top 10% of Commercial Banks & Capital Market   |
| CDP   | A (2023)                          | On the A-list which covers the top 1.5% of companies according to the climate questionnaire rating  |

More specifically, BNP Paribas' social responsibility actions are also recognised by extra-financial rating agencies, where the Group has obtained:

- a score of 74/100 on the social component of the Corporate Sustainability Assessment ranking by Standard & Poor's, placing it in the top 5%;
- a score of 70/100 on the social component of the Moody's ESG Solutions evaluation, in particular thanks to its anti-discrimination measures and the health and safety policies it has implemented. This rating places it among the best players in the European diversified banking industry, well above the sector average of 57/100;
- a score of 84/100 in the Workforce Disclosure Initiative (WDI) ranking, which places BNP Paribas well above the average for the Financials category (64/100).

Finally, since 2022, BNP Paribas has held the "Alliance" label, awarded in France by Afnor<sup>1</sup>. The Group is the first and only bank in France to have obtained this label, demonstrating its long-term commitment to gender equality and the fight against discrimination.

Other entities and specialised magazines have acknowledged the Group's improved CSR performance. Indeed, BNP Paribas:

- was named "Best bank for sustainable finance" in the world in 2023 for the third year running, by Euromoney, the leading finance magazine<sup>2</sup>, and "ESG Financing House" by the Institutional Financing Review (IFR)<sup>3</sup>;
- is the only French bank in the 2024 ranking of the "Global 100 most sustainable companies" by the Canadian magazine Corporate Knights<sup>4</sup> where it appears for the 10<sup>th</sup> consecutive year;
- was used as an example by the NGO ShareAction in its 2023 report on green finance for having defined a renewable energy target in the production portfolio of the International Energy Agency (IEA), and an electric vehicle target for its automotive portfolio<sup>5</sup>;
- was recognised for its commitments to fight against deforestation by the NGO Global Canopy, which ranked BNP Paribas at the top of 150 financial institutions in its Forest500 ranking for 2023<sup>6</sup>.

<sup>1</sup> Association française de normalisation (French Standardisation Organisation).

# A CSR STRATEGY IMPLEMENTED BY REINFORCED GOVERNANCE AND STRONG PUBLIC COMMITMENTS

## CSR TAKEN TO THE HIGHEST LEVEL IN THE ORGANISATION

Thanks to the involvement of its 182,656 employees at the end of 2023 (in FTE) and its GTS 2025 strategic plan, for which one of the three pillars (S: Sustainability) is dedicated to incorporating environmental and social issues into all of the Group's activities, CSR continues to be a high priority for BNP Paribas.

### A strategy driven by management bodies

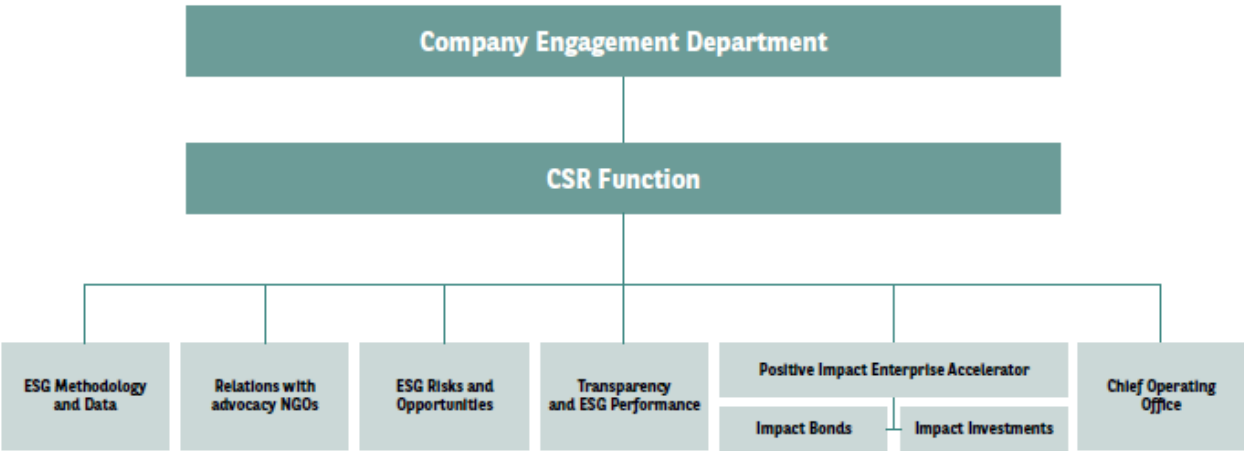

The Board of directors determines BNP Paribas' business orientations and supervises their implementation by the Executive Management, taking the social and environmental challenges of BNP Paribas' activities into consideration. In particular, one of its committees, the Governance, Ethics, Nominations and CSR Committee (CGEN), specifically ensures the Group's contribution to sustainable and responsible economic development, primarily by financing the economy in an ethical manner, by promoting the development and commitment of employees, by protecting the environment and by combating climate change, and through the Group's positive commitment to society. In addition, the Internal Control, Risk and Compliance Committee (CCIRC) examines the main guidelines of the Group's risk policy, including those of a social and environmental nature, based on the ESG risk measurements it receives. As such, the Board is regularly informed of the progress made in the implementation of the Group's CSR strategy. In 2023, it addressed ESG topics on 29 occasions, including the financing of the energy transition and BNP Paribas' net-zero trajectory, as well as the preliminary analyses of the corporate loan portfolio with regard to ESG risk factors.

Since 2021, three high-level sustainable finance committees have been working to strengthen the integration of these issues into the Group's strategy and within each entity:

- the Strategic Committee, under the direction of the Director and Chief Operating Officer, met five times in 2023 and made decisions on the Group's commitments to the alignment of loan portfolios for new sectors, and on updating of the Risk Appetite Statement or information on ESG pillar 3. A number of small, *ad hoc* meetings were also organised to discuss key issues such as NZBA targets and CSRD reporting changes;
- the Infrastructure Committee, under the direction of the Group Chief Operating Officer, met nine times to monitor the deployment of processes and reports related to sustainable finance, such as for example the ESG Assessment, at the methodological, normative and operational levels;
- the Regulatory Committee, chaired by the Group General Counsel and by the director of Corporate Engagement, met three times in 2023 to inform its members about the main regulations. In particular, the concept of sustainable investment was addressed in the context of the SFDR regulation<sup>1</sup> and the French and European legal frameworks on the duty of care (CS3D<sup>2</sup>).

### A strategy supported and rolled out by a cross-functional CSR division

A dedicated department is responsible for managing the Group's CSR commitments, reporting to the Company Engagement Department and represented in the Group Executive Committee. At the Head Office, the CSR Department is structured as follows:

<sup>1</sup> SFDR: Sustainable Finance Disclosure Regulation.

<sup>2</sup> Corporate Sustainability Due Diligence Directive.

The CSR Department is based on a network which operates in the divisions, business lines, retail networks, departments and subsidiaries in order to facilitate the roll-out of the CSR policy across the entire Group. In total, more than 220 employees spend all or a majority of their time on CSR matters.

There are communities of ESG expertise within the Group and its entities to accelerate, streamline and industrialise the consideration of sustainable finance issues in BNP Paribas' activities. For example, the Low-Carbon Transition Group, formed in 2021, is composed of more than 200 fully dedicated bankers (target of 250 in 2025) bringing together several areas of expertise and specialists in the financing of the energy transition, whose mission is to support corporate clients in their decarbonisation. The BNP Paribas Asset Management Sustainability Center brings together 37 ESG specialists.

## BNP PARIBAS' PUBLIC POSITIONS

BNP Paribas' approach to corporate social responsibility (CSR) is framed by the thematic and sector-specific public positions it has adopted. With a presence in 63 countries, the Group acts within numerous working groups and platforms, in compliance with and for the operational implementation of numerous commitments. Thus, for example, BNP Paribas' actions follow the framework of the 10 principles for sustainable business transformation, as defined by the United Nations Global Compact.

### Sustainable finance initiatives

The Group actively participates in designing and implementing long-term social and environmental solutions within the framework of:

- the Principles for Responsible Banking (PRB);
- the Principles for Responsible Investment (PRI), for BNP Paribas Asset Management, BNP Paribas Real Estate Investment Management, BNP Paribas Cardif;
- the Equator Principles.

### Environmental and climate initiatives and commitments

Amongst BNP Paribas' environmental commitments:

- the Net-Zero Banking Alliance, Net-Zero Asset Owner Alliance (BNP Paribas Cardif) and Net-Zero Asset Managers Initiative (BNP Paribas Asset Management);
- the Institutional Investors Group on Climate Change (IIGCC);
- the Roundtable on Sustainable Palm Oil (RSPO);
- the act4nature initiative;
- the Poseidon Principles;
- the Sustainable Markets Initiative (SMI) Financial Services Task Force (FSTF).

**BNP Paribas is also involved in flagship social initiatives, including:**

- the *Collectif des entreprises pour une économie plus inclusive en France* (Business collective for a more inclusive economy in France);
- Business for Inclusive Growth (B4IG).

### Voluntary commitments defined by BNP Paribas

BNP Paribas has been committed for several years to going further in terms of CSR in several major sensitive sectors by setting itself additional obligations, through:

- its financing and investment policies in the following sectors: agriculture, defence, nuclear energy, coal energy, mining, palm oil, paper pulp, oil and gas<sup>1</sup>;
- its positions on ocean protection, the preservation of biodiversity and carbon credits;
- an exclusion list of specific goods and activities that the Group is unwilling to finance, such as tobacco, driftnets for fishing, asbestos fibre production, products containing polychlorinated biphenyls or trade in any species regulated by the CITES convention without the necessary permit<sup>2</sup>;
- monitoring and restriction lists grouping businesses which do not meet the Group's CSR requirements;
- a Declaration on Human Rights;
- an Anti-Corruption Policy;
- a Responsible Business Relations Charter;
- a charter for responsible representation with respect to the public authorities;
- a Responsible Purchasing Charter;
- a Tax Code of conduct.

<sup>1</sup> These policies can be found online: <https://group.bnpparibas/en/our-commitments/transitions/financing-and-investment-policies>.

<sup>2</sup> Convention on International Trade in Endangered Species of Wild Fauna and Flora.

## Think tanks

Several members of BNP Paribas' General Management as well as Group experts play an active role in strategic active marketplace coalitions on CSR topics, for example:

- Laurence Pessez, CSR Director at BNP Paribas Group, sits on the Banking Board of the Principles for Responsible Banking of the UNEP FI (PRB) and is also Vice-President of the European think tank, *Institut du développement durable et des relations internationales* (IDDRI);
- Jane Ambachtsheer, Head of Sustainability at BNP Paribas Asset Management, is a member of the Taskforce on Climate-related Financial Disclosure (TCFD);
- Sébastien Soleille, Head of Energy Transition and Environment, is a member of the Taskforce on Nature-related Financial Disclosures (TNFD).

## FOSTERING DIALOGUE WITH STAKEHOLDERS

Dialogue with stakeholders is at the heart of BNP Paribas' actions to promote social and environmental responsibility. This dialogue has a three-fold objective: anticipating change in our businesses developments and improving our products and services, optimising risk management, and finding innovative solutions which positively impact society.

- Dialogue with the employees or employee representatives is described in the social pillar of this document (see *Strong Focus on Employees* and *High Quality Social Dialogue*, Commitment 5). Employees and external third parties may use the Company's whistleblowing system (see *The whistleblowing system*, Commitment 2).
- Individual and small business clients of all of BNP Paribas' Commercial Banking entities have access to a complaint management system (see *Protecting customer interests*, Commitment 2). Numerous entities provide their clients with the opportunity to use an independent ombudsman.
- In the framework of its asset management activities, BNP Paribas Asset Management engages with companies in which it invests on ESG topics in order to preserve, or even enhance, the medium and long-term value of the investments made on behalf of its clients. BNP Paribas Asset Management supports the ESG commitments of these companies through its voting rights policy (see *Integrating ESG criteria into assets management*, Commitment 3).
- BNP Paribas regularly talks to its main suppliers primarily through business reviews, annual "Partners for Strategic Sourcing" events dedicated to the Group's key suppliers, and satisfaction surveys (SME Pact Barometer). The Group also offers them a redress procedure in case of difficulties (see *Ethics at the heart of supplier relations*, Commitment 2).
- BNP Paribas presents its CSR strategy to investors several times a year and regularly keeps extra-financial analysts informed. The CSR Department talked about ESG topics 96 times with 77 different investors in 2023.
- The Group pursues a policy and a management process for its relations with advocacy NGOs, in order to ensure a constructive dialogue with them. In 2023, BNP Paribas had 183 different exchanges with these NGOs throughout the world.
- With regard to regulatory organisations, governments and parliamentarians, BNP Paribas adopted a "charter for responsible representation with respect to the public authorities" in 2012. This was completed in 2022 with a commitment to ensure that its public commitments relating to the environment and climate change are consistent, in particular its support for the Paris Agreement goals. The Bank is also registered in the digital register of lobbyists managed by the *Haute Autorité pour la transparence de la vie publique* (HATVP, High Authority for Transparency in Public Life), on the EU transparency register and now in Germany on the new *Bundestag Lobbyregister*. It is also registered in the United States with the Senate and the House of Representatives under the Lobbying Disclosure Act. Lastly, the Group follows the principles of the Transparency International France Joint Declaration on Transparency in Lobbying, signed in February 2014, and its revised version of May 2019, which takes into account the provisions of the Sapin 2 law on the representation of interests. The Group's main public positions on banking and financial regulations and its responsible representation practices are also available on the corporate website<sup>1</sup>.
- The stakeholder mapping and BNP Paribas dialogue initiatives with each stakeholder are described in detail in the document "How BNP Paribas listens to and takes into account the expectations of its stakeholders"<sup>2</sup>, available on the corporate website. A materiality matrix presenting the most important issues for the Group's internal and external stakeholders is also available (see *Vigilance plan*, section 7.7).

## CHANGES IN OUR EXTRA-FINANCIAL REPORTING INFORMATION

Section 5.11 *Environmental, social and governance risk* meets the regulatory requirements of Pillar 3 of the European Banking Authority.

In addition, the Green Asset Ratio (GAR) has been published for the first time this year, in section 7.9 *Aligned activities under the meaning of the European taxonomy* of this chapter.

<sup>1</sup> <https://group.bnpparibas/en/key-public-positions-banking-financial-regulation>.

<sup>2</sup> [https://cdn-group.bnpparibas.com/uploads/file/bnp\\_paribas\\_csr\\_dialogue\\_with\\_stakeholders\\_2024.pdf](https://cdn-group.bnpparibas.com/uploads/file/bnp_paribas_csr_dialogue_with_stakeholders_2024.pdf).

## 7.2 Our economic responsibility: financing the economy in an ethical manner

BNP Paribas' primary mission is to meet its clients' needs, in particular by financing in a responsible manner the projects of individual clients and businesses, drivers of economic development and jobs' creation. Given its leading positions in financial services in the 63 countries in which it operates, the Group's financing capacity and the way it conducts its business can have a direct impact on local economies. Thus, aware of its economic responsibility, BNP Paribas acts in coherence with its three commitments:

- **Commitment 1:** Financing and investments with a positive impact;
- **Commitment 2:** Ethics of the highest standard;
- **Commitment 3:** Systematic integration and management of environmental, social and governance risks (ESG).

### COMMITMENT 1: FINANCING AND INVESTMENTS WITH A POSITIVE IMPACT

#### OFFERING A WIDE RANGE OF SUSTAINABLE PRODUCTS

For several years, BNP Paribas has been developing a wide range of sustainable products linked to extra-financial indicators, intended for all its corporate clients, financial institutions and sovereigns such as:

- sustainability-linked loans (SLL), and impact loans for which the interest rate is subsidised according to the achievement of CSR objectives. BNP Paribas was the world's fifth-largest SLL provider in 2023 at USD 16.2 billion<sup>1</sup>;
- sustainability-linked bonds;
- sustainable deposits and cross-currency sustainability linked swaps;
- ISLF+ (inclusive and sustainability-linked financing), sustainable inclusive financing based on the SLL model (see *Continued support for microfinance institutions*, Commitment 7).

The Group also supports its clients with sustainable bond issues, which include social bonds and green bonds, for which BNP Paribas is the world leader for the second year running with USD 25.6 billion in 2023<sup>(1)</sup>. Examples of green bonds are detailed in Commitment 10, *Supporting corporate clients in their energy and ecological transition*.

#### Examples of sustainable transactions in 2023

BNP Paribas Fortis acted as co-sustainability coordinator when negotiating a sustainability-linked loan of EUR 400 million for Renewi, a waste recycling and recovery company. The interest margin on the loan will depend on whether Renewi achieves the objectives it has set itself, namely, to recycle 75% of its waste by 2025 and to reduce its scopes 1 and 2 carbon emissions.

In 2023, the Republic of Slovenia issued its largest sustainable bond in the amount of EUR 1.25 billion. BNP Paribas took on the role of sole structuring advisor and joint lead manager for this transaction. In addition to green projects, funds will be allocated to social projects for access to essential services in education, healthcare and social inclusion.

In 2023, BNP Paribas co-developed the first ISLF+ (inclusive & sustainability-linked financing). They specifically enable microfinance players to receive dedicated technical support and subsidised rates based on the achievement of social, environmental and/or just transition objectives. The first three ISLF+ were signed with some of the Group's long-standing partners: Adie in France, PerMicro in Italy and Banco da Familia in Brazil.

Launched in 2023, BNP Paribas Climate Impact Infrastructure Debt is a fund classified under article 9 of the SFDR which includes an initial investment by BNP Paribas Cardif. It aims to raise between EUR 500 and EUR 750 million from institutional investors. It will support projects working for the energy transition in Europe focused on renewable energy, clean mobility and the circular economy, including new sectors such as batteries, hydrogen and carbon capture.

These operations contribute to the objectives set out in the CSR dashboard as part of the GTS plan (Growth, Technology, Sustainability) 2025 (see 7.1 *Strategy*), and specifically:

- **EUR 150 billion in sustainable loans (EUR 117 billion at the end of 2023);**
- **EUR 200 billion in sustainable bonds (EUR 67 billion at the end of 2023);**
- **EUR 300 billion in assets under management in open-ended funds distributed in Europe, articles 8 and 9 of the SFDR (EUR 254 billion at the end of 2023).**

BNP Paribas Personal Finance is a major player in the financing of individuals in Europe, operating in around 20 countries,

<sup>1</sup> Source: Dealogic.

under several trademarks including Cetelem, Findomestic, AlphaCredit and Cpay and covering nearly 23 million customers. At the end of 2023, sustainable finance (financial inclusion, the energy transition of housing, sustainable mobility and the circular economy) outstandings reached EUR 8.9 billion, *i.e.* 8% of its total outstandings. This includes financing of the energy transition of housing for the amount of EUR 4 billion.

## FINANCING IMPACT ENTREPRENEURSHIP

Thanks to their hybrid business model, impact enterprises aim to generate a strong positive social and/or environmental impact, while seeking economic sustainability. They may be start-ups or SMEs, associations, cooperatives or microfinance institutions (MFIs, see *Continued support for microfinance institutions*, Commitment 7), and work on various themes such as the circular economy, access to healthcare, child protection, professional integration and equal opportunities. Primarily in France, through the "Act For Impact" initiative, the Group supports impact entrepreneurship through bank financing at subsidised rates, impact bonds and capital investments.

### THE GROUP'S COMMITMENT TO SUPPORT ENTREPRENEURSHIP FOR IMPACT AMOUNTS TO EUR 2 BILLION

The Group's support for impact entrepreneurship was stable overall compared to the previous year at an amount of EUR 2 billion, including support for the microfinance sector for EUR 345 million. The number of impact enterprises that have benefited from the Group's support continues to increase, from 3,170 in 2022 to 3,450 in 2023.

### Development of the Impact Bond activity

Impact Bonds are a financing tool based on a unique model of collaboration between the public, private and social and solidarity economy (SSE) sectors. They provide positive solutions for society or the environment that promote innovation in public policies with a limited cost for the State. In 2023, BNP Paribas continued the development and thematic diversification of Impact Bonds as an arranger and investor.

Three years after launching the very first Impact Bonds fund in France and the European Union, BNP Paribas launched a second edition, the BNP Paribas European Impact Bonds Fund 2, managed by BNP Paribas Asset Management. Three strategic investors have already committed to the creation of this fund alongside BNP Paribas: Banque des Territoires of the Caisse des Dépôts Group, the European Investment Fund and BNP Paribas Cardif. With a target size of EUR 70 million, this fund aims to change the scale of the Impact Bonds market in the European Union.

Nine new Impact Bonds were launched in 2023 for a total amount of EUR 28 million, in which the fund invested EUR 13 million. These include the EUR 2.9 million Impact Bond operated by Andes, which aims to combat food waste and food insecurity on a large scale by adding value to food that would otherwise go unsold and helping to diversify and improve the diet of food aid beneficiaries.

Since 2016, BNP Paribas has supported (as arranger or investor, often both) 24 Impact Bonds for a total amount of EUR 82 million, of which 18 are still active.

### Impact investments

This is a medium- or long-term investment strategy with the objective of financing concrete solutions that meet barely or poorly targeted social or environmental needs and generate a positive and quantifiable impact, with a financial return that may be lower than the market rate. This impact investments complies with the following criteria:

- intentionality: the explicit search for a positive social or environmental impact;
- additionality: the investor's commitment and contribution (financial or extra-financial) enable the financed company to maximise its positive impact;

- measurability: the measurement of the impact is based on the implementation of social or environmental objectives, the monitoring of results and a continuous assessment process.

In 2023, the Group continued to deploy its impact investments, via its own budget of EUR 200 million or its funds on behalf of third parties (such as the FCP BNP Paribas Social Business Impact France), by favouring direct equity investments in corporate clients with a strong social and/or environmental impact. 16 new investments (excluding reinvestments) were made for a total of EUR 56 million, including:

- Ecov, a shared mobility operator in areas where public transport is limited or absent, to promote mobility that is accessible to as many people as possible while avoiding CO<sub>2</sub> emissions;
- Urbilog, an iconic player in digital accessibility for people with disabilities (visual, auditory, motor, dys disorders, etc.).

## DESIGNING AND PROMOTING FUNDS WHICH INCLUDE SUSTAINABILITY CRITERIA

As part of the GTS 2025 strategic plan, BNP Paribas Asset Management aims to reach at least 90% of its assets under management in open-ended funds classified in categories 8 or 9 of the SFDR (Sustainable Finance Disclosure Regulation), i.e. EUR 300 billion. At the end of 2023, this proportion of 90% had been reached for assets of EUR 254 billion.

For several years, BNP Paribas Asset Management has broadened its range of investment solutions by focusing on corporate clients making a positive contribution to the transition to a more sustainable economy. Its sustainability-focused product offering is structured around two main ranges covering the main listed and unlisted asset classes. Solutions include:

- **labelled funds:** products that adhere to one or more European sustainability labels such as general labels (SRI in France or Towards Sustainability in Belgium), green label (Greenfin) or solidarity label (Finansol). The labelling processes are certified, which guarantees compliance with their specifications. In 2023, the SRI label was obtained for the ETF BNP Paribas Easy ECPI Circular Economy Leaders fund, and the Towards Sustainability label for BNP Paribas Emerging Climate Solutions and BNP Paribas Global Climate Solutions funds, created in 2022. Also in 2023, as the specifications of the Towards Sustainability and SRI labels have evolved, BNP Paribas Asset Management has acted to implement the new criteria as soon as they come into force (2024), in particular the one on the exclusion of fossil fuels.

In total, BNP Paribas Asset Management's labelled funds represented EUR 139.5 billion at the end of December 2023, i.e. nearly 26% of total assets under management;

- **thematic sustainability solutions:** see *Enabling its clients to transition to a low-carbon economy*, Commitment 10.

## TAILORED ADVICE AND SUPPORT: START-UPS AND INNOVATIVE COMPANIES

BNP Paribas channels all of the Bank's expert knowledge into serving innovative companies through strategic partnerships, raising of funds and adapted financing solutions.

In France, BNP Paribas has for several years developed recognised expertise and a strong commitment to the innovation ecosystem. Under the "We Are Innovation" WAI label, 100 specialised account managers advise innovative companies of all sizes and provide them with financing, equity capitalisation, global fund-raising, IPOs or direct investment solutions through BNP Paribas Développement subsidiary. The vast majority of innovative companies are supported by BNP Paribas teams, i.e. 85% of the companies in the Next40, 78% of companies in the FrenchTech120 and 75% in the FrenchTech 2030.

## COMMITMENT 2: ETHICS OF THE HIGHEST STANDARD

---

The respect of the most rigorous ethical standards is a prerequisite at BNP Paribas. All Group employees are required to strictly respect all laws, rules and regulations in effect in all domains, as well as all professional standards that apply to their activities. In the event of conflict between the laws of a country and BNP Paribas' ethical rules, employees are required to respect local legislation while at the same time looking for ways to apply and respect internal ethical rules.

### ETHICS OF THE HIGHEST STANDARD

#### Code of conduct

The BNP Paribas Code of conduct, published in 2016 and enhanced in 2022, is translated into 20 languages and is published on the Group's website<sup>1</sup>. It covers the following topics:

- customer's interest;
- financial security;
- market integrity;
- conflicts of interests;
- professional ethics;
- respect for colleagues;
- protection of the Group;
- commitment to society;
- the fight against corruption and influence peddling.

A training course on all the topics of the Code of conduct (Conduct Journey) is mandatory for new employees in the Group, and every two years for all employees (see chapter 2 *Internal control*).

#### The whistleblowing system

All employees have the right to signal an alert.

Alert subjects include, but are not limited to:

- acts of corruption, influence peddling or any other infringement pertaining to probity;
- acts of fraud;
- professional behaviour contrary to the provisions on respect for persons;
- breaches of the rules of professional ethics;
- financial security breaches;
- anti-competitive practices;
- breaches of market integrity;
- breaches of the rules for the protection of customer interests;
- unauthorised disclosure of confidential information, theft or leaking of data;
- violations of human rights and fundamental freedoms, personal health and safety or the environment, committed by a Group entity, by a supplier or the subcontractor of a supplier, under a commercial relationship established with the Group or one of its entities;
- violations of the Group's policies regarding suppliers;
- violations of the Group's policies regarding the use of social media.

Deployed in all BNP Paribas entities, the whistleblowing system<sup>2</sup> is based on dedicated channels under the responsibility of "Compliance alert referents" and "Conduct HR referents, Respect for colleagues", who ensure that alerts are processed in compliance with confidentiality rules.

Initially open to the Group's employees, it has now been extended to certain external players and in particular to former Group employees, its suppliers and their subcontractors since December 2022, and can be accessed *via* the Group's website<sup>3</sup>.

The protection of whistleblowers against the risk of retaliation has been strengthened by the French law No.2022-401 of 21 March 2022. Any person that needs to know of an alert during its processing is formally committed to respecting the confidentiality of the information relating to the whistleblowers and any person involved. In addition, the Group guarantees the protection of whistleblowers against the risk of retaliation, and any person considering themselves the victim of retaliation may issue an alert that will be dealt with according to the standards defined by the Human Resources Department. This protection applies regardless of the channel used by the whistleblower.

<sup>1</sup> [https://cdn-group.bnpparibas.com/uploads/file/220204\\_bnpb\\_compliance\\_codeofconduct\\_2022\\_eng.pdf](https://cdn-group.bnpparibas.com/uploads/file/220204_bnpb_compliance_codeofconduct_2022_eng.pdf).

<sup>2</sup> Summary of the system – BNP Paribas' whistleblowing procedure. ([https://cdn-group.bnpparibas.com/uploads/file/summary\\_of\\_bnp\\_paribas\\_wb\\_framework\\_eng\\_june\\_2022.pdf](https://cdn-group.bnpparibas.com/uploads/file/summary_of_bnp_paribas_wb_framework_eng_june_2022.pdf)).

<sup>3</sup> Whistleblowing framework (<https://group.bnpparibas/en/direct-access/whistleblowing>).

The whistleblowing system is presented in the mandatory Code of conduct training course. Executive Management and the Board of directors are regularly informed of its use.

| Alerts                    | 2021 | 2022 | 2023 |
|---------------------------|------|------|------|
| Number of alerts received | 296  | 313  | 333  |

## The fight against corruption, money laundering and the financing of terrorism

In all of its entities, BNP Paribas maintains mechanisms for detecting money laundering and terrorist financing operations, which are based on a set of standards and controls, on employee vigilance, maintained through mandatory training programmes, and on constantly evolving computerised tools. A strengthened system for the prevention and detection of corruption has also been generalised (see section *Compliance activity in 2023*, chapter 2).

## The fight against tax evasion

Compliance with all tax obligations is one of the Group's commitments in terms of economic and civic responsibility. The tax compliance of operations intended to meet its needs or those of its clients is thus a major objective of its governance. To this end, principles and procedures have been defined and are applicable to all operations in which the Group is involved. These items are included in the BNP Paribas Tax Code of conduct<sup>1</sup> the last updated version of which was published in June 2023.

The Group's fiscally responsible behaviour is reflected in the fair contribution it makes to the revenues of the countries or territories in which it operates.

Each year, the Group is fully transparent by publishing a table presenting, country by country, net banking revenue, workforce and income, as well as corporate income tax paid (see section 8.6 *Information on locations and businesses for 2023*).

### The Group's tax principles

The decisions taken by BNP Paribas are guided by the will to meet the needs of the real economy, and not by tax considerations.

The choice of location results from the Group's will to provide its customers with the best possible service. BNP Paribas entities have real economic substance.

In all the jurisdictions in which it operates, the Group undertakes to comply not only with the letter but also with the spirit of the tax laws and fiscal regulations in force. The Group ensures compliance with tax rules pursuant to treaties, laws and regulations, as well as the payment of all corresponding taxes whatsoever.

The transfer pricing policy applicable to intra-group cross-border transactions excludes any search for tax optimisation.

All around the world, BNP Paribas seeks to establish and maintain a cooperative relationship with tax authorities.

The Group takes the greatest care in ensuring the tax compliance of its clients.

BNP Paribas ensures the proper application of all provisions governing withholding taxes as well as the transfer of these funds to the budgets of the countries or territories concerned.

The Group also ensures the quality and completeness of information it transmits automatically, on request, or spontaneously, to public authorities.

## Amount of taxes and levies paid by BNP Paribas

Globally, the amount of taxes and levies owed by BNP Paribas reached EUR 6.8 billion in 2023. In France, the Group paid taxes and levies of EUR 2.1 billion in respect of the same year.

## PROTECTING CLIENT'S INTERESTS

Protecting clients' interests is a major concern for the Group. For this reason, it has chosen to place this issue at the heart of its Code of conduct and has set up a dedicated expert group within Compliance Function.

### A global Group-wide policy

The clients' interest protection policy defines the rules of organisation and conduct that must be applied throughout the relationship with the client and at all stages of the product and service life cycle, in order to ensure that:

- products and services offered to clients meet their needs and situation;
- information provided to clients is clear and honest, and enables them to make informed decisions;
- conflicts of interest are managed in such a way as to favour the interests of the clients and not those of the Group, its employees or its partners;

<sup>1</sup> <https://invest.bnpparibas/en/document/code-of-tax-conduct>

- complaints are handled promptly and rigorously.

The protection of clients' interests is the subject of trainings for the employees concerned, in particular the teams in charge of customer relations and management.

Compliance with the Code of conduct and the clients' interest protection policy is verified by all internal control players: the business lines as the first line of defence, Compliance and General Inspection as the second and third lines respectively.

These rules are translated into concrete practices deployed in all Group business lines and entities, depending on their specific characteristics:

- dialogue with consumer associations and other stakeholders is encouraged to gather their opinions on new ways to improve the protection of clients' interests;
- approval procedures for new products and services include the protection of clients' interests;
- questionnaires to identify needs and the situation of clients are gradually being enriched with environmental, social and governance (ESG) criteria, in order to integrate their preferences in the context of advice and portfolio management;
- compensation of sales teams is structured so as not to encourage operations that would be contrary to clients' interests.

For Commercial & Personal Banking in France (CPBF), for example, the variable compensation system for sales teams is structured around four aspects of its job, illustrating the performance that is expected from the employee: the quality of the customer relationship, commercial development, the management of risks and compliance, as well as management (for the employees concerned). In Belgium, part of the collective variable compensation is linked to the achievement of several objectives, including client satisfaction (NPS – Net Promoter Score).

## Complaints management and mediation

The processing of complaints is a key element of the client interest protection policy, and is subject to specific operational procedures. The complaints statistics are an indicator monitored at Group level.

|  | 2021  | 2022  | 2023 |
|--|-------|-------|------|
| Number of complaints received (in thousands) | 1,161 | 1,150 | 975  |

## BREAKDOWN OF COMPLAINTS (2023)

The nature of the activity is the dominant factor and explains the preponderance of retail activities in these statistics.

- BNP Paribas Personal Finance deploys a system for handling customer complaints in all its entities with a specific governance that brings together all the players concerned in order to implement the necessary corrective actions, and qualitative analyses to identify the causes. Thus, the entire "Termination" process, for example, has been revised from pre-sale to litigation, to better meet customers' expectations.
- At BNP Paribas Cardif in France, complaints analysis is used to prepare a formal document. This is presented to the "Complaints and Customer Voice" committee, which meets at least once a year. It aims to share quantitative and qualitative analyses of complaints and how they have evolved. In addition, an annual document entitled "Claims report", listing the volumes, complaints, causes and action plans by major product range, is distributed annually within the Company.

Many Group entities offer the services of independent mediators who can be used by customers. In France, Italy and Belgium, customers contact the national ombudsman services organised by the relevant regulatory bodies.

- BNP Paribas Personal Finance uses external ombudsmen in most countries. In France, an independent ombudsman studies the requests and provides proposed responses.
- Since 2022, BNP Paribas Cardif in France has strengthened its relationship with the Insurance Ombudsman in order to take into account the mediator's perspective on the cases that customers submit to it. In 2023, the continuous improvement of this system continued by identifying the causes of each complaint in the database.

## Monitoring customer satisfaction to better meet customer needs and interests

Measuring customer satisfaction enables product and service offerings to be adapted to their requests, in order to always best serve their interests by analysing their complaints and areas of dissatisfaction. At CPBF, a centre of expertise called Voices provides continuous improvement to serve both customers and employees. The cross-functional missions of Voices are to promote the methodology of the NPS and NPE (Net Promoter Employee) standards, as well as the methodology for redefining priority pathways. A team of experts listens to and analyses feedback from both customers and employees in order to detect the main causes of dissatisfaction. Another team of experts supports the business lines and redefines pathways as well as defining and deploying continuous improvement loops. In 2023, Voices collected more than 1.2 million customer feedback items (Retail Banking, Private Banking and corporate), and more than 4,000 employee feedback items. 15 priority pathways have also been redefined since 2022, including 8 in 2023, and 14 continuous improvement loops active at the end of 2023.

## The Advocacy programme and the Net Promoter System

At the level of the BNP Paribas Group, monitoring of customer satisfaction is part of the Advocacy programme, rolled out since 2017, in order to listen to the voice of customers and employees throughout the relationship with them and improve their experience. Thus, customer expectations and perceptions are better understood and the Group's decisions are guided at all levels (strategy, offering, distribution, customer experience, etc.).

The programme is adapted to any types of customers, and is rolled out by the "Client & Employee Advocacy" teams through the Net Promoter Score (NPS) methodology, which measures the level of recommendation of BNP Paribas customers and compares it with competitors each year.

The Group's objective is to ensure that these entities improve their rankings year-on-year in comparison with their competitors in the countries in which they are based. The NPS covers all domestic and EM (Europe-Mediterranean) markets within the CPBS division, as well as all the business lines and countries of the IPS division.

In 2023, in the four Domestic Markets (France, Belgium, Italy and Luxembourg), 7 million e-mail surveys were sent to customers to collect their feedback, with a return rate of 8%. In addition, nearly 800,000 feedback items were collected *via* live surveys on digital channels (pop-in, pop-up).

Regarding the Group's market positioning:

- of the Group's 26 banking entities, 65% had an NPS score at or above the average for their market in 2023 (vs 50% in 2018). This year's progress is mainly based on business clients:
  - CPBF consolidated its evident progress with business clients (+39 points since 2018) and more specifically with SME clients (+18 points since 2018) and large companies (+16 points since 2018); TEB (Türk Ekonomi Bankası) is one of the leading banks with business clients; BNL (Banca Nazionale del Lavoro) has become a leader among SMEs and large corporate clients (with respectively +19 points and +34 points since 2018),
  - in Commercial & Personal Banking: Hello bank! returned to its highest level (+15 points since 2017) and TEB retained its third place in Türkiye. In addition, it has become easier to contact an advisor at CPBF (call acceptance rate: +7 points in one year) and at BNP Paribas Fortis (+9 points in one year),
  - in Private Banking: BNP Paribas Fortis Wealth Management is the leader among private banks in Belgium for the fourth consecutive year;
- BNP Paribas Personal Finance has ensured that the Customer voice and service excellence is prioritised in operational excellence and strategy. The CES (Customer Effort Score) is now equal to the NPS (Net Promoter Score) as a key performance indicator to improve the customer journey. A shared reference framework called the Experience System has been set up to help countries define strategic challenges in terms of customer experience. Areas for improvement include better consideration of "relationship" paths, more emotion in interactions or even more efficient digital technology;
- BNP Paribas Cardif has included a customer NPS target in its 2025 strategic plan for all the countries in which it operates. Systematic listening and in-depth analysis of customer needs and expectations are thus deployed at the service of the continuous improvement of insurance solutions and the customer journey. With this in mind, BNP Paribas Cardif in France deployed a Close The Loop system in 2023, which involves making further contact with customers who responded to a satisfaction survey, with their prior agreement, to directly gain a more in-depth understanding of which factors are causes of customer satisfaction and dissatisfaction.

## ETHICS AT THE HEART OF SUPPLIER RELATIONS

In 2023, the Group's purchases amounted to around EUR 10 billion excluding tax in expenditure globally. BNP Paribas strives to develop balanced relationships with its suppliers, a desire reflected in its Sustainable Sourcing Charter<sup>1</sup> which details the commitments applicable to both the Group and its suppliers. In addition, the Group holds the label "*Relations fournisseurs et achats responsables*" (the Responsible Supplier Relations and Procurement label), the first and only label awarded by the French public authorities. It recognises French companies or public entities that have demonstrated sustainable and balanced relationships with their suppliers.

<sup>1</sup> [https://cdn-group.bnpparibas.com/uploads/file/sustainable\\_sourcing\\_charter\\_eng.pdf](https://cdn-group.bnpparibas.com/uploads/file/sustainable_sourcing_charter_eng.pdf).

In addition, the Procurement division abides by strict ethical principles, in order to manage the risks of mutual dependency, adapt its practices to allow small and medium-size suppliers to compete in its call for tenders and implement processes for faster payment of supplier invoices.

The Group offers its suppliers a remedy for any problems. In France, an internal ombudsman, appointed in accordance with the commitments of the BNP Paribas Sustainable Sourcing Charter and independent of the Procurement & Performance (P&P) function, can be contacted by any supplier in the event of a dispute with a view to resolving it (contact details can be found online on BNP Paribas' website). 10 referrals were recorded in 2023.

Finally, in France, under its Diversity & Inclusion policy, the Group undertakes a committed policy to develop its business relations with suppliers working with vulnerable and disabled employees and those isolated from work (STPA)<sup>1</sup> and SIAE<sup>2</sup>. BNP Paribas SA's agreement in France on the employment, professional integration and retention of people with disabilities includes the objective of reaching EUR 2 million in revenue excluding tax by 2025 with the STPA. This agreement was renewed for a period of three years (2023-2025), and approved by the French Ministry of Labour. This commitment to diversity in procurement is gradually being extended to the entire social entrepreneurship sector. The BNP Paribas Group, part of the *Collectif d'Entreprises pour une économie plus inclusive* (Business collective for a more inclusive economy)<sup>3</sup>, aims to increase its inclusive purchases in France by 30% by 2025 (from STPAs and SIAEs), compared to 2022.

## COMMITMENT 3: SYSTEMATIC INTEGRATION AND MANAGEMENT OF ENVIRONMENTAL, SOCIAL AND GOVERNANCE RISKS (ESG)

### A COMPREHENSIVE ESG RISK MANAGEMENT APPROACH

BNP Paribas is continually strengthening its system for managing ESG risks that may affect its business activities. Initially, this system focused on the most sensitive sectors from an ESG point of view, by developing sectoral policies. It is now more comprehensive, covering all sectors of the economy in which the Group has customers and clients, in particular through the development of sectoral ESG Assessment questionnaires.

#### Binding financing and investment policies

As part of the implementation of its strategy to combat climate change and align its activities with an objective to contribute to carbon neutrality by 2050, BNP Paribas has developed ESG policies covering, currently, eight major sectors<sup>4</sup>, both at the level of projects and corporate clients. They also address fundamental issues such as human rights and biodiversity, and apply to all of the Group's activities. Sectoral policies are regularly adapted to better take into account the new challenges of the sectors covered by being more ambitious.

The Group ensures that the companies and projects it finances comply with the criteria set out in its policies throughout the year. Sectoral policies are monitored, in the same way as all Group policies, as part of the three lines of defence structure (see section 2.4 *Internal control*): the implementation and first-level controls are the responsibility of the business lines, the second-level permanent control is the responsibility of the control functions, and the RISK Function in particular (when it comes to credit processes), and periodic control is the responsibility of the Audit Function and the General Inspection, as a third line of defence.

#### Respect of the Equator Principles in project financing

As a signatory to the Equator Principles alongside 135 other financial institutions worldwide, and in its role as a financial service provider and advisor, BNP Paribas works with its clients to identify, assess, and manage the risks and environmental and social impacts linked with major industrial and infrastructure projects. According to these principles, the negative impacts of these projects on communities, ecosystems or the climate must be avoided or minimised, mitigated and/or offset. Projects graded A present significant risks and systematically involve an external review; those graded B present more limited risks; and those graded C present minimal or no risks.

|  | 2021 | 2022 | 2023 |
|--|------|------|------|
| Number of transactions concerned in the year | 17   | 15   | 29   |
| Number of grade A transactions in the year   | 3    | 2    | 6    |
| Number of grade B transactions in the year   | 13   | 11   | 23   |
| Number of grade C transactions in the year   | 1    | 2    | 0    |

<sup>1</sup> Sheltered and adapted work sector.

<sup>2</sup> Integration through economic activity sector.

<sup>3</sup> <https://www.collectif-economie-plus-inclusive.fr>.

<sup>4</sup> <https://group.bnpparibas/en/our-commitments/transitions/financing-and-investment-policies>.

## **An internal ESG performance and risk assessment tool: ESG Assessment**

Gradually developed and then rolled out since 2021, the ESG Assessment has become the preferred tool for monitoring the ESG performance and associated risks of the Group's corporate clients. The ESG Assessment covers the environmental (climate and biodiversity), social (health and safety at work and impact on communities) and governance (business ethics) dimensions through numerous questions divided according to these five themes. It is supplemented by an analysis of controversies affecting clients. The assessment is a systematic ESG analysis that applies as part of the credit process, and is being rolled out in the KYC (Know Your Customer) system. Thus, like other criteria (financial, strategic), ESG criteria are taken into account in the assessment of the counterparty's credit profile. The ESG Assessment, therefore, enables BNP Paribas to deepen and document its ESG knowledge of clients. The ESG Assessment also assesses clients' compliance with the Bank's sectoral policies, as well as the maturity of their ESG strategy and its implementation.

The questionnaires developed in this context are specific to each sector in order to better integrate the challenges and issues specific to related activities. Aware that ESG issues are changing rapidly, the Group plans to adjust these questionnaires, as necessary, taking into account regulatory changes and feedback from clients and relationship managers (RMs), the RISK and CSR teams.

19 sectoral questionnaires (with several sub-sectors) were rolled out in 2023, to assess the maturity of its corporate clients in terms of ESG risks. More than 3,000 analyses of very large and large corporate clients were carried out at the end of 2023, covering almost all of our clients in these segments.

This assessment tool has been adapted for medium-sized corporate customers (companies with revenue in excess of EUR 50 million) and financial institutions, with a target of covering customers in these segments by the end of 2024.

## **IMPLEMENTATION OF FINANCING AND INVESTMENT POLICIES**

### **Restriction of activity lists**

In order to identify the companies presenting the highest environmental and social risks, in addition to financing and investment policies, the Group manages activity restriction lists according to the level of ESG risks observed. At end 2023, these lists included 1,718 companies, including 86 under monitoring and 1,432 under restrictions. Those under monitoring are subject to engagement measures by the Group, in order to monitor that they make lasting changes to their practices and reduce their ESG risks, and that they are aligned with the Group's policies and objectives. The Group prohibits any financing or investment with companies subject to restrictions.

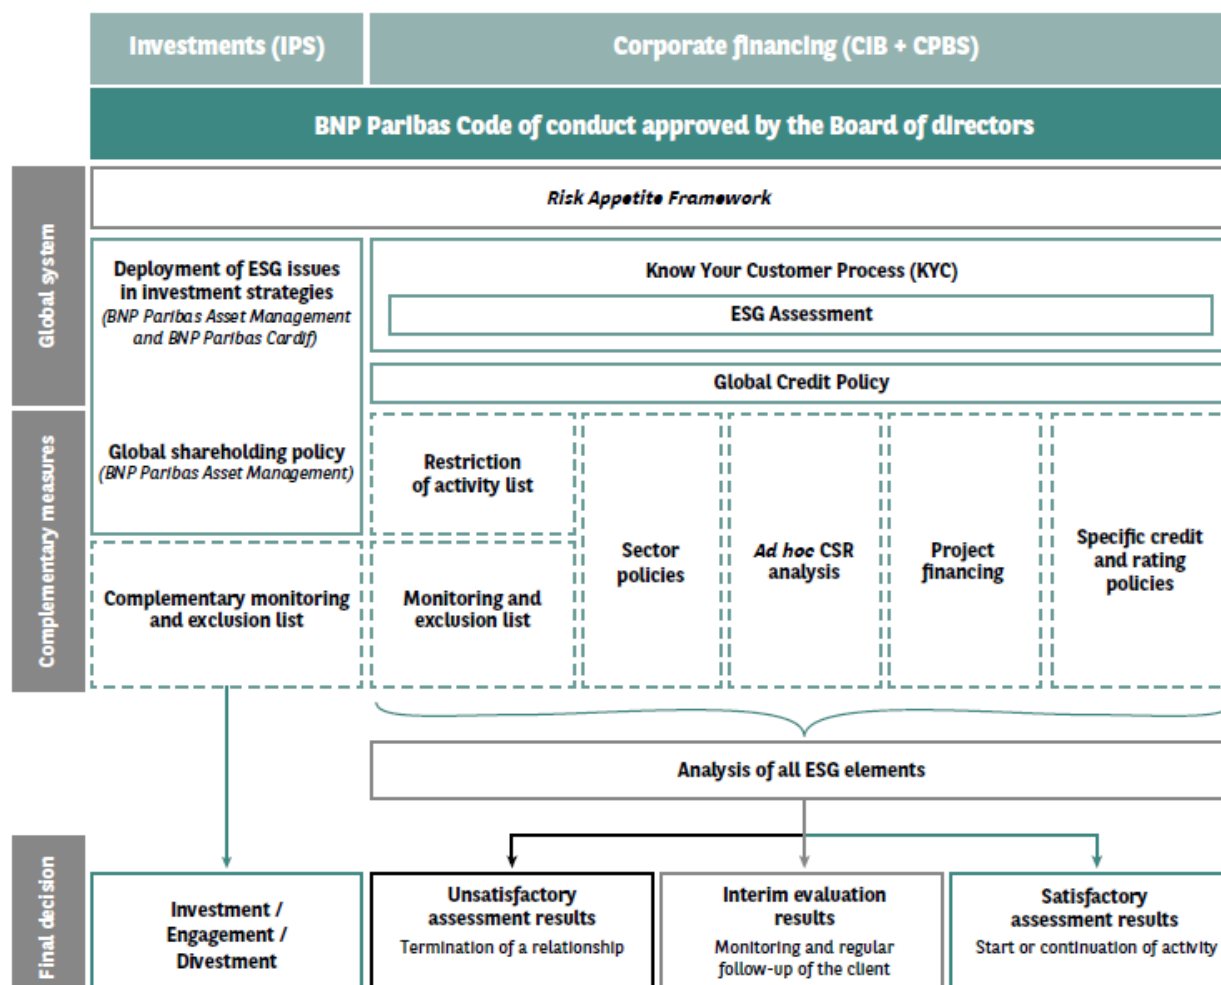

BNP Paribas has also drawn up an exclusion list<sup>1</sup> for certain goods and activities that the Group does not wish to finance, such as tobacco, driftnets, the production of asbestos fibres, products containing PCBs (polychlorinated biphenyls), or trade in any species regulated by the CITES convention.

These lists, implemented at the level of legal entities and groups, are periodically updated using data supplied by clients and external sources, and by analysing the key controversies involving corporate clients accused of serious violations of respect for the environment or human rights. The implementation of clients' exit strategies or amounts invested is regularly monitored internally.

<sup>1</sup> [https://cdn-group.bnpparibas.com/uploads/file/bnpparibas\\_csr\\_exclusion\\_list.pdf](https://cdn-group.bnpparibas.com/uploads/file/bnpparibas_csr_exclusion_list.pdf).

The overall ESG Risk Management system is therefore evolving and can be represented as follows:

The detail of this table appears in the Group Vigilance plan (see 7.7 *Vigilance plan*).

## Quantitative information and vision of the ESG risk portfolio according to European regulations

Information on the portfolios is published in accordance with the rules prescribed by the European Banking Authority (EBA). This information is detailed in section 5.11 *Environmental, social and governance risk* and in section 7.9 *Aligned activities within the meaning of the European taxonomy*.

## OTHER ESG RISK MANAGEMENT TOOLS

### Integration of ESG criteria into supply chain management

The Group expects its suppliers to conduct their activities in compliance with its environmental, social and governance requirements (see *Ethics at the heart of relationship with suppliers*, Commitment 2). Within its scope of operations, the Procurement & Performance (P&P) business line applies ESG criteria at several different levels:

- at the central level, with the inclusion of a central ESG risk mapping relating to the products or services purchased. This mapping helps identify high-risk purchasing categories according to 13 issues related to ethics (corruption, data protection, etc.), environmental (pollution, biodiversity, greenhouse gases, etc.) and social issues (human rights, working conditions, discrimination, etc.);
- through ESG assessments of suppliers, carried out through onboarding processes and in the context of calls for tenders. Internal purchasing standards provide for a minimum 15% weighting of CSR criteria during calls for tenders. In France, this system was enhanced in 2023 by using information from the Ecovadis platform for the ESG assessment of suppliers.

Finally, a significant effort was also devoted to employee training (475 people worldwide trained in CSR criteria, and more than 150 in inclusive purchasing).

In total, at the end of 2023, 5,312 supplier ESG assessments had been carried out, and 1,287 suppliers had signed the Group's Sustainable Sourcing Charter<sup>1</sup>.

## Integrating ESG criteria into asset management

BNP Paribas Asset Management strengthened its commitment to the Paris Agreement by signing the Net Zero Asset Manager (NZAM) initiative<sup>2</sup>. Its net zero roadmap covers investment activities, voting and engagement activities, and operations and is based on 10 commitments including:

- reducing the carbon footprint of its investments;
- aligning investments with the objective of carbon neutrality;
- increasing sector-specific investments in environmental and climate solutions;
- voting in favour of climate action by corporate clients at Annual General Meetings and engaging in dialogue with corporate clients on carbon neutrality;
- reducing the operational carbon footprint.

As part of its membership of the Net Zero Asset Owner Alliance (NZAOA), BNP Paribas Cardif has made commitments that meet the four pillars identified by the alliance<sup>3</sup>:

- measure the alignment of investment portfolios with the Paris Agreement and reduce its carbon footprint;
- set decarbonisation targets for the sectors that emit the most greenhouse gases;
- develop investments related to the climate transition;
- talk to companies and asset managers to encourage them to implement a climate strategy consistent with the Paris Agreement.

BNP Paribas Asset Management and BNP Paribas Cardif implement their ESG strategies, which include, among other things, the application of the Group's sector policies. Thus:

- BNP Paribas Asset Management's Global Sustainability strategy, launched in 2019 and updated at the beginning of 2024<sup>4</sup>, details the way in which ESG issues are deployed in investment strategies. It is based on the exclusion of certain sectors, engagement and dialogue with invested companies (stewardship) as well as responsible business conduct and a long-term perspective;
- in 2023, 95% of BNP Paribas Cardif's general assets in euros in France were subject to an ESG analysis.

In order to promote best ESG practices within the companies in which the asset management company and its clients have invested, BNP Paribas Asset Management systematically exercises its voting rights as a shareholder, voting this year at 1,931 Annual General Meetings. BNP Paribas Asset Management abstained or opposed about 36% of these resolutions (33% in 2022). It supported 88% of shareholder proposals on climate change and 96% of shareholder proposals on social issues. In 2023, BNP Paribas Asset Management objected to 1,521 resolutions proposed by 271 companies due to environmental or biodiversity-related considerations. Finally, BNP Paribas Asset Management ranked second in Point of No Returns 2023<sup>5</sup> ShareAction on the responsible investment practices of the 77 largest asset managers in the world.

BNP Paribas Asset Management and BNP Paribas Cardif use collaborative dialogue (working groups or coalitions whose members cooperate to act jointly with companies) to encourage improvements in practices. For example, these two entities are members of the Climate Action 100+ Initiative<sup>6</sup> and, as such, regularly engage in dialogue with companies ranked among the world's top greenhouse gas emitters to improve their climate change governance and strategy. BNP Paribas Asset Management is also a founding member of Nature Action 100<sup>7</sup>.

## Operational control plan

In order to verify the strict application of ESG risk management tools, BNP Paribas has rolled out a CSR operational control plan which establishes a continuous improvement process. This control plan, linked to the application of sectoral policies, exclusion and monitoring lists, and questionnaires on the duty of care, is applied to the business lines and functions (see *Our systems' controls* in section 7.7 *Vigilance plan*).

<sup>1</sup> Number of suppliers in the portfolio that have signed the BNP Paribas Sustainable Sourcing Charter. New indicator defined in 2023.

It is based on the number of suppliers in the priority monitoring quadrant of the supplier portfolio, i.e. the sensitive suppliers list that had signed up to the BNP Paribas Sustainable Sourcing Charter at the end of 2023.

This list is composed of "Active suppliers with a level of risk that could have a negative impact on BNP Paribas in the following categories":

- suppliers of sensitive outsourcing services;
- sensitive external suppliers;
- high-risk suppliers from a Compliance perspective;
- sensitive suppliers identified for onboarding;
- suppliers for whom a risk triggering event occurs during the contract life cycle.

## ALIGNMENT OF THE LOAN PORTFOLIO WITH THE OBJECTIVE OF A NET ZERO WORLD BY 2025

### A strong acceleration in the switch to low-carbon energy sources

In 2020, BNP Paribas announced its total exit from the thermal coal value chain by 2030 in the European Union and OECD (Organisation for Economic Cooperation and Development) countries, and by 2040 in the rest of the world. In 2023, aware of the impact of metallurgical coal on CO<sub>2</sub> emissions, the Group amended its mining policy to exclude any project financing related to its extraction.

In addition, BNP Paribas decided to massively reduce its financing to the oil and gas sector. For several years now, it no longer finances projects related to unconventional oil and gas, and oil and gas activities located in areas that are particularly sensitive in terms of biodiversity (the Arctic and the Amazon). In addition, **BNP Paribas no longer grants financing for the development of new oil or gas projects, regardless of the financing terms**, and terminates, on a scheduled basis, the financing granted to independent oil companies intended to support oil production (loans granted to companies or financing of reserve based lending), thus drastically reducing its exposure to fossil fuels.

**In 2028, at least 80% of BNP Paribas' credit exposure to energy production will be focused on low-carbon energies, and at least 90% in 2030.** At the end of September 2023, credit exposure to low-carbon energy represented EUR 32 billion, *i.e.* 65% of financing for energy production.

### Partnerships and loan portfolio measurement and alignment methodologies

BNP Paribas has committed to aligning its activities with the objectives of the Paris Agreement, then financing a carbon neutral world by 2050. In this context, the Group has joined various initiatives and coalitions, including the Net Zero Banking Alliance (NZBA), through which the Group has committed to applying its alignment strategy to the sectors that emit the most greenhouse gases.

In 2023, BNP Paribas published its Climate report<sup>1</sup> in which the stages of the loan portfolio alignment are presented in detail. In particular, this report explains what data is used, details of the calculation methodologies, including the calculation of the alignment trajectory and the strategy implemented by the Group, and specifies the methods for managing the portfolio. It also covers an update of the three sectors published in 2022 in the report Climate Analytics and Alignment<sup>2</sup> (power generation, oil and gas, and automotive) as well as three new sectors: steel, aluminium and cement.

Given the relative weight of each sector in the Group's credit exposure, on average the results at the end of 2023 are in line with BNP Paribas' ambition to finance a carbon neutral economy by 2050.

### Power generation: a loan portfolio aligned with the netzero 2050 objectives

The electricity mix is representative of the Group's client base as 99% of credit exposures to electricity producer clients are taken into account in this calculation. It shows a less carbon-intensive loan portfolio, that is more oriented towards renewable energies both in 2023 and by 2025 when compared to the IEA's Net Zero 2050 scenario.

### ELECTRICITY MIX CALCULATED BY CAPACITY

|                     | 2020 | 2021 | 2022 | 2023 | 2025 Objectives |
|---------------------|------|------|------|------|-----------------|
| Share of renewables | 57%  | 62%  | 60%  | 65%  | > 66%           |
| Share of coal       | 10%  | 8%   | 7%   | 5%   | < 5%            |

At 31 December 2023, low-carbon capacities (*i.e.* renewable and nuclear) increased compared to 2022 (from 69% to 74%), while coal and oil capacities were collectively down by three points (10% to 7%). This reduction is notably linked to the implementation of the Group's commitment to fully exit the coal value chain by 2030 for Europe and the OECD countries and 2040 for the rest of the world, and to our clients' investments in renewable capacity.

## BNP PARIBAS' ELECTRICITY MIX BY CAPACITY COMPARED TO GLOBAL ELECTRICITY MIX

\* Published in the IEA World Energy Outlook (WEO) 2023.

At 31 December 2023, the emission intensity of electricity portfolio amounted to 148 gCO<sub>2</sub>/kWh compared to 179 gCO<sub>2</sub>/kWh at 31 December 2022. This reduction is due to a decrease in the share of coal and oil in the electricity mix of our clients (these two energy sources being the highest CO<sub>2</sub> emitters), the growth in the financing of renewable projects and the updating of client data. The CO<sub>2</sub> intensity of the portfolio at 31 December 2023 and projected in 2025 is significantly lower than the global average and the IEA's Net Zero 2050 scenario by 2025.

### PORTFOLIO EMISSIONS INTENSITY FOR ELECTRICITY PRODUCTION

| Emission intensity in gCO <sub>2</sub> / kWh        | 2020 | 2021 | 2022 | 2023 | 2025  |
|---|------|------|------|------|-------|
| BNP Paribas   | 208  | 182  | 179  | 148  | ≤ 146 |
| Global Average and Net Zero IEA projection for 2025 | 518  | 512  | 507  | 471  | 397   |

### The fossil fuel extraction sector

At 31 December 2023, BNP Paribas has significantly exceeded its initial 2025 targets (compared to the end of 2020) for reducing its credit exposure to oil and gas exploration and production activities.

### CREDIT EXPOSURE TO OIL AND GAS EXPLORATION-PRODUCTION

|   | At<br>31 December<br>2022 | At<br>31 December<br>2023 | At<br>31 December<br>2025 |
|---|---------------------------|---------------------------|---------------------------|
| Credit exposure, oil exploration and production         | -15%                      | -43%                      | Target of -25%            |
| Credit exposure, oil and gas exploration and production | -12%                      | -37%                      | Target of -12%            |

These objectives were strengthened in January 2023 to aim for an 80% reduction in financing for oil exploration-production by the end of 2030 (compared to 30 September 2022) and a 30% reduction in gas exploration-production over the same period.

The Group is on track to reach them with a total 37% drop in oil and gas credit exposure between 30 September 2022 and 31 December 2023.

## CREDIT EXPOSURE TO OIL AND GAS EXPLORATION-PRODUCTION

| <i>In billions of euros</i>                     | At<br>30 September<br>2022 | At<br>31 December<br>2022 | At<br>30 September<br>2023 | At<br>31 December<br>2023 | Change |
|---|----------------------------|---------------------------|----------------------------|---------------------------|--------|
| Credit exposure, oil exploration and production | 5.0                        | 4.4                       | 3.6                        | 3                         | -40%   |
| Credit exposure, gas exploration and production | 5.3                        | 4.6                       | 4.3                        | 3.5                       | -34%   |

The carbon intensity of the oil and gas portfolio, calculated by combining exploration-production, refining and final use, was 67 gCO<sub>2</sub>eq/MJ at the end of December 2023, a very slight improvement year-on-year (-0.4 gCO<sub>2</sub>eq/MJ).

## LOAN PORTFOLIO EMISSIONS INTENSITY FOR OIL AND GAS

|   | 2020 | 2022 | 2023 | 2025<br>Objectives |
|---|------|------|------|--------------------|
| Emissions intensity in gCO <sub>2</sub> eq/MJ | 68   | 67   | 67   | ≤ 61               |

More broadly, the transition to a low-carbon economy also relies on the development of low-carbon energy financing (see the box at the beginning of this section).

### The automotive sector

Since 2022, BNP Paribas has calculated each year the share of electrified vehicles<sup>1</sup> for its portfolio and the emission intensity measured in grams of CO<sub>2</sub> per kilometre in WLTP standard<sup>2</sup>, focusing on “tank-to-wheel” emissions. Financing related to this activity includes all financing dedicated to automotive manufacturers and their financing captives, for light vehicles only.

## LOAN PORTFOLIO EMISSIONS INTENSITY FOR AUTOMOTIVE

|  | 2020 | 2021 | 2022 | 2023 | 2025<br>Objectives |
|--|------|------|------|------|--------------------|
| Share of electrified vehicles                      | 4%   | 7%   | 14%  | 15%  | ≥ 25%              |
| Emissions intensity in gCO <sub>2</sub> /km (WLTP) | 183  | 176  | 167  | 151  | ≤ 137              |

The share of electric vehicles continues to grow, albeit at a slower pace due to slower growth in demand, while emissions intensity is decreasing thanks to the combined effect of the increase in the rate of electric vehicles and the reduction in average emissions from internal combustion engine cars.

### The steel sector

Since 2023, BNP Paribas has calculated the intensity of its clients' emissions in the (crude) steel sector annually for its loan portfolio, measured in tonnes of CO<sub>2</sub> per tonne of primary crude steel (made from iron ore) and secondary crude steel (made from recycled steel). The measure includes direct emissions (scope 1), energy purchases (scope 2) and purchases of partially processed raw materials (partial scope 3) for non-fully-integrated players. The preparation of commodities and the manufacture of cast iron and steel are also taken into account in the value chain. Upstream activities (iron extraction) and downstream activities (finishing, for example) are excluded.

## PORTFOLIO EMISSIONS INTENSITY FOR STEEL

|  | 2022 | 2023 | 2030 |
|--|------|------|------|
|--|------|------|------|

<sup>1</sup> Electrified vehicles: plug-in hybrid vehicles, battery electric vehicles, vehicles equipped with fuel cells.

<sup>2</sup> WLTP: Worldwide Harmonized Light Vehicle Test Procedures defined by the United Nations Economic Commission for Europe.

## Objectives

|   |     |     |       |
|---|-----|-----|-------|
| Emissions intensity in tonnes of CO <sub>2</sub> per tonne of steel | 1.6 | 1.5 | ≤ 1.2 |
|---|-----|-----|-------|

The results at the end of 2023 show that the BNP Paribas portfolio is in line with the target set, and the IEA's NZE 2050 scenario of 1.2 tCO<sub>2</sub>/tonne of steel by 2030.

### The aluminium sector

Since 2023, BNP Paribas has been calculating its clients' emission intensity in the aluminium sector annually, measured in tonnes of CO<sub>2</sub> equivalent per tonne of primary aluminium (made from bauxite). The measurement includes direct emissions (Scope 1) and emissions from purchased (Scope 2) for the manufacture of aluminium (electrolysis). Upstream activities (bauxite extraction), alumina manufacturing and downstream activities (e.g. extrusion) are excluded.

### LOAN PORTFOLIO EMISSIONS INTENSITY FOR ALUMINIUM

|  | 2022 | 2023 | 2030 Objectives |
|--|------|------|-----------------|
| Emissions intensity in tonnes of CO <sub>2</sub> eq per tonne of aluminium | 6.2  | 5.8  | ≤ 5.6           |

The results at the end of 2023 show that the BNP Paribas portfolio is in line with the defined objective and displays an intensity significantly lower than the 1.5°C 2050 scenario of the IAI<sup>1</sup> based on the IEA NZE 2050 scenario, with 8.9 tCO<sub>2</sub>eq/tonne of aluminium in 2030.

### The cement sector

Since 2023, BNP Paribas has been calculating its loan portfolio emissions intensity for its clients in the cement sector annually, measured in tonnes of CO<sub>2</sub> per tonne of cementitious product. The measurement includes gross direct emissions (scope 1) and purchased energy emissions (Scope 2). The gross direct emissions include emissions of alternative fuels and exclude those related to biomass. The segment of the value chain under consideration is cement production. Upstream activities (extraction of raw materials) and downstream activities (e.g. concrete production) are excluded. Based on latest available client data, the portfolio's emission intensity at the end of 2022 was 0.64 tCO<sub>2</sub>/tonne of cementitious product, in line with the defined target. The data are available later than for the other sectors because they are taken from client's annual reports.

### LOAN PORTFOLIO EMISSIONS INTENSITY FOR CEMENT

|  | 2021 | 2022 | 2030 Objectives |
|--|------|------|-----------------|
| Emissions intensity in tonnes of CO <sub>2</sub> per tonne of cementitious product | 0.67 | 0.64 | ≤ 0.51          |

### Maritime transport

BNP Paribas has measured the carbon intensity of its portfolio in the field of maritime transport for the fourth year running, according to the Poseidon Principles<sup>2</sup>. The new strategy of the International Maritime Organization (IMO) announced in July 2023 provides for "minimum" objectives as well as more ambitious or "striving" objectives, thus implying two possible trajectories. At 31 December 2022, the alignment score for the maritime transport loan portfolio was:

- 3.6% above the alignment score according to the initial trajectory (before revision in 2023);
- 27.2% above the IMO Minimum Trajectory;
- 32% above the IMO Striving Trajectory.

<sup>1</sup> IAI: International Aluminium Institute.

## 7.3 Our social responsibility: supporting our employees by offering them an environment and pathways adapted to their expectations

As part of the *Growth, Technology, Sustainability 2025* (GTS) strategic plan presented by the Group in February 2022, which places people at the heart of its priorities, in 2023 Human Resources continued to implement the ambitions of the *People Strategy* within the Group's business lines and functions, around three pillars: **Ethics and Inclusion, Employee Experience, and Human Capital**.

Faced with the current major societal, environmental and technological challenges, BNP Paribas has a greater responsibility than ever to support its clients in their transitions towards solutions that are both sustainable and practical. Meeting these challenges requires the commitment of all employees in all of the Group's business lines and functions.

To this end, the Human Resources function plays a key role in rolling out people-focused ambitions.

The Group Human Resources Director leads the Company's social responsibility towards its employees, in particular in terms of:

- working conditions (health and safety at work, organisation of work, social dialogue and collective agreements, freedom of association, social protection and work-life balance);
- fair treatment and opportunity for all (equal treatment, fair and equitable compensation, diversity and inclusion, training and skills development, anti-harassment and discrimination);
- respect for labour rights.

She is a member of the Group Executive Committee. She reports regularly on the *People Strategy* and its implementation to the Governance, Ethics, Nominations and CSR Committee (CGEN) and the Board of directors. She also sits on the Board of directors' Remuneration Committee.

With more than 4,000 employees worldwide, the Human Resources function uses its structure and governance (including the bimonthly Executive Committee meeting with the Group managers of the function and the HR managers of the main business lines and territories) to disseminate and deploy its *People Strategy*, while listening to employees and partnering with the business lines in order to ensure that their own strategy is implemented. The *People Strategy* continues to be deployed in line with the objectives set for 2025.

In 2023, against a complex economic and geopolitical backdrop, the Group continued its actions to:

- protect its employees by providing assistance wherever they may need it (Ukraine, Türkiye, Morocco, Middle East), and by deploying its prevention, health and well-being at work offer throughout the world through the *We Care* programme;
- widely promote its diversity and inclusion policy in all its areas, particularly during its *Inclusion Days*, which provided an opportunity to raise employee awareness on equal opportunities, prejudice, disability and financial inclusion, and measure employees' perception of these issues as part of the general *Conduct & Inclusion* survey re-run in 2023;
- reach the ambitious target in terms of gender equality of 37% women in senior management<sup>1</sup> in 2023;
- develop the skills of its employees, particularly in IT, Data, Digital, and Sustainable Finance jobs, while offering them career development opportunities within the Group notably during the *Career Days*.

This enabled the Group to be recognised as Top Employer Europe in 2023 for the tenth year running. In addition, employees themselves helped to promote the Group as an employer during the #UnexpectedJobs campaign. BNP Paribas continues to rank first in the banking and insurance sector in France, according to the 2023 Ranking of preferred companies for students and young graduates produced by Epoka/Harris Interactive.

BNP Paribas' actions in terms of social responsibility are also recognised by extra-financial rating agencies (see chapter 7.1 *Strategy*).

Finally, since 2022, BNP Paribas renewed its "Diversity" and "Professional equality" labels brought together under an "Alliance" label awarded in France by Afnor (*Association Française de Normalisation* – French standardisation organisation). The Group is the first and only bank in France to have obtained this double label for the past four years, demonstrating its long-term commitment to gender equality and the fight against discrimination.

<sup>1</sup> The Group's Senior Management Position (SMP) population is composed of employees holding approximately 3,000 positions considered to have the most significant impact from a strategic, commercial, functional and expertise point of view.

## OUR EMPLOYEES AROUND THE WORLD

### CHANGES IN GROUP WORKFORCE

|  | Men <sup>(1)</sup> | Women <sup>(1)</sup> | Total<br>2022  | Men <sup>(1)</sup> | Women <sup>(1)</sup> | Total<br>2023  | Change<br>2023/2022 |

(1) This breakdown takes into account employees whose gender has been completed in the HR tools.

(2) Permanent-term contract.

(3) Fixed-term contract.

(4) Full-time equivalent workforce of entities for which the Group holds an HR management mandate: workforce pro-rated to their contractual working time, with all figures rounded to the nearest whole number.

(5) Full-time equivalent workforce of fully consolidated entities (see chapter 8 Income statement items and workforce by country).

At the end of 2023, the Group was established in 63<sup>1</sup> countries (65 countries in 2022). The 5.4% decrease in workforce (in FTE) compared to 2022 is mainly due to the sales of Bank of the West in the United States, the BNP Paribas Personal Finance business line in Bulgaria and the Europe-Mediterranean entities in Ivory Coast and Senegal. The workforce remains stable on a like-for-like basis (-0.1% compared to 2022).

### WORKFORCE IN FTE BY GEOGRAPHICAL AREA AND GENDER AT 31/12/2023

<sup>1</sup> The Group left Senegal and Ivory Coast.

(1) This breakdown takes into account employees whose gender has been completed in the HR tools.

## WORKFORCE IN FTE BY BUSINESS LINE AT 31/12/2023

(1) CPBS: Commercial, Personal Banking & Services.

(2) IPS: Investment & Protection Services.

## WORKFORCE (PHYSICAL HEADCOUNTS) BY AGE, GENDER AND GEOGRAPHICAL AREA AT 31/12/2023

This breakdown takes into account 98% of the Group workforce (permanent + fixed-term contracts) whose age and gender are completed in the HR tools and which is composed of a total of 186,162 employees in physical headcounts.

In 2023, the overall average age is 41.8 years (41.7 in 2022): 42 years for men and 41.7 years for women. In 2023, the average seniority in the Group is 12.1 years (11.7 in 2022): 11.4 years for men and 12.6 years for women.

## PART-TIME WORKFORCE (PHYSICAL HEADCOUNTS) BY GENDER

|                                    | Men <sup>(1)</sup> | Women <sup>(1)</sup> | Total 2022 | Men <sup>(1)</sup> | Women <sup>(1)</sup> | Total 2023 |
|------------------------------------|--------------------|----------------------|------------|--------------------|----------------------|------------|
| Number of part-time employees      | 1,950              | 13,017               | 14,970     | 1,748              | 11,366               | 13,114     |
| Of which part-time at 80% or more  | 1,222              | 8,803                | 10,026     | 1,194              | 7,892                | 9,086      |
| % by gender of part-time employees | 13%                | 87%                  |            | 13%                | 87%                  |            |

(1) Physical workforce taking into account 98% of the Group's workforce, for which the gender and part-time status have been completed in the HR tools.

In 2023, 13,114 employees worked part-time, representing 7% of the Group's workforce (8% in 2022). 69% of them work part-time at 80% or more (67% in 2022). Globally, 2% of men and 12% of women work part-time.

## Changes in workforce

### RECRUITMENTS (PERMANENT CONTRACTS) BY GENDER AND GEOGRAPHICAL AREA

|                                     | Men <sup>(1)</sup> | Women <sup>(1)</sup> | Total 2022    | Men <sup>(1)</sup> | Women <sup>(1)</sup> | Total 2023                  |

| Domestic markets (excluding France) | 1,193              | 872                  | 2,065         | 928                | 765                  | 1,693                       |
| Europe (excluding domestic markets) | 4,942              | 5,280                | 10,223        | 4,000              | 4,697                | 8,698                       |
| Rest of the world                   | 6,169              | 4,969                | 11,256        | 3,600              | 2,727                | 6,327                       |
| <b>TOTAL</b>                        | <b>15,028</b>      | <b>13,745</b>        | <b>28,892</b> | <b>10,724</b>      | <b>10,119</b>        | <b>20,844<sup>(2)</sup></b> |

(1) This breakdown (in physical headcounts) takes into account employees whose gender has been completed in the HR tools.

(2) Recruitments (permanent contracts) in FTE: 20,774.

In 2023, the Group recruited 20,844 employees on permanent contracts worldwide (-27.9% compared to 2022, stable compared to 2021), including 4,126 in France. With 70% of the hires in Europe (61% in 2022), BNP Paribas reaffirms its status as a leading European bank. For the sixth year running, France is the leading recruiting country with 19.8% of the total, followed by India (15.7%), Portugal (9.1%), Türkiye (8.7%) and United Kingdom (5.3%).

### DEPARTURES (PERMANENT CONTRACTS) BY GENDER AND REASON

|  | Men <sup>(1)</sup> | Women <sup>(1)</sup> | Total 2022    | Men <sup>(1)</sup> | Women <sup>(1)</sup> | Total 2023                  |
|--|--------------------|----------------------|---------------|--------------------|----------------------|-----------------------------|

| Resignation                                      | 8,741              | 7,797                | 16,549        | 5,588              | 5,093                | 10,681                      |
| Dismissals                                       | 773                | 791                  | 1,564         | 715                | 627                  | 1,342                       |
| Mutually agreed departures                       | 651                | 1,083                | 1,734         | 500                | 821                  | 1,321                       |
| Assisted departure plans                         | 314                | 433                  | 747           | 265                | 265                  | 530                         |
| Other ends of permanent contracts <sup>(2)</sup> | 1,592              | 1,433                | 3,028         | 1,728              | 1,633                | 3,402                       |
| <b>TOTAL</b>                                     | <b>12,973</b>      | <b>12,480</b>        | <b>25,467</b> | <b>9,910</b>       | <b>9,621</b>         | <b>19,572<sup>(3)</sup></b> |

(1) This breakdown (in physical headcounts) takes into account employees whose gender has been completed in the HR tools.

(2) Of which end of trial period, death, unspecified.

(3) Departures from permanent contracts in FTE: 19,291.

The fall in departures in 2023 (-23%) is mainly due to a general decrease in resignations, particularly in India, slightly offset by an increase in retirement mainly in Türkiye due to a change in local legislation. Of the 19,572 departures in 2023, more than 5,600 were in the domestic markets (6,700 in 2022), including more than 3,800 in France (nearly 4,500 in 2022), more than 8,300 in the rest of Europe (9,000 in 2022) and more than 5,600 in the rest of the world (nearly 9,700 in 2022).

## DEPARTURE RATE BY GENDER

|   | Men          | Women        | Total 2022   | Men          | Women        | Total 2023   |
|---|--------------|--------------|--------------|--------------|--------------|--------------|
| <b>Departure rate (physical headcounts)<sup>(1)</sup></b> | <b>13.7%</b> | <b>12.1%</b> | <b>12.9%</b> | <b>11.1%</b> | <b>10.3%</b> | <b>10.7%</b> |
| <b>Departure rate (FTE)</b>                               | <b>13.7%</b> | <b>12.3%</b> | <b>13.0%</b> | <b>11.1%</b> | <b>10.4%</b> | <b>10.8%</b> |
| <b>Voluntary departure rate (FTE)<sup>(2)</sup></b>       | <b>9.8%</b>  | <b>8.6%</b>  | <b>9.2%</b>  | <b>6.8%</b>  | <b>6.4%</b>  | <b>6.6%</b>  |
| France  | 5.1%         | 4.0%         | 4.5%         | 3.7%         | 2.6%         | 3.1%         |
| Domestic markets (excluding France)                       | 4.3%         | 3.6%         | 3.9%         | 4.1%         | 2.9%         | 3.5%         |
| Europe (excluding domestic markets)                       | 10.9%        | 12.1%        | 11.5%        | 8.1%         | 10.0%        | 9.1%         |
| Rest of the world   | 18.8%        | 16.3%        | 17.7%        | 11.2%        | 10.9%        | 11.1%        |

(1) Departure rate, based on permanent contracts: (Number of departures in year N)/(Average number of employees in year N).

(2) Voluntary departure rate, based on permanent contracts: (Number of resignations in year N + Number of mutually agreed departures in year N)/(Average number of employees in year N).

The fall in the departure rate, calculated on a like-for-like basis, is mainly due to the decrease in voluntary departures, particularly in India.

## INTERNAL MOBILITIES BY GENDER AND GEOGRAPHICAL AREA<sup>1</sup>

|                                     | Men <sup>(2)</sup> | Women <sup>(2)</sup> | Total 2022    | Men <sup>(2)</sup> | Women <sup>(2)</sup> | Total 2023    |

| Domestic markets (excluding France) | 2,207              | 2,217                | 4,424         | 2,738              | 2,417                | 5,155         |
| Europe (excluding domestic markets) | 2,778              | 3,135                | 5,913         | 2,627              | 2,902                | 5,529         |
| Rest of the world                   | 2,232              | 1,890                | 4,122         | 1,860              | 1,423                | 3,283         |
| <b>TOTAL</b>                        | <b>11,492</b>      | <b>13,419</b>        | <b>24,911</b> | <b>10,763</b>      | <b>11,478</b>        | <b>22,241</b> |

(1) Changes in the assignment and/or standard position of employees on permanent contracts. Changes related to reorganisations are not considered as mobilities.

(2) This breakdown (in physical headcounts) takes into account employees whose gender has been completed in the HR tools.

## Absenteeism

The Group's absenteeism rate<sup>(1)</sup> is calculated for 61 countries<sup>2</sup> and includes illness, work-related accidents and occupational illness, excluding commuting accidents and other authorised absences.

|                                     | 2022             |  | 2023             |  |
|-------------------------------------|------------------|--|------------------|--|
|                                     | Absenteeism rate | Maternity, Paternity, Adoption, Parental leave | Absenteeism rate | Maternity, Paternity, Adoption, Parental leave |
| France                              | 5.0%             | 1.9%   | 4.6%             | 1.6%   |
| Domestic markets (excluding France) | 5.5%             | 1.3%   | 4.9%             | 1.3%   |
| Europe (excluding domestic markets) | 2.7%             | 3.8%   | 2.6%             | 3.2%   |

<sup>1</sup> The absenteeism rate is based on the number of days of absence (paid and unpaid) calculated according to the local method used by each entity. The days of absence, all reported on a number of calendar days, are consolidated on a Group common basis, and the calculated rate depends on the average number of employees (paid and unpaid).

<sup>2</sup> The Group HR teams manage a social reporting process with entities in 61 countries (the "Social Reporting Entities") to collect data not available in the information systems, representing 93% of the workforce in FTE managed at 31/12/2023, hereinafter referred to as the "Social Reporting Workforce".

|                   |                           |             |                           |             |
|-------------------|---------------------------|-------------|---------------------------|-------------|
| Rest of the world | 1.4%                      | 1.2%        | 1.1%                      | 1.3%        |
| <b>TOTAL</b>      | <b>3.6%<sup>(1)</sup></b> | <b>2.2%</b> | <b>3.4%<sup>(1)</sup></b> | <b>2.0%</b> |

(1) 99% of the absenteeism rate is related to illness in 2022 and 2023.

## Work-related accidents

|                                     | 2022           |            |                            | 2023           |            |                            |
|-------------------------------------|----------------|------------|----------------------------|----------------|------------|----------------------------|
|                                     | Work - related | Commuting  | Total                      | Work - related | Commuting  | Total                      |
| France                              | 251            | 333        | 584                        | 266            | 311        | 577                        |
| Domestic markets (excluding France) | 150            | 175        | 325                        | 70             | 198        | 268                        |
| Europe (excluding domestic markets) | 112            | 102        | 214                        | 158            | 134        | 292                        |
| Rest of the world                   | 85             | 56         | 141                        | 70             | 63         | 133                        |
| <b>TOTAL</b>                        | <b>598</b>     | <b>666</b> | <b>1,264<sup>(1)</sup></b> | <b>564</b>     | <b>706</b> | <b>1,270<sup>(1)</sup></b> |

(1) Including one fatal accident in 2022 and three fatal accidents in 2023.

The frequency rate<sup>1</sup> for work-related accidents amounts to 1.07 and increases to 2.41 if commuting accidents are added (2.3 in 2022). The severity rate<sup>2</sup> is 0.05 excluding commuting accidents, and 0.09 if days lost due to commuting accidents are added (0.08 in 2022).

## COMMITMENT 4: PROMOTION OF DIVERSITY, EQUALITY AND INCLUSION

Commitment 4 is at the heart of the “Ethics and Inclusion” pillar of the *People Strategy*, the purpose of which is to ensure that our teams are united around a shared culture of ethics and inclusion, and to encourage respect, non-discrimination and exemplarity in our actions. This commitment is monitored through various channels, of which **the Group CSR dashboard indicator which is the share of women in Senior Management Positions** (see 7.1 *Strategy*).

### A SOLID FRAMEWORK, A MULTI-ACTOR COMMITMENT

#### Effective and cross-functional Diversity & Inclusion governance with a constant commitment of Executive Management

The Group Head of Diversity, Equality and Inclusion reports to the Group Head of Human Resources, and is a member of the HR Executive Committee and of the Executive Committee for Company Engagement. The Global Diversity and Inclusion Committee is made up of 40 members from throughout the Group. It meets twice a year and is rolled out at the country, business line and function levels. In 2023, this community was extended to Nickel and the Consulting & Transformation function.

Promoting diversity and inclusion also requires the mobilisation and active support of Executive Management. The personal commitment of the Group Chief Executive Officer is also regularly recognised with regard to the gender balance in jobs, the greater representation of women on governing bodies, and the inclusion of LGBT+ people (Lesbian, Gay, Bisexual and Transgender).

#### An inclusive framework, all over the world

Since the signature of the first Diversity Agreement within BNP Paribas SA in 2004, the mechanisms have been enhanced with each renegotiation to cover all stages of employees' career paths.

After coming into force on 1 October 2020 for four years, the 5<sup>th</sup> Diversity and Inclusion Agreement within BNP Paribas SA in France remains valid.

The Group's companies in France take the same proactive approach to defining initiatives to promote diversity as part of social dialogue. Agreements have been signed in this area: professional gender equality, integration and job retention of employees with disabilities, employment of seniors, and the situation of employees holding employee representative mandates in the

<sup>1</sup> The frequency rate corresponds to the number of accidents per one million hours.

<sup>2</sup> The severity rate corresponds to the number of days lost per 1,000 hours.

context of negotiations on trade union rights. This negotiated approach is periodically renewed in order to track progress, as well as updating and setting new quantified targets.

The 2014 European Agreement on gender equality includes all the key elements of the Group's policy in this area.

These agreements are supplemented by the signing of numerous commitments such as the United Nations Women's Empowerment Principles (WEP) (2011), the charter of the International Labour Organization and Disability Network (2016) and the United Nations LGBT Standards (2017).

## **Diverse and active employee networks, constantly growing and promoting social well-being**

Internal employee networks offering a space for cross-functional (multi-entity, multi-country, etc.) and informal discussions are key players in promoting diversity, inclusion and social well-being. They are both a source of information and a source of innovation. They are continuing to grow and develop synergies. For the past three years, a "World Networks Day" has been held during the *Inclusion Days* (see below).

Thousands of employees took part in events organised throughout 2023 in 32 countries<sup>1</sup> around themes as varied as gender equality, sexual orientation, generational inclusion, parenting, ethnocultural origins and disability. In addition, the Group's web of networks continues to expand: in 2023, the Pride Poland network was created, marking the presence of Pride in more than 30 countries across the Group, and Mixcity networks were created in the Nordic countries, Colombia and Morocco, increasing the number of Mixcity networks to 27.

## **PROMOTING AN INCLUSIVE CULTURE**

### **Training and developing**

All entities<sup>(1)</sup> offer training and awareness-raising actions on the fight against discrimination and the promotion of diversity and inclusion. Some countries and entities systematically include diversity awareness modules in their manager training courses, such as at CPBF, BNP Paribas Fortis, CIB Asia-Pacific and the Group IT function. In addition, the HR teams deploy specific training to the teams responsible for recruitment and to hiring managers.

Moreover, several inclusive personal development and leadership programmes focus on women's career paths<sup>2</sup>.

Three markers show that all employees are concerned by inclusion:

- in order to raise awareness among all Group employees, mandatory *Conduct Journey* training was enhanced in 2023 through a module entitled "Diversity, Equality & Inclusion" dedicated to non-discrimination, addressing unconscious bias and stereotypes through practical cases of situations that may affect colleagues or candidates during the recruitment process. The Group provides awareness-raising programmes on stereotypes and unconscious bias for 96% of employees<sup>(1)</sup> in the Group;
- as a result of the Group's work on promoting inclusion culture, more than 3,000 employees (*i.e.* three times more than in 2022) spontaneously checked the "Diversity, Equity & Inclusion" skill in their *About Me* profile, which is included in the Group skills catalogue;
- as a responsible employer, since 2014, BNP Paribas has been using the structured interview method, which is a more objective and reliable recruitment method. All French recruitment teams and managers are also trained on bias and stereotypes.

### **Communicating and raising awareness among employees and managers**

Awareness-raising campaigns are continuing and are based on a wide range of formats (interactive conferences, round tables, podcasts and screenings) in order to attract more employees either face-to-face, online, or through replays.

In 2023, Diversity and Inclusion Week was reinvented to become *Inclusion Days*. For more than two weeks, the HR Diversity, Volunteering, BNP Paribas Foundation, Engagement teams and employee networks highlighted the following themes: gender equality, prejudices & stereotypes, role models, equal opportunities, mentoring, disability and financial inclusion.

The first edition of this new format in around 30 countries, including France, was a great success with more than 200 solidarity events and actions organised, bringing together nearly 17,000 employees.

Four new episodes were added to the "In My Shoes" podcast series on the theme of Diversity and Inclusion, which has now been listened to more than 22,500 times.

### **The *Conduct & Inclusion* 2023 survey: maintaining broad employee support for the Group's Diversity & Inclusion policy**

After an initial survey conducted in 2021, the 2023 edition of this consultation with all Group employees remains very positive, with stable results and an overall favourable opinion rate of 83% on the Inclusion component of the survey. Employees were keen to get involved with this second edition: out of the 175,000 employees surveyed<sup>3</sup>, more than 90,000 responded, *i.e.* a

<sup>1</sup> Of the social reporting campaign.

<sup>2</sup> For example: "She Leads" (Portugal), "Women Leadership Program" (Canada and Switzerland), "Women Up" (Poland), "Mentoring Program" (BNP Paribas Fortis), "ALL Equal" (BNP Paribas Cardiff), "Boost Her Career" (CPBF), "Women's Impact Programme" (Germany) and "Women in Action" (Arval).

<sup>3</sup> Employees on permanent contracts for more than three months.

participation rate of 52% (compared to 43% in 2021). More than 60,000 *verbatim* statements were collected, including more than 25,000 on the Inclusion component.

Two factors show that inclusion is now fully embedded into the Group's culture:

- 87% of respondents agreed with "being able to be yourself at work without worrying about how you will be accepted";
- the vast majority of respondents state that they represent one or more diversity groups, and they are the most positive about the actions carried out by the Group. This option offered to respondents is considered an innovative practice in France and in several countries.

On the Conduct component, the results show a high level of employee approval of the values and behaviours defined in the Code of conduct. In addition, 93% of respondents state that they have "a good knowledge" of the channels which they can use to report alerts.

The main lessons of this survey were shared with the Governance, Ethics, Nominations and CSR Committee (CGEN), and the results will be subject to an in-depth analysis, in order to adapt action plans locally if needed.

## OUTSTANDING ACTIONS IN THE AREA OF PROFESSIONAL EQUALITY

### Gender equality targets at all levels: strong ambitions for 2025

The Group has set itself ambitious gender equality targets: by 2025, 40% women on the Group Executive Committee (ExCo), G100<sup>1</sup>, Leaders for Change<sup>2</sup> and Senior Management Positions<sup>3</sup> (SMP), as well as 50% women among the Leaders for Tomorrow ("Talents"<sup>4</sup>).

Significant progress has already been noted in 2023. By way of illustration, among the 92 members of the G100, the Group has 35 women in management positions in the Group's strategic business lines such as CPBF in France, BNL in Italy, BNP Paribas Cardif, BNP Paribas Personal Finance, BNP Paribas Leasing Solutions, in country management (Spain, United Kingdom, Switzerland, Canada, Australia) and in the Executive Management of BGL BNP Paribas in Luxembourg. Women are also Heads of the Human Resources, Compliance, CSR and Communication Departments. Six women are also members of the Group Executive Committee.

In 2023, the ambitious level of 37% women in Senior Management Positions was achieved thanks to the actions of Executive Committee members and the active involvement of HR teams through eight cross-functional projects<sup>5</sup>.

In addition, nearly 40% of the Group's managers are women, and around one-third of managers of managers (middle management) are women.

### PERCENTAGE OF WOMEN AT ALL LEVELS OF THE ORGANISATION

|                                    | 31/12/2022  | 31/12/2023  | 2025 Objectives |
|------------------------------------|---|---|-----------------|
| Board of directors                 | 8 women out of 15 members, including one elected by employees and one representing employee shareholders <sup>(1)</sup> | 6 women out of 13 members, including one elected by employees and one representing employee shareholders <sup>(1)</sup> |                 |
| Executive Committee                | 33% (6/18)  | 33% (6/18)  | 40%             |
| G100                               | 37%   | 38%   | 40%             |
| Leadership for Change (Top 500)    | 32%   | 34%   | 40%             |
| <b>Senior Management Positions</b> | <b>35%<sup>(2)</sup></b>  | <b>37%<sup>(2)</sup></b>  | <b>40%</b>      |
| Talents – Leaders for Tomorrow     | 50%   | 52%   | 50%             |
| Top                                | 46%   | 51%   | 50%             |
| Advanced                           | 48%   | 50%   | 50%             |

<sup>1</sup> The G100 represents around a hundred people, corporate officers and senior managers holding key responsibilities within the Group. The members of the G100 include, among others, the Heads of the operating divisions, of the major business lines, of Commercial Banking networks, of Group Functions, of geographical areas and of strategic countries in which the Group is present.

<sup>2</sup> The Leaders for Change (Lfc) population is composed of the members of the main Group-level cross-functional Executive Committees considered as making a major contribution to its operations and its development.

<sup>3</sup> This rate is calculated based on the number of women holding SMP positions as a proportion of the total number of SMP positions filled at 31/12/2023 (based on 100% of the Group's SMP workforce).

<sup>4</sup> The Leaders for Tomorrow (Lft) programme includes women and men who have a unique combination of skills, experiences, motivations and personal attributes ("Leadership Profile"), which the Group considers necessary to drive transformation in the future.

<sup>5</sup> In particular, a quarterly dashboard shared within the Group Executive Committee and awareness-raising actions dedicated to managers of SMP: "Being an inclusive leader".

| Emerging  | 52% | 53% | 50% |
|---|-----|-----|-----|
| <hr/>   |     |     |     |
| <p>(1) 50% in 2022 and 40% in 2023 according to the rules of the Copé-Zimmermann law. This ratio is calculated by excluding the three directors representing the employees or the employee shareholders. This information complies with the requirements of article L.22-10-10 2° of the French Commercial Code relating to the balanced representation of women and men on the committee established, where appropriate, by Executive Management to assist it regularly in the performance of its general duties and on the results in terms of gender diversity in the top 10% of positions with the highest responsibilities.</p> <p>(2) Indicator monitored in the Group's CSR dashboard.</p> |     |     |     |

In France, the “Rixain” law of 24 December 2021 includes several measures to improve gender equality in companies, by requiring gender-balanced representation among senior managers and members of the governing bodies of large companies. The objectives set by law are to be achieved gradually: 30% by 1 March 2026 and 40% by 1 March 2029. BNP Paribas SA published the following overview<sup>1</sup> of women and men for 2023:

- population of senior executives corresponding to BNP Paribas SA's G100: 43% women and 57% men;
- members of the governing bodies corresponding to the BNP Paribas Group Executive Committee: 33% women and 67% men.

## New Group commitments as part of the Generation Equality Forum

In order to accelerate this movement towards gender balance at all levels of the company, BNP Paribas is continuing and expanding its actions by partnering with the Generation Equality Forum, the global assembly for gender equality, organised by UN Women.

Since 2021, by becoming a member of the two coalitions below, by 2026, the Group has committed to the following:

- “gender-based violence”: to develop, strengthen and internationalise its actions and systems for its employees who are victims, to work alongside the members of the OneInThreeWomen network to convince at least 50 private sector organisations to get involved and better support their customers who are victims of economic abuse, in particular by raising awareness among its advisors and building on its Nickel services;
- “technology and innovation for gender equality”: to be among the champions in the recruitment and percentage of women in IT professions, to help associations supporting women in technology and innovation and to continue its financial commitment and advocacy for the Agrifed programme<sup>2</sup>.

## Developing and spotlighting women's career paths

In line with the GTS 2025 plan and in accordance with the Group's desire to promote the career paths of women, BNP Paribas is committed to gender diversity in structurally unbalanced business lines, particularly in terms of recruitment and retention.

With regard to capital markets activities within Corporate and Investment Banking, the action plan focuses on pre-recruitment and recruitment, on specific groups and their succession, and on development programmes.

With regard to the IT business lines, the Group aims to be among the champions in recruitment and boosting the percentage of women in this sector. Since 2020, the Group has continued to develop its global diversity programme for IT professions, entitled Women in IT.

The ambition of Women in IT is based on the following quantitative objectives for 2025 within the Group IT function: to achieve 32% women, through hires and departures of women in these roles,, and to achieve 50% women in LfT populations.

2023 was marked by new actions, with:

- increased action by IT Departments and the appointment of operational points of contact within the activity;
- the continuation and expansion of training programmes and reskilling developed by the Group for women (see *A learning company supporting dynamic career path management*, Commitment 6);
- close links with the Women & Girls in Tech initiative, to strengthen ties and the presence of women in all Tech business lines and proactive sourcing actions to broaden the female recruitment pool;
- the effective implementation of partnerships with eight associations benefiting from the budget of EUR 1.1 million over three years.

Thus, at the end of 2023, the Group's IT function has nearly 30.3% women.

A pioneer among CAC 40 companies and the financial sector by signing the *#JamaisSansElles* Charter in 2019, BNP Paribas continues to strengthen its action, and now has more than 700 signatories (of which 70% men), from management bodies in 24 countries that undertake not to participate in public events or panels with at least three speakers that do not include the presence of at least one woman. In June 2023, BNP Paribas Leasing Solutions' senior management team joined the community of signatories. BNP Paribas remains the company with the largest number of signatories of *#JamaisSansElles* in France and around the world.

## Fight against gender-based violence and its impacts at work

BNP Paribas has been a member of OneInThreeWomen, the first European network of companies committed to combatting violence against women, since 2018, and joined the network's Executive Committee on 1 January 2021. Domestic violence inevitably impacts professional life, and is a factor of inequality at work and an obstacle to gender equality. The OneInThreeWomen network aims to equip employers to raise awareness and better support female employees who have been victims. The network continues to strengthen its awareness-raising system (e-learning available in eight languages, podcast series, etc.) and in 2023, it welcomed 15 new companies as signatories to the OneInThreeWomen Charter.

<sup>1</sup> Percentage based on attendance during the year in question.

<sup>2</sup> Since 2018, the Group has been associated with the Agrifed programme in line with the UN Sustainable Development Goals, whose aim is to promote and strengthen food security in Senegal by promoting female entrepreneurship.

After the launch of the intranet page accessible to all employees worldwide (bringing together resources, testimonials from female victims and key contacts on the subject of violence), on 25 November 2023, the International Day for the Elimination of Violence Against Women, the Group strengthened its commitment to the fight against domestic economic abuse.

In France, BNP Paribas joined the #StOpE (Stop everyday sexism in the workplace) initiative from its creation in 2018, by signing an undertaking comprising eight principles. This collective now includes 199 member organisations.

The fight against sexism is the subject of numerous actions within the Group. BNP Paribas took part in the second edition of the survey on everyday sexism in the workplace, alongside 14 other member organisations of #StOpE. As in the first edition in 2021, nearly 12,000 employees based in France responded to the 2023 questionnaire. While sexism is still a reality in the eyes of different generations, it is beginning to recede and the company's action is widely recognised. At the same time, the awareness-raising e-learning module on "Preventing and combatting everyday sexism in the workplace", available to all Group employees, has been taken by more than 9,800 employees in France since its launch.

## 360° parenting and work-life balance

The Group implements numerous actions to promote gender equality around 360° parenting. The 11<sup>th</sup> Parenthood Week event in France was attended by more than 2,200 employees, and organised around thematic events such as adolescence, early childhood, family and intergenerational solidarity, and carers.

In addition, business lines and countries are developing their own systems. For example: BNP Paribas Cardif supports both carers and young parents; BNL is rolling out workshops for new parents; in Germany and Austria, the Group has gained its first certification following the "Work and Family" audit, highlighting the robustness and effectiveness of its systems in terms of work-life balance and supporting parenthood. At the same time, childcare assistance, either in the form of financial assistance or childcare, is offered by entities covering nearly 80% of the workforce<sup>1</sup>. In addition, more than 85% of the entities<sup>(1)</sup> grant adopting couples and/or same-sex couples parental leave rights similar to maternity and paternity leave. Nearly three quarters of entities<sup>(1)</sup> encourage their employees to take their paternity leave (second parent) through communication and awareness-raising actions.

In addition, in July 2023, BNP Paribas signed an agreement with the French Ministry of the Armed Forces in France reaffirming its commitment to employees who are in the operational reserve. In addition to the legal provisions, BNP Paribas maintains full pay for reservists for up to 10 working days per calendar year, so that they can fully commit to their civic duty.

## CONSTANT PROGRESS, PIONEERING INITIATIVES FOR GREATER DIVERSITY

### Promoting the employment and insertion of people with disabilities

#### NUMBER OF EMPLOYEES RECOGNISED AS HAVING A DISABILITY<sup>(1)</sup>

|                                     | Employees with disabilities |                      | Of which hires |            |
|-------------------------------------|-----------------------------|----------------------|----------------|------------|

| France                              | 2,882 <sup>(2)</sup>        | 3,106 <sup>(3)</sup> | 73             | 74         |
| Domestic markets (excluding France) | 828                         | 907                  | 24             | 40         |
| Europe (excluding domestic markets) | 976                         | 978                  | 59             | 69         |
| Rest of the world                   | 265                         | 119                  | 34             | 52         |
| <b>TOTAL</b>                        | <b>4,951<sup>(4)</sup></b>  | <b>5,110</b>         | <b>190</b>     | <b>235</b> |

(1) Workforce (physical headcounts) out of 93% of the Group's workforce (permanent + fixed-term contracts).

(2) The definitive results for 2022 known in June 2023 for France amount to 2,882 compared to 2,876 declared in February 2023.

(3) As the annual declaration is postponed to March 2024, the data communicated for France in 2023 are not definitive.

(4) 4,571 Full-Time Equivalents worldwide.

At 31 December 2023, there were 5,110 employees with disabilities in 28 countries, representing a Group employment rate of employees with disabilities of 2.7% compared to the total workforce<sup>2</sup>, up compared to the previous year (2.5% in 2022).

In France, as part of the renewal of the Disability Agreement for three years (2023-2025), BNP Paribas SA has recruited 57 disabled candidates. More than 2,000 job retention and nearly 200 awareness-raising actions were also carried out in 2023. The direct employment rate of employees with disabilities rose to 5.3% in 2022<sup>3</sup>, from 5.4% in 2021.

<sup>1</sup> Of the social reporting campaign.

<sup>2</sup> In 2023, the employment rate in entities that report that they specifically monitor the number of employees with disabilities in their workforce is approximately 3%.

<sup>3</sup> The 2023 rate will only be available in 2024.

In accordance with the International Labour Organisation's Business and Disability Charter, BNP Paribas carries out numerous actions, notably in Germany with the My Ability programme that offers coaching and training to facilitate access to employment. Several other business lines also stand out for their systems promoting better inclusion of people with disabilities in the workplace, such as BNP Paribas Cardif and BNP Paribas Canada.

In addition, to better reconcile long-term illness and work, BNP Paribas Fortis is launching a dedicated coaching programme, and BNP Paribas Personal Finance is a signatory of the Cancer@work Charter.

Designed by a Group employee affected by a hidden disability and with the support in 2022 of People'sLab4Good<sup>1</sup>, the immersive game "Disability Strikes Back" is part of the disability awareness programme, which primarily raises awareness of hidden disabilities<sup>2</sup>. It was rolled out across the Group throughout 2023 to help people with disabilities to cope, and to raise awareness among people who do not consider themselves as concerned. In 2023, this innovative approach impacted nearly 3,500 employees based in 11 countries.

Finally, in France, the first edition of the public-speaking contest dedicated to the theme of disability received 139 applications across the business lines.

### **Diversity of social and ethnocultural origins: strong and targeted actions**

With 168 nationalities present within the Group, including 15<sup>3</sup> within the G100, BNP Paribas has been working for several years to promote diversity of origins and gender equity.

In March 2023, the Group continued its partnership with the International Day for the Elimination of Racial Discrimination. This year, employees were able to take part in an unprecedented conference in the presence of Makaziwe Mandela, daughter of Nelson Mandela and Chairperson of the "House of Mandela".

In France, following the Diversity and Inclusion Index experiment in 2022, BNP Paribas SA commissioned a consulting firm to conduct a qualitative survey in the form of 60 individual, confidential and anonymous interviews on the subject of actual or perceived ethnocultural origin. This survey was also carried out by BNP Paribas Personal Finance.

In addition, around 15 internal professional networks (including HOLA, Latamigos and CulturALL) have developed and actively contributed to raising awareness and promoting diversity of origins in several countries (Brazil, United States of America, Canada, France, Belgium, United Kingdom, Portugal and the Nordics).

### **LGBT+: international engagement and reach, pioneering initiatives**

During the 5<sup>th</sup> edition of the "LGBT+ role models and allies at work" initiative organised by L'Autre Cercle in France in 2023, with its English counterpart OUTstanding, the Group once again distinguished itself this year with two employees being nominated for awards in the categories of "LGBT+ Leaders Role Models" and "Ally Leaders Role Models".

On the International Day Against Homophobia, Transphobia and Biphobia<sup>4</sup>, the Group reiterated its commitments to the inclusion of LGBT+ people, with a focus on gender identity and transidentity. At its conference jointly organised with Pride France on the theme of "Sexual orientation and gender identity: why is it a corporate issue", Nickel was able to highlight its "True name" feature, allowing the account holder to choose their first name, surname and title.

More broadly, many initiatives were held to mark this day. During *Inclusion Days* in India, support for LGBT+ people was illustrated this year by organising a pride walk bringing together more than 1,200 employees, as well as an awareness-raising session and group workshops producing posters in LGBT+ colours.

### **Age diversity, to promote generational inclusion**

Intergenerational issues are also the subject of conferences and workshops every year, notably during the *Inclusion Days*.

In France, the Group is stepping up its actions in favour of generational inclusion, and in 2022 signed a Commitment Act. It has since been joined by nearly 50 signatory organisations. This act is broken down into 10 key commitments around recruitment, training, job retention, support for career development, well-being at work, retirement and raising awareness of age-related stereotypes. An action plan based on these 10 commitments was drawn up in 2023, and will be rolled out in 2024.

Within the Group, mainly in Europe, innovative inclusive programmes and initiatives are being developed. In Italy, at BNL, the Senior Experts Network project enables an effective transfer of knowledge between generations, while promoting the skills and knowledge of the most experienced employees. In Portugal, the Build to Shift development programme is dedicated to employees with more than 15 years of experience, to create a common platform of knowledge shaping the banking sector and the associated working environment.

Within BNP Paribas SA in France, the Diversity and Inclusion agreement allows 150 employees to benefit from the end-of-career corporate volunteering scheme, while broadening the circle of partner associations (see *Corporate volunteering and other solidarity activities*, Commitment 5).

<sup>1</sup> Group intrapreneurship programme.

<sup>2</sup> 80% of disabilities are hidden disabilities.

<sup>3</sup> Including French.

<sup>4</sup> IDAHOT: International Day Against HOMophobia, Biphobia, and Transphobia.

## RESPECT FOR HUMAN RIGHTS AND CODE OF CONDUCT

### Promoting and respecting human rights

In its Code of conduct, the Group has, in particular, committed itself to promoting the respect for human rights in its sphere of influence and to treat all employees in a dignified manner. Forced labour is prohibited within the Group.

BNP Paribas carries out an annual review of countries that are classed as very high-risk in terms of human rights<sup>1</sup> (see chapter 7.7 *Vigilance plan*). The Group did not identify any employees under the age of 18 at 31/12/2023.

### “Respect for People” policy: preventing discrimination, harassment and violence at work and dealing with inappropriate behaviour

In order to strengthen the culture of compliance, a target relating to compliance with the Code of conduct, rules and regulations was assigned to all Group employees in early 2023. Any breach of these principles, including respect for people, must be formalised by the manager as part of the employee’s annual performance review.

In addition, the Group’s “Respect for People” policy was strengthened and fully rolled out worldwide in 2023:

- the entities have implemented the rules defined at Group level locally in terms of respect for people. The principles defined for the entire Group are directly applicable and may therefore be more protective than local regulations;
- approximately 150 employees were appointed as HR Conduct “Respect for People” Contacts. As they are responsible for handling alerts relating to behaviour which breaches the policy, they were trained in their new roles, which involve a high level of expertise and impartiality;
- workshops were held to raise awareness among managers and HR teams on the importance of respect for people, the detection of worrying signs in teams, and reporting and formalising alerts;
- in order to facilitate the collection and handling of alerts, a common tool for all Group entities has been selected, which will be rolled out to all employees in 2024.

Thus, at Group level, 347 “respect for people” alerts were recorded in 2022, and 587 in 2023. As soon as the analysis of the alert and the investigations carried out, if necessary, established inappropriate behaviour or situations requiring action, appropriate measures were taken, mainly individual, including disciplinary measures and/or support measures. In the event of disciplinary measures, the entire range of sanctions in force in the relevant setting is used. The vast majority of alerts resulted in measures, including 74 sanctions in 2022 (including 23 dismissals) and 101 in 2023 (including 22 dismissals).

## COMMITMENT 5: “A GOOD PLACE TO WORK” AND RESPONSIBLE EMPLOYMENT MANAGEMENT

---

Commitment 5 is included in the “Employee Experience” pillar of the *People Strategy*, the objective of which is to strengthen the attention paid to employees by offering them an experience adapted to their expectations, in particular through new ways of working in an agile environment. **The Group CSR dashboard indicator on this commitment is the number of solidarity hours performed by employees (#1MillionHours2Help)** (see section 7.1 *Strategy*).

### STRONG FOCUS ON EMPLOYEES

#### A solid framework for people safety and strong mobilisation in crisis situations

All Group employees as well as anyone else who is present at a Group site (subcontractors, clients, customers, visitors, etc.) benefit from a reference corpus on the safety of people and property, which was subject to an external audit in 2021. It establishes the fundamental principles of security (with regard to risks related to intentional or malicious acts likely to harm people or the Group’s assets and activities), safety (with regard to natural and climatic events, or related to the technological environments of our sites likely to harm people or the Group’s assets and activities), business continuity and crisis management. This framework, approved by the Group’s Executive Management, is rolled out country by country by local management.

The functions within the Group in charge of safety and security organise the basic measures intended to protect the integrity of BNP Paribas’ activities, resources and interests against safety and security measures affecting the Group, through a constant risk analysis approach. Health and safety conditions at each site comply with the regulations applicable in the various countries. Given the nature of the Group’s activities, the risks related to the Group’s health and safety are relatively low (see *Work-related accidents, Our employees around the world*). However, each entity may implement specific provisions locally in line with local HR policies.

Employees receive assistance with their business travels. In France, they receive 24/7 telephone support with an external service provider following traumatic events (attacks, climate events).

In 2023, the Group and the HR function continued to take action to help employees in all crisis situations.

<sup>1</sup> Source: Verisk Maplecroft (Human Rights Risk Index) identifies 22 very high-risk countries and 90 high-risk countries.

HR teams pursued strong support for Ukraine in 2023, notably through the continued provision of housing and the payment of housing allowance, as well as the allocation of substantial catering subsidies. HR also continued to support Ukrsibbank employees with their internal mobilities (61 international transfers were completed). Employees continue to receive psychological support from a company specialising in psycho-social risks.

Following the earthquake in Türkiye in February 2023, the TEB Crisis Committee was called upon to prioritise help for those affected. 587 employees and members of their families were evacuated and relocated, and a psychological support platform was immediately set up with 239 consultations led by psychologists experienced in managing post-traumatic stress. Survival equipment was delivered to the affected regions.

The Group provided widespread psychological support to its employees *via* a dedicated crisis line in regions and countries experiencing crisis situations, in particular in Türkiye, in Morocco following the powerful earthquake that struck in September 2023, and following events in the Middle East. It has also either provided donations directly or collected around the world *via* the Rescue & Recover Fund, for the benefit of NGO partners or associations in support of local people affected (see chapter 7.4 *Our civic responsibility: being a positive agent for change*).

### **Continuation and reinforcement of the *We Care* programme**

In 2022, the BNP Paribas Group launched a global programme – *We Care* – dealing with health and well-being at work. This programme is supported by a regular global governance under the sponsorship of the Group Human Resources Director, and a community of 30 ambassadors in the Group's regions and entities.

The *We Care* programme offers workplace health and well-being based around three pillars:

1. basic social benefits and insurance for all employees in the Group, including life insurance, incapacity insurance, disability insurance and health insurance, minimum maternity and paternity leaves;
2. health priorities defined at Group level and directly in line with the banking activity: combatting psycho-social risks and combatting the risks associated with a sedentary lifestyle;
3. a package of support with social, emotional, physical and financial well-being.

### **Employee benefits relating to social protection as a common base**

In addition to the legal and contractual arrangements, according to the regulations and practices of the countries in which the Group operates, employees may benefit from supplementary social protection and/or health insurance.

In accordance with the Global agreement, at the end of 2023, all of the Group's employees receive social protection in terms of health expenses coverage, incapacity/disability and life insurance, as well as social protection in terms of maternity leave, paternity leave and flexible days.

Depending on the situation, this coverage comes either from a government plan, an insurance plan, or a combination of both. Particularly attentive to the protection of employee health, in accordance with its regulatory environment, each business/country determines what coverage is provided, the specific applicability conditions and the terms of financing.

In France, the Group offers comprehensive supplementary social protection coverage through mandatory employee health insurance schemes, incapacity/disability protection insurance, and life insurance, enabling employees to adapt their level of protection to their personal situation.

Furthermore, flexible employee benefits enable employees to select, to a certain extent, their level of coverage from a range of benefits offered aiming at long-term employability and offering sustainable choices. These benefits are available in particular at BNL in Italy, at BNP Paribas Fortis in Belgium and at BNP Paribas in the United Kingdom.

The Group ensures that employees have access to information relating to employee benefits, offers and other schemes provided to them by the Group's various entities.

### **A solid occupational health framework, focusing on mental health and combatting sedentary lifestyle**

In line with the *We Care* programme, 84% of Group employees<sup>1</sup> are covered by an Employee Assistance Programme enabling them to better manage their mental health on a daily basis and in the case of traumatic events (attacks, climate events, *etc.*). In France, the Occupational Health and Prevention Service supports the HR line and managers by opening an external psychological assistance hotline in the case of serious events within a team (death of an employee, assault, robbery, *etc.*).

The European agreement on preventing stress in the workplace, signed in January 2017, outlines the principles and common framework and also stipulates the means to be implemented (information, awareness-raising, evaluation, training, support, communication).

Worldwide, almost all employees benefit from training initiatives related to the prevention of stress at work, some specifically dedicated to managers, others accessible to all employees.

In France and Luxembourg, regular training is offered to employees and managers to help them with their mental health and with improving their stress management. The employee engagement rate is measured each year in Pulse surveys. This rate is analysed by entity and country and is the subject of action plans.

In France, BNP Paribas measures the level of stress and well-being of its employees, through a regular survey. The rates measured in 2023, which are an improvement on the previous two years, show the positive impact of the action plans put in place (training, transparent sharing of organisational changes, professional development opportunities, *etc.*).

In line with the health priority related to the risk of a sedentary lifestyle:

- ergonomic advice and measures to improve the working environment, prevent occupational risks or musculoskeletal disorders are offered to almost all employees<sup>2</sup>;
- entities covering 93% of the workforce<sup>(2)</sup> also offer health awareness campaigns, which include information and prevention actions on various topics such as nutrition, sleep, addictions, women's health and physical activities.

<sup>1</sup> Based on reporting covering 91% of the Group's workforce.

<sup>2</sup> Of the social reporting campaign.

Finally, BNP Paribas signed up to the “Working with cancer” commitment in early 2023, with the aim of being more open when talking about cancer, and providing empathetic and caring support for employees and teams affected by the disease.

## **An offer focused on social, emotional, physical and financial well-being**

Well-being is the final pillar of the *We Care* programme, and has been defined around four main areas: social, emotional, physical and financial well-being.

There are a number of initiatives throughout the Group, and the inventories launched in 2022 are now being analysed. Action in the Asia-Pacific region intended for Singapore employees under the Energise banner aims to improve health and well-being around four pillars: physical well-being, social well-being, mental well-being and financial well-being.

Some programmes even include certifications as is the case in Germany with the *Beruf & Family* audit accreditation or in the UK with the Well-being certification.

With regard to the provisions planned at Group level, in particular for carers, the Global agreement provides for the possibility for employees to take up to five flexible days per year for personal convenience. Nearly two-thirds of the workforce<sup>1</sup> are covered by a specific policy for carers. In addition there are other highly innovative initiatives, such as the Tilia mobile app (developed in intrapreneurship), offered by certain Group entities which provides personal support, features and a useful information space for carers and those receiving care.

In France, in the BNP Paribas SA entity, the Group has implemented a set of measures to support employees who are carers, in particular an agreement on the donation of days of leave to employees helping a seriously ill child or spouse, awareness-raising actions (communication, regular group events, practical guides, group discussions with a psychologist), as well as training and partnerships with experts and discussion groups.

The *We Care* programme is reflected in HR processes with the implementation of a Health and Well-being component in performance reviews, and guides offered to managers and HR to support them and propose language elements to address these topics with their teams.

Regular communications are made to all Group employees on topics as varied as disconnecting from work before the summer, Pink October, walking challenges and solidarity runs.

In France, all employees are monitored by an Occupational Health and Prevention Service (OHPS) and benefit from a social assistance service. This service has implemented numerous occupational health prevention actions: Covid and flu vaccination campaigns, diabetes and cardiovascular risk screening workshops, consultations for sleep-related conditions, smoking cessation consultations, diet consultations, workshops on first aid in the event of a life-threatening emergency and breast cancer screening workshops.

To protect the mental health of Group employees in France, a psychological assistance system gives employees access to permanent listening and psychological support in the event of professional or personal difficulties. In addition, an occupational psychologist has been recruited to support employees individually and in groups, and HR staff, particularly in the event of transformation of entities. All these measures have been supported by communication materials, particularly on hybrid work, on the use of digital tools and on mental health in companies.

## **TRANSFORMING WORKING PRACTICES AND MAINTAINING THE STRONG CORPORATE CULTURE**

### ***Smart Working* and team project**

BNP Paribas aims to continue to develop its working methods based on a model of trust, autonomy and collaboration. This is evidenced by the Group France Agreement on remote working signed in July 2021, and supplemented by an amendment in May 2023 covering more than 90% of the Group's workforce in France, as well as the European Remote Working Charter, which covers all countries within the scope of the European Works Council (22 countries). Developed on the basis of the experience acquired during the health crisis, the analysis of market practices and above all, feedback from employees and managers, *Smart Working* integrates four dimensions:

- working methods: the Group continued its discussions on new ways of working<sup>2</sup> in order to better respond to the challenges of employee attractiveness, retention and engagement, while maintaining a sense of community and a sense of belonging to the company. The locations, eligibility, equipment and compensation conditions have been extended. The working hours and remote working arrangements have been opened up to ensure the development of remote working, taking into account the diversity of activities and employee expectations. At the end of December 2023, 72% of employees in France were working remotely (on average two days a week) and around 75% of employees in Europe (on average two days a week);
- workspaces: the hybrid organisation of the teams, the emphasis on collaborative work and its real estate strategy have led the Group to change the configuration of its office spaces to give more meaning to work on site;
- digital tools: the constant development and adaptation of collaborative tools, applications or IT equipment allowing flexible and hybrid collaborative work;
- *People care*: the Group continues to support its employees towards a hybrid way of working by adapting managerial practices (“Managing in a hybrid environment” module available in French, and in English from the start of 2024) and developing

<sup>1</sup> Of the social reporting campaign.

<sup>2</sup> Balance between remote working and on-site presence, with a maximum of 50% remote working per employee for activities that allow it.

preventive actions around employee health and well-being (maintaining social link, combatting physical inactivity and digital fatigue with a disconnection alert message after 10.5 hours of remote connection within Europe, work-life balance).

### **Agile transformation at scale, progress report**

In order to respond more effectively to the challenges of our environment, since 2020, the Group has chosen Agile at scale as a priority driver to meet three major challenges: “Faster” - delivering value to the clients and customers as soon as possible; “Better” - meeting the needs of the clients, customers and users through quality products and services and innovative experiences; “Happier” - enabling employees to develop and perform in a respectful and positive work environment.

The Group is continuing to deploy the agile culture by communicating the 5 BNP Paribas agile values<sup>1</sup>, and training which aims to foster understanding this new working approach. In 2023, CPBS (Commercial, Personal Banking & Services) entities continued their journey of agile transformation at scale with nearly 108 Tribes<sup>2</sup> rolled out as well as 43 new Tribes in other functions (Risk, Compliance, HRM) and IPS (Investment & Protection Services) entities such as Wealth Management and Asset Management.

The “Agile Essentials” training module continues to be rolled out to all Group employees, providing widespread training on agile culture. Nearly 11,000 employees have completed or are in the process of completing the training module since it was created in 2021. In 2023, three new training courses were created to enable employees to strengthen their skills in key roles within the organisation, including Product Owner, Scrum Master and Agile Coach.

New agile job titles have been created (UX Designer and Product Manager) to complete the positioning offer and bring consistency to the administrative description of employees within Group systems.

## The employee journey inspired by the customer experience

In order to promote the Group’s attractiveness, employee engagement and the retention of Talents, the Group has launched an initiative to improve the employee experience, mirroring the approach deployed to clients and customers over a number of years. HR teams have worked to produce a global reference framework for employee career paths, by listening to more than 300 employees around the world. This reference framework brings together 27 employee pathways structured around six macro-needs (including: onboarding, working environment and career management). The Group aims to improve the pathways that have the greatest impact on the experience and satisfaction of its employees.

## Corporate volunteering and other solidarity activities

The #1MillionHours2Help programme embodies the Group’s ambition to do more for civil society (NGOs, associations) by promoting the skills of employees. Through this initiative, BNP Paribas aims to foster more sustainable, shared growth by allowing all employees to use working time to help charitable organisations build a more inclusive, eco-friendly world. In 2023, a total of 651,972 hours either during working hours or outside of working hours with compensatory leave<sup>3</sup> were carried out for solidarity actions in favour of civil society as part of the **#1MillionHours2Help programme, i.e. a total of more than 1.26 million hours<sup>4</sup> over two rolling years**, far exceeding the target of one million hours set by the Group.

Now integrated into the BNP Paribas SA Diversity and Inclusion Agreement in France, the corporate volunteering system was renewed for four years from 1 October 2020. The French subsidiaries BNP Paribas Personal Finance, BNP Paribas Leasing Solutions, BNP Paribas Cardif, BNP Paribas Asset Management, BNP Paribas Arbitrage (now BNP Paribas Financial Markets) and Arval have implemented similar systems since 2017. In 2023, 315 employees<sup>5</sup> (of whom 133 started during the year) were able to participate in work with general interest or public utility non-profit associations lasting 6 to 24 months.

## HIGH-QUALITY SOCIAL DIALOGUE

In 2023, 1,758 official meetings (2,167 in 2022) took place, including 1,105 in France, illustrating the richness of social dialogue. These meetings led to the signature, in 2023, of 306 corporate collective agreements within the Group (287 in 2022), of which 111 in France, 188 in the rest of Europe and 7 in the rest of the world, reflecting the high quality of collective bargaining.

### Global agreement

The BNP Paribas Global agreement, signed in 2018 with UNI Global Union<sup>6</sup>, was extended until 30 June 2024, with the aim of broadening the provisions of this global framework, particularly in terms of health and quality of life at work (see 7.7 *Vigilance plan*). An overall assessment of its implementation was presented on 10 October 2023 to the monitoring committee, composed of UNI Global Union representatives and Management representatives.

This assessment highlighted the strengthening of the global social framework: 100% of the workforce<sup>7</sup> can claim paid maternity leave for a minimum period of 14 weeks, incapacity/disability and life insurance, and healthcare coverage. Following the recommendations of the Global agreement, 53 countries covering 80% of the workforce<sup>(7)</sup> offer paid paternity leave of at least six days.

### European Works Council and European social dialogue

At the end of 2023, the European Works Council<sup>8</sup> (EWC) covered 22 countries and around 72% of the total workforce.

<sup>1</sup> 5 fundamental BNP Paribas agile values: customer focus, openness, responsiveness, discipline and courage.

<sup>2</sup> A tribe is a grouping of autonomous multidisciplinary teams that work on one or more products and services, to maximise the value delivered to its customers.

<sup>3</sup> Number of hours declared in HR tools as part of the #1MillionHours2Help programme including the long-term corporate volunteering in application of the Diversity and Inclusion Agreement in France (permanent and fixed-term employees).

<sup>4</sup> Indicator monitored in the Group’s CSR dashboard.

<sup>5</sup> On a like-for-like basis (long-term volunteering in the middle and end of their career) in 2022, 313 employees were able to get involved in these missions.

<sup>6</sup> Defining the fundamental rights and the global social foundation which applies to all Group employees.

<sup>7</sup> Of the social reporting campaign.

<sup>8</sup> European Works Council comprising the employee representatives from entities based in all countries within the European Economic Area, excluding entities that are not majority-owned.

In 2023, the implementation of the GTS 2025 plan and the *People Strategy* were presented to the European Works Council. The Group's Diversity, Equality and Inclusion policy was also included on the agenda of the European Works Council meetings. The European Works Council contributes significantly to the implementation of the European Social Charter, including the European agreements on employment management (2012), gender equality (2014) and on stress prevention (2017), supplemented in 2021 by the Remote Working Charter.

The Remote Working Charter defines a common framework for the deployment and strengthening of remote working in the 22 countries covered by the BNP Paribas EWC for activities where this form of work organisation is possible. This framework may be supplemented, where appropriate, by agreements specific to Group companies in order to meet specific requirements.

## **Social dialogue in France**

In 2023, 111 collective agreements were signed (including amendments) within the BNP Paribas Group in France, including two Group-level agreements relating to remote working and Group-level negotiation procedures. 109 collective agreements were signed at Group company level, including 48 agreements related to compensation, employee savings and retirement savings. It should be noted that the Group's entities in France all renewed their SECs in 2023, excluding BNP Paribas Leasing Solutions and GAM, which had held their professional elections in 2022, given the expected duration of their term of office. In this respect, 33 agreements relating to professional elections were signed at Group company level. Finally, most of the mandatory annual negotiation meetings within the Group's entities in France, specifically covering compensation for 2024, began earlier than the schedules of previous years and ended at the end of November 2023.

## **Corporate social responsibility taken to the highest level in the organisation**

BNP Paribas SA's Central Social and Economic Committee (CSEC) and the SECs of the Group's French subsidiaries are regularly informed of the Group's CSR commitments.

In 2023, the Group's Head of Company Engagement confirmed to BNP Paribas SA's CSEC, in line with the presentation made in 2022 on the GTS 2025 plan, that we would accelerate our commitments to respond to the climate crisis.

## **Employment management**

BNP Paribas practises responsible employment management by anticipating changes necessary to maintain its economic performance, its capacity for development and therefore employment over time. It relies on dynamic internal mobility, a source of skills enhancement, supported by significant investments in training.

Employment is managed under collective agreements concluded at different levels: Global, European and French. In France, in 2022, the new Agreement signed on the management of employment and career paths was renewed, and strengthened the commitments made by the Group until 2026. In this context, the Group in France does not carry out any forced redundancies, favouring internal mobility and voluntary solutions for its projects impacting employment. In the other countries around the world, redundancies are exceptional, in line with the commitments of the European Agreement on employment management of 2012 (renewed by tacit agreement every three years) and with the "Employment management" section of the Global agreement of 2018.

In France, the Group's workforce also remained stable with a change in FTE of -0.8% (-0.4% excluding scope effect).

In Belgium, 2023 was marked by the implementation of the New Commercial Organisation plan from 1 January 2023, with this plan impacting the work content and/or positions in the organisation of nearly 4,500 employees. For the employees concerned, this approach enriches their career paths as well as providing new learning opportunities through training and change management. Following the merger with Bpost bank in January 2024, nearly 250 employees will join BNP Paribas Fortis. Their integration was prepared in detail, in consultation with employee representative bodies. This merger is one of the key elements of the GTS 2025 plan in Belgium.

In Poland, an agreement was signed with the trade unions concerning a social plan providing for the loss of a maximum of 800 jobs over the 2021-2023 period, aimed at supporting the company's industrial plan. This agreement integrates support measures including the reinforcement of internal mobility, the increase in benefits, the introduction of social protection guarantees and a voluntary departure plan. Within this framework, there were 86 departures in 2021, 262 in 2022 and 91 in 2023.

In Italy, BNL has set up two IT and back-office partnerships. These partnerships involve staff movements involving 820 positions, the terms of which are currently being set out.

In France, the BNP Paribas Personal Finance subsidiary has set up a plan to strengthen internal mobility and voluntary departures to support its transformation plan, which is necessary to restore its competitiveness regarding to the economic, regulatory and competitive backdrop. In this context, it plans to lose 950 roles, *i.e.* approximately 17% of the workforce by the end of 2024. Negotiations with the BNP Paribas Personal Finance trade unions led to the signing of a unanimous agreement in June 2023. They provide for support measures dedicated to voluntary departures from the company (maximum 691) and internal mobility in conjunction with the teams responsible for recruitment and internal mobility for France.

In addition, as part of its transformation plan, BNP Paribas Personal Finance initiated the disposal/run -off, depending on the entities, of four branches and one subsidiary in Eastern Europe, in compliance with the European Agreement on employment management. Measures dedicated to supporting employees have been rolled out, including mobility assistance within the Group in the country and region in question, outplacement for certain types of positions, departure conditions that are better than those

provided for by the legislation of each country concerned, measures to support change and stress management, and health insurance extension periods where applicable.

## A COMPETITIVE COMPENSATION POLICY

BNP Paribas' compensation policy is founded upon principles of fairness, notably with regard to gender, and transparency, which are notably supported by a single annual compensation review process for all employees. The principles on the composition of compensation and its evolution are common throughout the Group and consistent with the objectives of risk management.

### A compensation policy that complies with regulations

The Group's compensation policy, which applies to all entities, aims to ensure consistency between the behaviours of employees whose professional activities have a significant impact on the Group's risk profile, and its long-term objectives in terms of risk management in accordance with CRD regulatory provision<sup>1</sup>. Since 2009, the implementation of this policy has helped to improve governance, identify employees that are Material Risk Takers (MRT), and to apply provisions on the award and terms of payment applicable to their variable compensation. The compensation policy and principles of employees identified as MRTs are published annually in a report posted on the BNP Paribas website<sup>2</sup>.

The compensation policy complies with laws, regulations (in particular European prudential regulations) and the requirements of regulators (ECB, FED, *etc.*), both at local and consolidated level, including in terms of minimum wages where they exist locally.

### A socially responsible, fair and competitive compensation policy

In the majority of the countries in which it operates, BNP Paribas applies a salary grid upon hiring as part of its recruitment process, as well as a market compensation review during the annual review process. The Group ensures that proposed salary levels are salaries appropriate with regard to the local standard of living and are consistent with local market practices (particularly with regard to local benchmarks).

This salary level is supplemented by a set of social benefits to which all Group employees have access according to the Global agreement.

Faced with the economic context, the Group endeavours to integrate specific local factors into the framework of the budgets allocated in terms of compensation, taking into account local government measures for each country/entity. The annual compensation review process has incorporated these elements, with particular attention paid to the first salary levels that may be most impacted by the current economic context. In France, following discussions within the framework of BNP Paribas SA's mandatory annual negotiations, a certain number of decisions were taken, in particular in terms of collective increases and exceptional bonuses.

Since 2019, BNP Paribas SA and its various entities in France have published their Gender Equality Index. The scores earned by the banking and insurance entities<sup>3</sup>, which represent more than 48,000 employees, are above the statutory minimum, demonstrating the Group's long-term commitment to gender equality. All Group entities in the United Kingdom also publish their gender pay gap report<sup>4</sup>. BNP Paribas is continuing to increase its attention to equal treatment for all, particularly when it comes to gender equality. Since 2016, the consistent allocation of compensation between women and men has been monitored by indicators included in the annual compensation review process, for all the Group's business lines and functions, under the supervision of Executive Management.

For a number of years, measures are taken locally to reduce any pay gap between men and women. As part of 2022 mandatory annual negotiations of BNP Paribas SA in France, a budget of EUR 10 million to be divided equally in 2023 and 2024 was dedicated to the company's actions to promote gender equality in career paths and the promotion of women and to correct any discrepancies in annual compensation. Each year, the Group's other entities also have the option of requesting dedicated budgets as part of the budget discussions on the annual compensation review process. It should be noted that in 2023, more than 5% of women were promoted (change in classification) compared to less than 5% for men.

In addition, in 2023, the Group awarded more than 8,200 key employees<sup>5</sup> a loyalty plan (expiring in June 2026) called the Group Sustainability and Incentive Scheme (GSIS) the payment of which is subject to 20% of the initial award on achieving the objectives of the CSR criteria<sup>6</sup>, the rest is indexed to the Group's operating performance<sup>7</sup>.

<sup>1</sup> European Directive CRD 5 of 20 May 2019, amending European Directive CRD 4 of 26 June 2013, as transposed into French law in the French Monetary and Financial Code, as well as Delegated Regulation 2021/923 on the criteria for identifying Material Risk Takers (MRTs) and the European Banking Authority guidelines on prudent compensation policies of 2 July 2021.

<sup>3</sup> Gender equality index of the Group in France: [https://group.bnpparibas/uploads/file/index\\_eqlite\\_hf\\_022023.pdf](https://group.bnpparibas/uploads/file/index_eqlite_hf_022023.pdf). Scope: Entities with more than 1,000 employees.

<sup>4</sup> UK Gender Pay Gap Reports: <https://www.bnpparibas.co.uk/en/bnp-paribas-in-the-uk/legal-notice/gender-pay-gap-reports/>.

<sup>5</sup> Key employees: SMP, Talents or key local resources.

<sup>6</sup> For the 2020 plan, payable in 2023, the achievement of six out of the nine CSR criteria defined when the plan was allocated, triggered the payment of the amount initially allocated for CSR performance to the plan beneficiaries, in accordance with the plan's regulations.

<sup>7</sup> For employees subject to special regulatory frameworks, this loyalty scheme is adjusted in accordance with the CRD European Directive.

## **Social benefits relating to retirement and savings**

The BNP Paribas Group has set up employee pension plans, the characteristics of which are defined according to local legislation as well as the HR practices and policies defined locally. These plans, set up and financed by the Group, supplement the mandatory and legal plans which the entities contribute to for employees. They can be of two different types (defined-benefit plans or defined-contribution plans), as presented in chapter 4 *Financial statements – Salaries and employee benefits*.

Over the past few years, the BNP Paribas Group has implemented a wide campaign of converting defined-benefit plans into defined-contribution plans.

In France, employees benefit from defined-contribution retirement savings schemes under the conditions set out in chapter 4 *Financial statements – Salaries and employee benefits*. Several other countries have set up defined-contribution pension plans (Belgium, Switzerland, Italy, *etc.*). In the United Kingdom and the United States, defined-benefit pension plans, closed to new entrants, co-exist with defined-contribution plans.

In France, employees are involved in the Group's performance through profit-sharing and incentive schemes.

In respect of the 2023 financial year, EUR 212.6 million will be distributed to the 63,668 beneficiaries of entities that are members of the Group profit-sharing agreement in France (compared with EUR 201 million to 63,264 beneficiaries in 2022). This amount, calculated on the basis of a special formula, is nearly 10 times higher than the legal formula.

With regard to incentive schemes, almost all Group employees in France (nearly 99%) were covered by an incentive agreement at the end of 2023. The incentive agreement between BNP Paribas SA and BNP Paribas Financial Markets (formerly BNP Paribas Arbitrage) links employees with the financial objectives defined as part of the GTS 2025 plan.

The amount distributed is based on three components:

- gross operating income based equally on that of the Group and that of CPBF;
- dividends and share buybacks for the purpose of redistributing earnings;
- a component based on two CSR criteria<sup>1</sup>.

It should be noted that the dividend component integrated from 2013 makes it possible to link employees to results in the same way as shareholders. Since its introduction more than ten years ago, a cumulative amount of EUR 440 million has been paid in respect of the dividend component in the calculation of incentive schemes, which is equivalent to nearly three years of incentives.

Under this agreement, an amount of EUR 164 million will be divided between 46,606 beneficiaries for 2023 (exactly the same amount as was distributed to 46,314 beneficiaries in 2022).

Elsewhere in the world, similar schemes exist. At BNP Paribas Fortis in Belgium, part of the so-called "collective" variable compensation is linked to the achievement of CSR objectives. The 2023 objectives were met, thus a total of EUR 23.3 million was paid to all employees. Similarly, in Luxembourg, in 2023, the Group's entities paid non-managerial employees an incentive bonus with respect to 2022, which amounted to nearly EUR 3.3 million.

In terms of collective savings, in France, the management offering to employees in the Group's savings schemes (PEE, PERECO and PERO) changed in early 2023. The expansion of the financial management offering negotiated with the representative trade unions has made it possible to introduce new investment vehicles incorporating ESG criteria, including SRI-certified funds<sup>2</sup>. This change also makes it possible to cover the different investor profiles, investment horizons, more risk levels, and to diversify the geographical areas of investment beyond the euro zone.

In addition, most of the Group's companies in France support employees' voluntary savings efforts through savings plans (PEE and PERECO) with a matching cumulative contribution of EUR 69 million paid in 2023.

## COMMITMENT 6: A LEARNING COMPANY SUPPORTING DYNAMIC CAREER PATH MANAGEMENT

---

Commitment 6 is included in the "Human Capital" pillar of the *People Strategy* whose objective is to anticipate and constantly adapt resources by continuing to recruit, promoting the mobility of talents and strengthening the development of their skills. The Group CSR dashboard indicator on Commitment 6 is the **share of employees who completed at least four training courses** (see 7.1 *Strategy*).

### ATTRACTING CANDIDATES AND RETAINING EMPLOYEES

#### In 2023, BNP Paribas is still seen as a top employer

For more than 25 years, the Top Employers Institute has certified the quality of candidate companies' Human Resources practices. To do this, it carries out an audit covering 20 topics. For the tenth consecutive year, BNP Paribas was awarded the "Top Employer Europe 2023" label by the Top Employers Institute with an overall score of 88.75%<sup>3</sup> thanks to the certification of nine of the Group's European countries<sup>4</sup>. Other Group countries and entities<sup>5</sup> also benefit from the "Top Employer" certification.

France, for its part, has renewed its Happy Trainees survey of students who have had professional experience at BNP Paribas. 89% among them recommend the Group.

#### Changing the perception of our jobs through the #UnexpectedJobs campaign

The unprecedented and innovative #UnexpectedJobs campaign launched by the Group in 2023 aims to break down the clichés about banking jobs in order to strengthen our attractiveness as an employer, as well as employee engagement and pride in

<sup>1</sup> An environmental criterion for the annual reduction of greenhouse gas emissions per employee and a societal criterion linked to the number of solidarity hours completed by employees.

<sup>2</sup> SRI: Socially responsible investment.

<sup>3</sup> The score of 88.75% obtained by BNP Paribas means that the Group applies at least 88.75% of best practices in the field of Human Resources.

<sup>4</sup> Belgium, France, Italy, Luxembourg, Poland, Türkiye, Spain, Portugal and Germany, which is certified Top Employer for the first year. It should be noted that Ukraine did not participate this year.

<sup>5</sup> Latin America (Argentina, Brazil, Colombia, Mexico), BNP Paribas Personal Finance (United Kingdom, Italy, Belgium, Spain, Portugal and South Africa and the Netherlands for the first year), Algeria as well as BNP Paribas Real Estate France.

belonging. Thousands of employees from all BNP Paribas countries and activities have become ambassadors by showcasing their profession in an exciting and creative way. They have chosen job titles presented in an original way on LinkedIn, while explaining how these unusual titles reflect, in their opinion, the way in which they make a useful contribution to the Group's transformation, serving all of its clients and customers.

In terms of results, this campaign had a major positive impact, with:

- more than 5,400 spontaneous posts viewed 14.7 million times;
- a quarter of French people between the ages of 18 and 55 said they had seen the campaign;
- a strong increase in views of the Group's job offers (+54% compared to 2022).

#UnexpectedJobs has since been nominated for the 2023 Digital HR Awards, Innovation category.

The second wave was launched in September 2023 in 10 countries, and many other local initiatives are being rolled out, such as the creation of an “#UnexpectedJobs generator” launched at Vivattech, and an #UnexpectedDay in Paris, at which 80 bankers were recruited in a single day.

## Several initiatives to attract the best candidates

To reinforce its attractiveness to candidates and employees, BNP Paribas is committed to a process of constantly improving its employer brand:

- the Employer Promise, updated in 2022 and structured around BNP Paribas' purpose as a leader in sustainable finance, promotes three main pillars: Sustainability & Impact, Development & Career Perspectives and a Good place to work. In 2023, it was rolled out in many countries and Group entities to bring consistency and clarity to the way in which BNP Paribas is positioned as an employer throughout the world;
- in conjunction with Universum, the Group renewed a study to measure the perception and effectiveness of its Employer Promise among more than 27,000 students from business schools in five major markets (France, Italy, Germany, Spain, and for the first year India). Although their priority expectations still relate to compensation, the benchmark for a future job and training, in 2023 the study noted a significant increase in expectations around work-life balance and job security. The Universum study allows to adjust the employer brand strategy at the level of the Group and the participating countries.

In France in 2023, the Group maintained its commitments to training and integrating young people by recruiting more than 2,500 new work-study students and more than 1,500 interns, along with nearly 300 on International Volunteer Programme (VIE) missions. Moreover, two-thirds of the offers offered on permanent contracts are accessible to young people entering the job market. In 2023, more than 19,000 employees under the age of 30, including all contract types, were recruited by the Group worldwide, of which 10,444 were under 25 (permanent, fixed-term contracts, work-study students, interns).

In September 2023, B-School by BNP Paribas completed its third start of the academic year scheme with 220 students preparing for their certifying training programmes in Paris, Lyon, Marseille, Bordeaux and Lille. Its range of certifications has been extended to those dedicated to business development with a BTS and Master's in addition to the Bachelor's. The school also welcomed its first class of students in Bac+5 Master's level 2 in IT Development, 52% of which were women.

In 2023, a new Graduate Programme marketing offer was created in order to capitalise on existing programmes and offer business school students a consistent global offer across the Group. This integrated offer is structured around three main themes in line with the Group's strategic priorities: (i) Investment and financing jobs, (ii) Tech & Transformation, and (iii) Jobs.

It proposes nine common principles specific to the Group's Graduate Programmes<sup>1</sup>. This offer clarifying the programmes, will help external candidates to better understand the specific nature of a Graduate Programme and what is involved.

## Sustainable finance at the heart of the employee journey

In line with the GTS 2025 plan, BNP Paribas is continuing its change management plan, with the aim of embedding and disseminating the sustainable finance culture throughout its employees' career journeys. This plan is based on the key moments of this journey, including recruitment, onboarding, performance assessments, mobility and training.

Particular attention is paid at the time of recruitment, *via* awareness-raising actions on the sustainable finance culture offered to employees responsible for recruitment.

The Group has also enhanced its skills catalogue with the sustainable finance theme, and a new professional Sustainability family was created to support the Group in its transformation.

In addition, employees have the opportunity to train and acquire new skills through the *Sustainability Academy*. At the end of 2023, more than 4,500 employees had declared a skill related to sustainable finance.

Finally, BNP Paribas has also updated the Management Principles common to the entire Group, by reaffirming the pivotal role of the manager as a relay for its sustainability strategy. During the 2023 annual performance review process, managers were encouraged to promote any employees' sustainability initiative.

## A company that listens to its employees (Voice of Employees)

In 2023, 71 relationship “Pulse” surveys were carried out in 57 of the Group's countries, with increasingly high participation rates of 71% on average. Nearly 176,000 Group employees were surveyed during this period. The Engagement/Management/Well-being and Cooperation/Operational Efficiency themes are those which occur most often now, and the sustainable finance theme is starting to appear more often.

<sup>1</sup> (i) type of contract, (ii) length, (iii) years of experience, (iv) number of promotions per year, (v) desired turnover, (vi) networking opportunities, (vii) training opportunities, (viii) recruitment process and (ix) career management.

The vast majority of surveys launched in 2023 by the Group's various business lines and entities<sup>1</sup> incorporated three common questions related to employee engagement, in particular pride in belonging to the Group, adherence to the strategy and involvement in work. The overall engagement score, based on a consolidation of all local engagement scores, reached a high level of 85 out of 100.

## DEVELOPING SKILLS AND IMPROVING EMPLOYABILITY

### Skills management

The work that BNP Paribas does on defining, identifying and developing skills is an essential foundation for all of our actions, to develop each person's potential and commitment.

In 2023, 13 new business skills were created jointly with the entities, particularly in the Data, Risk, Finance and Budget and Insurance families.

In addition, since this year, employees, managers and HR have access to a new tool to identify the skills acquired and those that need to be developed. This tool now enables Group HR to measure soft skills and two families of business skills: sustainable finance and data. Thus, all employees can take ownership of their skills development and employability. Finally, they have the option of declaring their skills in the *About Me* Group tool, which allows HR teams to gain an in-depth knowledge of each employee's skills in real time. This mapping process has enabled us to fulfil our goal of creating a real employee journey by focusing on development, mobility and strengthening commitment.

### Anticipating the skills needs of the future

The skills anticipation exercise, also called Strategic Workforce Planning (SWP) is a joint approach between Human Resources and the business lines. Its aim is to identify, in advance, the skills needs required for the different business lines over the next three years in order to offer employees appropriate career paths (upskilling or reskilling), particularly towards the jobs with a shortage of workers and the skills of tomorrow.

More than 30 business lines and functions have been involved in this process. The work consists of interviewing members of the Executive Committees within the Group to understand their vision of the change or transformation of their scope/business. Translating this vision into skills makes it possible to create the jobs of the future or develop current jobs.

It then remains to compare the skills required over the next three years with those declared by employees in the same scope, in order to understand the skills gap. The results of the exercise thus give each business line and HR manager a clear view of the so-called sought-after jobs. Members of the Executive Committee have the necessary data to implement an action plan in order to reduce these gaps (mobility, employee development and retention of rare profiles).

In order to take account of the impact of artificial intelligence (AI) on our activities, an exercise was carried out in 2022 on the Data and AI jobs, and a second exercise is planned for 2024.

The report, entitled "The Evident AI Talent"<sup>2</sup> places BNP Paribas Group as the number 1 bank in Europe and 6<sup>th</sup> worldwide in terms of AI. Currently, 700 employees have a job fully dedicated to AI, and 5,744 employees have declared AI skills.

Skills anticipation exercises have also made it possible to create a new offer: "Internal Work-study contracts" for employees. This system allows employees to be promoted to a sought-after role by taking up their duties immediately, combined with work-study training in their new job. The first promotions were implemented in 2023 for IT and Human Resources positions.

### On-the-job development: the importance of discussions between employees and managers

At the heart of career management and at the service of employees, managers and HR, the *About Me* platform aims to:

- identify the skills of all employees: in December 2023, approximately 134,000 employees at Group level (of which approximately 53% were women) declared their skills;
- help employees implement their development plan and pursue their professional development;
- streamline interactions between employees, managers and HR, thus promoting cross-functional mobility;
- carry out the annual performance review process.

The performance review process, which is systematic for all employees, is digitised and simplified in *About Me*: it starts at the beginning of the year with the definition of individual, collective and/or cross-functional objectives. These objectives must be clear, achievable, defined over time, measurable and relevant to the nature of the activity and the responsibility of the position. Feedback is provided over the course of the year to identify skills development needs and to enhance the Personal Development Plan.

The annual performance review is an important time for discussion between the employee and their manager: it enables them to assess the past year, to define development opportunities and to look ahead to the coming year. 96.6% of the Group's eligible employees receive a performance assessment in the *About Me* tool for 2023.

<sup>1</sup> Covering 86% of all Group employees at 31/12/2023.

<sup>2</sup> The Evident AI Talent Report June 2023, ([evidentinsights.com](https://evidentinsights.com)).

## Mobility: one of the major issues for the strategic plan, essential for employability and skills development

Mobility is embedded in the culture of BNP Paribas. It is an essential vector for developing on-the-job skills.

In total, the Group counted 22,241 mobilities in 2023 (down 11% compared to 2022) including 21% cross-functional mobilities<sup>1</sup> (stable compared to 2022). In France, 8,274 mobilities were made (down 21% compared to 2022), of which 25% were cross-functional mobilities (stable compared to 2022). Internal mobility is managed through an internal job market management tool covering almost all employees in the Group. Thus, in 2023, more than 25,000 ads were published in the Group tool, and more than 10,500 positions were filled through these advertisements.

In order to better meet the needs of the business lines/functions and the Group's transformation challenges, pooled centres of expertise in France, Portugal and India manage all of the Group's internal and external recruitments for all types of contracts. Thanks to their proximity to the business lines and their global and cross-functional vision of the internal job market, these teams strive to optimise the candidate mobility experience.

### Career Days: a key event dedicated to professional development

After nine editions of the *Mobility Days*, and with a view to creating a 360° career event, in 2023, the Group launched the first edition of the *Career Days* for one month in 45 countries. This event, rolled out at Group level, provided an opportunity for each employee to gain a better understanding of the Group, its strategic challenges and opportunities for development. It also allowed them to take stock of their skills, training and development needs, to work on their career projects, and for those who wish to go ahead, to start the mobility process with their manager. The hybrid or digital formats brought together more than 26,200 participants at more than 400 events around agile, data, tech, sustainable finance, diversity and inclusion. The enthusiasm of countries to offer international events (20 in 2023) as well as the centralised coordination system (20 conferences) led to a very high level of participant satisfaction.

### Training offer

#### TRAINING COURSES ATTENDED: AVERAGE RATE AND NUMBER OF HOURS<sup>(1)</sup>

|   | 2022         | 2023                       |
|---|--------------|----------------------------|
| Share of employees who completed at least one training course (including mandatory training courses)          | 98.4%        | 98.8%                      |
| <b>Share of employees who completed at least four training courses (including mandatory training courses)</b> | <b>97.4%</b> | <b>98.2%<sup>(2)</sup></b> |
| Average number of hours per employee  | 21.8h        | 24.2h                      |
| Average number of hours per employee (excluding mandatory training courses)                                   | 18.6h        | 19.8h                      |

(1) Only those training courses mentioned as "terminated" in 2023 are counted in the Group's My Development tool.

(2) Of which 51% are women, and nearly 24% are employees over the age of 50, demonstrating fair access to training regardless of gender or age.

Indicator monitored in the Group's CSR dashboard.

#### TRAINING: OVERVIEW BY CONTENT<sup>(1)</sup>

|   | 2022 | 2023               |
|---|------|--------------------|
| Hard skills   | 52%  | 48% <sup>(2)</sup> |
| Risks & compliance  | 28%  | 35% <sup>(3)</sup> |
| Culture & awareness of the Group                                | 14%  | 13%                |
| Soft skills (including cross-functional and behavioural skills) | 6%   | 4%                 |

(1) Percentage of training actions by content out of all training courses attended in the Group (including mandatory training courses). An employee may attend several training sessions.

(2) Of which 20% on technology.

(3) Of which 80% mandatory training courses.

<sup>1</sup> Internal Group inter-entity and inter-business mobilities.

## Forging a culture of continuous development

The training strategy is based on two major pillars to support the GTS plan and the *People Strategy*: strengthening the learning culture and improving the training experience, in order to allow everyone to quickly and easily access the right resource at the right time.

Many entities have organised their own Learning festival to promote available offers (Corporate & Institutional Banking, BNP Paribas Personal Finance, Compliance, BNP Paribas Leasing Solutions and Arval) and some were linked to the Group major Learning moment, “Learn & Grow“, during the *Career Days*. This first edition of a Group-level career event was organised based on a system that enabled entities and regions to deploy their own local promotion organisation. The common thread was the GTS plan, and more than 3,000 unique participants from 54 countries connected to one or more of the 19 sessions and conferences offered.

## A development model by the academies to support the GTS 2025 plan

The GTS 2025 plan has positioned *Technology* and *Sustainability* as pillars of the strategy.

Regarding *Technology*, the Group offers numerous training courses:

- the Digital, Data & Agile Academy (DDAA) continues to offer training courses to support skills development associated with the key roles of Digital, Data and Agile. 2023 was the opportunity to review the offer to incorporate the results and guidelines of the skills anticipation exercises, in particular on Data. Two new roles were created with the associated pathways, including those of Machine Learning Engineers and AI/ML Model Reviewer. The methods are also evolving, with the introduction of cohorts of learners or internal work-study programmes in order to best help employees work towards new target positions. The internal work-study programme associated with the Reskilling Business Analyst training programme facilitated the mobility of 15 employees in 2023, 80% of whom were women.

The DDAA includes 42 upskilling courses, 17 reskilling courses and 38 reskilling boost courses. In 2023, there were 1,454 registrations for the DDAA programme, corresponding to 1,368 registered employees, of which 42% were women (the share of women among learners was 26% at the launch in 2018);

- the IT Academy is a portal launched by the Group IT function in early 2023, which centralises all training content on technologies open to all Group employees. It had nearly 41,000 visits in 2023;
- Data City is a collaborative platform launched in February 2023 around Data. It aims to meet the needs of the business lines by improving collaboration and simplifying access to content and tools. Since its launch, there were 13,700 unique users;
- the transformation hub *Bivwak!* also offers thematic packages and workshops in the fields of Data and new technologies;
- the sixth “Artificial Intelligence Summer School” permitted to bring together the Data Scientists, ML engineers, Analytics and IT Group communities for two full days of presentations, demonstrations and discussions on the latest progresses in Artificial Intelligence. The event was attended by more than 2,000 employees around the world;
- in Agile, three career paths to take new positions were created in 2023 (see *Agile transformation at scale, progress report, Commitment 5*).

To measure its technology skills development, the Group monitors these two indicators: the number of Group employees having completed at least 7 hours of training in the technological field reaches 9,948 in 2023 (16,546 in 2022), and the number of Group employees having completed at least 35 hours of training in the technological field reaches 1,385 in 2023 (1,088 in 2022).

Regarding *Sustainability*, the *Sustainability Academy*, launched at the end of 2022, materialises the Group’s ambition to equip all its employees with the knowledge and skills necessary to achieve its objectives in terms of sustainable development and finance. Whatever their job, function or type of business activity, each employee can take ownership of the challenges of Sustainable Development and Finance and understand the Group’s role and commitments on the five themes<sup>1</sup> of the “*Sustainability*” Pillar of the GTS 2025 plan, using the “Common Base” area. A “Specific Content” area provides access to the knowledge and techniques required for each scope of the Group’s activity, to support the transition of its clients and customers. In 2023, more than 86,000 employees completed at least one *Sustainability Academy* training course, with an average of 1.7 hour of training per person.

The Group also supports the deployment of “fresks”<sup>2</sup>, which are collaborative workshops facilitating the transition to action. The fresks have raised awareness on climate and biodiversity issues among employees in more than 20 countries, the Executive Committees of entities and countries as well as shareholders. In 2023, more than 15,770 employees took part in these workshops.

## Dedicated programmes strengthening the Group’s culture at the highest level of the organisation

As Group leaders (Top Executives (LfC), Senior Managers, Talents) are key to contributing to the success of the GTS 2025 plan, a global training offer is provided, particularly on sustainability topics.

The Leadership Corner is the space dedicated to this community built as an academy of rich and varied resources to strengthen the leadership culture, which includes:

- a webinar series *Preparing for Tomorrow*, observing, from a leadership perspective, future trends in positive innovation technology and business development with positive impact;
- certification programmes: digital programmes co-built with Harvard in the field of *Smart Working*/hybrid management and new technologies and programmes with some major universities recognised around the world, in the field of transformation management;
- programmes to accelerate understanding of BNP Paribas’ challenges and ambitions in terms of sustainable finance, adapted to each level of leadership.

To meet the ambitions of the GTS 2025 plan on the Sustainability component, the certifying training course on *Positive Impact Business* co-created by BNP Paribas and the University of Cambridge has again met with great success this year with the pioneers of positive impact. Over the past five years, it has provided hybrid training and certification to 500 pioneers in sustainable development, so that they can incorporate it into their customer discussions and solutions.

<sup>1</sup> Circular economy, Transition to carbon neutrality, Biodiversity conservation, Social inclusion and the Development of sustainable savings, finance and investment.

<sup>2</sup> Climate, Biodiversity, Circular Economy and Mobility Fresks, and 2 tonnes workshop.

In addition, the *Shape The Future* programme launched in 2022 has continued to strengthen in 2023. The *Mastering Sustainable Finance* certification programme was built, launched and completed with a first cohort of 130 Top Executives. A second cohort of 150 Top Executives was launched in September 2023. At the same time, discussion and action workshops dedicated to the Executive Committees have been built and implemented, in partnership with Insead, with the aim of integrating positive impact into the business lines' revenue strategies.

#### **News from the Talents programme “Leaders for Tomorrow”**

At the end of 2015, the Group launched the “Leaders for Tomorrow” initiative, aimed at identifying, developing and promoting high-potential employees in order to ensure the succession of the members of the Group's cross-functional Executive Committees for business, functions and regions (LfC).

These “Leadership Talents” are selected according to a rigorous Group process by their managers and HR managers on the basis of their skills, experience, sources of motivation and personal predisposition to become leaders. At the end of 2023, the programme brought together nearly 7,000 Leadership Talents belonging to the three levels (Emerging, Advanced or Top) through different business lines, functions and geography. More than 4,500 Leadership Talents of some 40 nationalities from all business lines/functions have benefited from dedicated support and development systems. In addition to Group offers grouped by theme (My Positive Impact, Me and Change, Me with my Team), initiatives are proposed locally by the business line or function.

## **7.4 Our civic responsibility: being a positive agent for change**

BNP Paribas' commitment to society is divided into three objectives:

- **Commitment 7:** Products and services that are widely accessible;
- **Commitment 8:** Supporting human rights and combatting social exclusion;
- **Commitment 9:** Corporate philanthropy policy focused on the arts, solidarity and the environment.

### **COMMITMENT 7: PRODUCTS AND SERVICES THAT ARE WIDELY ACCESSIBLE**

---

#### **THE GROUP'S ACTION TO PROMOTE THE INCLUSION AND FINANCIAL HEALTH OF ITS CLIENTS**

**The Group has set a target to serve by 2025 6 million beneficiaries of products and services promoting financial inclusion** (see section 7.1 *CSR policy management dashboard*), combining the number of Nickel accounts opened since its creation and the number of beneficiaries of microloans distributed by the microfinance institutions financed by the Group (*pro rata* to the financing). The strong development of the Nickel inclusive offer enabled the Group to **exceed 3.9 million inclusive product beneficiaries at the end of 2023**.

#### **Continued support for microfinance institutions: EUR 345 million in 2023**

For almost 35 years, BNP Paribas has been committed to inclusive finance by directly financing 86 microfinance institutions (MFIs) in 35 countries, for a cumulative amount of EUR 1.5 billion, through various initiatives including: direct financing to MFIs, investment in financial inclusion funds and the distribution of savings products dedicated to microfinance. BNP Paribas' support for microfinance has historically benefited nearly three million people since 1989, of which 84% are women.

At the end of 2023, this support reached EUR 345 million (up by EUR 13 million compared to last year), thereby directly financing 21 MFIs in 13 countries and indirectly more than 100 MFIs around the world, by investing in 14 dedicated funds benefiting nearly 260,000 people. New credit commitments were made to these institutions in 2023, particularly in countries where the Group has a significant presence, such as Morocco, India, Indonesia and Brazil.

The Group is very attentive to the social performance of its MFIs portfolio, which obtained a score of 78% when assessed by the SPI5 tool (Social Performance Indicator 5) of Cerise (a NGO), placing it well above the global average score of 61%.

### 30 years of partnership with Adie to promote Entrepreneurship in France

2023 marks the 30<sup>th</sup> year of the partnership established between BNP Paribas and Adie (*Association pour le droit à l'initiative économique* – Association for the Right to Economic Initiative), which was renewed for three years.

This partnership helped to finance Adie's micro-loan portfolio and develop financial innovation with a strong social impact, including the first Impact Bond and the first ISLF+ (Inclusive Sustainability Linked Financing). The Group is proud to support ADIE whose beneficiaries for 50% have income below the poverty line, for 22% have no qualifications, for 32% are under the age of 30 and 46% are women.

Since 1993, CPBF has granted its partner EUR 192 million in total financing to support nearly 40,000 small businesses and refinance more than 47,000 Adie micro-loans.

### Nickel, a powerful tool for financial inclusion

Nickel is a Group subsidiary present in five European countries. It allows everyone, including people who have been banned from banking, to unconditionally open an account with an IBAN and a payment card, and thus to pay and to be paid freely. In 2023, Nickel reached nearly 3.7 million customers, up by more than 700,000 in a year, of which 77% have an income of less than EUR 1,500 per month, 30% are unemployed, without regular income or living on benefits and 30% do not have a personal address. Nickel's first impact report – published in 2023 – shows convincing results achieved in terms of financial inclusion: 28% of its customers have opened their first current account. Of these newcomers to banking, 24% went on to find a job and 18% a home.

Since it was created, Nickel has collaborated with charitable organisations such as the French Red Cross, *Crésus* and Action Against Hunger. Nickel distributes its products through a network of more than 10,000 newsagents and points of sale in France, Belgium, Portugal, Spain and Germany.

### Support for vulnerable customers

The Group considers that the role of a responsible bank is to support its customers both financially and personally, even in the most difficult times. By way of example, CPBF systematically identifies its financially vulnerable customers and offers them a special banking offer, the Account Package (*Forfait de Compte*), to help them manage their expenses. These customers may also be supported by advisors trained in budgeting solutions to help with account management. Nearly 20% of those customers have signed up to this offer, and 40% of the customers monitored have not exceeded their agreed banking limits, as a consequence.

In early 2024, AXELLE, the CPBF's platform for vulnerable customers, was updated. It is now easier for them to find the help, advice and opportunities offered by partner associations, social enterprises and companies members of the French *Collectif des Entreprises pour une Economie plus Inclusive* (Business collective for a more inclusive economy), to better manage their budget. AXELLE is 100% free and anonymous.

Finally, financial education has proven to be effective in combatting over-indebtedness, promoting economic development and improving financial health. Hence, several Group entities are rolling out training programmes on this topic:

- BNP Paribas Personal Finance's "Responsible Budget" online platform is dedicated to young people, helping them to learn about key concepts of budget management, savings, loans and banking. In 2023, more than 59,000 young people received financial education through this platform, partnerships and webinars;
- in Italy, the tenth edition of BNP Paribas Personal Finance's Findomestic Camp was held in May 2023, closing the PerCorsi Young financial education programme, delivered this year to more than 46,000 students.

### TAKING CUSTOMERS' SPECIFIC NEEDS INTO ACCOUNT

BNP Paribas' role is to welcome its customers by providing them with structures, teams, products and services adapted to their specific situation. Whether supporting women-led small businesses, being accessible to people with disabilities or offering products adapted to a pivotal moment in life (childcare, studies, retirement, illness, etc.), each year the Group extends its customer support system in order to best meet their specific needs.

### Accelerating female entrepreneurship

The role of women in economic and social development is a major issue, which is why BNP Paribas has been involved in supporting female entrepreneurship and small women-led businesses for several years:

- in France, the ConnectHers programme helps women entrepreneurs to create and develop their projects, through the mobilization of a network of 300 referents, access to an ecosystem of partners, networking workshops and events (200 in 2023), acceleration and support programmes (70 women entrepreneurs supported in 2023). This programme was also rolled out by BGL BNP Paribas in Luxembourg in 2023 with workshops that hosted more than 200 people;

- in Ukraine, in 2023, UkrSibbank launched the Smart Lady programme, a commercial offer dedicated to female entrepreneurs by exempting them from payment and cash handling fees. In addition, and for the fifth consecutive year, a series of seminars offered mentoring sessions to help women to set up and grow their businesses, even in war time.

## A range of offers tailored to various audiences

In order to best support its customers in their life projects, the Group's entities have developed offers adapted to each individual's specific needs.

Since 2019, BNL has developed a range of products dedicated to supporting families and young people, at preferential rates and without fees. They include: *Adottami* and *Nuovi Nati* to help new parents, *Futuriamo* and *Scuola Piu* to help students to continue their studies regardless of the cost, thanks to loans with a maximum term of 10 years, and *Arte & Cultura che passione* to allow more people to become art students, with loans from EUR 500 to EUR 5,000 over two years.

In 2023, BNP Paribas Personal Finance in France offered a long-term lease option to single-parent families, giving them easier access to cleaner vehicles (Crit'Air 0 or 1). While their temporary status prevents temporary workers from accessing traditional bank loans, BNP Paribas Personal Finance and the FASTT (*Fonds d'Action Sociale du Travail Temporaire* – Temporary Work Social Action Fund) have signed a partnership to give them access to a range of loan products designed especially for them, such as personal loans, loan repurchase solutions and adapted insurance pricing.

In France, in conjunction with associations hosted by *L'Ascenseur*, such as Article 1, BNP Paribas renewed its student loan without a guarantor scheme to facilitate access to higher education for scholarship holders. Between March 2021 and December 2023, nearly 1,800 students had benefited from this offer, for a total amount of EUR 19 million in loans.

In order to provide appropriate support for its senior customers, since 2021 BNL offers *Futuro Pensione* (Future Pension), for customers wishing to buy back three-month periods they spent studying, in military/civilian service or in professional training in order to bring forward their retirement, due to a job loss or a desire for early retirement.

## Improved accessibility for people with disabilities

BNP Paribas takes action to improve the accessibility of its products, services, documents and branches open to the public in all of its entities around the world. Thus, a regularly updated public accessibility register of CPBF branches is distributed to the branch network in order to accommodate people with disabilities under the best possible conditions.

In Italy, BNL since 2019 has a team of hearing-impaired advisors to support its hearing-impaired customers. Meanwhile, BNP Paribas Polska has launched a sign language translation service in all its customer centres, and has made its call-centers accessible to hearing-impaired people. Since the launch of this service in 2020, more than 1,500 calls assisted by an interpreter have been conducted.

In Belgium, 53% of BNP Paribas Fortis branches are accessible to people with reduced mobility. People with partial or complete blindness can receive all their account statements in Braille language free of charge and use ATMs equipped with voice recognition system. Hearing-impaired people have the possibility of being accompanied by sign language interpreters for all their appointments.

TEB has also improved the accessibility of its services for visually impaired or with reduced mobility customers, increasing the number of ATMs adapted for the visually impaired to 205, and those adapted for people with reduced mobility to 1,103 in 2023.

## Support for victims of financial domestic abuse

Active for several years in the fight against gender-based violence, BNP Paribas chose in 2023 to strengthen its approach regarding financial domestic abuse, a term designating acts aimed at maintaining dependency on household members or withholding their financial resources. The Group is committed to strengthening its support for customers affected by financial abuse, primarily by training its advisors to listen to and guide victims. In addition, BNP Paribas Personal Finance took part in a coalition along with associations (*Solidarité Femmes*, *la Fondation des Femmes*, *Samusocial*, etc.) and public authorities to collaborate on the creation of awareness-raising videos on this topic.

## Support for sick patients

BNP Paribas Cardif promotes access to insurance in the event of aggravated health risks, and is continually boosting its offer to make it more inclusive. In France, adapted and specific pricing exists for people with certain conditions such as gestational diabetes, psychological disorders or Parkinson's disease. In 2023, this approach was extended to chronic inflammatory bowel diseases (IBD). BNP Paribas Cardif takes into account medical research and the improvement of treatment strategies to offer insurance coverage and pricing better suited to the situation of patients. In 2023, 99% of home loan insurance applications were accepted, thanks to the cover offered in the "Atout Emprunteur" (Borrower Insurance) policy marketed in BNP Paribas branches.

Finally, BNP Paribas Cardif France decided to supporting its most vulnerable customers by creating a social action fund. It aims to offer complementary financial assistance to customers who are in a vulnerable situation due to a serious health problem or an accident. This help is separate to policy cover and governed by a legal regulation that defines the eligibility conditions.

## COMMITMENT 8: SUPPORTING HUMAN RIGHTS AND COMBATTING SOCIAL EXCLUSION

---

### BNP PARIBAS IS COMMITTED TO RESPECTING HUMAN RIGHTS

#### Commitment at the highest level

BNP Paribas adheres to internationally-recognised human rights standards. This commitment is expressed at the highest level in the BNP Paribas Declaration on Human Rights<sup>1</sup>, signed by the Group's Executive Management and promoting the respect of these rights within BNP Paribas' sphere of influence. The Chairman of the Board of directors and the Group Chief Executive Officer also co-sign the statement on modern slavery and human trafficking that BNP Paribas publishes annually.

The Group supports the United Nations Guiding Principles on Business and Human Rights, as well as the OECD's Guidelines for Multinational Enterprises, in accordance with the "Protect, Respect and Remedy" framework. It has chosen to follow the recommendations of the United Nations Guiding Principles reporting framework.

BNP Paribas takes part in the annual meetings of several initiatives, associations and working groups dedicated to human rights, including *Entreprises pour les Droits de l'Homme* (EDH) and the Human Rights Working Group of the French network of the Global Compact. In addition, BNP Paribas Asset Management is a member of the PRI (Principles for Responsible Investment) Advance initiative, bringing together investors committed to the advancement of human rights through their stewardship policy. Finally, in 2023, BNP Paribas Asset Management joined the Investors Against Slavery and Trafficking initiative, and is tackling modern slavery through this initiative in the Asia-Pacific region.

#### Awareness-raising and training

The Group focuses on employee training and awareness-raising, which are important components of its human rights risks management process. A "Human Rights and Business" training module, established in collaboration with EDH and available in eight languages, has been assigned since 2016 to Group employees tackling human rights issues as part of their professional missions.

Since 2016, more than 22,000 employees have completed this training. Lastly, a Business & Human Rights newsletter is sent monthly to Group employees working on human rights issues.

#### Management of "salient"<sup>2</sup> risks as part of the distribution of products and services

BNP Paribas has identified two "salient" risks in the distribution of its products and services:

- non-discrimination in access to financial services;
- right to privacy (protection of clients' personal data).

#### Non-discrimination in access to financial services

The Group believes that sustainable economic development promotes wider access to fundamental rights, which is why it strives to contribute to the accessibility of financial services in the communities where it operates (see *Products and services that are widely accessible*, Commitment 7).

#### The right to privacy

The protection of privacy remains an ethical priority for the Group, as evidenced by its inclusion in the Code of conduct. In 2023, BNP Paribas continued to reinforce and develop its global network of data protection specialists, integrated into all Group's territories and businesses. Worldwide, job assignments to apply the principles of data confidentiality and increase personal data protection knowledge occupy more than 100 full-time equivalents (2<sup>nd</sup> line of defence).

Created in 2018 and reporting to the RISK Function, the Group Data Protection Office (GDPO) support, advise and supervise data protection activities, including the implementation of continuous development programmes for Data Protection project managers and correspondents, and to identify and deploy good practices.

During 2023, improved procedures and guidance were created. The tools developed by the Group have also been updated to reflect these improvements (see *Management of risks related to personal data protection* in 2.4 Internal Control).

---

<sup>1</sup> Statement of BNP Paribas on Human Rights [https://cdn-group.bnpparibas.com/uploads/file/uk\\_declaration\\_bnp\\_sur\\_droit\\_de\\_l\\_homme.pdf](https://cdn-group.bnpparibas.com/uploads/file/uk_declaration_bnp_sur_droit_de_l_homme.pdf).

<sup>2</sup> "Salient" is the term used by the drafters of the United Nations Guiding Principles Reporting Framework.

## Key tools

Available to all employees, they cover:

- data protection risk assessment to identify and address data processing risks;
- reporting personal data breaches. Each employee can report any suspicious personal data breach for investigation<sup>1</sup>;
- the recording of personal data processing activities;
- evaluating the impact of data sharing.

These tools provide a single view on how the Group manages and assesses personal data protection.

In 2023, a Personal Data Protection Awareness module was completed by 96% of employees, boosting understanding of the Group's commitment to data privacy, and their own data protection responsibilities. This e-learning module is taken by newcomers. All external teams with assignments for BNP Paribas and third parties are required to complete a training module which covers data privacy standards and obligations. These trainings were completed by awareness campaigns during the year.

## Management of “salient” risks of breaches in human rights in the Group’s financing and investment activities

The activities of corporate clients may pose a risk to human rights, particularly in the area of workers’ rights, and have an impact on local communities.

The Group endeavours to identify, assess (due diligence process), monitor and encourage the improvement of the current and future performance of its clients operating in sensitive sectors, through the application of its investment and financing policies (see *Systematic integration and management of Environmental, social and governance risks (ESG)*, Commitment 3). The implementation of the ESG Assessment, an internal tool for assessing the maturity of the Group’s clients on five major ESG issues, including respect for human rights, continued in 2023. At the end of the year, all of the Group’s strategic clients had been covered by an ESG Assessment, and the rollout to other major corporate clients is ongoing.

To ensure that the existing system meets the requirements of the French Duty of Care, BNP Paribas set up a risk mapping of its clients taking into account both their business sectors and the countries they operate in. This tool covers human rights issues through the analysis of several criteria, such as child labour, forced labour, human trafficking and failure to respect the rights of local communities. These issues are weighted based on the sector and location. This mapping thus strengthens the ability of the business lines and functions concerned to implement the most appropriate in-depth vigilance measures (see section 7.7 *Vigilance plan*).

### Workers’ rights

The human rights criteria of financing and investment policies in sensitive sectors deal with issues related to workers’ rights in particular. In addition to child labour and forced labour, workers’ health and safety as well as freedom of association are assessed. These themes are also taken into account in the analysis of projects covered by the Equator Principles (see *Systematic integration and management of Environmental, social and governance risks (ESG)*, Commitment 3).

### Rights of local communities

Identified as another “salient” issue, the rights of local communities are at the heart of most controversies related to large industrial projects. Therefore, for its project finance activities, BNP Paribas encourages its clients to obtain the Free, Prior and Informed Consent (FPIC) of the local communities impacted by their projects. In addition, in the event that a project results in the relocation of neighbouring communities, a Relocation Action Plan (RAP) must be drawn up by the client in order to compensate the people affected.

As a signatory of the Equator Principles (EP) since 2008, BNP Paribas ensures that negative environmental and social impacts are avoided, and where applicable, remedied in its project financing activities. The application of the 4<sup>th</sup> version of the EP (2020), results in a better recognition of the United Nations Guiding Principles and an expanded use of certain standards recognised by the Equator Principles, such as the systematic use of FPIC in “designated countries”, whereas previously it was only optional.

### Due diligences and dialogue

In the event of suspected or identified serious abuses of human rights by a BNP Paribas customer or a company in its portfolio, the Group conducts in-depth due diligences and discusses the matter with the company concerned (see *Systematic integration and management of Environmental, social and governance risks*, Commitment 3).

For example, in 2023, the construction of a road in Africa displaced local communities from their homes. One of the conditions for the financing was the elaboration and execution of a RAP, integrated with a Stakeholder Engagement Plan to ensure the involvement of the people affected in the discussions concerning the resettlement. BNP Paribas, with other lenders involved in the transaction, required an independent consultant to review and monitor the RAP implementation, which include site visits. Regular meetings are organized with the independent consultant and if needed with the client to discuss the implementation of the plan.

<sup>1</sup> In accordance with the General Data Protection Regulation (GDPR), customers can exercise their rights in order to control the use made of their personal data. See page Data protection at the corporate site (<https://group.bnpparibas/en/data-protection>)

## COMBATTING SOCIAL EXCLUSION

As a committed and responsible organization, the fight against social exclusion is a priority for BNP Paribas, with two main areas of intervention: the integration of young people and support for local regions. The majority of these actions are carried by the Group's Foundation and described in Commitment 9 (*Corporate philanthropy policy focused on the arts, solidarity and the environment*).

The Group's active participation in the *Collectif d'entreprises pour une économie plus inclusive* (Group of Companies for a More Inclusive Economy) and Business for Inclusive Growth (B4IG) coalition also contributes to this. In addition to these actions, BNP Paribas supports employee's skills-based volunteering to non-profit organisations involved in tackling social inclusion (see *A Good place to work and responsible employment management*, Commitment 5).

In France, the Group contributes to several major programmes that have a positive impact on the professional integration of young people excluded from employment due to their social, geographical or ethnocultural origins, and in this respect supports nearly 280 associations committed to this cause. In addition, BNP Paribas joined the government "One young person, one solution" (*Un jeune, une solution*) plan as soon as it was launched.

In addition, through the solidarity funds offered in its collective savings schemes (PEE, PERECO, PERO), BNP Paribas allows its employees to use their company savings to support 30 Social and Solidarity Economy organisations working in favor of vulnerable groups.

### **Projet Banlieues (Neighbourhoods Project) supports those working on the ground in France, and is being extended to Italy**

The *Projet Banlieues* aims to support associations operating in the priority city neighbourhoods (QPV), which work in multiple areas such as education, social and professional integration and strengthening social bonds among communities. Since 2006, EUR 32 million has been raised, including EUR 9.1 million dedicated to 1,200 local associations benefiting 1.2 million people in the priority neighbourhoods, and the the rest to Adie, Afev, *Proximité* and *Entreprendre pour Apprendre*.

In 2023, *Projet Banlieues* supported 443 local associations spread over a large part of the territories covered by the CPBF branch network, including 153 new associations providing help to approximately 177,000 vulnerable people. Determined to take very concrete action in favour of social inclusion, in 2023, BNL launched an initiative mirroring *Projet Banlieues* in Italy, known as Progetto IncluCity. In close collaboration with local associations, it aims to create professional and cultural opportunities for young people from disadvantaged neighbourhoods in Milan, Padua, Prato, Rome and Naples.

## COMMITMENT 9: CORPORATE PHILANTHROPY POLICY FOCUSED ON THE ARTS, SOLIDARITY AND THE ENVIRONMENT

---

The BNP Paribas Foundation has been major and expert player in corporate philanthropy since 1984. It structures and coordinates the international development of the BNP Paribas Group's philanthropy everywhere the latter is present, as well as its 11 foundations and endowment funds around the world. Its focus is towards projects promoting solidarity, culture, and the environment.

In 2023, the BNP Paribas Group's philanthropy allocated more than EUR 90 million to public interest activities, of which more than EUR 30 million coming from exceptional donations:

- more than EUR 12 million allocated by TEB to support the victims of the earthquake that struck Türkiye;
- nearly EUR 3 million allocated by BMCI to help victims of the earthquake that hit Morocco;
- EUR 20 million stemming from the share buyback programme were paid to more than 90 organisations working in three current priority areas<sup>1</sup>: the fight against extreme poverty and violence against women, integrating disadvantaged people into society (looking after refugees' welcome, equal opportunities, professional integration), the climate and biodiversity.

The remaining EUR 60 million (figure estimated at 1 February 2024), excluding exceptional support for extreme poverty, was divided into the following three areas of action: solidarity, culture and the environment.

## SOLIDARITY

### **Responding to emergencies**

#### **Combatting extreme poverty**

While the global economy is experiencing inflation that affects the most vulnerable groups, the Group's commitment to combatting extreme poverty amounts to nearly EUR 10 million worldwide over three years, primarily thanks to its share buyback programme in 2023. In France, EUR 3.5 million was dedicated to supporting people in food and housing emergencies with the help provided to the Group's partner associations, including *Restos du Cœur*, *Habitat & Humanisme* and Food Banks, amongst others.

<sup>1</sup> List can be consulted on the Group's website: <https://group.bnpparibas/en/news/more-than-30-million-euros-in-exceptional-donations-in-2023-to-address-urgent-needs>

## Responding to natural and humanitarian disasters

The Rescue & Recover Fund makes it possible to react quickly and effectively worldwide in the event of a humanitarian or environmental disaster. The Fund collects donations from employees, CPBF customers and retirees who are members of the *Amicale des retraités* (Retired Employees Circle). The Group generally doubles the amount, or even triples it in exceptional cases, in order to finance the projects of four partner NGO: Doctors Without Borders, CARE, the French Red Cross and the International Fund for Animal Welfare (IFAW). In 11 years, more than EUR 15 million (including EUR 5 million for Ukraine in 2023) has been used to finance tangible actions on the ground benefiting more than 6 million people. Since it was created, the Rescue & Recover Fund has been associated with 45 campaigns in more than 30 countries around the world.

In 2023, the Rescue & Recover Fund took action to support two crises caused by destructive earthquakes: in Türkiye and Syria in February, and in Morocco in September. The annual Rescue & Recover Fund campaign also supported women, the first victims of poverty and violence, through a number of international development projects with our partner NGO. These projects received a total of nearly EUR 2.5 million from the Fund in 2023.

In 2023, the BNP Paribas Foundation and the Group received the *Grand Prix de la Philanthropie* awarded by the Ficade Group, in the “Emergency” category, thus recognising the importance of action within the Group and the variety of initiatives launched during severe humanitarian crises.

## Accelerating social inclusion

### Refugee Programme: helping the integration of refugees

In 2023, BNP Paribas continued its sponsorship programme to promote the integration of refugees in Europe with the same objective: to enable refugees, minors as well as adults, to learn the language of the host country in order to better integrate, find professional training, resume studies, gain autonomy and find a job. To contribute to this, in 2023, the global philanthropy programme managed by the BNP Paribas Foundation provided nearly EUR 1.8 million to the programmes of 30 associations in 12 European countries<sup>1</sup>. In total, since 2015, EUR 17.3 million has been allocated to the aid and integration of refugees in Europe<sup>2</sup>.

### Help2Help: Supporting employee engagement

Since 2003, the BNP Paribas Foundation has supported projects carried out by the Group's employees in France that are members of solidarity organizations on their personal time. In 2023, this Help2Help programme, rolled out in around 20 countries, supported projects from over 185 associations.

### Whitaker Peace & Development Initiative: A first in France

Since 2018, BNP Paribas has supported the Whitaker Peace & Development Initiative NGO in its actions in South Africa, enabling young women and men from disadvantaged neighbourhoods to become ambassadors for peace and entrepreneurs in their communities, and improving access to information and communication technologies by giving them access to vocational training and scholarships.

In 2023, the Group supported the launch of the NGO's activity in France. A training centre was opened in Aubervilliers in a facility provided by BNP Paribas.

## Encouraging equal opportunities through mentoring and other actions

Declared a major national cause in 2023, mentoring was already at the heart of the Group's and the Foundation's youth support actions, through various partnerships with pioneering associations which have specialised in supporting young people for the past 15 years. In 2023, more than 1,000 Group employees were mentors, making BNP Paribas the leading French company in terms of the number of mentors.

## Supporting young people and vulnerable women

Taking stock of the issue of poverty amongst young people, the BNP Paribas Foundation continued its actions in this area around three main topics: access to education, poverty, and psychological trauma. It has thus supported partners and associations that work on the ground with the most vulnerable groups.

In 2023, the BNP Paribas Foundation reaffirmed its support for women, by partnering associations whose solidarity and awareness-raising actions help to combat gender-induced hardships, through access to healthcare, housing and basic necessities.

## CULTURE

Contemporary creation is at the heart of the BNP Paribas Foundation's cultural philanthropy programme. Engaged alongside many artists and the institutions hosting and featuring their works, the Foundation in particular supports contemporary dance, jazz and new circus arts. Its actions foster cultural transmission and thus resonate with the social programmes the Foundation also supports.

<sup>1</sup> Germany, Austria, Belgium, Spain, France, Greece, Italy, Luxembourg, Poland, Portugal, Switzerland, United Kingdom.

<sup>2</sup> And excluding emergency donations for Ukraine.

## Cultural transmission and access to it for all: a new commitment focus

Passing down, sharing an artistic heritage and musical knowhow are all levers that enable younger generations to succeed and move towards excellence while being supported and guided. The BNP Paribas Foundation has forged new partnerships in this area, for example with the hip-hop section of the Turgot high school. This class offers academic and artistic excellence unique in Europe, and is the only free training of this type within a public institution. It aims to integrate students from lower-income neighbourhoods, and break the spiral of academic failure through dance. Furthermore, the sale of fine art furniture from the BNP Paribas collection made it possible to support around 15 additional associations.

## Contemporary creation is at the heart of the BNP Paribas Foundation's cultural philanthropy programme

Committed to many artists and institutions, the Foundation continues its support for creativity by supporting new artists like the drummer, composer and producer Arnaud Dolmen, and the vocalist and musician Leïla Martial. Both are symbolic choices, demonstrating the new direction of the BNP Paribas Foundation's cultural philanthropy, which aims to promote younger generations and female artists.

## THE ENVIRONMENT

See *Advancing awareness and sharing of best environmental practices*, Commitment 12.

# 7.5 Our environmental responsibility: accelerating the ecological and energy transition

The Group deploys its environmental responsibility in three priority areas:

- **Commitment 10:** Enabling its clients to transition to a low-carbon economy respectful of the environment;
- **Commitment 11:** Reducing the environmental impacts of its operations;
- **Commitment 12:** Advancing awareness and sharing of best environmental practices.

## COMMITMENT 10: ENABLING ITS CLIENTS TO TRANSITION TO A LOW-CARBON ECONOMY RESPECTFUL OF THE ENVIRONMENT

---

### A STRONG AMBITION FOR THE TRANSITION TO A LOW-CARBON ECONOMY

As set out in Commitment 1 (*Financing and investments with a positive impact*), the Group supports its clients in the transition to a more sustainable economy. It has an **ambitious target for 2025: EUR 200 billion to support its clients in the transition to a low-carbon economy** (see section 7.1 *The CSR Policy Management Dashboard*). **The amount at the end of 2023 was EUR 104 billion.**

In terms of energy, BNP Paribas makes the following distinction:

- renewable energy, including wind and marine energy, photovoltaic solar energy, concentrated solar energy, hydroelectricity, geothermal energy, bioenergy (including biofuels except for first generation<sup>1</sup>);
- low-carbon energy, including renewable and nuclear energy sources.

The scope of low-carbon energy could evolve according to technological progress to gradually go beyond the production of energy and include other steps in the value chain such as transport, storage or distribution of low-carbon energy.

<sup>1</sup> In the presentation of our energy exposures, this distinction is not made to date, which is why the amount of our exposure to biofuels is isolated.

### In 2023, BNP Paribas accelerated its financing to low-carbon energy.

In January 2023, BNP Paribas set a 2030 target of EUR 40 billion of credit exposure to low-carbon energy, representing at least 80% of its credit exposure to energy production. It was nearly 55% at 30 September 2022.

At 30 September 2023, BNP Paribas' credit exposure to low-carbon energy production already represented EUR 32 billion (including EUR 28.8 billion for renewable energy sources), i.e. 65% of the Group's financing for energy production. Thus, in one year, BNP Paribas increased its credit exposure to renewable energy by EUR 3.8 billion, and its share of low-carbon energy in total energy financing is up by more than 10 points.

The commitment to achieve EUR 40 billion in credit exposure and 80% low-carbon energy in the Group's energy production financing has been brought forward to the end of 2028. The target for 2030 is now 90%.

### EXPOSURE TO LOW-CARBON ENERGY AND FOSSIL FUELS

Credit facilities + contingent liabilities + securities on balance sheet, in billions of euros, at 30 September 2022 and 30 September 2023

Please note that this is a stock of loans granted over the years, and which clients still repay over a number of years. The major action taken over the past few years to accelerate new low-carbon loans and the fossil fuel divestment makes it possible to achieve the 2028 and 2030 objectives.

### SUPPORTING CORPORATE CLIENTS IN THEIR ENERGY AND ECOLOGICAL TRANSITION

Climate change, circular economy and preserving biodiversity have become systemic challenges for companies. The Group offers its clients support throughout their energy and ecological transition strategy, which may cover efforts to reduce their energy consumption, decarbonise it, reduce their greenhouse gas emissions, develop more circular business models and minimise their impact on biodiversity.

#### The Low-Carbon Transition Group

In 2021, BNP Paribas created the Low-Carbon Transition Group, a strong platform made up of 200 bankers at end-2023 (with a target of 250 specialist bankers by end-2025) dedicated to supporting international clients, companies and institutional investors in accelerating their transition to a sustainable and low-carbon economy. A continuum of banking and non-banking solutions, is therefore provided for the decarbonisation of the economy, and particularly the energy, mobility and industry sectors. In addition to renewable energy and the battery sector, this platform is particularly attentive to future technology projects, specifically green hydrogen.

In addition, the Low-Carbon Transition for SMEs & MidCaps initiative supports SMEs and mid-sized companies in the transition to Net-Zero emissions<sup>1</sup> in the Group's five main Domestic Markets (France, Belgium, Italy, Luxembourg and Poland).

<sup>1</sup> SMEs: small and medium-sized enterprises.

## Increased support for renewable energy

BNP Paribas is strongly committed to increasing its financing for renewable energy. Among the concrete achievements in the renewable energy sector in 2023 worldwide, BNP Paribas jointly arranged financing for the renovation of three wind farms located in Hauts-de-France covering a total of 35 MW, operated by Kallista Energie, an independent renewable energy producer. The entire electricity production of these three wind farms, *i.e.* around 100 GWh per year, will be purchased by Groupement Les Mousquetaires, via its subsidiary Bonacieux Energies, over a period of 20 years. This is the second Corporate Power Purchase Agreement, following that of Lhyfe, one of the world leaders in green hydrogen.

In Poland, BNP Paribas was a major player in the Baltic Power project led by Orlen and Northland Power. The loan of more than EUR 4.4 billion will enable the construction of the first offshore wind farm in Polish waters. This farm comprises 76 wind turbines that will provide renewable energy to more than 1.5 million households from 2026. This was the largest offshore wind project in Europe in 2023.

The Abu Dhabi company, Masdar, developer and operator of public utility renewable energy infrastructure, active in 40 countries and with a portfolio with a total capacity of 20 GW, issued USD 750 million in green bonds to finance the development of new renewable energy infrastructure around the world. It plans to expand its capacity to 100 GW of renewable energy by 2030. BNP Paribas acted as joint ESG structuring advisor on Masdar's Green Finance Framework, and as joint lead manager on this issue.

BNP Paribas was coordinating lead arranger and bookrunner for a USD 2.5 billion financing to support renewable energy generation projects from AES Corporation, an American company specialised in the energy sector. This credit facility will finance more than 3 GW of new clean energy construction (solar, wind and energy storage) in the United States over a 12-month period.

ReNew Power, a major Indian player in renewable electricity production, obtained a loan of USD 1 billion to finance a portfolio of wind and solar projects of 1.3 GW, backed up by batteries to provide an uninterrupted energy supply. It is the most significant financing for a round-the-clock renewable energy project in India. The energy produced will be sold to the Solar Energy Corporation of India (SECI). BNP Paribas played the role of lead arranger and hedge bank in this transaction. Hybrid projects of this nature, combining wind, solar and energy storage, make it possible to optimise land resources and grid infrastructure, while generating a reliable electricity supply day and night. The purpose of such projects is to play a key role in India's energy transition.

## Development of more sustainable mobility

In 2023, the "BNP Paribas Mobility" brought together all of the Group's mobility expertise to support its partners and serve its customers through infrastructure financing, support for players in the automotive sector, and the development of adapted offers for new players with large vehicle fleets, the creation of new mobility offers and services for companies and individual customers. To this end, BNP Paribas Mobility launched the integrated "Mobility4you" platform for individuals, which incorporates the carbon footprint and promotes soft mobility.

BNP Paribas played the key role of joint sustainability structuring coordinator during the successful placement of the first EUR 1.25 billion green bond for Stellantis, whose funds will be mainly dedicated to the design, development and manufacture of 100% electric vehicles and electric vehicles fuel cells.

AESC (Automotive Energy Supply Corporation), the world's leading Japanese company in the design and production of batteries, was financed for an amount of more than EUR 800 million for the planned construction of a gigafactory in France. During the first phase of this large-scale project, it is expected that 9 GWh of batteries will power 200,000 electric vehicles produced each year from 2025 by the manufacturer Renault. Through its role as mandated lead arranger, BNP Paribas is therefore helping accelerate the development of the sector in Europe.

ChargePoint, a major player in electric vehicle charging networks, has signed an international agreement with Arval to accelerate the transition to electric mobility for international companies, SMEs and individuals. This agreement will support fleet managers with a complete portfolio of e-mobility services (smart charging stations, digitisation, payment, assistance, *etc.*).

At the same time, Arval has set itself a target of 350,000 electric vehicles in 2025 and more generally of 700,000 electrified vehicles in its rental fleet, contributing to its target of reducing average CO<sub>2</sub> emissions per leased vehicle by 35% compared to 2020. In 2023, its fleet included more than 166,000 electric vehicles, an increase of 85% in one year, and 438,000 electrified vehicles.

In addition, around the world, Arval had nearly 20,000 users of alternative mobility solutions to private cars, such as car-sharing, mobility cards and bicycle rentals.

## Deployment of circular economy

In order to reduce the consumption of non-renewable raw materials and waste production, BNP Paribas continues to support the development of circular economy, which resulted in various achievements in 2023.

CPBF financed a foundry sand regeneration installation project for an amount of EUR 3.3 million, an innovative project enabling La Fonte Ardennaise, a major player in the foundry industry worldwide, to recycle 90% of black moulding sand, and thus save natural resources, stop the landfill of sand waste and reduce CO<sub>2</sub> emissions by 20,000 tonnes per year.

Brambles, a company in the logistics sector and a pioneer in the field of circular economy thanks to its model of sharing and reuse of goods, issued a green bond of EUR 500 million in March 2023 for which BNP Paribas was joint bookrunner. This is the first green bond issued by an Australian company exclusively dedicated to financing circular economy. It will reduce the use of natural resources, the production of waste and supply chain carbon emissions.

On the investment side, BNP Paribas Asset Management offers investors the BNP Paribas Easy ECPI Circular Economy Leaders fund, whose assets amounted to more than EUR 900 million at the end of 2023, demonstrating the strong appeal of this area for both individual and professional investors.

Circular economy also plays a role in the transport sector: “Arval car sharing” offers a digital solution for the reservation and pooled use of service vehicles between employees within their company, thus maximising the fleet usage rate, and optimising the number of vehicles actually needed and therefore their cost, with a reduction of up to 20% in the road fleet.

## **Responsible real estate for companies**

BNP Paribas was the advisor to Covivio, a French real estate management company, for the implementation of its Sustainable Bond Framework which enabled the issuance of green bonds or bonds backed by sustainable performance indicators. This framework enabled the successful placement of EUR 500 million in green bonds.

60% of a building’s carbon footprint is related to construction materials. By forging a partnership with Materrup, a young French company that produces low-carbon construction materials based on uncalcined clay, BNP Paribas Real Estate has an additional solution to achieve its carbon footprint reduction targets. In this context, five pilot programmes were launched in France representing 81,800 m<sup>2</sup> of floor space, or 700 housing units.

## **Promoting high-quality voluntary carbon credit markets**

BNP Paribas actively supports its customers and corporate clients in its investment portfolio in their carbon neutrality approach, by offering them products and services for energy efficiency and the decarbonisation of their activity, as well as carbon offsetting. To this end, the Group published its position on voluntary carbon credits in 2023<sup>1</sup>, in which it defines the general principles according to which BNP Paribas uses, supports, advises or sells voluntary carbon credits for its own use or that of its customers.

The robust and rigorous development of voluntary carbon credits has a role to play in the global transition to carbon neutrality, with a specific attention to several sensitive aspects: emission reduction actions should always be a priority over using carbon credits; the greenhouse gas reductions linked to these voluntary carbon credits should be effective and permanent; the projects generating carbon credits should also have positive impacts on biodiversity and local populations.

## **SUPPORTING ITS INDIVIDUAL CUSTOMERS IN REDUCING THEIR CARBON FOOTPRINT AND PARTICIPATING IN THE ENERGY TRANSITION**

### **Support for energy-efficiency home renovation**

The energy footprint of housing is a major issue in the ecological transition. At the European level, in France, Belgium, Luxembourg, Italy and Poland, BNP Paribas is accelerating by offering dedicated solutions to its individual customers. These new “beyond banking” offers help decarbonise the residential real estate loan portfolio.

Thus, CPBF offers its customers “Energibio” for the financing of energy renovation. In Belgium, BNP Paribas Fortis offers energy loans and renovation loans to finance insulation work, and launched “HappyNest”, which offers to rent a new energy-efficient building and then buy it a few years later. In Italy, BNL launched “Mutuo Green”, a new green mortgage product with preferential interest rates for residential buildings of energy classes A and B.

Domofinance, created in 2003 at the initiative of EDF and BNP Paribas Personal Finance, is the only financial institution fully dedicated to financing energy renovation and home improvement works. Between 2004 and 2023, Domofinance financed nearly 800,000 loan applications. Since 2013, it has also financed the renovation of shared housing. Domofinance has outstanding loans of EUR 1.7 billion for energy renovation projects, including personal loans, loan with a professional and shared property loans.

The EIB Group (European Investment Bank and European Investment Fund) signed its first securitisation transaction with BNP Paribas Personal Finance. This enables the latter to free up equity for financing, over a three-year period, of EUR 627 million for home energy renovation and renewable energy projects for private individuals in France.

### **Support for the purchase of less polluting vehicles and sustainable mobility**

BNP Paribas Personal Finance and Arval signed a pan-European partnership agreement with the automotive manufacturer ZEEKR, a subsidiary of the Geely group, to deploy a full range of services. The partnership will enable ZEEKR’s end customers to access financing, leasing and insurance services covering all aspects of mobility.

In Germany, Arval is stepping up its cooperation with MG Motor by launching in 2023 a joint car subscription offer called “MG Auto Abo Powered by Arval”. This offer allows individuals to benefit from a more flexible lease term with all the benefits of long-term lease with services (reduction of the financial risks associated with owning a vehicle, including services, insurance, etc.).

<sup>1</sup> [https://cdn-group.bnpparibas.com/uploads/file/bnpparibas\\_csr\\_voluntary\\_carbon\\_credits\\_position.pdf](https://cdn-group.bnpparibas.com/uploads/file/bnpparibas_csr_voluntary_carbon_credits_position.pdf).

In France, to meet the expansion of bicycle use, BNP Paribas Personal Finance launched a new long-term rental offer for electric bicycles. The service is provided as a monthly subscription, with different cost levels depending on the bike, the options chosen and the length of the contract. Users can use a high-quality bike for a period of 24 or 36 months, which is covered by insurance (breakage, theft, etc.) and serviced annually by a professional.

## CONTRIBUTING TO PROTECTING BIODIVERSITY

“Natural capital and biodiversity” is one of the five priority areas of the Sustainability pillar in BNP Paribas’ GTS 2025 strategic plan. One of the CSR Policy Management Dashboard indicators (see section 7.1 *CSR Policy Management Dashboard*) measures **the amount of financing to companies contributing to the protection of terrestrial and marine biodiversity, with a target of EUR 4 billion by the end of 2025. The amount at the end of 2023 already exceeds the target with EUR 4.3 billion.**

This year, BNP Paribas took part in SLLs with objectives relating to the protection of biodiversity, in particular with agrifood companies seeking to increase the traceability of their supply chain and the share of agricultural commodities not linked to deforestation (for example, through criteria on the quantity of imported soybeans not linked to deforestation). The Group has also participated in bond issues including the financing of actions aimed at preserving the quality of natural environments (maintaining 100% of primary forests, improving the quality of surface and groundwater, etc.).

### Financing and investment policies to limit impacts on biodiversity

Since 2012, BNP Paribas has set up financing and investment policies<sup>1</sup> governing its activities in sectors considered sensitive from a biodiversity point of view, including agriculture (including livestock and forestry), palm oil, paper pulp, mining, oil and gas. In 2021, the Group strengthened its contribution to the fight against deforestation in the Amazon and Cerrado, by adopting new criteria for the beef and soybean sectors. In addition, in 2022, BNP Paribas announced that it would not finance any greenfield or brownfield oil and gas projects, nor any associated infrastructure, in the Amazon region or in the Arctic region.

In addition to these policies, in order to assess and contribute to reducing the impact of its customers on biodiversity, the Group includes questions relating to biodiversity in the sectoral questionnaires of the ESG Assessment (see *Systematic integration and management of Environmental, Social and Governance risks*, Commitment 3).

Moreover, BNP Paribas Asset Management is making progress in implementing its biodiversity roadmap<sup>2</sup>, in accordance with its new Global Sustainability Strategy 2023-2025<sup>3</sup>. In 2023, BNP Paribas Asset Management re-analysed the impact of its investments on biodiversity<sup>4</sup>, helping to identify commitment targets for its stewardship and asset management activities.

The analysis of the biodiversity footprint of investment portfolios (shares and corporate bonds) of BNP Paribas Cardif was published for the first time in 2022, renewed in 2023 and supplemented by a second measurement, using a complementary methodology<sup>5</sup>. The results show that the average dependency of portfolios on all ecosystem services is low.

### Positive actions for biodiversity

In parallel with these measures to manage the potential impacts of its activities on biodiversity, BNP Paribas incorporates the sustainable management of nature into its commercial activities. BNP Paribas Asset Management is thus expanding its sustainable investment offering, for example with the acquisition of a majority stake in the International Woodland Company (IWC), thus meeting the needs of investors who are increasingly diversifying in this market segment. Based in Denmark, IWC specialises in investment and advisory services for sustainable forestry, agriculture and natural ecosystems, as well as carbon credits and conservation projects.

BNP Paribas acted as joint lead manager and bookrunner in the combined EUR 1 billion green bond and SLB issued by Stora Enso, a Finnish company and one of the largest private forest owners in the world. Thanks to this green bond, the company has committed to more sustainable management of forests, energy, water and waste, as well as to increased pollution control.

### Support for the transition to more sustainable agriculture

In addition to its sectoral policy of responsible financing of the agricultural sector<sup>6</sup>, the Group is committed to developing products and services to promote the transition to more sustainable agriculture. Thus, the Group benefits from a centre of expertise for the agrifood sector known as BNP Paribas International Food & Agri, an entity of BNP Paribas Bank Polska, which all Group entities can use. The centre has developed the “Agronomist.pl” platform, a toolbox for producers and agrifood companies, to support the agroecological transition with experts, including bankers and analysts, specialised in cooperation with agricultural producers and agrifood stakeholders. The aim is to develop and promote a harmonised set of measures for sustainable agriculture.

## ASSET MANAGEMENT FOR THE ENERGY AND ECOLOGICAL TRANSITION

### Funds to direct financial flows towards the energy and ecological transition

For several years, BNP Paribas Asset Management has broadened its range of investment solutions by focusing on corporate clients making a positive contribution to the transition to a more sustainable economy. Its sustainability-focused product offering is structured around two main ranges covering the main listed and unlisted asset classes. Solutions include certified funds (see *Designing and promoting funds which include sustainability criteria*, Commitment 1) and thematic solutions.

These thematic solutions enable private and institutional investors to access specific ecological transition themes (such as the energy transition, biodiversity and the circular economy), by focusing their investments on a universe of companies or projects whose products, services and/or transactions make a positive contribution. For example, BNP Paribas Energy Transition fund, launched in 2019 with assets of EUR 1.5 billion at the end of 2023, invests in companies that are committed to the energy transition, such as the production of renewable energy or energy technology and infrastructure. A large part of these themes is found in the range of BNP Paribas Asset Management Article 9 funds (within the meaning of the SFDR directive) representing EUR 20.1 billion in assets at the end of 2023.

### Exercising of voting rights and shareholder dialogue for the energy and ecological transition

BNP Paribas Asset Management strengthened its ESG voting guidelines<sup>1</sup>, with particular attention given to the climate and biodiversity. It now opposes the major resolutions of large companies in the sectors that emit the most greenhouse gases, which have not set themselves a carbon neutrality target by 2050. In terms of biodiversity, companies, and in particular those in sectors with a high potential impact on biodiversity, must now assess and report on their main impacts and dependencies on nature, particularly in terms of deforestation and water issues.

## FINANCING INNOVATIVE START-UPS TO ACCELERATE THE ECOLOGICAL TRANSITION

BNP Paribas has been supporting innovation in the areas of ecological transition by committing a total of EUR 250 million of equity since 2016 to support start-ups. At the end of 2023, through its Ecological Transition Capital investment line, BNP Paribas had already invested EUR 87.2 million in 12 innovative companies, including CarbonWorks in France (CO<sub>2</sub> capture and recovery using microalgae) and Protix in the Netherlands (insect factory for animal feed), and in eight funds, including Shift4Good, Clay Capital and Seaya Andromeda.

Within this same investment line, the SFDR Article 9 fund BNP Paribas Solar Impulse Venture, to which BNP Paribas committed EUR 75 million, completed a closing of EUR 131.2 million at the end of 2023. In 2023, this fund invested in Hello Watt, which helps individuals reduce their carbon footprint through the energy renovation of their homes.

The Bank also supports start-ups by partnering with them on projects with high added value. TEB, a subsidiary of the Group in Türkiye, has joined forces with the German start-up Plan A to calculate CO<sub>2</sub> emissions for its clients in the Turkish textile and automotive sectors. In Poland, BNP Paribas Bank Polska invested in the start-up Envirly to offer their solution to the bank's MidCap customers in order to calculate their CO<sub>2</sub> emissions. Finally, BNP Paribas advised ChargePoly, a specialist in ultra-fast charging solutions for electric vehicles, on its raising of EUR 15 million in equity. BNP Paribas Leasing Solutions signed a partnership in France to develop its sales through adapted financing solutions.

## COMMITMENT 11: REDUCING THE ENVIRONMENTAL IMPACTS OF ITS OPERATIONS

---

The Group has set itself a target to reduce greenhouse gas emissions in its operational scope (scopes 1, 2 and business travel) to below 1.85 tonnes of CO<sub>2</sub> equivalent per FTE by 2025, down 25% compared to 2018. To achieve this, BNP Paribas strives first and foremost to reduce its greenhouse gas emissions by reducing energy consumption and using low-carbon energy. In addition, actions are carried out on impacts beyond greenhouse gas emissions including waste management and recycling, water consumption, mobility, responsible paper, etc. Finally, BNP Paribas also offsets its residual emissions by purchasing voluntary carbon credits. To deploy its commitment to reduce the environmental footprint related to its own operations, the Group uses the Green Company For Employees scheme, which puts employees at the heart of action.

### GREEN COMPANY FOR EMPLOYEES (GC4E): EMPLOYEE ENGAGEMENT WORLDWIDE

The Green Company for Employees programme accelerates the reduction of all of BNP Paribas' direct impacts on the environment, by assigning a central role to the participation of all employees. The priorities include the promotion of soft mobility by encouraging the sharing of journeys (carpooling) and vehicles (car-sharing, bicycle-sharing), monitoring digital footprints, the fight against single-use plastic, as well as the proposal for more sustainable food (responsible sourcing, food waste reduction, waste recovery). Particular emphasis is placed on raising the awareness of all Group employees, via dedicated thematic actions such as digital cleaning weeks, as well as training in environmental and climate issues.

<sup>1</sup> <https://www.bnpparibas-am.com/en/sustainability-bnpp-am/stewardship-future-maker-in-action/>.

With regard to IT management, the Group has set up the Sustainable IT programme. In this context, an internal “responsible digital” charter, built around 10 fundamental principles, was distributed to the entire IT sector worldwide and published in the Group’s Procedures database which is accessible to all employees.

## STRENGTHENED EFFORTS TO REDUCE THE ENERGY CONSUMPTION OF OPERATIONS

The Group continued its efforts to continue to reduce its energy consumption, comply with the government’s sobriety plan launched in France in 2022, deploy these principles internationally and to perpetuate this reduction over time. Thus, for the second consecutive year, very significant reduction in energy consumption was recorded, with a decrease of 26% in 2023 for the entire Group in absolute terms, which represent a decrease of 15% without taking into account the scope effect.

### Robust and multi-use environmental indicators

The indicators monitored each year as part of environmental reporting allow the Group to accurately measure the change in its direct environmental impacts, to ensure effective management by reporting detailed data to the business lines and regions, and to implement appropriate policies and actions to further reduce BNP Paribas’ operational environmental footprint.

The data required to calculate these indicators is collected annually for the Group’s main regions in terms of number of employees (20 countries in 2023 covering more than 85% of full-time equivalents - FTE). The results obtained for this scope are then extrapolated to cover all of BNP Paribas. The period taken into account for the data collected covers 12 months from October (year-1) to September (year 0). The number of FTEs is officially determined by Group HR at 31 December of the year in question.

The measurement of the CO<sub>2</sub> emissions for the Group’s operating scope is based on the reference methodology of the GHG Protocol. The following are taken into account: energy consumed (electricity, gas, fuel oil, district heating and cooling) in the buildings occupied by the Group, and the energy consumed in the means of transport used by employees for their business travel (excluding commuting) by car, train or plane. Only the combustion of fossil fuels is taken into account; the extraction and transportation of fuels are excluded from this calculation.

### MAIN ENVIRONMENTAL INDICATORS AT 31 DECEMBER 2023

| Indicators  | 2019 | 2020 | 2021 | 2022 | 2023  | 2025 Objectives                          |
|---|------|------|------|------|-------|--|
| Greenhouse gas emissions – scopes 1 and 2 and business travel (teqCO <sub>2</sub> /FTE) | 2.32 | 1.85 | 1.50 | 1.65 | 1.56  | ≤ 1.85                                   |
| Water consumption (m <sup>3</sup> /FTE)   | 21.8 | 15.8 | 18.2 | 10.7 | 10.39 | Qualitative improvement of the indicator |
| Paper consumption (kg paper/FTE)  | 86   | 58   | 49   | 44   | 39    | ≤ 70                                     |
| Share of sustainable paper (in %)   | 71.3 | 74.6 | 78.7 | 74.9 | 86.7  | ≥ 90                                     |
| Waste production (kg/FTE)   | 171  | 109  | 87   | 92.3 | 84    | Qualitative improvement of the indicator |

### MAIN CONSUMPTION SITUATION AT 31 DECEMBER 2023

| Total consumption/production           | 2019      | 2020      | 2021      | 2022      | 2023      |
|--|-----------|-----------|-----------|-----------|-----------|
| Energy consumption (in GWh)            | 1,399     | 1,209     | 1,171     | 1,123     | 830       |
| Water consumption (in m <sup>3</sup> ) | 4,339,270 | 3,058,462 | 3,453,976 | 2,072,981 | 1,897,531 |
| Paper consumption (in tonnes)          | 17,018    | 11,162    | 9,363     | 8,428     | 7,153     |
| Waste production (in tonnes)           | 33,905    | 21,085    | 16,451    | 17,771    | 15,260    |
| Share of recycled waste (in %)         | 21        | 31        | 34        | 26        | 39        |

Note: through its activities, the Group is not a significant source of noise pollution or any other specific industrial pollution.

## Use of low-carbon electricity

To continue reducing its environmental impact, the Group has been increasing its share of low-carbon electricity for several years. In 2023, low-carbon electricity represented 79% of total electricity consumption. The share of renewable electricity represented 34.8%. This electricity came either from the purchase of renewable electricity certificates, or from the direct consumption of renewable energy produced by the Group's buildings. Renewable energy consumption accounted for 27.3% of total energy consumption (830 GWh in 2023).

This commitment is strengthened with the introduction of exclusively renewable electricity purchase contracts (Power Purchase Agreements or PPAs). After signing PPA contracts in Poland to cover 100% of its electricity supply and in the United Kingdom, France also signed a contract in 2023, which will eventually provide at least 25% of its electricity supply from photovoltaic sources.

These systems are allowing the Group to limit CO<sub>2</sub> emissions associated with its electricity consumption, a reduction recognised in the market-based approach<sup>1</sup>. Based on this approach, the CO<sub>2</sub> emissions amounted to 214,859 teqCO<sub>2</sub> in 2023, *i.e.* a reduction of 70,464 teqCO<sub>2</sub> over the year compared to the location-based calculation<sup>2</sup>.

## Numerous environmental and commitment certifications

In 2023, 15 ISO 14001 environmental certifications were in progress at BNP Paribas, covering nearly 75,000 employees, *i.e.* 40% of its workforce, demonstrating the renewed commitment of the building management business lines (France, Belgium in particular), IT assets (France, Belgium, Italy and the United Kingdom), leasing (France), automotive (France, Germany, Belgium, Spain, Italy, Poland, Romania, Slovakia and the United Kingdom), housing and private finance.

In 2023, the Group is also ISO 50001 certified for its data centres in France, as well as for two BGL BNP Paribas buildings in Luxembourg. In addition, several Group entities also hold the Responsible Digital Label (*Agence Lucie*), while the purchasing department holds the Supplier Relations and Responsible Purchasing label (Corporate Mediation).

## GREENHOUSE GAS EMISSIONS IN THE OPERATIONAL SCOPE

In 2023, the Group's total emissions in its operational scope (direct emissions (Scope 1), indirect emissions related to energy purchases (Scope 2) and indirect emissions related to business travel) amounted to 285,323 teqCO<sub>2</sub> (based on the location-based approach) down by 10% compared to 2022 (representing a reduction of 33,166 teqCO<sub>2</sub>), and 38% compared to 2019, the pre-Covid reference year. **They represent 1.56 teqCO<sub>2</sub> per FTE**, *i.e.* below the maximum target for 2025 which is set to 1.85 teqCO<sub>2</sub> per FTE. This indicator has benefited from the sale of Bank of the West, which was one of the Group's highest emitting entities.

The results of the energy sobriety and building occupancy rationalisation plans contributed to a significant decrease in the share of buildings in the overall emissions, while at the same time, the share of travel continued to increase in 2023 following the resumption of travel after the health crisis.

<sup>1</sup> The Market-based approach quantifies Scope 2 greenhouse gas emissions based on the GHG emissions emitted by the producers from which the Group purchases the electricity it consumes. This makes it possible to take into account the Group's efforts to decarbonise its electricity via renewable energy purchase certificates or contracts. The Group uses it to calculate the quantity of tonnes of residual GHG emissions to offset with voluntary carbon credits.

<sup>2</sup> The Location-based approach quantifies Scope 2 greenhouse gas emissions by taking into account the emission factors of the average mix of each country. The emissions factors used are taken from the International Energy Agency. The Group uses it to report tonnes of GHG emissions annually and to define the reduction target.

57% of these emissions come from the energy consumption of buildings, and 43% from business trips. In more detail, the breakdown of the Group's greenhouse gas emissions in 2023 is as follows:

**BREAKDOWN BY TYPE OF GREENHOUSE GAS EMISSIONS**

**BREAKDOWN OF THESE EMISSIONS BY SCOPE OF GHG/ISO PROTOCOL IN TEQCO<sub>2</sub>**

**RESPONSIBLE REAL ESTATE INITIATIVES**

**The Green Buildings programme of the Real Estate Department**

The Group real estate operating function (IMEX) is a key player in reducing the environmental footprint of BNP Paribas' operating scope. As such, the Green Buildings programme implements a process to improve the operation and maintenance of its sites, thereby reducing the Group's environmental impact on a long-term basis. Programmes are also deployed to encourage waste sorting and recycling, the circular economy, water management, facilitate sustainable mobility and promote the purchase of sustainable and less energy-consuming equipment.

**The plan to reduce the carbon footprint of the real estate portfolio**

This plan is broken down into three levers involving the business lines, the Group's employees and IMEX. The first lever involves the continuous improvement of the energy performance of buildings *via* a monitoring tool that centralises energy consumption data for 90% of the portfolio, enabling the monitoring of optimisation plans. The second lever is based on work and investment plans to modernise and improve the efficiency of facilities (heat pumps, LED lighting, façade insulation, roof repairs, *etc.*). Finally, raising employees' day-to-day awareness of how buildings are used (offices, bank branches, data centres) is one of the plan's major focuses.

These efforts have been rewarded each year in which BNP Paribas has taken part in the Cube competition organised by the IFPEB (French Institute for Building Performance) under the high patronage of the French Ministry of Ecological Transition. This competition rewards users of commercial buildings who have saved the most energy over a year. In 2023, the Group registered 18 sites, including 15 in France.

## RESPONSIBLE CONSUMPTION

### Initiatives with our operational subcontractors

In France, the BPG (Business Partners Group) Department builds and operates shared service centres with its subcontractors for the various Group entities: logistics and transport platforms, vehicle fleet management, mobile telephony, document management (for example, industrial desktop publishing, etc.), management of banking AT (Automated Teller Machines). Operational efficiency, including the search for a reduction in environmental impacts, has made it possible to obtain the following results in 2023:

- the development of ATM recycling (47% of banknotes recycled) has made it possible to reduce the cash transport journey by 15% to 20% and therefore reduce the related CO<sub>2</sub> emissions;
- the complete overhaul of the road network, now 98% shared, has produced a cumulative fall in transport-related CO<sub>2</sub> emissions of 70%, *i.e.* a reduction of 130 tonnes of CO<sub>2</sub> emissions per month;
- BPG recovered nearly 5,000 phones at the end of the usage period (+50% compared to 2022). These phones are passed on to BNP Paribas 3 Step IT to be reconditioned or recycled;
- in 2023, the first declaration of greening the vehicle fleet was carried out for the Group in France. The result (27%) significantly exceeded the legal requirement for 2022 (10%). Ambitious objectives have also been defined to green the car fleet (50% low-emissions vehicles by 2025).

### Mandatory use of responsible paper since 2022

In order to contribute to the protection of forest ecosystems and biodiversity, the Group has been committed for many years to responsible paper purchasing (from recycled or sustainably managed forests, *i.e.* more than 50% recycled or PEFC or FSC certified). Since 2022, the purchase of responsible paper has become an obligation for all of the Group's business lines, except in the event of technical impossibility. This has made it possible to set an ambitious overall target for 2025 of 90% of responsible paper and 95% for the regions that consume the most paper. In 2023, 86.7% of the paper consumed by the Group met the responsible criteria detailed above.

## OFFSETTING RESIDUAL GREENHOUSE GAS EMISSIONS

Since 2017, BNP Paribas has purchased voluntary carbon credits annually for an amount equivalent to the residual greenhouse gas emissions emitted the previous year within its operating scope. These emissions amounted to 241,855 t<sub>eq</sub>CO<sub>2</sub> in 2022 (market-based approach). The carbon credits purchased in 2023 come from four projects:

- the Kasigau project in Kenya, supported by the Group since 2017, is a programme to protect and restore 200,000 hectares of forest. Led by the NGO Wildlife Works, it also finances access to healthcare, water and education for local populations;
- in India, the project is based on a ten-year voluntary carbon offset programme as part of a partnership between BNP Paribas and the GoodPlanet Foundation, *via* the construction of 13,000 biodigesters. They provide four hours of gas daily, thus avoiding cooking over a wood fire and deforestation, as well as improving the living conditions of nearly 70,000 people;
- in Guatemala, hundreds of landowners including local communities have come together to protect nearly 60,000 hectares of forest by developing sustainable livelihoods, which restore rather than degrade the forest and create better living conditions for its inhabitants;
- the Qori Q'oncha programme in Peru is deploying improved wood-burning stoves in several regions of the country, which reduces the amount of wood used and reduces carbon emissions while removing noxious smoke from homes.

## COMMITMENT 12: ADVANCING AWARENESS AND SHARING OF BEST ENVIRONMENTAL PRACTICES

### SUPPORTING RESEARCH AND DEVELOPMENT ON CLIMATE CHANGE AND BIODIVERSITY

The purpose of this support is to better know and understand the interaction between climate change and the erosion of biodiversity, in order to identify the most appropriate solutions. Two BNP Paribas Foundation philanthropy programmes are working in this field:

- by 2025, the Climate & Biodiversity Initiative, launched in 2010, will already have supported 35 research projects, with more than 500 researchers, for an amount of EUR 24 million. Since 2022, eight new research projects, ranging from the study of underwater animal forests to the impacts of climate change in the African savannah or on coastal ecosystems, have been supported until 2025 with a dedicated budget of EUR 6 million;
- the One Planet Fellowship programme is operated by AWARD<sup>1</sup> and supported by the BNP Paribas and Bill & Melinda Gates Foundations, the European Commission and the International Development Research Centre (IDRC, Canada). Endowed with USD 20 million over five years, its ambition is to support African women in research, and create a community of African and European researchers working on climate change adaptation in the agricultural sector in Africa. To date, 270 scientists have benefited from the mentoring programme.

In 2023, the Group also strengthened its support for some of its partners such as the International Union for Conservation of Nature (IUCN), or by providing assistance to new entities such as The Transition Institute 1.5 launched by Mines Paris, Naturalis in the Netherlands (see box), or Business for Nature, within the framework of budgets accompanying its share buyback programme (see *Corporate philanthropy policy focused on the arts, solidarity and the environment*, Commitment 9).

At the end of 2023, a multi-year partnership was launched with the Naturalis Biodiversity Center, marking a new chapter in BNP Paribas' approach to protecting and restoring biodiversity. Bringing together more than 150 scientists, this institution is one of the main biodiversity knowledge and research centres in the world. This partnership has four objectives: education and awareness, research and data, financial innovation by accelerating the development of tools to direct more capital towards protecting and restoring biodiversity, and scientific measurement to guide project financing decisions.

### RAISING AWARENESS AMONG INTERNAL AND EXTERNAL STAKEHOLDERS

#### A network of internal experts and employee awareness

In order to accelerate the environmental and social transition, BNP Paribas launched the NEST (Network of Experts in Sustainability Transitions) at the end of 2021. This network is now composed of more than 700 experts from all BNP Paribas entities in areas such as the energy transition, the circular economy, biodiversity, social inclusion and sustainable finance. The objective of this international network is to strengthen and share expertise, by developing knowledge, supporting the Group's various entities and promoting internal ecosystems, in order to accelerate the transition of its employees, customers and clients. In 2023, NEST organized 25 internal webinars attended by more than 3,000 participants.

In addition, in November 2023, the Company Engagement Department and the RISK Department organised "48 Hours of Biodiversity". These two days of conferences and internal discussions highlighted the Group's major initiatives, common challenges, the words of external experts as well as training offers, and enabled participants to understand how BNP Paribas' business lines and functions incorporate biodiversity into their daily activities.

#### The creation of informative content dedicated to the ecological transition

BNP Paribas regularly publishes information dedicated to the ecological transition for its employees and external stakeholders. Thus, in 2023, NEST distributed four newsletters (entitled "Perspectives") capitalising on the knowledge of more than 100 internal and external experts, with a special edition on the just transition based on a study conducted on 10,000 Europeans, which analyses the drivers of the energy transition as well as its social repercussions. In addition, since 2022 the Group has published a monthly newsletter on LinkedIn dedicated to the challenges of sustainable finance "Sustainable Finance at Scale" which is followed by nearly 420,000 subscribers. In 2023, the topics covered include the financial inclusion, the energy transition, the TNFD and the carbon credits.

#### Raising client awareness through high-level presentations

In addition to communications dedicated to ESG, BNP Paribas also organises targeted events with its clients on the theme of the energy and ecological transition. In 2023, the Group offered its clients and customers a forum dedicated to ESG experts, which was an opportunity to discuss the challenges of Net-Zero emissions, ESG regulations, biodiversity and the circular economy. In addition, throughout September 2023, BNP Paribas organised the 8<sup>th</sup> edition of the Sustainable Future Forum (SFF), with events in more than 17 countries around the theme "The transition compass: going in the right direction?".

<sup>1</sup> African Women in Agricultural Research and Development.

## Awareness-raising efforts for students and the general public

The second cohort of the ESSEC Business School “Talents for the Ecological Transition” chair was certified in 2023. Supported by BNP Paribas, this chair focuses on the themes of climate change and biodiversity, but also other themes essential to the ecological transition such as managing resources (water, air) and waste, energy and food, new forms of mobility, the regional transition and the impact of digital technology.

## The BNP Paribas Foundation and raising awareness among internal and external audiences

Alongside its support for research on climate change and the erosion of biodiversity, the BNP Paribas Foundation works to disseminate knowledge in various forms, including conferences (four conferences per year for employees), the creation of content for the general public (articles in *The Conversation* or *We Demain*) or by supporting exhibitions related to the theme, such as the *Bio-Inspirée* exhibition at the *Cité des sciences et de l'industrie*. All these actions carried out since 2010 have raised awareness among nearly one million people.

## TAKING AN ACTIVE PART IN PARTNERSHIPS AND COLLECTIVE INITIATIVES

In order to maximise the impact of the Group's actions for a massive and rapid transition, it is important that a large number of financial institutions engage in this movement. That is why BNP Paribas has chosen to initiate or play a leading role in coalitions that work to promote the United Nations sustainable development goals and the transition to a low-carbon economy.

### An active contribution to the Taskforce on Nature-related Financial Disclosures (TNFD)

Since 2020, BNP Paribas has been part of the initial design work of the TNFD with the co-Chairmanship of Antoine Sire, Head of Company Engagement, on the informal working group. Since its official launch in October 2021, BNP Paribas has been represented among the 40 members of the working group, by two experts from the Group. In 2023, the TNFD published its final recommendations on the reporting framework, thus taking a major step forward in the fight against biodiversity loss by creating a common language for companies, financial institutions and enabling better analysis, management and communication of nature-related dependencies, impacts, risks and opportunities.

### Working to accelerate renewable energy within the *Cercle de Giverny*

As a partner of the *Cercle de Giverny* since 2020, BNP Paribas co-chaired the working group on renewable energy to increase their development in France for the benefit of regions, populations and companies. These discussions produced six very concrete proposals, which were reflected in an opinion co-signed with Boralex and presented primarily to the Ministry of Ecological Transition.

### Participation in the work of Entreprises pour l'Environnement (EpE)

Member of the committee and former Chairman of the EpE (*Entreprises pour l'Environnement*) association, Jean-Laurent Bonnafé, Director and Chief Executive Officer of BNP Paribas, helped to highlight and promote the actions and reports from the EpE association while public positions were being adopted. In 2023, EpE completed an ambitious study identifying the main 2030 challenges for achieving the carbon neutrality objective in France by 2050, and the priority actions to be taken to overcome these challenges.

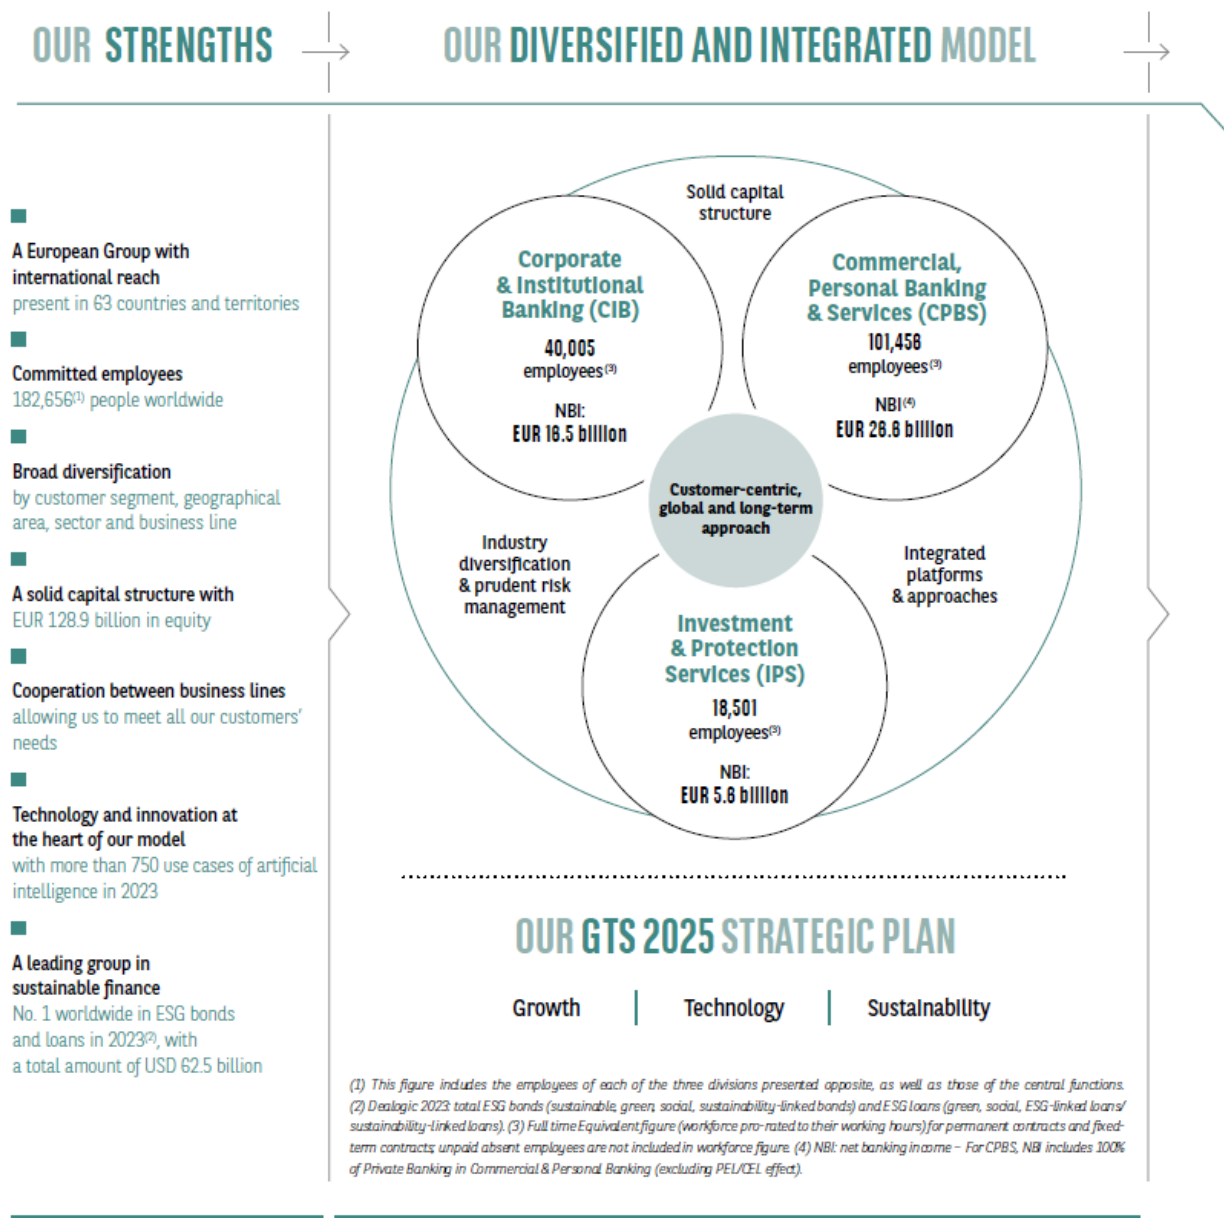

### Other global and local partnerships

BNP Paribas has also partnered with various stakeholders to raise awareness and promote solutions to climate and environmental challenges, including:

- being a founding member, with BNP Paribas Asset Management, of Nature Action 100 launched on the sidelines of the Montreal COP 15 on biodiversity, the first global investor engagement initiative calling on key companies to take urgent and necessary measures to protect and restore nature and ecosystems, and thus mitigate financial risks;
- actively contributing to the Hydrogen Council, which brings together nearly 150 international companies convinced that low-carbon hydrogen can be a key resource for the decarbonisation of industry and the energy system;
- being part of the Low-Carbon Building Initiative (LCBI), which brings together major European real estate players, and which in 2023 revealed the methodology for the first version of the LCBI label, based on life cycle analysis, and the first Pan-European low-carbon label. The challenge is to adopt common practices and standards in Europe to measure the carbon footprint of buildings throughout their life cycle, and reduce it by half;
- participating in the Ambition4Circularity initiative, a platform that brings together the commitments made by member companies of the *Association française des entreprises privées – AFEP* (French Association of Private Companies) to promote circular economy.

## 7.6 Extra-financial performance statement

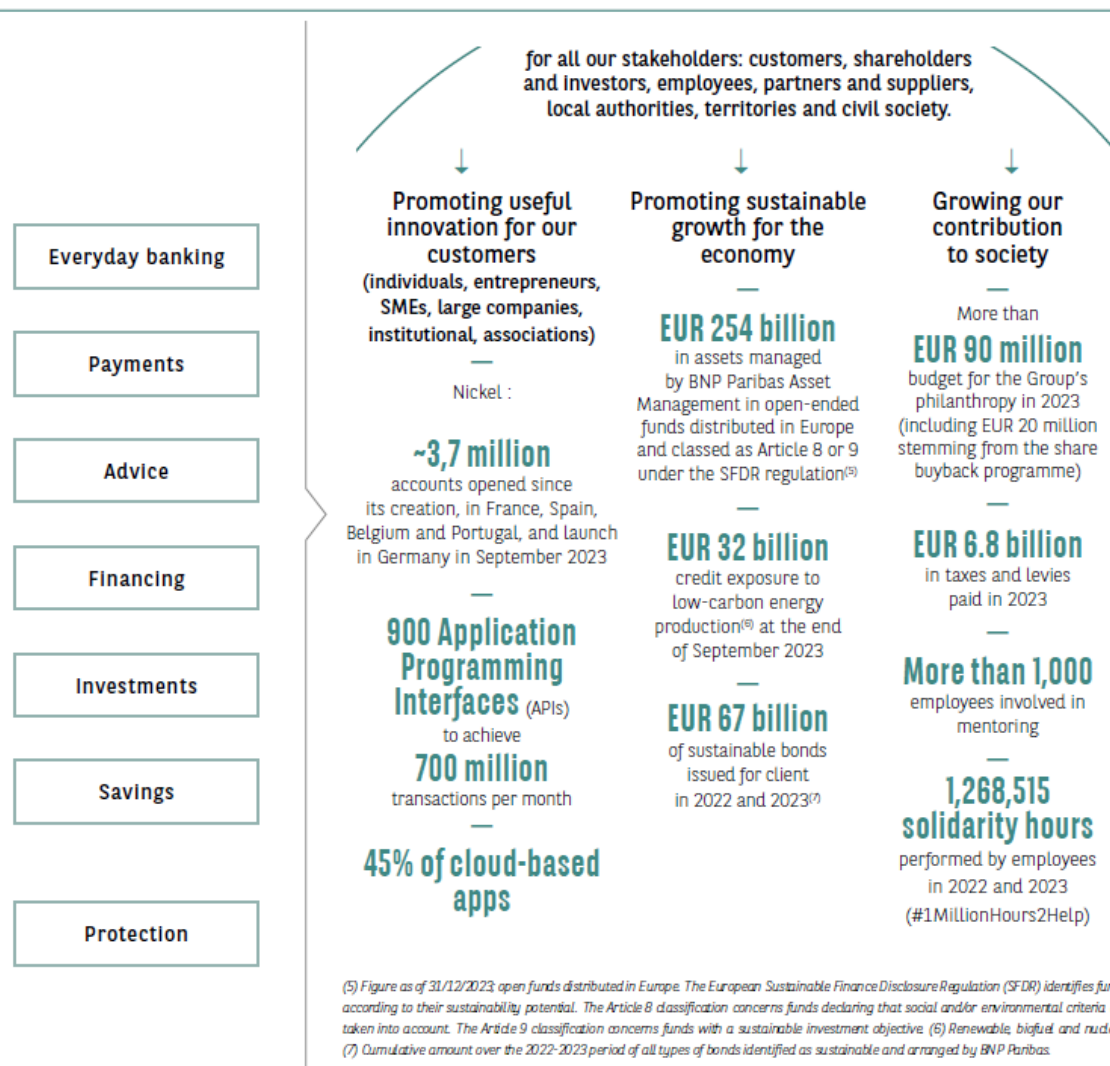

### A DIVERSIFIED AND INTEGRATED MODEL, CREATING VALUE

Thanks to the Group's solidity and the strength of its diversified and integrated model, BNP Paribas supports its clients, customers and society as a whole through its teams, resources and expertise. Its long-term commitment to them covers all phases of the economic cycle. By leveraging its leading business platforms and its unique position as a European leader, the Group creates value and supports the development of a sustainable economy.

## OUR SOLUTIONS

## CREATING VALUE

## ANALYSIS OF ISSUES, RISKS AND OPPORTUNITIES

Information requested pursuant to article R.225-105-1 of the French Commercial Code and Ordinance No. 2017-1180 relating to the publication of extra-financial information. The processes and responsibilities relating to the analysis, review and validation of non-financial risks are described in Commitment 3 *Systematic integration and management of Environmental, social and governance risks*. They are also described in the dedicated sections of chapter 5 *Risks and capital adequacy – Pillar 3*, which also deals with operational risks, including regulatory compliance risk.

BNP Paribas' business model is included in the preceding pages. In order to complete its materiality matrix, described by a graph<sup>1</sup>, BNP Paribas relied on an assessment of materiality criteria to classify approximatively one hundred extra-financial subjects brought together in 21 themed issues based on their relevance to the Group's external and internal stakeholders. Carried out for the first time in 2018, this analysis was repeated in 2021 using a very similar methodology. It is based on an assessment of the importance for BNP Paribas of these 21 extra-financial issues from two points of view: on the one hand, that of BNP Paribas employees, on the other hand, that of its external stakeholders. The internal perception is established by a survey to which more than 1,200 top management employees responded, while the external point of view is assessed by the importance of these issues in several databases: publications of ten of our main peers, more than 2,500 regulations applicable to our activities and locations, more than 20,000 industry press articles and more than 450 million tweets on social networks. The results of this study, presented in the graph indicated above, make it possible to distinguish three groups of issues: important, major and crucial. As part of the implementation of the Corporate Sustainability Reporting Directive, starting in 2024, the Group has begun to analyse and update its materiality issues.

As in 2018, data privacy and security, climate change and energy transition, and ethics and compliance, were categorized as crucial issues. Three other issues joined this category of crucial issues in 2021: human rights, responsible investments and financing, and business continuity. Together with the eight major challenges identified in the materiality matrix, they form the 14 most important challenges for BNP Paribas and are listed in the table below. The indicators, policies and associated due diligence are then further developed in the relevant chapters.

| Domain | Issue                        | Paragraph   | Policy  | Risks/Opportunities<br>Description pages  | Indicator   | Pages<br>(Paragraph;<br>Indicator) |
|--------|------------------------------|---|---|---|---|------------------------------------|
| Social | Fair and inclusive workplace | Outstanding actions in the area of professional equality                | Global agreement  | Discrimination risks – 668  | Share of women among the SMP population ( <i>Senior Management Position</i> )                   | 639                                |
|        | Employment practices         | Our employees around the world  | Global agreement<br>Code of conduct   | Risks of employee demotivation and increased absenteeism, psychosocial risks – 670        | Percentage of employees on permanent contracts within the Group                                 | 660                                |
|        | Talent management            | Developing skills and improving employability                           | Global agreement  | Loss of talent risk – 676   | Share of employees who completed at least four training courses during the year                 | 639                                |
| Civic  | Transparent practices        | Protecting clients' interests   | Code of conduct,<br>Group Policy on Protecting the Interests of clients and customers | Risks of discrimination for some customers and lack of sales information – 649            | Number of alerts received by the Group via the whistleblowing channel                           | 648                                |
|        | Data privacy & security      | Cyber security and technological risk<br>Ethics of the highest standard | Code of conduct   | Legal risk, Reputational and operational risks: leaking, alteration or loss of data – 327 | Percentage of employees who completed the training on <i>Personal Data Protection Awareness</i> | 684                                |

## DEFINITIONS OF INDICATORS FOR CSR ISSUES<sup>1</sup>

---

The definitions of the 10 indicators of the CSR policy dashboard are described in section 7.1 *Strategy*.

### PERCENTAGE OF EMPLOYEES ON PERMANENT CONTRACTS WITHIN THE GROUP IN 2023

The “Percentage of employees on permanent contracts” corresponds to the percentage of employees on permanent contracts as of 31/12/2023, among the workforce managed by the Group on a full-time equivalent basis. The Group’s managed workforce includes employees on permanent and fixed-term contracts. A permanent employment contract, unlike a fixed-term contract, does not specify the date on which it ends.

### NUMBER OF ALERTS RECEIVED BY THE GROUP VIA THE WHISTLEBLOWING CHANNEL

Number of alerts received by the Compliance Function through the BNP Paribas Group whistleblowing system in 2023 (from 1 January to 31 December 2023). Employees can send a report either through Compliance Alert channels (by email, post, orally or in a dedicated system such as in the United States and the United Kingdom), or to a manager who will send it through a compliance alert reporting channel. External third parties can also send a report to the compliance alert channels (by email). Reports are treated confidentially by the Compliance officers.

### PERCENTAGE OF EMPLOYEES WHO FOLLOWED THE “PERSONAL DATA PROTECTION AWARENESS” TRAINING

This indicator measures the percentage of employees who completed the Personal Data Protection Awareness module during the year (on a scope of 98% of the workforce monitored in the Mydevelopment tool), compared to the total number of Group employees on permanent + fixed-term contracts at 31/12/2023 (as indicated in the HR systems).

### RESPONSE RATES TO SURVEYS SENT TO CUSTOMERS IN DOMESTIC MARKETS

The four Domestic Markets are France, Luxembourg, Belgium and Italy. The surveys are sent to customers by email, SMS or telephone. Time scope: 2023 calendar year.

### NUMBER OF CUSTOMERS ACTIVE ON MOBILE APPLICATIONS IN DOMESTIC MARKETS

Number of connections from individual, professional and Private Banking customers of commercial banking and digital banks, Nickel and BNP Paribas Personal Finance (monthly average).

### RETURN ON TANGIBLE EQUITY (ROTE)

Indicator that measures the BNP Paribas Group’s return on tangible equity. The ROTE divides the net income attributable to owners of the parent restated for the remuneration net of tax on Undated super subordinated notes and the foreign exchange effect by the average of tangible permanent non-revalued equity. The average of tangible permanent non-revalued equity is defined as the average between the beginning of the year and the end of the period of tangible permanent equity. Tangible permanent equity is equal to accounting equity attributable to the owners of the parent, restated for changes in assets and liabilities recognised directly in equity, the assumption of dividend payments, intangible assets and goodwill.

### NUMBER OF EMPLOYEES WHO COMPLETED THE E-LEARNING MODULE ON “BUSINESS & HUMAN RIGHTS”

This indicator measures the number of Group employees who completed the “Human Rights into Business” training at the end of year n, cumulatively since the module was rolled out in 2016.

### PERCENTAGE OF EMPLOYEES WHO COMPLETED TRAINING ON ETHICS OR CONDUCT

This indicator measures the percentage of employees who have completed the second part of the Conduct Journey training course, assigned in 2023 to all Group employees (on a scope of 98% of the workforce monitored in the Mydevelopment tool), compared to the total number of Group employees on permanent + fixed-term contracts at 31/12/2023 (as indicated in the HR systems). The Conduct Journey comprises 11 modules, covering the topics addressed in the BNP Paribas Code of conduct (protection of clients’ interests; respect for colleagues; engagement with society; conflicts of interest; confidential information relating to financial markets; fight against corruption; financial security; competition law; cybersecurity; data protection; responsible communication).

---

<sup>1</sup> The definitions of the indicators Share of women among the SMP population, Share of employees who completed at least four training courses during the year, Amount of sustainable bonds and Amount of the support enabling our clients to transition to a low-carbon economy are given under the CSR Dashboard, p. 639.

## NUMBER OF INDEPENDENT MEMBERS OF THE BOARD OF DIRECTORS

This indicator compares the number of independent directors, within the meaning of the Afep-MEDEF Governance Code, out of the total number of directors on the Board of directors of a company. Directors are independent when they have no relationship of any kind whatsoever with the Company, its Group or its management that could compromise the exercise of their freedom of judgment.

## PERCENTAGE OF COVERAGE OF THE GROUP'S BUSINESS CONTINUITY PLANS

It measures the number of entities with a business continuity plan that have been approved in the last 12 months by the Business Continuity Committee. In accordance with the Group's requirements, this plan must include:

- the description of the roles and responsibilities of the various stakeholders in the process, whether internal or external to the Group;
- organisational and functional procedures enabling the activation of business continuity and return-to-normal solutions. They provide for the organisation of remote work and critical activities requiring specific equipment on a dedicated fallback site;
- contact lists.

In accordance with article L.225-102-1 of the French Commercial Code, amended by article 29 of Law No. 2023-703 of 1 August 2023, BNP Paribas has included information on the actions carried in the following areas in its Annual Reporting.

| Information   | Section/Paragraph   | Pages    |
|---|---|----------|
| Consequences of the Company's business activities and of the use of goods and services that it produces, on climate change                      | Alignment of the loan portfolio with the net-zero by 2050 objective (Eng. 3)<br>Strengthened efforts to reduce the energy consumption of operations (Eng. 11) | 655, 692 |
| Societal commitments to:<br>▪ sustainable development;  | Offering a wide range of sustainable products (Eng. 1)  | 645      |
| ▪ the circular economy;   | Deployment of the circular economy (Eng. 10)  | 689      |
| ▪ combatting food waste;  | Development of Impact Bonds (Eng. 1)<br><i>Green Company For Employees</i> (GC4E): employee engagement worldwide (Eng. 11)                                    | 646, 692 |
| ▪ combatting food insecurity;   | Combatting extreme poverty (Eng. 9)   | 686      |
| ▪ respect for animal welfare;   | Vigilance plan  | 704      |
| ▪ responsible, fair and sustainable food.   | <i>Green Company For Employees</i> (GC4E): employee engagement worldwide (Eng. 11)  | 692      |
| Collective agreements made within the Company and their impact on the Company's economic performance and on the working conditions of employees | Global agreement; European Works Council and European social dialogue; Social dialogue in France (Eng. 5)   | 673-674  |
| Actions to fight against discrimination and promote diversity   | Promotion of diversity, equality and inclusion (Eng. 4)   | 664      |
| Actions to promote the nation-army bond and support engagement in the reserves  | 360° parenting and work-life balance (Eng. 4)   | 668      |
| Actions to promote physical and sporting activities   | An offer focused on social, emotional, physical and financial well-being (Eng. 5)   | 672      |
| Measures taken to support people with disabilities  | Promoting the employment and integration of people with disabilities (Eng. 4)   | 668      |

# 7.7 Vigilance plan

## FRAMEWORK AND GOVERNANCE

---

### REGULATORY FRAMEWORK

Law No. 2017-399 of 27 March 2017 on the Duty of Care of parent companies and of companies using subcontractors applies to the Group as a whole and requires a vigilance plan to be established and implemented to identify and prevent the risk of serious violations of human rights and fundamental freedoms, and of harm to human health and safety and to the environment. The law also requires the preparation of an Annual Report on the effective implementation of the Group's vigilance plan.

BNP Paribas' vigilance plan applies to all subsidiaries controlled by the Group and is published in its universal registration document. BNP Paribas updates its vigilance plan each year, in particular by drawing on best practices in this area, and reports on its framework for monitoring the measures implemented and assessing their effectiveness in section 5 of this chapter.

### ELABORATION OF THE VIGILANCE PLAN

#### Internal and external contributions to the BNP Paribas' vigilance plan

BNP Paribas' vigilance plan is prepared taking into account the Group's business model, the specificities of its activities and geographical locations, as well as the information and requests of its stakeholders. The vigilance plan is therefore updated on an annual basis, fed by these elements and an ongoing dialogue, in particular with its employees and representative bodies, its investors and its clients and customers, as well as with civil society, including NGOs (see section 4.1 *Whistleblowing system*).

In order to enhance its roadmap, BNP Paribas has developed tools that enable it to be aware of its stakeholders' expectations. In particular, the Group has produced a materiality matrix to classify about a hundred extra-financial topics, grouped into 21 thematic issues according to their relevance for the Group's internal and external stakeholders, considered crucial, major or important (see section 1.1.1 *Materiality matrix*).

#### Drafting and approval process

BNP Paribas' vigilance plan is drafted under the lead of the CSR Department, with contributions from:

- the Human Resources Department (HR) with regard to the Group's employees;
- the Technology & Operational Performance (TOP) Department, including the Procurement & Performance (P&P) department for BNP Paribas suppliers and subcontractors;
- the main business lines within BNP Paribas' three divisions (Commercial, Personal Banking & Services - CPBS, Investment & Protection Services - IPS, and Corporate and Institutional Banking - CIB) for the distribution of financial products and services to individuals and for financing, investment and business advisory activities;
- the Finance, Compliance, RISK and LEGAL Departments, which contribute to overseeing the Group's Environmental, Social and Governance (ESG) issues.

The Corporate Governance, Ethics, Nominations and CSR Committee (CGEN) reviews BNP Paribas' vigilance plan and issues recommendations to the Group's Board of directors. Among other duties, the CGEN is responsible for monitoring CSR issues and for the integration of the CSR issues into the fulfilment of the Group's missions.

The Group's Board of directors, which has a specific role with regard to CSR, is responsible for approving the BNP Paribas' vigilance plan.

## STRATEGY & GOVERNANCE

### Purpose and Strategic Plan

Contributing to a more sustainable and responsible economy is at the heart of BNP Paribas' purpose. In early 2022, BNP Paribas launched its 2025 Strategic Plan entitled GTS (*Growth, Technology, Sustainability*), one of whose three pillars is to accelerate and mobilise all of the Group's business lines around the challenges of sustainable finance. The Group has set itself ambitious objectives in terms of energy transition, biodiversity, social inclusion and sustainable savings, investments and financing by 2025 (see section 5.1 *The CSR Policy Management Dashboard*). 2023 was a year of a major shift of BNP Paribas' financing from the energy sector to low-carbon, mainly renewable energies, which already accounted for 65% of its total credit exposure to the energy production sector at 30 September 2023. By 2030, the Group's new objective is for this share to reach 90%.

## CSR Policy and Governance

The Group as a whole is involved in monitoring ESG issues.

A sustainable finance strategic committee meets every two months, chaired by the director and Chief Executive Officer of BNP Paribas, validates the overall sustainable finance strategy and decides on the commitments made by the Group. This committee met five times in 2023. The CSR policy is managed by the CSR Department, reporting to the Company Engagement Department, and represented on the Group Executive Committee, which regularly decides on CSR issues.

BNP Paribas' Board of directors determines BNP Paribas's business orientations and supervises their implementation by the Executive Management, taking the social and environmental challenges of BNP Paribas' activities into consideration. CSR-related topics were specifically addressed 48 times during Boards and committees in 2023, in particular during meetings of the Board of directors, the Governance, Ethics, Appointments and CSR Committee (CGEN) and the Internal Control, Risk Management and Compliance Committee (CCIRC).

## SUSTAINABLE FINANCE COMMITMENTS

Convinced of the importance of collective action, the Group is a member of Principles for Responsible Banking (PRB),<sup>1</sup> the United Nations Principles for Responsible Investment (PRI) for the environment (UNEP FI) and the United Nations Global Compact through its subsidiaries BNP Paribas Asset Management, BNP Paribas Real Estate Investment Management and BNP Paribas Cardif, the OECD guidelines for multinational companies (internationally accepted), and the Equator Principles.

## ENVIRONMENTAL COMMITMENTS

For more than 10 years, BNP Paribas has been committed to the fight against climate change. Since 2015, the Group has committed to aligning its activities with the objectives of the Paris Agreement. To do this, it has continuously reduced its support for fossil fuels and at the same time accelerated its financing for low-carbon technologies. BNP Paribas is a founding member (2021) of the Net-Zero Banking Alliance (NZBA)<sup>2</sup>, thus making a very active contribution to the development of alignment methodologies, practical guides and open-source software. Group entities, BNP Paribas Asset Management and BNP Paribas Cardif, have respectively joined the Net-Zero Asset Managers initiative (NZAMi) and the Net-Zero Asset Owners Alliance (NZAOA). BNP Paribas' objective is not only to meet its climate commitments, but also to share its approach to make it more effective and powerful.

For several years, BNP Paribas has been committed to preserving biodiversity through its financing and investment policies, a constructive dialogue with its clients, the coalitions in which it participates, philanthropy and support for research. The Group published a Biodiversity Position<sup>3</sup> in order to clarify issues on this topic.

## SOCIAL COMMITMENTS

Respect for human rights is one of the pillars on which BNP Paribas' CSR strategy is based. The Group is committed to respecting the principles and standards that form the foundation of its activities, including the 10 principles of the United Nations Global Compact, the United Nations Guiding Principles on Business and Human Rights, human rights standards (internationally accepted as defined in the International Bill of Human Rights) and the core labour standards (as defined by the International Labour Organization).

Among the major voluntary commitments made by BNP Paribas to address the many issues surrounding human rights are its Code of conduct<sup>4</sup> (which covers client/customer interests, financial security, market integrity, conflicts of interest, professional ethics, respect for colleagues, protection of the Group, commitment to society and combatting corruption and influence peddling), its Human Rights Statement<sup>5</sup> and its Fundamental Rights and Workplace Social Foundation Agreement (Global Agreement<sup>6</sup>) signed in 2018 with UNI Global Union and renewed until 30 June 2024.

# OUR VIGILANCE APPROACH

As part of the preparation of its vigilance plan, BNP Paribas conducted, in line with its commitments, risk mapping and a review of its existing risk assessment and control process and tools, on a scope consistent with the text of the law.

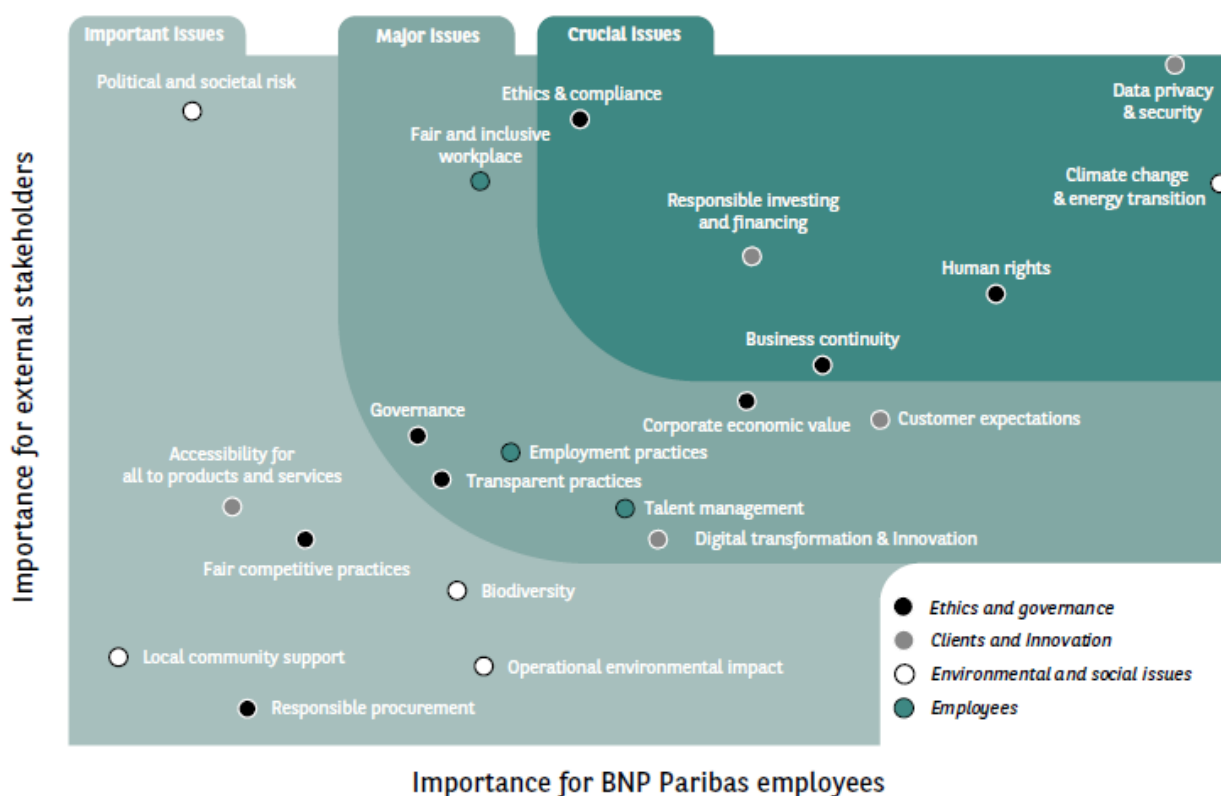

## 1 RISK MAPPING

### 1.1 Environmental, social and governance risks (ESG) taken into account by BNP Paribas

#### 1.1.1 Materiality matrix with regard to internal and external stakeholders' expectations

BNP Paribas produced a materiality matrix to classify about a hundred extra-financial topics, grouped into 21 thematic issues, according to their relevance for the Group's internal and external stakeholders. Internal perception is established by a survey to which more than 1,200 top management employees responded, while the external point of view is assessed by the weighting given to these issues in several of databases: publications of the Group's main peers, more than 2,500 regulations applicable to our activities and locations, more than 20,000 industry press articles and more than 450 million tweets on social networks. The results of this study, presented below, make it possible to classify issues into three main groups: important, major and crucial; the crucial issues being:

- human rights (which are included in all the mappings detailed in sections 1.3 to 1.7 inclusive);
- climate change and the energy transition (which are included in the mapping related to the Group's suppliers – see section 1.4, and in the mapping related to the business sectors and countries of operation of BNP Paribas' corporate clients – see section 1.7);
- data privacy and security (identified as one of the main issues related to the distribution of financial products and services to individuals – see section 1.5);
- ethics & compliance as well as business continuity (which are directly linked to the Group's cross-functional governance);
- responsible investments and financing (which are one of the major priorities of BNP Paribas' GTS 2025 Strategic Plan).

### 1.1.2 Risks taken into account in the development of different mapping exercises

In line with its CSR commitments, the Group has included in its vigilance approach the risks of serious violations of human rights and fundamental freedoms, and of harm to human health and safety and to the environment, and the following issues in particular:

- **Issues related to human rights and fundamental freedoms:** child labour; forced labour and human trafficking; use of violence, torture, cruel treatment and failure to respect the right to life; protection of the rights of migrant workers; self-determination rights of people; non-respect of the rights of local communities, the right to property, the right to privacy, the freedom of association and collective bargaining, the freedom to exercise the right to strike; discrimination; harassment; inadequate housing standards; over-indebtedness; failure to respect the right to an adequate standard of living; unfair compensation methods; excessive working hours; lack of respect for diversity (social and ethnocultural origins), (professional) equality and inclusion;
- **Issues related to individual health and safety:** health and safety at work for employees and consumers; industrial accidents; respect for work-life balance (remote working);
- **Environmental issues:** climate, physical and transition risks; GHG emissions (CO<sub>2</sub>, methane, etc.); pollution and water scarcity; air pollution; soil quality (pollution, erosion and depletion); scarcity and depletion of commodities; excessive waste production; damage of ecosystems and biodiversity; environmental impacts related to the use of products and their end of life.

To take these issues into account, BNP Paribas:

- builds on benchmark scientific work, such as that of the IPCC (Intergovernmental Panel on Climate Change) and IPBES (Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services);
- builds on forward-looking scenarios compatible with the objective of collective carbon neutrality in 2050, such as the IEA (International Energy Agency)'s Zero Net Emissions by 2050 Scenario.

Risk mappings were, among others, carried out with regard to Group employees, purchase categories for BNP Paribas' suppliers and subcontractors, as well as business sectors and operating countries for BNP Paribas' banking and financial activities.

### 1.2 Mapping with regard to Group employees

In 2023, the Group is present in 63 countries. With regard to all the human rights risks that could impact its employees, the Group has relied on indicators based on reference sources provided by Verisk Maplecroft, enabling it to determine a level of criticality by risk type (arithmetic average of each theme by country, updated annually):

- risks related to freedom of association and collective bargaining, including freedom of association and trade union negotiations, and freedom of assembly;
- risks of discrimination, inequality and exclusion, including workplace discrimination, minority rights, gender minorities, and women's rights;
- occupational health and safety risks;
- risks related to working conditions, including living wages, decent working hours, child labour and forced labour.

At the end of 2023, the breakdown of BNP Paribas' workforce by social risk category and the level of criticality in the countries in which the Group operates is as follows:

| Criticality  | Freedom of association and collective bargaining | Discrimination, inequality and exclusion | Occupational health and safety | Working conditions |
|--------------|--|--|--------------------------------|--------------------|
| Very high    | 0%   | 0%                                       | 0%                             | 0%                 |
| High         | 0.7%   | 13.2%                                    | 8.0%                           | 0.3%               |
| Average      | 25.6%  | 26.9%                                    | 16.8%                          | 26.9%              |
| Low          | 73.7%  | 59.9%                                    | 75.2%                          | 72.8%              |
| <b>TOTAL</b> | <b>100%</b>                                      | <b>100%</b>                              | <b>100%</b>                    | <b>100%</b>        |

On the basis of these analyses, more than 85% of the Group's workforce is located in countries with a low or medium criticality on all the social risk themes selected.

In the Discrimination, Inequality and Exclusion category, the "high" level of criticality mainly relates to two countries, which represent 12.5% of the Group's workforce. In the Occupational Health and Safety category, the "high" level of criticality relates mainly to two countries, which represent 7.7% of the Group's workforce.

### 1.3 Mapping of BNP Paribas' suppliers and subcontractors

An ESG risk mapping on purchasing categories, covering 13 ESG issues enables the identification of those that carry a significant level of environmental and social risk. This mapping is the result of a market initiative led by AFNOR in 2018, which resulted in four levels of criticality being assigned to the categories and subcategories of BNP Paribas' purchases, such as air transport, databases, data centres, office supplies, etc. In 2023, the Group refined its purchasing subcategory coverage and therefore covers 105 additional purchasing subcategories compared to 2022. The issues taken into account are as follows:

- fair practices and ethics: fraud and corruption, protection of personal data, property rights and patents;
- human rights and social conditions: child labour, forced labour and modern slavery, discrimination, health and safety, working conditions and freedom of association;
- environment: climate change and greenhouse gases, damage to biodiversity, depletion of natural resources, pollution (water, air, soil), waste and end-of-life management.

The breakdown of BNP Paribas' purchasing subcategories (covering 99% of total expenses for 2023,) by level of criticality is as follows at the end of 2023:

| Criticality  | Purchasing subcategories | % of total  | Corresponding amount | % of total  |
|--------------|--------------------------|-------------|----------------------|-------------|
| Very high    | 15                       | 6%          | €0.3 bn              | 3%          |
| High         | 44                       | 19%         | €1.0 bn              | 10%         |
| Medium       | 133                      | 57%         | €7.7 bn              | 78%         |
| Low          | 42                       | 18%         | €0.9 bn              | 9%          |
| <b>TOTAL</b> | <b>234</b>               | <b>100%</b> | <b>€9.9 bn</b>       | <b>100%</b> |

### 1.4 Mapping of the distribution of financial products and services to individuals

The Group has identified two main risks in the distribution of its products and services for individuals: non-discrimination in access to financial services, and the right to privacy.

### 1.5 ESG risk mapping related to BNP Paribas' financing, investment and corporate client advisory activities

Since 2011, BNP Paribas has gradually deepened and broadened its framework to manage the ESG risks that may affect its activities. Initially focused on the most sensitive sectors from an ESG point of view (with the development of sectoral policies), the system now covers all sectors of the economy in which the Group has clients. Sectoral policies are regularly adapted to better take into account the new challenges of the sectors covered by increasing the level of ambition. BNP Paribas has eight sectoral policies<sup>1</sup>, covering: Agriculture, Palm oil, Paper pulp, Energy production from coal, Mining industry, Oil and Gas, Nuclear energy and Defence.

#### 1.5.1 Mapping of environmental and social risk levels in the countries of operation of the Group's corporate clients

A level of environmental and social risk (E&S) was defined for each country in which the corporate clients of the Group operate on the basis of reference sources provided by Verisk Maplecroft and Reporters Without Borders, and issued by recognised international organisations and NGOs, such as the International Labour Organization, the World Bank, the United Nations Environment Programme, Human Rights Watch, Transparency International and the World Resources Institute.

15 indicators cover the following topics: child labour; forced labour; rights to land, property and housing; freedom of association and collective bargaining; living wages; decent working time; migrant workers; occupational health and safety; environmental regulatory framework; biodiversity and protected areas; deforestation; waste management; water quality; water stress; freedom of the press.

<sup>1</sup> <https://group.bnpparibas/en/our-commitments/transitions/financing-and-investment-policies>.

The 15 indicators are weighted, which gives the breakdown of the countries of operation of the Group's corporate clients according to the following four levels of environmental and social risk (data from May 2023):

| <b>Level of environmental and social risk</b> | <b>Countries of operation of corporate clients</b> | <b>% of total</b> |
|---|--|-------------------|
| Very high                                     | 7  | 5%                |
| High  | 26   | 19%               |
| Average                                       | 48   | 36%               |
| Low   | 53   | 40%               |
| <b>TOTAL</b>                                  | <b>134</b>   | <b>100%</b>       |

### 1.5.2 Mapping of the salient E&S risks of the Group's business sectors

For each business sector, BNP Paribas analysed the ones that had salient risks related to human rights and fundamental freedoms, individual health and safety and the environment. These risks were defined according to a methodology for rating the level of severity and occurrence of each risk, which is based on the United Nations Guiding Principles reporting reference framework. The level of risk inherent in each business sector was then determined based on the presence of salient risks.

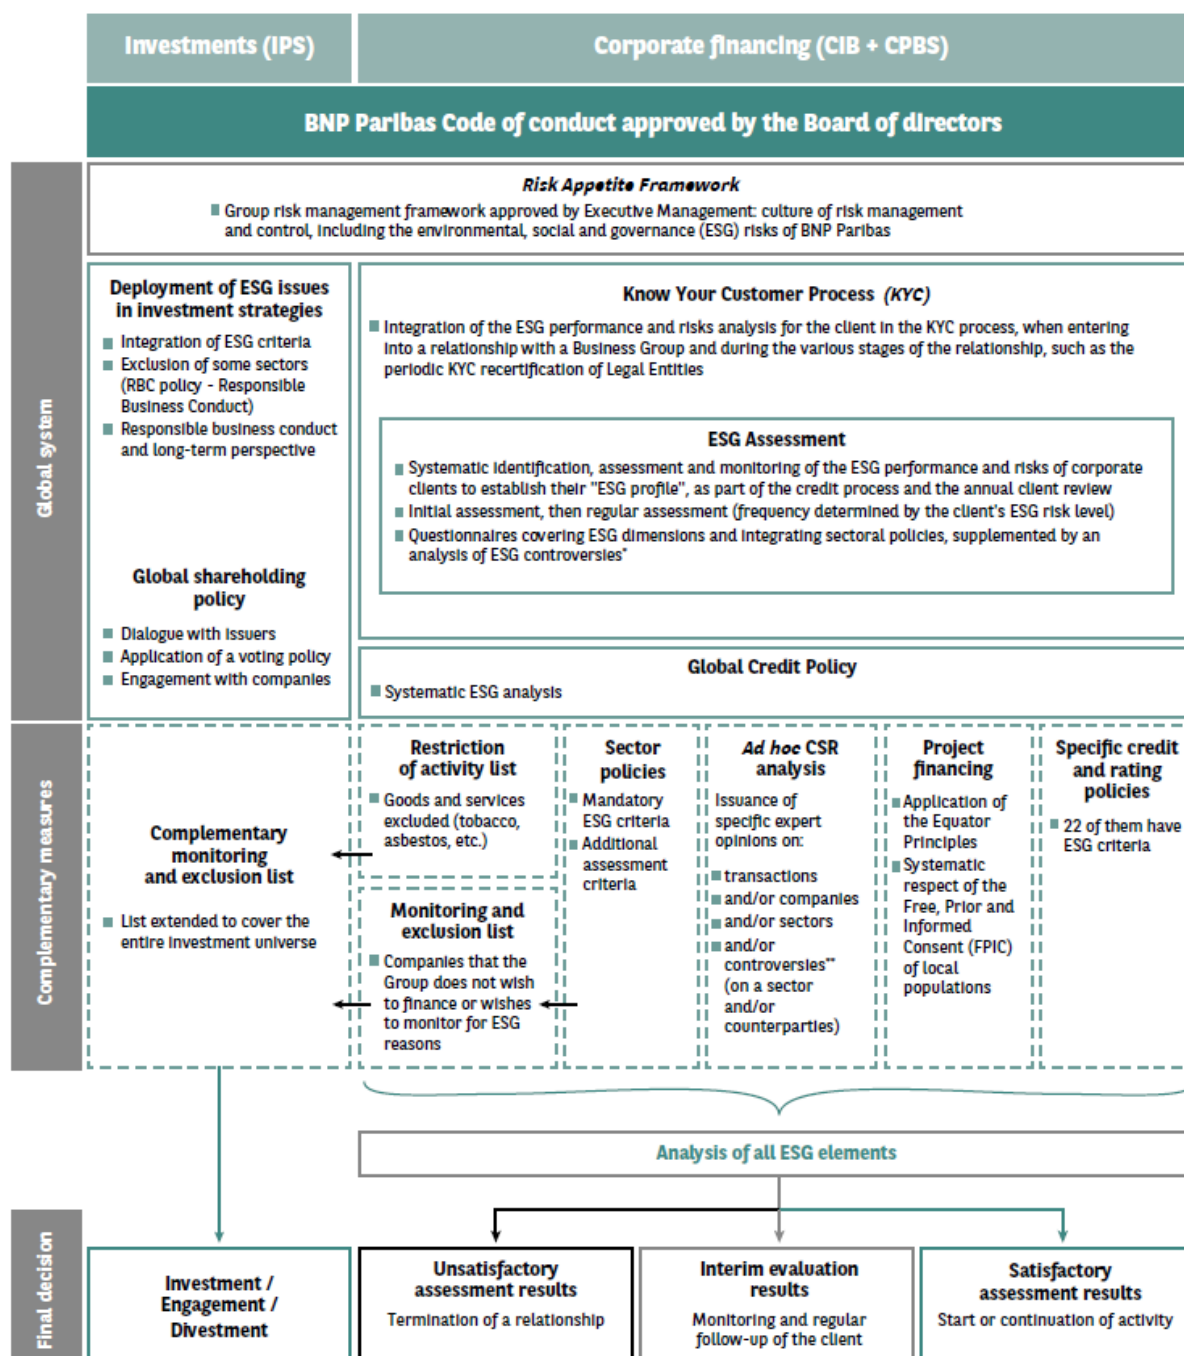

All business sectors of the Group's corporate clients are covered, including those that do not present intrinsic salient environmental and social risks, such as finance or insurance. Those with at least one risk are detailed below according to the number of salient environmental and social risks:

| <b>Business segments of corporate clients</b> | <b>Human rights and fundamental freedoms</b> | <b>Consumer health and safety</b> | <b>Environment</b> | <b>Total</b> |
|---|--|-----------------------------------|--------------------|--------------|
| Agriculture, food, tobacco                    | 7  | 1                                 | 6                  | 14           |
| Materials and minerals                        | 6  | 1                                 | 6                  | 13           |
| Energy excluding electricity                  | 4  | 1                                 | 6                  | 11           |
| Transport & storage                           | 6  | 1                                 | 4                  | 11           |
| Suppliers (electricity, gas, water, etc.)     | 3  | 1                                 | 6                  | 10           |
| Equipment excluding IT                        | 5  | 1                                 | 4                  | 10           |
| Chemicals excluding pharmaceuticals           | 3  | 2                                 | 3                  | 8            |
| Construction & public works                   | 6  | 1                                 | 1                  | 8            |
| Information Technology (IT)                   | 6  | 0                                 | 1                  | 7            |
| Consumer goods                                | 4  | 0                                 | 2                  | 6            |
| Healthcare & pharmaceutical industry          | 2  | 2                                 | 1                  | 5            |
| Hotels, tourism, leisure                      | 3  | 1                                 | 1                  | 5            |
| Automotive                                    | 0  | 1                                 | 1                  | 2            |
| <b>TOTAL</b>                                  | <b>55</b>                                    | <b>13</b>                         | <b>42</b>          | <b>110</b>   |

It should be noted that the same risk may exist for different sectors, such as the risk related to water pollution or the risk of child labour. These mappings make it possible:

- on the one hand, to provide a more specific framework for the business sectors of the Group's corporate clients that carry salient environmental and social risks;
- on the other hand, to develop financing and investments in activities with a positive impact.

## 1.6 Representation of the overall ESG Risk Management system

Sources: \* external ESG data providers (Reprisk, Moody's ESG Solutions, Sustainalytics), as well as \*\* media, NGOs, customers.

## 2 PROCEDURES FOR REGULAR ASSESSMENT OF THE SITUATION OF SUBSIDIARIES, SUBCONTRACTORS OR SUPPLIERS, WITH REGARD TO RISK MAPPINGS

### 2.1 Systems used to manage these risks

The Group has made an inventory of its existing systems, and compared them against the elements required for the preparation of the vigilance plan and its risk mappings, ensuring that these existing systems fully cover the main risks for employees, the main suppliers and banking and financial activities.

BNP Paribas' risk identification & assessment process (Risk ID) is part of the Group risk management framework. Risk ID is a fully integrated process, involving business lines, the RISK Function and the other control functions throughout the Group. It serves to maintain up-to-date Risk Inventories (both at local and Group levels). The Risk ID process aims to identify and assess all the risks the Group is, or might be exposed to in the future.

BNP Paribas' Risks ID process covers:

- all sets of activities and exposures, on and off-balance sheet, as well as new products and activities;
- all risk types and all geographies;
- all business lines and legal entities.

ESG dimensions are taken into account as risk factors, *i.e.* likely to trigger, promote or exacerbate the occurrence of a risk, whether financial or extra-financial (see section 5 *Risks and capital adequacy – Pillar 3* of this amendment to the 2022 Universal Registration Document, Appendix 5: *Environmental, social and governance risk*).

### 2.2 The system concerning Group employees

In order to assess and prevent the risks that could impact its employees, the Group relies on Group-level Human Resources (HR) policies, which apply up to the Group's highest level and to all its companies, and on agreements negotiated with employee representative bodies, in particular on the BNP Paribas Global Agreement which covers all employees, as well as Group-level or regional-level charters:

- freedom of association and collective bargaining: the Global Agreement specifically includes the Group's commitments in terms of freedom of association and the fundamental right to collective bargaining; social dialogue is particularly developed within the scope of the European Works Council (covering more than 70% of the Group's workforce);
- discrimination, inequality and exclusion: issues related to the fight against discrimination, diversity, inclusion and equality are at the heart of the Group's Code of conduct, with in particular the chapter "Respect for people" which aims to combat inappropriate behaviour. These issues are also integrated into recruitment and career management processes. Finally, gender equality issues are well reflected in the content of the Global Agreement;
- occupational health and safety:
  - under the Global Agreement, all Group employees are covered in terms of health, death and disability insurance and receive a minimum period of maternity leave. The *We Care* occupational health and well-being programme has boosted the Group's actions, particularly in the prevention of psychosocial risks, employee mental health and risks related to a sedentary lifestyle. Crisis units are also set up during major events, such as crises related to health or geopolitical situations,
  - in terms of occupational safety, all Group employees benefit from a reference corpus for the safety of people and property, which establishes fundamental principles in terms of security (with regard to the risks related to voluntary or malicious acts likely to harm people or Group assets and activities), and safety (with respect to natural and climatic events, or related to the technological environments of our sites likely to harm people or Group assets and activities);
- working conditions: forced labour is prohibited within the Group, and BNP Paribas had no employees under the age of 18 at the end of December 2023. Employment is managed under collective agreements. In addition, respect for work-life balance is incorporated in the European Remote Working Charter.

The policies and actions already undertaken by Group HR will continue to be implemented and monitored over time.

### 2.3 The system concerning BNP Paribas suppliers and subcontractors

Dedicated teams in the Procurement & Performance (P&P) Department deal with supplier- and subcontractor-related ESG risks.

In accordance with the deployment of the law on the duty of care, BNP Paribas' ESG Risk Management system for its suppliers and subcontractors is based on the following elements, in line with the ESG risk mapping for purchasing categories:

- ESG questionnaire templates used to assess ESG risks when entering into relationships with external suppliers and subcontractors representing a contract value of more than EUR 200,000, including taxes (from the first euro for suppliers of outsourced services), and during calls for tenders. ESG performance is assessed with a minimum weighting of 15% of ESG criteria (measured in 2023 compared to a minimum of 5% in 2022);
- supplier monitoring rules, targeting certain ESG criteria used during the selection process and completed by the thematic regulatory watches;
- training of Procurement Function employees.

In addition to this system, in France, BNP Paribas as a signatory of the Responsible Supplier Relations Charter promoted by the Business Mediation body of the French Ministry of Economy and Finance, has an internal procurement ombudsman which is independent from the P&P Department, whose contact details are provided on the Group's institutional website, to offer advice in the event of a dispute.

The use of ESG evaluation questionnaires in calls for tenders and the inclusion of their results in the overall evaluation of the supplier form part of the Procurement control plan.

## **2.4 The system related to the distribution of financial products and services to individuals**

The Group has identified two main issues in the distribution of its products and services for individuals: non-discrimination in the access to financial services and the right to privacy (protection of customers' personal data).

Non-discrimination in access to financial services is included in the internal Clients' Interests Protection (CIP) policy. This subject is at the top of the BNP Paribas Code of conduct and is a specific area of expertise within the Compliance teams, which monitor these issues. The CIP policy defines the rules of organisation and conduct that must be applied by the Group throughout the relationship with the customer, and at all stages of the product and service life cycle.

In addition, BNP Paribas is committed to being exemplary in the protection of their personal data. With the development of the global digital economy, regulators and data protection authorities around the world have considered that rapid technological change requires appropriate laws and regulations for data protection and their privacy. Data protection laws are being strengthened globally, some of which are applicable to a large number of Group entities (e.g. GDPR) and compliance with data protection rules has a paramount importance for BNP Paribas. The Group has strict internal procedures governed by the RISK Department to oversee the processing of personal data and implement best practices in this area.

## **2.5 The system related to corporate financing activities**

The activities of BNP Paribas' corporate clients may involve risks in relation to human rights and fundamental freedoms, human health and safety, and the environment. The Group has published its Responsible Business Principles Charter<sup>1</sup> for its corporate clients, thus reaffirming BNP Paribas' will to engage with clients whose business practices demonstrate a high level of governance and responsibility with respect to human rights, fundamental freedoms, human health and safety and the environment.

ESG risks related to corporate financing and investment activities are managed under the lead of the Group's Risk Appetite Framework, a Group Risk Management framework validated by Executive Management, which includes ESG risks (see section 1.5.1). The general credit policy includes a systematic ESG analysis, while 22 specific credit and rating policies include ESG criteria.

Considering the ESG aspect to be one of the Group's major challenges and a fundamental component of Know Your Client, the Group has generalised the integration of ESG assessment criteria into the client life cycle (Know Your Client – KYC process): in the process of entering into a relationship and during the various stages of the relationship, such as the KYC recertification, the Credit Committee or the annual review. The analysis of the client's ESG profile (enabled, among other things, by the ESG Assessment) will be integrated as a step of the KYC process, according to a deployment by client typology.

Gradually implemented since 2021, the ESG Assessment has become the preferred tool for monitoring the ESG performance and associated risks of the Group's corporate clients. The ESG Assessment covers the environmental (climate and biodiversity), social (health and safety at work and impact on communities) and governance (business ethics) dimensions through several questions split within these five themes. It is supplemented by an analysis of controversies affecting clients. The Assessment consists of a systematic ESG analysis that is applied as part of the credit process. Like other criteria (financial, strategic), ESG criteria are taken into account in the assessment of the counterparty's credit profile. The ESG Assessment, therefore, enables BNP Paribas to deepen and document its ESG knowledge of clients. The ESG Assessment also assesses clients' compliance with the Group's sectoral policies, as well as the maturity of their ESG strategy and its implementation.

The deployment of the ESG Assessment, included in the credit files for all business sectors and business groups, will enable the RISK Function to exercise greater control over the ESG dimensions during Credit Committees, on a documented basis. Initially designed for the Group's large corporate clients, for which roll-out was almost completed at the end of 2023, the ESG Assessment has been adapted for corporate clients with revenue of over EUR 50 million, and for financial institutions. In 2024, the objective is to cover all clients in these client segments.

Until the deployment of the ESG Assessment has been completed for all of the Group's corporate clients, additional ESG risk assessment tools remain, such as questionnaires related to the law on the duty of care, which apply to corporate clients operating in countries with very high or high environmental and social risk and in business sectors with salient risks, as defined by the mapping related to the Group's banking and financial activities (see sections 1.5.1 and 1.5.2).

## **2.6 The system related to investment activities**

The Group's asset management subsidiary, BNP Paribas Asset Management, and the Group's insurance subsidiary, BNP Paribas Cardif, implement their ESG strategies, which include, among other things, the application of the Group's sectoral policies (see section 1.5 *Mapping of ESG risks related to BNP Paribas' financing, investment and corporate client advisory activities*).

<sup>1</sup> [https://group.bnpparibas/uploads/file/bnpp\\_responsible\\_business\\_principles\\_ven.pdf](https://group.bnpparibas/uploads/file/bnpp_responsible_business_principles_ven.pdf).

BNP Paribas Asset Management's Global Sustainability strategy, launched in 2019 and updated at the start of 2024, details the way in which ESG issues are deployed in investment strategies. It is based on the exclusion of certain sectors, engagement and dialogue (stewardship) as well as responsible business conduct and a long-term perspective. In order to promote ESG best practices within the companies in which the asset management company and its clients have invested, BNP Paribas exercises its voting rights as a shareholder at Annual General Meetings.

In addition, BNP Paribas Asset Management and BNP Paribas Cardif use collaborative dialogue (working groups or coalitions whose members cooperate to act jointly with companies) to encourage improvements in practices. For example, these two entities are members of the Climate Action 100+ initiative and, as such, regularly engage in dialogue with companies ranked among the world's top greenhouse gas emitters to improve their climate change governance and strategy. BNP Paribas Asset Management is also a founding member of the initiative Nature Action 100.

### **3 APPROPRIATE ACTIONS TO MITIGATE RISKS OR PREVENT SERIOUS HARM**

#### **3.1 Concerning the Group's employees**

In order to reduce the risks of discrimination and promote respect for people, the Group has:

- in early 2023 set an objective relating to compliance with its Code of conduct, rules and regulations for all Group employees, in order to strengthen the culture of compliance, specifically including respect for people;
- strengthened and fully rolled-out worldwide in 2023 its policy: BNP Paribas entities have applied the principles defined at Group level locally;
- widely promoted its policy on inclusion in all its dimensions, particularly during the 2023 *Inclusion Days*, which raised employee awareness on equal opportunities, prejudice, disability and financial inclusion;
- set up specific training on human rights.

In order to promote professional equality, the Group:

- has set itself ambitious gender equality targets at all levels of the organisation by 2025, including 40% of women on the Group's Executive Committee and in Senior Management Positions (SMP). In 2023, the ambitious level of 37% of women in the SMP population was achieved thanks to the actions of the Executive Committee members and the strong commitment of all Human Resources teams in all business lines and regions;
- has continued its actions based on the development of employee skills, particularly in roles that are structurally unbalanced in terms of gender such as IT, Data, Digital, market activities within CIB and sustainable finance;
- for several years now, has introduced specific equal pay measures as part of the mandatory annual negotiations.

In terms of work-life balance, the Group:

- is continuing its preventive actions around the health and well-being at work of its employees while adapting its managerial practices;
- is setting up programmes related to the prevention of psychosocial risks and stress at work.

#### **3.2 Concerning BNP Paribas' suppliers and subcontractors**

In addition to the assessment system described above (see section 2.3 *The system concerning BNP Paribas suppliers and subcontractors*), BNP Paribas:

- published a "Sustainable Sourcing Charter", setting out the reciprocal commitments of the Group and its suppliers and subcontractors from an ethical, environmental and social standpoint;
- integrated standard contractual clauses covering requirements in order to meet environmental and social criteria. Since 2018, they have also included the option of ending contracts if suppliers do not comply with the Group's ESG requirements.

#### **3.3 Concerning the distribution of financial products and services to individuals**

In order to reduce the risk of discrimination in access to financial services, the Group:

- optimises the sale of products and services adapted to the needs and situation of customers, according to the rules defined by the internal policy for the protection of clients' interests (CIP);
- ensures that the information provided is clear and enables customers to make informed decisions;
- ensures the accuracy of information relating to the environmental or social characteristics of the products offered;
- prioritises the interests of customers rather than those of the Group or its employees;
- trains all employees concerned (particularly Front Office and Management) to protect customer interests;
- manages customer complaints;
- implements a financial inclusion approach, by supporting microfinance through financing and services provided to specialised institutions, by improving access to credit and insurance, and by supporting customers facing difficulties because of their disability or their financial situation.

BNP Paribas acts both to facilitate access to credit and to prevent over-indebtedness. It considers that the role of a responsible bank is to support its customers, even in the most difficult times.

- It is in this spirit that Commercial & Personal Banking in France (CPBF) launched the AXELLE platform in 2019 as part of its commitment to banking inclusion, updated in early 2024. The platform allows customers to find help, advice and tips offered by partner associations, social enterprises and member companies of the *Collectif des entreprises pour une économie plus inclusive en France* (Business collective for a more inclusive economy in France), to help them to manage their budget. AXELLE is 100% free and anonymous, and is aimed at all those on low incomes;
- In terms of financial education, BNP Paribas Personal Finance's online platform, Budget Responsible is dedicated to helping young people learn the key concepts of budget management, savings, loans and banking. In Italy, the Findomestic Camp by BNP Paribas Personal Finance also aims to raise awareness of financial education among young people.

In addition to the regulatory requirements related to the duty of care, the Group has developed several initiatives that fall within its civic responsibility, such as:

- the Nickel offering, currently marketed in five European countries (launched in Germany in 2023), which offers an unconditional account open to all, including sort code, account number and a payment card;
- support for microfinance, with microloans benefiting people in 11 countries, including many new emerging countries;
- training in financial issues, such as financial education;
- the offer by BNL, the Group's subsidiary in Italy, for seniors wishing to bridge the gap with their pensions (loss of employment less than 36 months before retirement or early retirement up to four years in advance).

In order to reduce the risk of non-compliance with personal data protection, BNP Paribas has set up a training course entitled "Personal Data Protection Awareness" for all of its employees, in order to raise their awareness of personal data protection and help them understand data protection requirements as well as data privacy laws. The training focuses on understanding key data protection principles and the implementation of personal data protection within the Group.

### 3.4 Concerning financing, investment and corporate client advisory activities

The risk mitigation and serious harm prevention system is based on the results of the application of the Group's eight sectoral policies. These are regularly updated and added to by internal application guides. For example, the oil and gas policy was amended in 2023 to include conventional oil and gas resources.

In addition, the Group's risk mitigation and serious harm prevention system also relies on specific actions implemented with regard to risk mapping, such as the management of controversies concerning environmental, social and governance issues.

#### 3.4.1 Activity restriction according to the severity of the environmental and social impacts

BNP Paribas has defined strict ESG criteria in many sectors, compliance with which determines the activity with its corporate clients, whether at the level of a client (which does not comply with the prohibitive criteria of a sectoral policy), a sub-sector (unconventional hydrocarbons), or a sector as a whole (such as tobacco).

In order to identify the companies presenting the highest environmental and social risks, the Group defines and applies sectoral policies, while managing activity restriction lists according to the level of ESG risks observed, *i.e.* a list of excluded companies and a list of companies placed under monitoring. Companies placed on the monitoring list are subject to an engagement by the Group to make lasting changes to their practices and reduce their ESG risks. For excluded companies, the Group prohibits any financing or investment relationship. Lastly, BNP Paribas has compiled an exclusion list<sup>1</sup> of specific goods and activities that the Group is unwilling to finance, such as tobacco. These lists are periodically updated using data supplied by clients and external sources, and by analysing the key controversies involving corporate clients accused of serious violations of environmental standards or human rights.

With regard to the drastic reduction in support for fossil fuels:

- in 2017, the Bank stopped supporting companies and infrastructure whose primary business is exploration, production and export of gas/oil from shale, oil from tar sands or gas/oil production in the Arctic. In 2022, BNP Paribas decided to no longer provide products and services to companies where more than 10% of the activity is related to tar sands and shale oil and gas;
- in 2020, BNP Paribas announced a strategy for a complete exit from the thermal coal value chain by 2030 in the European Union and OECD countries, and by 2040 in the rest of the world. Sectoral policies covering the mining and dedicated infrastructure sectors were also reviewed;
- 2023 was a year of a major shift of BNP Paribas' financing from the energy sector to low-carbon, mainly renewable energy sources, which already accounted for 65% of the Group's total credit exposure to the energy production sector on 30 September 2023. BNP Paribas is accelerating its transition strategy, with the aim of low-carbon making up 80% of the Group's credit exposure to energy production by 2028, and 90% by 2030. Please note that this is a stock of loans granted over the years, which clients will repay over a number of years. The major action taken from 2023 to accelerate new low-carbon loans and the divestment of fossil fuels will make it possible to achieve the 2028 and 2030 objectives.

With regard to combatting deforestation:

- in early 2021, BNP Paribas strengthened its commitment to combatting deforestation through its policy on Agriculture<sup>2</sup>, the scope of which includes all financial products and services provided by the Group, including participation in the issuance of bonds;
- in accordance with its agriculture sectoral policy, BNP Paribas asks all its clients producing or purchasing beef or soybeans in the Amazon and Cerrado in Brazil, to be zero legal and illegal deforestation by 2025 and to have full traceability of their direct and indirect value chain in the Amazon and Cerrado. This requirement applies to the entire direct and indirect value chain of the Group's clients;
- since 2021, an analysis of the portfolio of producers, meat packers and traders involved in the value chain of beef from Brazil has been carried out in order to assess their progress and engage in a dialogue;
- in addition, in 2022, BNP Paribas announced that it would not finance any greenfield or brownfield oil and gas projects, nor any associated infrastructure in the Amazon region or the Arctic region.

<sup>2</sup> [https://cdn-group.bnpparibas.com/uploads/file/bnpparibas\\_csr\\_sector\\_policy\\_agriculture.pdf](https://cdn-group.bnpparibas.com/uploads/file/bnpparibas_csr_sector_policy_agriculture.pdf).

### 3.4.2 Project financing

For all of its project financing activities, BNP Paribas encourages its clients to obtain the Free, Prior and Informed Consent (FPIC) of the local communities impacted by their projects.

Specific restrictions concerning protected areas (such as those listed by the IUCN) are also included in the Group's financing and investment policies.

The Group has been a signatory of the Equator Principles since 2008. These aim to avoid, reduce, mitigate or offset the negative impacts of major industrial or infrastructure projects on communities, ecosystems and the climate, with additional measures in certain countries.

### 3.4.3 Controversy management

The Group monitors controversies targeting its clients, with sources such as NGOs, the media, and alerts generated as part of the ESG Assessment (controversies identified by RepRisk and Sustainalytics). These controversies can be raised by the business lines, the CSR managers of the business lines, or the Group CSR.

When a controversy arises in relation to one of its clients, the Group first approaches risks according to the geography and criticality of the subject (such as a violation of human rights). An internal analysis combines the available information, in connection with the business line hierarchy and the Group's CSR, in order to estimate the severity of the controversy and to determine the list of questions that the client must answer. After contact with the latter, its additional responses and any action plan (taking into account the time horizon) are analysed in order to reach a final decision: continue the activity if everything is deemed satisfactory; suspend operations if doubts remain (with request for the implementation of a remediation plan and monitoring until satisfaction); exclusion if the situation cannot be remedied.

BNP Paribas also deepens its sector analyses on controversies affecting an entire sector. The Group then issues internal recommendations as to the criteria to be monitored, and specific issues are included in the assessment system for clients in these sectors.

## 3.5 Alignment of the loan and investment portfolio with the Net-Zero in 2050 objective

Continuing its commitments to combat global warming, BNP Paribas signed up to the Net-Zero Banking Alliance (NZBA) from its launch on 21 April 2021, committing to finance a carbon neutral economy by 2050, which corresponds to a temperature increase limited to 1.5°C compared to the pre-industrial era.

Other Net-Zero initiatives are grouped within the Glasgow Financial Alliance for Net-Zero (GFANZ). The Net Zero Asset Owner Alliance (NZAOA) signed by BNP Paribas Cardif in September 2021 and the Net-Zero Asset Managers initiative (NZAMi) signed by BNP Paribas Asset Management in November 2021 are examples. The two entities are committed to supporting the goal of zero net greenhouse gas emissions by 2050.

### 3.5.1 Significant resources for applying the Group's climate vigilance

BNP Paribas has dedicated a large number of employees from several teams to help to implement the Group's alignment strategy:

- the Climate Analytics & Alignment (C2A) Data Analytics team, co-managed by the CSR Department and CIB Global Banking EMEA, which is responsible for:
  - developing and deploying sectoral alignment methodologies (including modeling of missing data, analysis of different methodological options, testing of different climate change scenarios, *etc.*) in coordination with business teams and sectoral specialists,
  - calculating Group-scope portfolio-level metrics for external reporting,
  - calculating client-level metrics for portfolio management and client engagement;
- the Low-Carbon Transition Group, an internal organisation of 200 specialist bankers at the end of 2023 (with a target of 250 by the end of 2025), which is dedicated to supporting international clients, companies and institutional investors in accelerating their transition to a sustainable and low-carbon economy, with a particular focus on projects of the future, such as green hydrogen;
- the CSR network, which operates in the divisions, business lines, branch networks, functions and subsidiaries to facilitate the deployment of the CSR policy throughout the Group, with more than 220 employees devoting all or most of their time to managing CSR issues;
- the RISK Function, which continuously performs a second-line control over credit and counterparty risks, market risk, interest rate and foreign exchange rate risks on the banking book, liquidity risks, insurance risks, and operational risk, including technological and cybersecurity risks, data protection risks, modeling risks and environmental and social risk factors, as well as the associated governance risks;
- the Finance, RISK and ALM Treasury functions have created a shared team called Stress Testing & Financial Simulations (STFS), responsible for rolling out stress testing activities, ICAAP (Internal Capital Adequacy Assessment Process) tests and internal capital tests together with financial planning across the Group's entities and activities. Stress test methodologies are tailored to the main categories of risk and subject to independent review.

### 3.5.2 Objectives for six of the highest-emitting sectors

In its climate report<sup>1</sup>, published in 2023, BNP Paribas presents in detail the stages of the alignment of its loan and investment portfolio. In particular, this report explains what data is used, details of the calculation methodologies, including the calculation of the alignment trajectory and the strategy implemented by the Group, and specifies the methods for managing the portfolio. The climate report details the progress in achieving the objectives of the three business sectors published in 2022, and presents the targets for the reduction of financed greenhouse gas (GHG) emissions that have been set for three new sectors. These six sectors, which are all among the highest emitters, are as follows:

- Electricity production, for which the Group has undertaken to:
  - increase the share of renewable energies in the energy mix that it finances to reach more than 66% in 2025 and reduce the share of coal in the energy mix that it finances to less than 5% in 2025,
  - reduce the CO<sub>2</sub> intensity of its financing by at least 30% in 2025 compared to 2020;
- Oil and gas, for which the Group has undertaken to:
  - reduce its credit exposure to oil exploration and production activities by 80% between September 2022 and 2030,
  - reduce its credit exposure to oil & gas production activities by 12% in 2025 compared to 2020,
  - reduce its credit exposure to gas exploration and production activities by 30% between September 2022 and 2030,
  - reduce the intensity of GHG emissions of its financing by at least 10% in 2025 compared to 2020;
- Automotive sector, for which the Group has undertaken to:
  - increase the share of electrified vehicles in the automotive mix that it finances to reach more than 25% by 2025,
  - reduce the CO<sub>2</sub> intensity of its financing by at least 25% in 2025 compared to 2020;
- Steel, for which the Group has undertaken to:
  - reduce the CO<sub>2</sub> intensity of its financing by at least 25% in 2030 compared to 2022;
- Aluminium, for which the Group has undertaken to:
  - reduce the intensity of GHG emissions of its financing by at least 10% in 2030 compared to 2022;
- Cement, for which the Group has undertaken to:
  - reduce the CO<sub>2</sub> intensity of its financing by at least 24% in 2030 compared to 2021.

In 2022, BNP Paribas Asset Management and BNP Paribas Cardif published their “Net-Zero” commitments:

- regarding BNP Paribas Asset Management’s investments, these commitments are as follows:
  - reduce the carbon footprint (scopes 1 and 2) of the investments concerned (around 50% of assets under management to date, with the objective of reaching 100% over time), by 30% by 2025 and by 50% by 2030 (vs. 2019),
  - align the relevant investments (also around 50% of assets under management to date) with the “Net-Zero” principle: by 60% by 2030 (meeting, aligned or in the process of aligning with the “Net-Zero” objective) and by 100% by 2040,
  - substantially increase investment solutions in climate and environmental issues,
  - dialogue with clients on their “Net-Zero” transition;
- regarding BNP Paribas Cardif’s investments, these commitments are as follows:
  - reduce the carbon footprint of directly held equity and corporate bond portfolios by at least 23% by 2024 (vs. 2020),
  - reduce the carbon intensity of directly owned office buildings by at least 12% by 2030 (vs. 2020),
  - allocate at least EUR 800 million per year to environment-themed investments;
- regarding shareholder engagement or stewardship, these commitments are as follows:
  - vote for climate action (in favour of the most relevant climate initiatives or shareholder proposals),
  - foster dialogue with companies on the “Net-Zero” principle,
  - advocate for a climate policy aligned with the “Net-Zero” principle.

### 3.6 Investment and financing activities with a positive impact

The Group’s CSR strategy has long been structured to contribute to achieving the United Nations’ 17 Sustainable Development Goals (SDG). This strategy involves supporting all customers, individuals, companies and institutions, in their transition to a low-carbon economy, respectful of the planet’s resources and allowing the inclusion of the most vulnerable as well as respect for human rights.

To this end, the Group continues to expand the range of products and services to support or even accelerate this transition including:

- support for impact enterprises (including microfinance institutions):
  - through banking services or investment,
  - through financing, in particular with impact bonds, which enable the financing of innovative projects led by associations or impact enterprises, with a payment for results model dependent on social, environmental and development indicators, or the circular economy;

<sup>1</sup> [https://group.bnpparibas/uploads/file/bnp\\_paribas\\_2022\\_climate\\_report.pdf](https://group.bnpparibas/uploads/file/bnp_paribas_2022_climate_report.pdf).

- sustainable investment funds, which make it possible to direct investments towards assets incorporating ESG criteria, in other words funds classified as articles 8 and 9 according to the Sustainable Finance Disclosure Regulation (SFDR), whether they promote environmental or social characteristics (article 8), or have a sustainable investment objective (article 9);
- sustainable bonds, including green bonds and social bonds;
- sustainable loans, including sustainability linked loans (SLL), *i.e.* loans whose rate is adjusted according to the achievement of environmental and/or social objectives by the borrower;
- financing renewable energy: the Group has set a target of EUR 40 billion in credit exposures for low-carbon energy production by 2028.

## 4 ALERT MECHANISM (WHISTLEBLOWING)

### 4.1 Whistleblowing framework

BNP Paribas Group pays particular attention to the concerns of customers, employees, shareholders, suppliers and society as a whole. The Group is committed to listening, understanding and seeking to respond to the concerns raised by its stakeholders in a fair and effective manner.

BNP Paribas employees are required to report any effective or suspected breach of the Code of conduct, Group policies and procedures, or regulations. Employees can report issues to their line manager or another manager for issues relating to Respect for People, or to a Compliance alert channel.

Any suspicion by a BNP Paribas employee of a serious or potentially serious violation of human rights and fundamental freedoms, the health and safety of people, and the environment may be reported according to this whistleblowing system, except when specified otherwise by local regulations or procedures.

Initially open to Group employees only, the whistleblowing system is now also open to external third parties. The alert form to be completed is freely accessible on the BNP Paribas institutional website<sup>1</sup>.

The protection of whistleblowers against the risk of retaliation was strengthened in 2022, in line with the transposition of the European Directive 2019-1937. Any person that needs to know of an alert during its processing is formally committed to respecting the confidentiality of the information relating to the whistle-blower and any person involved. In addition, the Group guarantees the protection of whistleblowers against the risk of retaliation, and any person considering themselves the victim of retaliation may issue an alert that will be dealt with according to the standards defined by the Human Resources Department. This protection applies regardless of the channel used by the whistle-blower.

The whistleblowing system is presented in the mandatory Code of conduct training course.

In addition, alerts are analysed and processed, with 333 alerts reported in 2023.

### 4.2 Dialogue with external stakeholders

Dialogue with stakeholders is at the heart of BNP Paribas' social and environmental responsibility and is a key lever for achieving its corporate social responsibility (CSR) objectives. The Group maintains an open and constructive dialogue with its stakeholders, which involves listening to them, understanding them and aiming to meet their expectations, in line with BNP Paribas' CSR strategy. This dialogue has three main challenges: anticipating changes in the business lines and improving products and services by better understanding expectations; optimising risk management by listening, and having a positive impact on society.

BNP Paribas has four groups of contractual stakeholders: its clients and customers (individuals, professionals, corporate customers and institutions); its employees and employee representative bodies; its shareholders (individual and institutional investors) and its suppliers. The Group has also identified other strategic stakeholders, in particular: candidates, companies in which BNP Paribas invests on behalf of third parties and on its own behalf, regulatory bodies and public authorities, financial and extra-financial rating agencies, networks and think tanks, civil society and its organisations (local communities, NGOs, consumer associations, charities, *etc.*), the media and opinion leaders.

Each of the Group's stakeholders has identified contacts within BNP Paribas. These dialogue channels are adapted and deployed according to the objectives and expectations of the stakeholders. The Group endeavours to analyse the views and interests of its key stakeholders, in relation to its strategy and business model. Its Executive Management and Board of directors receive regular updates.

The main dialogue channels by stakeholder type are as follows:

- for BNP Paribas clients and customers, exchanges are based on the close relationship they may have with the Group's subsidiaries and business lines, supplemented by independent ombudsman services (organised by the regulatory bodies) in many Group entities, such as the Commercial & Personal Banking networks in France, Belgium, Italy, Morocco and Poland. Specialist expert teams also provide dedicated support to clients/customers or sectors (large companies, financial institutions, SMEs and mid-sized companies, small businesses, associations, *etc.*);
- for employees and employee representative bodies, the Group's Human Resources are responsible for social dialogue. For candidates, there are dedicated recruitment teams;

<sup>1</sup> <https://group.bnpparibas/en/direct-access/whistleblowing>.

- for shareholders (individual and institutional investors) and financial and extra-financial rating agencies, the main contacts are Investor Relations and Financial Information (IRFI) and Group CSR;
- for BNP Paribas suppliers and subcontractors, in addition to the P&P Department, BNP Paribas also has an independent internal ombudsman, whose contact details are published on the Group's institutional website, offering a means of appeal in the event of a dispute;
- companies in which BNP Paribas invests on behalf of third parties are in contact with investment teams, such as those of BNP Paribas Asset Management;
- the Institutional Affairs Department is responsible for relations with regulatory bodies and public authorities;
- networks, think tanks, civil society and its organisations (local communities, civil NGOs, advocacy NGOs, consumer associations, charities) are in contact with the Company Engagement, CSR, Communication and business lines teams;
- the Group Communication Department is the main contact for the media and opinion leaders.

## 5 SYSTEM FOR MONITORING THE MEASURES IMPLEMENTED AND ASSESSING THEIR EFFECTIVENESS

### 5.1 The CSR Policy Management Dashboard

BNP Paribas has set up a dashboard comprising 10 CSR indicators to guide its strategy in this area. The monitoring of the CSR Policy Management Dashboard is carried out on an annual basis by the Group's Executive Committee and Board of directors.

The achievement of the CSR objectives govern the payment of 20% of the amount of the loyalty plan awarded in 2023 to more than 8,200 key Group employees (see *A competitive compensation policy*, Commitment 5). The achievement of the CSR objectives is also included for one third in the calculation of the 15% of the variable compensation awarded for 2023 to the Group's corporate officers. These CSR objectives are those corresponding to the loyalty plan paid during the year to the Group's key employees (see chapter 2, *Compensation and benefits awarded to the Group's corporate officers*).

These indicators include our results for:

- our employees (indicator 4 on gender equality; indicators 5 and 6 on solidarity hours and training performed by employees);
- our distribution of financial products and services to individuals (indicator 7);
- our corporate financing and investment activity (indicators 1, 2, 3, 8 and 9 on supporting our clients in the transition to a sustainable and low-carbon economy);
- our own activity (indicator 10).

| Pillar                           | Indicator  | 2022 Results                 | 2023 Results                 | 2025 Objectives                    |
|----------------------------------|--|------------------------------|------------------------------|------------------------------------|
| Our economic responsibility      | 1 Amount of sustainable loans (in billions of euros)   | 87                           | 117                          | 150                                |
|                                  | 2 Amount of sustainable bonds (in billions of euros)   | 32                           | 67                           | 200                                |
|                                  | 3 Amount of assets under management in open-ended funds distributed in Europe under article 8 & 9 according to the SFDR (in billions of euros) | 223                          | 254                          | 300                                |
| Our social responsibility        | 4 Share of women among the SMP population ( <i>Senior Management Position</i> )  | 35.2%                        | 37.1%                        | 40%                                |
|                                  | 5 Number of solidarity hours performed by employees over two rolling years (#1MillionHours2Help)   | 1,126,142 (in 2021 and 2022) | 1,268,515 (in 2022 and 2023) | 1,000,000 (over two rolling years) |
|                                  | 6 Share of employees who completed at least four training courses during the year  | 97.4%                        | 98.2%                        | 90%                                |
| Our civic responsibility         | 7 Number of beneficiaries of products and services supporting financial inclusion (in millions)  | 3.3                          | 3.9                          | 6                                  |
| Our environmental responsibility | 8 Amount of the support enabling our clients to transition to a low-carbon economy (in billions of euros)                                      | 44                           | 104                          | 200                                |
|                                  | 9 Amount of financing to companies contributing to protecting terrestrial and marine biodiversity (in billions of euros)                       | 1.8                          | 4.3                          | 4                                  |
|                                  | 10 Greenhouse gas emissions in teqCO <sub>2</sub> /FTE   | 1.65                         | 1.56                         | 1.85                               |

## 5.2 Our employees

In addition to the three indicators relating to the Group's social responsibility included in the CSR dashboard (see section 5.1 *Our CSR Policy Management Dashboard*), the Group monitors other objectives with regard to its employees.

As part of the Global Agreement, a joint monitoring committee responsible for the implementation of the Agreement meets once a year to assess the progress made under the agreement and to take stock of the past year on the basis of a grid of indicators by country and geographical area.

In terms of gender pay equality, the Group set a dedicated budget of EUR 10 million for BNP Paribas SA over two years in 2022.

BNP Paribas remains attentive to its employees through Pulse surveys, with 71 surveys carried out in 57 countries, with increasingly high participation rates within the Group. In 2023, it was a 71% participation rate on average among nearly 176,000 employees surveyed.

The vast majority of surveys launched in 2023 by the Group's various business lines and entities incorporated three common questions related to employee engagement, in particular pride in belonging to the Group, adherence to the strategy and involvement in work. The overall engagement score based on the consolidation of all local engagement scores<sup>1</sup> reached a high level of nearly 85 out of 100.

One of the indicators that the Group tracks is the percentage of employees contributing directly to the promotion of human rights who have received specific human rights training. Since 2016, more than 22,000 BNP Paribas employees have completed this training.

## 5.3 Our suppliers and subcontractors

The number of ESG assessments of suppliers and sub-contractors that are conducted as part of calls for tender, in particular those relating to categories of at-risk purchases, is a metric of BNP Paribas monitoring actions towards this type of stakeholder.

At the end of 2023, 5,312 ESG assessments had been carried out (compared to 5,188 in 2022), and 1,287 BNP Paribas suppliers had signed up to the Group's Sustainable Sourcing Charter.

## 5.4 Our distribution of financial products and services to individuals

In 2023, BNP Paribas made a training course entitled "Personal Data Protection Awareness" mandatory for all its employees. The training was completed by 95% of Group employees.

## 5.5 Our financing, investment and corporate advisory activities

At the end of 2023, our system for our corporate financing and investment activities as well as the restriction of activity according to the severity of the environmental and social impacts produced the following results:

- more than 3,000 ESG Assessment questionnaires were carried out with the Group's very large and large corporate clients in 2023 (compared to 1,500 in 2022), covering almost all clients in these segments;
- at the end of 2023, the restriction of activity lists included 1,718 companies (compared to 1,490 in 2022, *i.e.* +15%), of which 1,432 companies were excluded and 86 monitored;
- in 2023, BNP Paribas Asset Management voted at 1,931 General Meetings, abstaining or opposing around 36% of these resolutions (compared to 33% in 2022), and supporting 88% of shareholder proposals on climate change and 96% of those on social topics. In 2023, BNP Paribas Asset Management opposed 1,521 resolutions proposed by 271 companies, primarily due to environmental or biodiversity-related considerations;
- BNP Paribas Asset Management ranked second in ShareAction Point of No Returns 2023 on the responsible investment practices of the 77 largest asset managers in the world;
- in 2023, 95% of BNP Paribas Cardif's general assets in euros in France were subject to an ESG analysis.

With regard to our positive impact financing and investing activities, the results are as follows (also see section 5.1 *Our CSR Policy Management Dashboard*):

- support for impact enterprises (including microfinance institutions), which reached EUR 2 billion at end-2023, with support for more than 3,450 impact enterprises;
- sustainable investment funds, which make it possible to direct investments towards assets incorporating ESG criteria, in other words funds classified as articles 8 and 9 according to the Sustainable Finance Disclosure Regulation (SFDR), either promote environmental or social characteristics (article 8), or have a sustainable investment objective (article 9). Assets under management under articles 8 and 9 of the SFDR in BNP Paribas Asset Management's distributed open-ended funds reached EUR 254 billion at the end of 2023;
- sustainable bonds, for which BNP Paribas was number one worldwide at the end of 2023 according to Dealogic, with USD 38.7 billion as bookrunner for its clients, including USD 25.6 billion for green bonds at the end of 2023;
- sustainable loans of EUR 117 billion at the end of 2023, including sustainability-linked loans (SLL), loans whose rate is modulated according to the achievement of environmental and/or social targets by the borrower;

<sup>1</sup> Covering 86% of all Group employees at 31/12/2023.

- financing for the production of low-carbon, mainly renewable energy: at the end of 2023, this financing represented EUR 32 billion, of which EUR 28.8 billion for renewable energy sources, *i.e.* 65% of the Group's energy production financing. At the end of 2022, this financing represented EUR 28.2 billion, of which EUR 24.8 billion for renewable energy sources, *i.e.* nearly 55% of the Group's energy production financing.

With regard to the alignment of our credit portfolio, given the relative weighting of each sector in the Group's credit exposure, the average results for end-2023 in the six business sectors for which the Group has set intermediate targets are in line with BNP Paribas' ambition to finance a carbon neutral economy by 2050 (see section 3.5 *Alignment of the loan and investment portfolio with the Net-Zero in 2050 objective*):

- Electricity production:
  - 148 gCO<sub>2</sub>/kWh at end-2023 (179 in 2022),
  - 65% renewable in the Group's electricity mix at end-2023 (60% in 2022),
  - 5% coal in the Group's electricity mix at end-2023 (7% in 2022);
- Oil and gas:
  - 67 gCO<sub>2</sub>eq/MJ at the end of 2023 (67 in 2022),
  - EUR 3 billion in credit exposure to oil extraction and production at the end of 2023 (EUR 5 billion at the end of 2022),
  - EUR 3.5 billion in credit exposure to gas extraction and production at the end of 2023 (EUR 5.3 billion at the end of 2022);
- Automotive sector:
  - 151 gCO<sub>2</sub>/km travelled at end-2023 (167 in 2022),
  - 15% electrified vehicles at the end of 2023 (14% in 2022),
- Steel: 1.5 tCO<sub>2</sub>/tonne of steel at the end of 2023 (1.6 in 2022),
- Aluminium: 5.8 tCO<sub>2</sub>eq/tonne of aluminium at the end of 2023 (6.2 in 2022),
- Cement: 0.64 tCO<sub>2</sub>/tonne of cement product at the end of 2022 (0.67 in 2021).

BNP Paribas has measured the carbon intensity of its portfolio in the maritime sector, for the fourth year running, according to the Poseidon Principles. It should be noted that in July 2023, the International Maritime Organization (IMO) announced a more ambitious reference trajectory, now aiming for carbon neutrality in 2050. At 31 December 2022, the alignment score of the loan portfolio dedicated to maritime transport was:

- 3.6% above the alignment score according to the initial trajectory (before revision in 2023);
- 27.2% above the IMO Minimum Trajectory;
- 32% above the IMO Striving Trajectory.

In addition to our investments, our asset management subsidiary BNP Paribas Asset Management analysed the impact of its investment portfolio on biodiversity for the second year in 2023<sup>1</sup>, in order to identify commitment targets for the voting team and for the managers.

The analysis of BNP Paribas Cardif's investment portfolios (shares and corporate bonds) was published for the first time in 2022, repeated in 2023 and supplemented by a second measurement, using an additional methodology<sup>2</sup>. The results show a low average dependency of portfolios on all ecosystem services.

## 5.6 Our own activity

Every year, BNP Paribas measures its environmental footprint of its own operations "scopes 1 and 2" which includes, among other things, the electricity and heating of the Group's buildings, as well as employee travel.

At the end of 2023, the Group's greenhouse gas emissions (expressed in tonnes of CO<sub>2</sub> equivalent per Full-Time Equivalent – FTE) amounted to 1.56 teqCO<sub>2</sub> per FTE (compared to 1.65 teqCO<sub>2</sub> per FTE at the end of 2022).

## 5.7 Our interactions with the Group's external stakeholders

Interactions with our stakeholders are key for the Group. The number of stakeholders is constantly changing, with in particular:

- 183 interactions with advocacy NGOs in 2023, up 51% since 2022 and 76% since 2020, on topics such as climate, fossil fuels and human rights;
- 96 interactions with investors in 2023, up 30% since 2022 and 43% since 2020, on various topics such as ESG risk management, portfolio alignment, social inclusion and sectoral policies.

## 5.8 Our systems' controls

Risk management is central to the banking business and is one of the cornerstones of operations for BNP Paribas. The Group has an internal control system covering all types of risks to which it may be exposed, including environmental and social risks, organised around three lines of defence (see section 2 *Corporate governance and internal control* of this amendment to the 2022 Universal Registration Document, chapter 2.4 *Internal control*):

- as the first line of defence, internal control is the business of every employee, and the Heads of the operational activities are responsible for establishing and running a system for identifying, assessing and managing risks according to the standards defined by the functions exercising an independent control in respect of the second line of defence;
- BNP Paribas' second line of defence is handled by the Compliance, RISK and LEGAL Departments. Their managers report directly to the Director and Chief Executive Officer and report on the performance of their duties to the Board of directors, primarily through its specialised committees;
- General Inspection provides a third line of defence responsible for periodic control.

In addition, BNP Paribas' consolidated extra-financial performance statement is audited by an independent third party.

In order to verify the strict application of ESG risk management tools, BNP Paribas has rolled out a CSR operational control plan which establishes a continuous improvement process. This control plan, linked to the application of sectoral policies, exclusion and monitoring lists, and questionnaires on the duty of care, is applied to the Group's business lines and functions.

## OUR COMMITMENT TO CONTINUOUS IMPROVEMENT

---

BNP Paribas' vigilance approach is part of a drive for continuous improvement. As such, the Group will complete, where necessary, its identification, control and management tools for identified risks, and will report on them each year in its universal registration document.

# 7.8 Statement on modern slavery and human trafficking

## INTRODUCTION

---

This Statement outlines the steps that BNP Paribas has taken to ensure that human trafficking<sup>1</sup> and modern slavery<sup>2</sup> are not taking place in its business or in any of its supply chains. It also refers to the risk management processes that the Group has put in place in the context of its financing and investment activities, which govern the potential cases of human rights violations that may affect the activities of its clients.

This Statement is for the financial year ended 31 December 2023. The Board and the Director and Chief Executive Officer attest annually that the Group complies with this Statement through the information provided by the respective departments of Corporate Social Responsibility (CSR), Procurement & Performance, and Human Resources (HR).

This Statement applies to all companies within the BNP Paribas Group that are required to have a slavery and modern trafficking statement. Those who have chosen to prepare their own declaration are not concerned.

## THE BNP PARIBAS GROUP

---

BNP Paribas is Europe's leading provider of banking and financial services. It operates in 63 countries and employs 182,656 full-time equivalent workforce. It holds key positions in its three main areas of activity: Corporate and Institutional Banking (personalised solutions for our corporate and institutional customers), Commercial, Personal Banking & Services (network of commercial & personal banks in the Eurozone and the Europe-Mediterranean zone, as well as some of the Group's specialised business lines<sup>3</sup>), and Investment & Protection Services (expertise in savings, investment and protection solutions). More information on BNP Paribas operations can be found in section 1.4 *Presentation of operating divisions and business lines*. The Group purchases over EUR 10 billion of expenditures worldwide broken down into nine categories: Real Estate, Market Data,

<sup>1</sup> The expression "human trafficking" means: "Recruitment, transportation, transfer, harbouring or receipt of persons, by means of the threat or use of force or other forms of coercion, of abduction, of fraud, of deception, of the abuse of power or of a position of vulnerability or of the giving or receiving of payments or benefits to achieve the consent of a person having control over another person, for the purpose of exploitation", United Nations Convention against Transnational Organized Crime.

<sup>2</sup> "Slavery is the status or condition of a person over whom any or all of the powers attaching to the right of ownership are exercised." United Nations Convention on Slavery.

<sup>3</sup> Arval, BNP Paribas Leasing Solutions, BNP Paribas Personal Finance, BNP Paribas Investors, new digital business lines (Nickel, Floa).

## RISKS OF MODERN SLAVERY & HUMAN TRAFFICKING

---

Academic studies, field investigations and recent news coverage have all clearly demonstrated that all sectors, industries and areas may be affected, to varying degrees, by these types of serious infringements to human rights.

In this regard, risk assessment policies devoted to the matter of modern slavery practices need to be multi-factorial (with complementary thematic screenings performed, on sector & industry, products & services, geographical and entity level) and regularly updated, in order to tackle this complex issue as fully and efficiently as possible. The risk-assessment process BNP Paribas implements to address the risks of modern slavery and human trafficking takes into account the vastly different situations of its stakeholders and is complemented by the *ad hoc* monitoring and regular discussions performed by Group teams on this subject.

### WORKFORCE'S INHERENT RISKS

Risks of modern slavery and human trafficking have been deemed low in business operations as, to the best of our knowledge, no publicly available study has categorised the banking sector and its employees, most of them being highly skilled professionals, as particularly exposed to these practices.

### SUPPLIERS' INHERENT RISKS

As a bank, BNP Paribas' supply chains are mainly focused on indirect procurements and expenditure (consulting services, IT services, security, IT equipment, office furniture, promotional items, cleaning and catering services). Depending on the procurement categories, supply chains may be simple or very complex, with human rights related risks being higher, and more difficult to monitor, where supply chain arrangements are complex. Based on the risk mapping tool developed by BNP Paribas, less than 20% (in spending) of the Group procurement categories are at high or very high risk in terms of human rights and labour conditions (including modern slavery and child labour).

### FINANCING AND INVESTMENT ACTIVITIES' INHERENT RISKS

BNP Paribas meets the needs of millions of individual and professional customers, entrepreneurs, small, medium and large companies in business sectors facing multiple environmental, social and governance (ESG) challenges. The Group also operates in countries where legal and governance systems are at diverse levels of development. This diversity of context calls for structured, comprehensive and expert-driven review and analysis processes, in order to identify potential risks of modern slavery and human trafficking in BNP Paribas clients' activities, or in the activities of the entities in which BNP Paribas invests on the behalf of its clients.

## BNP PARIBAS POLICY ON MODERN SLAVERY AND HUMAN TRAFFICKING

---

Respect for human rights is one of the pillars on which BNP Paribas' CSR strategy is based. The Group has committed itself to the promotion of the following principles and standards that form the basis of its activities:

- the United Nations Sustainable Development Goals;
- the Ten Principles of the United Nations Global Compact;
- the United Nations Guiding Principles on Business and Human Rights (United Nations Guiding Principles);
- the internationally-accepted OECD Guidelines for multinational enterprises;
- the internationally-accepted standards of human rights, as defined in the International Bill of Human Rights;
- the core labor standards set out by the International Labor Organization.

These public commitments are backed by internal policies implemented at Group level, with the goal of handling the many subjects revolving around social, environmental and governance matters, including human rights. These policies include:

- BNP Paribas Group Code of conduct;
- the BNP Paribas Statement on Human Rights;
- the BNP Paribas Sustainable Sourcing Charter;
- the BNP Paribas Asset Management Business Conduct Policy;
- the BNP Paribas Responsible Business Principles.

Early and efficient identification of modern slavery risks is the first step towards its prevention, alleviation and remediation, and calls for specific policies and practices. In this regard, BNP Paribas has taken the following steps and actions in order to exert its duty of care with all due seriousness.

## TOWARDS ITS EMPLOYEES

BNP Paribas is committed to providing a working environment in which all employees are treated fairly. In particular, the Group focuses on respect and the need to apply the most stringent norms of professional behaviour and rejects all forms of discrimination. BNP Paribas' policies and procedures notably include an annual review of high-risk countries in terms of human rights, as well as a monitoring of employees under the age of 18 (the Group did not have any in 2023).

Furthermore, the existing policies and procedures within the Group, including notably a diversity and inclusion policy as well as compensation principles are in line with the principles of non-discrimination in the recruitment process and career management of employees. The BNP Paribas Code of conduct, which applies to all employees, reaffirms the Group's commitment to changing behaviour and combatting disrespectful behaviour towards people, including harassment and discrimination. The Group's "Respect for People" policy aims to combat inappropriate behaviour, in particular, harassment and discrimination. In line with these policies and principles, all employees of the Group are required to treat all people with respect, make sure their interactions are professional and efficient, and be receptive of their contributions, even if they express different views from their own.

The Global agreement, signed on 18 September 2018 and extended to 30 June 2024, has set up an ambitious plan to contribute to improving quality of life and working conditions of employees, and thus achieve greater diversity, equality and inclusive growth.

## AWARENESS AND TRAINING

BNP Paribas took part in the development of an awareness-raising e-learning module called "Human Rights into Business", co-created with the other members of the French association *Entreprises pour les Droits de l'Homme* (Businesses for Human Rights – EDH). This e-learning module is mandatory for all employees who directly contribute to the promotion of human rights. It is available in eight languages and freely accessible to all Group employees.

## RAISING CONCERNS

BNP Paribas Group pays particular attention to the concerns of customers, employees, shareholders, suppliers and society as a whole. The Group is committed to listening, understanding and seeking to respond to the concerns raised by its stakeholders in a fair and effective manner.

BNP Paribas employees are required to report any effective or suspected breach of the Code of conduct, Group policies and procedures, or regulations.

Employees can report issues to their line manager or another manager, or to Human Resources for issues relating to respect for people, or to a Compliance alert channel.

Any violation or suspected violation of human rights in the context of the Group's activities or its suppliers may be reported in the Group's whistleblowing system, except if local regulations or procedures prevent this.

Pursuant to the Sapin II law, amended by the Wasserman law, the Group's whistleblowing system is now open to certain external third parties (depending on local regulations, but at least for suppliers and former employees). The alert form to be completed is freely accessible on the BNP Paribas institutional website<sup>1</sup>.

The whistleblowing policy guarantees employees exercising their right to raise an alert protection against reprisal for having raised an internal alert in accordance with the terms of the policy.

A summary note<sup>2</sup> on whistleblowing is available on the BNP Paribas Group website.

## TOWARDS ITS SUPPLIERS

Within the Procurement & Performance Function, dedicated teams address ESG risks linked to suppliers and subcontractors. BNP Paribas ESG risk management related to its suppliers and subcontractors hinges around the following elements:

- a responsible purchasing policy that aligns the Function's objectives with the Group's CSR objectives, as expressed in the Group purpose;
- the definition by the Function of a normative reference framework. This framework includes:
  - an ESG risk mapping tool encompassing 13 themes, including modern slavery and child labour, allowing the identification of procurement categories at high environmental or social risk,
  - a 'Sustainable Sourcing Charter', setting out the reciprocal commitments of the Group and its suppliers and subcontractors from an environmental and social standpoint,
  - contractual clauses requiring compliance with the ILO conventions in supplier contract standard templates in all countries where suppliers are located, allowing contract termination in case of non-compliance by the suppliers of the Group ESG requirements;

<sup>1</sup> BNP Paribas whistleblowing framework (<https://group.bnpparibas/en/direct-access/whistleblowing>).

<sup>2</sup> Summary of the system – BNP Paribas' whistleblowing procedure ([https://cdn-group.bnpparibas.com/uploads/file/summary\\_of\\_bnp\\_paribas\\_wb\\_framework\\_enq\\_june\\_2022.pdf](https://cdn-group.bnpparibas.com/uploads/file/summary_of_bnp_paribas_wb_framework_enq_june_2022.pdf)).

- ESG questionnaire models, used during the onboarding of new suppliers and during calls for tenders, and including environment, ethics and human rights targeted questions. BNP Paribas Procurement Norms set a minimum weight of 15% for CSR-related criteria in calls for tenders.
- supplier monitoring rules, targeting ESG criteria used during the selection process and completed by the thematic regulatory watches, and
- training for Procurement & Performance employees<sup>1</sup>.

## **TOWARDS ITS CLIENTS (FINANCING AND INVESTMENT ACTIVITIES)**

BNP Paribas strives to reduce potential violation of social and environmental rights, including human rights, from its financing and investment activities (see *Systematic integration and management of Environmental , Social and Governance risks*, Commitment 3).

These provisions are based on:

- the development of financing and investment policies managing the Group's activities in sectors with significant ESG issues;
- the respect of the United Nations Guiding Principles in the financing and investment activities;
- the respect of the Equator Principles for major industrial and infrastructure projects;
- the integration of ESG criteria in the Know Your Customer (KYC) process;
- the progressive integration of ESG criteria in lending and rating policies;
- the development and use of management and monitoring tools for these risks, including specific questionnaires for activities with salient environmental and social risks;
- the training of financing and investing business lines and control functions on the ESG risk framework;
- an operational control plan.

In addition to the tools described above, a new ESG Assessment framework was deployed in June 2021. It enables the identification, assessment and monitoring of the performance and ESG risks of corporate customers, in a sector-specific manner, with a common approach within the Group for a given customer segment. The ESG Assessment covers five major extra financial topics, including respect for human rights.

At the end of 2023, all large corporate clients of the Group had had an ESG Assessment, and the tool has been adapted for medium-sized clients (companies with turnover of more than EUR 50 million) and financial institutions, with a target of covering all our clients in these segments by the end of 2024.

---

<sup>1</sup> In the process of being rolled out for the Australian Purchasing function.

## ASSESSING EFFECTIVENESS

---

Acknowledging the challenges of assessing and addressing modern slavery and human trafficking issues, BNP Paribas remains committed to the review and enhancement of its own processes and policies, in order to continually improve their range and effectiveness.

### FOR EMPLOYEE-TARGETED POLICIES

BNP Paribas tracks the effectiveness of its actions in this field through the percentage of employees contributing directly to the promotion of human rights who have received specific training. Since 2016, more than 22,000 employees of the Group have completed this training.

### FOR SUPPLIER-TARGETED POLICIES

The number of ESG assessments of suppliers and sub-contractors that are conducted as part of calls for tender, in particular those relating to categories of at-risk purchases, is a metric of BNP Paribas monitoring actions towards this type of stakeholder. In 2023, 5,312 ESG assessments were completed (compared with 5,188 in 2022) and 1,287 suppliers signed BNP Paribas Sustainable Sourcing Charter (compared with 1,519 in 2022)<sup>1</sup>.

### FOR FINANCING AND INVESTMENT ACTIVITIES

The opening and maintenance of a high-quality dialogue between the Group and the entities it finances or in which it invests, plays an important role in monitoring and remedying certain issues, including those relating to human rights. The changes in exclusion and monitoring lists (*i.e.*, the companies with which the Group does not wish to maintain commercial relations or invest in, or which are subject to increased monitoring, which may result from serious violations of human rights) is another indicator monitored by BNP Paribas. At the end of 2023, these lists numbered 1,718 legal entities (1,432 under exclusion and 286 under monitoring), against 1,490 at the end of 2022.

## PROCESS OF CONSULTATION FOR PREPARING THIS STATEMENT

---

The information on this statement has been prepared thanks to the work and collaboration of relevant subject matter specialists, as well as members of the BNP Paribas CSR network, reaching through all functions, business lines and countries of the Group, where applicable (see *CSR taken to the highest level in the organisation*). The Group CSR and Group LEGAL Functions have coordinated this collaborative process over the past year, and in particular have consulted the designated contacts and experts for the United Kingdom and Australia.

## CONCLUSION

---

This statement has been used by BNP Paribas to establish the annual statements required by the Modern Slavery Act 2015 of the United Kingdom and Modern Slavery Act 2018 (Cth) of Australia. The annual statement can be found on the *Publications* page of the Group website<sup>2</sup> (<https://group.bnpparibas/en/group/publications>).

This statement for the Group was approved by the Board of BNP Paribas SA as the parent entity on 27 February 2024.

Jean-Laurent BONNAFÉ  
Director and Chief Executive Officer

Jean LEMIERRE  
Chairman of the Board of directors

---

<sup>1</sup> Number of suppliers in the portfolio who signed the BNP Paribas Sustainable Sourcing Charter. A new indicator has been defined in 2023, tracking the number of suppliers in the priority monitoring segment of the supplier portfolio (Sensitive Suppliers List, SSL) that endorsed the BNP Paribas Sustainable Sourcing Charter at the end of 2023. Suppliers are placed on the SSL if they belong to following categories:

1. Providers of sensitive outsourced services;
2. Sensitive external suppliers;
3. Suppliers deemed at high risk in terms of Compliance;
4. Sensitive suppliers identified as such during the onboarding;
5. Suppliers having triggered a risk event during the contract life cycle.

<sup>2</sup> BNP Paribas also publishes its statement on modern slavery and human trafficking on the Modern slavery statement registry, a platform run by the British government.

## 7.9 Aligned activities within the meaning of the European taxonomy

### REMINDER OF THE REGULATORY FRAMEWORK AND REPORTING OBLIGATIONS FOR FINANCIAL INSTITUTIONS

---

The European Taxonomy (hereinafter referred to as the Taxonomy) is a system for classifying economic activities according to their contribution to the six environmental objectives defined by the European Commission in the various Regulations and Delegated Acts published between June 2020 and November 2023<sup>1</sup>.

The Taxonomy is based on two central concepts that are associated with the economic activities of companies subject to the NFRD<sup>2</sup> (and the CSRD when it comes into force<sup>3</sup>):

- eligibility, if the activity is described in one of the Delegated Regulations of the Taxonomy because of its high potential to contribute to any one of the six environmental objectives;
- alignment, which confirms the significant contribution of an eligible activity to one of the six environmental objectives, based on measurable criteria. An aligned activity is defined<sup>4</sup> as an activity that makes a substantial contribution to one of the environmental objectives without causing harm to the other objectives, *i.e.* that firstly satisfies all the technical screening criteria described in one of the delegated regulations, and secondly that meets the minimum guarantees.

European financial companies must publish their alignment indicators for the first time for the 2023 financial year, in addition to the eligibility indicators published in the previous two years.

The main alignment indicator is the ratio of green assets, or Green Asset Ratio (GAR), which concerns financing instruments (loans and advances, debt securities, equity instruments and repossessed collaterals) carried on the institution's balance sheet. This disclosure of the GAR is accompanied by the green ratio for financial guarantees and the green ratio for assets under management.

### SCOPE OF FINANCIAL ASSETS SUBJECT TO THE ELIGIBILITY ANALYSIS

---

Each indicator is calculated based on the prudential scope of consolidation as presented in chapter 5 *Risks and capital adequacy – Pillar 3*, in accordance with Commission Delegated Regulation (EU) 2021/2178 of 6 July 2021.

#### GREEN ASSET RATIO (GAR)

The measurement of financial assets covered by the taxonomy regulation is based on the gross carrying amount, *i.e.* before taking into account any provisions.

The ratio numerator measures the amounts of financial assets corresponding to aligned activities within the meaning of the taxonomy. Its scope of analysis covers the following financial assets (in the form of loans and advances, debt securities, equity instruments of listed counterparties and repossessed collaterals):

- outstandings on European companies subject to the NFRD;
- outstandings on European households in the three loan categories covered by the regulations (home loans; energy renovation loans; car loans granted since 1 January 2022);
- outstandings on local authorities for financing of public housing and other specialised financing, *i.e.* for which the allocation of funds is known;
- the carrying amount of repossessed property collateral.

<sup>1</sup> Regulation (EU) 2020/852 of 18 June 2020, Delegated Regulation (EU) 2021/2139 of 4 June 2021, Delegated Regulation (EU) 2022/1214 of 9 March 2022, Delegated Regulation (EU) 2023/2486 of 27 June 2023, Delegated Regulation (EU) 2023/2485 of 27 June 2023 amending Delegated Regulation (EU) 2021/2139.

<sup>2</sup> Non-Financial Reporting Directive 2014/95/EU of 22 October 2014.

<sup>3</sup> Corporate Sustainability Reporting Directive EU 2022/2464 of 14 December 2022.

<sup>4</sup> EU Regulation No. 2020/852 of 18 June 2020.

The ratio denominator includes the following asset categories (in addition to the financial assets subject to alignment analysis for the calculation of the numerator):

- interbank current accounts;
- outstandings on hedging derivatives;
- outstandings to European companies not subject to the NFRD and outstandings with non-European counterparties;
- outstandings on households that do not fall within the three loan categories covered by the GAR (which are housing loans, energy renovation loans and car loans);
- cash on hand;
- other assets (e.g. property, plant and equipment, intangible assets, deferred tax assets).

The inclusion of assets excluded from numerator alignment analysis in the asset denominator (22.6% of total balance sheet assets, in gross carrying amount) causes a structural imbalance of the indicator. Consequently, this ratio cannot be a representative measurement indicator for alignment.

Exposures to central governments, central banks or supranational issuers are not covered by the regulations.

Details of the assets excluded by the regulations, which represent 49.4% of total balance sheet assets in gross carrying amount, are available in section 5.11 *Environmental, Social and Governance Risk*.

## RATIOS OF GREEN OFF-BALANCE SHEET ASSETS

Concerning the green ratio of financial guarantees, the scope of analysis for aligning guarantees, used to calculate the ratio numerator, covers financial guarantees whose counterparties are European companies subject to the NFRD. The denominator includes all financial guarantees granted to companies regardless of whether they are covered by the regulation. Yet again, a structural imbalance of the ratio must be considered, and consequently this ratio cannot be a representative measurement indicator for alignment.

Concerning the green ratio of assets under management, the scope of alignment covers instruments invested in European companies subject to the NFRD and investments in real estate assets. This covers both the asset management activities carried out by the Group, and the discretionary management of client portfolios in respect of investment funds, equity instruments, debt securities and investments in real estate assets. The same structural imbalance is observed, as the denominator includes all instruments regardless of whether they are covered by the regulations. Consequently, this ratio cannot be a representative measurement indicator for alignment.

Exposures to central governments, central banks or supranational issuers are also excluded from the off-balance sheet indicators.

## METHODOLOGY FOR ALIGNMENT QUALIFICATION UNDER THE EUROPEAN TAXONOMY

---

The analysis of the eligibility and alignment of financial assets with the taxonomy is based on differentiated approaches according to the categories of counterparties: companies subject to the NFRD, local governments, European households and investment funds.

For counterparties subject to the NFRD, if the financial instrument funds are not allocated, the Group collects, *via* data providers, the share of alignment published by the counterparties, measured firstly based on their turnover and secondly based on their capital expenditure (CapEx). Within this category, given that financial companies will only publish their alignment indicators for the first time in 2024, the aligned share of financial instruments for these counterparties is zero by default for this disclosure. This treatment applies to the three ratios: the Green Asset Ratio – GAR, the green ratio for financial guarantees and the green ratio for assets under management.

In the GAR, the assets of the Group's specific entities, Cardif and Arval, recognised in the prudential balance sheet using the equity method, were treated similarly, respectively taking into account Cardif's investment indicators and Arval's turnover and CapEx.

Where the use of funds is known, the alignment measure should be based on information collected from the counterparty. The European Commission's draft communication published on 21 December 2023<sup>1</sup> on the interpretation of certain provisions of Delegated Regulation (EU) 2021/2178 specifies that banking institutions must collect evidence of alignment for each of the technical criteria on contribution to the climate objectives, but also document the justification for the absence of impact causing harm to the other four environmental objectives. Compliance with each of these criteria must also be certified by an independent third party. The level of collection of supporting documents required by the Commission's draft communication since December 2023 is not fully achievable, as the criteria required are neither subject to a professional standard in most cases, nor subject to a disclosure obligation. There can therefore be no valid certification. This is why no financial instrument whose use of funds is known has been reported in the GAR numerator, whether with respect to companies or local governments.

<sup>1</sup> [https://ec.europa.eu/finance/docs/law/231221-draft-commission-notice-eu-taxonomy-reporting-financials\\_en.pdf](https://ec.europa.eu/finance/docs/law/231221-draft-commission-notice-eu-taxonomy-reporting-financials_en.pdf).

With regard to households, a similar approach should be conducted to assess the alignment of housing loans, energy renovation loans and car loans, with the collection of evidence justifying each of the criteria for both key energy or low-carbon performance criteria, as well as for other criteria justifying the absence of negative impacts on the other four environmental objectives. With regard to the latter, no professional standard is currently available. The Group collects evidence from households for key energy or low-carbon performance criteria, such as energy performance certificates or vehicle registration numbers. It is not able to collect evidence for each of the other criteria, which is why the GAR numerator does not include any outstanding loans to households.

With regard to the investment funds covered by the green ratio of assets under management, and in particular those included in the portfolios under management mandate, the Group faces the problem of a lack of eligibility indicators and the alignment of funds. This lack of alignment indicators is specific to this year, since the first disclosures of the fund alignment indicators must take place no later than June 2024, in accordance with the EU Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. The asset amounts for these funds are therefore currently considered as non-eligible and non-aligned.

## ALIGNMENT INDICATOR AMOUNTS AT 31 DECEMBER 2023

On the basis of the methodological elements presented above, the main alignment ratios required by the regulations are presented in the table below as of 31 December 2023:

### SUMMARY OF KEY PERFORMANCE INDICATORS (KPIs) TO BE PUBLISHED BY CREDIT INSTITUTIONS IN ACCORDANCE WITH ARTICLE 8 OF REGULATION (EU) 2020/852

|                      |                               |   |  |                |             |                                | % of assets excluded from the numerator of the GAR (Article 7 (2) and (3) and Section 1.1.2. of Annex V) | % of assets excluded from the denominator of the GAR (Article 7 (1)) and Section 1.2.4 of Annex V) |
|----------------------|-------------------------------|---|--|----------------|-------------|--------------------------------|--|--|
|                      |                               | Total environmentally sustainable assets (turnover) | Total environmentally sustainable assets (CapEx) | KPI (turnover) | KPI (CapEx) | % coverage (over total assets) |  |  |
| in millions of euros |                               |   |  |                |             |                                |  |  |
| Main KPI             | Green asset ratio (GAR) stock | 9,254   | 19,793   | 0.78%          | 1.66%       | 28.06%                         | 22.57%   | 49.36%   |

| <i>in millions of euros</i> |                         | Total environmentally sustainable assets (turnover) | Total environmentally sustainable assets (CapEx) | KPI (turnover) | KPI (CapEx) |
|-----------------------------|-------------------------|---|--|----------------|-------------|
| Additional KPIs             | Financial guarantees    | 5,751   | 9,492  | 4.65%          | 7.68%       |
|                             | Assets under management | 8,659   | 14,456   | 1.98%          | 3.31%       |

Details of the other tables<sup>1</sup> are presented in the ESG regulatory indicators document on the Group's investor relations website<sup>2</sup>. The detailed calculation of the green asset ratio is presented in section 5.11 *Environmental, Social and Governance Risk*, in accordance with the disclosure requirements under ESG Pillar 3. The Group's green asset ratio, measured from counterparty revenue, was 0.8% of hedged assets at the end of December 2023. Eligible and non-aligned assets represent 22.5% of these same assets.

<sup>1</sup> The Group has interpreted that the date on which the flow indicators are first applied (for the GAR, for the ratio of financial guarantees and for assets under management) is 2025, for the year 2024.

## **LIMITS OF THE REGULATORY RATIOS FOR ALIGNMENT WITH THE EUROPEAN TAXONOMY**

The ratio of green assets and the other indicators of alignment with the taxonomy applicable to banks, due to their methodological imbalances and their operational complexity, cannot reflect all of the Group's financing of the transition to a low-carbon economy.

Firstly, the analysis of the alignment with the European taxonomy only concerns companies subject to the NFRD, European households and specialised financing granted to European local governments. The regulations exclude the financing of SMEs and non-European companies. Specifically, they exclude from the analysis the financing of projects housed in dedicated vehicles, not subject to the NFRD regulation, even if they concern the financing of low-carbon infrastructure in Europe. Finally, the scope of the ratio limited to large companies subject to the NFRD regulation is very restrictive, given the Group's diversified business model.

Consequently, the imbalance between the assets falling within the scope of analysis of alignment under the numerator and the total assets covered by the denominator sets a structural ceiling for each of the Group's ratios, which was 55.4% in 2023. This cap is lower the more the business model is diversified in terms of clients and customers, products and locations.

The taxonomy alignment criteria are ambitious by definition, since they correspond to thresholds scientifically compatible with the European Union's carbon neutrality objective by 2050. However, by proposing only aligned or non-aligned results, the transition trajectory is not taken into account, even though it is the subject of a long-term effort already undertaken by the Group and its clients.

Finally, the climate performance criteria are accompanied by multiple additional conditions, aimed at ensuring that the activity does not cause significant harm to one of the Taxonomy's other five environmental objectives. The assessment of these conditions is complex, including issues of both interpretation of legislation and access to information. Most of the information to be collected by banks from their clients is not yet standardised or available. The need to take into account these final criteria significantly reduces the share of activities aligned by companies, especially since banks' collection of information for each of the criteria is currently not feasible.

This last finding has even more impact on loans to households, for which asset alignment would require the collection of data not related to climate performance, which individual customers are unable to collect. Also, by default, their efforts to contribute to a low-carbon economy are made invisible in the green asset ratios, even though outstanding home loans, renovations and car loans constitute a very significant portion of eligible assets.

These regulatory alignment indicators do not reflect the share of the Group's assets contributing to alignment with the European climate change mitigation and adaptation objectives, nor the efforts made by the Group to steer its business model towards a low-carbon economy, in particular through the alignment commitments of its loan portfolio and its assets under management (see Commitment 3, section 7.2).

Also, given the restrictive nature of these indicators, and in accordance with regulations, the Group aims to build and monitor an additional indicator comprising what it knows to be aligned elements of its portfolio which are not included in the regulatory calculations to date. This will enable the Group to measure the share of its assets financing activities which are aligned with European carbon neutrality objectives in all eligible activities. It better represents the efforts undertaken by a large international bank such as BNP Paribas, with a very diversified business model.

## PERCENTAGE OF ASSETS ALIGNED WITH THE PERFORMANCE CRITERIA IN ELIGIBLE ASSETS

The Group's proposed ratio of assets aligned with the climate performance criteria for all eligible assets enables trends to be monitored in financing granted by the Bank to assets contributing to Europe's carbon neutrality objectives.

At 31 December 2023, outstandings aligned with the Taxonomy's key performance criteria represented 11.6% of the Group's eligible outstandings.

This ratio covers the financing of European Union companies subject to the NFRD, whether or not the use of the funds is allocated, specialised financing granted to European local governments, and loans to European households which are covered by the Taxonomy, namely home loans, energy renovation loans and car loans.

The alignment measurement uses a simplified approach, based solely on compliance with the technical climate performance criteria, based on the following categories:

- For financing to companies subject to the NFRD whose use of funds is allocated, the alignment amount is identified based on a certificate of alignment with the Taxonomy collected from the client, which shows the percentage of alignment of the financed asset or project, and the environmental objective to which it contributes;
- For loans to households, alignment is assessed on the basis of a simplified approach<sup>1</sup>, based on the criteria of substantial contribution to the climate change mitigation objective (for example, for housing loans, verifying the energy performance certificate collected to ensure that the asset meets the energy performance criteria defined by the Taxonomy).

For financing to companies subject to the NFRD whose use of funds is not allocated, the measurement of the alignment is based on the key performance indicators disclosed by the counterparties, according to the methodology described previously in the section on methodology for alignment qualification under the European Taxonomy.

This ratio reflects the European market for the Group's strategy in favour of low-carbon energy financing, and the policy of supporting households with low-carbon housing, renovation and mobility solutions. The strategy for aligning its loan portfolio, applied to all its markets, is detailed in section 7.2, Commitment 3.

**31 December 2023**

The table below meets the transparency requirements of the Delegated Act of July 2022 on the financing of activities related to nuclear energy and fossil gas

**TEMPLATE 1: NUCLEAR AND FOSSIL GAS RELATED ACTIVITIES**

**31 December 2023**

| <b>Nuclear energy related activities</b> |  |     |
|--|--|-----|
| 1  | The undertaking carries out, funds or has exposures to research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.  | YES |
| 2  | The undertaking carries out, funds or has exposures to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies. | YES |
| 3  | The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.                          | YES |
| <b>Fossil gas related activities</b>     |  |     |
| 4  | The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.   | YES |
| 5  | The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.  | YES |
| 6  | The undertaking carries out, funds or has exposures to construction, refurbishment and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels.  | YES |

**TEMPLATE 2: TAXONOMY-ALIGNED ECONOMIC ACTIVITIES (DENOMINATOR) (GAR MEASURE BASED ON TURNOVER)**

| 31 December 2023  |                    |              |                                       |              |                                       |              |
|---|--------------------|--------------|---------------------------------------|--------------|---------------------------------------|--------------|

(\*) "GRI Universal Standards" published in 2021 and applicable in 2023.

(\*\*) Task force on Climate related Financial Disclosures - G: Governance, S: Strategy, R: Risk Management, MT: Metrics and Targets

The table below takes into account the codified standards of the Sustainability Accounting Standards Board (SASB) for the "Commercial Banking" category. It should be noted that the SASB standards present, at this stage, a "United States"-oriented approach to defining the criteria. This table best represents the information and data mapping according to the SASB indicators for Commercial & Personal Banking. Note that this mapping has not been audited.

| Domain  | SASB indicator  | SASB code of the indicator | References of information and data available in this amendment to the 2022 Universal Registration Document and the 2023 Annual financial report  |

## 7.11 Report of one of the Statutory Auditors, appointed as independent third party, on the verification of the consolidated non-financial performance statement

*This is a free English translation of the report by one of the Statutory Auditors issued in French and is provided solely for the convenience of English-speaking readers. This report should be read in conjunction with, and construed in accordance with, French law and professional standards applicable in France.*

Year ended December 31, 2023

To the Shareholders' Meeting,

In our capacity as Statutory Auditor of BNP Paribas SA (hereinafter the "Company"), appointed as independent third party ("third party") and accredited by the French Accreditation Committee (Cofrac), under number 3-1886 (Cofrac Inspection Accreditation, scope available at [www.cofrac.fr](http://www.cofrac.fr)), we have conducted procedures to express a limited assurance conclusion on the historical information (observed or extrapolated) in the consolidated non-financial performance statement, prepared in accordance with the Company's procedures (hereinafter the "Guidelines"), for the year ended December 31, 2023 (hereinafter the "Information" and the "Statement", respectively), presented in the Group management report pursuant to the legal and regulatory provisions of Articles L. 225-102-1, R. 225-105 and R. 225-105-1 of the French Commercial Code (*code de commerce*).

### Conclusion

Based on our procedures as described in the section "Nature and scope of procedures" and the evidence we have obtained, no material misstatements have come to our attention that cause us to believe that the non-financial performance statement does not comply with the applicable regulatory provisions and that the Information, taken as a whole, is not fairly presented in accordance with the Guidelines.

### Preparation of the non-financial performance statement

The absence of a generally accepted and commonly used reference framework or established practices on which to base the assessment and measurement of the Information enables the use of different but acceptable measurement techniques that may impact comparability between entities and over time.

Accordingly, the Information must be read and interpreted with reference to the Guidelines, summarised in the Statement and available on the Company's website or on request from its headquarters.

### Limits inherent in the preparation of the information relating to the Statement

The Information may be subject to uncertainty inherent to the state of scientific and economic knowledge and the quality of external data used. Some information is sensitive to the choice of methodology and the assumptions or estimates used for its preparation and presented in the Statement.

## RESPONSIBILITY OF THE COMPANY

---

Management is responsible for:

- selecting or determining the appropriate criteria for the preparation of the Information;
- preparing a Statement pursuant to legal and regulatory provisions, including a presentation of the business model, a description of the main non-financial risks, a presentation of the policies implemented with respect to these risks as well as the outcomes of these policies, including key performance indicators and the information set-out in Article 8 of Regulation (EU) 2020/852 (Green taxonomy);
- implementing such internal control as it determines is necessary to enable the preparation of Information that is free from material misstatement, whether due to fraud or error.

The Statement has been prepared by applying the Company's Guidelines as referred to above.

## RESPONSIBILITY OF THE STATUTORY AUDITOR APPOINTED AS INDEPENDENT THIRD PARTY

---

Based on our work, our responsibility is to express a limited assurance conclusion on:

- the compliance of the Statement with the requirements of Article R. 225-105 of the French Commercial Code;
- the fairness of the information provided pursuant to part 3 of sections I and II of Article R. 225-105 of the French Commercial Code, i.e. the outcomes of policies, including key performance indicators, and measures relating to the main risks, hereinafter the "Information."

As it is our responsibility to issue an independent conclusion on the information prepared by management, we are not authorised to participate in the preparation of the Information, as this could compromise our independence.

It is not our responsibility to provide a conclusion on:

- the Company's compliance with other applicable legal and regulatory provisions (particularly with regard to the information set-out in Article 8 of Regulation (EU) 2020/852 (Green taxonomy), the fight against corruption and tax evasion;
- the fairness of information set-out in Article 8 of Regulation (EU) 2020/852 (Green taxonomy);
- the compliance of products and services with the applicable regulations.

### Applicable regulatory provisions and professional guidance

We performed the work described below in accordance with our audit verification programme in application of Articles A. 225-1 et seq. of the French Commercial Code, the professional guidance issued by the French Institute of Statutory Auditors (*Compagnie Nationale des Commissaires aux Comptes*) relating to this engagement and with the international standard ISAE 3000 (revised - Assurance engagements other than audits or reviews of historical financial information).

### Independence and quality control

Our independence is defined by Article L. 821-28 of the French Commercial Code and French Code of Ethics for Statutory Auditors (*Code de déontologie*). In addition, we have implemented a system of quality control including documented policies and procedures aimed at ensuring compliance with applicable legal and regulatory requirements, ethical requirements and the professional guidance issued by the French Institute of Statutory Auditors (*Compagnie Nationale des Commissaires aux Comptes*) relating to this engagement.

### Means and resources

Our work engaged the skills of five people between December 2023 and March 2024 and took a total of twelve weeks.

To assist us in conducting our work, we referred to our corporate social responsibility and sustainable development experts. We conducted around fifteen interviews with people responsible for preparing the Statement.

This work involved the use of information and communication technologies allowing the work and interviews to be carried out remotely, without hindering the good execution of the verification process.

### Nature and scope of procedures

We planned and performed our work taking account of the risk of material misstatement of the Information.

We consider that the procedures conducted in exercising our professional judgement enable us to express a limited assurance conclusion:

- We familiarized ourselves with the activities of all companies in the consolidation scope and the description of the principal risks.
- We assessed the suitability of the Guidelines with respect to their relevance, completeness, reliability, neutrality and clarity, taking into account, where appropriate, best practices within the sector.
- We verified that the Statement covers each category of information stipulated in section III of Article L. 225-102-1 governing social and environmental affairs, respect for human rights and the fight against corruption and tax evasion.
- We verified that the Statement provides the information required under Article R.225-105 II of the French Commercial Code where relevant with respect to the principal risks, and includes, where applicable, an explanation for the absence of the information required under Article L.225-102-1 III, paragraph 2 of the French Commercial Code.
- We verified that the Statement presents the business model and a description of the principal risks associated with the activities of all the consolidated entities, including where relevant and proportionate, the risks associated with their business relationships, their products or services, as well as their policies, measures and the outcomes thereof, including key performance indicators associated to the principal risks.
- We referred to documentary sources and conducted interviews to:
  - assess the process used to identify and confirm the principal risks as well as the consistency of the outcomes, including the key performance indicators used, with respect to the principal risks and the policies presented; and
  - corroborate the qualitative information (measures and outcomes) that we considered to be the most important<sup>1</sup> ; for certain information, our work was carried out on the consolidating entity, while for other risks, our work was carried out on the consolidating entity and on a selection of entities.
- We verified that the Statement covers the consolidated scope, i.e. all companies within the consolidation scope in accordance with Article L. 233-16, with the limits specified in the Statement.
- We obtained an understanding of internal control and risk management procedures implemented by the Company and assessed the data collection process aimed at ensuring the completeness and fairness of the Information.
- For the key performance indicators and other quantitative outcomes<sup>2</sup> that we considered to be the most important, we implemented:
  - analytical procedures that consisted in verifying the correct consolidation of collected data as well as the consistency of changes thereto;
  - substantive tests, on a sample basis and using other selection methods, that consisted in verifying the proper application of definitions and procedures and reconciling data with supporting documents. These procedures were conducted for a selection of contributing entities<sup>3</sup> and covered between 20% and 100% of the consolidated data selected for these tests.
- We assessed the overall consistency of the Statement in relation to our knowledge of the entire Company.

The procedures conducted in a limited assurance review are substantially less in scope than those required to issue a reasonable assurance opinion in accordance with the professional guidelines of the French National Institute of Statutory Auditors (*Compagnie Nationale des Commissaires aux Comptes*); a higher level of assurance would have required us to carry out more extensive procedures.

## 8.7 Founding documents and Articles of Association

### SECTION I

#### FORM – NAME – REGISTERED OFFICE – CORPORATE PURPOSE

##### Article 1

BNP PARIBAS is a French Public Limited Company (*société anonyme*) licensed to conduct banking operations under the French Monetary and Financial Code, Book V, Section 1 (*Code Monétaire et Financier, Livre V, Titre 1<sup>er</sup>*) governing banking sector institutions.

The Company was founded pursuant to a decree dated 26 May 1966. Its legal life has been extended to 99 years with effect from 17 September 1993.

Apart from the specific rules relating to its status as an establishment in the banking sector (Book V, Section 1 of the French Monetary and Financial Code - *Code Monétaire et Financier, Livre V, Titre 1<sup>er</sup>*), BNP PARIBAS shall be governed by the provisions of the French Commercial Code (*Code de Commerce*) concerning commercial companies, as well as by these Articles of Association.

##### Article 2

The registered office of BNP PARIBAS shall be located in Paris (*9<sup>th</sup> arrondissement*), at 16, Boulevard des Italiens (France).

##### Article 3

The purpose of BNP PARIBAS shall be to provide and carry out the following services with any individual or legal entity, in France and abroad, subject to compliance with the French laws and regulations applicable to credit institutions licensed by the Credit Institutions and Investment Firms Committee (*Comité des Etablissements de Crédit et des Entreprises d'Investissement*):

- any and all investment services,
- any and all services related to investment services,
- any and all banking transactions,
- any and all services related to banking transactions,
- any and all equity investments,

as defined in the French Monetary and Financial Code Book III – Section 1 (*Code Monétaire et Financier, Livre III, Titre 1<sup>er</sup>*) governing banking transactions and Section II (*Titre II*) governing investment services and related services.

On a regular basis, BNP PARIBAS may also conduct any and all other activities and any and all transactions in addition to those listed above, in particular any and all arbitrage, brokerage and commission transactions, subject to compliance with the regulations applicable to banks.

In general, BNP PARIBAS may, on its own behalf, and on behalf of third parties or jointly therewith, perform any and all financial, commercial, industrial or agricultural, personal property or real estate transactions directly or indirectly related to the activities set out above or which further the accomplishment thereof.

### SECTION II

#### SHARE CAPITAL - SHARES

##### Article 4

The share capital of BNP PARIBAS shall stand at 2,294,954,818 euros divided into 1,147,477,409 fully paid-up shares with a nominal value of 2 euros each.

##### Article 5

The fully paid-up shares shall be held in registered or bearer form at the shareholder's discretion, subject to the French laws and regulations in force.

The shares shall be registered in an account in accordance with the terms and conditions set out in the applicable French laws and regulations in force. They shall be assigned by transfer from one account to another.

The Company may request disclosure of information concerning the ownership of its shares in accordance with the provisions of article L. 228-2 of the French Commercial Code (*Code de Commerce*).

Without prejudice to the legal thresholds set in article L. 233-7, paragraph 1 of the French Commercial Code (*Code de Commerce*), any shareholder, whether acting alone or in concert, who comes to directly or indirectly hold at least 0.5% of the share capital or voting rights of BNP PARIBAS, or any multiple of that percentage less than 5%, shall be required to notify BNP PARIBAS by registered letter with return receipt within the timeframe set out in article L. 233-7 of the French Commercial Code (*Code de Commerce*).

Above 5%, the disclosure obligation provided for in the previous paragraph shall apply to 1% increments of the share capital or voting rights.

The disclosures described in the previous two paragraphs shall also apply when the shareholding falls below the above-mentioned thresholds.

Failure to report either legal or statutory thresholds shall result in the loss of voting rights as provided for by article L. 233-14 of the French Commercial Code (*Code de Commerce*) at the request of one or more shareholders jointly holding at least 2% of the Company's share capital or voting rights.

## **Article 6**

Each share shall grant a right to a part of ownership of the Company's assets and any liquidation surplus that is equal to the proportion of share capital that it represents.

In cases where it is necessary to hold several shares in order to exercise certain rights, and in particular where shares are exchanged, combined or allocated, or following an increase or reduction in share capital, regardless of the terms and conditions thereof, or subsequent to a merger or any other transaction, it shall be the responsibility of those shareholders owning less than the number of shares required to exercise those rights to combine their shares or, if necessary, to purchase or sell the number of shares or voting rights leading to ownership of the required percentage of shares.

## **SECTION III**

### **GOVERNANCE**

#### **Article 7**

The Company shall be governed by a Board of Directors composed of:

##### **1/ Directors appointed by the Ordinary General Shareholders' Meeting**

There shall be at least nine and no more than eighteen Directors. Directors representing employees as well as Directors representing employee shareholders shall not be included when calculating the minimum and maximum number of Directors.

They shall be appointed for a three-year term.

When a Director is appointed to replace another Director, in accordance with applicable French laws and regulations in force, the new Director's term of office shall be limited to the remainder of the predecessor's term.

A Director's term of office shall end at the close of the Ordinary General Shareholders' Meeting convened to deliberate on the financial statements for the previous financial year and held in the year during which the Director's term of office expires.

Directors may be re-appointed, subject to the provisions of French law, in particular with regard to their age.

Each Director, with the exception of Directors representing employees and Directors representing employee shareholders, must own at least 10 Company shares.

##### **2/ Directors elected by BNP PARIBAS SA employees**

The status of these Directors and the related election procedures shall be governed by Articles L. 225-27 to L. 225-34 of the French Commercial Code (*Code de Commerce*) as well as by the provisions of these Articles of Association.

There shall be two such Directors – one representing executive staff and the other representing non-executive staff.

They shall be elected by BNP PARIBAS SA employees.

They shall be elected for a three-year term.

Elections shall be organised by the Executive Management. The timetable and terms and conditions for elections shall be drawn up by the Executive Management in consultation with the national trade union representatives within the Company such that the second round of elections shall be held no later than fifteen days before the end of the term of office of the outgoing Directors.

Each candidate shall be elected on a majority basis after two rounds held in each of the electoral colleges.

Each application submitted during the first round of elections shall include both the candidate's name and the name of a substitute, if any.

Applications may not be amended during the second round of elections.

The candidates shall belong to the electoral college where they stand for election.

Applications other than those presented by a trade union representative within the Company must be submitted together with a document including the names and signatures of one hundred electors belonging to the electoral college where the candidate is running for election.

### **3/ Director representing employee shareholders**

Where the report presented by the Board of Directors at the Annual General Meeting, in accordance with article L. 225-102 of the French Commercial Code, establishes that shares held by company employees or by employees of related companies within the meaning of article L. 225-180 of said Code, account for over 3% of the Company's share capital, a Director representing the employee shareholders is appointed by the Ordinary Shareholders' Meeting in accordance with the procedures set out in current regulations as well as by these Articles of association.

Candidates for election to the office of Director representing employee shareholders are selected on the following basis:

- when the voting right attached to the shares held by the employees, and former employees, referred to in article L. 225-102 of the French Commercial Code is exercised by the Supervisory Board, or Boards, of one, or more, mutual funds (FCPE), the Board, or Boards, of the FCPE or FCPEs, jointly selects two candidates;
- when the voting right attached to the shares, held directly or via an FCPE by the employees, and where applicable, former employees, as referred to in article L. 225-102 of the French Commercial Code, is exercised directly by said employees, they appoint two candidates, given that each employee shareholder will have the same number of votes as the number of shares that they directly, or indirectly, hold. The two employees with the most votes are appointed as candidates.

Only employee shareholders or employees who are members of the Supervisory Board of an FCPE holding company shares may be selected as candidates.

Each candidate must be presented together with a replacement who meets the same requirements as the said candidate.

The Board of Directors presents the candidates to the Annual General Meeting under separate resolutions and, where applicable, approves the resolution relating to its preferred candidate. The Ordinary General Meeting of Shareholders decides, under the conditions of quorum and majority applicable to the appointment of any member of the Board of Directors, on the appointment of the Director representing the employee shareholders. Out of the candidates referred to above, the one who has received the most votes from shareholders present, or represented, at the Ordinary General Meeting of Shareholders, will be appointed as Director representing employee shareholders.

This Director's term and the conditions under which the term of office is exercised are exactly the same as for Directors appointed by the Annual General Meeting.

Should the Director cease to be an employee, or in the event of a vacancy arising due to death or resignation of office, the term of office of the Director representing employee shareholders ends automatically.

Under these circumstances, the Director representing the employee shareholders shall be replaced at the next Ordinary Annual General Meeting.

Should the next Annual General Meeting be held within four months of the date on which the term of office is expected to end, the replacement is appointed at the next Annual General Meeting.

The new Director is appointed by the Annual General Meeting for the remainder of his/her predecessor's term of office.

Should the Director cease to be an employee, or in the event of a vacancy arising due to death or resignation from office, the replacement's term of office automatically ends and new candidates must be selected as described above. The candidates selected by this process shall be voted on by shareholders at the next Annual General Meeting. The new Director is appointed by the Annual General Meeting as described above. This Director's term of office and the conditions under which the directorship is exercised are identical to those of Directors appointed by the Annual General Meeting. Should the next Annual General Meeting be held within six months of the date on which the replacement's term of office is due to end, the replacement is appointed at the next Annual General Meeting.

Under the different circumstances mentioned above, the Board of Directors may meet and validly deliberate until the date on which the Director representing the employee shareholders is replaced.

The provisions of the first paragraph of 3/ shall cease to apply when, at year-end, the percentage of capital owned by Company employees and employees of related companies under the aforementioned article L. 225-102, accounts for less than 3% of the share capital, given that the term of office of any Director appointed in accordance with this article shall end on its expiry date.

Detailed procedures relating to the organisation and holding of the vote by all the shareholders referred to in the aforementioned article L. 225-102, particularly with regard to the timetable for the selection of candidates, are approved by the Executive Management directly, or by delegation.

### **Article 8**

The Chairman of the Board of Directors shall be appointed from among the members of the Board of Directors.

Upon proposal from the Chairman, the Board of Directors may appoint one or more Vice-Chairmen.

### **Article 9**

The Board of Directors shall meet as often as necessary in the best interests of the Company. Board meetings shall be convened by the Chairman. Where requested by at least one-third of the Directors, the Chairman may convene a Board meeting with respect to a specific agenda, even if the last Board meeting was held less than two months before. The Chief Executive Officer (CEO) may also request that the Chairman convene a Board meeting to discuss a specific agenda.

Board meetings shall be held either at the Company's registered office, or at any other location specified in the notice of meeting.

Notices of meetings may be communicated by any means, including verbally.

The Board of Directors may meet and make valid decisions at any time, even if no notice of meeting has been communicated, provided all its members are present or represented.

#### **Article 10**

Board meetings shall be chaired by the Chairman, by a Director recommended by the Chairman for such purpose or, failing this, by the oldest Director present.

Any Director may attend a Board meeting and take part in its deliberations by videoconference (*visioconférence*) or all telecommunications and remote transmission means, including Internet, subject to compliance with the conditions set out in applicable legislation at the time of its use.

Decisions within the remit of the Board of Directors referred to by article L. 225-37 French Commercial Code (*Code de Commerce*) may be taken by means of written consultation.

Any Director who is unable to attend a Board meeting may ask to be represented by a fellow Director, by granting a written proxy, valid for only one specific meeting of the Board. Each Director may represent only one other Director.

At least half of the Board members must be present for decisions taken at Board meetings to be valid.

Should one or both of the offices of Director elected by employees remain vacant, for whatever reason, without the possibility of a replacement as provided for in article L. 225-34 of the French Commercial Code (*Code de Commerce*), the Board of Directors shall be validly composed of the members elected by the General Shareholders' Meeting and may validly meet and vote.

Members of the Company's Executive Management may, at the request of the Chairman, attend Board meetings in an advisory capacity.

A permanent member of the Company's Central Social and Economic Committee, appointed by said Committee, shall attend Board meetings in an advisory capacity, subject to compliance with the provisions of French laws in force.

Decisions shall be made by a majority of Directors present or represented. In the event of a split decision, the Chairman of the meeting shall have the casting vote, except as regards the proposed appointment of the Chairman of the Board of Directors.

The Board of Directors' deliberations shall be recorded in minutes entered in a special register prepared in accordance with French laws in force and signed by the Chairman of the meeting and one of the Directors who attended the meeting.

The Chairman of the meeting shall appoint the Secretary to the Board, who may be chosen from outside the Board's members.

Copies or excerpts of Board minutes may be signed by the Chairman, the Chief Executive Officer, the Chief Operating Officers (COOs) or any representative specifically authorised for such purpose.

#### **Article 11**

The Ordinary General Shareholders' Meeting may grant Directors' remuneration under the conditions provided for by French law.

The Board of Directors shall split these fees among its members.

The Board of Directors may grant exceptional compensation for specific assignments or duties performed by the Directors under the conditions applicable to agreements subject to approval, in accordance with the provisions of Articles L. 225-38 to L. 225-43 of the French Commercial Code (*Code de Commerce*). The Board may also authorise the reimbursement of travel and business expenses and any other expenses incurred by the Directors in the interests of the Company.

### **SECTION IV**

#### **DUTIES OF THE BOARD OF DIRECTORS, THE CHAIRMAN, THE EXECUTIVE MANAGEMENT AND THE NON-VOTING DIRECTORS (CENSEURS)**

#### **Article 12**

The Board of Directors shall determine the business strategy of BNP PARIBAS and supervise the implementation thereof. Subject to the powers expressly conferred on the Shareholders' Meetings and within the limit of the corporate purpose, the Board shall handle any issue concerning the smooth running of BNP PARIBAS and settle matters concerning the Company pursuant to its deliberations. The Board of Directors shall receive from the Chairman or the Chief Executive Officer all of the documents and information required to fulfil its duties.

The Board of Directors' decisions shall be carried out either by the Chairman, the Chief Executive Officer or the Chief Operating Officers, or by any special representative appointed by the Board.

Upon proposal from the Chairman, the Board of Directors may decide to set up committees responsible for performing specific tasks.

### **Article 13**

The Chairman shall organise and manage the work of the Board of Directors and report thereon to the General Shareholders' Meeting. The Chairman shall also oversee the smooth running of BNP PARIBAS's management bodies and ensure, in particular, that the Directors are in a position to fulfil their duties.

The remuneration of the Chairman of the Board shall be freely determined by the Board of Directors.

### **Article 14**

The Board of Directors shall decide how to organise the Executive Management of the Company: the Executive Management of the Company shall be conducted, under his responsibility, either by the Chairman of the Board of Directors or by another individual appointed by the Board of Directors and who shall have the title of Chief Executive Officer.

Shareholders and third parties shall be informed of this choice in accordance with the regulatory provisions in force.

The Board of Directors shall have the right to decide that this choice be for a fixed term.

Once the Board of Directors has decided to dissociate the functions of Chairman and Chief Executive Officer, the Chairman shall be deemed to have automatically resigned at the close of the General Shareholders' Meeting held to approve the financial statements for the year in which he reaches seventy-five years of age. However, the Board may decide to extend the term of office of the Chairman of the Board until the close of the General Shareholders' Meeting held to approve the financial statements for the year in which he reaches seventy-six years of age. The Chief Executive Officer shall be deemed to have automatically resigned at the close of the General Shareholders' Meeting held to approve the financial statements for the year in which he reaches sixty-five years of age. However, the Board may decide to extend the term of office of the Chief Executive Officer until the close of the General Shareholders' Meeting held to approve the financial statements for the year in which he reaches sixty-six years of age.

In the event that the Board of Directors decides that the Executive Management shall be conducted by the Chairman of the Board, the provisions of these Articles of Association concerning the Chief Executive Officer shall apply to the Chairman of the Board of Directors who will in such case have the title of Chairman and Chief Executive Officer. He shall be deemed to have automatically resigned at the close of the General Shareholders' Meeting held to approve the financial statements for the year in which he reaches sixty-five years of age.

### **Article 15**

The Chief Executive Officer shall be vested with the broadest powers to act in all circumstances in the name of BNP PARIBAS. He shall exercise these powers within the limit of the corporate purpose and subject to those powers expressly granted by French law to Shareholders' Meetings and the Board of Directors.

He shall represent BNP PARIBAS in its dealings with third parties. BNP PARIBAS shall be bound by the actions of the Chief Executive Officer even if such actions are outside the scope of the corporate purpose, unless BNP PARIBAS can prove that the third party knew that the relevant action was outside the scope of the corporate purpose or had constructive knowledge thereof in view of the circumstances. The publication of the Company's Articles of Association alone shall not constitute such proof.

The Chief Executive Officer shall be responsible for the organisation and procedures of internal control and for all information required by French law regarding the internal control report.

The Board of Directors may limit the powers of the Chief Executive Officer, but such limits shall not be binding as against third parties.

The Chief Executive Officer may delegate partial powers, on a temporary or permanent basis, to as many persons as he sees fit, with or without the option of redelegation.

The remuneration of the Chief Executive Officer shall be freely determined by the Board of Directors.

The Chief Executive Officer may be removed from office by the Board of Directors at any time. Damages may be payable to the Chief Executive Officer if he is removed from office without a valid reason, except where the Chief Executive Officer is also the Chairman of the Board of Directors.

In the event that the Chief Executive Officer is a Director, the term of his office as Chief Executive Officer shall not exceed that of his term of office as a Director.

### **Article 16**

Upon proposal from the Chief Executive Officer, the Board of Directors may, within the limits of French law, appoint one or more individuals, who shall have the title of Chief Operating Officer, responsible for assisting the Chief Executive Officer.

In agreement with the Chief Executive Officer, the Board of Directors shall determine the scope and term of the powers granted to the Chief Operating Officers. However, as far as third parties are concerned, the Chief Operating Officers shall have the same powers as the Chief Executive Officer.

When the Chief Executive Officer ceases to perform his duties or is prevented from doing so, the Chief Operating Officers shall, unless the Board of Directors decides otherwise, retain their functions and responsibilities until a new Chief Executive Officer is appointed.

The remuneration of the Chief Operating Officers shall be freely determined by the Board of Directors, at the proposal of the Chief Executive Officer.

The Chief Operating Officers may be removed from office by the Board of Directors at any time, at the proposal of the Chief Executive Officer. Damages may be payable to the Chief Operating Officers if they are removed from office without a valid reason.

Where a Chief Operating Officer is a Director, the term of his office as Chief Operating Officer may not exceed that of his term of office as a Director.

The term of office of the Chief Operating Officers shall expire at the latest at the close of the General Shareholders' Meeting convened to approve the financial statements for the year in which the Chief Operating Officers reach sixty-five years of age. However, the Board may decide to extend the term of office of the Chief Operating Officers until the close of the General Shareholders' Meeting held to approve the financial statements for the year in which they reach sixty-six years of age.

#### **Article 17**

Upon proposal from the Chairman, the Board of Directors may appoint one or two non-voting Directors (*censeurs*).

Non-voting Directors shall be convened to and take part in Board meetings in an advisory capacity.

They shall be appointed for six years and may be reappointed for further terms. They may also be removed at any time under similar conditions.

They shall be selected from among the Company's shareholders and may receive a remuneration determined by the Board of Directors.

### **SECTION V**

#### **SHAREHOLDERS' MEETINGS**

##### **Article 18**

General Shareholders' Meetings shall be composed of all shareholders.

General Shareholders' Meetings shall be convened and deliberate subject to compliance with the provisions of the French Commercial Code (*Code de Commerce*).

As an exception to the last paragraph of article L. 225-123 of the French Commercial Code (*Code de Commerce*), each share carries one voting right, and no double voting rights are conferred.

They shall be held either at the registered office or at any other location specified in the notice of meeting.

They shall be chaired by the Chairman of the Board of Directors, or, in his absence, by a Director appointed for this purpose by the Shareholders' Meeting.

Any shareholder may, subject to providing proof of identity, attend a General Shareholders' Meeting, either in person, or by returning a postal vote or by designating a proxy.

Taking part in the meeting is subject to the shares having been entered either in the BNP PARIBAS' registered share accounts in the name of the shareholder, or in the bearer share accounts held by the authorised intermediary, within the timeframes and under the conditions provided for by the French regulations in force. In the case of bearer shares, the authorised intermediary shall provide a certificate of participation for the shareholders concerned.

The deadline for returning postal votes shall be determined by the Board of Directors and stated in the notice of meeting published in the French Bulletin of Compulsory Legal Announcements (*Bulletin des Annonces Légales Obligatoires* – BALO).

At all General Shareholders' Meetings, the voting right attached to the shares bearing beneficial rights shall be exercised by the beneficial owner.

If the Board of Directors so decides at the time that the General Shareholders' Meeting is convened, the public broadcasting of the entire General Shareholders' Meeting by videoconference (*visioconférence*) or all telecommunications and remote transmission means, including Internet, shall be authorised. Where applicable, this decision shall be communicated in the notice of meeting published in the French Bulletin of Compulsory Legal Announcements (*Bulletin des Annonces Légales Obligatoires* – BALO).

Any shareholder may also, if the Board of Directors so decides at the time of convening the General Shareholders' Meeting, take part in the vote by videoconference (*visioconférence*) or all telecommunications and remote transmission means, including Internet, subject to compliance with the conditions set out in the applicable laws at the time of its use. If an electronic voting form is used, the shareholder's signature may be in the form of a secured digital signature or a reliable identification process safeguarding the link with the document to which it is attached and may consist, in particular, of a user identifier and a password. Where applicable, this decision shall be communicated in the notice of meeting published in the French Bulletin of Compulsory Legal Announcements (*Bulletin des Annonces Légales Obligatoires* – BALO).

## **SECTION VI**

### **STATUTORY AUDITORS**

#### **Article 19**

At least two principal auditors shall be appointed by the General Shareholders' Meeting for a term of six financial years. Their term of office shall expire after approval of the financial statements for the sixth financial year.

## **SECTION VII**

### **ANNUAL FINANCIAL STATEMENTS**

#### **Article 20**

The Company's financial year shall start on 1<sup>st</sup> January and end on 31<sup>st</sup> December.

At the end of each financial year, the Board of Directors shall draw up annual financial statements and write a management report on the Company's financial position and its business activities during the previous year.

#### **Article 21**

Net income for the year is composed of income for the year minus costs, depreciation, amortizations and impairment.

The distributable profit is made up of the year's profit, minus previous losses as well as the sums to be allocated to the reserves in accordance with French law, plus the profit carried forward.

The General Shareholders' Meeting is entitled to levy all sums from the distributable profit to allocate them to all optional, ordinary or extraordinary reserves or to carry them forward.

The General Shareholders' Meeting may also decide to distribute sums levied from the reserves at its disposal.

However, except in the event of a capital reduction, no amounts may be distributed to the shareholders if the shareholders' equity is, or would become following such distribution, lower than the amount of capital plus the reserves which is not open to distribution pursuant to French law or these Articles of Association.

In accordance with the provisions of article L. 232-18 of the French Commercial Code (*Code de Commerce*), a General Shareholders' Meeting may offer to the shareholders an option for the payment, in whole or in part, of dividends or interim dividends through the issuance of new shares in the Company.

## **SECTION VIII**

### **DISSOLUTION**

#### **Article 22**

Should BNP PARIBAS be dissolved, the shareholders shall determine the form of liquidation, appoint the liquidators at the proposal of the Board of Directors and, in general, take on all of the duties of the General Shareholders' Meeting of a French Public Limited Company (*société anonyme*) during the liquidation and until such time as it has been completed.

## **SECTION IX**

### **DISPUTES**

#### **Article 23**

Any and all disputes that may arise during the life of BNP PARIBAS or during its liquidation, either between the shareholders themselves or between the shareholders and BNP PARIBAS, pursuant to these Articles of Association, shall be ruled on in accordance with French law and submitted to the courts having jurisdiction.

## 8.8 Statutory Auditors' special report on related party agreements

Annual General Meeting for the approval of the financial statements for the year ended 31 December 2023.

*This is a free translation into English of the Statutory Auditors' special report on related party agreements issued in French and is provided solely for the convenience of English speaking readers. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.*

To the General Assembly of the company,

In our capacity as Statutory Auditors of BNP Paribas SA, we hereby report to you on related party agreements.

It is our responsibility to report to shareholders, based on the information provided to us, on the main terms and conditions of agreements that have been disclosed to us or that we may have identified as part of our engagement, as well as the reasons given as to why they are beneficial for the Company, without commenting on their relevance or substance or identifying any undisclosed agreements. Under the provisions of article R. 225-31 of the French Commercial Code (*Code de commerce*), it is the responsibility of shareholders to determine whether the agreements are appropriate and should be approved.

Where applicable, it is also our responsibility to provide shareholders with the information required by article R. 225-31 of the French Commercial Code in relation to the implementation during the year of agreements already approved by the Annual General Meeting.

We performed the procedures that we deemed necessary in accordance with professional standards applicable in France to such engagements. These procedures consisted in verifying that the information given to us is consistent with the underlying documents.

### AGREEMENTS TO BE SUBMITTED FOR THE APPROVAL OF THE ANNUAL GENERAL MEETING

We were not informed of any agreement authorised and entered into during the year to be submitted for approval at the Annual General Meeting in accordance with article L. 225-38 of the French Commercial Code.

### AGREEMENTS PREVIOUSLY APPROVED BY THE ANNUAL GENERAL MEETING

#### Agreements approved in previous years

In accordance with article R. 225-30 of the French Commercial Code, we were informed that the following agreement, previously approved by the Annual General Meeting on 26 May 2016, was implemented during the year.

***Non-compete agreement between BNP Paribas and Jean-Laurent Bonnafé (authorised by the Board of Directors on 25 February 2016)***

*Director concerned:*

Jean-Laurent Bonnafé, Director

Chief Executive Officer of BNP Paribas

At its meeting on 25 February 2016, the Board of Directors of BNP Paribas authorised the implementation of a non-compete agreement between BNP Paribas and Jean-Laurent Bonnafé.

Under this agreement, in the event that Jean-Laurent Bonnafé ceases to hold a position with BNP Paribas or carry out any work on its behalf, he undertakes not to exercise, directly or indirectly, any professional activity for a period of 12 months on behalf of a banking, investment or insurance firm whose shares are traded on a regulated market in France or abroad, or on behalf of a banking, investment or insurance firm in France whose shares are not traded on a regulated market. As consideration for this non-compete obligation, Jean-Laurent Bonnafé will receive a payment equal to 1.2 times the total of the fixed and variable remuneration (excluding multi-annual variable remuneration) he received during the year preceding his departure. One-twelfth of the indemnity would be paid each month.

This agreement was concluded to protect the interests of BNP Paribas and its shareholders in the event of Jean-Laurent Bonnafé's departure.

# **"10 QUARTERLY FINANCIAL INFORMATION**

# FIRST QUARTER 2024 RESULTS

## PRESS RELEASE

Paris, 25 April 2024

### 1ST QUARTER 2024

## BNP Paribas reports very good 1<sup>st</sup> quarter 2024 performances and confirms its 2024 trajectory

- **Stable revenues** (€12,483m) driven by very solid business performances within each operating division
- **Positive jaws effect** (+1.1 point)
- **Cost of risk<sup>1</sup>** (29 bps) **still low**, due to the quality of the loan portfolio
- **Pre-tax income** up sharply (+7.4% vs. 1Q23 distributable<sup>3</sup>) to €4,363m
- **Very high Net Income** of €3,103m<sup>2</sup> (-2.2% vs. 1Q23 distributable<sup>3</sup>), driven by operating performances
- €1.05bn **share buyback** finalised on 23 April 2024, and €4.60 **dividend** subject to General Meeting approval on 14 May 2024
- **Earnings Per Share<sup>4</sup>** (€2.51) up sharply
- **Financial structure** very solid (CET1 ratio of 13.1%)
- **Active management of capital** including the divestment of Personal Finance businesses in Mexico and ongoing redeployment of capital from the Bank of the West divestment

On the strength of its 1<sup>st</sup> quarter 2024 results, BNP Paribas confirms its 2024 trajectory – revenues more than 2% higher than 2023 distributable revenues<sup>3</sup> (€46.9bn), a positive jaws effect<sup>5</sup>, a cost of risk below 40 bps, and Net Income higher than 2023 distributable Net Income<sup>3</sup> (€11.2bn).

**BNP PARIBAS**

The bank  
for a changing  
world

The figures included in this press release are unaudited.

As a reminder, on 29 February 2024 BNP Paribas reported restated quarterly series for 2023 to reflect, in particular, the end of the build-up of the Single Resolution Fund (SRF), effective 1 January 2024, and the assumption of a similar contribution to local bank taxes at a level estimated at about 200 million euros annually beginning in 2024, as well as an accounting heading separated from cost of risk and entitled "Other net losses for risks on financial instruments", beginning in the fourth quarter 2023. This press release reflects this restatement.

This press release includes forward-looking statements based on current beliefs and expectations about future events. Forward-looking statements include financial projections and estimates and their underlying assumptions, statements regarding plans, objectives, and expectations with respect to future events, operations, products and services, and statements regarding future performance and synergies. Forward-looking statements are not guarantees of future performance and are subject to inherent risks, uncertainties and assumptions about BNP Paribas and its subsidiaries and investments, developments of BNP Paribas and its subsidiaries, banking industry trends, future capital expenditures and acquisitions, changes in economic conditions globally, or in BNP Paribas' principal local markets, the competitive market and regulatory factors. Those events are uncertain; their outcome may differ from current expectations, which may in turn significantly affect expected results. Consequently, actual results may differ from those projected or implied in these forward-looking statements due to a variety of factors. These factors include among others: i) BNP Paribas's ability to achieve its objectives, ii) the impacts from central bank interest rate policies, whether due to continued elevated interest rates or potential significant reductions in interest rates, iii) changes in regulatory capital and liquidity rules, iv) continued elevated levels of, or any resurgence in, inflation and its impacts, v) the various geopolitical uncertainties and impacts related notably to the invasion of Ukraine and the conflict in the Middle East, or vi) the precautionary statements included in this press release.

BNP Paribas undertakes no obligation to publicly revise or update any forward-looking statements in light of new information or future events. It should be recalled in this regard that the Supervisory Review and Evaluation Process is carried out each year by the European Central Bank, which can modify each year its capital adequacy ratio requirements for BNP Paribas.

The information contained in this press release as it relates to parties other than BNP Paribas or derived from external sources has not been independently verified and no representation or warranty expressed or implied is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or correctness of the information or opinions contained herein. Neither BNP Paribas nor its representatives shall have any liability whatsoever in negligence or otherwise for any loss however arising from any use of this presentation or its contents or otherwise arising in connection with this presentation or any other information or material discussed.

The sum of values contained in the tables and analyses may differ slightly from the total reported due to rounding.

The percentage changes stated for indicators in the first quarter 2024 profit-and-loss statement have been calculated with reference to the profit-and-loss statement on a distributable base for the first quarter of 2023, using the restatement of quarterly series reported on 29 February 2024. The 2023 distributable result serves as a basis for calculating the distribution in 2023 and reflects the Group's intrinsic performance post impact of the Bank of the West sale and post ramp-up of the Single Resolution Fund (SRF) excluding extraordinary items.

BNP Paribas' financial disclosures of the first quarter 2024 consists of this press release, the attached presentation, and quarterly series. The quarterly series are available at the following address: <https://invest.bnpparibas/document/1q24-quarterly-series>.

All legally required disclosures, including the Universal Registration document, are available online at <https://invest.bnpparibas.com> in the "Results" section and are made public by BNP Paribas pursuant to the requirements under Article L.451-1-2 of the French Monetary and Financial Code and Articles 222-1 et seq. of the French Financial Markets Authority General Regulations.

The Board of Directors of BNP Paribas met on 24 April 2024. The meeting was chaired by Jean Lemierre, and the Board examined the Group's results for the first quarter 2024.

Jean-Laurent Bonnafé, Chief Executive Officer, stated at the end of the meeting:

*"On the strength of its diversified and integrated model, the Group achieved good performances in the first quarter 2024, thanks to business momentum in the operating divisions. BNP Paribas continues to demonstrate its ability to generate value and confirms its 2024 trajectory, with revenue growth expected to surpass 2% compared to 2023 and Net Income above the 2023 distributable result. We continue to focus on expanding our market shares, supporting our clients, and rolling out our strategic initiatives. BNP Paribas is well positioned for the new phase of the economic cycle. I thank the teams for their mobilisation."*

## SOLID RESULTS

**First-quarter revenues** were stable (-0.4%), driven by very solid business performances within each operating division, offsetting a high base effect at Global Markets. Excluding this impact, revenues were up by about 3%<sup>6</sup>. **Operating expenses** decreased (-1.5%). The Group thus generated a **positive jaws effect**<sup>5</sup> of 1.1 point. The effects of additional operating efficiency measures (400 million euros) are expected to begin showing up in the second quarter 2024.

**Net Income** (3,103 million euros) was driven by operating performances. Earnings per share<sup>4</sup> amounted to 2.51 euros.

The Group finalised its 1.05-billion-euro **share buyback** programme on 23 April 2024. The Board of Directors will propose a 4.60-euro **dividend** to shareholders at the General Meeting of 14 May 2024.

**The financial structure** is very solid, with a common equity Tier 1 ratio at 13.1%, and capital is managed actively, particularly with the divestment of Personal Finance in Mexico.

On the strength of its 1st quarter 2024 results, BNP Paribas confirms its **2024 trajectory** – revenues more than 2% higher than 2023 distributable revenues (€46.9bn), a positive jaws effect, a cost of risk below 40 bps, and Net Income higher than 2023 distributable Net Income (€11.2bn).

This growth trajectory is based mainly on the strengthening of efficiency initiatives (2024 pre-tax impact of +400 million euros), the quality of the loan portfolio throughout the cycle, the redeployment of 55 basis points of capital freed up by the Bank of the West divestment before the end of the first half of 2024 (return on invested capital<sup>7</sup> in 2025e>16%), the strategic repositioning at Personal Finance, and market share gains at CIB, while keeping capital allocation well-balanced. This trajectory reflects the impact of headwinds, including decisions by public authorities (2024 after-tax impact of -500 million euros) and the normalisation of used-car sale prices at Arval.

**Revenues** came to 12,483 million euros, down by 0.4% in comparison with the high base of revenues in the first quarter 2023 on a distributable basis, at 12,534 million euros.

Revenues decreased by 4.0% at **Corporate & Institutional Banking (CIB)**, as strong growth in revenues at Global Banking (+6.1%) and Securities Services (+6.8%) partly offset the 11.9% decline in Global Markets revenues.

Revenues at **Commercial, Personal Banking & Services (CPBS)**<sup>8</sup> were stable at +0.4%, driven by growth at Commercial & Personal Banking (+1.0%), whose fees were up by 4.4% and net interest revenues by +4.9% excluding the impact of headwinds (Belgian government bond, ECB mandatory reserves, and inflation hedges in the amount of about 150 million euros). Revenues at Specialised Businesses decreased only slightly, by 0.7%, thanks to the increase at Personal Finance (+0.7%) which was driven by higher volumes and the ongoing improvement in margins at production. At Arval, used-car prices normalised at a high level. New Digital Businesses fared very well (+21.0%).

At **Investment & Protection Services (IPS)** revenues rose by 0.8%, driven by good business momentum at Wealth Management (+5.2%), Insurance (+4.2%) and Asset Management (+2.6%<sup>9</sup>). Excluding the contribution of Real Estate and Principal Investments, IPS revenues were up by +4.2%.

**Group operating expenses** came to 7,937 million euros (8,058 million euros in the first quarter 2023 on a distributable basis), down by 1.5%. CIB operating expenses decreased by 4.9%, particularly at Global Markets (-8.2%). The jaws effect was very positive at Global Banking (+6.5 points) and Securities Services (+7.8 points).

CPBS<sup>8</sup> kept close control over operating expenses on the whole (+3.1%), up by 3.9% in Commercial & Personal Banking, due in particular to the impact of Belgian bank levies. The jaws effect was positive at BNL and CPBL. Specialised Businesses' operating expenses rose by 1.2%, in support of their growth and transformation. The jaws effect was positive at Personal Finance, Leasing Solutions and Personal Investors.

At IPS, operating expenses were stable (-0.1%), decreasing at Wealth Management (-0.4%), Asset Management (-0.1%<sup>9</sup>) and Real Estate (-3.9%). The jaws effect was positive at IPS on the whole (+0.9 point) and strongly positive (+3.9 points) when excluding the contribution of Real Estate and Principal Investments.

**Group gross operating income** thus amounted to 4,546 million euros (4,476 million euros in the first quarter 2023 on a distributable basis).

At 640 million euros<sup>1</sup> (592 million in the first quarter 2023 on a distributable basis), the Group's **cost of risk** stood at 29 basis points of customer loans outstanding, a low level, due to the quality of the loan portfolio. It reflects releases of provisions on performing loans (stages 1 and 2) of 123 million euros and provisions for non-performing loans (stage 3) of 763 million euros. The Group confirms its 2025 target of keeping cost of risk below 40 basis points each year.

**Group operating income** amounted to 3,901 million euros. In the first quarter 2023 it came to 3,884 million euros on a distributable basis.

**Group non-operating items** came to 462 million euros. They reflected the reconsolidation of activities in Ukraine<sup>10</sup> (+226 million euros) and a capital gain on the divestment of Personal Finance in Mexico (+118 million euros).

**Group pre-tax income** came to 4,363 million euros (4,062 million euros in the first quarter 2023 on a distributable basis).

The average corporate tax rate stood at 29.8%. It reflects the first-quarter recognition of full-year taxes and contributions in accordance with IFRIC 21, a significant portion of which is not deductible.

**Net Income, Group share** thus came to 3,103 million euros in the first quarter 2024, close to its level of the first quarter 2023 at 3,173 million euros on a distributable basis.

**Return on non-revaluated tangible equity** stood at 12.4%.

**As of 31 March 2024, the common equity Tier 1 ratio** stood at 13.1% and **the Liquidity Coverage Ratio**<sup>11</sup> (end-of-period) at 134% (148% as of 31 December 2023). The Group's immediately available liquidity reserve<sup>12</sup> amounted to 446 billion euros, or more than one year to manoeuvre in terms of wholesale funding. The leverage ratio<sup>13</sup> stood at 4.4%.

BNP Paribas continued to stand out in the first quarter 2024 in its commitment to **ESG** issues, as recognised by extra-financial ratings agencies and illustrated by its top-tier leadership in recent rankings. Several innovative solutions dedicated to each type of client were launched this quarter. For example, at CPBS, BNP Paribas Mobility launched an Arval and Leasing Solutions offering in Europe for combined leasing of electric vehicles and recharging stations, in order to facilitate the transition towards sustainable mobility. At IPS, BNP Paribas Asset Management launched its first global equities fund dedicated to the net-zero transition. The strategy is based on decarbonation and overweighted in sustainable investments.

The "Cease and Desist Order" of 30 June 2014, pertaining to violations of US laws and regulations governing economic sanctions, issued jointly by the Prudential Control and Resolution Authority (ACPR) in France and the Board of Governors of the Federal Reserve Board (FRB) in the United States, has been lifted, thus confirming the Group's accomplishment of its obligations under the remediation plan.

## CORPORATE AND INSTITUTIONAL BANKING (CIB)

CIB results were driven this quarter by very good performances by Global Banking and Securities Services and by a lower cost of risk.

**CIB revenues**, at 4,677 million euros, declined by 4.0% compared to the first quarter 2023. They were driven by strong growth at Global Banking (+6.1%) and Securities Services (+6.8%) partly neutralising the decrease at Global Markets' (-11.9%) due to the base effect arising from activity on the rates, currencies, and commodities markets. Activity on those markets had risen sharply in 2023 but suffered in the first quarter 2024 from a market environment marked by very low volatility in Europe.

### CIB – Global Banking

**Global Banking revenues**, at 1,543 million euros, achieved a record quarter, up by 6.1%. They rose in EMEA and the Americas.

Revenues were up very sharply on the **Capital Markets** platform, particularly in the Americas (+29.8%<sup>14</sup>) and EMEA (+18.9%<sup>14</sup>).

They achieved a strong increase in **Transaction Banking**, especially in EMEA (+10.5%<sup>14</sup>), with deposits in cash management almost stable during the quarter.

In **financings**, business momentum was very good in EMEA on the bond markets (market up by 26%<sup>15</sup> compared to the first quarter 2023) and syndicated loans (market up by 14%<sup>15</sup> compared to the first quarter 2023). **Loans**, at 178 billion euros, fell by 1.4%<sup>14</sup> compared to the first quarter 2023 but were up by 0.4%<sup>14</sup> compared to the fourth quarter 2023. **Deposits**, at 217 billion euros, continued to grow (+1.0%<sup>14</sup>).

In **rankings**, Global Banking confirmed its first-tier status as a leader<sup>15</sup> in EMEA in syndicated loans and bond issuance, a leader<sup>16</sup> in European Large Corporate Transaction Banking (Trade finance and Cash Management), and the European and global leader<sup>17</sup> in sustainable financing.

### CIB – Global Markets

At 2,435 million euros, **Global Markets revenues** fell by 11.9%.

At 830 million euros, **Equity & Prime Services revenues** rose by 11.0%, a good performance driven particularly by Prime Brokerage activities (revenues up by 44%).

At 1,604 million euros, **FICC revenues** were down by 20.4% compared to a high base in the first quarter 2023. EMEA, the region in which FICC generated about 60% of its 2023 revenues, is also the region that was hit hardest by the normalisation on the rates, forex, and commodities markets after a period of very strong client activity in 2022 and in the first quarter of 2023. This normalisation was marked in particular by very low volatility, especially in January and February 2024, causing less sustained client activity compared to the high volumes in the first quarter 2023. However, in the first quarter 2024, overall credit market activity was up sharply, particularly on EMEA primary markets and in the Americas.

In terms of **rankings**, Global Markets confirmed its leadership on multi-dealer electronic platforms.

Average 99% 1-day interval **Var**, which measures the level of market risks, stood at 36 million euros, up by €7m vs. the fourth quarter 2023, due mainly to changes in interest-rate activity on the perimeter of developed markets.

#### **CIB – Securities Services**

At 699 million euros, **Securities Services revenues** rose by 6.8%, driven by the favourable impact of the interest-rate environment and the impact of the 9.9% increase in outstandings at the end of the period compared to the first quarter 2023. Transactions volumes decreased by 4.8% compared to the first quarter 2023, due mainly to lower market volatility.

Business activity was strong, marked by new mandates, particularly a mandate for custody of securities in the United States, amounting to 60 billion dollars in assets. Meanwhile, Private Capital activities continue to be developed.

**CIB operating expenses**, at 2,741 million euros, were down by 4.9%. The jaws effect was positive by 0.9 point.

**CIB gross operating income** thus decreased by 2.7%, to 1,936 million euros.

**CIB cost of risk** had 95 million euros in releases and stood at -16 basis points of customer loans outstanding. It reflects releases on provisions on performing loans (stages 1 and 2) and non-performing loans (stage 3).

CIB thus achieved **pre-tax income** of 2,033 million euros, up by 2.4%.

## COMMERCIAL, PERSONAL BANKING & SERVICES (CPBS)

CPBS's performances this quarter featured good business momentum, which neutralised headwinds.

At 6,692 million euros, **revenues**<sup>18</sup> were up by 0.4% compared to the first quarter 2023. CPBS revenues were therefore stable compared to the first quarter 2023 when taking into account the impact of headwinds. They include inflation hedges in France (-54 million euros), the issuance of Belgian government bonds (-52 million euros), the ECB's halt to remuneration of mandatory reserves (-45 million euros) and the normalisation of used-car prices at a high level at Arval.

**Revenues at Commercial & Personal Banking** at 4,196 million euros, rose (+1.0%). Net interest revenues were up by 4.9% excluding the impact of headwinds<sup>19</sup>, driven by growth of margins on deposits. Fees were up by 4.4%, driven mainly by good performances in France and at Europe-Mediterranean. Commercial banking activities in Ukraine, which continue in support of the local economy, were reconsolidated.

**Revenues at Specialised Businesses** decreased by 0.7%, to 2,496 million euros. Arval achieved an increase in its financial margin and margin on services, driven by higher volumes. Personal Finance was up (+0.7% compared to the first quarter 2023), driven by higher volumes and the ongoing improvement in margins on production by continuing its geographical refocusing (divestment of its business in Mexico). Nickel continued to expand its business and its customer base.

The increase in **operating expenses**<sup>18</sup> was contained (+3.1%) at 4,482 million euros. It reflected the impact of inflation, particularly in Türkiye and Poland, the consolidation of commercial banking operations in Ukraine and the Belgian bank levies, partly offset by savings, particularly at CPBF and at Personal Finance.

**Gross operating income**<sup>18</sup> thus came to 2,210 million euros, down by 4.7%.

**Cost of risk**<sup>18</sup> stood at 726 million euros (600 million euros in the first quarter 2023), an increase with a base effect at Europe-Mediterranean and CPBF (release of stage 1 and 2 provisions in the first quarter 2023).

As a result, after allocating one third of Private Banking's Net Income to Wealth Management (IPS division), **CPBS achieved pre-tax income**<sup>20</sup> of 1,517 million euros, down by -13.5%, due to the change in cost of risk.

## CPBS – Commercial & Personal Banking in France (CPBF)

In an environment in the process of normalising, CPBF business was resilient.

**Loans outstanding** were down by 1.7% compared to the first quarter 2023, and volumes stabilised compared to the fourth quarter 2023 (-0.8%). Pricing continues to be adjusted across all customer segments. **Deposits** were down by 5.0% compared to the first quarter 2023, with a stabilisation of individual customer deposits. Off-balance-sheet savings rose by 4.0% compared to 31 March 2023, and net asset inflows into life insurance was high (+0.9 billion euros in the first quarter 2024).

Customer acquisition continues at **Hello bank!** (~+65K clients, +32.0% compared to the first quarter 2023), boosted by the start of integration of Orange Bank customers. Private Banking achieved good net asset inflows of 1.5 billion euros.

**Revenues**<sup>18</sup> came to 1,638 million euros, down by 1.9%. Net interest revenues were down by 8.0%. Margins rose but were offset by the impact of inflation hedges (-54 million euros, in the process of normalising) and the non-remuneration of mandatory reserves (-20 million euros). Excluding these two effects, net interest revenues were stable. Fees rose (+5.1% compared to the first quarter 2023), driven by financial fees (cross-selling with BNP Paribas Cardif). **Cash Management** was up.

At 1,171 million euros, **operating expenses**<sup>18</sup>, decreased by 0.8%. They were kept under control despite inflation, due to the ongoing impact of savings measures.

**Gross operating income**<sup>18</sup> came to 467 million euros, down by 4.7%.

**Cost of risk**<sup>18</sup> stood at 116 million euros (75 million euros in the first quarter 2023), or 20 basis points of customer loans outstanding – a low level (21 basis points in 2023).

As a result, after allocating one third of Private Banking's Net Income to Wealth Management (IPS division), CPBF achieved **pre-tax income**<sup>20</sup> of 301 million euros, down by 19.8%.

## CPBS – BNL banca commerciale (BNL bc)

BNL bc revenues rose sharply, the jaws effect was very positive and the cost of risk continued to decrease.

**Loans outstanding** were down by 7.1% compared to the first quarter 2023 and down by 5.8% on the perimeter excluding non-performing loans. Loans to individual were resilient, while corporate loans were down. Management of margins was disciplined in a competitive environment. **Deposits** were up by 8.1% compared to the first quarter 2023, with an increase in corporate and Private Banking deposits offset partially by a decline in individual customer deposits. Margins continued to improve. Off-balance-sheet savings were down by 5.2% compared to 31 March 2023. Net asset inflows into Private Banking were very good (1.4 billion euros).

**Revenues**<sup>21</sup> rose sharply, by 7.9% to 729 million euros. Net interest revenues rose very steeply, by 13.7%, driven by the margin on deposits and capital gains on disposals of securities, partly offset by the decrease in volumes and tightening on loan margins. Fees were stable compared to the first

quarter 2023, in connection with strong increase in financial fees offset by the decrease in banking fees.

At 440 million euros, **operating expenses**<sup>21</sup> were up by 2.2%, showing a contained increase. The jaws effect was very positive (+5.8 points).

**Gross operating income**<sup>21</sup> rose by 18.2%, to 288 million euros.

At 72 million euros, **cost of risk**<sup>21</sup> receded, with releases of provisions on performing loans (stages 1 and 2) and a decrease of provisions on non-performing loans (stage 3). Cost of risk stood at 39 basis points of customer loans outstanding.

As a result, after allocating one third of Private Banking's Net Income to Wealth Management (IPS division), BNL bc achieved **pre-tax income**<sup>22</sup> of 209 million euros, up sharply, by 50.3%.

### CPBS – Commercial & Personal Banking in Belgium (CPBB)

CPBB confirmed a good resilience of the business, with the first quarter 2024 featuring the successful integration of bpost bank into BNP Paribas Fortis.

**Loans outstanding** rose by 1.7% compared to the first quarter 2023, driven by the increase in mortgage and corporate loans. **Deposits** fell by 4.7% compared to the first quarter 2023 (-0.3% excluding the impact of the issuance of Belgian government bonds maturing in September 2024). Corporate customer deposits rose by +2.7% compared to the first quarter 2023. Off-balance sheet savings rose sharply, by 5.7% compared to 31 March 2023, driven by mutual funds. Private Banking achieved net asset inflows of 0.8 billion euros this quarter.

**Revenues**<sup>21</sup> were down by 8.6% at 929 million euros. Net interest revenues<sup>21</sup> were down by 11.0% (-1.7% compared to the first quarter 2023, excluding the impact of the non-remuneration of mandatory reserves and Belgian government bonds (-68 million euros)). Margins on corporate deposits rose, offset by tightening loan margins in a highly competitive environment. Fees<sup>21</sup> decreased by 2.5%, due to the decline in banking fees, including consumer finance, offset by the increase in financial fees, particularly in Private Banking.

At 955 million euros, **operating expenses**<sup>21</sup> were up by 4.9%, in connection with inflation and the bank levies (+2.6% compared to the first quarter 2023 excluding the IFRIC impact).

**Gross operating income**<sup>21</sup> amounted to -27 million euros.

At 28 million euros (8 million in the first quarter 2023), **cost of risk**<sup>21</sup> is still low and stood at 8 basis points of customer loans outstanding.

As a result, after allocating one third of Private Banking's Net Income to Wealth Management (IPS division), CPBB achieved **pre-tax income**<sup>22</sup> of -61 million euros.

## CPBS – Commercial & Personal Banking in Luxembourg (CPBL)

CPBL results were up sharply.

**Loans outstanding** were down by 2.8%, and **deposits** decreased by 1.6% compared to the first quarter 2023.

**Revenues**<sup>21</sup> rose by 6.8% to 155 million euros. Net interest revenues<sup>21</sup> were up sharply, by 9.0%, in connection with good resiliency in margins on deposits, particularly in corporate deposits and capital gains on divestments of securities. CPBL achieved a good level of fees. They decreased by 3.6%<sup>21</sup> compared to the first quarter 2023.

At 81 million euros, **operating expenses**<sup>21</sup> rose by 1.4%. The jaws effect was quite positive (+5.4 points).

**Gross operating income**<sup>21</sup> rose sharply, by 13.4%, to 74 million euros.

At 1 million euros, **cost of risk**<sup>21</sup> is still at a very low level.

After allocating one third of Private Banking's Net Income to Wealth Management (IPS division), CPBL achieved **pre-tax income**<sup>22</sup> of 72 million euros, up sharply by 14.7%.

## CPBS – Europe-Mediterranean

Europe-Mediterranean confirmed good business momentum in Poland, a normalisation of the environment in Türkiye, and the reconsolidation of businesses in Ukraine.

**Loans outstanding** were up by 3.7%<sup>14</sup> compared to the first quarter 2023. Origination was prudent in individual customers in Poland, and production momentum recovered in Türkiye across all customer segments. Deposits rose by 8.7%<sup>14</sup> compared to the first quarter 2023, driven by Türkiye and Poland.

**Revenues**<sup>21</sup>, at 745 million euros, were up by 3.1%<sup>23</sup>, driven mainly by good growth in net interest revenues in Poland and increased fees in Türkiye.

**Operating expenses**<sup>21</sup>, at 503 million euros, rose by 10.3%<sup>23</sup>, due to high inflation.

**Gross operating income**<sup>21</sup>, at 242 million euros, decreased by 10.8%<sup>23</sup>.

**Cost of risk**<sup>21</sup> stood at 40 million euros (1 million euros in the first quarter 2023), or 45 basis points of customer loans outstanding. It increased from a low first quarter 2023 base (releases of stage 1 and 2 provisions).

The hyperinflation situation in Türkiye<sup>24</sup> caused a decrease in "Other non-operating items" of 76 million euros.

After allocating one third of Private Banking's Net Income to Wealth Management (IPS division), Europe-Mediterranean thus achieved **pre-tax income**<sup>22</sup> of 184 million euros, up sharply by 49.2%<sup>23</sup>.

## CPBS – Specialised Businesses – Personal Finance

In the first quarter 2024, Personal Finance continues to implement the geographical refocusing of its activities and the reorganisation of its operating model. Ten entities were divested or placed into run-off, particularly in Central Europe and Mexico. Business drive was good, and the jaws effect was positive.

**Loans outstanding** were up by 10.9% compared to the first quarter 2023, driven mainly by an increase in mobility. Selectivity in granting loans increased. Margins on production rose constantly, despite continued pressure.

The impacts of the implementation of **partnerships in auto loans** continued and contributed to the expansion in volumes and the structural improvement in the risk profile (+ 6 points in the share of auto loans compared to the first quarter 2023).

**Revenues**, at 1,296 million euros, rose by 0.7% driven by the effect of higher volumes, partly offset by pressure on margins and higher financing costs.

**Operating expenses**, at 753 million euros, decreased by 1.5%, thanks to cost-saving measures. The jaws effect was positive (+2.1 points).

**Gross operating income** rose by 3.8% to 543 million euros.

**Cost of risk** stood at 394 million euros (358 million euros in the first quarter 2023), or 143 basis points of customer loans outstanding, stable compared to the first quarter 2023 (145 basis points) and down compared to the fourth quarter 2023 (179 basis points), supported by the structural improvement in the risk profile.

**Pre-tax income thus came to 278 million euros**, up by 65.2%, thanks to the positive impact of the capital gain on divestment of businesses in Mexico.

## CPBS – Specialised Businesses – Arval & Leasing Solutions

The first quarter 2024 was characterised by the gradual normalisation of used-car prices at a high level. The volume impact was favourable on vehicle sales, in relation to shorter delivery times (109,000 vehicles sold in the first quarter 2024). With more than 1.7 million financed vehicles<sup>25</sup>, the expansion in the Arval **financed fleet** remains strong (+6.7% compared to 31 March 2023). Outstandings rose (+24.4%<sup>26</sup> compared to the first quarter 2023). Business drive is strong, featuring a new partnership with the Chinese automaker BYD<sup>27</sup> (the world's largest maker of electric vehicles) in Spain, Germany, Italy, and Brazil.

At 23.8 billion euros, **Leasing Solutions outstandings** rose by 2.8% compared to the first quarter 2023. Business drive was good, with production volumes up by 11.0% compared to the first quarter 2023 on equipment markets and a good margin level.

**Revenues**, at 942 million euros, decreased by 4.0%. Arval's revenues decreased this quarter (-5.8% compared to the first quarter 2023), due to the gradual normalisation of used-car prices at a high level. This impact was partly offset by the volume-driven increase in Leasing Solutions revenues.

**Operating expenses**, at 393 million euros, rose by 3.7%, driven by inflation and business development.

**Pre-tax income at Arval and Leasing Solutions** decreased by 9.5% to 489 million euros.

### **CPBS – Specialised Businesses – New Digital Businesses and Personal Investors**

**Business was robust this quarter.** Nickel instituted new pricing and rolled out new financial services, including a home insurance offering for renters in partnership with BNP Paribas Cardif and Lemonade. The number of points of sale rose (+20.5% compared to 31 March 2023), and Nickel is already the largest distribution network of current accounts in France.

Regarding **Floa**, the number of active partnerships rose very sharply (x 2.3 compared to the first quarter 2023) and the level of production is good with a tightening of credit standards.

**Personal Investors** achieved good growth in assets under management (+12.9% compared to 31 March 2023) and kept the number of transactions at a high level, driven by financial market trends.

**Revenues**<sup>28</sup>, at 258 million euros, rose by 6.0%. Momentum continues, and Personal Investors revenues stabilised at a high level.

**Operating expenses**<sup>28</sup>, at 185 million euros, rose by 7.9%, due to the business development strategy.

**Gross operating income**<sup>28</sup> amounted to 72 million euros (+1.3% compared to the first quarter 2023).

**Cost of risk**<sup>28</sup> stood at 24 million euros (23 million euros in the first quarter 2023).

**Pre-tax income**<sup>29</sup> at New Digital Businesses and Personal Investors, after allocating one third of Private Banking's Net Income in Germany to Wealth Management (IPS division), was stable, at 46 million euros.

### **New ambitions for the Payments & Flow initiative out to 2025**

On the strength of their first-tier leadership in cash management in Europe (No.1 with large corporates, according to the 2023 Greenwich Leaders survey), CPBS and CIB are targeting €800m in increased revenue for their joint Payments & Flows initiative by 2025, compared to an initial €600m target, which was already reached late last year. These additional revenues will be derived from the Group's Cash Management, Trade Finance, and Factoring platforms, as well as electronic payments segments for individuals (PSP issuing and acquiring).

## INVESTMENT & PROTECTION SERVICES (IPS)

Insurance, Wealth Management and Asset Management had a very good first quarter 2024.

As of 31 March 2024, **assets under management**<sup>30</sup> amounted to 1,283 billion euros (+3.8% compared to 31 December 2023). They were driven by the impact of net asset inflows (+17.7 billion euros), the market performance effect (+27.3 billion euros) and the exchange rate effect (+2.2 billion euros). Net asset inflows were strong in all business lines, driven by the diversity of distribution networks. **Wealth Management** achieved very strong inflows, particularly in Commercial & Personal Banking. **Asset Management** achieved strong asset inflows, driven mainly by asset inflows into money-market funds and medium- and long-term vehicles. **Insurance** received strong asset inflows into Savings, especially in France. As at 31 March 2024, assets under management<sup>30</sup> broke down as follows: 588 billion euros at Asset Management and Real Estate<sup>31</sup>, 432 billion euros at Wealth Management, and 262 billion euros at Insurance.

**Revenues** rose by 0.8% (+4.2% excluding the contribution of Real Estate and Principal Investments). They were driven by strong momentum at Wealth Management (+5.2%), Insurance (+4.2%) and Asset Management (+2.6% excluding the contribution of Real Estate and Principal Investments).

At 883 million euros, **operating expenses** were down by 0.1%, kept under control with investments in targeted projects. The jaws effect was positive (+0.9 point) and very positive excluding Real Estate and Principal Investments (+3.9 points).

**Gross operating income** rose by +2.2% to 537 million euros.

At 573 million euros, **pre-tax income** decreased by 3.2% (+5.6% excluding the contribution of Real Estate and Principal Investments), reflecting the decrease in the contribution of associates.

### IPS – Insurance

**Savings** (47% of Insurance revenues) performed very well both in France and internationally, with gross inflows of 8.3 billion euros, up sharply (+34% compared to the first quarter 2023). Net asset inflows rose markedly, driven by very robust business drive in France.

**Protection** (53% of Insurance revenues) gross written premiums rose by 6% compared to the first quarter 2023 in all geographies. It continued to perform well in France, particularly in affinity insurance and property & casualty. Business expanded internationally in all geographies, driven by the deployment of new and existing partnerships.

**Revenues rose by 4.2%** to 546 million euros, driven particularly by the strong performance in France. **Operating expenses**, at 205 million euros, rose only moderately, by 1.7%, driven by ongoing targeted projects. **The jaws effect** was very positive (+2.5 points).

At 385 million euros, **pre-tax income** at Insurance was up by 1.0%, including the decline in contributions of associates due to first quarter 2023 base effects.

## IPS – Wealth and Asset Management<sup>32</sup>

**Wealth Management** achieved good net asset inflows (8 billion euros in the first quarter 2024), particularly in Commercial & Personal Banking and with high-net-worth clients, and assets under management increased with a positive market performance impact.

**Asset Management<sup>9</sup>** inflows were sustained (7.2 billion euros in the first quarter 2024), driven by money-market funds and passively managed funds. Two new bond ETFs with an active ESG approach were launched this quarter. Revenues fell sharply at Real Estate, due to a very sluggish real-estate market.

**Wealth Management revenues**, at 431 million euros, rose by +5.2%, driven by increased fees. **Asset Management<sup>9</sup> revenues** rose by +2.6%, driven by the increase in assets under management. Revenues decreased due to a high base effect at Principal Investments and to lower revenues at Real Estate.

**Operating expenses** were down by -0.6%, at 678 million euros. **The jaws effect** was very positive (+4.5 points) excluding the current downturn impact at Real Estate and Principal Investments.

**Pre-tax income** of Wealth and Asset Management thus came to 188 million euros, down by -10.7%.

## CORPORATE CENTRE

Since 1 January 2023, Corporate Centre includes two restatements related to the application of IFRS 17, alongside the implementation of IFRS 9 for insurance activities.

The main effects are as follows:

- Operating expenses deemed “attributable to insurance activities” are recognised in deduction of Revenues and no longer booked in operating expenses. The impact of these entries for internal distributors is presented in Corporate Centre. These entries have no impact on gross operating income.
  - The impact of volatility generated by the fair value accounting of assets through profit and loss (IFRS 9) is presented in Corporate Centre and therefore has no impact on Insurance revenues.
- Effective 1 January 2023, Corporate Centre thus includes restatements, which, for a better readability, are reported separately each quarter.

**Revenues of restatements related to insurance at Corporate Centre** came to -274 million euros (-266 million euros in the first quarter 2023).

**Operating expenses** of restatements related to insurance at Corporate Centre came to 267 million euros (250 million euros in the first quarter 2023).

**Pre-tax income of restatements** related to insurance at Corporate Centre thus came to -7 million euros (-16 million euros in the first quarter 2023).

**Corporate Centre's revenues excluding restatements related to insurance** amounted to 153 million euros. They thus reflect the revaluation of proprietary credit risk included in derivatives (DVA) of -26 million euros (-54 million euros in the first quarter 2023).

**Corporate Centre's operating expenses excluding restatements related to insurance** came to 208 million euros. They include the impact of 29 million euros of restructuring and adaptation costs (30 million in the first quarter 2023) and 74 million euros of IT reinforcement costs (95 million euros in the first quarter 2023).

**Cost of risk of Corporate Centre excluding restatements related to insurance** came to 10 million euros (release of 6 million euros in the first quarter 2023).

**Corporate Centre's non-operating items excluding restatements related to insurance** amounted to 309 million euros. They reflect the reconsolidation of commercial banking activities in Ukraine (+226 million euros) in "Other non-operating items" and the contribution of associates.

**Pre-tax income of Corporate Centre excluding restatements related to insurance** thus came to 244 million euros.

## FINANCIAL STRUCTURE

The Group has a solid financial structure.

**Its common equity Tier 1 ratio stood at 13.1% as of 31 March 2024**, down by 10 basis points compared to 31 December 2023, resulting mainly from the combined impact of the organic capital generation net of changes in risk-weighted assets in the 1st quarter 2024 (+30 basis points), the distribution of the first quarter 2024 result (-20 basis points), the redeployment of capital from the Bank of the West divestment (-5 basis points) and a decrease due to the updating of models and other items (-15 basis points).

**The leverage ratio<sup>13</sup>** stood at 4.4% as of 31 March 2024.

The **liquidity coverage ratio<sup>33</sup>** (end-of-period) stood at a high level of 134% as of 31 March 2024 (148% as of 31 December 2023).

**Immediately available liquidity reserves<sup>34</sup>** amounted to 446 billion euros as of 31 March 2024, equivalent to more than one year to manoeuvre compared to market resources.

Adjustments are detailed in the 2023 results' presentation:</p> <ul style="list-style-type: none"> <li>- include the effect of the anticipation of the end of the ramp-up of the Single Resolution Fund in 2023</li> <li>- exclude the Net Income of entities intended to be sold (application of IFRS 5) (notably the capital gain on the sale of Bank of the West) and additional items related to the sale of Bank of the West</li> <li>- exclude extraordinary items such as the extraordinary negative impact of the hedging adjustment related to changes in the TLTRO terms decided by the ECB in the fourth quarter 2022 and extraordinary provisions for litigation</li> </ul> <p>The distributable Net Income is used to calculate the ordinary distribution in 2023 as well as to monitor the Group's performance in 2023.</p> | Measure of BNP Paribas Group's Net Income reflecting the Group's intrinsic performance in 2023, pivotal year, post-impact of the sale of Bank of the West and the last expected year of the contribution to the ramp-up of the Single Resolution Fund, marked by extraordinary items. |
| Net Income, Group share excluding exceptional items | <p>Net Income attributable to equity holders excluding exceptional items.</p> <p>Details of exceptional items are disclosed in the slide "Main Exceptional Items" of the results' presentation.</p>   | Measure of BNP Paribas Group's Net Income excluding non-recurring items of a significant amount or items that do not reflect the underlying operating performance, notably restructuring, adaptation, IT reinforcement and transformation costs.                                      |
| Coverage ratio of non-performing loans              | Relationship between stage 3 provisions and impaired outstandings (stage 3), balance sheet and off-balance sheet, netted for collateral received, for customers and credit institutions, including liabilities at amortised cost and debt securities at fair value through equity (excluding Insurance)   | Measure of provisioning of non-performing loans   |

#### Methodology: Comparative analysis at constant scope and exchange rates

The method used to determine the effect of changes in scope of consolidation depends on the type of transaction (acquisition, sale, etc.). The underlying purpose of the calculation is to facilitate period-on-period comparisons.

In cases of acquired or created entity, the results of the new entity are eliminated from the constant scope results of current-year periods corresponding to the periods when the entity was not owned in the prior-year.

In cases of divested entities, the entity's results are excluded symmetrically for the prior year for quarters when the entity was not owned.

In cases of change of consolidation method, the policy is to use the lowest consolidation percentage over the two years (current and prior) for results of quarters adjusted on a like-for-like basis.

Comparative analysis at constant exchange rates are prepared by restating results for the prior-year quarter (reference quarter) at the current quarter exchange rate (analysed quarter). All of these calculations are performed by reference to the entity's reporting currency.

#### Reminder

**Operating expenses:** sum of salary and employee benefit expenses, other operating expenses and depreciation, amortisation and impairment of property, plant, and equipment. Throughout the document, the terms "operating expenses" and "costs" may be used indifferently.

There are three operating divisions:

- **Corporate and Institutional Banking (CIB)** including Global Banking, Global Markets, and Securities Services.
- **Commercial, Personal Banking and Services (CPBS)** including:
  - Commercial & Personal Banking in France, in Belgium, in Italy, in Luxembourg, in Europe-Mediterranean;
  - Specialised Businesses, with Arval & Leasing Solutions; BNP Paribas Personal Finance; New Digital Businesses (including Nickel, Lyf...) & Personal Investors;
- **Investment & Protection Services (IPS)** including Insurance, Wealth and Asset Management, which includes Wealth Management, Asset Management, Real Estate and Principal Investments

## END NOTES

- <sup>1</sup> Cost of risk does not include "Other net losses for risk on financial instruments".
- <sup>2</sup> Net Income, Group share
- <sup>3</sup> Restatement of quarterly series reported on 29 February 2024. Results serving as a basis for calculating the 2023 distribution reflecting the Group's intrinsic performance post impact of the Bank of the West divestment and post contribution to the build-up of the Single Resolution Fund (SRF), excluding extraordinary items
- <sup>4</sup> Earnings per share at end of period calculated on the basis of Net Income excluding the remuneration of undated super subordinated notes in the first quarter 2024 and the average number of shares outstanding during the quarter
- <sup>5</sup> Increase in Group revenues between 2023 (distributable) and 2024 minus the increase in Group operating expenses between 2023 (distributable) and 2024
- <sup>6</sup> Internal estimate, assuming FICC revenues stable in 1Q24 vs. 1Q23
- <sup>7</sup> Return on Invested Capital: estimated 2025 net income generated by capital redeployed since 2022, compared to allocated capital (CET1)
- <sup>8</sup> Including 100% of Private Banking (excluding PEL/CEL effects in France)
- <sup>9</sup> Excluding Real Estate and Principal Investments
- <sup>10</sup> 60% stake in Ukrsibbank, the remaining 40% being held by the European Bank for Reconstruction and Development
- <sup>11</sup> End-of-period LCR calculated in accordance with Regulation (CRR) 575/2013, Art. 451a
- <sup>12</sup> Liquid market assets or eligible assets in central banks (counterbalancing capacity), taking into account prudential standards, notably US standards, minus intra-day payment system needs
- <sup>13</sup> Calculated in accordance with Regulation (EU) n°2019/876
- <sup>14</sup> At constant scope and exchange rates
- <sup>15</sup> Source: Dealogic Quarterly Rankings Debt Capital Markets 1Q24 and Dealogic Quarterly Rankings Syndicated Loans 1Q24, bookrunner rankings in volume
- <sup>16</sup> Coalition Greenwich 2024 Share Leaders in European Large Corporate Cash Management, February 2024 and 2023 Share Leaders in European Large Corporate Trade Finance, October 2023
- <sup>17</sup> Source: Dealogic – All ESG Fixed Income, Global & EMEA Sustainable Financing (ESG Bonds and Loans), bookrunner rankings in volume, 1Q24
- <sup>18</sup> Including 100% of Private Banking (excluding PEL/CEL effects in France)
- <sup>19</sup> Issuance of Belgian government bonds, inflation hedges in France and non-remuneration of mandatory reserves
- <sup>20</sup> Including 2/3 of Private Banking (excluding PEL/CEL effects in France)
- <sup>21</sup> Including 100% of Private Banking. Regarding the comment on cost of risk, the 726 million euros include "Other net losses for risk on financial instruments" (5 million euros) for the first quarter 2024
- <sup>22</sup> Including 2/3 of Private Banking
- <sup>23</sup> At constant scope and exchange rates excluding Türkiye (at historical exchange rates in accordance with IAS 29)
- <sup>24</sup> Impact of the implementation of IAS 29 and taking into account the efficiency of the hedge in Türkiye (CPI linkers), the TRY / EUR depreciation (-6.8%), and the 15% increase in the CPI on the quarter
- <sup>25</sup> Increase in fleet at end of period
- <sup>26</sup> Average outstandings
- <sup>27</sup> *Build your dreams.*
- <sup>28</sup> Including 100% of Private Banking in Germany
- <sup>29</sup> Including 2/3 of Private Banking in Germany
- <sup>30</sup> Including distributed assets
- <sup>31</sup> Real Estate assets under management: €26bn
- <sup>32</sup> Asset Management, Wealth Management, Real Estate and Principal Investments
- <sup>33</sup> Calculated in accordance with Regulation (CRR) 575/2013, Art. 451a.
- <sup>34</sup> Liquid market assets or eligible assets in central banks (counterbalancing capacity), taking into account prudential standards, notably US standards, minus intra-day payment system needs.

# FIRST QUARTER 2024 RESULTS

25 APRIL 2024

**BNP PARIBAS**

**The bank for a changing world**

1

## DISCLAIMER

The figures included in this presentation are unaudited.

As a reminder, on 29 February 2024 BNP Paribas reported restated quarterly series for 2023 to reflect, in particular, the end of the build-up of the Single Resolution Fund (SRF), effective 1 January 2024, and the assumption of a similar contribution to local bank taxes at a level estimated at about 200 million euros annually beginning in 2024, as well as an accounting heading separated from cost of risk and entitled "Other net losses for risks on financial instruments", beginning in the fourth quarter 2023. This presentation reflects this restatement.

This presentation includes forward-looking statements based on current beliefs and expectations about future events. Forward-looking statements include financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future events, operations, products and services, and statements regarding future performance and synergies. Forward-looking statements are not guarantees of future performance and are subject to inherent risks, uncertainties and assumptions about BNP Paribas and its subsidiaries and investments, developments of BNP Paribas and its subsidiaries, banking industry trends, future capital expenditures and acquisitions, changes in economic conditions globally, or in BNP Paribas' principal local markets, the competitive market and regulatory factors. Those events are uncertain; their outcome may differ from current expectations which may in turn significantly affect expected results.

Consequently, actual results may differ from those projected or implied in these forward-looking statements due to a variety of factors. These factors include among others: i) BNP Paribas's ability to achieve its objectives, ii) the impacts from central bank interest rate policies, whether due to continued elevated interest rates or potential significant reductions in interest rates, iii) changes in regulatory capital and liquidity rules, iv) continued elevated levels of, or any resurgence in, inflation and its impacts, v) the various geopolitical uncertainties and impacts related notably to the invasion of Ukraine and the conflict in the Middle East, or vi) the precautionary statements included in this presentation.

BNP Paribas undertakes no obligation to publicly revise or update any forward-looking statements in light of new information or future events. It should be recalled in this regard that the Supervisory Review and Evaluation Process is carried out each year by the European Central Bank, which can modify each year its capital adequacy ratio requirements for BNP Paribas.

The information contained in this presentation as it relates to parties other than BNP Paribas or derived from external sources has not been independently verified and no representation or warranty expressed or implied is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or correctness of the information or opinions contained herein. Neither BNP Paribas nor its representatives shall have any liability whatsoever in negligence or otherwise for any loss however arising from any use of this presentation or its contents or otherwise arising in connection with this presentation or any other information or material discussed.

The sum of values contained in the tables and analyses may differ slightly from the total reported due to rounding. The alternative performance measures are defined in the press release published jointly with this presentation.

ESG | 1Q24 marks BNP Paribas' ongoing engagement, which is recognised in ratings and rankings

1Q24: Examples of innovative solutions dedicated to each type of client

CIB

- Exclusive financial advisory for ACC's 4.4 billion euro debt raising to finance the construction of electric vehicle battery factories

CPBS

- BNP Paribas Mobility launches an Arval and Leasing Solutions offering in Europe for combined rental of electric vehicles and recharging stations, in order to facilitate the transition towards sustainable mobility

IPS

- BNP Paribas Asset Management launches its first global equity fund dedicated to the net-zero transition: strategy based on decarbonation and overweighted with sustainable investments

Strong recognition by extra-financial ratings agencies

| Agency <sup>1</sup>  | Rating | Ranking   |
|--|--------|---|
|  CDP  | A      | On the A-list (the 1.5% top-rated companies based on a climate questionnaire) |
|  Moody's ESG Solutions                                | 70/100 | 2 <sup>nd</sup> in the category "Diversified banks Europe"                    |
|  S&P Global Corporate Sustainability Assessment (CSA) | 65/100 | In the top 7% in the banking industry (the top 1% for the environment)        |
|  MSCI   | AA     | A leading position in the environmental component                             |

A leading position in recent rankings

- 2023 "World's Best Bank" and "World's Best Bank for Sustainable Finance"

- 2024 "World's Best" in Sustainability for BNP Paribas Wealth Management

- 2024 "Global 100 Most Sustainable Corporations" for the 10<sup>th</sup> consecutive year – Corporate Knights

## A REINFORCED INTERNAL CONTROL SET-UP

- An even more solid control and compliance set-up and ongoing efforts in inserting a reinforced compliance culture into daily operations
- **Ongoing improvement of the operating model for combating money laundering and terrorism financing:**
  - A standards-based, risk-adjusted approach, with a risk management set-up shared between business lines and Compliance (know-your-client, reviewing unusual transactions, etc.)
  - Group-level steering with regular reporting to monitoring and supervisory bodies
- **Ongoing reinforcement of set-up for complying with international financial sanctions:**
  - Thorough and diligent implementation of measures necessary for enforcing international sanctions as soon as they have been published
  - Broad dissemination of the procedures and intense centralisation, guaranteeing effective and consistent coverage of the surveillance perimeter
  - Continuous optimisation of cross-border transaction filtering tools and screening of relationship databases
- **Ongoing improvement of the anti-corruption framework with increased integration into the Group's operational processes**
- **Intensified on-line training programme:** compulsory programmes for all employees on financial security (Sanctions & Embargos, Combating Money Laundering & Terrorism Financing and on Combating Corruption), protecting clients' interests, market integrity, and all topics dealt in the Group's Code of Conduct.
- **Ongoing regular missions of the General Inspection dedicated to ensuring financial security within entities generating USD flows.** These successive missions have been conducted since the start of 2015 in the form of 18-month cycles. The first five cycles achieved a steady improvement in processing and audit mechanisms. The trend was confirmed during the sixth cycle, which was completed in December 2023.
- The "Cease and Desist Order" order of 30 June 2014, pertaining to violations of US laws and regulations governing economic sanctions, issued jointly by the Prudential Control and Resolution Authority (ACPR) in France and the Board of Governors of the Federal Reserve Board (FRB) in the United States, has been lifted, thus confirming the Group's full accomplishment of its obligations under the remediation plan.

23

## CONCLUSION

On the strength of its diversified, integrated and at-scale model,  
BNP Paribas achieved a very good first quarter 2024,  
driven by a solid operational performance

The 2024 trajectory is confirmed

ESG rankings and ratings confirm BNP Paribas' ongoing commitment to the  
energy transition

Thanks to its teams' firm commitment to serving clients,  
BNP Paribas is solid and well placed for the new phase of the economic  
cycle

# FIRST QUARTER 2024 RESULTS

## APPENDICES

25 APRIL 2024

**BNP PARIBAS**

The bank for a changing world

1

### DISCLAIMER

The figures included in this presentation are unaudited.

As a reminder, on 29 February 2024 BNP Paribas reported restated quarterly series for 2023 to reflect, in particular, the end of the build-up of the Single Resolution Fund (SRF), effective 1 January 2024, and the assumption of a similar contribution to local bank taxes at a level estimated at about 200 million euros annually beginning in 2024, as well as an accounting heading separated from cost of risk and entitled "Other net losses for risks on financial instruments", beginning in the fourth quarter 2023. This presentation reflects this restatement.

This presentation includes forward-looking statements based on current beliefs and expectations about future events. Forward-looking statements include financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future events, operations, products and services, and statements regarding future performance and synergies. Forward-looking statements are not guarantees of future performance and are subject to inherent risks, uncertainties and assumptions about BNP Paribas and its subsidiaries and investments, developments of BNP Paribas and its subsidiaries, banking industry trends, future capital expenditures and acquisitions, changes in economic conditions globally, or in BNP Paribas' principal local markets, the competitive market and regulatory factors. Those events are uncertain; their outcome may differ from current expectations which may in turn significantly affect expected results.

Consequently, actual results may differ from those projected or implied in these forward-looking statements due to a variety of factors. These factors include among others: i) BNP Paribas's ability to achieve its objectives, ii) the impacts from central bank interest rate policies, whether due to continued elevated interest rates or potential significant reductions in interest rates, iii) changes in regulatory capital and liquidity rules, iv) continued elevated levels of, or any resurgence in, inflation and its impacts, v) the various geopolitical uncertainties and impacts related notably to the invasion of Ukraine and the conflict in the Middle East, or vi) the precautionary statements included in this presentation.

BNP Paribas undertakes no obligation to publicly revise or update any forward-looking statements in light of new information or future events. It should be recalled in this regard that the Supervisory Review and Evaluation Process is carried out each year by the European Central Bank, which can modify each year its capital adequacy ratio requirements for BNP Paribas.

The information contained in this presentation as it relates to parties other than BNP Paribas or derived from external sources has not been independently verified and no representation or warranty expressed or implied is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or correctness of the information or opinions contained herein. Neither BNP Paribas nor its representatives shall have any liability whatsoever in negligence or otherwise for any loss however arising from any use of this presentation or its contents or otherwise arising in connection with this presentation or any other information or material discussed.

The sum of values contained in the tables and analyses may differ slightly from the total reported due to rounding. The alternative performance measures are defined in the press release published jointly with this presentation.

## CIB | Global Markets – Sustained activity on credit and equity markets

### — Credit markets:

- Overall activity up sharply, particularly in primary markets in the Americas

### — Equity markets:

- Sustained activity, in particular in prime brokerage

### — Fixed income, currencies and commodities markets:

- Market normalised in 1Q24 with very low volatility, particularly in the first two months, which led to less robust activity compared to the high volumes of 1Q23, with demand picking up, however, in March
- Confirmation of leadership on multi-dealer electronic platforms

### • Revenues: - 11.9% vs. 1Q23

- **Equity & Prime Services** (+11.0% vs. 1Q23): good performance driven particularly by prime brokerage activities (revenues up by 44% with an increase in balances). Steep increase in APAC.
- **FICC** (-20.4% vs. 1Q23): very good performance in credit activities offset by the normalisation in EMEA vs. a high base in 1Q23 in rates, foreign exchange and commodities markets

### — Trend in revenues

### — Rankings on multi-dealer electronic platforms

- Currency markets #1 in global volumes<sup>1</sup>
- Fixed-income markets #1 in € government bonds<sup>2</sup>  
#1 on local market swaps<sup>3</sup>
- Credit markets #2 on iTraxx CDS indexes in €<sup>4</sup>

## CIB | Market risks – 1Q24

Average VaR<sup>1</sup> higher, due mainly to changes in the interest rates activity on the developed markets perimeter

- The Group's 1Q24 VaR averaged €36m, up by €7m vs. 4Q23, due mainly to changes in interest-rate exposure in the US and EU perimeters.
- No theoretical back-testing event has occurred in the past 12 months

1. VaR calculated to monitor market limits

## CIB | Securities Services – Outstandings sharply up and good business drive

### — Good business drive

#### • New mandates in 1Q24, including:

- Indeval, the Mexican central securities depository: a mandate as local custodian for the US market, amounting to USD60bn in assets
- La Mutuelle Générale, a major player in health and protection insurance in France: mandate with Manaos, a BNP Paribas data management platform, for its ESG data collection and reporting needs
- Further sustained development in private capital

#### • Increase in end-of-period outstandings of 9.9% vs. 1Q23, due mainly to the market rebound and the implementation of new mandates

#### • Transactions volumes down by 4.8% vs. 1Q23, due mainly to less volatility on the markets

### — Record revenues this quarter, up by 6.8% vs. 1Q23

- Favourable impact of the interest-rate environment and effect of higher average outstandings
- Effect of the decrease in transaction volumes due to more moderate volatility

### — Assets under custody (AuC) and under administration (AuA)

End-of-period outstandings in €000bn

### — Transaction volumes

Settlement & delivery transactions in millions

<sup>1</sup> Excluding PEL/CEL effects and including 100% of Private Banking for the Revenues to Pre-tax income line items - Allocated equity available in quarterly series

— **Revenues<sup>1</sup>: +0.4% vs. 1Q23**

- Increase in Commercial & Personal Banking revenues (+1.0%), driven by the increase in net interest revenues (+4.9%), excluding the negative impacts of the non-remuneration of ECB mandatory reserves, inflation hedges, and the Belgian government bond, and good resiliency in fees (+4.4%)
- Decrease in revenues at Specialised Businesses (-0.7%) related to the normalisation of used-car prices at Arval
- Increase in Personal Finance revenues (+0.7%), driven by volume growth (Stellantis)
- Nickel: continued expansion in business and customer base

— **Operating expenses<sup>1</sup>: +3.1% vs. 1Q23**

- Impacts of inflation, particularly in Türkiye and Poland, the reconsolidation of Ukraine, and the Belgian bank levies, partly offset by savings, particularly in France and at Personal Finance with the geographical refocusing
- Positive jaws effects: BNL, CPBL, Personal Finance, Leasing Solutions and Personal Investors

— **Cost of risk<sup>1</sup>: increase** due in particular to the base effect at Europe-Mediterranean and CPBF (stage 1 and 2 releases in 1Q23)

— **Pre-tax income<sup>2</sup>: -13.5% vs. 1Q23**, related to the change in cost of risk

## Commercial & Personal Banking in France – Good business resilience in a normalizing environment

- **Loans: -1.7% vs. 1Q23**, stable volumes vs. 4Q23 (-0.8%) and continued adjustment in pricing across all customer segments
- **Deposits: -5.0% vs. 1Q23**, stabilisation in 1Q24 of individual customer deposits
- **Increase in off-balance-sheet savings (+4.0% vs. 31.03.23)** and high net inflows in life insurance (+€0.9bn in 1Q24)
- **Ongoing customer acquisition at Hello bank!**: ~+65K customers (+32.0% vs. 1Q23), boosted by the start of integration of Orange Bank customers
- **Leader in Tech**: 26 of the 29 French unicorns are CPBF clients
- Good net inflows in **Private Banking** of €1.5bn

- **Revenues<sup>2</sup>: -1.9% vs. 1Q23**
- **Net interest revenues<sup>2</sup>: -8.0% vs. 1Q23**, increase in margins offset by the impact of inflation hedges (-€54m, in the process of normalising) and the non-remuneration of mandatory reserves (-€20m); stable when excluding these two effects
- **Fees<sup>2</sup>: +5.1% vs. 1Q23**, driven by financial fees (cross-selling with BNP Paribas Cardif); an increase in Cash Management
- **Operating expenses<sup>2</sup>: -0.8% vs. 1Q23**, under control despite inflation, with the ongoing impact of savings measures
- **Cost of risk<sup>2</sup>: 20bps**, a low level (21bps in 2023)

### Favourably positioned | Individual customer deposits<sup>1</sup>

### Increase in fees<sup>2</sup>

— **TEB: a solid and well capitalised bank**

- Context: normalisation of monetary policy and gradual adaptation of the regulatory framework in Türkiye (remuneration of regulatory reserves beginning 1Q24, subject to conditions)
- Solvency ratio<sup>1</sup> of 17.67% as of 31.03.24
- Very largely self-financed

— Geographical breakdown in loans outstanding in 1Q24<sup>2</sup>

First quarter 2024 results | 24

24

## CPBS | Personal Finance – Good business momentum and positive jaws effect

- **Loans:** +10.9% vs. 1Q23, increase particularly in mobility; increased selectivity at origination; ongoing improvement in margins at production despite continued pressure
- **Ongoing impacts of the implementation of partnerships in auto loans** on the increase in volumes and the structural improvement in the risk profile (+6pts in the share of auto loans vs. 1Q23)
- **Smooth implementation of the geographical refocusing** of activities and reorganisation of the operating model – disposals and run-off of businesses in 10 countries, particularly in Central Europe and Mexico

- **Revenues:** +0.7% vs. 1Q23, driven by the effect of higher volumes, partly offset by pressure on margins and higher financing costs
- **Lower operating expenses** (-1.5% vs. 1Q23), driven by the impact of cost-savings measures; positive jaws effect (+2.1 pts)
- **Increase in cost of risk due to the current downturn** despite the structural improvement in the risk profile
- **Pre-tax income:** +65.2% vs. 1Q23, positive impact of the capital gain on divestment of its business in Mexico

### Change in pre-tax income, 2022-2026 (in €m)

### Structural improvement of cost of risk with the change in the product mix

Allocated equity available in quarterly series

- IFRS 17 "Insurance contracts" has replaced IFRS 4 "Insurance contracts" since 01.01.23. IFRS 17 entered into force at the same time as the implementation of IFRS 9 for insurance activities.
- The impact of volatility generated by the fair value accounting of assets through profit and loss (IFRS 9) is presented in Corporate Centre and therefore has no impact on Insurance revenues.

Allocated equity available in quarterly series

- As of 01.01.23, Corporate Centre includes two restatements related to the application of IFRS 17, alongside the implementation of IFRS 9 for Insurance activities. For a better readability, these restatements will be reported separately each quarter.
- Operating expenses deemed "attributable to insurance activities" are recognised in deduction of Revenues and no longer booked in operating expenses. The impact of these entries for internal distributors is presented in Corporate Centre. These entries have no impact on gross operating income
- The impact of volatility generated by the fair value accounting of assets through profit and loss (IFRS 9) is presented in Corporate Centre and therefore has no impact on Insurance revenues.
