## FOURTH AMENDMENT TO THE 2022 UNIVERSAL REGISTRATION DOCUMENT

**FILED WITH THE FCA ON 29 MAY 2024**

Universal Registration Document, annual financial report 2022 and first quarter 2023 results filed with the Financial Conduct Authority ("**FCA**") on 15 June 2023 (the "**2022 Universal Registration Document**").

First amendment to the 2022 Universal Registration Document filed with the FCA on 23 June 2023.

Second amendment to the 2022 Universal Registration Document and second quarter 2023 results filed with the FCA on 2 April 2024.

Third amendment to the 2022 Universal Registration Document and third quarter 2023 results filed with the FCA on 18 April 2024.

*Société anonyme* (Public Limited Company) with capital of 2,468,663,292 euros

Head office: 16 boulevard des Italiens, 75 009 PARIS

R.C.S.: PARIS 662 042 449

## CONTENTS

|  |     |
|--|-----|
| 1. AMENDMENTS TO THE 2022 UNIVERSAL REGISTRATION DOCUMENT        | 1   |
| 2. PERSON(S) RESPONSIBLE FOR THE UNIVERSAL REGISTRATION DOCUMENT | 937 |

This fourth amendment to the 2022 Universal Registration Document has been filed on 29 May 2024, without prior approval, with the Financial Conduct Authority ("**FCA**"), as competent authority pursuant to Article 9 of Regulation (EU) 2017/1129 as it forms part of domestic law of the United Kingdom by virtue of the European Union (Withdrawal) Act 2018 (as amended "**EUWA**"), as amended and the regulations made thereunder (the "**UK Prospectus Regulation**").

The universal registration document may be used for the purposes of an offer to the public of securities if approved by the FCA together with any amendments, if applicable, and a securities note and summary approved in accordance with the UK Prospectus Regulation.

The 2022 Universal Registration Document (as amended) may form part of a prospectus of the Issuer consisting of separate documents within the meaning of the UK Prospectus Regulation.

# **1. AMENDMENTS TO THE 2022 UNIVERSAL REGISTRATION DOCUMENT**

The 2022 Universal Registration Document is amended as follows:

- (a) Section 1 entitled "Presentation of the BNP Paribas Group" on pages 5 to 36 shall be deleted in its entirety and replaced with the following:

# "1 PRESENTATION OF THE BNP PARIBAS GROUP

## 1.1 Group presentation

With its integrated and diversified model, BNP Paribas is a leader in banking and financial services in Europe. The Group leverages strong customer franchises and business lines with strong positions in Europe and favourable positions internationally, strategically aligned to better serve customers and long-term partners.

It operates in 63 countries and has almost 183,000 employees<sup>1</sup>, over 145,000 in Europe. The Group's activities are diversified and integrated within a distinctive model combining Commercial & Personal Banking activities in Europe and abroad, Specialised Businesses (consumer credit, mobility and leasing services, and new digital business lines), insurance, Private Banking and asset management, and Corporate and Institutional Banking.

BNP Paribas' organisation is based on three operating divisions: Corporate and Institutional Banking (CIB), Commercial, Personal Banking and Services (CPBS) and Investment and Protection Services (IPS). These divisions include the following businesses.

- **Corporate and Institutional Banking** division, combines:
  - Global Banking;
  - Global Markets; and
  - Securities Services.
- **Commercial, Personal Banking & Services** division, covers:
  - Commercial & Personal Banking in the Euro-zone:
    - Commercial & Personal Banking in France (CPBF),
    - BNL banca commerciale (BNL bc), Italian Commercial & Personal Banking,
    - Commercial & Personal Banking in Belgium (CPBB),
    - Commercial & Personal Banking in Luxembourg (CPBL);
  - Commercial & Personal Banking outside the Euro-zone, organised around Europe-Mediterranean, covering Commercial & Personal Banking outside the Euro-zone, in particular in Central and Eastern Europe, Türkiye and Africa;
  - Specialised Businesses:
    - BNP Paribas Personal Finance,
    - Arval and BNP Paribas Leasing Solutions,
    - New Digital Businesses (in particular Nickel, Floa, Lyf) and BNP Paribas Personal Investors.
- **Investment and Protection Services** division, combines:
  - Insurance (BNP Paribas Cardif);
  - Wealth and Asset Management: BNP Paribas Asset Management, BNP Paribas Real Estate, the management of the BNP Paribas Group's portfolio of unlisted and listed industrial and commercial investments (BNP Paribas Principal Investments) and BNP Paribas Wealth Management.

BNP Paribas SA is the parent company of the BNP Paribas Group.

---

<sup>1</sup> Based on HR managed workforce standard also applied in chapter 1.4 of the presentation of divisions and business lines.

## 1.2 Key figures

### RESULTS

|   | 2023<br>distributable (***) | 2023<br>reported | 2022<br>Restated<br>according to<br>IFRS 17 and<br>IFRS 9 | 2021<br>reported |
|---|-----------------------------|------------------|---|------------------|
| Revenues (in millions of euros)               | 46,927                      | 45,874           | 45,430  | 46,235           |
| Gross operating income (in millions of euros) | 17,347                      | 14,918           | 15,566  | 15,124           |
| Net income Group share (in millions of euros) | 11,232                      | 10,975           | 9,848   | 9,488            |
| Earnings per share (in euros) <sup>(*)</sup>  | 9.21                        | 8.58             | 7.52  | 7.26             |
| Return on tangible equity <sup>(**)</sup>     | 11.0%                       | 10.7%            | 10.2% <sup>(****)</sup>                                   | 10.0%            |

(\*) Based on net income Group share adjusted for interest on Undated super subordinated notes deemed equivalent to preferred shares issued by BNP Paribas SA and treated as a dividend for accounting purposes.

(\*\*) Return on tangible equity is calculated by dividing net income attributable to equity holders (adjusted for interest on Undated super subordinated notes issued by BNP Paribas SA, treated as a dividend for accounting purposes and adjusted for the foreign exchange effect on redeemed Undated super subordinated notes) by average tangible permanent shareholders' equity, not revalued, between the beginning of the year and the end of the year (shareholders' equity attributable to equity holders adjusted for changes in assets and liabilities recognised directly in equity, Undated super subordinated notes, remuneration net of tax payable to holders of Undated super subordinated notes, the distribution project, intangible assets and goodwill).

(\*\*\*) Results serving as a basis for calculating the distribution in 2023 and reflecting the Group's intrinsic performance post Bank of the West sale and post ramp-up of the Single Resolution Fund (SRF), excluding extraordinary items; earnings per share calculated on the number of shares outstanding at the end of the period.

(\*\*\*\*) 2022 return on tangible equity calculated on the basis of reported 2022 results, i.e. net income, Group share of EUR 10,196 million.

On 15 February 2024, Moody's confirmed the long-term rating of BNP Paribas at Aa3 with a stable outlook.

On 21 June 2023, DBRS confirmed the long-term rating of BNP Paribas at AA (low) with a stable outlook.

# 1.3 History

## 1966: Creation of BNP

The merger of BNCI and CNEP to form BNP represented the largest restructuring operation in the French banking sector since the end of the Second World War.

## 1968: Creation of Compagnie Financière de Paris et des Pays-Bas

## 1982: Nationalisation of BNP and Compagnie Financière de Paris et des Pays-Bas at the time of the nationalisation of all French banks

In the 1980s, deregulation of the banking sector and the growing tendency of borrowers to raise funds directly on the financial market transformed the banking business in France and worldwide.

## 1987: Privatisation of Compagnie Financière de Paribas

With 3.8 million individual shareholders, Compagnie Financière de Paribas had more shareholders than any other company in the world. Compagnie Financière de Paribas owned 48% of the capital of Compagnie Bancaire.

## 1993: Privatisation of BNP

BNP's return to the private sector represented a new start. The 1990s were marked by a change in the level of profitability of the Bank, which had the highest return on equity of any major French institution in 1998. This period was marked by the launch of new banking products and services, the development of activities on the financial markets, expansion in France and at the international level, and preparation for the advent of the euro.

## 1998: Creation of Paribas

On 12 May 1998, the merger between Compagnie Financière de Paribas, Banque Paribas and Compagnie Bancaire was approved.

## 1999: A momentous year for the Group

Following an unprecedented double tender offer and a stock market battle waged over six months, BNP was in a position to carry out a merger of equals with Paribas. For both groups, this was the most important event since their privatisation. It gave rise to a new Group with tremendous prospects. At a time of economic globalisation, the merger created a leading player in the European banking sector.

## 2000: Creation of BNP Paribas

BNP and Paribas merged on 23 May 2000.

The new Group derived its strength from the two major financial and banking lines from which it descends. It has two goals: to create value for shareholders, clients and employees by building the bank of the future, and to become a leading global player.

## 2006: Acquisition of BNL in Italy

BNP Paribas acquired BNL, Italy's 6<sup>th</sup>-largest bank. This acquisition transformed BNP Paribas, providing it with access to a second domestic Market in Europe. In both Italy and France, all of the Group's business lines can now develop their activities by leveraging a nationwide banking network.

## 2009: Merger with the Fortis group

BNP Paribas took control of Fortis Bank and BGL (Banque Générale du Luxembourg).

## 2012: Launch of Hello bank!

## 2015: Acquisition of BGZ Polska in Poland, which will become BNP Paribas Bank Polska

## 2017: Acquisition of Nickel, which offers payment solutions that are accessible to all, directly online or at tobacconists, without conditions of resources

## 2020: Agreement with Deutsche Bank for the takeover of its Prime Brokerage business

## 2023: Closing of the sale of Bank of the West to BMO Financial Group

# 1.4 Presentation of operating divisions and business lines

## CORPORATE AND INSTITUTIONAL BANKING

---

With close to 40,000 people in 53 countries, Corporate and Institutional Banking (CIB) serves two types of clients – corporates and institutionals (Banks, Insurance Companies, Asset Managers, *etc.*) – offering them tailored solutions in Capital Markets, Securities Services, Financing, Risk Management, Cash Management and Financial Advice.

Acting as a bridge between corporate and institutional clients, CIB aims to connect the financing needs of our corporate clients with the investment needs of our institutional clientele.

In 2023, 34% of BNP Paribas' revenues from operating divisions were generated by CIB. CIB's streamlined and efficient structure is designed to meet the needs of BNP Paribas' corporate and institutional clients. CIB is thus organised around three main global business lines and three major regions:

Business lines:

- Global Banking, a global organisation since 2023;
- Global Markets, grouping together all capital market activities; and
- Securities Services, one of the main global players in securities services.

Regions:

- EMEA (Europe, Middle East, Africa);
- Americas;
- APAC (Asia Pacific).

### 2023 awards

  - Lead manager of the year, social bonds – corporate,
  - Lead manager of the year, sustainability-linked bonds,
  - Loan structurer/arranger/coordinator of the year.

## GLOBAL BANKING

The Global Banking business is structured around two axes. On the one hand, the commercial support of around 4,600 large corporate clients of BNP Paribas to meet their banking needs *via* all the solutions offered by the Group. On the other hand, global product and service platforms, including:

- loan financing solutions (traditional loans and specialised financing, including export financing and financing of projects, acquisitions and Leveraged Finance) or securitisation in connection with Global Markets;
- advisory on mergers and acquisitions (advisory mandates for acquisitions or disposals, strategic financial advice, privatisation advice, *etc.*);
- primary activities on the bond and equity markets (IPOs, capital increases, convertible and exchangeable bond issues, *etc.*);
- transaction banking solutions (liquidity management, cash management deposit collection, trade finance and supply chain management as well as the associated foreign exchange risk hedging services in collaboration with Global Markets).

Since February 2023, Global Banking, previously organised around three independent regional platforms, has gone global with the aim of ensuring better commercial and operational coordination of teams and enabling better support for clients on an international scale.

This system reinforces the Group's One Bank approach, offering any client entering a corporate business centre access to an international Global Banking platform and ensuring they benefit from the expertise of all other business centres for their activities.

In EMEA (Europe, Middle East, Africa), Global Banking activities are present in 32 countries. This set-up reinforces the *One Bank for Corporates* approach developed in close cooperation with the Group's Commercial & Personal Banking and includes a network of 78 trade centres in 2023.

In Asia-Pacific, Global Banking covers more than 1,200 Asian companies and more than 900 multinational clients with a presence in 12 countries.

In the Americas, Global Banking serves around 700 companies and 500 multinational clients in the United States, Canada and six Latin American countries.

## GLOBAL MARKETS

Global Markets (GM) serves a wide range of corporate and institutional customers (companies, institutions, private banks, distributors, *etc.*) with investment, hedging, financing, research and market intelligence products and services across all asset classes.

As an industry leader with significant market share on global financial markets and regularly ranked as one of the leading providers, GM offers a wide range of financial products and services on the equity, interest rate, foreign exchange, local and credit markets. With over 4,400 employees, GM has global coverage, operating in over 30 markets worldwide including a number of large scale business centres, in particular London, Paris, Brussels, New York, Hong Kong, Singapore and Tokyo.

The business comprises three global business lines, across two core activities:

- Fixed Income, Currencies & Commodities:
  - Global Macro: foreign exchange, Global Rates, Local Markets, Commodity Derivatives,
  - Global Credit: DCM Bonds, Credit, Securitisation;
- Equity & Prime Services:
  - Global Equities: Equity Derivatives, Cash Equities, Prime Services.

Global Markets also offers a long-established foreign exchange Prime Brokerage, and a leading global Derivatives Execution and Clearing service, under the umbrella of its Technology Platforms business.

BNP Paribas is delivering on its strategy to become the leading European markets house on the world stage. Through both investment and organic growth, the bank has built a comprehensive markets offering across its three business lines.

This year the global integration of equity broker Exane into BNP Paribas was completed. Together with the launch of BNP Paribas' Prime Services business in 2022 and coupled with the bank's longstanding expertise in Equity Derivatives, this announcement signifies the completion of the bank's Global Equities offering.

It also marks a new phase in Global Markets' ambitious growth strategy, which sees it targeting a position as the number one European markets house on the world stage.

In the face of ongoing uncertainty in the macro environment, including the persistent inflationary trend, Global Markets has continued to offer consistently excellent service across its comprehensive product range, acting as a strong, reliable European partner for global clients.

It also aims to facilitate the emergence of a carbon neutral economy and a socially responsible world, innovating new ways to help clients integrate ESG into all their markets activities, and scaling up sustainable finance markets solutions.

## SECURITIES SERVICES

Securities Services is one of the major global players in securities services with EUR 12,382 billion in assets under custody and EUR 2,468 billion in assets under administration. With a global reach covering more than 90 markets, Securities Services' custody network is one of the most extensive in the industry.

As part of its full range of tools and resources developed to support institutional investors in their ESG transition journey, Securities Services enhanced in 2023 its investment compliance screening capabilities to include customisable and flexible ESG criteria, enabling a responsible monitoring of their portfolios.

Securities Services offers solutions to all participants across the investment cycle:

- investment banks, broker-dealers, banks and market infrastructures (sell-side operators) are offered solutions in execution services, derivatives clearing, local and global clearing, settlement and custody for all asset classes worldwide. Outsourcing solutions for middle and back-office activities are also provided;
- institutional investors – asset managers, hedge funds, private equity funds, real estate and sovereign wealth funds, insurance companies, pension funds, fund distributors and promoters (buy-side operators) – enjoy a wide range of services: global custody, depositary bank and trustee services, transfer agent and fund distribution support, fund administration and middle-office outsourcing, investment, risk assessment and performance reporting;
- issuers (originators, arrangers and corporates) have access to a wide range of management services: securitisation and structured finance services, debt agency services;
- market and financing services are offered to all market participants: securities lending and borrowing, foreign exchange, credit and collateral management, triparty collateral management, trading service and financing.

## 2023 awards

- **Transaction Bank of the Year for Securities Services** (The Banker Transaction banking Awards 2023);
- **European Custodian of the Year** (Funds Europe Awards 2023);

- **Custodian Bank of the Year** (GlobalCapital Global Derivatives Awards 2023);
- **ESG Services** (Central banking Awards 2023);
- **Custodian of the Year** (European Pensions Awards 2023).

## COMMERCIAL, PERSONAL BANKING AND SERVICES

---

### COMMERCIAL, PERSONAL BANKING & SERVICES (CPBS)

Commercial, Personal Banking & Services includes the Group's Commercial & Personal Banking networks and certain specialised businesses.

Employing more than 100,000 people, Commercial, Personal Banking & Services generated 54% of the revenue of BNP Paribas' operating divisions in 2023 (61% for Commercial & Personal Banking and 39% for Specialised Businesses).

Commercial, Personal Banking & Services includes BNP Paribas' Commercial & Personal Banking:

- in the Eurozone countries including France (CPBF), Italy (BNL bc), Belgium (CPBB operating under the BNP Paribas Fortis brand) and Luxembourg (CPBL operating under the BGL BNP Paribas brand);
- in countries "outside the Eurozone", and in particular in Ukraine, Poland, Türkiye, Kosovo, Morocco and Algeria and through an equity interest in China.

The CPBS division also includes specialised business lines:

- Arval: one of the European leaders in multi-brand full-service leasing and a specialist in sustainable mobility solutions with over 1.7 million vehicles leased;
- BNP Paribas Leasing Solutions: a European leader in professional equipment financing that supports its partners and clients in their energy transformation and transition;
- BNP Paribas Personal Finance: one of the major players in the financing of individuals in Europe with nearly 40% of outstandings dedicated to the automotive market;
- BNP Paribas Personal Investors: a leading digital bank in Germany and an online broker in India, with a broad retail offering focused on savings and investment for 4.5 million clients, across three brands in Germany (Consorsbank, DAB and Wealth Management Private Banking) and a brand in India (Sharekhan by BNP Paribas);
- New Digital Business lines such as Nickel (alternative banking services) that has opened over 3.7 million accounts in France since its creation and continues to grow in Europe, with a launch in Spain in 2021, Belgium and Portugal in 2022, and Germany in 2023, or Floa (the French leader in Buy Now Pay Later that joined the BNP Paribas Group in February 2022 and has more than 4 million customers in Spain, Belgium, Italy, Portugal and France).

The Cash Management activities (No. 1 in Europe for large corporate clients<sup>1</sup>), Trade Finance (No. 1 in Europe<sup>(1)</sup>) and Factoring (No. 1 in Europe<sup>2</sup>), in synergy with the CIB division's Global Banking business complete the offer to the Commercial & Personal Banking corporate clients around the One Bank for Corporates approach.

The Wealth Management activity is developing its Private Banking model within Commercial & Personal Banking. A cross-functional team, Partners in Action for Customer Experience (PACE), aims to help Commercial & Personal Banking activities offer a better customer experience. Hello bank!, the Group's main digital bank in France, Belgium and Germany, had 3.4 million customers at the end of December 2023. The Bank thus offers a full set of solutions adapted to the needs of its various customer bases (individuals, professionals, small businesses, corporates).

## COMMERCIAL & PERSONAL BANKING IN FRANCE (CPBF)

With over 23,000 employees, Commercial & Personal Banking in France (CPBF) supports its customers in all their projects. CPBF offers innovative solutions in financing, payment, wealth & asset management, and insurance to 7.2 million individual customers, 729,000 professionals and very small enterprises, over 32,600 corporate clients (SMEs, mid-sized and large corporates) and 54,000 associations.

CPBF thus occupies leading positions in Private Banking and Corporate Banking as well as strong positions in retail and professional banking. Combining the best in digital and human interaction, it provides its customers with broad interface capabilities, ranging from essential banking services, through a self-care solution, to customised guidance using dedicated teams and experts.

CPBF is structured around 10 regions covering 142 territories, making it possible to provide all customer bases with the right level of proximity whilst maintaining synergies between business lines.

All customer bases have dedicated areas appropriate to their needs:

- for individual and professional customers: 1,599 branches and 4,193 ATMs operating under the BNP Paribas and BNP Paribas – Banque de Bretagne brands<sup>3</sup>.

CPBF also provides its customers with a full online relationship capability, based on:

- a [mabanque.bnpparibas](https://mabanque.bnpparibas) website and a "My Accounts" mobile app offering services used by more than 4 million unique digital customers (who authenticated at least once on the site or app during the quarter), of which 3.3 million customers via mobile<sup>4</sup>,
- Hello bank! is BNP Paribas' digital bank. No. 1 in digital customer relations for four years, Hello bank! offers more than 800,000 individual customers a comprehensive range of products and services: everyday banking, credit solutions, savings, insurance and stock market investment solutions. Hello bank!, which celebrated its 10<sup>th</sup> anniversary in 2023, is the only digital bank to serve both individual and small businesses, with Hello bank! Pro,
- 9 customer service centres located in the regions, handling requests received by email, telephone, chat or secure messaging;
- for small business customers, a dedicated and unique system of 43 Entrepreneur Spaces bringing together 200 locations, combining proximity and expertise;

<sup>1</sup> Banking 2023 and Coalition Greenwich Voice of Client, 2023 European Large Corporate Cash Management and 2023 European Large Corporate Trade Finance studies.

<sup>3</sup> At 10 November 2023.

<sup>4</sup> Source : Digital Monthly Monitoring – TDMC (Digital Transformation and Customer Marketing), BNP Paribas, December 2023.

- for Private Banking customers, Private Banking centres located throughout France (for customers with more than EUR 250,000 in financial assets) and 14 Wealth Management offices (for customers with more than EUR 5 million in financial assets), making BNP Paribas Private Bank the leading private bank in France for Wealth Management<sup>1</sup>;
- for corporate clients, a sizeable organisation that brings together multiple skills and dedicated teams:
  - 39 business centres for SME, mid-cap and key account customers, including 6 specialised divisions (Innovation, Real Estate, Images & Media, Green Desk, Non-profit Organisations & Social Impact, banking & Financial Services) and one skills and advice centre dedicated to the social and environmental transition, offer customised solutions that meet the specific needs of clients,
  - unique Investment Banking capabilities for our SME/mid-cap customers with a team of advisory bankers and synergies between the business lines and subsidiaries (M&A, Structured Finance, Private Equity, stock market and wealth optimisation),
  - 25 trade centres and 6 trading rooms,
  - a business support service (Client Service), a Cash Customer Service (CCS) and specific customer support centres,
  - 65 WAI hubs<sup>2</sup> supporting start-ups and innovative companies and one dedicated innovation hub: WAI Paris, spaces for acceleration and connection with the ecosystem. BNP Paribas, through the hundred or so WAI bankers across France, now supports over 4,000 companies, including 88% of Next40 companies, 78% of FT120 companies and 80% of the FrenchTech 2030<sup>3</sup>;
- specialised subsidiaries: BNP Paribas Factor, one of the European leaders in factoring, which offers management solutions for trade receivables and suppliers; BNP Paribas Développement, a capital investment company and Portzamparc that allows private customers and SMEs to invest or obtain financing on the stock market; Copartis, a company specialising in the outsourcing of banking products, and Cofiloisirs, a major player in film and audiovisual financing whose main activity is the structuring of production loans;
- for customers in the French Overseas Departments and Collectivities, four regional subsidiaries, several teams and an economic interest group (GIE) in mainland France dedicated to individual, professional, Private Banking and Corporate customers (including two WAI divisions - Reunion/Antilles Guyana - and two Green Desks - Reunion/Antilles Guyana);
- lastly, 44 production and sales support branches, back offices that handle all transaction and collection processing.

Three independent studies<sup>4</sup> conducted in the second half of 2023 confirm CPBF's digital leadership on the BNP Paribas and Hello bank! brands:

- for Adverts, BNP Paribas' two banking applications, My Accounts and Hello bank!, stand out as the best banking applications in 2023;
- for Sia Partners, BNP Paribas is ranked first among branch network banks in France for its mobile application;
- for Deloitte, BNP Paribas and Hello bank! have the best digital customer service.

For Mindfintech, the Hello bank! application is ranked in 2023 as the most innovative in the online banking market.

BNP Paribas Private Banking was voted "best private bank in France" in 2024 by Euromoney, as well as in 2023 by The Digital Banker, Global Finance and World Finance. It was also named "best advisor network of the year" by Citywire in 2023.

## BNL BANCA COMMERCIALE

BNL bc is Italy's 6<sup>th</sup> largest Commercial and Personal bank in terms of total assets and 6<sup>th</sup> for customer loans<sup>5</sup>.

With about 10,000 employees, BNL bc widely supports its customers. It provides a comprehensive range of banking, financial and insurance products and services to roughly 2.5 million individual customers<sup>6</sup>, 54,000 Private Banking clients<sup>(6)</sup>, 117,000 small businesses<sup>(6)</sup>, 9,000 medium and large corporates<sup>(6)</sup> and 3,200 local authorities and non-profit organisations<sup>(6)</sup>. This range of products and services are based on the Group's extensive expertise and its integrated model by developing business line cooperation.

BNL bc has innovative and client-tailored offer models, leveraging on a multi-channel distribution network, organised in 5 regions ("*direzioni territoriali*") and 1 transversal direct banking area, integrating products and services for Retail Banking (including a network of more than 700 life bankers and 300 financial advisors), Private Banking and Corporate Banking. This organisation, named *Rete Unica*, aims at extending and strengthening the cross-selling approach to the whole distribution network, which includes:

- for individuals and professional customers, 610 branches, with Open BNL multi-channel branches (50) serving customers 24/7;
- for Private Banking customers, 27 Private Banking centres located throughout Italy;
- for Corporate clients and entrepreneurs, a diversified organisation:

<sup>1</sup> According to Euromoney 2024 ranking, and the Assets under management criterion.

<sup>2</sup> WAI: We Are Innovation.

<sup>3</sup> Source: WAI, December 2023.

<sup>4</sup> 2023 studies carried out by the consulting firms Adverts, Sia Partners and Deloitte, which compare the applications of retail banks, online banks and fintechs on the French market.

<sup>5</sup> Source: annual and periodic reports of BNL and its competitors.

<sup>6</sup> Source: internal customer data.

- 39 corporate and small-medium enterprises centres,
- 8 centres for local authorities and public sector organisations,
- 1 trade centre for clients' cross-border activities,
- 2 Italian desks to assist Italian companies abroad and multinational companies with direct investments in Italy.

The distribution network is completed by:

- 2 specialised networks: Large Corporate network with 7 centres and Wealth Management network with 2 hubs;
- a sizeable number of ATMs (1,400) as well as by a growing range of cutting-edge digital, on-line and mobile banking solutions.

As a result of this set-up, BNL bc has a significant position in lending to households, especially residential mortgages (market share of 6.5%<sup>1</sup>) and has a deposit base (3.6%<sup>(1)</sup> of household current accounts) above the market penetration rate (3.1%<sup>2</sup> in terms of number of branches).

BNL bc is also well established in the corporate markets (4.4%<sup>(1)</sup> of loans market share) and local authority, with a recognised expertise in cash management, cross-border payments, project finance, structured finance and factoring, *via* its subsidiary Ifitalia (ranked 3<sup>rd</sup> in Italy<sup>3</sup>).

## COMMERCIAL & PERSONAL BANKING IN BELGIUM (CPBB)

BNP Paribas Fortis is the No. 1 bank for retail customers in terms of market share<sup>4</sup> and has strong positions in the corporate and small business sector in Belgium. BNP Paribas Fortis is also the leading Private Bank in Belgium. BNP Paribas Fortis is also No. 1 in Belgium for Corporate Banking<sup>5</sup> and offers a full range of financial services to corporate clients, public sector entities and local authorities. On the strength of its teams' commitment, the bank aims to finance the specific needs of its customers, actively contribute to the development of the Belgian economy, and support the sustainable and energy transition, while affirming a deep commitment to society.

Since 1 January 2023, BNP Paribas Fortis has a new commercial organisation revised to better meet customer expectations:

- Retail Banking, with 2.9 million active customers<sup>6</sup>, serves individual, independent and small business customers through a multidisciplinary team;
- Affluent & Private Banking with 0.37 million active customers, serves individual customers with assets of more than EUR 85,000 and independent customers and companies active in the liberal professions through a dedicated relationship manager. Private Banking services are aimed at individual customers with invested assets of more than EUR 250,000. The Wealth Management Department within Private Banking caters to customers with invested assets of more than EUR 5 million;
- Corporate Banking, with 87,000 active customers, serves corporate clients with more complex needs through a dedicated relationship manager (Enterprises for small and medium-sized enterprises, and Corporate Coverage for large companies and public and institutional clients).

BNP Paribas Fortis serves customers through its various integrated networks, as part of a hybrid banking strategy combining physical networks and digital channels:

- 308 branches (including 132 independent branches) organised into four regions to serve individual, self-employed and small business customers. This set-up is supplemented by 193 franchises under the Fintro<sup>7</sup> brand and 656 points of sale of bpost bank (wholly owned) in partnership with bpost;
- 31 dedicated Private Banking centres, including one remote centre and two Wealth Management centres;
- teams dedicated to large companies and public companies and institutional clients centralised in Brussels supplemented by a network of 14 Business Centres across Belgium for medium-sized companies and dedicated relationship managers present in the branch network for small companies within Corporate Banking;
- a digital platform completes the system with Banking services *via* the internet (*Easy Banking Web*) and the *Easy Banking App* application (2.75 million cumulative active users, including Fintro). *Easy Banking Business* is the online banking platform for companies and the self-employed. PaxFamilia, a secure platform with tools to support the management, monitoring and transmission of assets, has 29,700 contracts. The digital offer is supplemented by the Hello bank! digital bank which has more than 537,000 customers<sup>8</sup>. These digital platforms are enriched by active collaboration with fintechs such as TINK for the development of an effective budget management tool;
- a network of 608 ATMs (including Fintro) supplemented by 973 ATMs of Batopin, a joint venture of BNP Paribas Fortis, KBC, ING and Belfius, each holding a 25% stake. Batopin is installing neutral CASH points throughout Belgium in places with high customer flows;

<sup>3</sup> Source: Assifact, ranking by turnover.

<sup>4</sup> Source: Financial Market Data Monitor 2023 (Market survey on a representative sample of 2,000 households in December 2023).

<sup>5</sup> Source: Greenwich 2022, in terms of market penetration of strategic companies (medium and large).

<sup>6</sup> Excluding the 600,000 active customers of bpost bank and Fintro customers.

<sup>7</sup> In December 2023, Fintro, active in the bancassurance business, had 193 branches, 909 employees and EUR 14.57 billion in assets under management (excluding insurance business) for 361,874 active clients.

<sup>8</sup> Including 5,483 Hello Pro customers.

- the bank is also available for customers thanks to the *Easy Banking Centre* which handles up to 60,000 calls per week.

BNP Paribas Fortis continued its digital development and customer experience improvement, in particular with the development of remote Easy Banking services with new features and improved performance. The customer service centre building on robotics and artificial intelligence is fully deployed, allowing optimised processing of an increasing number of questions from customers and employees.

BNP Paribas Fortis received several awards for its quality of service to its customers in 2023. The bank was voted “Best bank for digital solutions in Belgium” and “Best investment bank in Belgium” by Euromoney, “Bank of the year in Belgium” by The Banker, “Best private bank in Belgium” by PWM-The Banker and “Best bank in Belgium” by Global Finance.

In 2022, BNP Paribas Fortis became a 100% shareholder of bpost bank after the acquisition of the 50% stake held by bpost. An exclusive seven-year commercial agreement was also signed between bpost and BNP Paribas Fortis. As part of this agreement, bpost offers BNP Paribas Fortis services and products in its network of post offices. From 22 January 2024, bpost bank will be integrated into BNP Paribas Fortis and bpost bank customers will join BNP Paribas Fortis. The bpost bank brand will disappear from post offices and will be replaced by the BNP Paribas Fortis brand and logo.

## COMMERCIAL & PERSONAL BANKING IN LUXEMBOURG (CPBL)

With a 16.5%<sup>1</sup> market share of the Retail Banking market and 22%<sup>2</sup> of the SME market, BGL BNP Paribas is the No.2 commercial & personal bank in Luxembourg.

The three business lines, Luxembourg Retail Banking (LRB), Banque des Entreprises in Luxembourg (BEL) and Private Banking in Luxembourg (PBL), actively support the financing of the economy and adapt their strategy and network to changes in customer behaviour and new consumption patterns with a focus on digitisation.

With the expertise of their employees, they support their customers to bring their plan to fruition, with:

- a Retail Banking network supporting more than 180,000 customers on a daily basis, based on:
  - 28 branches throughout the country and 77 ATMs for individual and corporate customers,
  - a comprehensive and diverse range of products and services offered through an innovative multi-channel presence, encompassing a branch network as well as online, phone and mobile banking,
  - teams of savings and investment specialists assisting customers in the management of their portfolios, teams of mortgage specialists advising customers on loans for their acquisition and construction projects, as well as specialists for professionals and liberal professions;
- a corporate bank dedicated to a broad and diversified corporate client base:
  - its system of 140 employees supports large companies and SMEs, the public sector and institutional investors, real estate professionals, social organisations and start-ups,
  - each customer segment benefits from tailor-made support, with specialised asset managers for each segment and a range of adapted solutions, including financing, trade, cash management, interest rate or foreign exchange risk hedging, and the escrow account, *etc.*,
  - support for corporate clients includes access to the BNP Paribas Group’s specialised business lines as well as privileged access to the BNP Paribas’ One Bank for Corporates international network;
- a private bank organised around 5 centres serving nearly 3,900 customers and offering tailored financial and wealth management solutions.

## EUROPE-MEDITERRANEAN

Within the CPBS division, Europe-Mediterranean (EM) brings together BNP Paribas’ commercial banking activities for individuals, professionals and companies outside the Eurozone. EM offers a full range of financial and extra-financial services, leveraging inter-business cooperation and the Group’s approach to risk diversification.

Since 29 April 2023, EM is present in six countries: Poland (BNP Paribas Bank Polska), Ukraine (UKRSIBBANK), Türkiye (TEB A.S.), Kosovo (TEB Sh.A), Morocco (BMCI) and Algeria (BNP Paribas El Djazaïr) with a minority stake in China (Bank of Nanjing).

With around 23,000 employees, EM supports its customers through three main business lines:

- Commercial & Personal Banking, whose multi-channel and local network serves more than 15 million customers through a network of over 1,400 branches;
- Private Banking, which builds on the deployment of global Wealth Management activities in conjunction with the Group’s IPS division;
- Corporate Banking, with a network of 42 business centres, 11 Trade Centres and 5 desks covering Multinationals.

In 2023, EM showed solidarity with Türkiye and Morocco after the earthquakes in these countries, in particular with the Rescue & Recover Fund mobilised by the Group<sup>1</sup>. In the context of the invasion<sup>2</sup>, EM continued to provide its support to Ukraine.

<sup>1</sup> Source: TNS ILRES – Bank Survey December 2022.

<sup>2</sup> Source: TNS ILRES – SME Bank Survey 2022.

EM banks continued to implement the Group's strategy in 2023. In terms of ESG, BNP Paribas Bank Polska, for example, launched its carbon footprint calculator via the Agronomist.pl platform<sup>3</sup> and BNP Paribas El Djazaïr, its "Circular Economy" community<sup>4</sup> co-built with strategic customers. UKRSIBBANK and TEB A.S. continued to support women entrepreneurs with the Smart Lady offer<sup>5</sup> and the first female variable fund in Türkiye with TEB Portfolio Women First Variable Fund<sup>6</sup>. In addition, BMCI launched the BMCI Connect Enterprises by Centric solution<sup>7</sup> to facilitate cash management for companies and BNP Paribas Bank Polska launched the mamGo platform<sup>8</sup> by offering a customer journey to identify, locate and finance a car. In 2023, TEB A.S., BNP Paribas Bank Polska and for the first time, BNP Paribas Djazaïr, were certified Top Employers<sup>9</sup>. BNP Paribas Bank Polska was also selected as the best bank for Corporate and ESG customers in Poland by Euromoney magazine.

## BNP PARIBAS PERSONAL FINANCE

BNP Paribas Personal Finance is a major player in the financing of individuals in Europe, operating in around twenty countries, under several trademarks such as Cetelem, Findomestic, AlphaCredit, Cpay with almost 17,000 employees for over 23 million customers.

In 2023, BNP Paribas Personal Finance built a strategic transformation project to drive growth and profitability, which includes a reorganisation of its operating model as well as a refocusing of its activities in Europe and the United Kingdom.

BNP Paribas Personal Finance is the daily financial partner for its customers, giving them the means to carry out their home and personal equipment, home renovation and mobility projects and supporting their budget management needs. BNP Paribas Personal Finance also offers its wholesale, retail and mobility partners, looking for a financial partner, a wide range of services to ensure the promotion, sale and management of financing solutions.

BNP Paribas Personal Finance strengthened its ambition in the mobility business and continued to structure partnerships with major manufacturers such as Stellantis and Jaguar Land Rover. At 31 December 2023, the weight of automotive outstandings represents 41%, with the objective of reaching 50% by 2025.

Since 2020, BNP Paribas Personal Finance's purpose is to: "Promote access to more responsible and sustainable consumption to support our customers and our partners", demonstrating the willingness for the long-term transformation of the Company and its activities, and supporting the BNP Paribas Group's ambition to become the leader in sustainable finance.

By positioning this purpose as the reference framework for its 2025 strategic plan, BNP Paribas Personal Finance expresses its ambition to integrate sustainable development as a key element of its performance in a sector particularly impacted by the transformation of lifestyles and consumption. BNP Paribas Personal Finance has set an ambition in sustainable finance, with sustained efforts in four areas: financial inclusion, the energy transition of housing, sustainable mobility and the circular economy.

At the end of 2023, sustainable finance outstandings reached EUR 8.9 billion, i.e. 8% of total outstandings. This includes the financing of the energy transition of housing for EUR 4 billion.

In France, the Cetelem Foundation for Inclusion through Digital Sharing has set itself the goal of helping French people in situations of economic precariousness appropriate online consumption.

BNP Paribas Personal Finance supports households while promoting the development of controlled consumption with systems to detect and support customers in vulnerable situations in all its regions. BNP Paribas Personal Finance is developing a smooth, instant and secure customer experience and inclusive financing products, along with payment methods adapted to the consumer expectations and new needs.

To meet all of these challenges, BNP Paribas Personal Finance is pursuing a collaborative and structured innovation approach, responding to new consumer requirements by inventing value-added solutions for its customers and partners.

## ARVAL

Arval is a major player in long-term vehicle leasing and a specialist in mobility solutions. As a specialised business line belonging to the Commercial, Personal Banking & Services division of BNP Paribas, Arval is positioned at the heart of the Group's integrated model. Arval offers corporate clients (from large multinationals to small and medium enterprises), its partners, their employees and also individuals, customised solutions to optimise their mobility.

At the end of 2023, Arval had 8,400 employees in the 29 countries where the Company operates, leased over 1.7 million vehicles to its over 300,000 customers, and had nearly 20,000 users of solutions for alternative mobility to private cars such as car-sharing, mobility cards and bicycle rentals worldwide. Arval is No. 2 in the full-service multi-brand vehicle leasing sector in

<sup>9</sup> <https://www.bnpparibas.dz/top-employe>.

Europe, ranking No. 1 in Poland, No. 2 in France, Spain, Italy and Belgium and No. 3 in the Netherlands<sup>1</sup>. Arval relies, in addition, on strategic partnerships, thanks to the Element-Arval Global Alliance, the world leader in the sector, with a total of more than 4.4 million vehicles in 56 countries.

Arval aims to have 350,000 fully electric vehicles leased by 2025, to reduce the accident rate of its leased fleet, and to accelerate more generally virtuous behaviour and the energy transition in the markets in which it operates.

## BNP PARIBAS LEASING SOLUTIONS

BNP Paribas Leasing Solutions supports the development of its customers and industrial partners by offering them leasing and financing solutions with services to preserve their working capital.

At the heart of financing the real economy, BNP Paribas Leasing Solutions provides corporate clients with the flexibility they need to remain competitive and develop in a responsible and sustainable manner in their markets (agriculture, construction, IT, telecommunications, transportation, medical, real estate, food, materials handling, mobility infrastructure, etc.).

BNP Paribas Leasing Solutions supports its partners (manufacturers, distributors or resellers) in developing profitable business models based on the concept of use or “as a service”.

With 3,700 employees, the company operates in 20 countries in Europe, China, the United States and Canada.

BNP Paribas Leasing Solutions’ team of experts support:

- equipment manufacturers and professional software publishers with comprehensive retail financing solutions aimed at stimulating and supporting the sales of their distribution networks and resellers;
- distributors, dealers, resellers and integrators of professional equipment with a wide range of leasing products and services to meet the needs of their customers;
- corporate clients, local authorities and professionals with solutions to finance their investments.

In 2023, BNP Paribas Leasing Solutions financed more than 330,000 projects for a total volume of EUR 15.5 billion. The total amount of assets under management at the end of December 2023 was EUR 39.6 billion.

In 2023, BNP Paribas Leasing Solutions was recognised as “Vendor Finance Provider of the Year” and awarded “Best Energy Transition Financing Program” by *Leasing Life*, a magazine dedicated to leasing in Europe. (Source: 21<sup>st</sup> Annual Leasing Life Conference & Awards 2024 – Arena International ([arena-international.com](https://arena-international.com))).

In a world undergoing climate and environmental change, BNP Paribas Leasing Solutions supports the environmental transition of its partners and clients by financing low-carbon equipment (for example EV chargers, industrial electric vehicles, etc.) and remains committed to further developing its diversity, equality and inclusion roadmap.

## BNP PARIBAS PERSONAL INVESTORS

BNP Paribas Personal Investors is a digital banking and investment services specialist. It offers a broad range of banking, credit, savings and short- to long-term investment services to 5.3 million customers (out of which 2.0 million customers in Germany at December 2023), on mobile applications, online, by phone or face-to-face. It provides decision-making tools, advice and analyses.

BNP Paribas Personal Investors also provides services and its IT platform to independent financial advisors, asset managers and fintechs. Services include market access, transactions, account management and custody services.

Covering Germany and India<sup>2</sup>, BNP Paribas Personal Investors today has ~3,700 employees (out of which ~1,100 employees in Germany at December 2023<sup>3</sup>):

- in Germany, BNP Paribas Personal Investors operates under three brand names: Consorsbank for individual customers, DAB BNP Paribas for B2B partners and BNP Paribas Wealth Management Private Banking for wealthy individual customers. Consorsbank is a full-service direct bank and one of the pioneers in digital banking in Germany celebrating its 30<sup>th</sup> birthday in 2024. It was awarded best online broker by finance magazine Focus-Money in 2023<sup>4</sup>. DAB BNP Paribas is a platform for financial portfolio managers and service provider for fintechs. BNP Paribas Wealth Management Private Banking offers banking services for customers with investable assets above EUR 250,000;
- in India, Sharekhan is one of the largest online broker<sup>5</sup>. Its footprint extends to 541 across 28 states through a network of 130 branches and over 4,000 business partners, serving almost 3.2 million customers.

## NICKEL

With the acquisition of Nickel in 2017, BNP Paribas responded to customers’ need to pay, and be paid, via a simple and handy service. With over 10,000 tobacconists and Nickel Points in Europe, Nickel has a strong position in its market as notably the

<sup>1</sup> Source Frost & Sullivan at the end of December 2022, taking into account the merger of ALD and LeasePlan which was finalised in 2023.

<sup>2</sup> FTE excluding Integrated functions employees.

<sup>3</sup> Since 13 December 2023, the Group has signed with the Mirae Group the sale of 100% of its Indian activity. The final closing is subject to obtaining all the necessary regulatory approvals.

<sup>4</sup> BÖRSENHANDEL: Guter Deal – FOCUS online.

<sup>5</sup> Ranking based on data communicated by the National Stock Exchange in India.

leading distributor of current accounts in France. Thanks to its digital model and a distribution method that is present throughout the country, Nickel maintained a sustained rate of customer acquisition throughout the year and even reached a record number of new accounts opening in France in September 2023 with more than 57,500 openings during the month. Nickel had nearly 3.7 million accounts opened at 31 December 2023 in Europe. In Europe, Nickel is growing rapidly in Spain, Belgium and Portugal and launched its activity in Germany in September 2023, always with the same model combining digital with physical point of sale networks.

## FLOA

A pioneer in payment facilities, Floa offers split payment solutions, loans and bank cards. Floa is a partner of major e-retailers, key travel players and fintechs for which it develops adapted services. Floa's products and services stand out for their ease of use for customers and their speed of integration for partners. Floa has more than 4 million customers and finances more than EUR 2.5 billion in goods and services each year. Floa employs nearly 500 people based in France and Europe who work daily to offer innovative financial services with a successful cross-channel user experience, capitalising on new digital technologies and data. Floa places the customer experience at the heart of its strategy and has been rewarded with numerous awards in the field of user experience and customer relations (CX Award by Contentsquare, Cas d'Or du Digital).

Floa was also voted Customer Service of the Year for 2024, for the fourth consecutive year in the credit institution category and for the second year in the payment solution category. Leader in France, and present in Spain, Belgium, Italy and Portugal, Floa joined the BNP Paribas Group in February 2022.

## INVESTMENT AND PROTECTION SERVICES

---

The Investment and Protection Services (IPS) division brings together the Group's activities dedicated to protection, savings, investment and real estate services. It strives to design innovative and sustainable products to support individuals, professionals, corporate clients and institutions in their projects and in their desire to have a positive impact:

- BNP Paribas Cardif (over 8,000 employees, present in over 30 countries, EUR 255 billion in assets under management) designs, develops and markets savings and protection offers with over 500 distributor partners to insure people, their projects and their property;
- BNP Paribas Wealth Management (more than 7,000 employees (including commercial banks), 19 countries, EUR 415 billion in assets under management) meets the wealth and financial needs of wealthy individual customers, family offices and entrepreneurs. BNP Paribas Wealth Management is the leading private bank in the Eurozone<sup>1</sup>;
- BNP Paribas Asset Management (nearly 2,100 employees, 34 countries, EUR 540 billion in assets under management) offers investment solutions to individual savers, corporate clients and institutional investors, with specific expertise: active conviction-based strategies, liquidity solutions, emerging markets, multi-asset investments, systematic investments, quantitative & index-based and private assets; In January 2023, the private asset management activities of the IPS division were grouped into a dedicated business unit, "Private Assets", integrated into BNP Paribas Asset Management;
- BNP Paribas Principal Investments is responsible for managing BNP Paribas' portfolio of unlisted and listed industrial and commercial investments.
- BNP Paribas Real Estate (nearly 4,400 employees, 14 countries (24 with its Alliances), EUR 26.1 billion in assets under management) supports its clients – institutional investors, owners, corporate clients, local authorities, individuals, etc. – during all stages of the property life cycle: Development, Transaction, Consulting, Valuation, Investment Management and Property Management;

IPS employs nearly 19,000 people in 48 countries and holds strong positions in the Group's key growth regions, Asia-Pacific and Latin America. The division works closely with CPBS to anticipate clients' savings and investment needs (offers, technologies, quality of the client experience, quality of advice) and with CIB to co-construct the best investment solutions for institutional clients and large companies.

By integrating environmental, social and governance criteria into all its operational processes, the IPS division aims to contribute to positioning BNP Paribas as one of the world leaders in sustainable finance.

## BNP PARIBAS CARDIF

Operating in over 30 countries, BNP Paribas Cardif designs, develops and markets savings and protection offers to insure people and their assets throughout their lives. A world leader in bancassurance partnerships, BNP Paribas Cardif is a major player in the financing of the economy and the world leader in creditor protection insurance (CPI)<sup>2</sup>.

BNP Paribas Cardif provides its more than 80 million insured customers with savings solutions to build and grow capital and prepare for the future, thanks to products adapted to individual customers' needs and projects. It also offers products in non-life insurance, health insurance, budget insurance, revenue and means of payment insurance, unexpected event protection

<sup>1</sup> Source: Assets under management as published by the main banks in the Eurozone at 30/09/2023.

<sup>2</sup> Finaccord 2023.

(unemployment, accident, death) or the protection of private digital data to meet the evolution of customers' needs. Over 8,000 employees worldwide contributed to generating gross written premiums of EUR 30.3 billion in 2023.

BNP Paribas Cardif builds notably on a unique partnership approach, which relies on more than 500 partners. This network of diversified distributors comprises financial institutions, credit organisations, automotive sector companies, retailers, telecommunications companies, as well as financial advisors and brokers. The insurer supports its partners by developing with them the insurance solutions best suited to their needs and those of their customers: products that are increasingly easy to understand, accessible and inclusive thanks to digital and multi-channel customer journeys, as well as integrated service ecosystems articulated around various themes: retirement, employability, housing, well-being, old age or automotive services (warranties and car maintenance contracts).

Resolutely focused on the future, BNP Paribas Cardif continued its transformation in 2023, intensifying its partnerships with digital distribution platforms and digital players. Committed toward its employees, its partners and their customers, BNP Paribas Cardif wishes to have a positive impact on society, notably through its core mission of making insurance more accessible. Concerned about its environmental impact, BNP Paribas Cardif has strengthened its commitments for the climate. As an investor, it contributes to give meaning to its policyholders' investments and has set itself the target of investing EUR 1 billion per year on average by 2025 to positive impact investments. BNP Paribas Cardif has also committed to aligning its portfolios with a carbon neutrality trajectory by 2050, to reducing the carbon intensity of its investment portfolios related to electricity producers and has joined the Net-Zero Asset Owner Alliance.

## BNP PARIBAS WEALTH MANAGEMENT

BNP Paribas Wealth Management develops its Private Banking model across 17 countries around the world, serving a client base of small businesses, family offices and high-net-worth individuals.

With EUR 415 billion in assets under management in 2023, over 7,000 employees (including commercial banks) and offices in Europe, Asia and the Middle East, BNP Paribas Wealth Management is a major global Private Bank and the leading Private Bank in the Eurozone<sup>1</sup>.

Building on BNP Paribas' integrated model, BNP Paribas Wealth Management offers its clients a network of private bankers and dedicated experts. In Europe, the Private Banking business is promoted by the commercial networks of BNP Paribas. In Asia, the Private Bank benefits from the Group's established presence in the markets and Corporate and Institutional Banking's expertise to cater to the most sophisticated needs of its clients.

A global benchmark in its industry through its experience, reputation and know-how, BNP Paribas Wealth Management offers its clients a wide range of products and services by mobilising its large network of experts: financial experts, wealth management engineers, discretionary managers, financial analysts, private bankers specialising in family ownership, experts in credit structuring, real estate specialists, advice on rural land, art, philanthropy, etc. as well as privileged access to all of the BNP Paribas Group's expertise.

BNP Paribas Wealth Management stands out for its proximity to "Entrepreneur and Family" customers, able to meet all their needs in order to support them in the construction, development and preservation of their business and personal assets, by leveraging all of the Group's capabilities.

For many years, sustainable investment and responsible innovation have been at the heart of BNP Paribas Wealth Management's business culture. The Responsible Investment offering was launched in 2006 to respond to the emerging desire of investors to combine financial performance with a social and environmental dimension, and it is based on in-depth expertise and clients' personal convictions. BNP Paribas Wealth Management gradually continued its roll-out, notably by extending its range of sustainable products and services.

Lastly, with a constant focus on innovation, BNP Paribas Wealth Management's range of digital solutions continues to expand in order to offer a unique client journeys. In 2023, BNP Paribas Wealth Management continued to enrich its customer experience. For example, the Private Assets Investor Portal enables clients to monitor their investments in private investment funds. Use cases based on artificial intelligence were also launched at the various sites to improve the customer experience, operational efficiency and risk management.

BNP Paribas Wealth Management won over 70 awards in 2023 including:

- Best private bank in Europe, best digital private bank in Europe, best DPM offer in Europe: Euromoney Global Private Banking Awards 2023 (wealthmanagement.bnpparibas) – a total of 16 prestigious prizes awarded by Euromoney;
- Best private bank in France, best private bank in the Middle East, best innovative private bank at the GLOBAL Private Banking INNOVATION AWARDS: Global Private Banking Innovation Awards – The Digital Banker;
- Best private bank for entrepreneurs, best private bank in Belgium and best private bank in Hong Kong by PWM – THE BANKER: PWM / The Banker Private Banking Awards 2023 – The Banker;
- Best SRI and impact offering by WEALTHBRIEFING at the "WEALTH FOR GOOD AWARDS 2023";
- Best private bank for its digital services and customer paths by Wealthbriefing at the European Awards.

## BNP PARIBAS ASSET MANAGEMENT

BNP Paribas Asset Management (BNPP AM) is the BNP Paribas Group's dedicated asset management business, employing almost 2,100 people in 34 countries<sup>1</sup> with a significant commercial presence in Europe and the Asia-Pacific region. Through the BNP Paribas integrated model, BNPP AM serves a large international client base and has close relationships with the distribution networks within BNP Paribas' commercial banks. Ranked the 10<sup>th</sup> largest asset manager in Europe<sup>2</sup>, BNPP AM manages assets totalling EUR 540 billion<sup>(2)</sup> and employs 525 investment professionals<sup>(2)</sup>.

BNPP AM offers investment solutions for individual investors (through internal distributors – private banks and Commercial & Personal Banking within BNP Paribas – and external distributors), corporates and institutional investors (insurance companies, pension funds, official institutions). BNPP AM develops specific expertise: active, conviction-based strategies, liquidity solutions, emerging markets, multi-assets, systematic, quantitative & index and private assets.

BNPP AM's priority is to achieve long-term sustainable returns for its clients by placing sustainability at the heart of its investment strategy and philosophy. In this sense, in 2023, BNPP AM completed the acquisition of a majority stake in leading Danish natural resources specialist International Woodland Company. This acquisition demonstrates its forward-looking approach to sustainability-related investment strategies, particularly in private markets. It also contributes to BNPP AM's commitments within the framework of its Net Zero and Biodiversity roadmaps.

<sup>2</sup> Source: IPE Top 500 Asset Managers 2023.

BNPP AM is an important sustainability<sup>1</sup> player. 90%<sup>2</sup> of assets under management of its European-based open-ended funds, representing EUR 254.2 billion<sup>(2)</sup>, are classified Article 8 (promoting environmental and/or social characteristics) or Article 9 (having a sustainable investment objective) of the European SFDR regulation<sup>3</sup> – which identifies funds according to their sustainability potential. This positioning is supported by its 171<sup>(2)</sup> labelled funds<sup>4</sup> in France and Belgium, representing EUR 139.5 billion in assets<sup>(2)</sup>. BNPP AM has the largest labelled ETF & Index funds range<sup>5</sup> in Europe<sup>6</sup>.

BNPP AM also uses its ability to engage with companies and public authorities to promote a business model that incorporates a successful energy transition, healthy ecosystems and greater equality in our societies. Its best responsible investment practices were recognised by ShareAction, with BNPP AM retaining the second place for the second time in a row in its Point of No Returns 2023: Part I – Ranking and General Findings<sup>7</sup> report.

For the fourth successive year, BNPP AM also won the Best ESG<sup>8</sup> Manager award in Asia during the Best of the Best Awards 2023 and the global ESG Services prize during the Central banking Awards 2023<sup>9</sup>.

## BNP PARIBAS REAL ESTATE

With its extensive range of services, and its nearly 4,400 employees, BNP Paribas Real Estate supports its clients across all stages of the property life cycle, from building design to everyday management, through its business lines: Property Development, Transaction, Consulting, Valuation, Investment Management and Property Management.

This multi-sector offering covers all asset classes: offices, homes, warehouses, logistics platforms, retail, hotels, serviced residences, land, etc.

It is proposed based on the needs of clients, whether they are institutional investors, owners, corporate clients (SMEs, large corporate groups), public entities, local authorities or individuals.

In commercial real estate, BNP Paribas Real Estate is present in 24 countries, with:

- **its direct offices in eleven European countries**, a continent where the Company is one of the leaders and where its main markets are France, Germany and the United Kingdom. It is also present in Belgium, Spain, Ireland, Italy, Luxembourg, the Netherlands, Poland and Portugal;
- **its platforms** in Hong Kong (SAR China), Dubai and Singapore to support local investors in their real estate strategies in Europe;
- **its network of commercial Alliances** with local partners in the following countries (Austria, Greece, Hungary, Jersey, Northern Ireland, Portugal, Czech Republic, Romania, Slovakia, Switzerland and the United States).

In residential and office property development, BNP Paribas Real Estate mainly operates in the Paris region and in several major regional cities such as Bordeaux, Lyon, Marseille and Nice. Internationally, the Company is present in property development, in Germany, the UK and the Iberian Peninsula.

In order to constantly improve its services, in 2023, BNP Paribas Real Estate launched a data visualisation solution – an online platform that allows customers to explore a 3D map of Europe, using Google's Photorealistic 3D Tiles technology, enriched with their own real estate and public data. The power of the solution lies in the cross-referencing of data which makes it possible to review past changes in cities and anticipate future changes at the level of a neighbourhood, a city or a country.

In 2023, BNP Paribas Real Estate received several awards, including:

- four awards for the METAL 57 office building in Boulogne-Billancourt, notably:
  - the MIPIM Awards category “Best refurbished building” (source: MIPIM), and
  - the “Tertiary renovation” developer ranking award (source: Innovapresse);
- development - 2 silver pyramids for two housing programmes in Lyon (source: Fédération des Promoteurs);
- REIM – Prix Victoires des SCPIs pour Access Valeur Pierre, winner in the Offices category (source: Le Particulier);
- REIM – Access Valeur Pierre SCPI was ranked 3<sup>rd</sup> place on the podium of best SCPI predominantly offices (source: Mieux Vivre Votre Argent);
- HR: Top Employer France 2023 certification (source: Top Employers Institute);
- CSR: Carbon Challenge Trophy (source: CSR News and CSR Challenge Trophies).

## BNP PARIBAS SHAREHOLDING STRUCTURE AT 31 DECEMBER 2023 (IN% OF VOTING RIGHTS)

To the Company's knowledge, there are no shareholders, other than SFPI, Amundi and BlackRock Inc., who held more than 5% of the share capital or voting rights as at 31 December 2023.

The Société Fédérale de Participations et d'Investissement (SFPI) became a shareholder of BNP Paribas on the occasion of the merger with the Fortis group, which took place in 2009; during the same year, it made two declarations of threshold crossing to the Autorité des Marchés Financiers (AMF):

- on 19 May 2009 (AMF Disclosure No. 209C0702), SFPI disclosed that its interest in BNP Paribas' capital and voting rights had risen above the 5% and 10% disclosure thresholds following its transfer of a 74.94% stake in Fortis Bank SA/NV in return for the issue of 121,218,054 BNP Paribas shares, which at the time represented 9.83% of BNP Paribas' share capital and 11.59% of its voting rights. The disclosure stated in particular that neither the Belgian government nor SFPI were considering taking control of BNP Paribas.

At the same time, BNP Paribas notified the AMF (AMF Disclosure No. 209C0724) that an agreement had been reached between the Belgian government, SFPI and Fortis SA/NV (renamed Ageas SA/NV at end-April 2010), giving Fortis SA/NV an option to buy the 121,218,054 BNP Paribas shares issued as consideration for SFPI's transfer of its shares in Fortis Bank, with BNP Paribas having a right of subrogation regarding the shares concerned;

- on 4 December 2009 (AMF Disclosure No. 209C1459), SFPI disclosed that it owned 10.8% of BNP Paribas' share capital and voting rights. This change resulted mainly from:
  - BNP Paribas' capital increase through the issuance of ordinary shares in 2009,
  - the capital decrease by the Bank through the cancellation, on 26 November 2009, of preferred shares issued on 31 March 2009 to Société de Prise de Participation de l'État.

On 27 April 2013, the Belgian government announced the buy-back *via* SFPI of the purchase option that had been granted to Ageas.

On 6 June 2017 (AMF Disclosure No. 217C1156), SFPI disclosed that it owned 7.74% of the share capital and voting rights of BNP Paribas; this drop below the 10% capital and voting rights thresholds resulted from the sale of shares on the market. Since that date, SFPI has disclosed statutory threshold crossings without crossing legal thresholds.

On 9 May 2017 (AMF Disclosure No. 217C0939), BlackRock Inc. disclosed that its interest in BNP Paribas' capital and voting rights had risen, as at 8 May 2017 above the 5% disclosure thresholds. On this date, BlackRock Inc. held 63,223,149 BNP Paribas shares on behalf of its clients and the funds it manages.

On 18 June 2019 (AMF Disclosure No. 219C0988), BlackRock Inc. stated that it held 62,764,366 BNP Paribas shares. Since that date, BlackRock Inc. has disclosed statutory threshold crossings without crossing legal thresholds.

On 6 January 2022 (AMF Disclosure No. 222C0046), Amundi, acting on behalf of the funds it manages, disclosed that its interest in BNP Paribas' capital and voting rights had risen above the 5% legal thresholds on 31 December 2021 and that it held

74,482,498 BNP Paribas shares. Since that date, Amundi has disclosed statutory threshold crossings without crossing legal thresholds.

## LISTING INFORMATION

When the shareholders of BNP and Paribas approved the merger between the two banks at the Shareholders' Combined General Meeting of 23 May 2000, BNP shares became BNP Paribas shares. The Euroclear-France code for BNP Paribas is the same as the previous BNP code (13110). Since 30 June 2003, BNP Paribas shares have been registered under ISIN code FR0000131104. To help increase the number of shares held by individual shareholders, BNP Paribas carried out a two-for-one share split on 20 February 2002, reducing the par value of the shares to EUR 2.

BNP shares were first listed on the Cash Settlement Market of the Paris Stock Exchange on 18 October 1993, following privatisation, before being transferred to the Monthly Settlement Market on 25 October of that year. When the monthly settlement system was discontinued on 25 September 2000, BNP Paribas shares became eligible for Euronext's Deferred Settlement Service (SRD).

Since privatisation, a Level 1 144A ADR (American Depositary Receipt) programme has been active in the United States, where JP Morgan Chase is the depositary bank (two ADRs correspond to one BNP Paribas share).

The ADRs have been traded on OTCQX International Premier since 14 July 2010 in order to provide better liquidity and visibility to US investors.

BNP Paribas has been part of the CAC 40 index since 17 November 1993 and became part of the EURO STOXX 50 index on 1 November 1999. Since 18 September 2000, it has been part of the STOXX 50 index. BNP Paribas also joined the DJ Banks Titans 30 Index, an index comprising the 30 largest banks worldwide. It is also included in the EURO STOXX Banks and STOXX Banks indices. BNP Paribas shares are also included in the main Sustainable Development benchmarks (see chapter 7), including Vigeo Euronext indices (World 120, Europe 120, Euro 120 and France 20), FTSE4Good Index Series, Dow Jones Sustainability World & Europe Indices and STOXX Global ESG Leaders Index.

All of these elements foster liquidity and share price appreciation, as the BNP Paribas share is necessarily a component of every portfolio and fund that tracks the performance of these indexes.

### BNP PARIBAS SHARE PRICE PERFORMANCE BETWEEN 31 DECEMBER 2020 AND 31 DECEMBER 2023

*Comparison with the EURO STOXX Banks, STOXX Banks and CAC 40 indexes (rebased on share price)*

Source: Bloomberg

In the three-year period from 31 December 2020 to 31 December 2023, BNP Paribas' share price increased by 45.2% from EUR 43.11 to EUR 62.59, outperforming the CAC 40 (+35.9%), but underperforming Eurozone banks (Euro STOXX Banks: +60.4%) and European banks (STOXX Banks: +56.1%).

Over this period, European banking stocks were initially supported by the good performance of banking institutions and the outlook for a post-covid-19 economic recovery. This dynamic was halted from the end of February 2022 by the consequences of the invasion of Ukraine. Eurozone institutions subsequently benefited from the interest rate hike, but the rise in equity prices was contained by central bank actions against inflation and fears of an economic slowdown; the influence of these factors eased at the end of 2023.

## BNP PARIBAS MONTHLY AVERAGES AND HIGH AND LOW MONTHLY CLOSING PRICES SINCE JANUARY 2022

Source: Bloomberg.

- At 31 December 2023, BNP Paribas' market capitalisation was EUR 71.82 billion, ranking the Enterprise 10<sup>th</sup> among CAC 40 stocks; BNP Paribas' free float also put the bank in 9<sup>th</sup> place on the Paris market index and in 14<sup>th</sup> place in the EURO STOXX 50 index.
- Daily trading volume on Euronext Paris averaged 3,257,629 shares in 2023, down 10.6% from the previous year (3,642,664 shares per trading session in 2022). Including the volumes traded on multilateral trading facilities (MTFs), daily trading volume in 2023 averaged 7,562,994 shares, down 5.0% (7,961,426 shares traded daily in 2022).

- (1) Based on the average number of shares outstanding during the year. Calculated in 2023 on the basis of the distributable 2023 earnings and the number of shares outstanding at year-end.
- (2) Before distribution. Revalued net book value based on the number of shares outstanding at year-end 2023, net earnings per share calculated on a number of shares outstanding at year-end.
- (3) Following ECB/2020/19 recommendation of the European Central Bank of 27 March 2020 on dividend distribution policies during the Covid-19 pandemic, the distribution of EUR 3.10 per share initially proposed to the Annual General Meeting of 19 May 2020, was appropriated to "Other reserves".
- (4) EUR 1.11 distributed following the approval of the Shareholders' Combined General Meeting of 18 May 2021, plus EUR 1.55 distributed following the approval of the Ordinary Annual General Meeting of 24 September 2021; taking into account only the distribution of the 2020 dividend.
- (5) Taking into account only the distribution of the 2020 dividend.
- (6) Taking into account only the distribution of the 2021 dividend and not taking into account the EUR 900 million share buyback programme, executed between 1 November 2021 and 6 December 2021.
- (7) Taking into account only the distribution of the 2022 dividend and not taking into account the EUR 962 million share buyback programme in respect of the so-called "ordinary" distribution.
- (8) Subject to approval by the Annual General Meeting of 14 May 2024 and not taking into account the EUR 1.05 billion share buyback programme planned for 2024.
- (9) Cash dividend distribution recommended at the Annual General Meeting expressed as a percentage of distributable net income attributable

to shareholders.  
(10) Recorded intra-day during trading session.

## CREATING VALUE FOR SHAREHOLDERS

### TOTAL SHAREHOLDER RETURN (TSR)

#### Calculation parameters

- Dividends are reinvested in BNP shares then in BNP Paribas shares; 50% tax credit was included until this system was abolished at the beginning of 2005.
- Exercise of preferential subscription rights during the rights issues of March 2006 and October 2009.
- Returns stated are gross, *i.e.* before any tax payments or brokerage fees.

#### Calculation results

The following table indicates, for various periods ending on 31 December 2023, the total return on a BNP share, then on a BNP Paribas share, as well as the effective annual rate of return.

| Holding period                    | Investment date | Share price at the investment date (in euros) | Number of shares at the end of the calculation period | Initial investment multiplied by | Effective annual rate of return |
|-----------------------------------|-----------------|---|---|----------------------------------|---------------------------------|
| Since privatisation of BNP        | 18/10/1993      | 36.59   | 6.8229  | 11.6710                          | 8.47%                           |

## COMMUNICATION WITH SHAREHOLDERS

---

BNP Paribas endeavours to provide all shareholders with clear, consistent, high-quality information at regular intervals, in accordance with best market practice and the recommendations of stock market authorities.

The Investor Relations team informs institutional investors and financial analysts about the Group's strategy, major events concerning the Group's business and the Group's quarterly results.

In 2024, the timetable is as follows<sup>1</sup>:

- 1 February 2024: publication of 2023 full-year results;
- 25 April 2024: publication of the first quarter 2024 results;
- 24 July 2024: publication of the second quarter and first half 2024 results;
- 31 October 2024: publication of the third quarter and the first nine months 2024 results.

Informative briefings are organised several times a year for all market participants, in particular when the annual and half-year results are released, or on specific topics, providing General Management with an opportunity to present the BNP Paribas Group and its strategy. More specifically, an Investor Relations Officer is responsible for liaising with managers of ethical and socially responsible funds.

The Shareholder Relations team provides information and deals with queries from the Bank's 301,200 individual shareholders (internal sources and SRD2 Survey at 31 December 2023). Twice a year, shareholders receive a financial newsletter outlining the Group's main developments, and the minutes of the Annual General Meeting are sent in early July. During the year, shareholders are invited to meetings in various French cities where the Company's achievements and strategy are presented by Executive Management (in 2023, for example, in Bordeaux on 31 May and Marseille on 12 September). Lastly, BNP Paribas representatives were able to interact directly with nearly 400 people during the "*Investir Day*" fair held in Paris on 28 November 2023.

The members of the **Cercle des actionnaires de BNP Paribas** (BNP Paribas Shareholders' Club), set up in 1995, are the 57,700 shareholders holding at least 200 shares. They receive the financial newsletters each half-year and the minutes of the Annual General Meeting. They also receive regular e-mails informing them of new events on the *Cercle des actionnaires* (Shareholders' Club) website ([www.cercle-actionnaires.bnpparibas](http://www.cercle-actionnaires.bnpparibas)), which also features all the available propositions. Each Club member has a personal and secure access to manage his/her registrations and retrieve his/her invitations.

In 2023, the Club offered more than 300 face-to-face events – guided tours, concerts, performing arts shows, film screenings, *etc.* – and videoconferences, podcasts (interviews with historians, speakers, artists, *etc.*). In addition, the site's Magazine pages contain articles related to the programming and **BNP Paribas** Group's commitments.

A **French toll-free phone number** has also been made available, **0800 666 777**; it provides the market price and allows members to leave a voice message for the Club team. Messages can also be sent by email to [cercle.actionnaires@bnpparibas.com](mailto:cercle.actionnaires@bnpparibas.com).

**The BNP Paribas website (<https://invest.bnpparibas/>)**, available in French and English, offers users access to all information on the BNP Paribas Group (including press releases, key figures, coverage of the main events, *etc.*). All documents such as Integrated reports and Reference documents or universal registration documents, can also be viewed and downloaded. The financial calendar gives the dates of important forthcoming events, such as the Annual General Meeting, results announcements and shareholder seminars. The website also features the latest share performance data and comparisons with major indexes, as well as a tool for calculating performance.

Reports and presentations relating to BNP Paribas' business and strategy aimed at all audiences (institutional investors, asset managers and financial analysts) are also available. The **Individual shareholder section** shows information and features specifically designed for retail shareholders, in particular, access to information such as proposed events.

A section dedicated to **Social and Environmental Responsibility** describes the Bank's goals, the policy followed and the main achievements in this area.

In addition, there is a specific section dedicated to the **Annual General Meeting** which includes information regarding attendance at the meeting, ways to vote and practical matters, as well as a presentation of the resolutions and the complete text of all speeches made by corporate officers. Webcasts of the Annual General Meeting can be viewed on the Bank's website.

In response to the expectations of individual shareholders and investors, and to meet strict regulatory transparency and disclosure requirements, BNP Paribas regularly adds sections to its website and improves existing sections with enhanced content and new functions.

---

<sup>1</sup> Subject to change at a later date.

## SHAREHOLDER LIAISON COMMITTEE

---

After its formation in 2000, BNP Paribas decided to create a Shareholder Liaison Committee to help the Group improve communications with its retail shareholders. At the Annual General Meeting that approved the merger between BNP and Paribas, the Chairman of BNP Paribas initiated the process of appointing members to this Committee, which was fully established in late 2000.

Chaired by Jean Lemierre, it includes ten shareholders who are both geographically and socio-professionally representative of the retail shareholder population, along with two employees or former employees. Each member serves a three-year term. When their terms expire, announcements are published in the Group's various financial publications; any shareholder may apply.

At end 2023, the Liaison Committee was composed of:

- Mr Jean Lemierre, Chairman;
- Mr Jean-Louis Busière, residing in the Moselle Department;
- Mr Michel Cassou, residing in the Tarn Department;
- Mr Jean-Marc Cornier, residing in Meudon;
- Mr Patrick Cunin, residing in the Essonne Department;
- Ms Catherine Drolc, residing in Montpellier;
- Ms Anne Doris Dupuy, residing in the Gironde Department;
- Mr Jean-Marie Lapoirie, residing in the Rhône Department;
- Mr Jacques Martin, residing in the Alpes-Maritimes Department;
- Ms Françoise Rey, residing in Paris;
- Mr Jean-Jacques Richard, residing in Toulon;
- Mr Ugo Cuccagna, BNP Paribas employee;
- Ms Christine Valence, BNP Paribas employee.

In accordance with the provisions of the Charter, to which all participants have adhered and which serves as the Internal Rules, the members of the Committee met twice in 2023, on 16 May (after the Annual General Meeting) and 22 September.

The main topics of discussion in 2023 included:

- BNP Paribas' capital structure and changes therein, particularly among "retail shareholders";
- the draft 2022 universal registration document, and specifically, the chapters on Shareholder Relations, Corporate governance and Social and Environmental Responsibility;
- the Integrated Report;
- the quarterly, half-yearly and annual results;
- the initiatives taken in preparation for the Annual General Meeting, including its organisation;
- proposals for resolutions at the AGM;
- the presentation of the economic outlook and environment;
- the geopolitical situation;
- presentation of ALM (Asset & Liability Management) Treasury activities.

## DIVIDEND

---

At the Annual General Meeting of 14 May 2024, the Board of directors will propose a dividend of EUR 4.60 per share (up by 17.9% compared to EUR 3.90 distributed in 2023). The ex-dividend date and the payment of the coupon would then take place on 21 May and 23 May 2024 respectively in the event of a positive vote by the AGM.

The total amount of the proposed cash distribution amounts to EUR 5,278 million, compared to a total of EUR 4,814 million in cash distributed in 2023.

## CHANGE IN DIVIDEND (in euros per share)

(\*) Following the recommendation BCE/2020/19 of the European Central Bank of 27 March 2020 on dividend distribution policies during the Covid-19 pandemic, the amounts corresponding to the dividend distribution initially proposed to the Annual General Meeting of 19 May 2020, of a dividend of EUR 3.10 per share, were allocated to the "Other reserves" item.

(\*\*) Subject to approval at the Annual General Meeting of 14 May 2024.

**Limitation period for dividends:** any dividend unclaimed five years after its due date is forfeited, as provided by law. Dividends for which payment has not been sought are paid to the Public Treasury.

## BNP PARIBAS REGISTERED SHARES

At 31 December 2023, 23,370 shareholders held BNP Paribas registered shares.

### REGISTERED SHARES HELD DIRECTLY WITH BNP PARIBAS

Shareholders who hold registered shares directly with BNP Paribas:

- automatically receive all documents regarding the Bank that are sent to shareholders;
- can call a **French toll-free phone number: 0800 600 700** to place buy and sell orders<sup>(1)</sup> and to obtain any information;
- benefit from preferential brokerage rates;
- have access to "Planetshares" ([planetshares.uptevia.pro.fr](https://planetshares.uptevia.pro.fr)), a fully secure dedicated web server, allowing them to view their BNP Paribas registered share accounts and account movements, as well as place and track orders<sup>1</sup>; this server is also available on tablets and smartphones;
- are automatically invited to Annual General Meetings without the need for an ownership certificate;
- may receive notice of Annual General Meetings online;
- pay no custody fees.

Registered shares held directly with BNP Paribas cannot be registered in a PEA (Share Savings Plan), given the regulations and procedures applicable to this vehicle. Investors whose shares are held in a PEA and who want to hold them in "registered" form can opt to hold them in an administered account (see below).

### REGISTERED SHARES HELD IN AN ADMINISTERED ACCOUNT

BNP Paribas is also extending its administered share account services to institutional shareholders. For institutional shareholders, this type of account combines the main benefits of holding shares in bearer form with those of holding registered shares directly with BNP Paribas:

- shares can be traded at any time, through the shareholder's usual broker;
- the shareholder can have a single share account, combined with a cash account;
- the shareholder is automatically invited to attend and vote at Annual General Meetings, without the invitation being sent through a third party;

<sup>1</sup> Subject to prior signature of a "brokerage services agreement" (free of charge).

- shareholders may receive notice of meetings and vote at Annual General Meetings online.

## SHAREHOLDERS' ANNUAL GENERAL MEETING

The procedures for BNP Paribas' Annual General Meetings are defined in article 18 of the Bank's Articles of association.

The Board of directors calls an Ordinary General Meeting at least once a year to vote on the agenda set by the Board.

The Board may call Extraordinary General Meeting for the purpose of amending the Articles of association, and especially to increase the Bank's share capital. Resolutions are adopted by a two-third majority of shareholders present or represented.

The Shareholders' Combined General Meeting may be called in a single notice of meeting and held on the same date.

The Bank's last Shareholders' Combined General Meeting took place on 16 May 2023 on first notice. The text of the resolutions and the video of the meeting can be viewed on the BNP Paribas website, where the original live webcast was shown. The composition of the quorum and the results of the votes cast on resolutions were posted online the day after the meeting. A specific letter to shareholders included the minutes of this meeting.

The quorum broke down as follows:

### BREAKDOWN OF QUORUM

|   | Number of<br>shareholders | (%)            | Equities             | (%)            |
|---|---------------------------|----------------|----------------------|----------------|
| Present   | 889                       | 4.64%          | 675,675              | 0.08%          |
| Appointment of proxy  | 515                       | 2.69%          | 12,998,276           | 1.46%          |
| Proxy given to Chairman                                     | 7,364                     | 38.40%         | 3,087,645            | 0.35%          |
| Postal votes  | 10,408                    | 54.28%         | 876,106,194          | 98.12%         |
| <b>TOTAL</b>  | <b>19,176</b>             | <b>100.00%</b> | <b>892,867,790</b>   | <b>100.00%</b> |
| <i>of which online</i>                                      | <i>17,349</i>             | <i>90.47%</i>  | <i>741,454,677</i>   | <i>83.04%</i>  |
|   |                           |                |                      | <b>Quorum</b>  |
| <b>Number of ordinary shares (excluding treasury stock)</b> |                           |                | <b>1,218,504,698</b> | <b>73.28%</b>  |

Of the 17,349 shareholders who took part in our last Shareholders' Combined General Meeting online:

- 565 had requested an admission card;
- 6,441 had given the Chairman a proxy;
- 508 had given a proxy to a third party (who legally must also be a shareholder);
- 9,835 had voted by post.

All resolutions proposed to the shareholders were approved.

## SHAREHOLDERS' COMBINED GENERAL MEETING OF 16 MAY 2023

| <b>Twenty-third resolution:</b> powers for formalities   | 99.99%           |

## NOTICES OF MEETING

BNP Paribas will hold its next shareholders' Combined General Meeting on 14 May 2024<sup>1</sup>.

The meeting notices and invitations are available on the [invest.bnpparibas.com](https://invest.bnpparibas.com) website in French and English from the time of their publication in the French Bulletin of Compulsory Legal Announcements (BALO). Staff at all BNP Paribas branches are specifically trained to provide the necessary assistance and carry out the required formalities.

Holders of registered shares are automatically notified, regardless of the number of shares held, with a complete notice of meeting containing in particular the agenda, the draft resolutions and a voting form. A significant and fast-growing proportion (20.4% for the AGM of 16 May 2023, compared to 19.6% for the AGM of 2022) of notices of meeting to registered shareholders were sent *via* the internet after the shareholders concerned had given their prior agreement to this information procedure.

BNP Paribas informs holders of bearer shares *via* the internet regardless of the number of shares held, subject to their custodians being part of the market system known as Votaccess. Shareholders notified of the Annual General Meeting may take part quickly and easily. The Bank also provides custodians with notices of meetings and printed postal voting forms, which can then be sent to those shareholders who request them.

## ATTENDANCE AT MEETINGS

Holders of shares may gain admittance to a General Meeting provided these shares are recorded in their accounts two trading days before the Meeting. Holders of bearer shares must also present an entry card or certificate proving their ownership of the shares.

## VOTING

Using the internet voting platform gives shareholders access to the notice of the Annual General Meeting. They can then either vote or appoint a proxy, or print their admission card if they wish to attend the Annual General Meeting in person.

More than 90% of shareholders who took part in the vote in May 2023 used the platform set up, a proportion that has risen sharply compared to the nearly 85% recorded in 2022.

Shareholders not using the online platform return the printed form enclosed with the notice of meeting to BNP Paribas. Before the Annual General Meeting, this document may be used to:

- request an admission card;
- vote by post;
- give proxy to another individual or legal entity; or
- give proxy to the Chairman of the meeting.

## DISCLOSURE THRESHOLDS

---

In addition to the legal thresholds, and in accordance with article 5 of the Articles of association, any shareholder, whether acting alone or in concert, who owns or may hold directly or indirectly at least 0.5% of the capital or voting rights of BNP Paribas, or any multiple of that percentage up to 5%, is required to notify BNP Paribas by registered letter with return receipt.

Once the 5% threshold is reached, shareholders are required to disclose any increase in their interest representing a multiple of 1% of the share capital or voting rights of BNP Paribas.

The disclosures described in the previous two paragraphs shall also apply when the shareholding falls below the above-mentioned thresholds.

In the case of failure to comply with these disclosure requirements, either legal or statutory, the undisclosed shares will be stripped of voting rights at the request of one or more shareholders who hold a combined interest of at least 2% of the share capital or voting rights of BNP Paribas.";

---

<sup>1</sup> Subject to change at a later date.

- (b) Section 2 entitled "Corporate Governance and Internal Control" on pages 37 to 144 shall be deleted in its entirety and replaced with the following:

# "2 CORPORATE GOVERNANCE AND INTERNAL CONTROL

## 2.1 Report on Corporate governance

This Corporate governance report was prepared by the Board of directors in accordance with the last paragraph of article L.225-37 of the French Commercial Code.

The information contained herein notably takes into account annex 1 of the Commission Delegated Regulation (EU) 2019/980 of 14 March 2019, AMF Recommendation No. 2012-02<sup>1</sup> amended on 28 July 2023, the 2023 AMF<sup>2</sup> report and the November 2023 Annual Report of the High Committee for Corporate governance (*Haut Comité de Gouvernement d'Entreprise* – HCGE).

---

<sup>1</sup> AMF recommendation No. 2012-02 – Corporate governance and executive compensation in companies referring to the Corporate Governance Code of Listed Companies (Afep-MEDEF Code) – Consolidated presentation of the recommendations contained in the Annual Reports of the AMF.

<sup>2</sup> 2023 AMF report on Corporate governance and executive compensation of listed companies (December 2023).

(\*) Listed company.

## 2.1.2 BNP PARIBAS CORPORATE GOVERNANCE

The Corporate Governance Code that BNP Paribas refers to on a voluntary basis in this report is the Corporate Governance Code of Listed Companies, published by the French employers' organisations, *Association Française des Entreprises Privées* (AfeP) and the *Mouvement des Entreprises de France* (MEDEF). BNP Paribas declares that it complies with all of the recommendations of this Code, hereinafter referred to as the Corporate Governance Code or AfeP-MEDEF Code, which can be viewed on the BNP Paribas website (<http://invest.bnpparibas.com/en>), the AfeP website (<http://www.afeP.com/en>) and the MEDEF website (<http://www.MEDEF.com/en>).

The detailed rules on the participation of shareholders at the Shareholders' Annual General Meeting are laid out in article 18, Title V "Shareholders' Meetings", of BNP Paribas' Articles of association published in this amendment to the 2022 Universal Registration Document in the section entitled *Founding documents and Articles of association*. Moreover, a summary of these rules and a report on the organisation and running of the Shareholders' Combined General Meeting of 16 May 2023 are provided in the section entitled *BNP Paribas and its shareholders* of said document.

In addition to the above, BNP Paribas is governed in accordance with French and European banking regulations, and the guidelines issued by the European Banking Authority (EBA) and is subject to permanent supervision of the European Central Bank (ECB) pursuant to the Single Supervisory Mechanism (SSM).

### 1. PRINCIPLES OF GOVERNANCE

The Internal Rules adopted by the Board of directors define the duties of the Board and of its specialised committees. They are updated periodically to comply with current laws, regulations and market guidelines, and to keep pace with best practice in the area of Corporate governance.

The Internal Rules were extensively revised in 2015 to reflect the provisions of Directive 2013/36/EU on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms (hereinafter "CRD 5") then amended on various occasions to take into account changes in regulations. In respect of these changes, two procedures were added to the Internal Rules: a Policy on the suitability of Members of the management body and Key function holders, hereinafter referred to as the "Suitability policy", and the "Implementation procedure for conflicts of interest in respect to loans and other transactions granted to the Members of the management body and their related parties".

The Group Code of conduct, approved by the Board of directors, was introduced in 2016. The latter as well as the *addendum* on anti-corruption were the subject of an update in December 2021, approved by the Board of directors.

#### **Code of conduct (article 1.2 of the Internal Rules)**

The Code of conduct is the result of BNP Paribas' Board of directors and Executive Management's shared conviction that the success of the Bank depends on the behaviour of each employee. The Code of conduct "sets out the rules to uphold our values and perform the Bank's missions. This Code, which shall be integrated by each business line and each employee, governs the actions of each employee, and guides the decisions at every level of the organisation. For this purpose, the Board ensures the Executive Management implements this Code in business lines, countries and regions."

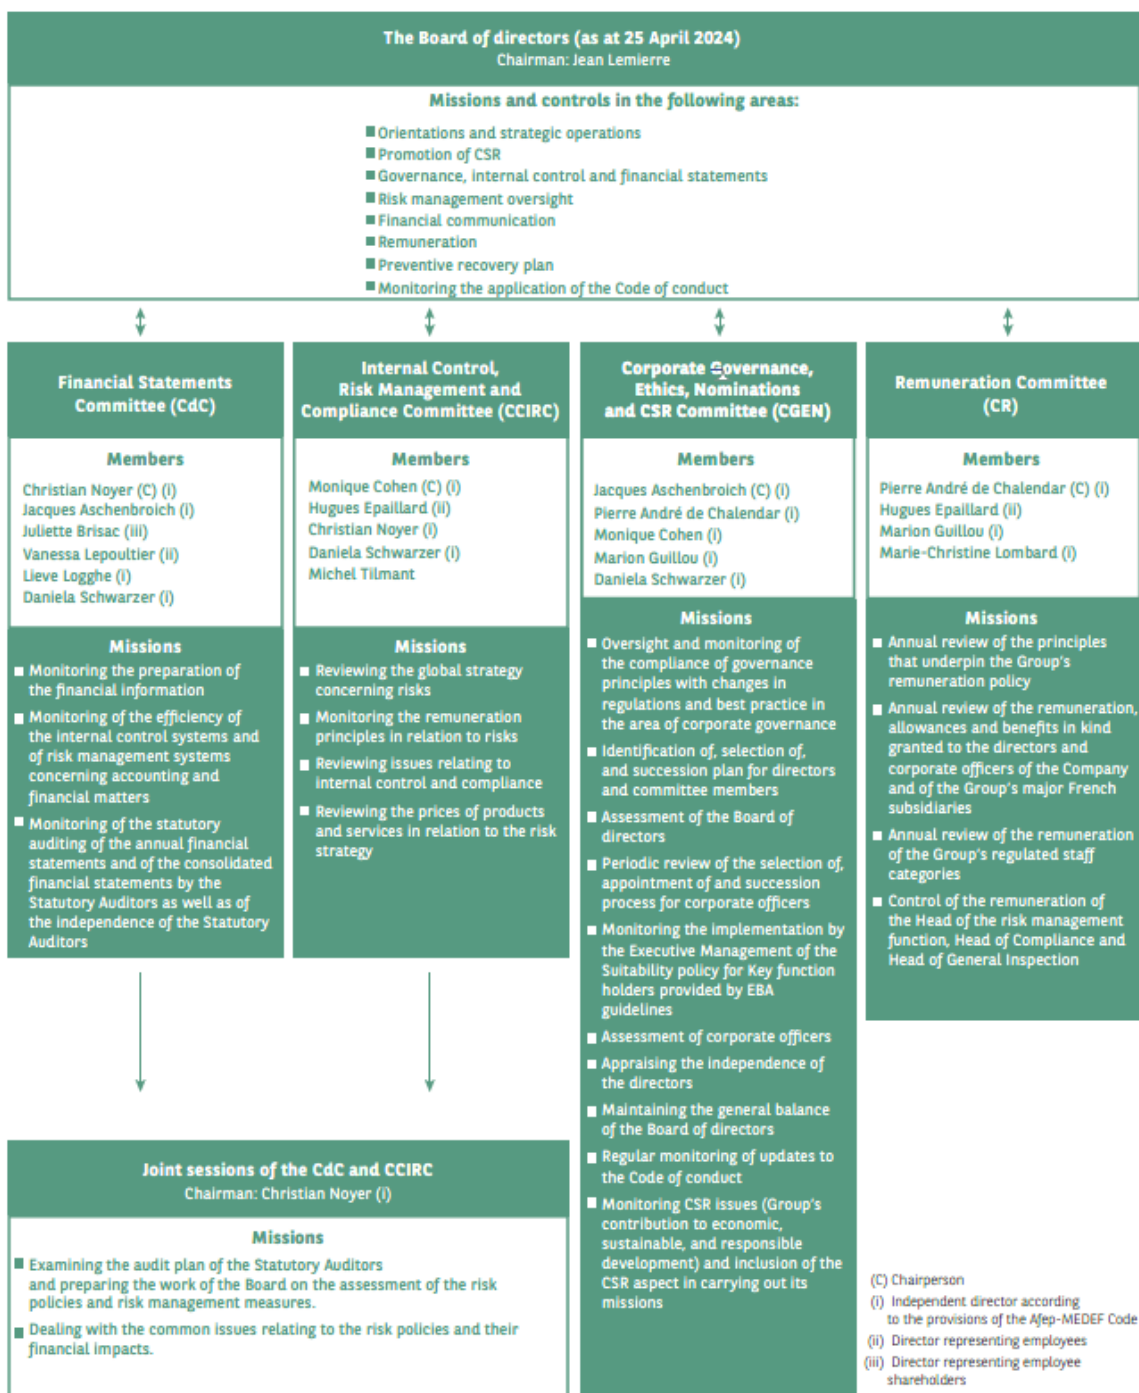

Note that the Internal Rules emphasise the collegial nature of the Board of directors, which jointly represents all shareholders and must act in the Company's best interest at all times. It details the Board responsibilities (article 1).

The Board of directors is backed by four specialised committees (the Financial Statements Committee, the Internal Control, Risk Management and Compliance Committee, the Corporate Governance, Ethics, Nominations and CSR Committee, and the Remuneration Committee) as well as any *ad hoc* committees. The Internal Rules detail each committee's missions, in line with the provisions of the CRD 5 and EBA Guidelines. They provide for joint meetings between the Financial Statements Committee and the Internal Control, Risk and Compliance Committee whenever required.

Neither the members of the Executive Management nor the Chairman of the Board of directors have been members of any committee since 1997.

As far as the Board is aware, no agreement has been entered into, directly, or through an intermediary, between on the one hand, one of BNP Paribas' directors and corporate officers and, on the other, another company in which BNP Paribas owns, directly or indirectly, over half of the share capital (articles L.22-10-10 and L.225-37-4 paragraph two of the French Commercial Code), without prejudice to any agreements relating to current operations concluded under normal conditions.

The Internal Rules and Suitability policy mentioned above have been adopted by the Board of directors and are included in this report.

Each committee is composed of members with expertise in the relevant areas and complies with the provisions of the French Monetary and Financial Code and the recommendations of the Afep-MEDEF Code. Thus,

- the Financial Statements Committee has independent members as well as a director representing employees and a director representing employee shareholders. Most of the members of the Financial Statements Committee have qualifications and experience in corporate financial management, accounting and financial information. Its Chairman brings to the Committee financial skills strengthened by his professional career, in particular as a former Governor of the Banque de France;
- the Internal Control, Risk Management and Compliance Committee has three independent members out of a total of five members. Most of the members of the Internal Control, Risk Management and Compliance Committee have particular expertise in financial matters and in the area of risk through their training or experience. Its Chairwoman brings to the Committee her experience in financial regulation and supervision acquired as a former member of the Board of the French Financial Markets Authority (Autorité des Marchés Financiers - AMF). One of its members has experience in the supervision of banking institutions as former Chairman of the *Autorité de contrôle prudentiel et de résolution* (ACPR) and another has international experience in banking management as well as in terms of financial risks. In addition, two members of the Internal Control, Risk Management and Compliance Committee are also members of the Financial Statements Committee in order to promote the work of the Committees on the appropriateness of the risks and provisions recorded by the Bank;
- the members of the Corporate Governance, Ethics, Nominations and CSR Committee are independent directors who have expertise in Corporate governance and in putting together management teams in international companies and in CSR. It is chaired by the Chairman of the Board of directors of a major telecommunications group that has made social and environmental commitments. One of its members has also been a member of the High Committee for the Climate since its creation in 2018, another is Chairman of an international group involved in energy renovation and yet, another member is a member of the management board of a leading independent foundation that participates in the research and financing of projects, in particular in the fields of education, climate and digital transformation, and themes related to Europe and democracy;
- the Remuneration Committee is made up of independent members who have experience of remuneration systems and market practices in this area and a director elected by employees. A member of the Remuneration Committee is also a member of the Internal Control, Risk Management and Compliance Committee. This composition facilitates the Board of directors' work on the appropriateness of BNP Paribas' remuneration principles with the risk policy.

The Chairman of the Board of directors attends the meetings of the committees but is not a member of any of them and may add any subject he considers relevant to the agenda.

European and French regulations applicable to BNP Paribas require members of the Board of directors and executive corporate officers to demonstrate integrity at all times, and to have the knowledge skills, experience and time needed to perform their duties. The ECB is notified of their appointment or re-appointment so that it can assess them on the basis of these criteria.

In addition, the ECB did not issue any objections as regards the composition of the Board of directors or its specialised committees.

## **1.a Separation of the functions of Chairman and Chief Executive Officer**

At 11 June 2003, BNP Paribas dissociated the offices of Chairman of the Board and Chief Executive Officer. This decision is in line with the obligations imposed on credit institutions since 2014 by the French law transposing Directive 2013/36/EU on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms.

### **The duties of the Chairman**

They are described in article 3.1 of the Internal Rules.

The Chairman is responsible for ensuring that the quality of the relationship with shareholders is maintained, coordinating closely with any steps taken by Executive Management in this area. In this connection, the Chairman chairs the Shareholder Liaison Committee, whose task is to assist the Bank in its communications with individual shareholders; several times a year, he invites the shareholders to meetings where the Company's strategy is explained. He reports on his duties to the Board of directors.

The Chairman maintains a close and trusting relationship with Executive Management and provides the team with assistance and advice while respecting its executive responsibilities. The Chairman organises his activities so as to ensure his availability and put his experience to the Group's service. His duties are contributory in nature and do not confer any executive power on him. They do not in any way restrict the powers of the Chief Executive Officer, who has sole operational responsibility for the Group.

Coordinating closely with Executive Management, the Chairman can represent the Group in its high-level relationships, particularly with major clients, public authorities and institutions, at national, European and international levels. He plays an active part in discussions concerning regulatory developments and public policies affecting BNP Paribas, and, more generally, the financial services sector.

The Chairman contributes to promoting the values and image of BNP Paribas, both within the Group and externally. He expresses his views on the principles of action governing BNP Paribas, in particular in the field of professional ethics. He contributes to enhancing the Group's image through the responsibilities he exercises personally in national or international public bodies.

At the request of the Chief Executive Officer, he can take part in any internal meeting on subjects relating to strategy, organisation, investment or disinvestment projects, risks and financial information. He expresses his opinions without prejudice to the remit of the Board of directors; he provides support to the teams responsible for covering major companies and international financial institutions; he also contributes to the development of BNP Paribas' advisory activities, particularly by assisting in the completion of major corporate finance transactions.

He ensures that principles of Corporate governance are defined and implemented.

The Chairman is the custodian of the proper functioning of the Board of directors of BNP Paribas. As such:

- with the support of the Corporate Governance, Ethics, Nominations and CSR Committee, with the approval of the Board of directors and of the Shareholders' Annual General Meeting, where appropriate, he endeavours to build an efficient and balanced Board, and to manage, both in the short- and long-term, the replacement and succession processes related to the Board of directors and nominations which will acknowledge the Company's strategic ambitions;
- on the basis of the dissociation of the functions of Chairman and Chief Executive Officer, his role is to ensure directors' independence and freedom of speech;
- he ensures that the directors have the documentation and information necessary to carry out their duties in a timely manner and in a clear and appropriate form.

### **The powers of the Chief Executive Officer**

The Chief Executive Officer has the broadest powers to act in all circumstances on behalf of BNP Paribas, and to represent the Bank in its relations with third parties. He is responsible for the organisation of internal control procedures and for all the information required by regulations in that regard.

He exercises his powers within the limitations of the corporate object, and subject to any powers expressly attributed by law to the Shareholders' Annual General Meeting and Board of directors.

The Internal Rules of the Board of directors provide that the Chief Executive Officer shall request its prior approval for all investment or disinvestment decisions (other than portfolio transactions) in excess of EUR 250 million, and for any proposal to acquire or dispose of shareholdings in excess of that threshold (other than portfolio transactions) (article 1.1). The Chief Executive Officer must also ask the Board's Financial Statements Committee for prior approval of any non-audit related assignment involving fees in an amount of over EUR 1 million (excluding taxes) (article 7.1.3).

## **1.b Composition of the Board – Independence of directors**

### **Composition of the Board of directors: a collegial body with collective competence**

On the proposal of the Board of directors, the Shareholders' Annual General Meeting of 16 May 2023 renewed the terms of office as directors of Messrs Jean Lemierre and Jacques Aschenbroich and Mses Monique Cohen and Daniela Schwarzer.

At 31 December 2023:

## Independence of directors (as of 31 December 2023)

The table below shows the position of each director with regard to the independence criteria provided by the Afep-MEDEF Code to define an independent director:

| Criteria  | Jean LEMIERRE | Jean-Laurent BONNAFÉ | Jacques ASCHENBROICH | Juliette BRISAC | Pierre André de CHALENDAR | Monique COHEN | Hugues EPAILLARD | Marion GUILLOU | Lieve LOGGHE | Christian NOYER | Daniela SCHWARZER | Michel TILMANT | Sandrine VERRIER |

| 8 Major shareholder status  | ✓             | ✓                    | ✓                    | ✓               | ✓                         | ✓             | ✓                | ✓              | ✓            | ✓               | ✓                 | ✓              | ✓                |

✓ represents an independence criterion of the Afep-MEDEF Code that is met.

0 represents an independence criterion of the Afep-MEDEF Code that is not met.

- The following directors meet the independence criteria contained in the Corporate Governance Code and reviewed by the Board of directors<sup>1</sup>: Mses Monique Cohen, Marion Guillou, Lieve Logghe, Daniela Schwarzer, Messrs Jacques Aschenbroich, Pierre André de Chalendar, Christian Noyer. As far as the Board is aware, there are no potential conflicts of interests between BNP Paribas and any of the directors.
- The two directors elected by the employees, Ms Sandrine Verrier and Mr Hugues Epailard, as well as the director representing employee shareholders, Ms Juliette Brisac are not taken into account for the calculation of independence according to the criteria of the Afep-MEDEF Code despite their status and their method of election, which guarantee their independence.
- Three directors appointed by the shareholders – the Chairman of the Board of directors, Mr Jean Lemierre, the Chief Executive Officer, Mr Jean-Laurent Bonnafé, and Mr Michel Tilmant – do not fulfil the independence criteria laid down by the Corporate Governance Code of Listed Companies defining an independent director..

Over half of the directors of BNP Paribas are therefore independent in terms of the criteria for independence contained in the Afep-MEDEF Code and the Board of directors' assessment.

## Directors' knowledge, skills and experience – Diversity and complementarity

When the Corporate Governance, Ethics, Nominations and CSR Committee (CGEN) reviews the skills and experience of potential directors, it is careful to maintain the diversity and collective skills of the Board of directors in light of changes to the Bank's strategy and in accordance with the Suitability policy. Thus, the Board brings together expertise in banking and financial matters, risk management, international digital transformation, banking regulation and compliance, particularly as regards anti-money laundering and combating the financing of terrorism (AML/CFT) and in CSR as well as experience in Executive Management of large corporate groups.

These candidates are identified and recommended by the committee on the basis of criteria that combine personal and collective skills, according to the procedures in the Internal Rules (article 4.2.1) and by the Suitability policy (section II "Identification of selection of and

<sup>1</sup> Ms Rajna Gibson-Brandon and Ms Fields Wicker-Miurin also met the independence criteria on the date each of their terms of office ended.

succession plan for Members of the management body and Key function holders”), which ensure their independence of mind; these include:

- competence, based on experience and the ability to understand the issues and risks, enabling the directors to make informed and effective decisions;
- courage, in particular to express opinions and make judgements, enabling the directors to remain objective;
- availability and assiduity, which allow for the necessary detachment and promote the directors’ commitment and sense of responsibility regarding the exercise of their office;
- loyalty, which fosters directors’ commitment to the Company and to their duties within the Board, which collectively represents the shareholders;
- directors’ proper understanding of the Company’s culture and ethics.

Directors all have a range of skills and experience that they have acquired during their professional careers. The table below aims to reflect this diversity within the Board of directors and lists more specific contributions made by each of the directors.

| Director   | Age <sup>(1)</sup> | Gender | Nationality | Areas of expertise   | End of term of office |

(1) *At 31 December 2023.*

Furthermore, the additional information referred to in article L.22-10-10 of the French Commercial Code relating to employees is shown in sections 7.3 *Outstanding actions in the area of gender equality* and 7.7 *The system concerning Group employees* of this document<sup>1</sup>.

### **1.c Directors' ethical conduct**

As far as the Board is aware, there are no potential conflicts of interests between BNP Paribas and any of the directors. The Suitability policy requires directors to report any situation likely to constitute a conflict of interest to the Chairman, the Board of directors may then ask the director in question to refrain from taking part in voting on the relevant issues.

As far as the Board is aware, none of the Board members has been found guilty of fraud or been associated, as member of an administrative, management or supervisory body, or as Chief Executive Officer, with any insolvency, receivership or liquidation proceedings during at least the last five years.

As far as the Board is aware, no member of the Board of directors is subject to any official public accusation and/or penalty. No director has been prohibited from acting in an official capacity during at least the last five years.

There are no arrangements or agreements with key shareholders, customers, suppliers or other persons that involve the selection of any member of the Board of directors.

The directors must carry out their duties in a responsible manner, particularly as regards the regulations relating to insider dealing. They are notably required to comply with legal requirements relating to being in possession of insider information. Under the terms of the Internal Rules, they must also refrain from carrying out any transactions in BNP Paribas shares that could be regarded as speculative (article 4.3.1 of the Internal Rules). They are informed of the periods during which they may, except in special circumstances, carry out any transactions in BNP Paribas shares (article 4.3.1 of the Internal Rules).

### **1.d Directors' training and information**

Pursuant to the Internal Rules, every director can ask the Chairman or the Chief Executive Officer to provide them with all the documents and information required to enable them to carry out their duties, to participate effectively in the meetings of the Board of directors and to make informed decisions, provided that such documents are necessary to the decisions to be taken and connected with the Board's powers (article 3.4.1 of the Internal Rules).

The directors have unrestricted and continuous access to the minutes of meetings of the Board's specialised committees and the minutes of Board meetings using a special digital tool. This system also provides directors with a range of useful information in a secure and timely manner to facilitate them in their work. Since 2017, it has been possible to use this system to deliver e-learning training modules to directors.

Committee meetings provide an opportunity to update the directors on the topical issues on the agenda. In addition, the Board is kept informed of changes in the banking regulations and reference texts concerning governance and can be trained on such occasions.

During three training days (March, June and September 2023), the directors received training on (i) securitisation, (ii) adapting the Bank to the new solvency framework, (iii) overview of Global Markets activities, (iv) Global Markets partnerships and investments within fintechs, (v) liquidity risk management and (vi) financial security (sanctions and embargoes, anti-money laundering and combating the financing of terrorism, fight against corruption and influence peddling). It was also the opportunity for directors to meet with the relevant managers in the Group.

In respect of 2023, one of the directors representing employees completed her training leading to a diploma at the *Institut Technique de Banque* and the other director representing employees attended a CSR training course provided by an external organisation. The directors representing employees and the director representing employee shareholders also benefit, like any other director, from trainings provided by BNP Paribas as described above, in addition to their external training.

<sup>1</sup> This information supplements the description of the diversity policy applied to members of the Board of directors.

## 1.e Directors' attendance at Board and Committee meetings in 2023

| Director                         | Board of directors | Specialised committees | Individual attendance rates |

(1) Ms Rajna Gibson-Brandon's term of office ended on 10 September 2023.

(2) Ms Fields Wicker-Miurin's term of office ended at the Shareholders' Annual General Meeting of 16 May 2023.

## 2. THE WORK OF THE BOARD AND COMMITTEES IN 2023

### 2.a The work of the Board in 2023

The Board of directors, which determines BNP Paribas' strategy and overall business objectives based on proposals submitted by Executive Management and with the aim of promoting long-term value creation in the light of social and environmental issues:

- monitored the Group's results for the first nine months of 2023, which demonstrate both the strength of its diversified and integrated model and the growth potential of BNP Paribas;
- proposed to the Shareholders' Annual General Meeting of 16 May 2023, the payment of a cash dividend of EUR 3.90 in respect of 2022, *i.e.* a distribution of 50% of the distributable income for 2022 increased to 60% with the launch of a share buyback programme;
- approved the launch of a EUR 5 billion share buyback programme (in two tranches of EUR 2.5 billion) of which (i) EUR 4.04 billion with the intention of offsetting the effect of the dilution of the net earnings per share related to the sale of Bank of the West on 1 February 2023 and (ii) EUR 962 million corresponding to 10% of the distributable profit for 2022 ([see previous point](#)), the execution of which was monitored during 2023;
- decided to decrease the share capital by cancelling in several instalments the shares bought back under the share buyback programme for both the first and second tranches and delegated the powers necessary for the material completion of the capital decrease and in particular the corresponding amendments to the Articles of association;
- reviewed the issuance amounts of debt securities in the form of senior debt and subordinated and hybrid debt;

- sub-delegated the power to decide on the issue of deeply subordinated bonds convertible into shares with cancellation of preferential subscription rights (AT1 bonds);
- heard the Chief Executive Officer's report on the issue of super-subordinated bonds convertible into shares with cancellation of preferential subscription rights (AT1 bonds) and approved the terms of the additional report made available to shareholders and which will be brought to the attention of the shareholders at the Annual General Meeting of 14 May 2024;
- renewed the delegations of authority for the issuance of debt securities, particularly for bonds and similar securities;
- renewed the Group's American Depositary Receipt programme;
- approved the management report for 2022;
- received the Executive Management's comments on the net margin generated on new lending in 2022 and in the first half of 2023;
- reviewed the provisional results of the Supervisory Review and Evaluation Process led by the ECB;
- reviewed the Bank's relative performance and regulatory ratios in 2023 compared with its competitors;
- monitored changes in the shareholding structure and share price;
- reviewed the reaction of analysts and investors to the 2022 annual results and the results of the first half-year 2023;
- reviewed and approved the answers to written questions submitted by shareholders at the Annual General Meeting of 16 May 2023;
- reviewed the Group's budget for 2024;
- approved the acquisition by BNP Paribas Cardif of 5.01% of the share capital of SCOR;
- approved the acquisition by BNP Paribas Cardif of 70% of the share capital of BCC Vita;
- approved the sale of Cetelem Mexico;
- approved the sale of Sharekhan;
- approved the merger of Exane SA into BNP Paribas (SA);
- was informed of the evolution of the Group's payments ecosystem and strategy as part of the transversal "Payments and Flows" initiative of the GTS 2025 Plan;
- monitored the implementation of the Group's IT and information systems strategy;
- duly noted the Group's residual direct and indirect exposure to clients established in the Russian Federation and validated the exit strategy for the Russian Federation approved by Executive Management as well as the management and monitoring of residual activities of entities that cannot be sold and monitored the implementation of the strategy;
- reviewed the situation in Türkiye following the earthquake on 6 February 2023 and in Morocco following the earthquake on 8 September 2023, as well as on the efforts undertaken by the Turkish subsidiary TEB and the Moroccan subsidiary BMCI to help employees and their families;
- took note of the highlights of 2022 and the outlook for 2023 in terms of the Group CSR policy, in terms of economic, social, civic and environmental responsibility;
- reviewed the Group's announcements on its commitments and trajectory in terms of financing the energy transition, including the update of the "oil and gas" sectoral policy and the publication of new objectives for the steel, aluminium and cement sectors;
- was informed of the opinion of the Central Social and Economic Committee on the Group's economic and financial situation as well as the elements of a response to the observations made on the one-year report of the GTS 2025 Plan;
- was informed of the results of targeted surveys of employees measuring their satisfaction and quality of life at work;
- was informed of the status of gender equality within BNP Paribas in 2023;
- reviewed the related-party agreements entered into and authorised in previous years but still in force in the past year;
- renewed the authorisation relating to the delegation of responsibility for internal control by regulated subsidiaries;
- was informed of the ECB's preliminary analysis on internal governance.

As in previous years, Single Supervisory Mechanism (SSM) representatives from the ECB and representatives of the French *Autorité de contrôle prudentiel et de résolution* (ACPR) attended the Board of directors' meeting of 22 February 2023. They outlined their priorities for banking supervision for 2023, which were followed by an exchange of views with the members of the Board.

The Board of directors met on 19 December 2023 for a strategic seminar devoted, among other things, to the execution of the GTS 2025 Plan and the issues faced by the business lines within Commercial, Personal Banking & Services, Corporate and Institutional Banking and Investment and Protection Services.

### **Executive sessions**

In addition to the assessments of the performance and compensation of the executive corporate officers, which were discussed outside their presence, four meetings of directors were held in the form of "executive sessions" on the Group's challenges and operations of which three as a follow-up to the training sessions provided during the year. During these three sessions, the directors had the opportunity to interact with the operational managers concerned.

Finally, the Chairman and the non-executive directors had discussions both on strategy and on their perception of interactions between the Board of directors and the Group's Executive Management.

## 2.b Work performed by the Financial Statements Committee and work approved by the Board of directors in 2023

### Examination of the financial statements and financial information

The Financial Statements Committee:

- conducted quarterly reviews of the financial statements based on the documents and information provided by Executive Management and the work carried out by the Statutory Auditors;
- each quarter, analysed summary reports of the consolidated results and annualised return on equity, as well as results and profitability by business area;
- reviewed the Group's consolidated balance sheet and changes thereto on a quarterly basis. On this occasion, it was informed of changes in off-balance sheet commitments;
- each quarter, reviewed the report on internal audit control points flagged by Group entities in the context of the certification of their financial statements. It analysed the change in the risk level observed for each of the major accounting controls;
- reviewed changes in equity and the capital adequacy ratio with regard to the new prudential solvency regulations and new requirements imposed by the regulator;
- reviewed trends in revenues and the cost/income ratio by business for each quarter;
- kept track of the changes in prudential requirements and reviewed changes in risk-weighted assets;
- reviewed the provisions for litigation;
- reviewed goodwill;
- analysed the composition and changes in the Group's balance sheet;
- acknowledged, each quarter, the adjustments made to the Credit Valuation Adjustment (CVA), the Debt Valuation Adjustment (DVA) and the Funding Valuation Adjustment (FVA);
- monitored, on a semi-annual basis, the implementation of the recommendations of the General Inspection on accounting and financial risk, the Statutory Auditors on internal control and the ECB;
- was informed of the restatements made to arrive at a *pro forma* result as of 31 March 2022, due to the application from 1 January 2023 of the accounting standard IFRS 17 (for insurance contracts) as well as the effects of IFRS 5 (assets and liabilities held for sale) and IAS 29 (financial reporting in hyper-inflationary economies);
- reviewed the resolutions relating to the approval of the parent company and consolidated financial statements for 2022, the allocation of income for the year ended 31 December 2022 and the payment of the dividend;
- took note of the transfer to the U.S. SEC and U.S. CFTC of the simplified quarterly reporting based on 31 December 2022;
- took note of the change in the accounting risk anticipation and summary system, aimed at anticipating the risk anticipation process of the accounting closing as part of the improvement of the permanent control system;
- was informed of the proposed updates to the Independence Policy applicable to the Group's Statutory Auditors;
- reviewed the draft press release on the Group's results each quarter.

Each quarter, when reviewing the results, the Financial Statements Committee:

- heard the Group's Chief Financial Officer, his deputy and the person responsible for accounting and financial reporting;
- interviewed the Group's Chief Financial Officer and asked the questions it considered necessary, without the presence of Executive Management or the Statutory Auditors;
- heard the Statutory Auditors' comments and conclusions on the quarterly and annual financial statements;
- asked the Statutory Auditors the questions it considered necessary, without the presence of the Group's Executive Management or the Group Chief Financial Officer;
- reviewed the accounting certification mechanisms as part of the internal control procedures.

It reviewed the section of the management report concerning the internal control procedures relating to the preparation and processing of accounting and financial information in respect of 2022; it recommended its approval by the Board of directors.

The Board:

- was informed of all the work of the Financial Statements Committee and the findings of the Statutory Auditors at the end of each reporting period;
- reviewed the results of the fourth quarter of 2022, full-year 2022 and the first three quarters of 2023;
- approved the annual company and consolidated financial statements for 2022, the allocation of income for the year ended 31 December 2022 and the payment of the dividend;
- approved draft press releases at each meeting held to discuss the results;
- acknowledged the report of the discussions held by the Financial Statements Committee with the Statutory Auditors and the Chief Financial Officer, without the presence of the Executive Management;
- approved the section of the management report on the preparation and processing of accounting and financial information in respect of 2022.

### ***Relations with the Statutory Auditors***

The Financial Statements Committee received their annual certificate of independence from the Statutory Auditors.

It took note of the draft engagement letter of the Statutory Auditors for the year ended 31 December 2023.

In respect of the fourth quarter 2022, it approved a non-prohibited service from one of the Statutory Auditors.

In the absence of the Statutory Auditors, the Financial Statements Committee:

- reviewed the document relating to the identification and publication of the Statutory Auditors' fees for 2022;
- gave its prior authorisation for a recurring assignment by one of the Statutory Auditors, for which the amount of fees (excluding tax) exceeded EUR 1 million;
- took note of the distribution of the mandates envisaged in respect of the statutory audit for the period 2024-2029; validated the organisation and timetable of the call for tenders with a view to the appointment of one or more auditors on sustainability information in accordance with the provisions of the Corporate Sustainability Reporting Directive (CSRD).

## 2.c Work performed by the Financial Statements Committee and the Internal Control, Risk Management and Compliance Committee in their joint meetings, and work approved by the Board of directors in 2023

The committees:

- reviewed the findings of the Internal Capital Adequacy Assessment Process testifying to the Group's ability to continue its activities while maintaining an adequate level of capitalisation and effectively managing its risks and took note of the draft Capital Adequacy Statement;
- took note of the results of the stress tests conducted in 2023 by the EBA and internally by the Bank;
- took note of the Statutory Auditors' audit plan for 2023;
- discussed whether the prices of the products and services proposed to customers are compatible with the risk strategy (in accordance with the provisions of CRD 5);
- reviewed the main disputes and ongoing proceedings giving rise or likely to give rise to provisions;
- reviewed the economic assumptions used to prepare the budget for 2024;
- reviewed the ACPR letter notifying the Group's Global Systemically Important Bank score.

The Board:

- was informed of all the work performed jointly by the Financial Statements Committee and the Internal Control, Risk Management and Compliance Committee;
- approved the process conducted by Executive Management to assess the internal capital adequacy and its conclusions.

## 2.d Work performed by the Internal Control, Risk Management and Compliance Committee and work approved by the Board of directors in 2023

Since 19 May 2020, the Internal Control, Risk Management and Compliance Committee and the Financial Statements Committee have at least one joint member to support the work of the committees on the appropriateness of the risks and provisions recognised by the Bank.

### Risks

The Internal Control, Risk Management and Compliance Committee:

- took note of the annual internal control report for 2022 in its permanent control and operational risk component, including the assessment by the RISK Function of the management of operational risk in terms of information technology and communication, outsourcing and fraud;
- reviewed the Risk Appetite Statement (RAS), the overall risk limits and those applicable by division as well as the proposals for the introduction of new risk indicators or new thresholds for limits, notably in terms of environmental, social and governance (ESG) risks;
- reviewed the renewal of risk limits for specific sectors and activities;
- was informed that the risk limits had not been exceeded;
- took note of the report on the Bank's Internal Liquidity Adequacy Assessment Process and of the draft Liquidity Adequacy Statement;
- reviewed the report prepared for 2022 on the Assessment and Monitoring of Risks, in accordance with the provisions of the order of 3 November 2014 on the internal control of companies in the banking, payment services and investment services sectors subject to the control of the ACPR;

- monitored the deployment plan of the cybersecurity programme within the Group, its action plan, the priority topics and the related budget on a semi-annual basis. It was informed of regulatory changes and the expected impacts of the Digital Operational Resilience Act. It noted that no major incident had been detrimental to the Group during the first half-year 2023;
- reviewed the dashboard presented quarterly by the Head of RISK and reviewed the evolution of market risks, credit and counterparty risks, operational risk, liquidity risk, interest rate risk and equity risk in the banking book, insurance risk, model risk as well as ESG indicators;
- was informed of the governance of liquidity risk management, the impacts of changes in the ECB's monetary policy, the diversified management of the Bank's deposit base as well as the analysis of the balance sheet in terms of liquidity;
- was informed of the management of interest rate risk in the banking book in a context of rapid and significant increase in interest rates;
- reviewed the adequacy of the Group's compensation policy and practices to its risk profile;
- ensured the independence of the Head of RISK and the Head of Group Compliance and reported to the Remuneration Committee on its findings.

The Board:

- was informed of all the committee's work on the Group's risks and liquidity;
- approved the forwarding to the ACPR of the operational risk and permanent control components of the internal control report;
- approved changes to the Group's RAS;
- approved the liquidity risk tolerance level and the policies, procedures and internal systems relating to liquidity risk;
- approved the forwarding of the risk measurement and monitoring report to the ACPR;
- approved the renewal of the sector budgets.

### **Ad hoc work**

The Internal Control, Risk Management and Compliance Committee:

- was informed, during each of its meetings, of risks related to current events, such as the situation of employees and their families in Ukraine in a context of ongoing conflict with Russia as well as in Türkiye and Morocco after the earthquakes that struck these two countries and the change in the cost of risk;
- was informed of the exposure to the real estate sector in a context of rising interest rates;
- was informed of the preliminary analyses of the corporate loan portfolio with regard to CSR risk factors;
- took note of the letter from the ECB following the control carried out on electronic and algorithmic trading, as well as the elements of a response;
- took note of the ECB's letter on the risk management framework applicable to leveraged finance, as well as the elements of response.

The Internal Control, Risk Management and Compliance Committee and the Corporate Governance, Ethics, Nominations and CSR Committee, at a joint meeting, also examined the progress made in terms of the integration of CSR topics, including climate-related risk factors, as part of the Bank's risk management framework.

The Board was informed of all the *ad hoc* work of the Committee on risks and liquidity.

### **Compliance, internal control, litigation and periodic control**

The Internal Control, Risk Management and Compliance Committee:

- reviewed the draft Annual Report on internal control for 2022 presenting the internal control system and the highlights of 2022 for each of the control functions (Compliance, LEGAL, RISK and General Inspection) in terms of organisation and activity;
- reviewed the draft annual internal control report for 2022 in its compliance component, including the assessment by the Compliance Function of the risks of non-compliance in terms of financial security, market integrity, protection of customers' interests and corruption;
- reviewed the draft annual periodic control report for 2022, including notably the activity report of the General Inspection in respect of the 2022 audit plan;
- reviewed the Annual Reports on the organisation of internal control systems in terms of anti-money laundering, combating financing of terrorism and BNP Paribas (SA)'s freezing of assets on a standalone and consolidated basis;
- reviewed the classification of the Group and BNP Paribas (SA)'s risks in terms of anti-money laundering and combating the financing of terrorism in accordance with the order relating to the system and internal control on anti-money laundering and combatting the financing of terrorism, the freezing of assets, ban on the provision or use of funds or economic resources;

- reviewed the MiFID II systems put in place within BNP Paribas (SA) and the measures in progress to complete the implementation and remedy the malfunctions identified, the results of the controls carried out in 2022 by the business lines and Compliance on the compliance of systems in place to meet MiFID II requirements as well as the system in place in terms of product governance and employee knowledge and skills;
- reviewed the Annual Report on conflicts of interest relating to the system put in place under MiFID II to prevent and manage conflicts of interest that may arise in the provision of an investment or related service, regarding transactional and non-transactional conflicts of interest;
- reviewed the results of the annual assessment of corruption risks for 2022;
- took note of the analysis of the Bank's 2022 recovery plan carried out by the ECB and examined the 2023 recovery plan as well as the various recovery options;
- reviewed the European regulatory developments in terms of resolution and was informed of the Group's Minimum Requirement for own funds and Eligible Liabilities (MREL) to be reached by the first quarter 2024 set by the Single Resolution Board as well as appeals exercised by the Group;
- reviewed the implementation of the Group's outsourcing policy;
- regularly reviewed the main disputes and ongoing proceedings and the progress of the main cases;
- reviewed the completeness and evolution of the results of the periodic control in 2022;
- reviewed the General Inspection's half-year report;
- reviewed the Compliance Function's half-year report;
- regularly monitored the deployment of the 2023 audit plan and the results of the General Inspection missions;
- reviewed the remediation plan and its implementation following the ECB's mission on the General Inspection;
- took note of the follow-up letter to the Banque de France's control report on the cheque stream, as well as the response elements;
- took note of the follow-up letter to the ACPR control report on the system for implementing the free choice of borrower insurance, as well as the elements of response;
- took note of the follow-up letter to the AMF control report on the activity of BNP Paribas Épargne & Retraites Entreprises acting as custodian of accounts within the framework of an employee savings scheme, as well as the elements of response;
- regularly took note of the fines imposed on the Bank by supervisors.

The Board:

- was informed of all the Committee's work on internal control, risks and compliance;
- approved the forwarding to the ACPR of the annual internal control report in its compliance and permanent control component;
- approved the forwarding to the ACPR and the ECB of the annual periodic control report;
- approved the forwarding to the ACPR of reports on the organisation of internal control systems on anti-money laundering and combating the financing of terrorism, as well as on asset freezing;
- took note of the state of play and the measures underway concerning the implementation of the MiFID II regulation;
- approved the 2023 recovery plan.

The committee interviewed the Heads of the RISK, Compliance, LEGAL and General Inspection Functions, without the presence of Executive Management.

The Board heard the reports of the interviews.

## 2.e Work performed by the Corporate Governance, Ethics, Nominations and CSR Committee and work approved by the Board of directors in 2023

### Changes in the membership of the Board and its specialised committees

The Corporate Governance, Ethics, Nominations and CSR Committee:

- reviewed the expiry dates of the directors' terms of office and proposed that the Board of directors submit to the vote of the Shareholders' Annual General Meeting the renewal of the terms of office expiring in 2023, namely those of Mr Jean Lemierre, Ms Monique Cohen, Ms Daniela Schwarzer and Mr Jacques Aschenbroich. It was not proposed to renew the term of office of Ms Fields Wicker-Miurin, due to her 12-year mandate at BNP Paribas, as she would no longer meet the criteria of the Corporate Governance Code defining an independent director;
- reviewed the situation of each of the directors and decided to propose to the Board of directors to appoint, in addition to their respective presence for one on the Corporate Governance, Ethics, Nominations and CSR Committee and for the other on the Financial Statements Committee:
  - Ms Daniela Schwarzer, as member of the Financial Statements Committee and member of the Internal Control, Risk Management and Compliance Committee as of the Shareholders' Annual General Meeting of 16 May 2023,
  - Mr Christian Noyer, as member of the Internal Control, Risk Management and Compliance Committee as of the Shareholders' Annual General Meeting of 16 May 2023;
- reviewed the situation of directors asked to take up corporate offices outside the Group, as provided for in the Suitability policy;
- continued its review of changes to the composition of the Board of directors and appointed an external firm to identify candidate independent directors on an ongoing basis;
- was informed that following the elections of the directors representing employees to the Board of directors of BNP Paribas (SA), Mr Hugues Epailard was re-elected the executives employees (for a period of three years from 16 February 2024) and Ms Vanessa Lepoutier was elected by the technicians employees (for a term of three years from 16 February 2024);
- took note of the resignation of Ms Rajna Gibson-Brandon from her directorship due to family constraints, as of 11 September 2023;
- selected, to replace Ms Rajna Gibson-Brandon, several candidates interviewed by the Chairman of the Committee, then proposed to the Board of directors the co-option of Ms Marie-Christine Lombard from 10 January 2024, her appointment being subject to ratification by the Shareholders' Annual General Meeting of 14 May 2024.

The Board:

- proposed that the Shareholders' Annual General Meeting of 16 May 2023 renews the terms of office of the directors in question;
- appointed with immediate effect after the Shareholders' Annual General Meeting of 16 May 2023, Ms Daniela Schwarzer as member of the Financial Statements Committee and member of the Internal Control, Risk Management and Compliance Committee and Mr Christian Noyer, as member of the Internal Control, Risk Management and Compliance Committee;
- co-opted Ms Marie-Christine Lombard to replace Ms Rajna Gibson-Brandon, from 10 January 2024, this decision being subject to ratification by the Shareholders' Annual General Meeting of 14 May 2024.

### Governance

The Corporate Governance, Ethics, Nominations and CSR Committee:

- reviewed the updated pool of potential independent directors;
- carried out the annual review of the potential successor(s) for the Chairman of the Board of directors and the Chief Executive Officer who could be proposed to the Board of directors in the event of temporary or permanent disability or death of the position holder;
- examined the proposed amendments to the Board of directors' Internal Rules to implement the ECB's recommendations following its mission on the General Inspection;
- proposed an amendment to the Articles of association to the Board of directors for submission to the Shareholders' Annual General Meeting of 16 May 2023, in order to extend the age limit of the Chairman of the Board of directors to 75 years, with the option for the Board of directors to extend it for one year;

- reviewed the report on the current agreements entered into between BNP Paribas (SA) or one of its subsidiaries and the directors, the Chief Executive Officer and the Chief Operating Officers, in accordance with the Procedure for current agreements entered into under normal conditions;
- ascertained the assessment of Key function holders by the Human Resources Department;
- was informed of the implementation and outcome of the controls related to the Corporate governance Policy applicable to all subsidiaries within BNP Paribas' prudential scope of consolidation;
- was informed of the content of exchanges between the Chairman of the Board of directors and investors about the Bank's governance;
- reviewed the draft Corporate governance report for 2022.

The Board:

- approved the amendments to the Internal Rules of the Board of directors;
- approved the amendment to the Articles of association submitted to the vote of the Shareholders' Annual General Meeting of 16 May 2023;
- concluded that all the agreements between BNP Paribas (SA) or one of its subsidiaries and the directors, the Chief Executive Officer and the Chief Operating Officers that were examined were ordinary agreements entered into under normal conditions;
- approved the Corporate governance report for 2022.

### Assessment of the Board of directors

The committee:

- acknowledged the results of the assessment of the Board of directors conducted by the Board of directors Secretariat (SCA), for 2022. The assessment confirmed the directors' satisfaction with the functioning of the Board of directors, which continues to make progress, underlined the complementarity of its members, the quality of the discussions and the attentiveness and mutual respect. It noted the fluidity of discussions with Executive Management and the quality of the interventions of the Heads of the operational departments;
- monitored the implementation of the action plan resulting from the assessment carried out in 2022, which resulted in progress in addressing CSR issues;
- proposed to the Board of directors an action plan including in particular the strengthening of the skills represented on the Board of directors.

The Board approved the action plan following the 2022 assessment.

In addition, in accordance with Article 9.4. of the Internal Rules of the Board of directors and the recommendations of the Afep-MEDEF Code stipulating that the assessment of the Board of directors must be carried out every three years by an external firm, the Committee pre-selected the firm for the 2023 assessment, following a call for tenders.

The Board approved the choice of an external firm for the 2023 assessment.

### Monitoring of the Conduct framework

The Corporate Governance, Ethics, Nominations and CSR Committee, in accordance with its powers, devoted one meeting to reviewing the main actions taken during the past year to strengthen the Conduct framework within the Group. In particular, it reviewed the results of the various Conduct indicators, including those related to respect for people and customer perception, as well as the results of the survey launched in 2023 among the Group's employees to collect their opinions on the Conduct issues.

### Directors' compensation

Prior to the Board of director's approval of the allocation of compensation to each director for 2023, the Corporate Governance, Ethics, Nominations and CSR Committee reviewed the actual attendance of each director at the Board and Committee meetings.

### Social and Environmental Responsibility

As part of its powers, the Corporate Governance, Ethics, Nominations and CSR Committee reviewed the report on the Group's social and environmental responsibility and proposed some amendments and modifications.

The Committee:

- reviewed the Group's social and environmental responsibility report and took note of the Group's main progress and achievements in 2022 in the area of economic, social, civic and environmental responsibility;

- was informed of (i) the strengthening of the Bank's Vigilance plan in order to align it with best practices and to set out in more detail its approach in this area and (ii) the results for 2022 of each of the ten 2022–2025 CSR dashboard indicators covering the Bank's four CSR pillars (economic, social, civic and environmental responsibility);
- was informed of the quantitative and qualitative information describing the environmental, social and governance risk factors that may indirectly affect the Bank's accounting balance sheet through their impact on its customers;
- reviewed the statement made on behalf of the Group's entities under the UK and Australian Modern Slavery Acts ("Modern Slavery Act 2015" in the United Kingdom and "Modern Slavery Act 2018" in Australia) to ensure that their activities are free from human trafficking and slavery. This statement is included in the Group's social and environmental responsibility report;
- was informed of the Group's policy on diversity, equality and inclusion, particularly in terms of gender balance in management bodies and strategic priorities.

The Corporate Governance, Ethics, Nominations and CSR Committee also took note of comparative analyses published by non-governmental associations on the commitments of the largest international and European banking institutions in terms of financing the energy transition.

It was also informed of BNP Paribas Asset Management's CSR voting policy at Shareholders' Meetings.

The Corporate Governance, Ethics, Nominations and CSR Committee and the Internal Control, Risk Management and Compliance Committee, meeting jointly, reviewed the progress made in terms of the integration of CSR topics, including climate-related risk factors, as part of the Bank's risk management framework.

The Board:

- approved the Group's social and environmental responsibility report, including the sections on the Vigilance plan and the Extra-Financial Performance Statement, with the amendments proposed by the committee;
- approved the statement made on behalf of the Group's entities on the United Kingdom's "Modern Slavery Act 2015" and Australia's "Modern Slavery Act 2018".

## 2.f Work performed by the Remuneration Committee and work approved by the Board of directors in 2023

One member of the Remuneration Committee is also a member of the Internal Control, Risk Management and Compliance Committee, promoting thereby the work of the Committee on the appropriateness of BNP Paribas' compensation principles and risk policy, thus meeting the requirements of the French Monetary and Financial Code.

The Remuneration Committee:

In respect of the year 2022

- With regard to the principles of the compensation policy:
  - carried out an annual review of the principles of the compensation policy, and of the compensation, indemnities and benefits of any kind granted in respect of the 2022 performance year to the corporate officers of the Group's significant subsidiaries in France falling within the set threshold by law and having delegated these missions to the Committee,
  - was informed of the provisional results for 2022 of the implementation of the reviews of compliance with the Code of conduct, rules and regulations and the assessment and control of risks for the Group's Senior Management Position (SMP) and material risk takers populations,
  - was informed of the summary of the General Inspection report concerning the implementation of the review of Group material risk takers' compensation in respect of 2022,
  - was informed of the follow-up to the recommendations issued by the ECB as part of one of its missions carried out in 2020.
- With regard to specific categories of personnel, in particular employees whose professional activities have a significant impact on the Group's risk profile:
  - after receiving detailed information on Group employees whose responsibilities within the Bank have a significant impact on the Group's risk profile ("material risk takers"):
    - reviewed the issues relating to their remuneration,
    - acknowledged the final scope of the Group's material risk takers,
    - reviewed the 2023 published report on compensation paid to the Group's material risk takers for 2022;
  - reviewed the resolution on compensation paid in 2022 to the Group's material risk takers that is subject to an annual advisory vote at the Shareholders' Annual General Meeting of 16 May 2023,
  - audited the 2022 remuneration of the Group's Head of RISK and Head of Compliance,
  - was informed of the remuneration of Key function holders for 2022,
  - took note of the list of the highest paid employees in 2022,
  - reviewed the final parameters for determining the variable compensation package for the Global Markets business line in respect of 2022 performance and was informed of the final package awarded and the way in which individual awards were made for this business line.
- Concerning the corporate officers:
  - reviewed, without the presence of the Executive Management, the quantitative and qualitative performance criteria related to the annual variable compensation of the corporate officers and proposed to the Board to approve their variable compensation for the 2022 performance year,
  - approved the information relating to the total compensation and benefits of any kind awarded in respect of 2022 or paid during the same year ("Say on pay") to directors and corporate officers of BNP Paribas (SA).

- Concerning the directors:
  - was informed of the final amount of the compensation allocated to the directors for 2022.

#### In respect of the year 2023

- With regard to the principles of the compensation policy:
  - reviewed the proposed changes to the Group's compensation policy in order to take into account an extension of the retention period for the portion of variable compensation paid in instruments to material risk-takers, as well as certain proposals to adapt the policy,
  - reviewed the rules on deferred compensation and the variable compensation payment terms applicable to the Group's material risk takers in 2023,
  - was informed of the actions carried out by the Group with regard to the gender neutrality of the compensation policy,
  - was informed of future regulatory changes.
- Regarding specific categories of personnel:
  - took note of the scope of the Group's material risk takers identified as an initial estimate in respect of 2023,
  - reviewed the initial parameters used to determine the variable compensation package for Global Markets' employees for the 2023 performance year.
- Concerning directors and corporate officers:
  - reviewed the compensation policy for directors and corporate officers applicable from the 2023 performance year,
  - examined the proposed amendments to the Board of directors' Internal Rules to implement the ECB's recommendations following its mission on the General Inspection,
  - reviewed the provisional distribution of the compensation allocated to the directors in respect of 2023 on the basis of their actual attendance at Board and Committee meetings.

#### In respect of the year 2024

- Concerning the corporate officers:
  - reviewed the level and structure of the compensation of corporate officers based on benchmarks with a panel of comparable European banks.
- Concerning the directors:
  - reviewed the level of the compensation package allocated to directors.

With regard to the votes on the resolutions relating to the compensation of directors and corporate officers at the Shareholders' Annual General Meeting of 16 May 2023, the Committee noted that all the resolutions had received an approval rate significantly higher than 80%. A lower rate was observed for only one of the resolutions relating to the 2023 performance year, if abstentions are included in the votes cast. However, the Committee recalled that the standard for counting votes now excluded abstentions.

#### The Board:

- was informed of all the Remuneration Committee's work;
- approved the changes to the Group's compensation policy;
- was informed by the Committee Chairman of the approach used to identify those employees whose professional activities have a significant impact on the Company's risk profile and the principles for their compensation as proposed by Executive Management for the 2023 performance year;
- heard the Committee Chairman's report on the appropriateness of the compensation of the Group's Head of RISK and Head of Compliance for the 2022 performance year;
- approved the principles of the compensation policies for directors and corporate officers submitted for approval to the Shareholders' Annual General Meeting of 16 May 2023;
- approved, without the presence of the Chief Executive Officer and the Chief Operating Officers, the compensation policy for directors and corporate officers for 2023;
- reviewed and approved, without the presence of the Chief Executive Officer and the Chief Operating Officers, the assessment made by the Committee of the quantitative and qualitative criteria related to the annual variable compensation of the executive corporate officers for the performance year 2022;
- approved the information relating to the total compensation and benefits of any kind awarded in respect of 2022 or paid during the same year ("Say on pay") to the directors and corporate officers of BNP Paribas (SA) and submitted for the approval of the Shareholders' Annual General Meeting of 16 May 2023;
- approved the amendments to the Internal Rules of the Board of directors;
- approved the individual split of the compensation allocated to the directors for 2023.

# INTERNAL RULES OF THE BOARD OF DIRECTORS

---

## PREAMBLE

The rules concerning:

- the Board of directors;
- the members of the Board of directors, including their rights and obligations;
- the Board of directors' Committees,

are set by the statutory and regulatory provisions, the Company's Articles of Association, and these rules (in addition to these Internal Rules of the Board of directors, there is the Policy on the suitability of Members of the management body and Key function holders mentioned in 1.3 below).

The Board of directors also takes into account the French market guidelines concerning Corporate Governance and, in particular, the provisions of the Corporate Governance Code of Listed Companies published by the French employers' organisations *Association française des entreprises privées* (AfeP) and the *Mouvement des entreprises de France* (MEDEF), hereinafter called the AfeP-MEDEF Code, to which BNP Paribas (the "**Company**") refers.

The Board of directors is a collegial body that collectively represents all shareholders and acts in all circumstances in the corporate interests of the Company.

The Board of directors is assisted by specialised committees:

- Financial Statements Committee;
- Internal Control, Risk Management and Compliance Committee;
- Corporate Governance, Ethics, Nominations and CSR Committee; and
- Remuneration Committee;
- as well as by any *ad hoc* committee.

## PART ONE – THE BOARD OF DIRECTORS, COLLEGIAL BODY

### ARTICLE 1. DUTIES OF THE BOARD OF DIRECTORS

The Board of directors discusses any question coming within the scope of its statutory and regulatory duties and contributes to promoting the corporate values aimed, in particular, to ensuring that the conduct of BNP Paribas' activities by its employees complies with the highest ethical requirements in order to protect the reputation of the Bank.

In particular and non-exhaustively, the Board of directors is competent in the following areas:

#### 1.1. Orientations and strategic operations

The Board of directors:

- determines BNP Paribas' s business orientations and supervises their implementation by the Executive Management, taking the social and environmental challenges of BNP Paribas' activities into consideration;
- subject to the powers expressly allocated to the shareholders' meetings and within the limit of the corporate purpose, it handles any issue concerning the smooth running of the Company and settles by its decisions any matters concerning it;
- gives its prior approval with respect to all investment or disinvestment decisions (other than portfolio transactions) in an amount in excess of EUR 250 million, and any proposal to acquire or dispose of shareholdings (other than portfolio transactions) in excess of that threshold, submitted to it by the Chief Executive Officer. It is also regularly informed by the Chief Executive Officer of significant transactions which fall below this limit;
- gives its prior approval to any significant strategic operation which falls outside the approved orientations;
- promotes long-term value creation by BNP Paribas.

#### 1.2. Code of conduct

The Board of directors and the Executive Management have developed a Code of conduct of BNP Paribas Group which defines the standards of conduct in line with the values and missions determined by the Bank. This Code, which shall be integrated by each business line and each employee, governs the actions of each employee and guides the decisions at every level of the organisation. For this purpose, the Board ensures the Executive Management implements this Code in business lines, countries and regions.

### 1.3. Governance, internal control and financial statements

The Board of directors:

- appoints the Chairman, the Chief Executive Officer and, on the recommendation of the latter, the Chief Operating Officer(s) (COO);
- sets any limits to the powers of the Chief Executive Officer and of the Chief Operating Officer(s);
- examines the system of governance, which includes, in particular, a clear organisational structure with well defined, transparent and consistent sharing of responsibilities, efficient processes to identify, manage, monitor and report the risks to which the Company is or might be exposed to; it periodically assesses the efficiency of this governance system and ensures that corrective measures have been taken to remedy any failings;
- determines the orientations and controls their implementation by the actual managers of the monitoring measures in order to guarantee an effective and prudent management of the Company, including the segregation of duties in the organisation of the Company and the prevention of conflicts of interests;
- ensures the fulfilment of the obligations which are incumbent on it concerning internal control, and, in particular, examines, at least twice a year, the activity and the results of the internal control;
- approves the Management report and the Corporate governance report attached to it;
- carries out the controls and verifications which it deems appropriate;
- ensures that the Chief Executive Officer and/or Chief Operating Officer(s) implement a policy of non-discrimination and of diversity including gender balance in management bodies;
- ensures the implementation of process for preventing and detecting corruption and influence-peddling for which it receives all the information required for that purpose;
- examines and closes the financial statements and ensures their sincerity;
- reviews, at least once a year, the draft budgets and the drafts of the various statutory and regulatory reports which the Chief Executive Officer submits to it;
- prepares a Suitability policy that defines the assessment of Members of the management body and of Key function holders (the "Policy on the suitability of Members of the management body and Key function holders"); the Board of directors (and its committees) apply this policy and revise it regularly to account in particular for any regulatory changes.

### 1.4. Risk management

The Board of directors:

- regularly examines, in connection with the strategy it has defined, the opportunities and risks, such as financial, legal, operational, social, and environmental risks, those linked to money laundering and terrorist financing issues, as well as the measures taken as a result;
- as such, approves and regularly reviews the strategies and policies governing the taking, management, monitoring and reduction of the risks to which the Company is or might be exposed to, including the risks caused by the economic environment. In particular, the Board of directors approves the global risk limits and puts into place a specific process organising its information and, as the case may be, the referral of the matter to it in the event these limits are exceeded.

### 1.5. Communication

The Board of directors:

- ensures that the financial information disclosed to the shareholders and the markets is of high quality;
- controls the process of financial publication and communication, quality and reliability of the information intended to be published and communicated by the Company.

### 1.6. Remuneration

The Board of directors:

- allocates, without prejudice to the powers of the Annual General Meeting, the directors' attendance fees;
- adopts and regularly reviews the general principles of the remuneration policy of the Group which relates, in particular, to the categories of staff including the risk takers, staff engaged in control functions and any employee who, given his overall income, is in the same remuneration bracket as those whose professional activities have an impact on the risk profile of the Group;
- decides, without prejudice to the powers of the Annual General Meeting, the remuneration of the managers who are corporate officers (*dirigeants mandataires sociaux*), in particular their fixed and variable remuneration as well as any other means of remuneration or benefit in kind.

Executive corporate officers are not present during the discussions of the Board of directors and the Remuneration Committee regarding their own compensation, nor do they participate in the vote.

## **1.7. Resolution**

The Board of directors settles the preventive recovery plan of the institution, as well as the items necessary to establish the resolution plan communicated to the competent regulatory authorities.

## **1.8. RELATIONS WITH CONTROL FUNCTIONS**

The heads of the control functions (RISK, Compliance, General Inspection and LEGAL) are interviewed once a year on the organisation, methods and procedures used and on the work programme of these functions within the Group by the Internal Control, Risk Management and Compliance Committee (CCIRC), without the presence of Executive Management.

In addition, the heads of control functions regularly present a summary of their activities to the Internal Control, Risk Management and Compliance Committee.

Without reporting to the executive officers, the heads of the control functions have direct access to the Board of directors - or, where applicable, its committees.

The Board of directors gives its prior approval to:

- the appointment of the Head of General Inspection;
- the dismissal of the heads of RISK, Compliance and General Inspection.

The heads of the control functions are subject to the same rules of ethics, confidentiality and professional conduct as the directors.

## **ARTICLE 2. FUNCTIONING OF THE BOARD OF DIRECTORS**

### **2.1. Organisation of the meetings**

The Board of directors meets at least four times a year and as often as circumstances or BNP Paribas' interest requires this.

Notices of meetings may be communicated by the Secretary of the Board.

The Secretary of the Board prepares all of the documents necessary to the Board meetings and arranges to place all of the documentation at the disposal of the directors and other participants in the meetings.

An attendance register is kept, which is signed by the directors taking part in the meeting. It mentions the names of the directors considered as present.

The Board of directors' decisions are recorded in minutes by the Secretary of the Board which are entered into a special register, in accordance with the laws in force. The Secretary of the Board of directors is authorised to issue and certify copies or excerpts of the Board minutes. Each set of Board minutes must be approved at a subsequent Board meeting.

The decisions of the Board of directors are carried out either by the Chief Executive Officer, or a Chief Operating Officer, or by any special representative appointed by the Board of directors.

### **2.2. Means of participation**

Directors taking part in the meeting by videoconference or telecommunication means enabling their identification, guaranteeing their effective participation, transmitting at least the voices of the participants, and meeting, through their technical features, the needs of confidentiality, of continuous and simultaneous retransmission, with the exception of Board meetings closing out the financial statements and the annual report, shall be deemed to be present for the purpose of calculating both the quorum and the majority. The minutes state, as the case may be, the occurrence of any technical incidents if they disturbed the conduct of the meeting.

## **PART TWO – THE MEMBERS OF THE BOARD OF DIRECTORS**

### **ARTICLE 3. COMPOSITION, INFORMATION AND SKILLS**

#### **3.1. Chairman of the Board of directors**

##### ***3.1.1. Relations with the Company's other bodies and with parties outside the Company***

In relations with the Company's other bodies and with parties outside the Company, the Chairman of the Board of directors alone has the power to act on behalf of the Board of directors and to express himself in its name, except in exceptional circumstances, and except where specific assignments or duties are entrusted by the Board of directors to another director.

The Chairman makes sure that he maintains a close and trusting relationship with Executive Management. He provides him with his assistance and his advice while respecting his executive responsibilities. He organises his activities so as to ensure his availability and put his experience at the Company's service. He contributes to promoting the values and image of the Company, both within the Group and externally.

Coordinating closely with Executive Management, he can represent the Group in its high level relationships, and particularly with major clients, public authorities and the institutions on national, European and international levels.

He ensures that the quality of relations with shareholders is maintained, in close coordination with the work of Executive Management in this area. He reports on this mission to the Board.

He ensures that principles of Corporate governance are defined and implemented.

The Chairman is the custodian of the proper functioning of the Board of directors of BNP Paribas. As such:

- with the support of the Corporate Governance, Ethics, Nominations and CSR Committee, with the approval of the Board of directors and of the Annual General Shareholders' Meeting, where appropriate, he endeavours to build an efficient and balanced Board, and to manage replacement and succession plan processes related to the Board of directors and nominations on which it will have to opine;
- he can attend all committee meetings and can add any subject to the agenda of the latter which he considers to be relevant;
- he ensures that the directors have the documentation and information necessary to carry out their duties in a timely manner and in a clear and appropriate form.

### **3.1.2. Organisation of the work of the Board of directors**

The Chairman organises and manages the work of the Board of directors in order to allow it to carry out all of its duties. He sets the timetable and agenda of Board meetings and convenes them.

He ensures that the work of the Board of directors is well organised, in a manner conducive to constructive discussion and decision-making. He directs the work of the Board of directors and coordinates its work with that of the specialised committees.

He sees to it that the Board of directors devotes an appropriate amount of time to issues relating to the future of the Company and particularly its strategy.

The Chairman is kept regularly informed by the Chief Executive Officer and other members of the Executive Management of significant events and situations relating to the business of the Group, particularly those relating to: deployment of strategy, organisation, investment or disinvestment projects, financial transactions, risks, financial statements.

The Chief Executive Officer provides the Chairman with all information required under French law regarding the internal control report.

He may ask the Chief Executive Officer or any manager, and in particular, the heads of the control functions, for any information likely to assist the Board and its committees in the carrying out of their duties.

He may hear the Statutory Auditors in order to prepare the work of the Board of directors and of the financial statements' Committee.

## **3.2. Directors**

They undertake to act in the corporate interest of BNP Paribas and to comply with all of the provisions of these Internal Rules that are applicable to them, and more specifically the procedures of the Board of directors.

## **3.3. Other participants**

### **3.3.1. Non-voting directors (censeurs)**

The non-voting directors attend the meetings of the Board and of the specialised committees in an advisory capacity.

### **3.3.2. Statutory Auditors**

The Statutory Auditors attend the meetings of the Board and of the specialised committees which examine or close the annual or interim financial statements and may attend the meetings of the Board and of the specialised committees when the Chairman of the Board considers it necessary.

### **3.3.3. Persons invited**

The Board can decide to invite one or several persons to attend the meetings.

### **3.3.4. Representative of the Central Works Committee**

The representative of the Central Works Committee attends the meetings of the Board in an advisory capacity.

### **3.3.5. Secretary of the Board**

The Secretary of the Board is appointed by the Board and attends the meetings of the latter.

## **3.4. Access to information**

### **3.4.1. Information and documentation**

For the purpose of efficiently participating in the Board of directors' meetings and making enlightened decisions, each director may ask that the Chairman or the Chief Executive Officer communicates to him or her all documents and information necessary to perform his or her duties, if these documents are useful for making decisions and are related to the Board of directors' powers.

Requests are sent to the Secretary of the Board of directors who informs the Chairman thereof.

When the Secretary of the Board of directors considers this preferable, for reasons of convenience or confidentiality, the documents thus placed at the disposal of the directors as well as of any person attending the meetings of the Board are consulted through the Secretary of the Board or through the competent employee of the Group.

### **3.4.2. Systems**

The placing at disposal of the directors or of any person attending the Board meetings of all of the documentation with a view to meetings of the Board, may be done by any means, including dematerialised. In this case, all the measures of protection considered necessary are taken to protect the confidentiality, the integrity and the availability of the information and each member of the Board or any person who has received the documentation is responsible not only for the systems and media thus placed at disposal but also for their access.

### **3.5. Training, individual and collective skills**

The directors of BNP Paribas possess, both individually and collectively, the expertise, experience, skills, understanding and personal qualities necessary, notably in terms of professionalism and integrity, to properly perform their duties in connection with each of the significant activities of BNP Paribas and guaranteeing efficient governance and supervision.

The directors shall ensure that their knowledge is kept updated in compliance with the Policy on the suitability of Members of the management body and Key function holders.

The directors representing employees and the director representing employee shareholders are given time dedicated to training determined by the Board in accordance with the regulations in force. At the end of the training, the training centre chosen by the Board must issue a certificate of regular attendance, which the director must remit to the Secretary of the Board.

## **ARTICLE 4. OBLIGATIONS**

### **4.1. Holding and keeping of BNP Paribas shares**

Every director appointed by the General Shareholders' Meeting must personally hold 1,000 shares. The director must hold all of the shares within twelve months of appointment. At the expiry of this period, every director concerned shall make sure to keep the minimum number of BNP Paribas' shares throughout their term of office.

The directors undertake not to engage in any individual hedging or insurance strategies to cover their risk on such shares.

This obligation does not concern directors representing employees and director representing employee shareholders.

### **4.2. Ethics – confidentiality**

#### **4.2.1. Ethics**

##### **4.2.1.1. Availability and regular attendance**

The members of the Board of directors shall devote the time and the effort necessary to carry out their duties and responsibilities, in compliance with the Policy on the suitability of Members of the management body and Key function holders.

The directors representing employees and the director representing employee shareholders are given a preparation time determined by the Board in accordance with the Guidelines on the assessment of the suitability of Members of the management body and Key function holders.

##### **4.2.1.2. Independence and loyalty**

Every member of the Board of directors shall at all times maintain his or her independence of mind, in compliance with the Policy on the suitability of Members of the management body and Key function holders.

He or she shall act with loyalty towards the other directors, shareholders and BNP Paribas.

He or she shall refuse any benefit or service liable to compromise his independence.

##### **4.2.1.3. Duty of vigilance**

Every member of the Board of directors is bound by a duty of vigilance with respect to the keeping, use and, as the case may be, the return of the systems, documents and information placed at disposal.

#### **4.2.2. Confidentiality**

Any director and any person participating in the work of the Board is bound by an obligation of absolute confidentiality about the content of the discussions and decisions of the Board and of its committees as well as the information and documents which are presented therein or which are provided to them, in any form whatsoever.

Except as provided by law, he or she is prohibited from communicating to any person outside of the Board of directors any information that has not been made public by BNP Paribas.

### **4.3. Ethical conduct – limitation on directorships – conflicts of interests – personal declarations**

#### **4.3.1. Ethical conduct**

If directors have any questions related to ethical conduct, they may consult the head of the Group Compliance Function.

The legislation relating to insider trading applies particularly to directors both in a personal capacity and when carrying out their duties within companies that hold shares in BNP Paribas. They are required, in particular, to respect the legal requirements governing the definition, communication and exploitation of inside information, the principal provisions of which are communicated to them when they take directorship.

Directors can only deal in securities of BNP Paribas on a personal basis during the period of six weeks beginning on the day after the publication of the quarterly and annual financial statements, or after the publication of a press release on the Company's operations, unless they are in possession during that period of information that puts them in the position of an insider with respect to stock exchange regulations.

Directors shall refrain from any transactions that could be considered as speculative, and in particular from leveraged purchases or short sales, or short-term trading.

The director as well as persons with close connections with him are under the obligation to declare to the French Financial Markets Authority (*Autorité des marchés financiers – AMF*), which ensures the publication thereof, and to BNP Paribas, the transactions that they execute in BNP Paribas shares and the financial instruments related thereto.

#### **4.3.2. Limitation on directorships**

The director complies with the statutory and regulatory provisions which are applicable to him or her, or which are applicable to BNP Paribas, concerning limitations on directorships, as well as the Policy on the suitability of Members of the management body and Key function holders.

#### **4.3.3. Conflicts of interests**

The director complies with the applicable statutory and regulatory provisions regarding conflicts of interests – in particular the so-called “related-party agreements” (*conventions réglementées*) regime as well as with the Policy on the suitability of Members of the management body and Key function holders.

Whatever the circumstances, in the event of breach of the obligations with respect to conflict of interests by a director, the Chairman of the Board of directors shall take all the statutory measures necessary in order to remedy it. He can, furthermore, keep the relevant regulators informed of such acts.

#### **4.3.4. Personal declarations**

The director undertakes to inform the Secretary of the Board as soon as possible of any change in his or her personal situation (change of address, appointment, directorships, duties carried out, or criminal, civil, or administrative convictions, *etc.*).

In particular, and in compliance with the Policy on the suitability of Members of the management body and Key function holders, the director shall inform, as soon as possible, the Chairman of the Board of directors of any criminal or civil conviction, management prohibition, administrative or disciplinary sanction, or measure of exclusion from a professional organisation, as well as any proceedings liable to entail such sanctions against him or her, any dismissal for professional misconduct, or any dismissal from a directorship of which he or she may be the subject. Similarly, the director informs the Chairman of the Board of directors of any criminal or civil order entered against it, administrative or disciplinary sanction or measure of exclusion from a professional organisation, as well as of any Court-ordered reorganisation or liquidation measure of which a company of which he is the manager, shareholder or partner is the subject or would be liable to be the subject.

### **ARTICLE 5. REMUNERATION OF DIRECTORS AND NON-VOTING DIRECTORS (*CENSEURS*)**

The overall amount of remuneration given to the directors is determined by the General Shareholders' Meeting.

The individual amount of remuneration given to directors is determined by the Board of directors pursuant to a proposal by the remuneration Committee. It comprises a predominant variable portion based on actual participation in meetings, regardless of the means. Directors residing abroad receive an increased amount, except where they may participate in meetings of the Board of directors by videoconference or telecommunications means.

Actual participation in the committees entitles committee members to an additional remuneration, the amount of which may differ depending on the committees. Committee members receive this additional remuneration for their participation in each different Committee. The Chairmen of Committees also receive an additional remuneration.

The remuneration of the non-voting directors is determined by the Board of directors pursuant to a proposal of the Remuneration Committee.

## **PART THREE – THE BOARD OF DIRECTORS’ SPECIALISED COMMITTEES**

To facilitate the performance of their duties by BNP Paribas’ directors, specialised committees are created within the Board of directors.

### **ARTICLE 6. COMMON PROVISIONS**

#### **6.1. Composition and skills**

They consist of members of the Board of directors who do not carry out management duties within the Company. They include the required number of members who meet the criteria required to qualify as independent, as recommended by the Afep-MEDEF Code. The members of the committees have the knowledge and skills suited to carry out of the missions of the committees in which they participate.

The Remuneration Committee includes at least one director representing the employees.

Their remits do not reduce or limit the powers of the Board of directors.

The Chairman of the Board of directors sees to it that the number, missions, composition, and functioning of the committees are adapted at all times to the statutory and regulatory provisions, to the Board of directors’ needs and to the best Corporate governance practices.

By decision of the Board, the Internal Control, Risk Management and Compliance Committee (CCIRC), the Remuneration Committee (RemCo), and the Corporate Governance, Ethics, Nominations and CSR Committee (CGEN) may, in accordance with the provisions of Article L.511-91 of the French Monetary and Financial Code (*Code monétaire et financier*) ensure their missions for the companies of the Group under the supervision of the regulator on a consolidated or sub-consolidated basis.

#### **6.2. Meetings**

The committees shall meet as often as necessary.

#### **6.3. Means placed at the disposal of the committees**

They may call upon outside experts when needed.

The Chairman of a Committee may ask to hear any officer within the Group, regarding issues falling within this Committee’s jurisdiction, as defined in the present Internal Rules.

The Secretary of the Board prepares all of the documents necessary to the meetings of the specialised committees and organises the placing of the documentation at the disposal of the directors and other participants in the meetings.

This documentation can be placed at disposal by any means, including dematerialised. In this case, all the measures of protection considered necessary are taken for the purposes of protecting the confidentiality, integrity and the availability of the information and each member of the specialised Committee concerned or any person who has received the documentation is responsible not only for the systems and media and their provision but also for their access.

#### **6.4. Opinions and minutes**

They express opinions intended for the Board of directors. The Chairmen of committees, or in case of their impediment another member of the same committee, present a verbal summary of their work at the next Board of directors’ meeting.

Written reports of committees’ meetings are prepared by the Secretary of the Board and communicated, after approval at a subsequent meeting, to the directors who so request.

### **ARTICLE 7. THE FINANCIAL STATEMENTS COMMITTEE**

#### **7.1. MISSIONS**

In accordance with the provisions of the French Commercial Code, the Committee ensures the monitoring of the issues concerning the preparation and verification of the accounting and financial information.

##### **7.1.1. Monitoring of the process of preparation of the financial information**

The Committee is tasked with analysing the quarterly, half-yearly and annual financial statements issued by the Company in connection with the closing of financial statements and obtaining further explanations of certain items prior to presentation of the financial statements to the Board of directors.

The Committee shall examine all matters relating to these accounts and financial statements: the choices of accounting principles and policies, provisions, analytical results, prudential standards, profitability indicators, and all other accounting matters that raise methodological issues or are liable to give rise to potential risks.

It makes, as the case may be, recommendations, in order to ensure integrity of the elaboration process of the financial information.

### **7.1.2. Monitoring of the efficiency of the internal control systems and of risk management concerning accounting and financial matters**

The Committee shall analyse, at least twice a year, the summary of the operations and the results of the internal accounting and financial control, as well as those originate from controls on the elaboration process and the processing of accounting, financial and extra-financial information, based on the information communicated to it by the Executive Management. It shall be briefed of incidents revealed by the accounting and financial internal control, reported on the basis of the thresholds and criteria defined by the Board of directors and shall report on its findings to the Board of directors.

It is informed by the Chairman of the Board of directors of any possible failure to implement corrective measures decided within the framework of the accounting and financial internal control system that has been brought to his direct knowledge by the head of periodic control and reports on its findings to the Board of directors.

### **7.1.3. Monitoring of the statutory auditing of the annual financial statements and of the consolidated financial statements by the Statutory Auditors as well as of the independence of the Statutory Auditors**

The Committee shall steer the procedure for selection of the Statutory Auditors, express an opinion on the amount of fees charged for conducting the legal auditing engagements and report to the Board of directors on the outcome of this selection process.

It shall review the Statutory Auditors' audit plan, together with their recommendations and their monitoring.

It shall be notified on a yearly basis of the amount and breakdown of the fees paid by the BNP Paribas Group to the Statutory Auditors and the networks to which they belong, calculated using a model approved by the Committee. It shall ensure that the amount or the portion of the audit firms or the networks' revenues that BNP Paribas represents is not likely to compromise the Statutory Auditors' independence.

Its prior approval shall be required for any engagement entailing total fees of over EUR 1 million (before tax). The Committee shall approve, *a posteriori*, all other engagements, based on submissions from the Finance Department. The Committee shall validate the Finance Department's fast-track approval and control procedure for all "non-audit" engagements entailing fees of over EUR 50,000. The Committee shall receive, on a yearly basis from the Finance Department, a report on all "non-audit" engagements carried out by the networks to which the Group's Statutory Auditors belong.

It receives from the Statutory Auditors a written report on their main observations concerning the weaknesses of internal control and reviews it, as well as most significant recommendations issued in the framework of their mission and reviews it. It takes notes of the most significant statements and recommendations issued by the internal audit in the framework of their missions regarding accounting and financial information.

Each Statutory Auditor shall report on a yearly basis to the Committee on its internal control system for guaranteeing its independence, and shall provide a written statement of its independence in auditing the Group.

The Committee accounts for the statements and conclusions of the *Haut Conseil des Commissaires aux comptes* (H3C) resulting from the controls provided by the H3C in the professional activity of Statutory Auditors.

At least twice a year, the Committee shall devote part of a meeting to a discussion with the team of Statutory Auditors, without any member of the company's Executive Management being present.

The Committee meets in the presence of the team of Statutory Auditors, to review quarterly, half-yearly and annual financial statements.

However, the Statutory Auditors shall not attend all or part of Committee meetings dealing with their fees or their re-appointment.

The Statutory Auditors shall not attend all or part of Committee meetings dealing with specific issues that concern a member of their staff.

Except in the event of exceptional circumstances, the files containing the quarterly, half-yearly and annual results and financial statements shall be sent to Committee members at least three days prior to the Committee meetings.

Where questions of interpretation of accounting principles arise in connection with quarterly, half-yearly and annual results, and involve choices with a significant impact, the Statutory Auditors and FINANCE shall submit, on a quarterly basis, a memorandum to the Committee analysing the nature and significance of the issues at play, presenting the pros and cons of the various possible solutions and explaining the rationale for the choices ultimately made.

They present, at least twice a year, a note on the works on certification of the financial statements. Based on it, the Committee reports to the Board on the results of this mission and on the way this mission has contributed to the integrity of the financial information and on his own role in it.

## **7.2. CHAIRMAN'S REPORT**

The Committee shall review that part of the draft of the Chairman's report on internal control procedures relating to the preparation and processing of accounting and financial information.

### **7.3. HEARINGS**

With regard to all issues falling within its jurisdiction, the Committee may, at its initiative, hear the heads of finances and accounting of the Group, as well as the head of Asset/liability management.

The Committee may ask to hear the head of Finances Group with regard to any issue within its jurisdiction, for which he may be held liable, or the Company's management may be held liable, or that could call into question the quality of accounting and financial information disclosed by the Company.

## **ARTICLE 8. THE INTERNAL CONTROL, RISK MANAGEMENT AND COMPLIANCE COMMITTEE**

### **8.1. MISSIONS**

#### ***8.1.1. Missions concerning the global risk strategy***

The Committee advises the Board of directors on the adequacy of the global strategy of the Company and the overall current and future risk appetite. It assists the Board of directors when the latter verifies the implementation of this strategy by the actual managers and by the Head of risk management.

For this purpose, the Committee examines the key orientations of the Group's risk policy, including social and environmental orientations, based on measurements of the risk and profitability of the operations reported to it, in accordance with the regulations in force, as well as any specific issues related to these matters and methods.

In the event that a global risk limit is exceeded, a procedure to refer the matter to the Board of directors is provided for: the Executive Management informs the Chairman of the Committee, who can decide to convene the Committee or to request the convening of the Board of directors.

#### ***8.1.2. Missions concerning the examination of the prices of the products and services proposed to customers***

In the framework of its mission and according to the terms it shall define, the Committee examines whether the prices of the products and services proposed to customers are compatible with the risk strategy. Where prices do not properly reflect the risks, it presents to the Board of directors an action plan to remedy this.

#### ***8.1.3. Missions concerning remuneration***

Without prejudice to the missions of the Remuneration Committee, the Internal Control, Risk Management and Compliance Committee examines whether the incentives provided for by the policy and the remuneration practices of the Company are compatible with its situation with respect to the risks to which it is exposed, its capital, its liquidity and the probability and the spreading over time of the expected profits.

To carry out this mission, the Chairperson of the Committee or his/her representative shall attend the Remuneration Committee's meeting and presents to it the position upheld.

#### ***8.1.4. Missions concerning internal control and compliance***

The Committee ensures compliance with its obligations relating to internal control, including compliance with banking and financial regulations on internal control; it also examines any issue relating to the compliance policy relating, in particular, to reputational risk or professional ethics.

The Committee analyses the risk measurement and monitoring report. Twice a year it examines the internal control operations and findings (excluding accounting and financial internal control, which is the responsibility of the Financial Statements Committee) based on the information provided to it by Executive Management and the reports presented to it by the heads of permanent control, compliance and periodic controls. It reviews the Company's exchanges of correspondence with the Secretariat General of the Prudential Control and Resolution Authority (*Autorité de contrôle prudentiel et de résolution* – ACPR).

The Committee is briefed on incidents revealed by internal control that are reported on the basis of the thresholds and criteria defined by the Board of directors and reports on its findings to the Board of directors.

It analyses the status of recommendations made by the General Inspection unit that were not implemented. It is informed by the Chairman of the Board of directors of any possible failure to implement corrective measures decided within the framework of the internal control, of which it would have been informed directly by the head of periodic control and reports on its findings to the Board of directors.

The General Inspection charter is presented to the Committee.

### **8.2. ACCESS TO THE INFORMATION**

The Committee has all the information about the situation of the Company with respect to risks. It may, if this is necessary, use the services of the Head of risk management or of outside experts.

### **8.3. JOINT MEETINGS OF THE FINANCIAL STATEMENTS COMMITTEE AND THE INTERNAL CONTROL, RISK MANAGEMENT AND COMPLIANCE COMMITTEE**

The Financial Statements Committee and the Internal Control, Risk Management and Compliance Committee shall meet at the request of the Chairman of the Internal Control, Risk Management and Compliance Committee, or at the request of the Chairman of the Financial Statements Committee or at the request of the Chairman of the Board of directors.

In that context, the members of these committees:

- shall be briefed of the mission plan of the General Inspection and of the audit plan of the Statutory Auditors and shall prepare the work of the Board of directors in assessing the risk policies and management systems;
- deal with common subjects concerning the risks and financial impacts policy (including provisioning). They carry out, in particular, a systematic review of the risks that can in the future have a significant impact on the financial statements.

This meeting shall be chaired by the Chairman of the Financial Statements Committee.

## **ARTICLE 9. THE CORPORATE GOVERNANCE, ETHICS, NOMINATIONS AND CSR COMMITTEE**

### **9.1. MISSIONS CONCERNING CORPORATE GOVERNANCE**

The Committee is tasked with monitoring Corporate governance issues. Its role is to help the Board of directors to adapt Corporate governance practices within BNP Paribas and to assess its functioning.

It ensures the follow up on a regular basis of the evolution in the governance disciplines at the global, European and national levels. At least once a year, it presents a summary thereon to the Board of directors. It selects measures that are suitable for the Group and which are likely to bring its procedures, organisation and conduct in line with best practice in this area.

It examines the draft report on Corporate governance and all other documents required by applicable laws and regulations.

The Committee is in charge of the follow up of questions related to the social and environmental responsibility ("CSR"). For this purpose, it handles more specifically the Group's contribution to sustainable economic development, in particular by an ethical financing of the economy, by promoting the development and the commitment of the employees, by the protection of the environment and the fight against climate change, as well as the positive impact of the Group in the society.

### **9.2. CODE OF CONDUCT**

The Committee carries out regular monitoring of the update of BNP Paribas Group's Code of conduct.

### **9.3. MISSIONS CONCERNING THE IDENTIFICATION OF, SELECTION OF, AND SUCCESSION PLAN FOR DIRECTORS, COMMITTEE MEMBERS, AND NON-VOTING DIRECTORS (*CENSEURS*)**

For the identification of, selection of, and succession plan for the directors, the Committee applies the principles and procedure described in the Policy on the suitability of Members of the management body and Key function holders. The Committee regularly reviews this policy and proposes any amendments it deems advisable to the Board of directors.

The Committee sets an objective to achieve with respect to gender balance on the Board of directors. It draws up a policy aimed at achieving this objective. This objective and this policy, once set, are approved by the Board of directors.

As the case may be, the Committee proposes to the Board of directors the appointment of the non-voting directors.

### **9.4. MISSIONS CONCERNING THE ASSESSMENT OF THE BOARD OF DIRECTORS**

The Committee assesses periodically, and at least once a year, the balance and diversity of the Board in compliance with the Policy on the suitability of Members of the management body and Key function holders.

Furthermore, an assessment of the Board of directors is made by a firm of external expert advisors every three years.

### **9.5. MISSIONS CONCERNING THE SELECTION OF, APPOINTMENT OF, AND SUCCESSION PLAN FOR THE CHAIRMAN, MEMBERS OF EXECUTIVE MANAGEMENT, AND KEY FUNCTION HOLDERS**

The Committee periodically examines the Policy on the suitability of Members of the management body and Key function holders regarding the selection of, appointment of, and succession plan for the executive officers, the Chief Operating Officer(s), the Chairman, and the Key function holders as defined in this Policy, and makes recommendations in the matter.

The Committee contributes to the selection and appointment of, as well as the establishment of succession plans for, the Chairman and members of the Executive Management, pursuant to the Policy on the suitability of Members of the management body and Key function holders.

With regard to the key function holders, it ensures that the Policy on the suitability of Members of the Management body and Key function holders is applied by Executive Management.

## **9.6. MISSIONS CONCERNING THE ASSESSMENT OF THE CHAIRMAN, CHIEF EXECUTIVE OFFICER, AND CHIEF OPERATING OFFICER(S)**

The Committee assesses the action of the Chairman.

It makes an assessment of the performance of the Chief Executive Officer and of the Chief Operating Officer(s) in the light of the strategic directions of the business established by the Board of directors and taking into consideration their capacities for anticipation, decision, organisation and exemplarity.

## **9.7. MISSIONS CONCERNING THE INDEPENDENCE OF THE DIRECTORS**

The Committee is tasked with assessing the independence of the directors, within the meaning of the Afep-MEDEF Code, and reporting its findings to the Board of directors.

## **9.8. MISSIONS CONCERNING THE GENERAL BALANCE OF THE BOARD OF DIRECTORS**

The Committee ensures that the Board of directors is not dominated by one person or, a small group of persons in a manner that is detrimental to the interests of the Company. For this purpose, it applies the Policy on the suitability of Members of the management body and Key function holders.

## **ARTICLE 10. THE REMUNERATION COMMITTEE**

The Committee prepares the decisions that the Board of directors approves concerning remuneration, in particular that which has an effect on risk and the management of risks.

The Committee makes an annual examination:

- of the principles of the remuneration policy of the Company;
- of the remuneration, allowances and benefits of any kind granted to the directors and corporate officers of the Company;
- of the remuneration policies of the categories of staff, including the executive managers, risk takers, and staff engaged in control functions and any employee, who given his overall income, is in the same remuneration bracket as those whose professional activities have a material impact on the risk profile of the Company or of the Group.

The Committee directly controls the compensation of the Head of the RISK Function, the Head of Compliance and the Head of General Inspection, with regard to their independence and the rules laid down by the Code of conduct.

Within the framework of the missions described above, the Committee prepares the work of the Board of directors on the principles of the remuneration policies, in particular concerning Group staff whose professional activities have a material impact on the Group's risk profile, in accordance with the regulations in force.

It is tasked with studying all issues related to the personal status of the directors and corporate officers, and in particular the remuneration, the amount of retirement benefits and the allotment of subscription or purchase options to the Company's shares, as well as the provisions governing the departure of the members of the Company's management or representational bodies.

It examines the conditions, the amount and the distribution of the subscription or purchase stock option plans. Similarly, it examines the conditions for the allotment of free shares.

With the Chairman, it is also within its remit to assist the Chief Executive Officer with any matter relating to the remuneration of senior executives that the latter might submit to it.

## **GUIDELINES ON THE ASSESSMENT OF THE SUITABILITY OF MEMBERS OF THE MANAGEMENT BODY AND KEY FUNCTION HOLDERS**

---

### **I. BACKGROUND AND DEFINITIONS**

#### **a. Background**

The purpose of the Policy on the suitability of Members of the management body and Key function holders is, while complying with the legal and regulatory provisions applicable to the Company, to specify and detail the procedures for implementing the provisions of the Internal Rules and of the regulations applicable to BNP Paribas in the French Monetary and Financial Code (hereinafter "CoMoFi"), the European Banking Authority ("EBA") Guidelines on the assessment of the suitability of members of the management body and key function holders (the "Fit and Proper Guidelines") for which the revision published on 2 July 2021, and on Internal governance, from the comply or explain process (defined below).

Pursuant to these provisions, these guidelines cover the following topics:

- I. Identification of, selection of, and succession plan for Members of the management body and Key function holders:
  - a. Identification of, selection of, and succession plan for directors,
  - b. Identification of, selection of, and succession plan for the Chief Executive Officer and Chief Operating Officer(s),
  - c. Identification of, selection of, and succession plan for Key function holders;

- II.** Independence of mind and management of conflicts of interest of the Members of the management body:
  - a.** General principles,
  - b.** Cases of conflicts of interests,
  - c.** Management of conflicts of interests;
- III.** Compliance with the rules on limitation of directorships and on availability of the Members of the management body:
  - a.** Compliance with rules when appointing a Member of the management body,
  - b.** Compliance with rules while holding directorship as a Member of the management body;
- IV.** Good repute, honesty, and integrity of the Members of the management body;
- V.** Diversity of the Members of the management body and collective competence of the Board of directors;
- VI.** Induction and training of the Members of the management body.

These guidelines are approved by the Board of directors. Updates shall also be submitted for approval to the Board of directors.

## **b. Definitions**

**Members of the management body** means the directors, the Chief Executive Officer, and the Chief Operating Officer(s).

**Key function holders** means, for the purposes of the Fit and Proper Guidelines, the Chief Financial Officer, the Head of Compliance, the Head of RISK and the Head of the General Inspection, the Head of LEGAL, the Head of Human Resources, and the individuals to whom the Company has decided to confer the title of Deputy Chief Operating Officers.

**Fit and Proper** means the assessment conducted by BNP Paribas on the collective suitability of the Board and of the relevant individuals with regard to the following criteria:

- knowledge, skills and experience;
- good reputation, honesty, and integrity;
- independence of mind;
- compliance with the rules on limitation of directorships and on availability.

**Comply or explain process** means the procedure in the Single Supervisory Mechanism by virtue of which the European Central Bank ("ECB") and the competent national authorities announce their intention to comply, fully, partially, or not at all, with the guidelines issued by that authority.

**Company** means BNP Paribas.

**CGEN** means the Corporate Governance, Ethics, Nominations and CSR Committee of BNP Paribas.

**SCA** means the Secretariat of the Board of directors of BNP Paribas.

## **II. IDENTIFICATION OF, SELECTION OF, AND SUCCESSION PLAN FOR MEMBERS OF THE MANAGEMENT BODY AND KEY FUNCTION HOLDERS**

### **a. Identification of, selection of, and succession plan for directors**

The CGEN is tasked with the identification of the persons that are likely to be appointed as directors, regardless of their role on the Board of directors, to establish and to maintain at all times a list of these persons, which will be periodically monitored by the CGEN, without precisely determining the circumstances requiring their nomination to the Board of directors.

#### ***Identification by the CGEN of the persons likely to be appointed as directors***

The CGEN shall identify and recommend to the Board of directors candidates suitable for the non-executive directorship of director, with a view to proposing their candidacy to the General Meeting. In the determination of the potential candidates, the CGEN assesses the balance of skills, experience, diversity, as well as the integrity and the capacity of understanding the stakes and the risks, both personal and collective, of the members of the Board. It ensures, furthermore, that the candidates are able to act objectively, critically and independently, notably with respect to other directorships they hold, that they have the courage necessary to express their thoughts and their judgements, sufficient availability to have a strong commitment in their duties and the objectivity indispensable for their directorship and, lastly, the desire to protect the interests of the Company and ensure its proper running.

The CGEN specifies the missions and the necessary qualifications for the duties to be carried out within the Board of directors and calculates the time to be devoted to such duties.

For the purposes of identifying the candidate, the CGEN,

- on the one hand, mandates, if it wishes so, one or several specialised agencies in the research for independent directors with the meaning of the provisions provided in Afep-MEDEF Code; this or these specialised agencies are selected further to a tender organised in coordination with the SCA;
- on the other hand gathers inputs on this from other Board members.

Upon receipt of a proposal, the CGEN conducts a careful examination of the provisions of these guidelines as well as on the following criteria based on both personal and collective skills:

- knowledge and skill in requested areas, based on experience and the ability to understand the issues and risks of key activities for the Bank, including social and environmental issues as well as money laundering and terrorism financing related risks, enabling directors to make informed and effective decisions;
- courage, in particular to express opinions and make judgments, enabling directors to remain objective and independent;
- availability, *i.e.* sufficient time for the director to dedicate to his or her directorship and related training, and the assiduity, which allow the necessary hindsight and promote the director's commitment and sense of responsibility regarding the exercise of their directorship;
- loyalty, which fosters the director's commitment to the Company and to their duties within the Board, which collectively represents the shareholders;
- director's proper understanding of the Company's culture and ethics;
- good reputation and propriety: a person should not be considered of good reputation and meeting the propriety criterion if his or her personal or business conduct gives rise to any material doubt about his or her ability to ensure his or her directorship as independent director, and if, more specifically, he or she is personally involved in a money laundering or terrorism financing operation or attempt.

The CGEN ensures the regular updating of the list of persons that are likely to be selected, and, once a year, reports to the Board the work performed in order to identify the persons that are likely to be appointed directors so that the Board can deliberate on it.

As appropriate, the CGEN shall identify those individuals likely to be selected for the non-executive directorship of Chairman in consideration of the criteria set out above.

### ***Selection by the Board of directors of the persons likely to become members of the Board***

When the Board has to decide the appointment of a new member, the CGEN decides upon the submission of the candidacy to the Board in order, if the Board decides so, to propose such candidacy to the General Meeting. First, it shall communicate to the Chairman of the Board the name of the person who is likely to be appointed setting out the reasons for its proposal. The Chairman of the Board of directors contacts the relevant person and, in the case of an agreement with this person, asked the SCA to review the situation of the person in accordance with the above provisions. The Chairman of the CGEN and the Chairman of the Board met potential candidates.

A candidate for the non-executive directorship of Chairman of the Board of directors is submitted to the Chairman of CGEN so that this latter may contact the relevant candidate.

If the review and interview regarding the duties of both director and Chairman of the Board of directors are deemed to be satisfactory, the CGEN can then propose to the Board of directors to adopt the proposal for the submission of the candidacy.

The SCA can ask the candidates for any document required for its review, which it will retain pursuant to legal and regulatory provisions on personal data.

For specialised committees, the CGEN makes recommendations to the Board of directors on the appointment of the members in cooperation with the Chairman of the relevant Committee, and of the Chairmen of the Committees when they are to be renewed.

### ***Succession plan for directors and review of the composition of the Board***

The CGEN is responsible for examining the provisions allowing for the succession of the directors as well as, where applicable, the Chairman.

Once a year, the SCA, under the responsibility of the CGEN, reviews the composition of the Board of directors in accordance with the provisions relating to the identification of persons likely to become members of the Board of directors. The CGEN presents to the Board of directors the outcome of such review, which is subject to Board's deliberation.

Moreover, the CGEN carried out an annual assessment of the potential successor(s) for the Chairman of the Board of directors liable to be proposed to the Board of directors in the event of temporary or permanent incapacity or death of the position holder. The Chairman of the Board of directors has obtained the consent of the potential successor(s). This assessment gives rise to the preparation of a list of names that is kept by the SCA.

#### **b. Identification of, selection of, and succession plan for the Chief Executive Officer and Chief Operating Officer(s)**

The Board of directors appoints the Chief Executive Officer and, on the recommendation of the latter, the Chief Operating Officer(s), and sets any limits to their powers.

For this purpose, acting jointly with the Chairman, the CGEN puts forward recommendations for the selection of the Chief Executive Officer for consideration by the Board, and, acting on recommendation of the Chief Executive Officer, it puts forward recommendations for the selection of the Chief Operating Officer(s). The CGEN ensures, at the time of identifying and putting forward recommendations for the Chief Operating Officer position(s), upon proposal from the Chief Executive Officer and where applicable with the support of the Company's Human Resources, that there is a gender balance and guarantees the presence of at least one woman and one man until the end of the selection process.

To identify the candidate, the CGEN conducts a careful examination of his or her candidacy in consideration of the provisions of this policy as well as the following criteria:

- knowledge and skill in requested areas, based on experience and ability to understand the issues and risks of key activities for the Bank, including social and environmental issues as well as money laundering and terrorism financing related risks, enabling them to make informed and effective decisions;
- courage, in particular to express opinions and make judgements, enabling directors to remain objective and independent;
- availability, *i.e.* the sufficient time which the Chief Executive Officer and Chief Operating Officer(s) must dedicate to their duties and to the relevant training;
- loyalty, which fosters the commitment of the Chief Executive Officer and the Chief Operating Officer(s) to the Company and its shareholders;
- good repute and propriety: a person shall not be considered of good repute or meeting the propriety criterion if his or her personal or business conduct gives rise to any material doubt about his or her suitability as Chief Executive Officer or Chief Operating Officer, as the case may be, and if, more specifically, he or she is personally involved in a money laundering or terrorism financing operation or attempt.

The SCA can ask the candidate or the Company, as the case may be, for any document required for its review, which it shall retain pursuant to the legal and regulatory provisions on personal data.

It is also responsible for examining the provisions allowing the succession of the Chief Executive Officer and Chief Operating Officer(s).

Moreover, the CGEN carried out an annual assessment of the potential successor(s) for the Chief Executive Officer liable to be proposed to the Board of directors in the event of temporary or permanent incapacity or death of the position holder. The Chairman of the Board of directors has obtained the consent of the potential successor(s). This assessment gives rise to the preparation of a list of names that is kept by the SCA.

### **c. Identification and appointment of the Key function holders**

The CGEN ensures that in the identification and appointment of the Key function holders by Executive Management, with the support of the Company's Human Resources, as the case may be, the following are considered:

- skills, qualification, and experience;
- and good repute, honesty, and integrity, taking particular care to ensure that the concerned person is not personally involved in a money laundering or terrorism financing operation or attempt.

## **III. INDEPENDENCE OF MIND AND MANAGEMENT OF CONFLICTS OF INTEREST OF THE MEMBERS OF THE MANAGEMENT BODY**

In consideration of the so-called "related-party agreements" regime in articles L.225-38 *et seq.* of the French Commercial Code, provisions regarding independence of mind and conflicts of interest set out in section 9 of the Fit and Proper Guidelines and Principle 3 of the Guidelines on Corporate governance principles for banks, published in July 2015 by the Basel Committee on Banking Supervision, and with the objective to embrace the best practices observed in the governance area, the aim of this section is to (i) recall the general principles applied to ensure the independence of mind of every Member of the management body, (ii) define the situations of conflicts of interest to which directors may face in light of the various activities that the Group conducts and which could be in competition with the interests of the concerned director, shall it be directly or indirectly, and (iii) provide details, in case such conflict of interest occurs, concerning the necessary measures to be adopted in order to take the situation into account and handle it in an appropriate manner.

### **a. General principles**

Every Member of the management body shall at all times maintain his or her independence of mind, analysis, assessment, decision, and action so as to be able to issue opinions and make decisions in an informed, judicious and objective manner. For this purpose, the Member of the management body shall respect both the legal and regulatory provisions applicable to conflicts of interest – specifically the so-called "related-party" agreements – and the provisions below on the measures to be adopted in recognising conflicts of interest and managing them appropriately.

More specifically, the Members of the management body shall refuse any benefit or service liable to compromise their independence, and undertake to avoid any conflict of interest (as described below).

Each member of the Board of directors shall freely express his or her positions, possibly minority positions, about the subjects discussed in the meetings of the Board or specialised committee.

It is recalled that any conflict of interest may question the fact that a director qualifies as an independent director according to the provisions of the Afep-MEDEF Code.

### **b. Cases of conflicts of interests**

Besides the so-called "*conventions réglementées*" regime provided for by articles L.225-38 and *et seq.* of the French Commercial Code, the following situations may give rise to conflicts of interest:

- a) each agreement entered into directly, or through an intermediary person<sup>1</sup>, between a company that BNP Paribas controls within the meaning of article L.233-16 of the French Commercial Code and one of the Members of the Company's management body;
- b) each agreement to which one of the Members of the Company's management body is indirectly interested, meaning that without being directly party to the said agreement entered into by one of the companies controlled by the Company within the meaning of article L.233-16 of the French Commercial Code, the Member of the management body benefits in a way or another from the agreement;
- c) each agreement entered into between one of the companies controlled by the Company, within the meaning of article L.233-16 of the French Commercial Code, and a company owned by a Member of the Company's management body or of which such director is also an owner, general partner, manager, director, Member of the Supervisory Board or, generally, in a senior manager of this company;
- d) each situation where a member of the management body is or might be, in relation with the exercise of his or her non-executive directorship, the recipient of inside information (i) concerning a company in which he or she is an executive director within the meaning of c) or in which he or she exercises a function or holds interests whatever, or (ii) concerning the Company or one of the companies under its control within the meaning of article L.233-16 of the French Commercial Code which may be interests concerning the activity of a company in which he or she is an executive director within the meaning of c) or in which he or she exercises a function or holds interests whatever they may be;

<sup>1</sup> The interposition of an intermediary corresponds to a situation in which the Member of the management body is the ultimate real beneficiary of the agreement between one of the companies that BNP Paribas controls and the co-contracting party of that controlled company.

- e) each situation where the Member of the management body could take part in a Board meeting which would be of interest to any person with whom he or she has family or professional links, or close relations;
- f) the undertaking of a new directorship whether in a listed or unlisted entity, French or foreign, not belonging to a group of which he or she is a manager, or any participation in the specialised Committee of a corporate body or any other new directorship<sup>1</sup>;
- g) each currently valid commitment made under directorship previously held in France or abroad (e.g. a non-competition clause);
- h) more generally, each situation that may constitute a conflict of interest between the Member of the management body and the Company or one of its subsidiaries within the meaning of article L.233-16 of the French Commercial Code.

#### c. Management of conflicts of interests

The assessment of current agreements is subject to a separate procedure by the Board of directors entitled “Implementation procedure for conflicts of interest in relation to loans and other transactions granted to the members of the management body and their related parties”.

#### **Situations covered by the “related-party agreements” regime**

The Members of the management body acknowledge having read and understood the related-party agreement regime and the obligations resulting from such regime.

#### **Other situations**

If one of the situations described in a) through e) or g) or h) above should occur, the Member of the management body shall immediately inform the Chairman of the Board of directors, who shall in turn inform the CGEN so that the latter, based on the analysis of the presented situation, may give an opinion which may consist of one or more measures described in the following paragraph. This opinion is then submitted to the Board of directors and, if followed by the said Board, is notified by the Chairman of the Board, to the concerned director. The decision of the Board of directors will be included in the minutes of the meeting.

More specifically, if one of the situations described in a) through e) or g) or h) above should occur during a Board of directors meeting or one of its Committees, and without prejudice to the application of the preceding paragraph, the Board of directors or the Committee, as the case may be, shall immediately determine the measures to be taken, which may take different forms including the fact the concerned director or Committee would not participate to the debate or the votes, would not receive the information on the issue that gives or may give rise to a conflict of interest, or even would have to leave the meeting of the Board or the Committee during the discussion of the concerned issue. The minutes of the Board or the Committee includes the measures adopted.

If the situation covered in f) above should occur, he or she shall inform the Chairman of the Board of directors of his or her intention to accept (i) a new directorship, whether in a listed or unlisted, French or foreign entity that does not belong to a group of which he or she is an executive director, or (ii) each participation in the specialised committees of a corporate body, or (iii) any other new directorship, such that the Board of directors, on the recommendation of the CGEN, may decide on the compatibility of such an appointment with the non-executive directorship of a Member of the management body in the Company. If necessary, the provisions on limitation of directorships and on the availability of Members of the management body set forth below shall be applied *mutatis mutandis*.

In any case, if the Board considers that the relevant Member of the management body is no longer able to perform his or her duties therein because of a conflict of interest, he or she shall resign.

More generally, in the event of a breach of obligations with respect to conflicts of interest by a Member of the management body, the Chairman of the Board of directors shall take all legal measures required to remedy it. He or she may, furthermore, keep the relevant regulators informed of such acts.

## **IV. COMPLIANCE WITH RULES ON LIMITATION OF DIRECTORSHIPS AND ON AVAILABILITY OF THE MEMBERS OF THE MANAGEMENT BODY**

The Member of the management body complies with legal and regulatory provisions, specifically those set out in articles L.511-52 and R.511-17 of the CoMoFi (the “CoMoFi Provisions”) and in the Fit and Proper Guidelines, which are applicable to him or her or applicable to the Company in matters of limitation of directorships and of availability as well as those in the Afep-MEDEF Corporate Governance Code.

#### a. Compliance with rules when appointing a Member of the management body

Once a candidate is chosen by the CGEN and prior to submitting it to the Board of directors, the SCA, under the responsibility of the Chairman of the Board of directors:

- a) contacts the candidate in order to request the list of directorships as well as any other functions he or she may hold, and how much time is spent on them each year;
- b) ensures that the candidate is in compliance with the Provisions of the CoMoFi regarding the number of directorships;

<sup>1</sup> This includes those of a political nature.

- c) ensures that the candidate has the time required for the duties and training he or she would perform for the directorship in question;
- d) and checks that these directorships and other functions are suitable with the position of a Member of the management body, in accordance with the above provisions on independence of mind and management of conflicts of interest.

The candidate shall certify that the list of directorships and functions is complete and provide on request of the SCA any document (company bylaws, extracts from trade registers or equivalent, certificate, statement, *etc.*), that the SCA deems useful to have.

The SCA then analyses the directorships declared by the candidate so as to ensure that the Provisions of the CoMoFi are complied with. It records the written documents on which the analysis and the conclusions were based, in accordance with personal data laws and regulations. As part of this review, the SCA may proceed to the researches he deems useful.

At the outcome of the SCA's review,

- a) either the candidate is in compliance with the Provisions of the CoMoFi and has the time required to serve as a director: the SCA shall report to the Chairman of the Board of directors, who shall inform the Chairman of the CGEN. The CGEN shall then propose the candidate to the Board of directors which shall take a decision on his or her appointment or co-option, as the case may be; or
- b) the candidate is not in compliance with the Provisions of the CoMoFi or does not have the time required to serve as a director: the SCA shall inform the Chairman of the Board, who shall in turn notify the Chairman of the CGEN, so that the measures for remedying this situation can be reviewed with the candidate. If the candidate is willing to make the necessary arrangements prior to his nomination or his or her co-option, the SCA states this in minutes which will then be submitted to the Board of directors which will decide on the nomination or co-option, as the case may be.

If the candidate is not willing or cannot implement the necessary steps, the SCA establishes minutes to the attention of the CGEN, which acts the end of the selection process.

#### **b. Compliance with rules while holding directorship as a Member of the management body**

At all times, the Members of the management body shall comply with the rules on limitation of directorships and dedicate the time and effort required to carrying out their duties and responsibilities. They accept the discipline involved in working together in the respect of each other's opinions and they exercise their sense of responsibilities towards shareholders and the other stakeholders of the Group.

In addition, directors shall actively and regularly participate in meetings of the Board of directors and of the committees, and shall attend the Annual General Shareholders' Meeting. Furthermore, the directors representing employees and the directors representing employee shareholders, are given preparation time determined by the Board, in accordance with the laws in force.

To this end, every Member of the management body shall inform the Chairman of the Board of directors of his or her intention to accept (i) a new directorship, whether in a listed or unlisted, French or foreign entity, not belonging to a group of which he or she is an executive officer, or (ii) any participation in the specialised committees of a corporate body, or (iii) any new directorship, in France or abroad, such that the Board of directors, on the recommendation of the Corporate Governance, Ethics, Nominations and CSR Committee may decide on the compatibility of such an appointment with the non-executive directorship in the Company.

In this case, the SCA shall follow the analysis and verification procedure for the appointment of a Member of the management body.

At the end of the analysis referred to above, one of two situations may arise:

- a) either the Member of the management body accepting this new directorship complies with the Provisions of the CoMoFi, in which case the SCA informs the Chairman of the Board of directors, who in turn informs the CGEN. The CGEN then ensures that this new directorship complies specifically with the conflicts of interest rules on set out above;
- b) or the Member of the management body, by accepting this new directorship, is no longer in compliance with the Provisions of the CoMoFi, in which case the SCA shall inform the Chairman of the Board of directors, who shall report it to the Chairman of the CGEN, so that the measures for complying with the CoMoFi Provisions can be reviewed with the Member of the management body.

Whatever the case, if he or she no longer has the time to perform his or her duties, the SCA shall inform the Chairman of the Board of directors, who shall report it to the Chairman of the CGEN so that the measures for remedying the situation can be reviewed with the Member of the management body.

If the Member of the management body is willing to maintain his or her directorship in the Company, he or she shall either not accept the proposed directorship, or resign from a directorship he or she already holds. The SCA shall include this in minutes that shall then be submitted to the Board of directors.

If the Member of the management body decides to accept this new directorship without resigning from any directorship he or she already holds, the Member of the management body shall tender his or her letter of resignation as Member of the management body. The SCA shall mention this in a report to be addressed to the CGEN which acts this resignation, with the effective date to be decided on by the Board of directors. Any Member of the management body who considers him- or herself unable to continue on the Board of directors, or on the Committees of which he or she is a member shall resign.

At least once a year, the SCA asks the Members of the management body to update the form known as the “EBA Form”, under which are listed all the directorships held by each Member of the management body, and to which is appended their availability table.

This update shall enable the SCA to ensure that all Members of the management body are in compliance with the Provisions of the CoMoFi and available on an ongoing basis.

## **V. GOOD REPUTE, HONESTY, AND INTEGRITY OF THE MEMBERS OF THE MANAGEMENT BODY**

At all times, the Members of the management body shall meet the requirements of good repute and show honesty and integrity.

Candidates and Members of the management body undertake to immediately notify the Chairman of the Board of directors and the SCA of:

- a) any conviction (including on appeal, in criminal, civil, or administrative proceedings);
- b) any disciplinary measure;
- c) any prior refusal of validation by competent banking or financial authorities in France or abroad;
- d) any refusal, withdrawal, revocation, or prohibition on management of any registration, authorisation, membership, or licence to conduct a business or profession;
- e) any sanction by public authorities or professional organisations, or investigations or enforcement proceedings ongoing in France or abroad;
- f) any dismissal for professional misconduct or any dismissal from a directorship he or she may be the subject;
- g) any situation mentioned in a) through f) above concerning a company of which he or she is an executive officer, shareholder, or partner.

The SCA shall retain the written evidence and documents on which the analysis and the conclusions of the CGEN were based, in accordance with personal data laws and regulations. As part of this review, and at the request of the Chairman of the Board of directors, or, as applicable, the Chairman of the CGEN, the SCA may carry out any searches it deems useful, including questioning the relevant person.

If the Chairman of the Board of directors, or, as applicable, the Chairman of the CGEN, is notified of the occurrence of one of the aforementioned cases, he or she shall inform the CGEN so that this latter, based on the analysis of the reported situation, can issue an opinion as to the good repute of the Member of the management body and decide whether to ask him or her to resign. This opinion is then submitted to the Board of directors and if followed by the said Board, is notified by the Chairman of the Board to the director concerned. The decision of the Board of directors will be included in the minutes of the meeting.

In addition, every Member of the management board undertakes to act with loyalty and integrity toward the Members of the management board, the shareholders, and the Company alike. Failing this, the Chairman of the Board of directors, or, as applicable, the Chairman of the CGEN, may refer the matter to the CGEN so that the latter can issue an opinion as to the loyalty and integrity of the Member of the management body and may decide to ask him or her to resign.

## **VI. DIVERSITY OF THE MEMBERS OF THE MANAGEMENT BODY AND COLLECTIVE COMPETENCE OF THE BOARD OF DIRECTORS**

The CGEN shall set the objectives to achieve with respect to gender balance on the Board of directors, age diversity, professional qualifications and experience, and nationality among the Members of the management body, so as to ensure that at all times they have the skills necessary to understand the risks, including money laundering and terrorism financing risks, and issues, including social and environmental issues, and potential developments in the Company.

For this purpose, the CGEN periodically assesses and at least once a year, the structure, the size, the composition and the effectiveness of the Board of directors with respect to the missions with which it is entrusted, and makes any useful recommendations to the Board.

## **VII. INDUCTION AND TRAINING OF THE MEMBERS OF THE MANAGEMENT BODY**

The Members of the Company's management body shall possess, both individually and collectively, the expertise, experience, skills, understanding, and personal qualities necessary, specifically in terms of professionalism and integrity, to properly perform their duties in connection with each of the significant activities of the Company, guaranteeing effective governance and supervision.

The Members of the management body shall maintain their knowledge in the following fields: finance and banking, risk management (in particular environmental, social, money laundering and terrorism financing related risks), regulations applicable to the Company, and, more broadly, any field related to the development and strategy of the Company.

The Company shall dedicate the human and financial resources required for the training of the Members of the management body. With this aim, annual training courses are administered by the managers of the topics presented, and strategy seminars are held.

In addition to the training courses mentioned above, any director may request additional training. For this purpose, he or she shall initiate a dialogue with the Chairman and the SCA, who shall determine the arrangements for the requested training.

The directors representing employees and the directors representing employee shareholders are given time dedicated to training determined by the Board, in accordance with the laws in force. At the end of the training, the training centre chosen by the Board must issue a certificate of regular attendance, which the director representing employees and the director representing employee shareholders must give to the Secretary of the Board.

The Board of directors shall ensure that new directors meet with the Key function holders.

## **DESCRIPTION OF THE IMPLEMENTATION PROCEDURE FOR CONFLICTS OF INTEREST IN RELATION TO LOANS AND OTHER TRANSACTIONS GRANTED TO THE MEMBERS OF THE MANAGEMENT BODY AND THEIR RELATED PARTIES**

---

Pursuant to article L. 22-10-12 of the French Commercial Code, the Board of directors has implemented a procedure in order to regularly ensure that the transactions entered into in the ordinary course of business and on arms' length basis (so-called "free" agreements) meet these conditions, to strengthen the process for identifying and monitoring conflicts of interest and to implement a process dedicated to review loans granted by the Bank to Members of the management body and related natural and legal persons.

Pursuant to the provisions of article 72 of the Belgian law on the status and supervision of credit institutions, this procedure was extended by the Board of directors in June 2022 to transactions concluded between BNP Paribas Fortis and the directors, the Chief Executive Officer and the Chief Operating Officers of BNP Paribas.

This procedure covers agreements concluded between BNP Paribas and the directors, the Chairman, the Chief Executive Officer and the Chief Operating Officers of BNP Paribas or natural persons closely associated with them, their holding companies and legal entities in which they have an interest (directorship or equity holding).

There are two parts to the procedure for so-called "free" agreements:

- Agreements between BNP Paribas and the natural persons or holding companies mentioned above:  
Each year, the Bank reviews the list of agreements entered into between BNP Paribas and the natural persons or asset holding companies mentioned above. The Compliance Function ensures that these agreements do cover current operations and are concluded under normal conditions and prepares a report that it sends to the Secretary of the Board of directors.
- Agreements between BNP Paribas and legal entities (other than asset management companies) mentioned above:  
This procedure is based on existing policies (such as the Code of conduct or the "Customer Interests Protection Policy") and also provides:
  - the declaration by the directors and corporate officers of the legal entities with which they are associated,
  - the verification by the Bank of any business relationships between each of these legal entities,
  - in-depth monitoring of agreements identified using a risk-based approach.

A report is prepared for each of these elements and submitted every year to the CGEN which informs the Board of directors.

### **2.1.3 COMPENSATION AND BENEFITS AWARDED TO THE GROUP'S DIRECTORS AND CORPORATE OFFICERS**

---

The provisions of the French Commercial Code provide for *ex ante* approval each year by the Ordinary Annual General Meeting of the compensation policy for directors and corporate officers. The compensation policy for directors and corporate officers of BNP Paribas is presented below on pages 79 to 85.

The compensation of these same directors and corporate officers is also subject to the *ex post* vote of the Ordinary Annual General Meeting on the information on compensation referred to in article L.22-10-9 I of the French Commercial Code (this information is set out below on pages 86 *et seq.*). When the Annual General Meeting does not approve these items, the Board of directors submits an amended compensation policy, taking into account the shareholders' vote, for the approval of the next Annual General Meeting. The payment of directors' compensation for the current year is suspended until the amended compensation policy is approved. When the payment is reinstated, payments are backdated to the last Annual General Meeting.

Lastly, the compensation of each corporate officer is subject to a second *ex post* vote on the total compensation and benefits in kind paid during the previous year or awarded in respect of the same year (the information relating to this compensation is outlined in tables 1a and b, 2a and b, 3a and b and 4a and b on pages 87 *et seq.*). The variable components of compensation awarded to the corporate officers in respect of the previous year can only be paid after they have been approved by the Annual General Meeting on the basis of this second vote.

## **COMPENSATION POLICY FOR DIRECTORS AND CORPORATE OFFICERS SUBMITTED FOR SHAREHOLDERS' EX ANTE APPROVAL, IN ACCORDANCE WITH ARTICLE L.22-10-8 OF THE FRENCH COMMERCIAL CODE, AT THE ANNUAL GENERAL MEETING OF 14 MAY 2024**

In this report, the Board of directors provides details of the fixed and variable components of total compensation and benefits in kind, attributable to the directors, the Chairman of the Board of directors, the Chief Executive Officer and the Chief Operating Officers for their three-year corporate offices within BNP Paribas (SA), over a three-year period.

The elements of the compensation policy presented below are the subject of resolutions submitted for the approval of the Shareholders' Annual General Meeting voting under the quorum and majority conditions required for Ordinary General Meetings. If the Annual General Meeting does not approve these resolutions, the previous compensation policy, already approved by the Annual General Meeting of 16 May 2023, will continue to apply. In this case, the Board of directors will submit for the approval of the next Annual General Meeting a draft resolution outlining an amended compensation policy, indicating how the shareholders' vote was taken into account and, where appropriate, the opinions stated during the Annual General Meeting.

The compensation policy for directors and corporate officers complies with applicable legislation and regulations, the Afep-MEDEF Code and the BNP Paribas Code of conduct. The policy as detailed below (in particular the performance criteria):

- (i) is aligned with the Company's corporate interest and contributes to the Company's commercial strategy and sustainability;
- (ii) takes into consideration the compensation and employment conditions of employees within the Company; and
- (iii) is gender-neutral.

Without prejudice to the powers of the Annual General Meeting in this respect, the determination of the compensation of directors and corporate officers is the responsibility of the Board of directors and is based on proposals from the Remuneration Committee, which drafts the decisions which the Board of directors approves regarding compensation. In particular, the Remuneration Committee annually reviews the remuneration, compensation and benefits in kind awarded to the Company's directors and corporate officers. This committee is made up of three independent members who have experience of compensation systems and market practices in this area and includes a director elected by employees.

Measures aimed at avoiding and managing conflicts of interest are established in the Internal Rules of the Board of directors, by the Policy on the suitability of Members of the management body and Key function holders, as well as by the Implementation procedure for conflicts of interest in relation to loans and other transactions granted to the Members of the management body and their related parties. Executive corporate officers do not take part in deliberations or voting on their own compensation.

The compensation of corporate officers takes into account, in its principles, the following objectives:

- alignment with the Bank's corporate interest and with that of its shareholders:
  - consistency with a medium to long-term outlook, especially in terms of the growth of the Bank's value, good risk management and the relative performance of its share,
  - integration of extra-financial assessment criteria,
  - taking into account CSR aspects to determine the compensation (partly aligned with the CSR objectives considered for certain employees), and in particular criteria related to the Group's climate objectives,
  - guaranteeing sufficient variability in the amounts allocated to reflect changes in the Bank's results without weighing too heavily on fixed expenses;
- the transparency of compensation:
  - all components (fixed, annual variable, conditional long-term incentive plan) are included in the overall assessment of compensation,
  - balance between the components of compensation, which must contribute to the general interest of the Bank and reflect best market practices and legal and regulatory constraints,
  - the rules must be stable, strict and intelligible;
- compensation that is sufficiently attractive to facilitate the selection of profiles that are particularly competent in the Group's business areas.

### **I. DIRECTORS' COMPENSATION**

The compensation policy for directors is gender-neutral.

In accordance with the law, the global amount of directors' compensation is set by the Shareholders' Annual General Meeting.

The individual amount of directors' compensation is determined by the Board of directors pursuant to a proposal of the Remuneration Committee. It consists of a fixed portion and a portion based on actual participation in meetings, regardless of the means. Directors residing abroad receive an increased amount, except where they may participate in meetings of the Board of directors by videoconference or telecommunications means. Additional compensation is paid for actual participation in one of the four Specialised Committees. This is increased for directors participating in the CCIRC in view of the specific investment required by this committee.

At the end of the year, the Remuneration Committee examines the allocation of directors' compensation and the amount paid to each of them in respect of the year on the basis of an audit of each director's actual presence at Board and Committee

meetings. Where applicable, the remainder of the global amount fixed by the Annual General Meeting is allocated in proportion to the amount paid to each director. In the event of an additional extraordinary meeting of the Board or Committees, the amount of the compensation due to each director is adjusted, in proportion to the amounts paid to each director.

The Board of directors then approves the individual distribution of the directors' compensation for the year before its actual payment to the directors (subject to the provisions of article L.22-10-34 I of the French Commercial Code which provides that the payment of directors' compensation for the current year is suspended in the event of a negative vote by the shareholders on the components of compensation paid during or awarded in respect of the past year to corporate officers).

## II. COMPENSATION OF THE CHAIRMAN OF THE BOARD OF DIRECTORS

The annual fixed compensation of the Chairman, Mr Jean Lemierre, amounts to EUR 950,000 gross.

The Chairman does not receive annual variable compensation or conditional long-term incentive plans. The absence of variable compensation reflects the independence of the Chairman with respect to the Executive Management.

Should a new Chairman be appointed, on the proposal of the Remuneration Committee and under this compensation policy, the Board of directors will set the amount of his/her fixed compensation in line with the new Chairman's profile and experience.

## III. COMPENSATION OF EXECUTIVE CORPORATE OFFICERS

Compensation for executive corporate officers includes:

- a fixed component;
- an annual variable component;
- a conditional long-term incentive plan (long-term incentive plan or LTIP).

The levels of these different components are determined using established market benchmarks.

Compensation takes into account the cap on total variable compensation in relation to fixed compensation (including awards under long-term incentive plans) in accordance with article L.511-78 of the French Monetary and Financial Code, applicable specifically to credit institutions.

In accordance with paragraph 2 of said article, the Shareholders' Annual General Meeting of BNP Paribas of 18 May 2021 decided that this cap would be set at twice the amount of the fixed compensation for a duration of three years; this decision will once again be submitted for approval to the Shareholders' Annual General Meeting of 14 May 2024.

For the purposes of calculating the aforementioned ratio, a discount rate may in addition be applied to no more than 25% of the total variable compensation inasmuch as the payment is made in the form of instruments after a deferred period of at least five years, in accordance with article L.511-79 of the French Monetary and Financial Code.

### 1. Fixed compensation

The annual fixed compensation of the Chief Executive Officer, Mr Jean-Laurent Bonnafé, amounts to EUR 1,843,000 gross.

The last increase in the fixed annual compensation of the Chief Executive Officer, effective from 1 January 2022, was decided by the Board of directors and approved by Annual General Meeting of 17 May 2022. The Board of directors had noted the Bank's very good performance since the Chief Executive Officer was appointed.

As part of the annual review of compensation, the Board reviewed the compensation of the Chief Executive Officers of ten comparable European banks. The compensation of the Chief Executive Officer of BNP Paribas remains significantly lower than the median of the situations observed.

At 31 December 2023, the fixed annual compensation of the Chief Operating Officers amounted to EUR 1,500,000 gross for the Chief Operating Officer in charge of the CIB scope, Mr Yann Gérardin, and EUR 900,000 gross for the Chief Operating Officer in charge of the CPBS scope, Mr Thierry Laborde. These fixed annual compensations have remained unchanged since their determination in May 2021 when Mr Yann Gérardin and Mr Thierry Laborde were appointed.

Subject to approval by the Annual General Meeting of 14 May 2024, the Board of directors proposes a revaluation of 20% of the fixed annual compensation of the Chief Operating Officers, effective from 1 January 2024, taking into account the following items:

- the significant growth in the Bank's results and the consolidation of its European leadership;
- the growth in revenues of the CIB and CPBS divisions since 2020, +20% and +11% respectively (excluding the activity related to Bank of the West sold on 1 February 2023) and the confirmation of the BNP Paribas Group's leadership positions in these strategic activities;
- the increase in the average fixed compensation of BNP Paribas SA employees in France between 2020 and 2023 (+11% based on the data presented in the social reports for 2020 to 2022 and taking into account individual and collective salary increases for 2023).

The Board of directors also reviewed the compensation of holders of comparable positions on the basis of a study carried out by the independent firm WTW. This study is based on a panel of nine comparable European banks (Barclays, BBVA, Crédit Agricole, Deutsche Bank, HSBC, Santander, Société Générale, UBS and Unicredit) among which BNP Paribas ranks in terms of revenues at year-end 2022, in first position for the CIB division and in third position for the CPBS division. The total compensation awarded to the Group's Chief Operating Officers for 2022 is in sixth position out of ten, around 30% lower than the median.

Following this 20% revaluation effective on 1 January 2024, the annual fixed compensation of the Chief Operating Officer in charge of the CIB scope, Mr Yann Gérardin, amounts to EUR 1,800,000 gross and that of the Chief Operating Officer in charge of the CPBS scope, Mr Thierry Laborde, to EUR 1,080,000 gross.

After revaluation, the total compensation of the Chief Operating Officers remains below the median of the situations recorded for the panel of holders of comparable functions of the nine comparable European banks.

Should a new Chief Executive Officer or a new Chief Operating Officer be appointed, the Board of directors will, on the proposal of the Remuneration Committee and under this compensation policy, set his/her fixed compensation in line with his/her profile and experience. The components of annual variable compensation or of the conditional long-term incentive plan will be set in accordance with the principles set out in this compensation policy.

## **2. Annual variable compensation**

The variable component is intended to reflect the effective contribution of executive corporate officers to the success of BNP Paribas in respect of their functions as executive managers of an International Financial Services Group.

### **General principles**

The variable compensation of executive corporate officers is determined based on a target compensation equal to 100% of their annual fixed compensation for the Chief Executive Officer and the Chief Operating Officers.

The variable compensation varies in accordance with criteria representative of the Group's results, CSR-linked criteria and a qualitative assessment by the Board of directors.

In addition, the payment of the annual variable compensation includes a deferred period, "malus" and "claw-back" arrangements, as well as a cancellation clause in the event of a bank resolution measure, in accordance with same terms and conditions as those described below for the LTIP (see 3 below).

### **Criteria linked to the Group's financial performance**

Criteria linked to the Group's financial performance account for 75% of the target variable compensation and enable the corresponding portion of the annual variable compensation to be calculated in proportion to the evolution of financial indicators. There are two Group-based quantitative criteria for the Chief Executive Officer and four for the Chief Operating Officers, half of which are Group-based and the other half based on their respective areas of responsibility.

If objectives based on quantitative criteria are exceeded (or not achieved), the fraction of the target compensation in question evolves proportionally within the limits of the cap mentioned below.

- For the Chief Executive Officer, the quantitative criteria apply to the Group's overall performance based on the following equally weighted criteria:
  - evolution of net earnings per share for the year compared to the previous year (37.5% of the target variable compensation);
  - percentage of achievement of the Group's budgeted gross operating income (37.5% of the target variable compensation).
- For the Chief Operating Officers, half of the quantitative criteria are based on the Group's overall performance and half on the performance of their respective scopes of responsibility based on the following equally weighted criteria:
  - evolution of net earnings per share for the year compared to the previous year (18.75% of the target variable compensation);
  - percentage of achievement of the Group's budgeted gross operating income (18.75% of the target variable compensation);
  - evolution of pre-tax net income for the year compared to the previous year for their respective areas of responsibility (18.75% of the target variable compensation);
  - percentage of achievement of the budgeted gross operating income of their respective areas of responsibility (18.75% of the target variable compensation).

### **Criteria linked to the Group's CSR performance**

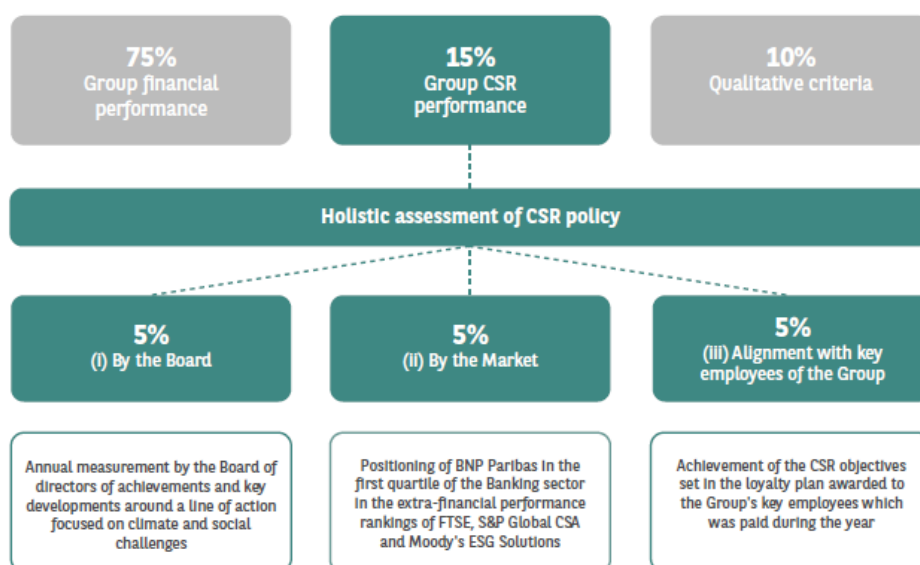

A portion of 15% of the target variable compensation is linked to the Group's CSR performance.

The allocation of this portion of the annual variable compensation is based on multi-criteria measurement resulting from a holistic approach of actions undertaken by the BNP Paribas Group with respect to social, societal, and environmental issues.

With this in mind, this compensation structure includes three weighted criteria, each at 5%:

- (i) the Board of directors' assessment of the year's highlights, primarily with regard to climatic and social challenges;
- (ii) the publications of extra-financial rating agencies measuring the quality of the BNP Paribas' CSR positioning relative to its peers;
- (iii) an alignment with the CSR objectives included in the loyalty plans granted to the Group's key employees. These objectives are based on the Group's four CSR pillars in terms of economic, social, civic and environmental responsibility and include, in particular, quantified climate objectives as part of the support for the Group's clients towards a low-carbon economy and the reduction of the BNP Paribas Group's environmental footprint.

For several years, the BNP Paribas Group has made the variable compensation of executive corporate officers conditional on the achievement of criteria in line with the Group's climate objectives in accordance with the principle of the Afep-MEDEF Code, which came into force in December 2022.

### Qualitative criteria

The portion of the variable compensation linked to the Board of directors' qualitative assessment is 10% of the target variable compensation.

The Board of directors considers it essential to carry out this qualitative assessment, particularly given its enhanced responsibilities in terms of supervision and control in line with the French Monetary and Financial Code. In addition to the Bank's strategy, which it must approve considering social and environmental issues, the Board of directors must also assess the performance of executive corporate officers based on their capacities for anticipation, decision-making, leadership and exemplary behaviour as part of the 2025 strategic plan.

This assessment will be made in light of the economic situation and with regard to the Group's operational and integrated model.

### SUMMARY OF THE CRITERIA USED TO DETERMINE THE ANNUAL VARIABLE COMPENSATION APPLICABLE TO THE CHIEF EXECUTIVE OFFICER AND THE CHIEF OPERATING OFFICERS

| Criteria   | % of target annual variable compensation |                          | Type   |
|--|--|--------------------------|--|
|  | Chief Executive Officer                  | Chief Operating Officers |  |
| Criteria linked to the Group's financial performance | 37.50%                                   | 18.75%                   | Evolution of net earnings per share for the year compared to the previous year   |
|  | 37.50%                                   | 18.75%                   | Achievement of budgeted Group gross operating income   |
|  | N/A.                                     | 18.75%                   | Evolution of pre-tax net income of the area of responsibility for the year compared to the previous year   |
|  | N/A.                                     | 18.75%                   | Achievement of budgeted gross operating income of the area of responsibility   |
| Criteria linked to the Group's CSR performance       | 15.00%                                   | 15.00%                   | Multicriteria assessment of the actions taken by BNP Paribas Group with respect to social, societal and environmental issues   |
| Qualitative criteria                                 | 10.00%                                   | 10.00%                   | Assessment with regard to implementation of the Bank's strategic guidelines, particularly the human, organisational and technical dimensions of the Growth, Technology & Sustainability 2025 plan, and taking into account the general context of the year under consideration |

## Ceiling

The Board of directors ensures the consistency of the annual variable compensation with evolution of the Group's results and the area of responsibility of each of the Chief Operating Officers.

In any case:

- each of the criteria related to the Group's financial performance (two in the case of the Chief Executive Officer and four in the case of the Chief Operating Officers) is capped at 130% of its target weight and cannot therefore result in an annual variable compensation exceeding respectively 48.75% of the target variable compensation for the Chief Executive Officer and 24.375% for the Chief Operating Officers;
- the criteria related to the Group's CSR performance, as well as the qualitative criteria, are capped at 100% of their target weight and cannot therefore result in an annual variable compensation greater than, respectively, 15% and 10% of the target variable compensation;
- the amount of the annual variable compensation awarded to each executive corporate officer is capped at 120% of their target variable compensation.

## Terms and conditions of payment

The payment terms for variable compensation of BNP Paribas Group's executive corporate officers, in accordance with the provisions of the French Monetary and Financial Code and the European Banking Authority's Guidelines on compensation policy, are:

- 60% of annual variable compensation is deferred over five years, at the rate of one-fifth per year;
- regarding the non-deferred portion of the variable compensation:
  - half will be paid in cash in May of the year of the award, subject to the approval of the Shareholders' Annual General Meeting under the terms provided for by article L.22-10-34 II of the French Commercial Code, and
  - half will be paid in cash indexed to BNP Paribas share performance, at the end of a one-year holding period starting on the award date (award date is the date of the Board of directors' decision), *i.e.* in practice, in March of the year following the year in which the compensation is awarded;
- the deferred portion of the variable compensation will be paid annually in fifths over five years, the first payment being paid only at the end of a deferred period of one year from the award date of the variable compensation. Each instalment will be paid:
  - half in cash in March every year, and
  - half in cash indexed to BNP Paribas share performance, in March of the following year, at the end of a one-year holding period,
  - provided that the Group's pre-tax ROE for the year preceding the payment is greater than 5%.

### 3. Conditional Long-Term Incentive Plan over five years (LTIP)

In 2011, to align the interests of executive corporate officers with the medium to long-term performance of the BNP Paribas Group without compromising risk management, the Board of directors introduced a conditional long-term incentive plan (LTIP) over five years.

The LTIP, which amounts to the target annual variable compensation awarded in respect of the previous year, is split into two equal parts: one recognising the increase in the intrinsic value of the BNP Paribas share, and the other, its potential outperformance relative to peers.

#### First half of the awarded amount: intrinsic share performance

The first half of the awarded amount depends on the evolution of the share price<sup>1</sup> given that no payment will be made for this first half of the awarded amount if the BNP Paribas share price does not increase by at least 5% from the date of the award by the Board of directors to the end of a five-year period from the award date.

If the share price increases by at least 5% during this period, a factor is applied to the initial amount, resulting in the amount being increased or reduced, in line with the table below:

| Evolution of the BNP Paribas share price over five years | Factor applied to the first half of the award |
|--|---|
| Strictly under 5%  | 0 (no payment)                                |
| Equal to or higher than 5% and under 10%                 | 40%   |
| Equal to or higher than 10% and under 20%                | 80%   |
| Equal to or higher than 20% and under 33%                | 120%  |

<sup>1</sup> The initial and final amounts used to measure the performance of the share price over the five-year period are as follows:

- the initial value is the average of the opening price of the BNP Paribas share for the rolling twelve-month period preceding the award date;
- the final value is the average of the opening price of the BNP Paribas share in the rolling twelve-month period preceding the payment date.

|   |      |
|---|------|
| Equal to or higher than 33% and under 50% | 130% |
| Equal to or higher than 50% and under 75% | 150% |
| Equal or higher than 75%                  | 175% |

Thus, the first half of the awarded amount will only be paid in full at the end of the five-year period if the share price increases by more than 20% during this five-year period. The factor applied to the first half of the award will, in any event, always be less than or equal to the evolution of the share price and cannot, under any circumstances, exceed 175% of the awarded amount, assuming that the share price has increased by more than 75% at the end of the five-year period.

#### **Second half of the awarded amount: outperformance of the BNP Paribas share relative to peers**

Fulfilment of this condition is assessed by measuring the performance of the BNP Paribas share price relative to the "EURO STOXX Banks" index of main Eurozone banks.

It only takes into account the outperformance of the BNP Paribas share price relative to the average index measured over the twelve months prior to the award date, compared with the average for this same index for a period of twelve months prior to payment. The second half of the target amount under the LTIP will only be paid in full if the BNP Paribas share price outperforms the index by at least 10%.

#### **Relative performance of the BNP Paribas share in relation to the performance of the EURO STOXX Banks index**

#### **Factor applied to the second half of the award**

|                           |      |
|---------------------------|------|
| Lower or equal to 0 point | 0%   |
| 0 to 5 points inclusive   | 50%  |
| 5 to 10 points inclusive  | 80%  |
| Greater than 10 points    | 100% |

The amount determined by applying each of the conditions over the plan's five-year period is the compensation paid under the LTIP.

#### **Ceiling**

According to the provisions of article L.511-78 of the French Monetary and Financial Code relating to the cap on the variable component as a percentage of the fixed component, total variable compensation awarded, including amounts awarded under the LTIP, may not be more than twice the fixed compensation, in accordance with the decision of the Shareholders' Annual General Meeting of 18 May 2021; this decision will once again be submitted for approval to the Shareholders' Annual General Meeting of 14 May 2024. To calculate the ratio, a discount rate may in addition be applied to no more than 25% of the total variable compensation in as much as the payment is made in the form of instruments after a deferred period of at least five years.

#### **Payment of LTIP**

Based on the evolution of the BNP Paribas share price, the first half of the amount paid under the LTIP may not, under any circumstances, exceed 175% of the initial awarded amount. Payment of the second half of the award may not, under any circumstances, exceed the initial awarded amount.

Thus, under no circumstances can payments under the LTIP exceed 137.5% of their award value.

#### **Continued presence requirement**

LTIP rules require continued presence throughout the entire duration of the plan. Departure from the Group would result in the LTIP not being paid. Nonetheless, in the event of retirement or death after the end of the first year of the plan, payments would be made provided that performance conditions are met and subject to assessment by the Board of directors.

#### **Malus and Claw-back clauses**

The LTIP provides for "malus" clauses and "claw-back" arrangements. Thus, in the event that the beneficiary should behave in a way or be guilty of acts that do not comply with BNP Paribas' expectations, as defined in particular in terms of:

- (i) compliance with the Code of conduct, internal rules, regulations; and
- (ii) risk assessment and management,

the Board of directors may decide not only not to proceed with the payment of the planned amount, whether or not the beneficiary is present, but also to request the return of all or part of the sums already paid under previous plans over a period of five years.

Moreover, this rule provides that in the event of the implementation of a bank resolution measure under the French Monetary and Financial Code, the LTIP rights shall be definitively cancelled.

The Board of directors reserves the right to reduce awards under the LTIP, in particular in the event of non-compliance with the above-mentioned ceiling.

#### **IV. Extraordinary compensation**

No extraordinary compensation may be paid to the directors, the Chairman of the Board of directors, the Chief Executive Officer or the Chief Operating Officers.

#### **V. Benefits in kind**

The Chairman of the Board of directors, the Chief Executive Officer and the Chief Operating Officers may have a company car.

#### **VI. Stock option or share purchase subscription plans**

Directors and corporate officers do not benefit from any stock option or share purchase subscription plans.

#### **VII. Performance shares**

Directors and corporate officers do not receive any performance or free shares.

#### **VIII. Post-employment benefits**

##### **1. *Payments or benefits due or likely to become due upon termination or change in functions***

Directors and corporate officers do not receive any contractual compensation for termination of their term of directorship.

##### **2. *Retirement benefits***

Directors and corporate officers, with the exception of the Chief Operating Officers, do not receive post-employment benefits when they leave the Company or when they retire.

The Chief Operating Officers are entitled to the standard retirement benefits awarded to all BNP Paribas (SA) employees pursuant to their initial employment contract.

##### **3. *Supplementary pension plans***

The corporate officers benefit solely from the supplementary defined-contribution pension plan set up for all BNP Paribas (SA) employees, in accordance with article 83 of the French General Tax Code.

##### **4. *Protection insurance***

The Chairman of the Board of directors, the Chief Executive Officer and the Chief Operating Officers are entitled to the same flexible welfare benefits (death and disability insurance, as well as the common healthcare benefit scheme) as all BNP Paribas (SA) employees.

They also benefit from the *Garantie Vie Professionnelle Accidents* system (death and disability insurance), which covers all employees of BNP Paribas (SA).

The Chief Executive Officer and the Chief Operating Officers are also entitled to the supplementary plan set up for members of the Group Executive Committee, which pays out additional capital of EUR 1.10 million in the event of death or total and permanent disability. The employer contribution under this scheme is recognised as a benefit in kind.

##### **5. *Non-compete agreement***

Please note that the Chief Executive Officer signed a non-compete agreement with BNP Paribas (SA) on 25 February 2016. This agreement was approved by the Annual General Meeting of 26 May 2016 pursuant to the provisions of article L.225-38 of the French Commercial Code.

Under this agreement, if he ceases to hold any role or position in BNP Paribas, Mr Jean-Laurent Bonnafé undertakes, for a period of twelve months, not to take any role whatsoever, either directly or indirectly, for a credit institution, investment or insurance firm whose securities are traded on a regulated market in France or abroad, as well as in France for a credit institution, investment or insurance firm whose securities are not traded on a regulated market. Decisions to apply the agreement will be taken in due time with sincerity and loyalty.

Under this agreement, the Chief Executive Officer will receive a payment equal to 1.2 times the total of his fixed and variable compensation (excluding LTIP) received during the year prior to his departure. One-twelfth of the indemnity would be paid each month.

In accordance with the Afep-MEDEF Code and article R.22-10-14 of the French Commercial Code which stipulate that the payment of a non-compete indemnity must be excluded if the person concerned claimed his pension rights or has exceeded the age of 65 and in line with the stipulations of said non-compete agreement, the Board of directors and the Chief Executive Officer have confirmed that they comply with this provision.

## **IX. Loans, advances and guarantees granted to the Group's directors and corporate officers**

BNP Paribas directors and corporate officers and their spouse and dependent children may be granted loans.

These loans, representing normal transactions, are granted on an arm's length basis, in accordance with the Implementation procedure for conflicts of interest in relation to loans and other transactions granted to the Members of the management body and their related parties.

**COMPONENTS OF COMPENSATION PAID IN 2023 OR ALLOCATED IN RESPECT OF THE SAME YEAR SUBMITTED TO THE EX POST VOTE OF SHAREHOLDERS DURING THE ANNUAL GENERAL MEETING OF 14 MAY 2024 IN ACCORDANCE WITH ARTICLE L.22-10-34 OF THE FRENCH COMMERCIAL CODE**

The total compensation of directors and corporate officers, as described below, is in line with the compensation policy adopted at the Annual General Meeting of 16 May 2023.

**DIRECTORS' COMPENSATION** *(amounts in euros)*

| Directors                           | Amounts paid in<br>2022 in respect of<br>the year<br>(as a reminder) | Amounts paid in<br>2023 in respect of<br>the year |
|-------------------------------------|--|---|

| WICKER-MIURIN Fields <sup>(5)</sup> | 136,698  | 75,941  |
| <b>TOTAL</b>                        | <b>1,540,000</b>   | <b>1,540,000</b>                                  |

(1) Director until 17 May 2022.

(2) Amount paid to the corresponding trade union organisation.

(3) Director until 10 September 2023.

(4) Director from 17 May 2022.

(5) Director until 16 May 2023.

For information, the rules for allocating directors' compensation are as follows:

|   | Fixed portion <sup>(1)</sup> | Portion based on actual participation |                                  |
|---|------------------------------|---------------------------------------|----------------------------------|
|   |                              | Scheduled meeting                     | Extraordinary meeting            |
| Directors resident in France                          | EUR 23,000                   | EUR 3,300/meeting                     | EUR 4,400/meeting                |
| Directors resident outside of France                  | EUR 23,000                   | EUR 4,500/meeting <sup>(2)</sup>      | EUR 4,600/meeting <sup>(3)</sup> |
| Chairman of a specialised committee (excluding CCIRC) |                              | EUR 6,000/meeting                     | EUR 6,000/meeting                |
| Member of a specialised committee (excluding CCIRC)   |                              | EUR 3,000/meeting                     | EUR 3,000/meeting                |
| Chairman of CCIRC                                     |                              | EUR 6,200/meeting                     | EUR 6,200/meeting                |
| Member of the CCIRC (excluding joint session)         |                              | EUR 3,200/meeting                     | EUR 3,200/meeting                |

(1) The fixed portion is calculated prorata temporis of the term of directorship during the year in question.

(2) Or EUR 3,300 per meeting if participation is via videoconference or telecommunication means.

(3) Or EUR 4,400 per meeting if participation is via videoconference or telecommunication means.

Directors elected by the employees and the director representing the employee shareholders receive compensation under their employment contract.

At 31 December 2023, the composition of the Board of directors complies with the obligation for gender parity provided by article L225-18-1 of the French Commercial Code.

Directors' compensation is also gender-neutral. It consists of a fixed portion and a portion based on actual participation in meetings on the basis of the allocation rules presented above.

## Compensation and benefits of the corporate officers

**TABLE NO. 1: COMPONENTS OF COMPENSATION PAID DURING 2023 OR AWARDED IN RESPECT OF THE SAME YEAR TO MR JEAN LEMIERRE, CHAIRMAN OF THE BOARD OF DIRECTORS, SUBMITTED TO THE VOTE OF THE SHAREHOLDERS** (amounts in euros)

### a. Components of compensation awarded in respect of 2023 to Mr Jean LEMIERRE, Chairman of the Board of directors

|   | Amounts        | Comments   |
|---|----------------|--|
| Fixed compensation                              | 950,000 (paid) | The compensation paid to Mr Jean LEMIERRE is determined following the guidelines proposed by the Remuneration Committee and approved by the Board of directors. This fixed compensation has not changed since December 2014. |
| Annual variable compensation                    | None           | Mr Jean LEMIERRE is not entitled to annual variable compensation. The absence of variable compensation reflects the independence of the Chairman with respect to the Executive Management.                                   |
| Conditional long-term incentive plan            | None           | Mr Jean LEMIERRE does not benefit from a conditional long-term incentive plan. The absence of variable compensation reflects the independence of the Chairman with respect to the Executive Management.                      |
| Compensation linked to the term of directorship | 64,758 (paid)  | Mr Jean LEMIERRE does not receive any compensation in respect of directorships that he holds in the Group's companies other than BNP Paribas (SA).   |
| Extraordinary compensation                      | None           |  |
| Stock options awarded during the period         | None           |  |
| Performance shares awarded during the year      | None           |  |
| Benefits in kind                                | 5,023          | Mr Jean LEMIERRE has a company car.  |

|              |                  |
|--------------|------------------|
| <b>TOTAL</b> | <b>1,019,781</b> |
|--------------|------------------|

- b. Components of compensation paid to Mr Jean LEMIERRE, Chairman of the Board of directors during 2023 in respect of previous years (having been subject to a shareholders' vote at the time of their award)**

|      | Submission date to the<br>AGM and resolution<br>number | Amounts paid in<br>2023 |
|------|--|-------------------------|
| None |  |                         |

- c. Commitments of any kind corresponding to compensation components, indemnities or benefits in kind due or likely to be due as a result of the assumption, termination or change in functions or after performing these to the benefit of Mr Jean LEMIERRE, Chairman of the Board of directors**

|   | Amounts | Comments  |
|---|---------|---|
| Sign-on bonuses and severance payments          | None    | Mr Jean LEMIERRE receives no sign-on bonus or severance payment.  |
| Supplementary defined-benefit pension plan      | None    | Mr Jean LEMIERRE does not benefit from any supplementary defined-benefit pension plan.  |
| Supplementary defined-contribution pension plan | 1,892   | Mr Jean LEMIERRE benefits from the defined-contribution plan (article 83 of the French General Tax Code) set up for all BNP Paribas (SA) employees. The amount of contributions paid by the Company under the plan for Mr Jean LEMIERRE in 2023 was EUR 1,892.  |
| Welfare benefit and healthcare plans            | 4,115   | Mr Jean LEMIERRE benefits from the disability, invalidity and death, and healthcare insurance plans offered to employees of BNP Paribas (SA). He also benefits from the <i>Garantie Vie Professionnelle Accidents</i> system (death and disability insurance) covering all employees of BNP Paribas (SA). The amount of the contributions paid by the Company in this respect for Mr Jean LEMIERRE in 2023 was EUR 4,115. |

**TABLE NO. 2: COMPONENTS OF COMPENSATION PAID DURING 2023 OR AWARDED IN RESPECT OF THE SAME YEAR TO MR JEAN-LAURENT BONNAFÉ, CHIEF EXECUTIVE OFFICER, SUBMITTED TO THE VOTE OF THE SHAREHOLDERS** (*amounts in euros*)

**a. Components of compensation awarded in respect of 2023 to Mr Jean-Laurent BONNAFÉ, Chief Executive Officer**

|  | <b>Amounts</b>      | <b>Comments</b>   |
|--|---------------------|---|
| Fixed compensation   | 1,843,000<br>(paid) | The compensation paid to Mr Jean-Laurent BONNAFÉ is determined following the guidelines proposed by the Remuneration Committee and approved by the Board of directors. The last increase in the fixed compensation of Mr Jean-Laurent BONNAFÉ, bringing it to EUR 1,843,000, dates from 7 February 2022 with effect from 1 January 2022. The Board of directors had noted the Bank's very good performance since the appointment of the Chief Executive Officer.  |
| Annual variable compensation <sup>(1)</sup>                                      | 1,877,648           | <p>The variable compensation of Mr Jean-Laurent BONNAFÉ evolves depending on criteria representative of Group results and his managerial performance. It is expressed as a percentage of a target variable compensation corresponding to 100% of fixed compensation for the year.</p> <p>The quantitative criteria depend on indicators linked to the Group's overall performance; they are as follows:</p> <ul style="list-style-type: none"> <li>▪ evolution of net earnings per share for the year compared to the previous year (37.5% of the target variable compensation);</li> <li>▪ percentage of achievement of the Group's budgeted gross operating income (37.5% of the target variable compensation).</li> </ul> <p>CSR criteria also condition 15% of the target variable compensation. They correspond to the multi-criteria assessment of the actions taken by the Group with respect to social, societal and environmental issues.</p> <p>The qualitative criteria represents 10% of the target variable compensation.</p> <p>After taking into account quantitative, CSR and qualitative criteria, the Board of directors set the annual variable compensation of Mr Jean-Laurent BONNAFÉ for 2023 at EUR 1,877,648, i.e. 101.88% of the target annual variable compensation:</p> <ul style="list-style-type: none"> <li>▪ half of the non-deferred portion of the variable compensation will be paid in May 2024, and half in March 2025, indexed to the performance of the BNP Paribas share;</li> <li>▪ the deferred portion of the variable compensation will be paid in fifths as of 2025. Each payment will be made half in March every year, and half in March of the following year, indexed to the performance of the BNP Paribas share. The last payment in respect of 2023 will therefore be made in March 2030;</li> <li>▪ the annual payment of the deferred variable compensation is subject to the condition that the ROE before tax of the Group for the year preceding the payment is greater than 5%.</li> </ul> <p>The ratio between the annual fixed compensation and variable compensation, as required under the French Commercial Code, is 101.88%.</p> |
| Conditional long-term incentive plan (fully deferred for a period of five years) | 610,217             | <p>The fair value of the LTIP awarded to Mr Jean-Laurent BONNAFÉ on 31 January 2024 with respect to 2023 amounts to EUR 610,217.</p> <p>The term of the LTIP is five years. The two conditions of the LTIP, one recognising an increase in the intrinsic value of the BNP Paribas share and the other recognising its potential outperformance relative to its peers, are assigned equal weighting in order to measure their effects separately.</p> <p>Payments under the LTIP may not exceed 137.5% of their award value.</p>   |
| Compensation linked to the term of directorship                                  | 64,758              | Mr Jean-Laurent BONNAFÉ receives compensation for his term of his directorship at BNP Paribas (SA).   |
| Extraordinary compensation   | None                |   |
| Stock options awarded during the period  | None                |   |
| Performance shares awarded during the year                                       | None                |   |
| Benefits in kind   | 6,267               | Mr Jean-Laurent BONNAFÉ has a company car. This amount also includes the employer contribution of EUR 1,360 paid by BNP Paribas (SA) for 2023 under the Executive Committee professional life insurance policy, offering an additional EUR 1.10 million in the event of death or total permanent disability.  |

**TOTAL** **4,401,890**

**c. Commitments of any kind corresponding to compensation components, indemnities or benefits in kind due or likely to be due as a result of the assumption, termination or change in functions or after performing these to the benefit of Mr Jean-Laurent BONNAFÉ, Chief Executive Officer**

| <b>Amounts</b>                         | <b>Comments</b>  |
|--|--|
| Sign-on bonuses and severance payments | None Mr Jean-Laurent BONNAFÉ receives no sign-on bonus or severance payment.   |
| Non-compete indemnity                  | None Under the non-compete clause signed on 25 February 2016, and subject to the conditions detailed below, Mr Jean-Laurent BONNAFÉ would receive compensation equal to 1.2 times the sum of his fixed and variable compensation (excluding conditional long-term incentive plan) received during the year prior to his departure. One-twelfth of the indemnity would be paid each month.<br>Under this agreement, if he ceases to hold any role or position in BNP Paribas, Mr Jean-Laurent BONNAFÉ undertakes, for a period of twelve months, not to take any role whatsoever, either directly or indirectly, for a credit institution, investment or insurance firm whose securities are traded on a regulated market in France or abroad, as well as in France for a credit institution, investment or insurance firm whose securities are not traded on a regulated market. Decisions to apply the agreement will be taken in due time with sincerity and loyalty.<br>In accordance with the Afep-MEDEF Code and article R.22-10-14 III of the French Commercial Code, which stipulate that the payment of a non-compete payment must be excluded if the person concerned claimed his pension rights or has exceeded the age of 65 and in line with the stipulations of said non-compete agreement, the Board of directors and the Chief Executive Officer have confirmed that they comply with this provision. |

|   |       |  |
|---|-------|--|
| Supplementary defined-benefit pension plan      | None  | Mr Jean-Laurent BONNAFÉ does not benefit from any supplementary defined-benefit pension plan.  |
| Supplementary defined-contribution pension plan | 1,892 | Mr Jean-Laurent BONNAFÉ benefits from the defined-contribution plan (article 83 of the French General Tax Code) set up for all BNP Paribas (SA) employees. The amount of contributions paid by the Company in this respect for Mr Jean-Laurent BONNAFÉ was, in 2023, EUR 1,892.  |
| Welfare benefit and healthcare plans            | 4,115 | Mr Jean-Laurent BONNAFÉ benefits from the disability, invalidity and death and healthcare insurance plans offered to employees of BNP Paribas (SA). He also benefits from the <i>Garantie Vie Professionnelle Accidents</i> system (death and disability insurance) covering all employees of BNP Paribas (SA). The amount of contributions paid by the Company in this respect for Mr Jean-Laurent BONNAFÉ was, in 2023, EUR 4,115. |

**Details relating to the annual variable compensation of executive corporate officers**

**Assessment of the achievement of the targets set for 2023**

At its meeting of 31 January 2024, the Board of directors assessed the achievement of the objectives set in accordance with the compensation policy.

**Group performance criteria**

Concerning the criterion linked to the evolution of net earnings per share for the year compared to the previous year, its measurement for the Chief Executive Officer Mr Jean-Laurent Bonnafé as a percentage of the target variable compensation, amounts to 41.25% for 2023 (20.63% for the Chief Operating Officers, Mr Yann Gérardin and Mr Thierry Laborde).

Concerning the criterion related to the achievement of the Group's gross operating income budget, its measurement for the Chief Executive Officer Mr Jean-Laurent Bonnafé as a percentage of the target variable compensation, amounts to 35.63% for 2023 (17.81% for the Chief Operating Officers, Mr Yann Gérardin and Mr Thierry Laborde).

In addition, for the Chief Operating Officers, Mr Yann Gérardin and Mr Thierry Laborde:

- concerning the criterion related to the evolution of net income before tax for the year compared to the previous year, relating to the scope under their responsibility, its measurement, as a percentage of the target variable compensation, is 19.95% for the CIB scope and 18.26% for the CPBS scope;
- concerning the criterion related to the achievement of the gross operating income budget for the scope under their responsibility, its measurement, as a percentage of the target variable compensation, is 18.55% for the CIB scope and 18.58% for the CPBS scope.

(1) These data are calculated using the average exchange rate for 2023.

(2) In order to be comparable with the results for 2023, the results for 2022 have been recomposed to take into account, in particular, the IFRS 5 impact. This recomposition was presented to the market in May 2023.

(3) The indicators used to calculate the annual financial performance of the Chief Executive Officer and Chief Operating Officers are based on the 2023 accounting results.

### Criteria linked to the Group's CSR performance

The Board of directors reviewed the achievement of the multi-criteria measurement with regard to the three criteria linked to the Group's CSR performance provided for in the compensation policy, each of which has a 5% weighting.

#### (i) Board's assessment of the CSR policy

With regard to the qualitative assessment, the Board of directors considered that this criteria has been met given the significant achievements in 2023 regarding environmental and social issues.

BNP Paribas has an ambitious policy of engagement in society on these issues, notably with a clear energy transition strategy and initiatives in favour of ethical responsibility. In 2023, the Bank accelerated its commitments to sustainable finance, which is one of the pillars of its 2025 strategic plan (Growth, Technology & Sustainability).

On the economic pillar:

- alignment of the loan portfolio with the Net Zero emissions objective in 2050 with the publication of the first Climate report with targets (i) by the end of 2025 for the electricity production, oil and gas and automotive sectors, and (ii) by the end of 2030 for the steel, aluminium and cement sectors;

- strengthening of the oil and gas policy to take into account the Group's new commitments, such as (i) achieving the target of 80% low-carbon in BNP Paribas' financing of energy production by 2028, (ii) achieving the target of 90% low-carbon in BNP Paribas' financing of energy production by 2030, (iii) the exclusion of all financing dedicated to the development of new oil and gas capacities and (iv) the 80% reduction of all upstream oil financing and the 30% reduction in financing for gas exploration-production by 2030;
- BNP Paribas' shift towards a majority of low-carbon energies was characterised in 2023 by a 13% increase in its low-carbon financing, representing EUR 32 billion at the end of September 2023 or 65% of financing related to energy production. At the same time, the Group reduced its fossil fuel financing by 27%, which at the end of September 2023 represented EUR 17.3 billion, *i.e.* 35% of financing related to energy production;
- number one world ranking in terms of sustainable bonds and ESG loans in 2023 according to Dealogic with USD 62.5 billion and 5<sup>th</sup> in terms of Sustainability-Linked Loans with USD 16.2 billion (1<sup>st</sup> European);
- prize for the best bank in the world in terms of sustainable finance in 2023 by Euromoney for the 3<sup>rd</sup> consecutive year;
- EUR 254 billion in assets under management of articles 8 and 9 funds within the meaning of SFDR<sup>1</sup> in BNP Paribas Asset Management's open-ended funds distributed in Europe;
- deployment of the ESG Assessment, a tool for assessing the environmental, social and governance (ESG) risk profile of the Group's corporate clients, which was almost completed at the end of 2023 for the Group's large corporate clients and extended to various client segments.

#### On the social pillar:

- protection of Group employees by providing assistance wherever they may need it (Türkiye, Morocco, Ukraine, Middle East) and by deploying the We Care program worldwide to promote the Bank's offer in terms of prevention, health and well-being at work;
- achievement of the Group's ambitious target in terms of gender representation with 37.1% of women in Senior Management Positions (SMP) by the end of 2023 (40% by 2025);
- broad promotion of BNP Paribas' inclusion policy during Inclusion Days, to raise employee awareness of equal opportunities, prejudice, disability and financial inclusion. A large majority of employees surveyed actively support BNP Paribas' initiatives in terms of diversity and inclusion (according to the Conduct & Inclusion survey conducted in 2023, which notably revealed that 87% of employees say they can be themselves at their workplace);
- recognition of the Group in 2023 as Top Employer Europe for the 10<sup>th</sup> consecutive year;
- success of the Sustainability Academy with more than 86,000 unique employees trained at least once on sustainable finance topics in 2023 (for 1.7 hours of training and 4.3 modules per person on average).

#### On the civic pillar:

- continued development of the Nickel offer (accounts and payment cards from twelve years old, without conditions) contributing to better financial inclusion: nearly 3.7 million accounts at the end of 2023 with a presence in France, Spain, Belgium, Portugal, and in Germany since the summer of 2023;
- continued development of Impact Contracts as a structurer and investor with nine new projects for a total amount of EUR 28 million, including the one operated by Andes, which aims to combat food waste and food insecurity on a large scale;
- sixteen new investments with a social and/or environmental impact in 2023 for a total of nearly EUR 56 million, including Ecov, a shared mobility operator in areas where the public transport offering is reduced or absent;
- development of the first ISLF (Inclusive & Sustainability-Linked Financing), which aim to support inclusion players, through reduced-rate financing and dedicated technical assistance if social, environmental and fair transition objectives are achieved, with the first three signed with Adie in France, PerMicro in Italy, and Banco da Familia in Brazil;
- exceptional donations of over EUR 35 million from, among other actions, the sale of fine furniture (EUR 500,000), an exceptional TEB budget for disaster victims in Türkiye (over EUR 12 million) and EUR 20 million from the solidarity tranche (ESG component) linked to the buyback of shares in favour of over 90 structures promoting environmental knowledge and combating extreme poverty.

#### On the environmental pillar:

- number one world ranking for green bonds with USD 25.6 billion in 2023 according to Dealogic;
- numerous low-carbon transactions with the LCTG (Low-Carbon Transition Group), including:
  - major role in the loan of more than EUR 4 billion for the Baltic Power project, enabling the construction of the first offshore wind farm in Polish waters, which will provide renewable energy to more than 1.5 million households from 2026,
  - financing of more than EUR 800 million for AESC (Automotive Energy Supply Corporation), a Japanese world leader in battery design and production, for a gigafactory planned for construction in Douai in France;

<sup>1</sup> "Sustainable Finance Disclosure Regulation": European regulation on the disclosure of sustainability information in the financial services sector, which entered into force in March 2021, which imposes transparency obligations on sustainable investment funds:

- "article 8" funds: products that promote environmental or social characteristics;
- "article 9" funds: products with a sustainable investment objective.

- acquisition by BNP Paribas Asset Management of a majority interest in International Woodland Company (IWC), based in Denmark, specialised in investment and advisory services dedicated to sustainable forestry, agriculture and natural ecosystems, as well as carbon credits and conservation projects;
- launch of a multi-year partnership with the Naturalis Biodiversity Center to protect and restore biodiversity, by supporting 150 biodiversity scientists, with the objectives of education, data or financial innovation.

### **(ii) Market assessment of the CSR policy**

Regarding the criterion related to the Group's CSR positioning compared to its peers in the extra-financial performance rankings of FTSE, S&P Global Corporate Sustainability Assessment and Moody's ESG Solutions, BNP Paribas is effectively in the 1<sup>st</sup> quartile of the Banks sector of the three aforementioned agencies.

### **(iii) Assessment of the CSR policy by alignment with the Group's key employees**

Regarding the criterion of alignment with the Group's key employees, the three-year CSR target measure set in the loyalty plan awarded to the Group's key employees are also met.

Consequently, the multi-criteria measure, as a percentage of the target variable compensation, amounts to 15% for 2023 for the Chief Executive Officer and the Chief Operating Officers.

| CSR – Assessment of the CSR policy |                  |                    |                                    |                            |
|------------------------------------|------------------|--------------------|------------------------------------|----------------------------|
|                                    | (i) By the Board | (ii) By the market | (iii) Alignment with key employees | Multi-criteria measurement |
| Weighting                          | 5.00%            | 5.00%              | 5.00%                              |                            |
| Measurement                        | 5.00%            | 5.00%              | 5.00%                              | <b>15.00%</b>              |

### **Qualitative criteria**

The Board of directors assessed the qualitative portion of the annual variable compensation in terms of the application of the criteria provided for in the compensation policy.

For 2023, the Board of directors took into main consideration and deemed satisfied by Mr Jean-Laurent Bonnafé the following:

- increase of 2023 net income attributable to the shareholders compared to 2022; the Group generated a positive jaws effect and continued its growth in a long-term approach by managing its risks in a prudent manner;
- his decisive role in the Bank's management with the continued implementation of the GTS 2025 Plan and in particular in strengthening the Group's operational resilience;
- his decisive action in the sale of Bank of the West to BMO Financial Group, generating a net capital gain of EUR 2.9 billion partly redeployed to the Group's organic growth and targeted investments and acquisitions;
- his continued involvement in the definition and implementation of the Group's CSR strategy in order to contribute to a carbon neutral economy in 2050, in particular through new commitments made in 2023: reduction of financing dedicated to the (i) oil and gas sectors with, in particular, the end of new production capacities financing and the (ii) steel, cement and aluminium sectors;
- his role in increasing the number of women in governing bodies as well as his involvement in all the pillars of the Group's diversity and inclusion policy.

For Mr Yann Gérardin, as Chief Operating Officer in charge of the Corporate and Institutional Banking (CIB) division and in line with the assessments proposed for Mr Jean-Laurent Bonnafé:

- CIB division's results in 2023 in line with budget after an exceptional year in 2022, with good risk management, reflecting BNP Paribas' continued improvement in the rankings of investment banks in Europe thanks to market share gains;
- his contribution to the implementation of the BNP Paribas integrated model through the acceleration of joint initiatives with each of the CPBS and IPS divisions, in particular as part of the Payments & Flows and Savings transversal initiatives;
- his commitment to continuing to make CIB a leader in CSR, and which is reflected by the Bank's position as the world No. 1 in sustainable financing in the EMEA region as well as by the award obtained as the best bank at the global level for sustainable financing (Euromoney) in 2023;
- his involvement in the integration of Exane's activities with the successful merger of Exane SA into BNP Paribas SA, enabling CIB to offer a more comprehensive range of products and services in the equity and equity derivatives segment;
- his involvement in strengthening controls and operational resilience and in the continued adoption of the Code of conduct in market activities.

For Mr Thierry Laborde, as Chief Operating Officer in charge of the Commercial, Personal Banking & Services division (CPBS) and in line with the assessments proposed for Mr Jean-Laurent Bonnafé:

- positive value creation, by controlling the effects of changes in interest rates resulting, in particular, from monetary policy;

- his involvement in the adaptation of the business model, particularly with regard to consumer finance and Retail Banking;
- his role in the deployment by CPBS of the GTS 2025 Plan, with significant progress in customer satisfaction, the continued digitalisation of the customer journey, as well as in supporting business lines and territories requiring transformation plans and/or restructuring;
- his role as sponsor in the Mobility and Payments & Flows transversal initiatives, which achieved new commercial successes in 2023, with the conclusion of new partnerships and with the acceleration of BNP Paribas' presence in the digital business lines (in particular the continued deployment of Nickel in Europe and the increase in the number of active Floa partners);
- his decisive contribution to strategic projects, in particular the European Payments Initiative (EPI), which made concrete progress in 2023;
- his commitment to continue integrating the CSR dimension into CPBS's business lines.

## Summary

After taking into account all the criteria used to set annual variable compensation, and the evolution of the Group's operating results, the Board of directors, on the proposal of the Remuneration Committee, set the variable compensation awarded in respect of 2023 at:

- EUR 1,877,648 for Mr Jean-Laurent Bonnafé (representing 101.88% of his target annual variable compensation);
- EUR 1,529,100 for Mr Yann Gérardin (representing 101.94% of his target annual variable compensation);
- EUR 902,520 for Mr Thierry Laborde (representing 100.28% of his target annual variable compensation).

The result in respect of each criterion is set out in the following table:

|                      |                            | Quantitative criteria |                    |                     |                    | CSR performance criteria | Qualitative criteria | Annual variable with respect to 2023 | Reminder of target variable compensation |
|----------------------|----------------------------|-----------------------|--------------------|---------------------|--------------------|--------------------------|----------------------|--------------------------------------|--|
|                      |                            | EPS <sup>(2)</sup>    | GOI <sup>(3)</sup> | NIBT <sup>(4)</sup> | GOI <sup>(5)</sup> |                          |                      |                                      |  |
|                      |                            | Group                 | Group              | Business            | Business           |                          |                      |                                      |  |

|                      | Measurement <sup>(1)</sup> | 20.63%                | 17.81%             | 18.26%              | 18.58%             | 15.00%                   | 10.00%               | 902,520                              | 900,000                                  |

(1) As a percentage of target annual variable compensation.

(2) Evolution of net earnings per share (EPS) for the year compared to the previous year.

(3) Percentage of achievement of budgeted gross operating income (GOI) for the Group.

(4) Evolution of net income before tax (NIBT) for the year compared to the previous year. Yann Gérardin: CIB scope/Thierry Laborde: CPBS scope.

(5) Percentage of achievement of budgeted gross operating income (GOI). Yann Gérardin: CIB scope/Thierry Laborde: CPBS scope.

## Terms and conditions of payment

- a) The payment terms for variable compensation of BNP Paribas Group executive corporate officers in respect of 2023, in accordance with the provisions of the French Monetary and Financial Code and the EBA's 2 July 2021 Guidelines on compensation policy are:
- 60% of annual variable compensation is deferred over five years, at the rate of one-fifth per year;
  - half of the non-deferred portion of the variable compensation is paid in May 2024, subject to the approval of the Shareholders' Annual General Meeting under the terms provided for by article L.22-10-34 II of the French Commercial Code; and half in March 2025, indexed to the performance of the BNP Paribas share since the award;
  - the deferred portion of the variable compensation will be paid annually in fifths starting in 2025. Each payment will be made half in March every year, and half in March of the following year, indexed to the performance of the BNP Paribas share since the award. The last payment in respect of 2023 will therefore be made in March 2030.
- b) In addition, the annual payment of the deferred variable compensation is subject to the condition that the ROE before tax of the Group for the year preceding the payment is greater than 5%.

The Board of directors noted that this performance condition was met in 2023; accordingly, deferred compensation payable in 2024 in respect of previous plans will be paid.

## Details relating to the conditional long-term incentive plan over five years (LTIP)

### LTIP amounts awarded in 2024

In accordance with the compensation policy and on the proposal of the Remuneration Committee, the Board of directors set the LTIP amounts awarded in 2024.

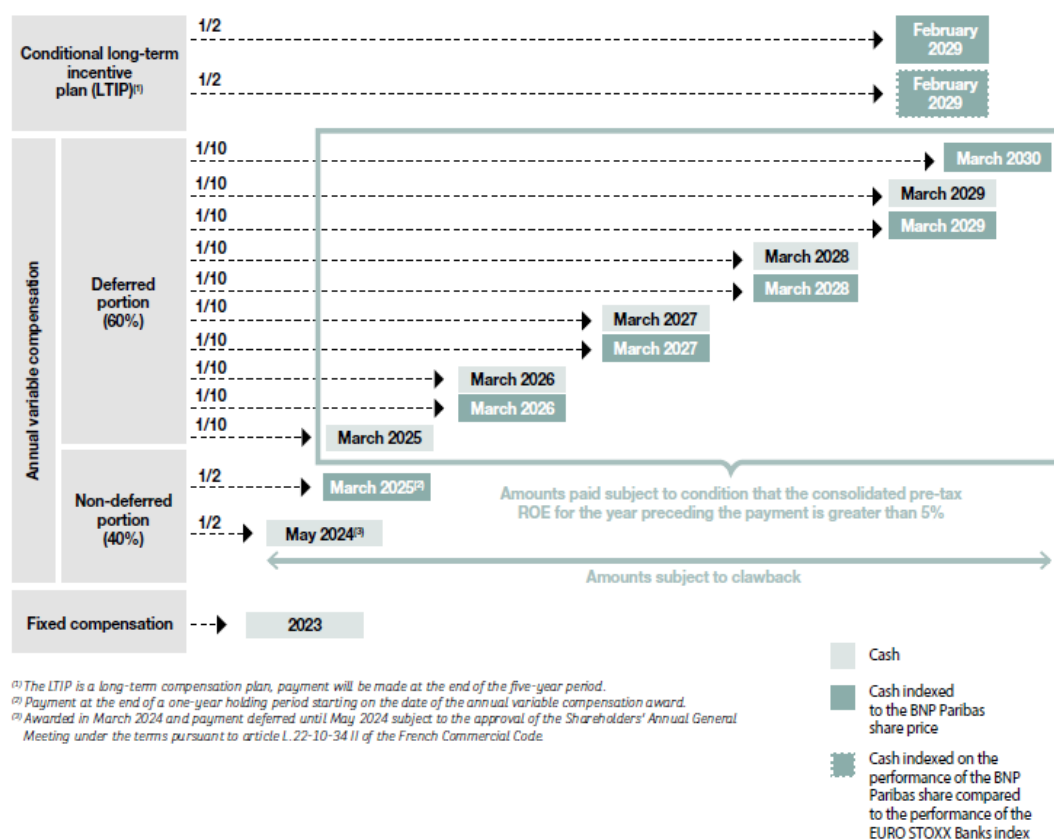

The amount awarded under the LTIP is equal to the target annual variable compensation for 2023.

| LTIP awarded on 31 January 2024 (in euros) | Awarded amount <sup>(1)</sup> | Fair value of the awarded amount <sup>(2)</sup> |
|--|-------------------------------|---|
| Jean-Laurent BONNAFÉ                       | 1,843,000                     | 610,217   |
| Yann GERARDIN                              | 1,500,000                     | 496,650   |
| Thierry LABORDE                            | 900,000                       | 297,990   |

(1) See explanations above.

(2) Fair value of the awarded amount in accordance with IFRS. The calculation is carried out by an independent expert.

## STRUCTURE OF THE PAYMENT OF THE COMPENSATION OF CORPORATE OFFICERS IN RESPECT OF 2023 AFTER TAKING INTO ACCOUNT THE EBA GUIDELINES

<sup>(1)</sup> The LTIP is a long-term compensation plan, payment will be made at the end of the five-year period.

<sup>(2)</sup> Payment at the end of a one-year holding period starting on the date of the annual variable compensation award.

<sup>(3)</sup> Awarded in March 2024 and payment deferred until May 2024 subject to the approval of the Shareholders' Annual General Meeting under the terms pursuant to article L. 22-10-34 II of the French Commercial Code.

## Relative proportion of fixed and variable compensation of executive corporate officers

The cap on total variable compensation provided for by article L.511-78 of the French Monetary and Financial Code was not exceeded. Pursuant to article L.511-79 of the French Monetary and Financial Code, a discount rate may in addition be applied to no more than 25% of total variable compensation inasmuch as the payment is made in the form of instruments after a deferred period of at least five years.

After applying the discount rate to the variable compensation amounts awarded in the form of instruments deferred for five years (discount rate of 42.24% in accordance with European Banking Authority guidelines on the application of the notional discount rate for variable compensation, published on 27 March 2014), the ratio between total variable compensation and fixed compensation is 1.73 for the Chief Executive Officer Mr Jean-Laurent Bonnafé, 1.73 and 1.71 respectively for Messrs Yann Gérardin and Thierry Laborde as Chief Operating Officers for 2023.

***Use of “malus” and “claw-back” clauses***

The Board of directors has not been called upon to apply the “malus” and “claw-back” clauses, provided for in the compensation policy defined above.

***Compensation paid or awarded by a company included in the consolidation scope***

No compensation has been paid or awarded to directors and corporate officers by a company included in the scope of consolidation of BNP Paribas within the meaning of article L.233-16 of the French Commercial Code.

***Compensation multiples and evolutions***

In accordance with the provisions of article L.22-10-9 of the French Commercial Code and the Afep guidelines on compensation multiples updated in February 2021, the level of compensation of the Chairman of the Board of directors, the Chief Executive Officer and the Chief Operating Officers, with respect to the average compensation and the median compensation based on full-time equivalent employees of BNP Paribas (SA), as well as evolutions of this compensation, these ratios and the Company's performance criteria, are shown below.

This information is provided over a five-year period.

The employees considered are those of BNP Paribas (SA) in France and its branches, continuously present over the year. Compensation due or awarded to employees includes fixed compensation, variable compensation, commercial bonuses, loyalty plans, profit-sharing and incentive bonuses, as well as benefits in kind.

The compensation due or awarded to corporate officers includes fixed compensation, variable compensation, fair value of the long-term incentive plan, directors' compensation, as well as benefits in kind, information already presented in chapter 2 of this document for 2022 and 2023.

All this compensation, due or awarded, is presented on a gross basis, excluding employer contributions.

The table below shows the compensation multiples and their evolutions for each corporate officer.

|  | Year   |       |        |                     |                     |
|--|--------|-------|--------|---------------------|---------------------|
|  | 2019   | 2020  | 2021   | 2022 <sup>(1)</sup> | 2023 <sup>(2)</sup> |
| <b>Performance of the Company</b>  |        |       |        |                     |                     |
| Net pre-tax income (in millions of euros)                                      | 11,394 | 9,822 | 13,637 | 13,214              | 11,725              |
| Evolution between N/N-1  | 12%    | -14%  | 39%    | 6%                  | -11%                |

- (1) In order to be comparable with the results for 2023, the results for 2022 have been recomposed to take into account the enforcement of IFRS 5 and IFRS 17 accounting standards.
- (2) 2023 results are on an accounting basis.
- (3) The terms of offices of Messrs Yann Gérardin and Thierry Laborde as Chief Operating Officers began on 18 May 2021. Their compensation for 2021 has been annualised for comparability purposes.

### Application of the provisions of the second paragraph of article L.225-45 of the French Commercial Code

The provisions of the second paragraph of article L.225-45 of the French Commercial Code do not need to be applied in 2023.

## OTHER INFORMATION ON THE COMPENSATION OF CORPORATE OFFICERS PAID OR AWARDED IN RESPECT OF 2023, NOT SUBMITTED TO THE SHAREHOLDERS' VOTE

The components below, relating to the compensation of corporate officers, reiterate some information already presented in this chapter.

### TOTAL COMPENSATION AWARDED IN RESPECT OF 2023 AND COMPARISON WITH 2022

| (in euros)                              | Jean-Laurent BONNAFE |                  | Yann GERARDIN    |                  | Thierry LABORDE  |                  |

(1) This is an estimated value at the award date. The final amount will be known at the date of payment.

### Share ownership

The Board of directors has decided that the minimum number of shares that Messrs Jean Lemierre, Jean-Laurent Bonnafé, Yann Gérardin and Thierry Laborde shall be required to hold for the duration of their terms of office shall be 10,000, 80,000, 30,000 and 20,000 shares respectively. The four interested parties have complied with this obligation, through the direct ownership of shares or units in the Company Savings Plan fully invested in BNP Paribas shares.

### Quantitative information on the compensation of corporate officers

The table after shows the gross compensation awarded in respect of the year, including compensation linked to a term of directorship and benefits in kind, for each corporate officer.

# SUMMARY TABLE OF THE COMPENSATION AWARDED TO EACH CORPORATE OFFICER

|  | <b>TOTAL</b>   | <b>1,033,274</b> | <b>1,263,845</b> |

The average tax and social contribution rate on this compensation is 34% in 2023 (unchanged compared to 2022).

- (1) The Chairman of the Board of directors, the Chief Executive Officer and the Chief Operating Officers, if applicable, have a company car. The Chief Executive Officer and Chief Operating Officers benefit from the Executive Committee professional life insurance, for which the Company's contribution is recognised as a benefit in kind.
- (2) The application of the performance conditions attached to the LTIP awarded in 2018 led to a payment in 2023 corresponding to 50% of the amount awarded to Mr Bonnafé. As a reminder, the application of the performance conditions attached to the LTIP awarded in 2017 led to a payment in 2022 corresponding to 90% of the amount awarded to Mr Bonnafé.

## 2.1.4 OTHER INFORMATION

### 1. INFORMATION ON STOCK SUBSCRIPTION OR PURCHASE OPTIONS AND ON PERFORMANCE SHARES

The Company did not grant any instruments to employees who are not directors or corporate officers in 2022.

No instruments were transferred or exercised in 2022 for the benefit of employees who are not directors or corporate officers.

### 2. LOANS, ADVANCES AND GUARANTEES GRANTED TO THE GROUP'S DIRECTORS AND CORPORATE OFFICERS

As at 31 December 2023, the total outstanding loans granted directly or indirectly to directors and corporate officers amounted to EUR 5,770,986 (EUR 5,179,096 as at 31 December 2022). This represents the total amount of loans granted to BNP Paribas' directors and corporate officers, their spouse and dependent children. These loans representing normal transactions were carried out at arm's length, in accordance with the Implementation procedure for conflicts of interest in relation to loans and other transactions granted to the Members of the management body and their related parties.

### 3. TABLE OF DELEGATIONS

#### Resolutions adopted at Shareholders' Annual General Meetings valid for 2023

The following delegations to increase or reduce the share capital have been granted to the Board of directors under resolutions approved by Shareholders' General Meetings and were valid during 2023:

| Resolutions adopted at Shareholders' General Meetings                               |  | Use of authorisation in 2023  |
|---|--|---|
| Shareholders' Combined General Meeting of 17 May 2022 (5 <sup>th</sup> resolution)  | <p>Authorisation given to the Board of directors to set up a share buyback programme by the Company up to a maximum of 10% of the shares comprising the share capital.</p> <p>Said acquisitions of shares, at a price not exceeding EUR 88 per share (previously EUR 73), would be intended to fulfil several objectives:</p> <ul style="list-style-type: none"><li>▪ cancelling shares in accordance with conditions set by the Shareholders' Combined General Meeting of 17 May 2022 (28<sup>th</sup> resolution);</li><li>▪ fulfilling obligations arising from the issue of securities giving access to capital, stock option programmes, the award of free shares, the award or assignment of shares to employees in connection with the employee profit-sharing scheme or company savings plans, and all forms of share grants to employees and/or directors and corporate officers of BNP Paribas and the companies controlled exclusively by BNP Paribas as defined in article L.233-16 of the French Commercial Code;</li><li>▪ holding and subsequently remitting them in exchange or payment for external growth transactions, mergers, spin-offs or asset contributions;</li><li>▪ under a market-making agreement in accordance with Decision No. 2021 of 22 June 2021 of the French Financial Markets Authority (Autorité des Marchés Financiers – AMF);</li><li>▪ carrying out investment services for which BNP Paribas is authorised or to hedge them.</li></ul> <p>This authorisation was granted for a period of 18 months and replaces that granted by the 5<sup>th</sup> resolution of the Shareholders' Combined General Meeting of 18 May 2021.</p> | <p>As part of the share buyback programme authorised by the Board of directors on 6 February 2023, 15,607,680 shares were repurchased from 3 April 2023 to the date of the Shareholders' Combined General Meeting of 16 May 2023, by virtue of this delegation, representing 1.26% of the share capital</p> |
| Shareholders' Combined General Meeting of 17 May 2022 (21 <sup>st</sup> resolution) | <p>Capital increase, with preferential subscription rights maintained, through the issue of ordinary shares and securities (<i>valeurs mobilières</i>) giving access immediately or in the future to shares to be issued.</p> <p>The nominal amount of capital increases that may be carried out, immediately and/or in the future, by virtue of this delegation, may not exceed EUR 985 million (i.e. 492,500,000 shares).</p> <p>This authorisation was granted for a period of 26 months and replaces that granted by the 19<sup>th</sup> resolution of the Shareholders' Combined General Meeting of 19 May 2020.</p>  | <p>This resolution was not used during the period</p>   |
| Shareholders' Combined General Meeting of   | <p>Capital increase, without preferential subscription rights, by issue of ordinary shares and securities (<i>valeurs mobilières</i>) giving access immediately or in the future to shares to be issued.</p>   | <p>This resolution was not used during the period</p>   |

| Resolutions adopted at Shareholders' General Meetings                                  |   | Use of authorisation in 2023                   |
|--|---|--|
| 17 May 2022<br>(22 <sup>nd</sup> resolution)   | <p>The nominal amount of capital increases that may be carried out, immediately and/or in the future, by virtue of this authorisation, may not exceed EUR 240 million (i.e. 120 million shares).</p> <p>This authorisation was granted for a period of 26 months and replaces that granted by the 20<sup>th</sup> resolution of the Shareholders' Combined General Meeting of 19 May 2020.</p>  |  |
| Shareholders' Combined General Meeting of 17 May 2022<br>(23 <sup>rd</sup> resolution) | <p>Capital increase, with cancellation of preferential subscription rights, through the issue of ordinary shares and securities (<i>valeurs mobilières</i>) giving access, immediately or in the future, to shares to be issued intended to remunerate contributions of securities up to a limit of 10% of the share capital.</p> <p>The nominal amount of capital increases that may be carried out in one or more times by virtue of this authorisation, may not exceed 10% of the share capital of BNP Paribas as at the date of the decision of the Board of directors.</p> <p>This delegation was given for a period of 26 months and replaces that granted by the 21<sup>st</sup> resolution of the Shareholders' Combined General Meeting of 19 May 2020.</p>  | This resolution was not used during the period |
| Shareholders' Combined General Meeting of 17 May 2022<br>(24 <sup>th</sup> resolution) | <p>Overall limit on authorisations to issue shares with cancellation or without preferential subscription rights for existing shareholders.</p> <p>The maximum nominal amount of capital increases with cancellation or without preferential subscription rights for existing shareholders carried out immediately and/or in the future may not exceed EUR 240 million as part of authorisations by virtue of the 22<sup>nd</sup> and 23<sup>rd</sup> resolutions of the Shareholders' Combined General Meeting of 17 May 2022.</p>   | This resolution was not used during the period |
| Shareholders' Combined General Meeting of 17 May 2022<br>(25 <sup>th</sup> resolution) | <p>Capital increase by capitalising reserves, retained earnings, additional paid-in capital or contribution premium.</p> <p>Authorisation was given to increase the share capital up to a maximum amount of EUR 985 million in one or more times, by capitalising all or part of the reserves, profits or additional paid-in capital, merger or contribution premiums, successively or simultaneously, through the issuance and award of free shares, through an increase in the par value of existing shares, or through a combination of these two methods.</p> <p>This authorisation was granted for a period of 26 months and replaces that granted by the 23<sup>rd</sup> resolution of the Shareholders' Combined General Meeting of 19 May 2020.</p>   | This resolution was not used during the period |
| Shareholders' Combined General Meeting of 17 May 2022<br>(26 <sup>th</sup> resolution) | <p>Overall limit on authorisations to issue shares with, with cancellation or without preferential subscription rights for existing shareholders</p> <p>The maximum nominal amount of capital increases with, with cancellation or without preferential subscription rights for existing shareholders carried out immediately and/or in the future may not exceed EUR 985 million as part of authorisations by virtue of the 21<sup>st</sup> to 23<sup>rd</sup> resolutions of the Shareholders' Combined General Meeting of 17 May 2022.</p>   | This resolution was not used during the period |
| Shareholders' Combined General Meeting of 17 May 2022<br>(27 <sup>th</sup> resolution) | <p>Authorisation granted to the Board of directors to carry out transactions reserved for members of the BNP Paribas Group Company Savings Plan, with cancellation of preferential subscription rights, which may take the form of capital increases and/or disposals of reserved titles.</p> <p>Authorisation was given to increase the share capital within the limit of a maximum nominal amount of EUR 46 million in one or more times by issuing ordinary shares (with cancellation of preferential subscription rights for existing shareholders), reserved for members of the BNP Paribas Group's Company Savings Plan, or by selling of shares.</p> <p>This authorisation was granted for a period of 26 months and replaces that granted by the 25<sup>th</sup> resolution of the Shareholders' Combined General Meeting of 19 May 2020.</p> | This resolution was not used during the period |

| Resolutions adopted at Shareholders' General Meetings                               |   | Use of authorisation in 2023   |
|---|---|--|
| Shareholders' Combined General Meeting of 17 May 2022 (28 <sup>th</sup> resolution) | <p>Authorisation granted to the Board of directors to reduce the share capital by cancelling shares.</p> <p>Authorisation is given to cancel, in one or more times, through reduction of the share capital, all or some of the shares that BNP Paribas holds and that it could hold, up to a maximum of 10% of the total number of shares constituting the share capital existing as at the date of the transaction, for a period of 24 months.</p> <p>Delegation of all powers to carry out this reduction in share capital, and allocate the difference between the purchase price of the cancelled shares and their nominal value to share premium and retained earnings, including the legal reserve up to 10% of the share capital cancelled.</p> <p>This authorisation was granted for a period of 18 months and replaces that granted by the 20<sup>th</sup> resolution of the Shareholders' Combined General Meeting of 18 May 2021.</p>  | This resolution was not used during the period   |
| Shareholders' Combined General Meeting of 16 May 2023 (5 <sup>th</sup> resolution)  | <p>Authorisation given to the Board of directors to set up a share buyback programme by the Company up to a maximum of 10% of the shares comprising the share capital.</p> <p>Said acquisitions of shares, at a price not exceeding EUR 89 per share (previously EUR 88), would be intended to fulfil several objectives:</p> <ul style="list-style-type: none"><li>▪ cancelling shares in accordance with conditions set by the Shareholders' Combined General Meeting of 16 May 2023 (21<sup>st</sup> resolution);</li><li>▪ fulfilling obligations arising from the issue of securities giving access to capital, stock option programmes, the award of free shares, the award or assignment of shares to employees in connection with the employee profit-sharing scheme or company savings plans, and all forms of share grants to employees and/or directors and corporate officers of BNP Paribas and the companies controlled exclusively by BNP Paribas as defined in article L.233-16 of the French Commercial Code;</li><li>▪ holding and subsequently remitting them in exchange or payment for external growth transactions, mergers, spin-offs or asset contributions;</li><li>▪ under a market-making agreement in accordance with Decision No. 2021-01 of 22 June 2021 of the French Financial Markets Authority (Autorité des Marchés Financiers – AMF);</li><li>▪ carrying out investment services for which BNP Paribas is authorised or to hedge them.</li></ul> <p>This authorisation was granted for a period of 18 months and replaces that granted by the 5<sup>th</sup> resolution of the Shareholders' Combined General Meeting of 17 May 2022.</p> | As part of the share buyback programme authorised by the Board of directors on 6 February 2023, 71,246,557 shares were repurchased from the date of the Combined General Meeting of 16 May 2023 to 8 November 2023 by virtue of this delegation, representing 5.77% of the share capital   |
| Shareholders' Combined General Meeting of 16 May 2023 (19 <sup>th</sup> resolution) | <p>In the context of an offer referred to in article L.411-2 1° of the French Monetary and Financial Code, authorisation granted to the Board of directors to increase the share capital with cancellation of preferential subscription rights, through the issue of super-subordinated convertible contingent bonds that would be converted into ordinary shares of BNP Paribas to be issued, up to a limit of 10% of the share capital, only in the event that the Common Equity Tier One ratio ("CET1") becomes equal to or falls below a threshold of 5.125%.</p> <p>The Board of directors is authorised to increase the share capital in one or more times, with cancellation of preferential subscription rights, by offering securities to a restricted circle of investors and/or qualified investors, as part of issues of super-subordinated bonds convertible into ordinary shares of BNP Paribas in the event that the Group's Common Equity Tier One (CET 1) ratio becomes equal to or falls below the threshold of 5.125% or any other threshold allowing classification as additional Tier 1 capital instruments (the "AT1 Bonds"). These AT1 Bonds will be denominated in USD, it being recalled that the ordinary shares are denominated in euros.</p> <p>The maximum nominal amount of capital increases that may be carried out, in one or more times, by virtue of this delegation, is set at EUR 240 million, and may not exceed 10% of the share capital of BNP Paribas per year as at the date of the issue decision.</p> <p>This delegation was granted for a period of 14 months.</p>   | Pursuant to the authorisation to the Board of directors of 16 May 2023, issue on 7 August 2023 of AT1 Bonds (super-subordinated convertible contingent bonds) for a nominal amount of USD 1.5 billion, which may give rise in the event of conversion to a capital increase equal to a maximum of EUR 66,529,200, subject to any adjustments |
| Shareholders' Combined General Meeting of 16 May 2023                               | <p>Authorisation granted to the Board of directors to carry out transactions reserved for members of the BNP Paribas Group Company Savings Plan, with cancellation of preferential subscription rights, which may take the form of capital increases and/or disposals of reserved titles.</p>   | This resolution was not used during the period   |

| Resolutions adopted at Shareholders' General Meetings                               |  | Use of authorisation in 2023  |
|---|--|---|
| (20 <sup>th</sup> resolution)   | <p>Authorisation is given to increase, in one or more times, the share capital by a maximum nominal amount of EUR 46 million, through the issue of ordinary shares or securities (<i>valeurs mobilières</i>) governed by article L.228-92 paragraph 1 of the French Commercial Code giving access to the share capital of BNP Paribas reserved for members of the BNP Paribas Group Company Savings Plan or by disposal of shares.</p> <p>This authorisation was granted for a period of 26 months and replaces that granted by the 27<sup>th</sup> resolution of the Shareholders' Combined General Meeting of 17 May 2022.</p>   |   |
| Shareholders' Combined General Meeting of 16 May 2023 (21 <sup>st</sup> resolution) | <p>Authorisation granted to the Board of directors to reduce the share capital by cancelling shares.</p> <p>Authorisation is given to cancel, in one or more times, through reduction of the share capital, all or some of the shares that BNP Paribas holds and that it could hold, up to a maximum of 10% of the total number of shares constituting the share capital existing as at the date of the transaction, for a period of 24 months.</p> <p>Delegation of all powers to carry out this reduction in share capital, and allocate the difference between the purchase price of the cancelled shares and their nominal value to share premium and retained earnings, including the legal reserve up to 10% of the share capital cancelled.</p> <p>This authorisation was granted for a period of 18 months and replaces that granted by the 28<sup>th</sup> resolution of the Shareholders' Combined General Meeting of 17 May 2022.</p> | <p>Cancellation of 86,854,237 shares with a par value of EUR 2 from 27 September 2023 to 17 November 2023 representing 7.04% of the share capital</p> |

#### 4. ITEMS LIKELY TO HAVE AN IMPACT IN THE EVENT OF A PUBLIC TENDER OR EXCHANGE OFFER (ARTICLE L.22-10-11 OF THE FRENCH COMMERCIAL CODE)

Among the items referred to in article L.22-10-11 of the French Commercial Code, there is no item likely to have an impact in the event of a public tender or exchange offer.

## 2.2 Statutory Auditors' report

The comments required by article L.22-10-71 of the French Commercial Code are covered in the Statutory Auditor's report on the parent company financial statements (chapter 6.6).

## 2.3 The Executive Committee

At 25 April 2024, the BNP Paribas Executive Committee had the following members:

- **Jean-Laurent Bonnafé**, Director and Chief Executive Officer;
- **Yann Gérardin**, Chief Operating Officer in charge of the Corporate & Institutional Banking division;
- **Thierry Laborde**, Chief Operating Officer in charge of the Commercial, Personal Banking & Services division;
- **Laurent David**, Deputy Chief Operating Officer;
- **Renaud Dumora**, Deputy Chief Operating Officer in charge of the Investment & Protection Services division;
- **Isabelle Loc**, Head of Commercial & Personal Banking in France;
- **Charlotte Dennery**, Director and Chief Executive Officer of BNP Paribas Personal Finance;
- **Elena Goitini**, Chief Executive Officer of BNL;
- **Michael Anseeuw**, Director and Chief Executive Officer and Chairman of the Executive Board of BNP Paribas Fortis;
- **Yannick Jung**, Head of Corporate & Institutional Banking Global Banking;
- **Pauline Leclerc-Glorieux**, Chief Executive Officer of BNP Paribas Cardif;
- **Olivier Osty**, Head of Corporate & Institutional Banking Global Markets;
- **Bernard GavGANI**, Chief Information Officer;
- **Stéphanie Maarek**, Head of Compliance;
- **Lars Machenil**, Chief Financial Officer;
- **Sofia Merlo**, Head of Human Resources;
- **Frank Roncey**, Chief Risk Officer;
- **Antoine Sire**, Head of Company Engagement.

The BNP Paribas Executive Committee has had a permanent Secretariat since November 2007.

## 2.4 Internal control

The following information relating to internal control was submitted to the Group's Executive Management. The Chief Executive Officer, as executive director, is responsible for the organisation and procedures of internal control and for all information required by French law regarding the internal control report. This document is based on the information provided by the Compliance, RISK, Finance & Strategy, LEGAL and General Inspection Functions. It has been approved by the Board of directors.

### BNP PARIBAS' INTERNAL CONTROL STANDARDS

The principles and procedures for the internal control of banking activities in France and abroad are at the heart of banking and financial regulations and are subject to numerous legislative and regulatory provisions.

The main text applicable to BNP Paribas is the Ministerial Order of 3 November 2014. This text sets out the conditions for the implementation and monitoring of internal control in credit institutions and investment firms, in compliance with the European Directive CRD 4. In particular, it specifies the principles relating to internal transaction control systems and procedures, organisation of accounting and information processing, risk and result measurement systems, risk monitoring and control systems, and the information and documentation system for internal control. Article 258 of this Order provides for the drafting for the Board of directors of an annual regulatory report on the conditions under which internal control is implemented.

This Order requires BNP Paribas to have an internal control system (hereinafter Internal control) comprising specific departments and persons responsible for permanent control (including the Compliance and RISK Functions) and periodic control. This system must also take into account, as appropriate, the General regulation of the AMF, the regulations applicable to foreign branches and subsidiaries and to specialised activities such as portfolio management and insurance, and the

recommendations of leading international bodies dealing with issues related to the prudential regulation of international banks, first and foremost the Basel Committee, the Financial Stability Board, the European Authorities, the European Securities and Markets Authority, the European Central Bank and the French *Autorité de contrôle prudentiel et de résolution*.

## DEFINITION, OBJECTIVES AND STANDARDS OF INTERNAL CONTROL

The BNP Paribas Group's Executive Management has implemented an internal control system whose main purpose is to ensure overall control of the risks and to provide reasonable assurance that the Company's objectives in this respect are achieved.

The BNP Paribas Internal Control Charter specifies the framework of this system and constitutes BNP Paribas' basic internal control framework. Widely distributed within the Group and accessible to all its employees, this charter firstly recalls the objectives of internal control, which aims to ensure:

- a sound and prudent risk management approach, aligned with BNP Paribas' values and Code of conduct in conjunction with the policies outlined in its corporate social responsibility framework;
- operational security of BNP Paribas' internal operations;
- the relevance and reliability of accounting and financial information;
- compliance with laws, regulations and internal policies.

Its implementation requires, in particular, that a high-level culture of risk and ethics be promoted to all employees and in BNP Paribas' relations with third parties, clients, intermediaries or suppliers as well as its shareholders.

The charter then sets out the rules governing the organisation responsibility and scope of operations of the various internal control entities and establishes the principle according to which the control functions (Compliance, LEGAL, RISK and General Inspection in particular) execute these controls independently.

## SCOPE OF INTERNAL CONTROL

The BNP Paribas Group's internal control is overarching:

- it covers all types of risks to which the Group may be exposed (credit and counterparty risk, market risk, liquidity risk, interest rate risk in the banking book, underwriting risk with respect to insurance, operational risk, risk of non-compliance, equity risk, etc.);
- it is applied at the Group level and at the level of directly or indirectly controlled entities, irrespective of their line of business and irrespective of whether they are consolidated entities or otherwise. For other entities (in particular, legal entities subject to significant influence), the Group's representatives on the corporate bodies of these entities are strongly encouraged to promote the same standards of internal control;
- it also covers the use of outsourced services, in accordance with principles defined by regulation.

## FUNDAMENTAL PRINCIPLES OF INTERNAL CONTROL

BNP Paribas' internal control system is based on its values and the Code of conduct as well as the following additional principles of action:

- clearly identified responsibilities: internal control is the responsibility of every employee, irrespective of their seniority or responsibilities. The exercise of a managerial function carries the additional responsibility of ensuring the proper implementation of the internal control system within the scope subject to regulation. As such, the necessary responsibilities and delegations must be clearly identified and communicated to all stakeholders;
- a structured risk identification, assessment and management system (involving, among others, a decision-making system, delegation, organisational principles, controls, reporting and alert mechanism, etc.);
- independent control and oversight of risks: the Heads of the operational activities have the ultimate responsibility for those risks created by their activities and as such, the foremost responsibility of implementing and operating a system that identifies, assesses and manages risk. The internal control system provides for mandatory intervention, and as early as possible, of functions exercising independent control under a second level of control. This intervention takes the following forms:
  - defining the overall normative framework for risk identification, assessment and management,
  - defining cases where a prior second review by a function exercising a second-level control shared with the operational entity is necessary for decision-making,
  - independent controls, called second-level controls, carried out by said function on the system implemented by the Heads of the operational activities and on their operations (result of the risk identification and assessment process, relevance and compliance of the risk control systems and in particular, compliance with the limits set);
- separation of duties: this is a key element of the risk control system. It consists of assigning certain operational tasks that contribute to the performance of a single process to stakeholders at various hierarchical levels or to separate these tasks by other means, in particular by electronic means. Thus, for example, tasks related to transaction initiation, confirmation, accounting, settlement and accounts reconciliation must be performed by different parties;
- proportionality of risks: the internal control system must be implemented under an approach and with an intensity that is proportionate to the risks involved. This proportionality is determined based on one or more criteria:

- risk intensity as identified in the context of assessment programmes (“Risk ID”, RCSA, *etc.*),
- amount of allocated capital and/or ratios in terms of solvency and liquidity,
- criticality of activities with regard to systemic issues,
- regulatory conditions governing the exercise of business activities, size of business activities carried out,
- customer type and distribution channels,
- complexity of the products designed or marketed and/or services provided,
- complexity of the processes carried out and/or the level of use of outsourcing with internal/external entities of the Group,
- sensitivity of the environment where the activities are located,
- legal form and/or presence of minority shareholders;
- appropriate governance: the internal control system is subject to governance involving the different stakeholders and covering the various aspects of internal control, both organisational and monitoring and oversight; the Internal Control Committees are a key instrument in this system. The framework is part of the decision-making processes managed through a system of delegations in the management reporting lines. They may involve the input of a third party belonging to another reporting line, whenever the systems defined by the operating entities and/or the functions exercising a second-level control so provide. The escalation process allows for disagreements between the operating entities and functions exercising second-level control, especially those related to decision-making, to be escalated to the higher hierarchical and possibly functional levels, to which the two parties report, and ultimately, if these disputes cannot be resolved in this way, to arbitration conducted by the Group’s Executive Officers. This process is implemented in accordance with the powers conferred to the Group Risk Officer, who may exercise his right of veto under the conditions set out in the RISK Function Charter;
- a requirement for formalisation and traceability: Internal Control relies on the instructions of the Executive Officers, written policies and procedures and audit trails. As such, the controls, their results, their implementation and the feedback from the entities to the higher levels of the Group’s governance are documented and traceable;
- a duty of transparency: all Group employees, irrespective of their position, have a duty to communicate, in a transparent manner, that is, spontaneously and promptly, to a higher level within the organisation to which they belong:
  - any information required for a proper analysis of the situation of the entity in which the employee operates, and which may impact the risks or the reputation of the entity or the Group,
  - any question that the employee could not resolve independently in the exercise of his or her duties,
  - any anomaly of which the employee becomes aware.

In addition, he or she has a whistleblowing right, as provided for in the Group’s Code of conduct, allowing them to make a report within a framework placed under the responsibility of the Compliance Function, providing a guarantee of confidentiality and enhanced protection against the risk of retaliation;
- Human Resources management taking into account internal control objectives: the internal control objectives to be considered in employee career management and remuneration (including: as part of the employee evaluation process, training, recruitment for key positions, and in determining remuneration);
- continuous adaptation of the system in response to changes: the internal control system must be actively managed by its various stakeholders. This adjustment in response to changes of any kind that the Group must face must be done according to a periodic cycle defined in advance but also continuously as soon as events so justify.

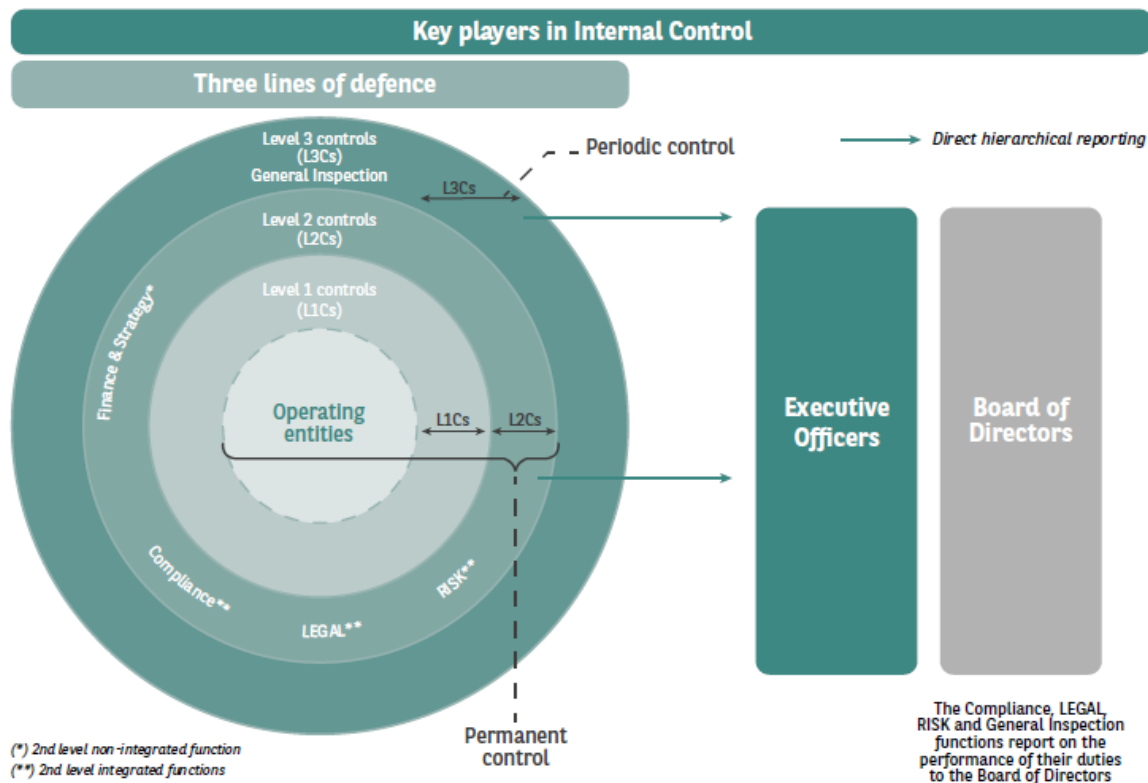

Compliance with these principles is verified on a regular basis, in particular through assignments carried out by the periodic control teams (General Inspection).

## ORGANISATION OF INTERNAL CONTROL

BNP Paribas Group’s internal control system is organised around three lines of defence, under the responsibility of the Executive Officers and under the oversight of the Board of directors.

Permanent control is the ongoing implementation of the risk management system and is provided by the first two lines of defence. Periodic control, provided by the third line of defence, has an audit and assessment function that is performed according to its own audit cycle.

The functions exercising the second and the third lines of defence are so-called functions exercising independent control. They report directly to the Executive Officers and with respect to Compliance, LEGAL, RISK and General Inspection, they report on the performance of their duties to the Board of directors.

## KEY PLAYERS IN INTERNAL CONTROL

- Operating entities are the first line of defence: operating entities are primarily responsible for managing their risks and are the front-line in permanent control. They act within the framework defined by the Group's Executive Officers and reviewed by its Board of directors, transcribed in the form of policies and procedures and to the extent necessary, tailored by the corporate bodies of the Group's entities.
- The risk control system operated by the first line of defence forms what is called the first-level control system. It is implemented by employees and/or their reporting line and/or control teams that do not operate the processes under their control.

The operating entities cover:

- all operating divisions and business lines, whether these are profit centres or their support functions;
- all cross-divisional functions, including the control functions for the processes that they operate directly and not under the responsibility of the second line of defence;
- all the Territories, attached to an operating division.
- The functions exercising second-level control (second line of defence):
  - the functions exercising second-level control are responsible, under the delegation given by the Executive Officers, for the organisation and functioning of the risk control system and its compliance with laws and regulations on a range of areas (subjects and/or processes), as defined in their Responsibility Charter;
  - as such, in their field of expertise and, where appropriate, after having consulted the operating entities, they define the general normative framework in which they manage the risk for which they are responsible, the terms of their intervention (thresholds, delegations, escalation, etc.), implement this system in the relevant areas and for which they are responsible, for first-level and second-level permanent control. They challenge and provide an independent view of risk identification and assessment *vis-à-vis* operating entities. They also contribute to spreading a culture of risk and ethics within the Group;
  - the Heads of these functions provide the Executive Officers and Board of directors with a reasoned opinion on the level of risk control, current or potential, in particular regarding the "Risk Appetite Statement" as defined and propose any actions for improvement that they deem necessary;
  - the Head of a function performing a second-level control performs this mission by relying on teams that can be placed, either:
    - under its direct or indirect hierarchical responsibility, where the function is then called integrated. It thus has full authority over its budget and the management of its Human Resources, or
    - under its direct or indirect functional responsibility (so-called non-integrated function) subject to joint decision-making with the reporting line manager for Human Resources and budget.

The three integrated functions exercising second-level control are:

- **RISK**, in charge of organising and overseeing the overall system for controlling those risks to which the BNP Paribas Group is exposed, particularly credit risk and counterparty risk, market risk, funding and liquidity risk, interest rate and exchange rate risk in the Banking book, insurance risk, operational risk, and environmental and social risk factors that affect the above risk categories;
- **Compliance**, responsible for organising and overseeing the non-compliance risk control system. As such, it contributes to the permanent control of compliance with laws and regulations, professional and ethical standards and the guidelines of the Board of directors and the instructions of the Executive Management;
- **LEGAL**, responsible for organising and overseeing the legal risk control system, exercises its responsibility to prevent and manage legal risks through its advisory and control roles. It exercises this control by (i) issuing legal opinions for the purpose of avoiding or mitigating the effects of a major legal risk, (ii) first- and second-level control exerted on the legal processes and (iii) the definition of a Group-level control plan for the business lines and functions to cover certain risks that may affect the processes under their responsibility. The missions entrusted to this function are performed independently of the business activities and support functions. The function is integrated hierarchically under the sole authority of its Department head, the Group General Counsel, who reports to the Chief Executive Officer.

The Heads of these functions may be heard by the Board or any of its specialised committees, directly, possibly without the presence of Executive Officers, or at their request.

Finance & Strategy is a non-integrated function that exercises a second-level control. The Standards & Controls Department, within it, is responsible for defining and implementing the risk management system related to accounting and financial information.

RISK, Compliance and Finance & Strategy share responsibility for the second line of defence in terms of tax risk with the support of the Tax function, which acts as an expert on tax-related issues.

The appointment of the Heads of the Compliance, Finance & Strategy and RISK Functions falls within the framework defined by the European Banking Authority.

Permanent control can be outlined as follows:

- **General Inspection (third line of defence):** the General Inspection is responsible for periodic control, performs the internal audit function and contributes to the protection of the Group by independently acting as its third line of defence on all Group entities and in all areas. It includes:

- centrally-based inspectors who carry out their duties throughout the Group,
- auditors distributed in the geographical or business line platforms (called “hubs”).

The General Inspector, responsible for periodic controls, reports to the Chief Executive Officer.

- **Executive Officers:** the Chief Executive Officer and the Chief Operating Officers ensure the effective management of the Company for regulatory and legal purposes. In practice, the Executive Officers make key decisions through specialised committees that allow them to rely on experts with a deep understanding of the issues to be addressed.

Executive Officers are responsible for the internal control system as a whole. As such and notwithstanding the powers of the Board of directors, the Executive Officers:

- decide on the key policies and procedures serving as the basis for this system;
  - directly oversee the functions exercising independent control and provide them with the means to allow them to fulfil their responsibilities effectively;
  - define the Group's risk-taking policies, validate the most important decisions in this area and, if necessary, make the final decisions in the context of the escalation process. This process is implemented in accordance with the powers conferred to the Group Risk Officer, who may exercise his or her right of veto under the conditions set out in the RISK Function Charter;
  - periodically evaluate and monitor the effectiveness of the internal control policies, systems and procedures and implement the appropriate measures to remedy any deficiencies;
  - receive the main reports on internal control within the Group;
  - report to the Board of directors or its relevant committees on the operation of this system.
- Pursuant to the Decree of 3 November 2014 on the internal control of companies in the banking, payment services and investment services sector subject to the control of the ACPR, BNP Paribas must appoint an executive director responsible for overseeing the consistency and effectiveness of the BNP Paribas Group's internal control. At 31 December 2023, the Chief Executive Officer is the Executive Officer responsible for overseeing the consistency and effectiveness of BNP Paribas Group's internal control.
- The Board of directors: the Board of directors exercises directly or through specialised committees (Financial Statements Committee, Internal Control, Risk Management and Compliance [CCIRC] Committee, Governance, Ethics, Nominations and CSR Committee, etc.) key responsibilities in terms of internal control. Among others, the Board of directors:
- determines, on the proposal of the Executive Officers, the strategy and guidelines of the internal control activity and ensures their implementation;
  - reviews the internal control activity and results at least once per year;
  - regularly reviews, assesses and verifies the effectiveness of the governance system, including in particular clearly defined responsibilities, and internal control, which notably includes risk reporting procedures, and takes appropriate measures to remedy any failings uncovered;
  - validates the Risk Appetite Statement, approves and periodically reviews the strategies and policies for taking up, managing, monitoring and controlling risks and approves their overall limits.

The organisation of the Board of directors and its specialised committees is defined through its Internal Rules. The Heads of General Inspection and the integrated functions exercising second-level control have the right to be heard, possibly without the presence of Executive Officers, by the Board of directors or one of its specialised committees.

Finally, among the specialised committees, the Internal Control, Risk Management and Compliance Committee (CCIRC) is essential in the Group's internal control system. Indeed, it assumes the following responsibilities:

- analyses reports on internal control and on risk measurement and monitoring, reports on the activities of the General Inspection, and significant correspondence with the main regulators;
- examines the strategic directions of the risk policy;
- reports to the Board of directors.

## COORDINATION OF INTERNAL CONTROL

At the consolidated level, the Group Supervisory & Control Committee – GSCC coordinates internal control, and is responsible, in particular, for ensuring consistency and coordination in the internal control system. Chaired by the Chief Executive Officer, it brings together the Chief Operating Officers, the Deputy Chief Operating Officers and the Heads of control functions.

In those entities and territories that are significant for the Group, their Executive Officers are responsible for arranging this coordination, generally within the framework of the Internal Control Committees.

## PROCEDURES

The procedures are one of the key elements of the permanent control system alongside the identification and assessment of risks, controls, reporting and monitoring of the control system.

Written guidelines are distributed throughout the Group and provide the organisation and procedures to be applied as well as the controls to be performed. These procedures constitute the basic framework for internal control. The RISK Function regularly monitors procedure guidelines. The Group's cross-functional procedures framework is regularly updated with contributions from all divisions and functions. Regarding the control framework, investigations into the status of the system are included in the report on permanent control.

Among the Group's cross-functional procedures, applicable in all entities, risk control is critically important in, for example:

- the procedures that govern the process for approving exceptional transactions, new products and new business activities;
- the procedure for approving credit and market transactions;

- the procedures for compliance with embargoes, anti-money laundering and the financing of terrorism and anti-corruption.

The processes from these procedural frameworks rely primarily on committees (Exceptional Transactions Committees, New Business Activities and Products Committees, Credit Committees, *etc.*) mainly covering both operational and related functions such as IT and Operations, as well as the control functions (RISK, Compliance, Finance & Strategy and LEGAL Functions), which take a “second-look” on transactions. In the event of a dispute, they are submitted to a higher level of the organisation. At the highest level of the Group, there are committees (Credit, Market Risk, Risk Policy Committees, *etc.*) chaired by members of Executive Management.

## COMPLIANCE

### Organisation and change to the function

Compliance is a globally integrated function: all compliance managers in the operating divisions, business lines, regions, territories and their teams report to it hierarchically, which guarantees their independence. Its organisation brings together proximity teams aligned with the structure of the Group's operating divisions, business lines and entities, as well as central areas of expertise.

Compliance contributes to the three components of the Group's GTS 2025 strategic plan:

- growth: by participating in projects for new products, new channels and external growth as part of the business lines' development strategy;
- technology: by continuing the automation of processes and the deployment of standard IT tools;
- sustainability: by anticipating emerging risks and regulatory changes, and by supporting the Group's ESG commitments.

The Compliance workforce stood at 3,610 full-time equivalents (FTE) at the end of December 2023.

### Compliance activity in 2023

#### *Financial security*

2023 was marked by an exacerbated geopolitical context and the prospect of significant regulatory changes at the European level.

The Group's remediation plan for international financial sanctions is now complete and has been submitted to the authorities in France and the United States.

The highly complex sanction measures against Russia continue to mobilise the Compliance teams and have led to the adaptation of tools and operational processes to effectively manage the new regulations. The system is being adapted to better capture the risk of circumvention of these sanctions.

In general, the system for combating money laundering and the financing of terrorism, compliance with international sanctions and the freezing of assets is subject to continuous improvement of its standards and IT tools.

In 2023, this improvement focused, in particular, on the strengthening of steering for risk management purposes and the search for greater operational efficiency through the implementation of homogeneous indicators and dashboards in the Group.

Lastly, in terms of regulations, the Group took part in the consultations organised as part of the development of the new European framework for combating money laundering and the financing of terrorism.

#### *The fight against corruption*

As part of a continuous improvement approach, the system for preventing and detecting corruption and influence peddling is being strengthened in its various components with regard to risk assessment.

The due diligence measures on customers, intermediaries and suppliers knowledge have been complemented in order to improve the assessment of the risk of corruption. Procurement procedures have been revised. The automation of the detection of negative information on third parties is being implemented.

#### *Professional ethics*

The system for overseeing employees' personal transactions, private mandates and gifts & invitations has been strengthened with the update of the procedural body, the deployment of the dedicated IT tool allowing homogeneous risk management throughout the Group, as well as the publication of guidelines governing the management of breaches.

The whistleblowing system is now extended to external players and the protection of whistleblowers has been strengthened. In addition, employees responsible for processing alerts receive specific training. Finally, a comprehensive report on alerts is presented each year to Executive Management and the Board of directors.

#### *Market integrity*

The regulatory system has been updated: the procedures as well as the control plan applicable by the first line of defence have been updated.

In collaboration with the Professional Ethics and Protecting Clients' Interests Departments, the Group's conflict of interest policy was updated and the management system strengthened.

The integration of Exane's activities into the Group's overall monitoring system (in particular, detection and treatment of conflicts of interest and market abuse) was completed in November 2023.

The communication channels used by the market activities were subject to an exhaustive review to ensure the compliance of the registration and information retention processes.

Lastly, the algorithmic trading activities conducted within the various business lines and entities were subject to an in-depth review to ensure their compliance with the Group's control system.

### ***Regulation of banking activities***

The BNP Paribas Group is subject to the French Banking Separation and Regulation Act, as well as to the Volcker rule. The associated compliance system has been updated and adapted to the specificities and operational constraints of each activity and each legal entity, in compliance with legal and regulatory provisions.

The Group's swap activities, mainly under the responsibility of CIB, subject to CFTC (Commodity Futures Trading Commission) and SEC (Securities and Exchange Commission) regulations, have been the subject of several initiatives to strengthen their compliance framework.

### ***Tax regulations applicable to customers***

The BNP Paribas Group is subject to a set of tax regulations with extraterritorial scope: FATCA (Foreign Account Tax Compliance Act), QI regime (Qualified Intermediary) regulating the withholding of income from US securities; AEOI (automatic exchange of tax information within the OECD); DAC6 directive (declaration of tax schemes considered to be aggressive in the European Union).

The compliance systems relating to these regulations have been in place since their entry into force, including procedures, an employee training programme and adapted control plans.

In 2023, the local tax regulations applicable to customers were harmonised by Compliance, RISK and Finance & Strategy, which share the responsibility for the second line of defence in terms of tax risk with the support of the Tax function, acting as an expert in tax-related matters.

### ***Conduct***

In addition to its role as second line of defence in terms of risks relating to the rules of conduct that it shares with RISK and LEGAL, Compliance ensures the coordination, steering and information of management on transverse initiatives aimed at strengthening the Group's Conduct system composed of the following pillars:

- customer's interest;
- financial security;
- market integrity;
- conflicts of interests;
- professional ethics;
- respect for colleagues;
- protection of the Group;
- commitment to society;
- the fight against corruption and influence peddling.

This responsibility is now carried out within Compliance by a new domain of expertise, Supervisory & Conduct.

In 2023, the Group focused on strengthening the monitoring framework for Conduct, particularly within its market activities, in terms of risk assessment, procedures, controls and indicators. Specific governance has been put in place for these activities.

In addition, a series of indicators is regularly reported to the Board of directors. They relate to the use of the whistleblowing system, alerts relating to respect for people, the monitoring of mandatory training and customer complaints related to the topics of Conduct.

A recent survey of the Group's employees confirmed their high level of adherence to the values and behaviours defined in the Code of conduct, as well as a good knowledge of the channels used to raise alerts. These good overall results are the subject of a detailed analysis at the level of each entity in order to identify any additional actions.

### ***ESG practice***

In order to integrate environmental, societal and governance stakes into the risk management ensured by Compliance, an ESG practice team was created to bring expertise to the various domains of the Function and to establish collaboration with RISK, LEGAL, Company Engagement and the business lines.

The compliance system has been adapted, in particular in terms of protecting clients' interests with the issuance of instructions – for example to prevent the risk of greenwashing – and in terms of knowledge of third parties – in particular to integrate the identification of ESG risk factors when entering into relations.

Finally, a training programme for Compliance employees was designed within the Sustainability Academy, in liaison with Human Resources.

***Risk management system***

In 2023, actions relating to the risk management system focused on:

- the improvement of Risk and Control Self Assessment thanks to a more detailed taxonomy;
- the standardisation of the second-level control process carried out by Compliance on the first line of defence;
- increased use of the standard Group operational risk management tools.

## **Training**

Mandatory training programmes, adjusted in their content, continued with high completion rates.

All new employees, when they join the Group, are systematically registered for training on the Code of conduct (Conduct Journey) and financial security (know your customer, fight against money laundering, financing of terrorism and corruption, international sanctions and embargoes).

All Group employees are assigned a training course on all the topics of the Code of conduct. In its third edition, the Conduct Journey was enriched with information on whistleblowing channels and with a new module on diversity, equity and inclusion.

In addition, employees particularly exposed to certain risks receive complementary training on:

- financial security – advanced course;
- the fight against corruption – advanced course;
- the MIFID II regulation;
- the fight against market abuse and banking laws with extraterritorial scope;
- AEOI and FATCA tax regulations.

For all these campaigns completed during the year, the completion rates are between 96% and 99%.

## **Industrialisation of Compliance**

The COO Technology and Operational Performance Department continuously carries out actions to improve the effectiveness of Compliance tools and operational processes. Thus:

- close collaboration with the Group IT has made it possible to automate the search for adverse information on customers and suppliers, and to implement a new tool for managing risks related to professional ethics;
- innovative projects are carried out with the RISK Function to design solutions integrating artificial intelligence, process robotization and advanced information analysis technologies.

## **LEGAL**

### **Organisation and change to the function**

LEGAL is an independent and integrated function comprising all the Group's legal teams. All LEGAL employees report directly or indirectly to the Group General Counsel, in order to enable the legal experts to carry out their duties under conditions that guarantee their freedom of judgement and action.

At all levels of the Group, the LEGAL organisation enables adequate coverage of legal risks, including:

- dedicated legal teams that cover the business lines, regions and territories, based on the Group's organisation;
- platforms, created in 2020 and numbering nine at the end of 2023, which are dedicated internal legal teams that deliver legal services in all business activity sectors, entities and geographies concerned, within the framework of their exclusive main domain of expertise;
- the Group Dispute Resolution (GDR), a global and hierarchically integrated team which ensures appropriate management of the Group's major litigations and investigations as well as legal issues related to financial security (such as embargoes and anti-money laundering);
- the LEGAL Practice Competition Law specialising in competition law, which joined forces with Compliance in 2022 to strengthen the Group's compliance system in this area;
- finally, two central departments provide support services to the organisation of LEGAL.

### **LEGAL activity in 2023**

Throughout the year, LEGAL continued to strengthen the legal risk management system.

As part of its legal advisory activity, LEGAL has contributed to the analysis of emerging risks on themes such as corporate social responsibility (CSR), blockchain, crypto-assets, cybersecurity, artificial intelligence, outsourcing, *etc.*

In terms of legal risk prevention, training and awareness-raising actions have been undertaken at all levels of the organisation up to its executive managers.

To meet the technological challenges of the Group's GTS strategic plan, a Digital Learning Centre (DLC2) programme has been designed offering a continuous training course on digital topics for LEGAL employees as well as round tables by associating business lines and functions.

In the area of sustainable development, one of the three pillars of the GTS plan, LEGAL has actively contributed to raising the awareness of the management teams of the divisions, business lines and functions on the legal challenges in terms of sustainable finance and ESG. In addition, within the Regulatory, platform, a Sustainable Finance practice has been structured and a training course dedicated to LEGAL employees has been built with Human Resources – the LEGAL Sustainability Academy, in line with the Group's.

Lastly, LEGAL continued to implement the legal risk management system:

- updating the Risk and Control Self-Assessment – RCSA for the entire function;
- performing second-level controls on legal processes;
- overseeing operational risk incidents involving legal risk; and
- contributing to the deployment of the library of controls relating to legal risks by continuing to provide educational support for the business lines and functions.

## **RISK AND PERMANENT CONTROL**

### **Operational risk management**

The operational risk management model for the RISK Function is based on both decentralised teams within the businesses, under the responsibility of the Risk directors of these businesses, close to the processes, operational staff and systems, and on a central structure (RISK ORM) with a steering and coordination role and providing local teams with support on subjects requiring specific expertise (for example: cybersecurity, anti-fraud or managing risks related to products and services supplied by third parties).

All of the components of the procedural system for operational risk have been significantly overhauled since 2018:

- Risk and Control Self-Assessment (RCSA);
- controls;
- collection of historical incidents;
- analysis and quantification of operational risk scenarios (“potential incidents”);
- action plans;
- outsourcing risk management.

Work on the taxonomy of risks as well as the mapping of processes and organisational structures has also been completed to further standardise guidelines supporting the assessment and management of operational risk.

In addition to these methodological changes, a new integrated operational risk management tool (360 Risk Op), composed of various interconnected modules, was rolled out in the fourth quarter of 2019. After the launch of the module dedicated to the collection of Historical Incidents in 2019, those relating to RCSAs, Potential Incidents and the collection of outsourcing arrangements in 2020, the one dedicated to Action Plans has been available since April 2021. The control modules have been gradually developed and deployed since the summer of 2021 and implemented in 2023.

### **Management of risks related to Information and Communication Technologies**

The ongoing implementation of the Group’s digitisation initiatives aimed at creating streamlined channels for its customers and partners as well as new ways of collaboration for its staff, introduces new technologies and risks, and reinforces the need to continue to monitor the Group’s technological risk profile and ensure the effectiveness of controls.

In 2023, the RISK teams continued to improve the risk management framework related to information and communication technologies (ICT) through the following actions:

- the performance of penetration tests (Red Team) on several entities in order to assess their capabilities of detecting cybersecurity incidents, and reinforcing protection measures where necessary;
- better integration of ICT risk elements into the entire reference framework;
- participation in major Group programmes in order to provide an independent analysis of the risks and action plans identified on topics such as fraud, cyber risk management or the deployment of the cloud;
- the implementation of Group-level governance and a procedural framework for operational resilience;
- monitoring cybersecurity threats, notably in the context of the conflict in Ukraine.

### **Management of risks related to personal data protection**

In 2023, BNP Paribas continued to integrate personal data protection into the existing RISK management and governance practices. A robust control system makes it possible to respond to requests from the authorities, to correct vulnerabilities as a priority and to demonstrate the Group’s responsibility in this area.

- In accordance with the Group’s new confidentiality policy, the normative framework has been revised and is being implemented in all entities.
- The general risk taxonomy has been revised to include personal data protection and a Generic Control Library was designed.
- An independent testing plan was implemented by the second line of defence in the majority of entities.
- Improving the system and tools for detecting and managing personal data incidents makes it possible to react more effectively and strengthen their prevention.
- Contracts with third parties as well as cross-border data transfers are subject to continuous review, facilitated by automation measures.
- The Privacy Risk Assessment process has been improved and automated.

- A mandatory training programme has been rolled out.
- The global system has been automated, enabling the production of risk indicators, thus contributing to a better maturity of entities operating outside the scope of the European regulation.

All of these actions strengthen the consistency of the system, reduce risks and vulnerabilities, and improve visibility and control.

## Changes to the RISK Function

RISK continues to roll out its RISK2025 transformation plan, the aim of which, in line with the Group's GTS Strategic Plan, is to optimise the effectiveness and efficiency of the function through the development of enhanced capabilities to manage risks, optimise the function's operating model and ensure the attraction, retention and development of talent.

In this context, a certain number of initiatives were continued and new ones launched, structured transverse programmes covering the main types of risks. They make it possible to simplify, automate and pool certain internal processes and contribute to the end-to-end review of customer processes, while ensuring that the control system is at the highest level. They are based on reinforcing new technologies (for example in the context of lending processes and the detection and monitoring of risks), on consolidating internal skills (for example through the increased use of key profiles related to new modelling methods or through the internalisation of external assistance positions), or the strengthening of its pooled operational platforms in Portugal, India, Spain and Canada.

## Environmental, social and governance (ESG) risk management

As part of the Group's "Sustainable Finance" governance, a multi-year programme was launched to strengthen the integration of ESG risk factors into the Group's risk management system. These risk factors likely to affect so-called traditional risk categories (such as credit, market or operational risks) are thus better identified, assessed and analysed, and therefore better integrated into the Group's risk management.

In particular, a homogeneous approach to assess the ESG profile of large corporate clients is being rolled out, making it possible to:

- identify potential adverse impacts that could result in credit, investment, and reputational risks on the environment and society; and
- support dialogue with corporate clients and accompany their transition to a more sustainable business model.

As a second line of defence for environmental risks, the RISK Function has continued to integrate this analysis approach into the credit processes, in collaboration with the operating entities. This work will continue in 2024 with the adaptation of this approach to other customer segments such as midcap companies or financial institutions.

Additional information on climate change risk management can be found in Commitment3 described in chapter 7 of this amendment to the 2022 Universal Registration Document.

## PERIODIC CONTROL

In 2023, the General Inspection adjusted its framework following the disposals of Bank of the West, BICI Senegal and BICI Côte d'Ivoire. Thus, the initial audit plan of 916 missions was resized accordingly to 835 missions. A total of 798 missions were finally completed in 2023, *i.e.* 96% of the target for the year; 92% of them were scheduled in the original audit plan.

At the end of 2021, the European Central Bank initiated an audit on the General Inspection. The report was issued in 2023, highlighting positive points but also expressing recommendations. These are currently being closed in accordance with the agreed schedules.

At the end of 2021, the General Inspection had laid the foundations of a new modernisation plan with the creation of the Transformation & Digital Intelligence team. After a first year of framing and structuring the IG+ programme in 2022, 2023 saw the implementation of profound transformations impacting the daily life of the function and all of its employees around the world. This plan is structured around seven projects, the first two of which are the pillars that support the whole. Simplification and cross-functionality are the key words of this transformation.

Four projects are focused on processes and tools:

- as provided for in the project plan, in the spring of 2023, the General Inspection Department implemented an end-to-end audit tool with the highest standards in the profession, enabling a profound improvement in operational efficiency. This tool, deployed in all audit teams around the world, has made it possible to switch the conduct of all assurance missions into a new ergonomic, collaborative environment, allowing cross-functionalities at the level of the entire function, and also interfaces and feed of information from the other control functions;
- the continued strengthening of data analytics capabilities was backed by a complete overhaul of the underlying tools and technologies and the standardisation of data exchange protocols within BNP Paribas in compliance with the highest standards, systematic use of these techniques in the missions and a continuous acculturation and training effort aimed at the entire General Inspection population;
- the revision of mission conduct methodologies, systematically integrates the audit guides to improve efficiency and consistency between similar missions, thanks to the new tool;
- the overhaul of Risk Assessment mechanisms promotes better integration of the results of the works of the first and second lines of defence (*e.g.* RCSA data – Risk and Control Self Assessment), and implements new data analysis techniques to

improve access and the industrial use of the business line data necessary for risk assessment (for example, the analysis of the Group's Corporates activities).

Three projects are focused on people:

- an overhaul of the Employer Value Proposition (EVP) for inspectors/auditors;
- a review of working methods to continue to improve cross-functionality and everything that contributes to it;
- a change management project to support employees in these transformations.

Supported by its transformation, General Inspection continued to develop the methods of collaboration created during the pandemic – between the central General Inspection teams and those of the audit hubs present in the countries; with other control functions; between auditors and auditees – allowing work in remote mode and also a better coordination of teams. Among the virtuous consequences of this transformation, the General Inspection has considerably improved its carbon footprint by significantly reducing international travel.

In 2023, the General Inspection Department repeated its annual risk assessment exercise. All of the approximately 3,000 Audit Units (AUs) were reviewed and a document describing the broad outline of the AU and detailing the assessment of its inherent risk and the quality of the controls carried out therein was produced for each. The changes in scope adjustments offset each other overall:

- disposals of entities and therefore removal of the AUs that represented them; and
- conversely: creation of new entities, division of AUs in the Group's offshoring platforms to take into account the increase in these teams and the diversification of the services they provide to the Group.

Overall, the residual risk profile for 2023, which results from the combination of the two factors: inherent risk and quality of controls, is slightly improved compared to that of 2022. The General Inspection noted a certain stability of the inherent *pro forma* risk and the continued improvement of the quality of controls to a very good level.

In terms of the audit plan, 2023 is the start of a new cycle (2023-2027). The General Inspection department always endeavours to cover the entire auditable scope at the right frequency. The audit frequency applicable to each AU depends on the residual risk score. The frequency is shorter when the measured residual risk is high. If the AU has a specific regulatory audit cycle, the applicable cycle is the shorter one between the regulatory cycle and the cycle resulting from the Risk Assessment. All the AUs were placed in order of priority by combining these different elements. The duration of the audit cycle cannot exceed five years in any case.

Thanks to the capabilities offered by the new General Inspection tool, the audit plan promotes transverse missions in which the employees of the hubs and the central General Inspection audit similar AUs spread around the world, at the same time and using the same tool. In addition to an obvious gain in efficiency, these missions are of increased interest to auditees and auditors.

The policy of very high investment in training continued:

- in particular around the pillars of the General Inspection's transformation: new tool, new audit methods, actions taken in terms of data analysis;
- also in the various audit areas: in particular to enable new employees to acquire the required skills base; such that all employees of the Function follow regulatory training with a high level of expertise; or by offering technical training related to auditors' profiles and specialisations;
- the training framework is organised between face-to-face, distance learning and e-learning, to provide for digital and classroom-based at the same time;
- the headcount of the General Inspection department was down at the end of 2023 compared to the end of 2022. This trend is due to a scope effect related to disposals. It masks targeted increases, for example: audit of offshore platforms, audit of Conduct. The General Inspection is continuing a permanent recruitment effort in a context of a war for talent, which has made Human Resources challenges its priority, notably reflected in the revision of its EVP.

## INTERNAL CONTROL EMPLOYEES

The various internal control functions are based on the following headcount (in FTE = Full-Time Equivalents, calculated at the end of the period):

|                  | 2018          | 2019          | 2020          | 2021 <sup>(1)</sup> | 2022 <sup>(2)</sup> | 2023 <sup>(3)</sup> | Variation<br>2023/2022 |
|------------------|---------------|---------------|---------------|---------------------|---------------------|---------------------|------------------------|
| Compliance       | 4,183         | 4,219         | 4,105         | 3,770               | 3,791               | 3,610               | -4.8%                  |
| LEGAL            | 1,846         | 1,810         | 1,779         | 1,736               | 1,703               | 1,651               | -3.1%                  |
| RISK             | 5,520         | 5,462         | 5,191         | 5,029               | 4,885               | 4,754               | -2.7%                  |
| Periodic control | 1,394         | 1,446         | 1,381         | 1,355               | 1,342               | 1,278               | -4.8%                  |
| <b>TOTAL</b>     | <b>12,943</b> | <b>12,937</b> | <b>12,456</b> | <b>11,890</b>       | <b>11,721</b>       | <b>11,293</b>       | <b>-3.7%</b>           |

(1) In 2021, the reduction in the headcount of the Compliance and RISK Functions is mainly due to the transfer of control teams to the first line

---

of defence (business lines).

- (2) In 2022, the headcount reductions result from the continuation of this transfer for the RISK Function, and a change in the scope of consolidation for all functions (deconsolidation of Ukrsibbank in Ukraine). On a like-for-like basis, the headcount increased by 2.7% for Compliance and remained virtually stable for the other functions.
- (3) In 2023, the headcount reductions result from a change in the scope of consolidation for all functions (mainly the disposals of Bank of the West in the United States, BICI Senegal and BICI Côte d'Ivoire). On a like-for-like basis, the total headcount for the control functions remained stable.

---

## INTERNAL CONTROL PROCEDURES RELATING TO THE PREPARATION AND PROCESSING OF FINANCIAL INFORMATION

---

### ROLES AND RESPONSIBILITIES FOR PREPARING AND PROCESSING ACCOUNTING AND FINANCIAL INFORMATION

Under the authority of the Chief Executive Officer, the Finance & Strategy Function is notably responsible for preparing and processing financial information. It also performs an independent control mission which aims at ensuring control of the risk related to accounting and financial information. The specific missions assigned by the Group to the Finance & Strategy Function are defined by a charter. These consist of:

- preparing the financial information and guaranteeing the consistency and fairness of the financial and prudential information published, in compliance with the regulatory framework and standards;
- providing Executive Management with support for the Group's economic management at each level of its organisation;
- managing the Group's tax risk, representing the Group in tax matters and helping to preserve its reputation;
- defining accounting policies, management standards and prudential standards for the Group and overseeing their operational implementation;
- defining, deploying and supervising the permanent control system concerning financial information for the entire Group;
- assisting Executive Management in defining the Group's strategy, ensuring the benchmarking of the Group's performance and initiating and examining mergers and acquisitions ("M&A");
- managing the Group's equity and conducting the analysis and financial structuring of the Group's external and internal acquisition, partnership and disposal projects;
- ensuring the Group's financial communication and monitoring of the BNP Paribas share price, shareholders and market reactions;
- managing relations with market authorities and investors and organising Annual General Meetings;
- anticipating regulatory and prudential changes, and developing and communicating the Group's positions on these issues;
- coordinating the Group's banking supervision, in particular the relationship with the ECB;
- meeting the economic research needs of all of the Group's customers, business lines and functions;
- defining and managing the organisation of the Finance & Strategy Function and monitoring its resources and costs;
- managing the implementation of the target operational system, contributing to the definition of the functional architecture and the design of the Finance systems and deploying them.

All these missions require those involved to be fully competent in their particular areas, to understand and check the information they produce and to comply with the required standards and time limits. Particular attention is paid to compliance, quality and integrity of the information used and data protection. All those involved in the function have a duty to alert Executive Management. The missions of the function are carried out in conjunction with the RISK and ALM Treasury Functions for regulatory requirements, with the Project Management team for Finance & Strategy and RISK, housed within Group IT, with regard to user processes and the changes to the information system. In practice, the responsibility of the Finance & Strategy Function is carried out as follows:

- the financial data produced is the responsibility of the Finance Department of each entity, whether produced at its own level or by shared regional platforms; when they contribute to the Group's consolidated results, they are sent to the divisions/business lines for approval;
- the production of forecast financial data is carried out by the divisions/business lines, ensuring their consistency with the actual data produced by the entities or regional platforms;
- centrally, the Finance & Strategy Function prepares the reporting instructions distributed to all divisions/business lines and consolidated entities in order to ensure that the data is homogeneous and complies with the Group's rules. It gathers all the accounting and management information produced by the entities and approved by the divisions/business lines and assembles and consolidates these data for use by Executive Management or for communication to third parties.

## PRODUCTION OF ACCOUNTING AND FINANCIAL DATA

### Standards framework

The local financial statements for each entity are prepared following the accounting standards prevailing in the country where the entity carries on business, while the Group consolidated financial statements are prepared under IFRS (International Financial Reporting Standards) as adopted by the European Union.

Within Finance & Strategy (Group), the “Standards & Controls – Group Financial Policies” (GFP) department defines the IFRS-based accounting principles to be applied to the Group as a whole. It monitors regulatory changes to IFRS and French standards and interprets them as necessary by issuing new principles. A manual of the Group’s IFRS accounting principles is available for the divisions/business lines and entities on the internal network communication tools (“intranet”) of BNP Paribas. It is regularly updated to reflect regulatory changes. At the request of GFP or those responsible for reporting, certain interpretations and major elements of doctrine are submitted to a specialised committee (“Accounting Policy Committee”) for approval or arbitration. This committee reviews and approves the changes to be made to the accounting principles manual.

In addition, the “Group Financial Policies” department reviews the specific accounting studies carried out by the divisions or entities as part of the preparation of the financial statements and during the approval process of new products or new activities, when these are complex or require the exercise of judgement. In some cases, it is also responsible for carrying out these analyses.

Finally, this department is also responsible for maintaining the management standards manual, incorporating the needs identified by the performance management teams. These principles and standards can also be accessed using internal network tools (intranet).

The solvency framework is the joint responsibility of the RISK and Finance & Strategy Functions. The Finance & Strategy Function is notably responsible for the normative elements relating to the prudential scope, regulatory capital, and the calculation of leverage and GSIB ratios. The other aspects relating to risk measurement are the responsibility of the RISK Function. A joint “Solvency Policies Committee”, co-chaired by the two functions, performs the same role as the “Accounting Policy Committee” in terms of prudential standards.

The regulatory liquidity framework is the responsibility of ALM Treasury (with the contribution of the Finance & Strategy and RISK Functions).

### Data processing system

The data processing system is organised around two channels, the first structured according to entities, and the second according to business lines:

- “Measure, Control and Explain (MCE)” is the Finance channel dedicated to the preparation of financial data. Organised around shared and multi-business regional platforms, it combines expertise and industrialisation for all financial reporting flows (financial statements, regulatory, management, solvency, liquidity, taxes), at Group or local level;
- “Monitor and Foster Performance (MFP)” is the Finance channel which has an analysis and advisory role in terms of strategic management of the businesses, based on the financial data provided by the MCE channel. It is also responsible for preparing forecast financial reports (estimate, budget, three-year plan, financial information in stressed scenarios) by interacting closely with the Business heads. This is why this channel is structured according to the Division, Business Line, Function.

## PERMANENT CONTROL OF ACCOUNTING AND FINANCIAL INFORMATION

### Internal control within the Finance & Strategy Function

To allow centralised monitoring of the risk related to accounting and financial information, the “Group Financial Controls” team within Finance & Strategy (Group) carries out the following main missions:

- defining the Group’s policy as regards the accounting internal control system. This system requires accounting entities to follow rules in organising their accounting internal control environments and to implement key controls ensuring that the information in their consolidation packages is reliable. The Group has issued internal accounting control guidelines for use by the consolidated entities and a standard accounting control plan listing the major mandatory controls aiming at covering the accounting risk;
- ensuring that the internal control environment for accounting and financial information functions properly within the Group, in particular via the procedure for internal certification of accounts described below; reporting quarterly to Executive Management and the Board of directors’ Financial Statements Committee on the quality of the Group’s financial statements;
- together with the RISK Function, overseeing the proper functioning of the system for collecting and processing consolidated credit risk reporting, including by means of quality indicators;
- ensuring the proper functioning of the data collection and processing system for the preparation of liquidity reports, in particular by means of a specific certification system and quality indicators;
- ensuring the implementation by the entities of the Statutory Auditors’ recommendations, the recommendations of the General Inspection relating to the Finance process and the ECB’s recommendations allocated to Finance & Strategy with the support of the divisions/business lines. This monitoring is facilitated by use of a dedicated tool that enables each entity to monitor the

recommendations made to it and to regularly report on the progress made on the various action plans. Centralised monitoring of these recommendations enables Finance to identify improvements to the accounting internal control system made within the consolidated entities, identify any cross-functional problems and, if necessary, revise the Group-level procedures and instructions.

These missions are relayed within the Finance Departments of the divisions-business lines by central, independent second-level control teams who carry out close supervision of the entities and develop, if necessary, accounting control procedures adapted to the specificities of their scope, in line with Group-level procedures.

Lastly, within the entities/businesses' Finance Departments, the Group's accounting internal control principles have led to dedicated and independent second-level accounting control teams or representatives, depending on the size of the entities, being set up. As such, the Group's established approach, in which the reporting production tasks are consolidated on regional platforms (improving the harmonisation of the first-line reporting and control processes and increasing their efficiency for the scope of the entities concerned), also ensures that the second-level accounting control teams are the appropriate size and have the necessary expertise. The main missions of these local teams are as follows:

- implementing second-level accounting controls on all entities falling within their scope and covering in particular the controls carried out by the entities' Finance Functions (including the first-level controls carried out on the processes operated by the Back Offices). These procedures are based, in particular, on standardised accounting control plans and accounting control tools that allow control responsibilities to be allocated to the various contributors to flows. Several control tools support first- and second-line defence controls, for example, identifying, for each account, the department responsible for its justification and control, reconciling the balances recorded in the accounting system with the balances appearing in the Operations systems of each activity and identifying, justifying and monitoring the clearance of outstanding items in the flow accounts;
- implementing control and coordinating (directly when this task is not performed by first-line controls) the "elementary certification" process (described below) requiring an entity's different departments to report to the Finance & Strategy Function on the controls that they have carried out;
- ensuring that the accounting internal control system enables the entity's Finance Department to have sufficient oversight of the process of preparation of account summaries, and in particular over all the elements necessary for the Group's certification process (described below). To assist in achieving this objective, the tasks involved in accounts closure are formally defined. The use of tools to map the processes and associated risks and to document the checks as well as the coordination with other control channels contributes to improving the quality.

## Internal Certification Process

### At Group level

Finance & Strategy (Group) uses FACT (Finance Accounting Control Tool) for the internal certification of the quarterly data produced by each entity for the consolidation package and for the consolidation process for which the "Financial & Regulatory Reporting" Department within Finance & Strategy (Group) is responsible.

The Chief Financial Officer of each entity concerned certifies to Finance & Strategy (Group) that:

- the transmitted data have been prepared in accordance with the Group's norms and standards;
- the accounting internal control system guarantees its quality and reliability.

The main certificate completed by fully consolidated entities reproduces the results of all of the major controls defined in the Group's accounting control plan, and leads to the determination of a rating for each entity. Entities consolidated by the equity method complete an appropriate certificate. Finally, non-consolidated entities are certified annually through a simplified procedure.

This internal certification process forms part of the Group's monitoring system for Internal control and enables the Finance & Strategy (Group) Function, which has the overall responsibility for the preparation and quality of the Group's consolidated financial statements, to be informed of any problems in the financial statements and to monitor the entities' implementation of appropriate corrective measures. A report on this process is presented to Executive Management and to the Financial Statements Committee of the Board of directors at the close of the Group's quarterly consolidated accounts.

This certification system is also in place for the information included in regulatory reporting on credit risk and the capital adequacy ratio. Those contributing to the reports attest that they have complied with the standards and procedures and that the data used is of appropriate quality. They further describe the results of the controls carried out at the various stages of producing the reports.

On the same principles, a certification system is in place for the reporting of liquidity-related data. The various contributors report on the compliance of the data transmitted with the standards, and the results of key controls performed to ensure the quality of reporting.

### At entity level

In order to ensure the oversight of all the process of preparation of accounting information at the level of each entity's Finance Department, the permanent control procedures of Finance & Strategy (Group), developed by Group Financial Controls require the implementation of first-level procedures relating to accounting data or controls when the process of preparing the accounting information is operated or controlled in a decentralised way. In this context, an "elementary certification" (or "sub-certification") procedure can be deployed.

This is a process by which the providers of the information used to prepare accounting and financial data (e.g. Middle Office, Back Office, Human Resources, Risk, Suppliers' Accounts, etc.) formally certify that the fundamental controls intended to ensure the reliability of the accounting and financial data under their responsibility function properly. The elementary certificates are sent to the local Finance Department first level of control, which analyses them in combination with the accounting controls that it exercises directly, prepares a summary report intended to be used to prepare the main certificate, and liaises with the various players in order to monitor points requiring attention.

The FACT application also makes it possible to automate this sub-certification process by providing entities with a dedicated environment in which they can directly manage the processes set up at their level.

## **Valuation control of financial instruments measured at fair value**

### **Assets and derivatives measured at fair value through profit or loss in the trading portfolio**

The trading portfolio mainly focuses on the market activities of Global Markets and a few other, less significant scopes. Finance & Strategy (Group) has defined a specific system for the main scope. This is based on the principle that Finance & Strategy, responsible for the preparation and quality of the Group's accounting and management information, delegates the production and control of the market or model value of financial instruments to the various players of the chain, thus constituting a single and integrated valuation channel for financial instruments. The processes covered include in particular:

- verifying the appropriateness of the valuation system as part of the approval process for new transactions or activities;
- verifying the proper recording of transactions in the systems and ensuring it is appropriate with the valuation methodologies;
- verifying the development and approval mechanism independent of the valuation methods;
- determining the market parameters and the procedure for an independent verification of these parameters;
- determining valuation adjustments for market, liquidity and counterparty risks;
- determining and reviewing the rules for making parameters observable;
- classifying instruments within the fair value hierarchy, determining day one profit adjustments, estimating the sensitivity of level 3 valuations to valuation assumptions.

Through appropriate processes and tools, the channel's objectives are to ensure both the correctness and the reliability of the process for valuing financial instruments, and the quality and comprehensiveness of the control system. It can thus provide the appropriate data to the various decision-making bodies, data that also informs the operational processes for compiling the accounting and management results, and ensures the transparency of appendices dedicated to fair value.

Control of the valuation channel, which involves all participants, is supervised by the Finance & Strategy Function within the framework of a specific charter and a dedicated governance. This control system is based on a set of organisational principles defined in the Group's Internal Control Charter for each organisational level, *i.e.* Group, CIB and the main entities that account for market transactions.

To ensure its proper functioning, the Finance & Strategy Function relies on dedicated teams ("Standards & Controls – Valuation Risk and Governance, S&C – VRG"), which oversee the entire system. The Finance Function decides on the information that must be reported by the various players: this comprises both quantitative and qualitative data indicating trends in different businesses as well as the results and quality of upstream controls carried out.

Several committees that meet on a quarterly or monthly basis are set up to bring all the players together to review and examine, for each process and Business line, the methods used and/or the results of the controls conducted. These committees' operating methods are governed by procedures approved by the Finance & Strategy Function, ensuring that Finance & Strategy takes part in the main choices and arbitrations. Lastly, the S&C – VRG reports at each accounting quarter-end to the Product Financial Control Committee (PFC), chaired by the Group Deputy Chief Financial Officer, on its work, and informs the committee of the points of arbitration or attention concerning the effectiveness of the controls and the degree of reliability of the valuation and results determination process. This quarterly committee brings together the business lines, Finance & Strategy (Group) and the divisions concerned, ALMT and the RISK Function. Intermediary PFC committees complete this system and aim at defining project priorities, monitoring their implementation and thoroughly examining certain technical elements.

### **Instruments measured at fair value through profit or loss or through equity outside the trading portfolio**

#### ***Fixed income securities, derivatives and debt measured at fair value through profit or loss or through equity***

Most of the instruments relating to this scope are covered by the system in place for the trading portfolio, thanks to an adapted extension of the governance as well as the pooling of systems, processes and valuation methodologies. The main business line concerned is ALM Treasury, which is represented on the aforementioned PFC committee.

#### ***Equity securities measured at fair value through profit or loss or through equity***

Since 2020, Group Financial Policies has developed a specific valuation standard, and the valuation governance system has been standardised to ensure homogeneous coverage of this portfolio and an appropriate distribution of responsibilities and decision-making chains.

#### ***Other items measured at fair value***

Control systems, meeting the requirements of the Group's accounting control plan, exist at the level of the entities or at the level of the divisions-business lines to ensure the necessary level of control on loans that do not meet IFRS 9 SPPI<sup>1</sup> criteria.

<sup>1</sup> SPPI (Solely Payment of Principal and Interest): The SPPI criterion is a criterion required in addition to the management model in order to determine the classification of financial instruments excluding trading activities on the balance sheet. It is linked to the contractual characteristics of the instruments. The tests must be carried out on all assets whose management model is "HTC" ("Held To Collect", collect contractual cash flows and keep the asset until maturity) or "HTCS" ("Held To Collect and Sell", collect contractual flows and sell the asset) in order to determine the accounting category: amortised cost, fair value through equity or fair value through profit or loss.

## Development of the system

### The Finance & Strategy Function's general permanent control framework

The permanent control system related to the risk on accounting and financial information is continuously being adapted. In 2021, the Finance & Strategy Function reviewed its permanent control system and the articulation between its two lines of defence as well as with the functions exercising second line of defence missions. This framework has also introduced a strong governance of the system articulated through committees called "FORCC"<sup>1</sup> through which all the permanent control processes of the Finance operating business units are reviewed. The comprehensive deployment of this system was completed in 2022. The procedures described above, as well as the change in the tools are part of an evolving framework that aims at guaranteeing an adequate level of control throughout the Group, and a better harmonisation of the control of accounting and financial information. Thus, the implementation within the channel of a standardised tool for formalising and monitoring controls (Beacon) is continuing in order to cover all entities and central teams on the various financial control plans (accounting, strategic management, solvency and liquidity). Lastly, the inherent risk assessment methodology was clarified this year. The entities measure a level of risk dynamically in anticipation of closing, based on the major events of the quarter, identified locally or by the Group, and the analysis of risk indicators adapted to each generic control point concerned. It thus makes it possible to prioritise risks in advance and to guide the intensity of the control activities of the second line of defence finance teams locally.

Moreover, the quality of the accounting certification process is regularly reviewed with the divisions/business lines, for instance with the preparation of quantitative indicators for some controls, targeted cross-functional reviews of a major control and *ad hoc* reviews with the divisions/business lines on specific points for improvement in various scopes. These reviews are supplemented by presentations to the various committees in the Finance & Strategy channel and training sessions. Group procedures clarifying some major controls, and detailed instructions aiming at ensuring consistent responses and adequately-documented processes are also distributed. These Group procedures and instructions are extended where necessary at division/business line level to cover issues specific to them.

Similarly, the certification system of the data contributing to the calculation of the capital solvency ratio is subject to adjustment in order to take into account developments in the processes and the organisation, and to capitalise on indicators and controls in place in the various sectors in connection with the improvement programme on the reporting and the quality of the data.

In addition, for liquidity reporting, changes in processes and tools are carried out regularly in order to adapt to the new regulatory reporting demands, and specific actions are taken with the various contributors in order to enhance the quality and controls for the channel.

### Data control system

As in previous years, the Group continued to adapt its system in 2023 to continue to improve the quality and integrity of the data required to produce the reports covering the different types of risks to which BNP Paribas is exposed (risk related to the accounting and financial information, credit, market/counterparty, liquidity and operational risks), and to improve the consistency of related reporting at all levels of the organisation during normal periods as well as during stress or crisis periods.

This continuous adaptation of the system is part of the regulatory framework of the principles set by the Basel Committee for the aggregation of risk data and their reporting ("Principles for effective risk data aggregation and risk reporting – Basel Committee on Banking Supervision – Standard 239") and aims at ensuring the Group's compliance with these principles.

Significant orientations taken in previous years were maintained in 2023 as part of the data strategy ("Data Towards 2025") in line with the Group's 2025 ambitions, in particular in the following areas:

- the implementation of the Group's Data Management strategy, including the Data Management by Design approach, the data compilation model around the Group Data Management tool, "WeData", monitoring and quality control (strengthening of local Business line indicators and their consolidated vision, organisation of the extension of the scope of critical data for implementation from 2023/2025), the organisation of the processes supporting these activities (inclusion of the Single Channel organisational model), the use of adapted technologies and a strengthened data culture within the Group with active management of the Data community (organisation of different Data events during the year);
- the coordination of Data governance with, in particular, the holding of the Group Data Board (biannual), a Shared Data Council for the data of the Group's standards and quality assessment committees and monitoring of remediation actions of the Group, Business lines or functions and entities ("Quality Assessment & Remediation Committees – QARC") generally quarterly. Also in 2023 the update of the Group "Roles & Responsibilities related to Data Quality, Integrity and Protection" procedure;
- consideration of the Data strategy as part of the Group's IT strategy, notably by integrating the principles of Data Management by Design and the IT contribution to the data compilation model (including the development of dictionaries of application data), and with the permanent presence of the Group CIO on the Group Data Board, the individual assignment of Data responsibilities within the Group IT Function and the participation in the main Data projects.

<sup>1</sup> FORCC: Financial and Operational Risk Control Committee.

## PERIODIC CONTROL

General Inspection has a dedicated Finance channel (called the “Finance Domain”) with a team of specialist inspectors in accounting and financial auditing, thus reflecting the General Inspection’s strategy of having a robust auditing capability, as regards both the technical complexity of its work and its scope of coverage of accounting and financial risk.

Its action plan is based on an annual risk assessment exercise, the practical details of which have been established by General Inspection based on the risk evaluation chart defined by the RISK Function.

The core aims of this team are as follows:

- establishing a hub of accounting and financial expertise in order to reinforce the capability of General Inspection when carrying out inspections in these areas;
- disseminating accounting and financial internal audit best practices and standardising the quality of related audit work within the Group;
- identifying and inspecting areas of accounting and financial risk at Group level.

## RELATIONS WITH THE STATUTORY AUDITORS

Each year, as part of their statutory assignment, the Statutory Auditors issue a report in which they give their opinion concerning the consistency and fairness of the consolidated financial statements of the BNP Paribas Group as well as the annual financial statements of the Group's companies. The Statutory Auditors also carry out limited reviews on the closing of the half-yearly accounts, and specific tasks in relation to the quarterly accounts.

Thus, as part of their statutory mission:

- they examine any significant changes in accounting standards and present their opinions to the Financial Statements Committee concerning the accounting choices with a material impact;
- they present their conclusions to the Finance & Strategy Functions in the entities/business lines/divisions and at a Group level, and in particular any observations and recommendations to improve certain aspects of the internal control system that contribute to the preparation of the accounting and financial information that they reviewed during their audit.

## FINANCIAL COMMUNICATION (PRESS RELEASES, SPECIAL PRESENTATIONS, ETC.)

Financial communications for publication are written by the "Investor Relations and Financial Information" Department within Finance & Strategy (Group). It is directed at retail and institutional shareholders, financial analysts and rating agencies, and presents the Group's different activities, explains its results and describes its development strategy, while maintaining the financial information homogeneous with that used at an internal level.

The team, which reports to Executive Management and the Chief Financial Officer, proposes and defines the format in which financial information is published by the BNP Paribas Group. It works with the divisions and functions to prepare the presentation of financial results, strategic projects and specific topics. It distributes them to the financial community.

The Statutory Auditors are associated with the validation and review phase of communications relating to the closing of quarterly, half-yearly or annual financial statements, before their presentation to the Financial Statements Committee and to the Board of directors, who approve them.";

- (c) Section 3 entitled "2022 Review of Operations" on pages 145 to 192 shall be deleted in its entirety and replaced with the following:

# "3 2023 REVIEW OF OPERATIONS

## 3.1 BNP Paribas consolidated results

As a reminder, the financial information and data at 31 December 2022 have been restated in line with the consolidated financial statements to take into account (i) the application of IFRS 5 relating to groups of assets and liabilities held for sale, following the sale of Bank of the West on 1 February 2023; (ii) the application of IFRS 17 (Insurance Contracts) and the application of IFRS 9 for insurance entities, effective 1 January 2023; (iii) the application of IAS 29 (Financial Reporting in Hyperinflationary Economies) to Türkiye, effective 1 January 2022; and (iv) the internal transfers of activities and results at Global Markets and Commercial & Personal Banking in Belgium.

The section includes references to 2023 distributable income. The distributable income is the basis for the calculation of the distribution in 2023 and reflects the intrinsic performance of the Group after the impact of the sale of Bank of the West, after the contribution to the constitution of the Single Resolution Fund (SRF) and excluding extraordinary items.

## SOLID RESULTS

BNP Paribas' diversified and integrated model and its capacity to accompany clients and the economy in a comprehensive way by mobilising its teams, its resources, and its capabilities, continued to drive growth in activity and results in 2023.

**The Group's performance, as reflected in distributable Net Income<sup>1</sup>, is solid and in line with the 2023 objective.** Distributable Net Income<sup>(1)</sup> amounted to EUR 11,232 million in 2023, up sharply by 10.2% compared to the 2022 reported result<sup>2</sup>. Distributable Net Income reflects BNP Paribas' intrinsic performance post impact of the sale of Bank of the West and post contribution to the ramp-up of the Single Resolution Fund and enabled the absorption of the very significant negative impact of extraordinary items in 2023 recognised in Corporate Centre.

On this basis<sup>(1)</sup>, **revenue growth was strong (+3.3%), and operating expenses decreased by 1.0%.** The Group achieved a positive jaws effect<sup>3</sup>. Thanks to its long-term approach and prudent and proactive risk management, **cost of risk is at a low level** (32 basis points of outstanding customer loans)<sup>4</sup>, driven by a structural improvement in the risk profile over the past 10 years.

**The financial structure is solid**, and the trajectory of the common equity Tier 1 ratio is on track to meeting the 12% objective post implementation of the new CRR 3 regulation. Lastly, the **redployment of capital is well underway and disciplined in its approach and sustains the acceleration in growth.**

**For the whole of 2023, revenues came to EUR 45,874 million** (EUR 45,430 million in 2022). They reflected the extraordinary negative impact of -EUR 938 million due to changes in TLTRO terms and conditions decided by the European Central Bank in the fourth quarter 2022 and the exceptional impact of -EUR 125 million from provisions for litigation booked in the second quarter 2023, both recognised in Corporate Centre.

**Revenues adjusted to derive distributable Net Income rose by 3.3% to EUR 46,927 million.** They excluded the extraordinary negative impact and an additional adjustment of EUR 115 million for a total of EUR 1,053 million.

In the operating divisions, revenues increased by 1.8% (+2.5% at constant scope and exchange rates). They rose by 0.6% at **Corporate & Institutional Banking (CIB)** (+2.0% at constant scope and exchange rates), driven by the steep rise in Global Banking revenues (+14.5% at constant scope and exchange rates) and the increase at Securities Services (+5.6% at constant scope and exchange rates). Global Markets revenues decreased by 6.5% at constant scope and exchange rates, as activity was more normalised. Revenues at **Commercial, Personal Banking & Services (CPBS)**<sup>5</sup> rose by 4.3% (+4.7% at constant scope and exchange rates). Revenues at Commercial & Personal Banking (+4.6%) were up strongly with the increase in net interest revenues. Revenues at Specialised Businesses rose by 3.8%, driven by the strong increase at Arval & Leasing Solutions (+12.5%) and at New Digital Businesses & Personal Investors (+19.0%). The context was less favourable for Personal Finance (-3.1% at constant scope and exchange rates). At **Investment & Protection Services (IPS)** revenues decreased by 3.8% (-3.6% at constant scope and exchange rates), due to the very negative impacts of the current downturn on Real Estate and of a base effect at Principal Investments. Excluding the contribution from Real Estate and Principal Investments, IPS revenues were up by 3.7%, driven by sustained growth at Wealth Management (+6.0%) and Insurance (+3.6%).

**The Group's operating expenses came to EUR 30,956 million** (EUR 29,864 million in 2022). In 2023, they reflected the exceptional impact of restructuring and adaptation costs (EUR 182 million) and IT reinforcement costs (EUR 395 million) for a total of EUR 576 million (EUR 490 million in 2022). In 2023, they also reflected the extraordinary impact of overall adaptation costs related in particular to Personal Finance (EUR 276 million). For 2023, the Group's operating expenses were also affected by taxes subject to IFRIC 21, which came to EUR 1,896 million (EUR 1,874 million in 2022), including the contribution to the Single Resolution Fund in the amount of EUR 1,002 million (EUR 1,256 million in 2022) and the impact of UK bank levies (EUR 226 million), considered as an extraordinary item. These exceptional and extraordinary items are recognised in Corporate Centre.

**At EUR 29,580 million, operating expenses adjusted to derive distributable Net Income decreased by 1.0%.** They reflected the impact of the anticipation of the end of the ramp-up of the Single Resolution Fund (including the impact of the UK bank levies) in the amount of -EUR 1,028 million and an additional adjustment of -EUR 72 million and excluded the extraordinary impact of overall adaptation costs related in particular to Personal Finance (EUR 276 million), for a total of EUR 1,376 million. On this basis, the Group achieved a positive jaws effect.

In the operating divisions, operating expenses were up by 2.3% (+3.1% at constant scope and exchange rates). CIB's operating expenses rose by 1.2% (+2.9% at constant scope and exchange rates). The jaws effect was positive at Global Banking and Securities Services. Operating expenses at CPBS<sup>(5)</sup> were up by 3.5% (+3.8% at constant scope and exchange rates), and its jaws effect was positive (+0.8 point<sup>(5)</sup>). Operating expenses<sup>(5)</sup> rose by 2.5% at Commercial & Personal Banking and by 5.8% at

<sup>1</sup> Result serving as a basis for calculating the distribution in 2023.

<sup>2</sup> Reported on 7 February 2023, i.e. EUR 10,196 million.

<sup>3</sup> +1.0 point on distributable basis and excluding exceptional operating expenses and taxes subject to IFRIC 21.

<sup>4</sup> Note: cost of risk does not include "Other net losses for risk on financial instruments" i.e. charges related to risk of invalidation or non-enforceability of financial instruments granted (extraordinary provisions on mortgage loans in Poland, provisions for litigation related to Personal Finance, and provisions for risk on receivables in 2023 recognised in Corporate Centre (EUR 775 million in 2023)).

<sup>5</sup> Including 100% of Private Banking (excluding PEL/CEL effects in France).

Specialised Businesses. IPS's operating expenses increased by 0.4% (+0.6% at constant scope and exchange rates), and its jaws effect was positive (+2.1 points) excluding the contributions from Real Estate and Principal Investments.

**The Group's gross operating income thus amounted to EUR 14,918 million** (EUR 15,566 million in 2022).

**The Group's gross operating income adjusted to derive distributable Net Income came to EUR 17,347 million, an 11.4% increase.**

At EUR 2,907 million<sup>1</sup> (EUR 3,003 million in 2022), the **Group's cost of risk came to a low level of 32 basis points of outstanding customer loans**. It reflected EUR 517 million in releases of provisions on performing loans in 2023 and a provision on non-performing loans of EUR 1,833 million excluding cost of risk at Personal Finance.

**Other net losses for risk on financial instruments** are charges related to the risk of invalidation or non-enforceability of financial instruments granted. They came to EUR 775 million and are recognised in Corporate Centre. For 2023, they reflected the extraordinary impact of provisions on mortgage loans in Poland (EUR 450 million), provisions for litigation related to Personal Finance (EUR 221 million) and provisions for risk on receivables (EUR 104 million). These other net losses for risk on financial instruments are considered extraordinary items in 2023 recognised in Corporate Centre and are excluded in order to derive the distributable Net Income.

The Group's operating income came to EUR 11,236 million. In 2022, it amounted to EUR 12,564 million.

The Group's operating income adjusted to derive distributable Net Income amounted to EUR 14,440 million, up by 14.9%.

**The Group's non-operating items amounted to EUR 489 million** (EUR 651 million in 2022). For 2023, they reflected the exceptional impact of -EUR 87 million from the sale of an Insurance business and a capital gain of +EUR 91 million on a divestment. In 2022, they had reflected the positive impact of negative goodwill related to bpost bank (+EUR 244 million), and a capital gain (+EUR 204 million), offset by the impairment of Ukrsibbank shares and the negative impact from the reclassification to profit and loss of exchange differences (-EUR 433 million).

**The Group's pre-tax income came to EUR 11,725 million** (EUR 13,214 million in 2022).

The average corporate tax rate stood at 29.3% (29.7% in 2022). The Group is also a substantial taxpayer with a total taxes and levies of EUR 6.8 billion paid in 2023.

**The Group closed the sale of Bank of the West on 1 February 2023.** The conditions of this transaction announced on 20 December 2021 fall within the scope of application of IFRS 5 relating to groups of assets and liabilities held for sale. In accordance with IFRS 5, the result of activities held for sale came to EUR 2,947 million in 2023, reflecting the capital gain on the sale of Bank of the West, treated as an extraordinary item. This result had come to EUR 687 million in 2022.

**Net Income, Group share thus amounted to EUR 10,975 million in 2023.** In 2022, it had come to EUR 9,848 million in 2022.

As announced in February 2023, **Net Income, Group share for 2023 has been adjusted to calculate distributable Net Income, Group share.** It reflects the Group's intrinsic performance following the sale of Bank of the West and following the end of the contribution to the ramp-up of the Single Resolution Fund and enabled the absorption from 2023 of the negative impact of extraordinary items. **Distributable Net Income came to EUR 11,232 million in 2023, up by 10.2% (EUR 1,036 million) compared to the Net Income, Group share reported in February 2023 (EUR 10,196 million), in line with the 2023 objective.** Distributable Net Income for the first nine months of 2023 has been restated (see 31 January 2024 announcement) to reflect these impacts on an annual basis. After restatements, it came to EUR 9,225 million (EUR 8,810 million prior to these restatements).

**Return on non-revaluated tangible equity stood at 10.71% (10.98% on the basis of the distributable Net Income).** This reflects the BNP Paribas Group's solid performances, which are due to the strength of its diversified and integrated model.

**As of 31 December 2023, the common equity Tier 1 ratio stood at 13.2%<sup>2</sup>.** The liquidity coverage ratio (at end of period) came to 148% as of 31 December 2023. The Group's immediately available liquidity reserve amounted to EUR 474 billion, or more than one year of room to manoeuvre in terms of wholesale funding. The leverage ratio<sup>3</sup> stood at 4.6%.

**Tangible net book value<sup>4</sup> per share amounted to EUR 87.60, a 10.4% increase** since 31 December 2022, illustrating constant value creation across economic cycles.

#### Capital allocation

Revenue from the capital allocated to each division is included in the division's profit and loss account. The capital allocated to each division corresponds to the amount required to comply with CRR 2/CRD 5 regulation, also known as Basel 3, and is based on 11% of risk-weighted assets.

Risk-weighted assets are calculated as the sum of:

- the risk-weighted assets for credit and counterparty risk, calculated using the standard approach or the Internal Ratings Based Approach (IRBA) depending on the particular entity or business activity;
- the regulatory capital requirement for market risks, for adjustment of credit valuation and for operational risk, multiplied by 12.5. Moreover, elements that are deducted from Tier 1 capital are allocated to each division. Last, the capital allocated to

<sup>1</sup> Note: cost of risk does not include other net losses for risk on financial instruments.

<sup>2</sup> CRD 5; including IFRS 9 transitional arrangements.

<sup>3</sup> Calculated in accordance with Regulation (EU) No. 2019/876.

<sup>4</sup> Revaluated.

the insurance business is based on the minimum solvency capital requirement as defined by Solvency II.

**For the whole of 2023, CIB was the leading Europe-based CIB in EMEA, with increased market shares<sup>1</sup>** on the back of a diversified model supported by three powerful franchises at the service of clients. CIB has increased its global market share<sup>2</sup> by 10 basis points since 31 December 2022.

The financing business lines achieved a very good level of client activity, in particular in the Americas and EMEA. Activity was sustained on the equity markets, in particular in equity derivatives and prime brokerage, and demand was up sharply on the credit markets. On the rates, foreign exchange and commodities markets, the environment was more normalised. Securities Services continued its strong business drive, and average assets rose with the year end market rebound.

**CIB revenues**, at EUR 16,509 million, increased by 0.6% (+2.0%<sup>(3)</sup>), driven by the very strong rise at Global Banking (+14.5%<sup>(3)</sup>), the increase at Securities Services (+5.6%<sup>(3)</sup>) and good resiliency at Global Markets (-6.5%<sup>(3)</sup>).

<sup>1</sup> Source: Coalition Greenwich 3Q23 YTD Competitor Analytics. Ranking based on Coalition Greenwich Index banks and on BNP Paribas' product scope; EMEA: Europe, Middle East, Africa.

<sup>2</sup> Source: reported BNP Paribas' revenues; Coalition Greenwich Competitor Analytics based on BNP Paribas' product scope. Market share calculated as the ratio of BNP Paribas' reported revenues to industry revenues.

<sup>3</sup> At constant scope and exchange rates.

**Global Banking revenues**, at EUR 5,822 million, rose very sharply by 12.4% (+14.5% at constant scope and exchange rates) and were up in all three regions<sup>(3)</sup>, thanks in particular to strong growth in the Americas and EMEA. Activity was up very sharply in Transaction Banking, particularly in EMEA (+56.4%<sup>(3)</sup>), with a very sharp increase in revenues on the Capital Markets platform, particularly in the Americas and EMEA. Advisory progressed<sup>(3)</sup> in a market that was down sharply.

At EUR 7,996 million, **Global Markets revenues** decreased by 7.4% (-6.5% at constant scope and exchange rates). At EUR 5,138 million, FICC<sup>1</sup> revenues were down by 11.2%<sup>2</sup>. The performance was very good in credit activities but was offset by more normalised activity in EMEA in rates and foreign exchange and, even more, in commodities compared to a high base in 2022. At EUR 2,858 million, Equity & Prime Services revenues were up by 0.3%<sup>(2)</sup>, a strong performance supported by activity in equity derivatives and prime brokerage.

At EUR 2,691 million, **Securities Services revenues** were up by 4.1% (+5.6% at constant scope and exchange rates), driven by the favourable impact of the interest-rate environment and the effect of the increase in average assets. Transaction volumes decreased because of more moderate volatility.

**CIB operating expenses**, at EUR 10,823 million, were up by 1.2% (+2.9% at constant scope and exchange rates). The jaws effect was very positive at Global Banking and positive at Securities Services.

**CIB gross operating income** thus decreased by 0.5% (+0.4% at constant scope and exchange rates), to EUR 5,686 million.

**CIB** released EUR 63 million in **cost of risk**. Global Banking released EUR 74 million and cost of risk came to -4 basis points of outstanding customer loans. This included releases of provisions on performing loans (stages 1 and 2). Cost of risk on non-performing loans (stage 3) was low.

CIB thus achieved **pre-tax income** of EUR 5,744 million, up strongly by 6.4% (+7.1% at constant scope and exchange rates).

## COMMERCIAL, PERSONAL BANKING & SERVICES (CPBS)

| Income Attributable to Wealth and Asset Management  | (328)         | (282)         | +16.4%         |
| <b>Pre-Tax Income of Commercial, Personal Banking &amp; Services</b>  | <b>7,095</b>  | <b>7,285</b>  | <b>-2.6%</b>   |
| <b>Cost/Income</b>  | <b>61.7%</b>  | <b>62.2%</b>  | <b>-0.5 pt</b> |
| Allocated Equity (€bn, year to date; including 2/3 of Private Banking in France, Belgium, Italy, Luxembourg, Poland, Türkiye and Germany) | 43.2          | 41.7          | +3.5%          |

**For the whole of 2023**, on the strength of its diversification and strong positions in the Corporate and Private Banking client segments in Europe and in Specialised Businesses, CPBS activity was up, despite the impact of the repositioning of Personal Finance and of the decisions by European public authorities late in the year (in particular in connection with mandatory reserves or the Belgian government bond issue).

Loan outstandings increased by 2.9% compared to 2022. They were up slightly at Commercial & Personal Banking in the Eurozone (+0.8%) and up sharply in Specialised Businesses (+11.3%). Deposits were down by 1.6% compared to 2022 but stable in the fourth quarter 2023 compared to the third quarter 2023 at Commercial & Personal Banking in the Eurozone, excluding the impact of the Belgian government bonds. Private Banking achieved good net asset inflows of EUR 12.5 billion in 2023 (or 5.0% of assets under management at the start of the year). Hello bank! continued to acquire customers, with 463,000

<sup>1</sup> Fixed Income, Currency, and Commodities.

<sup>2</sup> Reminder: restatement reported on 11 December 2023.

new customers in 2023 (+35.7% compared to 31 December 2022)<sup>1</sup> and the pace of account openings at Nickel was high (+22.8% compared to 31 December 2022).

**Revenues**<sup>2</sup>, at EUR 26,627 million, increased by 4.3%, driven by revenue growth at Commercial & Personal Banking (+4.6%) with an increase in net interest revenues (+8.0%) and growth at Specialised Businesses (+3.8%; +13.8% excluding Personal Finance).

**Operating expenses**<sup>(1)</sup> increased by 3.5%, to EUR 16,437 million. The jaws effect was positive (+0.8 point), driven by Commercial & Personal Banking (+2.1 points) and Arval & Leasing Solutions (+4.9 points).

**Gross operating income**<sup>(1)</sup> thus amounted to EUR 10,191 million and increased by 5.6%.

**Cost of risk**<sup>(1)</sup> stood at EUR 2,923 million (EUR 2,491 million in 2022). In 2022, it had registered a release of provision in connection with a change in method to align with European standards (EUR 163 million at Commercial Banking in France)<sup>3</sup>.

The other net losses for risk on financial instruments were null overall in 2023.

As a result, after allocating one third of Private Banking's Net Income to Wealth Management (IPS division), **CPBS achieved pre-tax income<sup>4</sup> of EUR 7,095 million**, a 2.6% decrease, in connection mainly with the hyperinflationary situation in Türkiye<sup>5</sup> (-EUR 250 million compared to 2022).

**For the whole of 2023**, loan outstandings increased (+1.2% compared to 2022) across all customer segments, and adjustments in margins continued. Deposits were down by 2.7% compared to 2022 but did stabilise gradually (-0.6% between 30 September 2023 and 31 December 2023), with an increase in deposits from corporate clients late in the year (+1.9% between end-September and end-December 2023). Off-balance sheet savings increased by 5.9% compared to 31 December 2022, and net asset inflows in life insurance were high (+EUR 1.6 billion in 2023, +8.5% compared to 2022). Private Banking achieved good net asset inflows of EUR 4.6 billion.

**Revenues**<sup>1</sup> amounted to EUR 6,593 million, down by 0.6%. Net interest revenues decreased by 0.7% (+2.2% excluding the impact of inflation hedges). Fees were quasi-stable (-0.5% compared to 2022), supported by a good performance in cash management and fees on payment means.

<sup>1</sup> Excluding Italy.

<sup>2</sup> Including 100% of Private Banking (excluding PEL/CEL effects in France).

<sup>3</sup> Note: cost of risk does not include "Other net losses for risk on financial instruments".

<sup>4</sup> Including 2/3 of Private Banking (excluding PEL/CEL effects in France).

<sup>5</sup> Effects of application of IAS 29 and reflecting the efficiency of hedging (with CPI linkers) in Türkiye.

**Operating expenses<sup>(5)</sup>** at EUR 4,749 million, were up by 1.1%.

**Gross operating income<sup>(5)</sup>** amounted to EUR 1,844 million, down by 4.8%.

**Cost of risk<sup>(5)</sup>** came to EUR 485 million (EUR 237 million in 2022), or 21 basis points of outstanding customer loans. In 2022, it benefited from the release of a provision due to a change in method in order to align with European standards (-EUR 163 million).

As a result, after allocating one third of Private Banking's Net Income to Wealth Management (IPS division), **CPBF achieved pre-tax income<sup>2</sup> of EUR 1,193 million**, a 23.9% decrease.

## BNL BANCA COMMERCIALE (BNL BC)

| <b>Pre-Tax Income</b>  | <b>509</b>   | <b>436</b>   | <b>+16.9%</b>    |
| Income Attributable to Wealth and Asset Management                     | (22)         | (26)         | -15.2%           |
| <b>Pre-Tax Income of BNL bc</b>  | <b>488</b>   | <b>410</b>   | <b>+18.8%</b>    |
| Cost/Income  | 66.2%        | 65.9%        | +0.3 pt          |
| Allocated Equity (€bn, year to date; including 2/3 of Private Banking) | 5.7          | 6.0          | -3.9%            |

*Including 100% of Private Banking in Italy for the Revenues to Pre-tax income line items.*

**For the whole of 2023**, loan outstandings were down by 4.4% compared to 2022 and by 3.0% on the scope excluding non-performing loans. Loans to individuals held up well and corporate loan outstandings decreased. The management of margins at production was disciplined in a competitive environment. Deposits expanded by 0.3% compared to 2022, with good resilience (+3.7% compared to the third quarter 2023) and a steady improvement in margins, in particular late in the year. Off-balance sheet savings decreased by 7.7% compared to 31 December 2022. Net asset inflows into Private Banking were very good (EUR 2.8 billion).

**Revenues<sup>3</sup>** increased by 3.5% to EUR 2,727 million. Net interest revenues<sup>(1)</sup> rose by 6.6%, with an acceleration in the fourth quarter 2023, driven by the margin on deposits, partially offset by the effect of lower volumes and the increase in loan financing costs. Fees decreased (-0.6%), thanks to good resilience in banking fees despite the decrease in financial fees.

At EUR 1,804 million, **operating expenses<sup>(1)</sup>** were up by 4.0%, due mainly to the impact of inflation.

**Gross operating income<sup>(1)</sup>** increased by 2.7%, to EUR 923 million.

At EUR 410 million, **cost of risk<sup>(1)</sup>** improved by EUR 55 million with the steady improvement in the risk profile. It came to 53 basis points of outstanding customer loans.

As a result, after allocating one third of Private Banking's Net Income to Wealth Management (IPS division), BNL bc achieved **pre-tax income<sup>4</sup> of EUR 488 million**, up very sharply by 18.8%.

<sup>1</sup> Including 100% of Private Banking (excluding PEL/CEL effects).

<sup>2</sup> Including 2/3 of Private Banking (excluding PEL/CEL effects).

<sup>3</sup> Including 100% of Private Banking..

<sup>4</sup> Including 2/3 of Private Banking.

## COMMERCIAL & PERSONAL BANKING IN BELGIUM (CPBB)

| Other Non-Operating Items  | 9            | 10           | -7.2%            |
| <b>Pre-Tax Income</b>  | <b>1,175</b> | <b>1,123</b> | <b>+4.6%</b>     |
| Income Attributable to Wealth and Asset Management                     | (84)         | (74)         | +13.6%           |
| <b>Pre-Tax Income of CPBB</b>  | <b>1,091</b> | <b>1,049</b> | <b>+4.0%</b>     |
| Cost/Income  | 68.6%        | 69.5%        | -0.9 pt          |
| Allocated Equity (€bn, year to date; including 2/3 of Private Banking) | 6.1          | 6.1          | -0.7%            |

*Including 100% of Private Banking in Belgium for the Revenues to Pre-tax income line items.*

**For the whole of 2023**, loan outstandings increased by 3.2% compared to 2022, driven by rises across all customer segments. Deposits decreased by 2.0% compared to 2022 (-0.5% excluding the impact of the issue of Belgian government bonds maturing in September 2024<sup>1</sup>). Off-balance sheet savings increased by 4.1% compared to 31 December 2022, driven by mutual funds. At EUR 2.0 billion, net asset inflows into Private Banking were good.

**Revenues**<sup>2</sup> rose sharply by 6.0% to EUR 3,990 million. Net interest revenues<sup>(2)</sup> were up very sharply by 9.5%, supported by margins that held up well on deposits and despite the increase in refinancing costs and the negative impact of the Belgium government bond issue in the fourth quarter 2023. Fees<sup>(2)</sup> decreased by 2.0%, due to the decrease in banking fees, partially offset by the increase in financial fees.

At EUR 2,739 million, **operating expenses**<sup>(2)</sup> were up by 4.7%. The jaws effect was positive (+1.3 points), thanks to contained operating expenses, which partially offset the impact of inflation.

**Gross operating income**<sup>(2)</sup> rose sharply by 8.9%, to EUR 1,251 million.

At EUR 86 million (EUR 36 million in 2022), **cost of risk**<sup>(2)</sup> remained low at 6 basis points of outstanding customer loans.

As a result, after allocating one third of Private Banking's Net Income to Wealth Management (IPS division), CPBB achieved **pre-tax income**<sup>3</sup> of EUR 1,091 million, up sharply by 4.0%.

<sup>1</sup> Impact of -EUR 6.9bn on end-of-period deposit volumes offset by increased volumes on securities accounts (+EUR 5.1bn at end of period) included in off-balance sheet client assets but not included in off-balance sheet savings.

<sup>2</sup> Including 100% of Private Banking.

<sup>3</sup> Including 2/3 of Private Banking.

*Including 100% of Private Banking in Luxembourg for the Revenues to Pre-tax income line items.*

**For the whole of 2023**, loan outstandings increased by 1.3% and were up across all customer segments. Deposits decreased by 4.2%.

**Revenues**<sup>1</sup> rose very sharply by 24.7% to EUR 592 million. Net interest revenues<sup>(1)</sup> were up very sharply by 31.6%, thanks to margins on deposits that held up well, particularly in corporate clients, and the increase in loan outstandings. Fees<sup>(1)</sup> were down by 1.7% compared to a high 2022 base.

At EUR 302 million, **operating expenses**<sup>(1)</sup> increased by 9.8%. The jaws effect was very positive (+14.9 points).

**Gross operating income**<sup>(1)</sup> rose very sharply by 45.3% to EUR 290 million.

At EUR 8 million, **cost of risk**<sup>(1)</sup> was very low.

As a result, after allocating one third of Private Banking's Net Income to Wealth Management (IPS division), CPBL thus achieved **pre-tax income**<sup>2</sup> of **EUR 281 million**, up very sharply by 30.3%.

<sup>1</sup> Including 100% of Private Banking.

<sup>2</sup> Including 2/3 of Private Banking.

| <b>Pre-Tax Income of Europe-Mediterranean</b>                          | <b>1,030</b> | <b>808</b>   | <b>+27.6%</b>    |
| Cost/Income  | 62.0%        | 70.7%        | -8.7 pt          |
| Allocated Equity (€bn, year to date; including 2/3 of Private Banking) | 5.3          | 5.5          | -2.8%            |

*Including 100% of Private Banking in Poland and in Türkiye for the Revenues to Pre-tax income line items.*

**For the whole of 2023**, loan outstandings were up by 2.2%<sup>1</sup> compared to 2022. Targeted origination was prudent in Türkiye and Poland, particularly with individual customers. Deposits increased by 8.1%<sup>(1)</sup> compared to 2022, with an increase in all countries.

**Revenues**<sup>2</sup>, at EUR 2,687 million, were up very sharply by 19.4%<sup>3</sup>, due in particular to the good increase in net interest revenues in Poland.

**Operating expenses**<sup>(2)</sup>, at EUR 1,666 million, were up by 5.6%<sup>(3)</sup>, due to high inflation.

**Gross operating income**<sup>(2)</sup>, at EUR 1,021 million, rose very sharply by 51.9%<sup>(3)</sup>.

**Cost of risk**<sup>(2)</sup> came to EUR 44 million (EUR 153 million in 2022), or 13 basis points of outstanding customer loans<sup>4</sup>. The other net losses for risk on financial instruments are null overall in 2023.

**The hyperinflationary situation in Türkiye**<sup>5</sup> led to a decrease in “other non-operating items” of EUR 212 million compared to 2022.

As a result, after allocating one third of Private Banking’s Net Income to Wealth Management (IPS division), Europe-Mediterranean achieved **pre-tax income**<sup>6</sup> of **EUR 1,030 million**, up very sharply by 23.2%<sup>(3)</sup>.

<sup>1</sup> At constant scope and exchange rates.

<sup>2</sup> Including 100% of Private Banking.

<sup>3</sup> At constant scope and exchange rates, excluding Türkiye at historical exchange rates in accordance with IAS 29.

<sup>4</sup> The extraordinary provision on mortgage loans in Poland is booked in Corporate Centre under “Other net losses for risk on financial instruments” (EUR 450 million) and therefore has no impact on cost of risk at Europe-Mediterranean.

<sup>5</sup> Effects of application of IAS 29 and reflecting the efficiency of hedging (with CPI linkers) in Türkiye.

<sup>6</sup> Including 2/3 of Private Banking.

| <b>Pre-Tax Income</b>                       | <b>630</b>   | <b>1,121</b> | <b>-43.8%</b>    |
| Cost/Income                                 | 58.1%        | 54.2%        | +3.9 pt          |
| Allocated Equity (€bn, year to date)        | 9.2          | 8.1          | +12.7%           |

**For the whole of 2023**, Personal Finance continued its transformation. The geographical refocusing of its business activities and the reorganisation of its operating model are going smoothly. Seven entities, in particular in Central Europe, were divested or put into run-off. The effects of the new auto loan partnerships continued and contributed to the expansion in volumes and to the structural improvement in the risk profile. Loan outstandings were up by 10.1% compared to 2022, driven in particular by robust growth in mobility. There was greater selectivity in loan origination. Production margins continued to improve despite increased pressure.

**Revenues**, at EUR 5,163 million, decreased by 4.2% (-3.1% at constant scope and exchange rates), due to pressure on margins and higher financing costs and despite increased volumes.

**Operating expenses**, at 2,998 million, rose by 2.6%, in connection with targeted development projects.

**Gross operating income** decreased by 12.2% to EUR 2,164 million.

**Cost of risk** came to EUR 1,600 million (EUR 1,373 million in 2022), or 155 basis points of outstanding customer loans. Cost of risk remains low despite the impact of the current downturn, on the back of the structural improvement in the risk profile.

**Pre-tax income at Personal Finance thus amounted to EUR 630 million**, down by 43.8%, due to the decrease in gross operating income and the impact of the current downturn on the cost of risk.

## SPECIALISED BUSINESSES – ARVAL & LEASING SOLUTIONS

**For the whole of 2023**, with 1.7 million financed vehicles<sup>1</sup>, Arval's financed fleet expanded robustly (+6.9% compared to 2022). The volume effect was favourable on vehicle sales on the back of shorter delivery times (342,000 vehicles sold in 2023, compared to a low base in 2022).

At EUR 23.5 billion, outstandings at Leasing Solutions increased by 4.4% compared to 2022. Business drive was good, with production volumes up by 4.3% compared to 2022.

**Revenues**, at EUR 3,869 million, rose sharply by 12.5%, driven by the steep increase in Arval revenues (+16.8% compared to 2022), supported by increases in outstandings and in the number of vehicles sold, despite the gradual normalisation, but at a high level, of used car prices. Revenues at Leasing Solutions rose with the increase in outstandings.

**Operating expenses**, at EUR 1,501 million, rose by 7.6%. The jaws effect was positive (+4.9 pts).

**Pre-tax income at Arval and Leasing Solutions** was up sharply by 11.8% to EUR 2,188 million.

**For the whole of 2023**, Nickel maintained a steady increase in account openings (more than 63,000 per month<sup>2</sup>). The number of Floa's active partnerships rose very quickly (2.8-fold since 1 January 2023). Personal Investors achieved a 12.4% increase in assets under management compared to 31 December 2022, driven by the very high level of customer acquisitions (about 230,000 in 2023).

**Revenues**<sup>3</sup>, at EUR 1,007 million, rose very sharply by 19.0%, driven by the increase at New Digital Businesses with the development of activity and the strong increase in Personal Investors revenues, driven by the interest-rate environment.

**Operating expenses**<sup>(2)</sup>, at EUR 677 million, increased by 17.1%. The jaws effect was positive.

**Gross operating income**<sup>(2)</sup> rose very sharply by 23.0%, to EUR 330 million.

**Cost of risk**<sup>(2)</sup> came to EUR 123 million (EUR 100 million in 2022).

**Pre-tax income**<sup>4</sup> at New Digital Businesses and Personal Investors after allocating one third of results of Private Banking in Germany to Wealth Management (IPS division), rose very sharply by 23.9%, to EUR 195 million.

<sup>1</sup> Fleet at end of period.

<sup>2</sup> On average in the fourth quarter 2023 in all countries.

<sup>3</sup> Including 100% of Private Banking in Germany.

<sup>4</sup> Including 2/3 of Private Banking in Germany.

**For the whole of 2023, IPS, a player of reference in protection, savings, and responsible investment**, continued to deploy its plan and to pursue its strategic initiatives. Insurance results improved, driven by Protection and an increased contribution from partnerships. Wealth Management achieved strong growth in revenues and good net asset inflows (+EUR 17.1 billion in 2023<sup>1</sup>) in all geographies. Asset Management<sup>2</sup> performed well, with net asset inflows of +EUR 13.4 billion in 2023. Results at Real Estate and Principal Investments were strongly affected by a high base effect and a market at Real Estate that slowed considerably.

**Revenues** decreased by 3.8% but increased by 3.7% without the contribution from Real Estate and Principal Investments. They were driven by growth at Wealth Management (+6.0%), Insurance (+3.6%) and Asset Management<sup>(2)</sup> (+1.7%, excluding a negative non-recurring base effect).

At EUR 3,566 million, **operating expenses** rose by 0.4% (+1.7% excluding the contribution of Real Estate and Principal Investments).

The jaws effect was positive (+2.1 points) excluding the current downturn impact at Real Estate and Principal Investments.

**Gross operating income** came to EUR 2,024 million, down by 10.5%.

At EUR 2,159 million, **IPS's pre-tax income** was down by 14.7% (+1.8% excluding the contribution of Real Estate and Principal Investments).

<sup>1</sup> Excluding the impact of the sale of a portfolio in Spain.

<sup>2</sup> Excluding Real Estate and Principal Investments.

| Allocated Equity (€bn, year to date)        | 3.4          | 2.9          | +16.3%           |

### Inflows and assets under management

As of 31 December 2023, **assets under management**<sup>1</sup> came to EUR 1,236 billion. They reflected a market performance effect of +EUR 54.4 billion and the effect of strong net asset inflows of +EUR 23.8 billion, partially offset by the unfavourable forex impact of -EUR 9.8 billion. Net asset inflows were good and driven mainly by asset inflows into money-market funds at Asset Management and good inflows at Wealth Management. Assets under management<sup>(1)</sup> were up by 5.5% compared to 31 December 2022.

As of 31 December 2023, assets under management<sup>(1)</sup> broke down into EUR 566 billion at Asset Management and Real Estate, EUR 415 billion at Wealth Management, and EUR 255 billion at Insurance.

### Insurance

**For the whole of 2023**, savings activity achieved gross asset inflows of EUR 22.9 billion, driven by strong business drive in France, with net asset inflows sustained by inflows into unit-linked policies. Protection activity continued to rise in Latin America and France, in particular in affinity insurance, property & casualty insurance, and individual protection.

**Revenues** rose by 3.6%, to EUR 2,090 million, driven mainly by the good performance at Protection and the increase in the technical result.

<sup>1</sup> Including distributed assets.

**Operating expenses**, at EUR 808 million, were up by 1.8%.

At EUR 1,394 million, **pre-tax income** at Insurance was up by 4.1%, including strong contributions from associates in all regions. In the fourth quarter 2023, it reflected the negative exceptional impact of the sale of a business in Argentina.

## Wealth & Asset Management

**For the whole of 2023**, activity improved at Private Wealth Management with good net asset inflows (EUR 17.1 billion<sup>1</sup> in 2023), in particular in Commercial & Personal Banking and with large clients. Revenues were up very sharply sustained by the interest-rate environment.

Asset Management<sup>2</sup> achieved sustained asset inflows, driven by inflows into money-market funds despite net outflows from medium- and long-term funds. Revenues rose with the effect of inflows and marketing drive.

Real Estate decreased sharply on a market that slowed considerably, and the performance of Principal Investments compares with a high 2022 base.

**Revenues**, at EUR 3,500 million, decreased by 7.8% but increased by +3.8% excluding the contribution from Real Estate and Principal Investments. They were driven by higher revenues at Wealth Management (+6.0%) and Asset Management<sup>(2)</sup> (+1.7% excluding a negative third quarter 2022 base effect), offset by the decrease at Real Estate and Principal Investments.

**Operating expenses** were down by 0.1% (+1.6% excluding the contribution from Real Estate and Principal Investments), at EUR 2,757 million. The jaws effect was positive (+2.2 points) excluding the impact of the current downturn at Real Estate and Principal Investments.

**Pre-tax income** at Wealth & Asset Management thus amounted to EUR 765 million, down by 35.8%. This compares with a high base in 2022, which had reflected the impact of capital gains on divestment due to a sale at Wealth Management and the creation of a joint venture at Asset Management.

**IFRS 17 “Insurance contracts” has replaced IFRS 4 “Insurance contracts” since 1 January 2023.** IFRS 17 entered into force together with the implementation of IFRS 9 for insurance activities.

The main effects are as follows:

- Operating expenses deemed “attributable to insurance activities” are recognised in deduction of revenues and no longer booked in operating expenses. These accounting entries apply only to Insurance and to Group entities (other than in the

<sup>1</sup> Excluding the impact of the sale of a portfolio in Spain.

<sup>2</sup> Excluding Real Estate and Principal Investments.

Insurance business line) that distribute insurance contracts (*i.e.* internal distributors) and have no impact on gross operating income. The impact of these entries for internal distributors is presented in Corporate Centre, in order not to impede the readability of their financial performance.

- The impact of the volatility generated by the fair value accounting of certain assets through profit and loss (IFRS 9) is presented in Corporate Centre and therefore has no impact on Insurance revenues.

As of 1 January 2023, Corporate Centre thus includes restatements, which will be reported separately each quarter to improve readability.

**For the whole of 2023, revenues on restatements related to insurance activities in Corporate Centre** amounted to -EUR 1,081 million (-EUR 1,440 million in 2022). This included -EUR 1,041 million from the impact of restating “attributable” operating expenses of internal distributors (-EUR 1,056 million in 2022) and -EUR 40 million from the impact of volatility at Insurance generated by the fair value accounting of assets through profit and loss (IFRS 9) (-EUR 384 million in 2022).

**Operating expenses from restatements related to insurance activities in Corporate Centre** amounted to - EUR 1,041 million (-EUR 1,056 million pour 2022).

**Corporate Centre’s pre-tax income from restatements related to insurance activities** thus amounted to -EUR 40 million (-EUR 384 million in 2022).

**For the whole of 2023, the extraordinary items are recognised in Corporate Centre. Corporate Centre’s revenues excluding restatements related to insurance activities** came to -EUR 1,060 million (-EUR 278 million in 2022), -EUR 122 million excluding the impact of extraordinary items. They indeed reflected the extraordinary impact of the adjustment of hedges, due to changes in TLTRO terms and conditions decided by the European Central Bank in the fourth quarter 2022 (-EUR 938 million) and the exceptional impact of provisions for litigation (-EUR 125 million). They also reflected a negative impact of EUR 55 million from the revaluation of proprietary credit risk included in derivatives (DVA) (+EUR 185 million in 2022 offset by the impact of a negative non-recurring item).

**Corporate Centre’s operating expenses excluding restatements related to insurance activities** stood at EUR 1,551 million (EUR 1,163 million in 2022), EUR 1,049 million excluding the impact of extraordinary items. They reflected the extraordinary impact of overall adaptation costs related in particular to Personal Finance (EUR 276 million) and the impact of the bank levy in Great Britain (EUR 226 million), and the exceptional impact of restructuring costs and adaptation costs in the amount of EUR 182 million (EUR 189 million in 2022) and IT reinforcement costs of EUR 395 million (EUR 302 million in 2022).

**Corporate Centre’s cost of risk excluding restatements related to insurance activities<sup>1</sup>** came to EUR 37 million (EUR 185 million in 2022).

**Other net losses for risk on financial instruments, *i.e.* charges related to the risk of invalidation or non-enforceability of financial instruments granted** came to EUR 775 million and are considered as extraordinary items. In 2023, they reflected the extraordinary impact of provisions on mortgage loans in Poland (EUR 450 million), provisions for litigation related to Personal Finance (EUR 221 million), and provisions for risk on receivables (EUR 104 million).

**Other non-operating items of Corporate Centre excluding restatements related to insurance activities** amounted to EUR 190 million (-EUR 36 million in 2022). They reflected the positive impact of capital gains on sales in the second quarter 2023. In 2022, they had reflected the negative impact of the impairment of Ukrsibbank shares and the reclassification to profit and loss of exchange differences<sup>2</sup> (-EUR 433 million), partially offset by the positive effects of negative goodwill at bpost bank (+EUR 244 million) and a capital gain on the sale of a stake (+EUR 204 million).

**Pre-tax income of Corporate Centre excluding restatements related to insurance activities thus amounted to -EUR 3,233 million** (-EUR 1,662 million in 2022), -EUR 1,017 million excluding the impact of extraordinary items.

<sup>1</sup> Note: cost of risk does not include the other net losses for risk on financial instruments.

<sup>2</sup> Previously recorded in consolidated equity.

## 3.3 Balance sheet

### ASSETS

---

#### OVERVIEW

Since 1 January 2023, BNP Paribas Group's insurance entities have applied IFRS 17 "Insurance Contracts" and IFRS 9 "Financial Instruments". The effects of this change on the balance sheet at 31 December 2022 are presented in chapter 4 note 2 *IFRS 17 and IFRS 9 first time application impacts*.

At 31 December 2023, the total consolidated balance sheet of the BNP Paribas Group amounted to EUR 2,591.5 billion, down by -3% from 31 December 2022 (EUR 2,663.7 billion restated according to IFRS 17 and 9). The Group's main assets include cash and balances at central banks, financial instruments at fair value through profit or loss, loans and advances to customers, debt securities at amortised cost, investments and other assets related to insurance activities and accrued income and other assets, which, together, accounted for 94% of total assets at 31 December 2023 (91% at 31 December 2022). The -3% decrease in assets is mainly due to the evolution of:

- financial instruments at fair value through profit or loss which increased by +7% (+EUR 45.8 billion, or EUR 730.9 billion at 31 December 2023);
- financial instruments at fair value through equity which increased by +38% (+EUR 14.5 billion, or EUR 52.5 billion at 31 December 2023);
- investments and other assets related to insurance activities which increased by +5% (+EUR 11.6 billion, or EUR 257.1 billion at 31 December 2023);
- loans and advances to credit institutions which decreased by -25% (-EUR 8.3 billion, or EUR 24.3 billion at 31 December 2023);
- accrued income and other assets which decreased by -18% (-EUR 37.8 billion, or EUR 170.8 billion at 31 December 2023);
- assets held for sales which decreased by -EUR 86.8 billion following the sale of the retail and commercial banking activities in the United States operated by the BancWest cash-generating unit.

#### CASH AND BALANCES AT CENTRAL BANKS

Cash and central banks accounted for EUR 288.3 billion at 31 December 2023, decreased by -9.5% from 31 December 2022 (EUR 318.6 billion).

#### FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS

Financial assets recognised at market or model value through profit or loss are composed of trading portfolios, financial derivatives and certain assets not held for trading purposes, whose characteristics do not permit recognition at amortised cost or at fair value through equity. Financial assets in the trading portfolio include securities, loans and repurchase agreements.

These assets are measured at market or model value at each balance sheet date.

Total financial instruments at market value by profit and loss increased by +7% (+EUR 45.8 billion) compared with 31 December 2022.

This increase is mainly due to the +27.4% increase in securities (+EUR 45.6 billion to EUR 211.6 billion at 31 December 2023), and by the +18.9% increase in loans and repurchase agreements (+EUR 36.1 billion to EUR 227.2 billion at 31 December 2023), partially offset by the -10.9% decrease in derivative financial instruments (-EUR 35.9 billion to EUR 292.1 billion at 31 December 2023).

#### LOANS AND ADVANCES TO CREDIT INSTITUTIONS

Loans and advances to credit institutions (net of impairment) amounted to EUR 24.3 billion at 31 December 2023, a decrease of -EUR 8.3 billion compared with 31 December 2022, and are split between on demand accounts, loans to credit institutions and repurchase agreements.

Repurchase agreements were down by -17% for a total of EUR 4.9 billion at 31 December 2023, compared with EUR 5.9 billion at 31 December 2022. Loans to credit institutions decreased by -22% to EUR 12.3 billion at 31 December 2023, compared with EUR 15.8 billion at 31 December 2022. Impairment provisions were stable at EUR 99 million at 31 December 2023.

#### LOANS AND ADVANCES TO CUSTOMERS

Loans and advances to customers are divided into ordinary accounts, loans to customers, reverse repurchase agreements and finance leases.

Loans and advances to customers (net of impairment) amounted to EUR 859.2 billion at 31 December 2023, compared with EUR 857 billion at 31 December 2022, increasing by +0.3%. This is due to the increase in financial leases which amounted to EUR 47.7 billion at 31 December 2023, increasing by +14.9% compared with 31 December 2022 and an increase in on demand accounts which amounted to 44 billion at 31 December 2023, increasing by +9.6% compared with 2022 offset, by the decrease in loans to customers (-1%, or EUR 767 billion at 31 December 2023, compared with EUR 774.6 billion at 31 December 2022). Impairment provisions were down to EUR 17.5 billion at 31 December 2023, compared with EUR 18.3 billion at 31 December 2022.

## **DEBT SECURITIES AT AMORTISED COST OR AT MARKET OR MODEL VALUE THROUGH EQUITY**

Debt securities that are not held for trading purposes and which meet the cash flow criterion established by IFRS 9 are recognised:

- at amortised cost if managed to collect cash flows by collecting contractual payments over the life of the instrument; or
- at fair value through equity if held in a business model whose objective is achieved through both the collection of contractual cash flows and the sale of financial assets.

### **Debt securities at amortised cost**

Debt securities at amortised cost are measured using the effective interest rate method. They totalled EUR 121.2 billion at 31 December 2023 (net of impairment), compared with EUR 114 billion at 31 December 2022, thus increasing by +6.3%.

### **Debt securities at fair value through equity**

These assets are measured at market or model value through equity at each balance sheet date. They increased by EUR 14.4 billion between 31 December 2022 and 31 December 2023, amounting to EUR 50.3 billion.

Debt securities at fair value through equity posted an unrealised loss of -EUR 585 million at 31 December 2023, compared with -EUR 866 million at 31 December 2022, an increase of +EUR 281 billion.

## **INVESTMENTS AND OTHER ASSETS RELATED TO INSURANCE ACTIVITIES**

Financial investments and other assets related to insurance activities mainly include financial instruments corresponding to investments of liabilities relating to insurance contracts and in particular unit-linked contracts, derivative instruments subscribed, investment properties, equity-method investments and assets related to insurance activities.

Investments and other assets related to insurance activities amounted to EUR 257.1 billion at 31 December 2023, an increase of +4.7% compared with 31 December 2022. This variation is mainly due to an increase of +8.9% in financial assets at fair value through profit or loss (EUR 156.8 billion at 31 December 2023, compared with EUR 144 billion at 31 December 2022), and to a decrease of 15.1% in investment properties (EUR 7.5 billion at 31 December 2023, compared with EUR 8.8 billion at 31 December 2022).

Financial assets at fair value through equity have an unrealised loss of -EUR 5.1 billion at 31 December 2023, compared with -EUR 10.3 billion at 31 December 2022, an increase of +EUR 5.2 billion.

## **ACCRUED INCOME AND OTHER ASSETS**

Accrued income and other assets are divided between guarantee deposits and bank guarantees paid, collection accounts, accrued income and prepaid expenses, other debtors and miscellaneous assets.

Accrued income and other assets amounted to EUR 170.8 billion at 31 December 2023, compared with EUR 208.5 billion at 31 December 2022, down -18.1%. This decrease is in particular related to guarantee deposits and bank guarantees paid, down by -EUR 36.9 billion (-23.6%).

## **LIABILITIES**

---

### **OVERVIEW**

The Group's liabilities (excluding equity) amounted to EUR 2,462.6 billion at 31 December 2023, down by -3% from 31 December 2022 (EUR 2,537.7 billion restated according to IFRS 17 and 9). The Group's main liabilities consist of financial instruments at fair value through profit or loss, deposits from customers and from credit institutions, debt securities, accrued expenses and other liabilities, and technical reserves and other insurance liabilities, which, together, accounted for 97% of the Group's total liabilities (excluding equity) at 31 December 2023 (94% at 31 December 2022). The -3% decrease in liabilities is mainly due to the evolution of:

- financial instruments at fair value through profit or loss which increased by +6% (+EUR 42.2 billion, or EUR 741.2 billion at 31 December 2023);
- deposits from credit institutions which decreased by -24% (-EUR 29.5 billion, or EUR 95.2 billion at 31 December 2023);

- deposits from customers which decreased by -2% (-EUR 19.5 billion, or EUR 988.5 billion at 31 December 2023);
- accrued expenses and other liabilities which decreased by -22% (-EUR 41.3 billion, or EUR 143.7 billion at 31 December 2023);
- liabilities associated with assets held for sale which decreased by -EUR 77 billion following the sale of the retail and commercial banking activities in the United States operated by the BancWest cash-generating unit.

## FINANCIAL INSTRUMENTS AT FAIR OR MODEL VALUE THROUGH PROFIT OR LOSS

The trading portfolio consists mainly of sales of borrowed securities, repurchase agreements and financial derivatives. Financial liabilities designated as at fair or model value through profit or loss are mainly composed of issues originated and structured on behalf of clients, where the risk exposure is managed in combination with the hedging strategy. These types of issues contain significant embedded derivatives, whose changes in value are offset by changes in value of the hedging instruments.

Total financial instruments at fair or model value through profit or loss increased by +6.0% (+EUR 42.2 billion) compared with 31 December 2022, related mainly to the +16.9% increase in repurchase agreement operations (+EUR 39.5 billion to EUR 273.6 billion at 31 December 2023) and the +5.8% increase in securities (+EUR 5.8 billion to EUR 104.9 billion in 31 December 2023), partially offset by the -7.1% decrease in financial derivatives (-EUR 21.2 billion to EUR 278.9 billion at 31 December 2023).

## DEPOSITS FROM CREDIT INSTITUTIONS

Amounts due to credit institutions consist primarily of interbank borrowings, demand deposits and repurchase agreements. Amounts due to credit institutions decreased by -23.7% or -EUR 29.5 billion to EUR 95.2 billion at 31 December 2023. This decrease mainly results from the -47.4% decrease in interbank borrowings EUR 54.8 billion at 31 December 2023 compared with EUR 104.1 billion at 31 December 2022.

## DEPOSITS FROM CUSTOMERS

Deposits from customers consist primarily of on-demand deposits, term accounts, savings accounts and repurchase agreements. Deposits from customers amounted to -EUR 988.5 billion, down by -EUR 19.5 billion from 31 December 2022. This is due to the -8.5% decrease in on-demand deposits (a decrease of -EUR 50.1 billion, to EUR 542.1 billion as at 31 December 2023) and to the increase of +15.5% in term accounts and short-term notes (an increase of +EUR 39.3 billion, to EUR 292.5 billion as at 31 December 2023).

## DEBT SECURITIES

This category includes negotiable certificates of deposit and bond issues but does not include debt securities classified as financial liabilities at fair or model value through profit or loss (see note 5.h to the consolidated financial statements). Debt securities rose from EUR 155.4 billion at 31 December 2022 to EUR 191.5 billion at 31 December 2023.

## ACCRUED EXPENSE AND OTHER LIABILITIES

Accrued expense and other liabilities consist of guarantee deposits received, collection accounts, accrued expense and deferred income, lease liabilities, as well as other creditors and miscellaneous liabilities.

Accrued expense and other liabilities amounted to EUR 143.7 billion at 31 December 2023, compared with EUR 185 billion at 31 December 2022, a decrease of -22.3%. This decrease is mainly due to guarantee deposits received, down by -EUR 36.4 billion (-29.4%).

## LIABILITIES RELATED TO INSURANCE CONTRACTS

Liabilities related to insurance contracts increased by +3.9% compared with 31 December 2022 and amounted to EUR 218 billion at 31 December 2023 (EUR 209.8 billion at 31 December 2022), mainly due to the increase in the valuation of underlining assets related to insurance contracts not measured under the Premium Allocation approach.

## MINORITY INTERESTS

---

Minority interests amounted to EUR 5.1 billion at 31 December 2023, compared with EUR 4.8 billion at 31 December 2022.

## SHAREHOLDERS' EQUITY

---

Shareholders' equity (before dividend payout) amounted to EUR 123.7 billion at 31 December 2023, compared with EUR 121.2 billion at 31 December 2022 (restated in accordance with IFRS 17 and 9). This EUR 2.5 billion increase is mainly attributable to the profit of the period which amounted to EUR 11.0 billion, to share buybacks for -EUR 5.0 billion, to the distribution of dividends on 2022 profit for -EUR 4.7 billion and to undated super subordinated notes' issuances for EUR 1.7 billion.

## FINANCING AND GUARANTEE COMMITMENTS

### FINANCING COMMITMENTS

Financing commitments given mainly consist mostly of documentary credit, other credit confirmations and other commitments. They decreased by -EUR 17.5 billion compared with 31 December 2022, to EUR 369.5 billion at 31 December 2023.

Financing commitments given to customers decreased by -4.4% to EUR 365.8 billion at 31 December 2022 and those given to credit institutions decreased by -EUR 0.6 billion to EUR 3.7 billion at 31 December 2023.

Financing commitments received consist mainly of financing commitments received from credit institutions in the context of refinancing from central banks. Financing commitments received increased by +5.8%, to EUR 72.8 billion at 31 December 2023, compared with EUR 68.8 billion at 31 December 2022.

### GUARANTEE COMMITMENTS

Guarantee commitments given rose by +6.5% to EUR 190.3 billion at 31 December 2023 (compared with EUR 178.8 billion at 31 December 2022); this increase comes from the guarantee commitments given to credit institutions (an increase of +4.6% to EUR 63.1 billion at 31 December 2023), and the increase of guarantee commitments to customers by +7.4% to EUR 127.2 billion at 31 December 2023 (compared with EUR 118.4 billion at 31 December 2022).

## 3.4 Profit and loss account

### REVENUES FROM CONTINUING ACTIVITIES

| <i>In millions of euros</i>  | Year to 31 Dec.<br>2022 |  | Change<br>(2023/2022) |

### OVERVIEW

The increase of +EUR 444 million in the Group's revenues between 2022 and 2023 was mainly due to the increase of +EUR 1 billion in net gain on financial instruments at fair value through profit or loss and +EUR 1.3 billion in net income from other activities partially offset by the decrease of -EUR 1.9 billion in net interest margin.

### NET INTEREST INCOME

This line item includes net interest income and expense related to customer transactions, interbank transactions, debt instruments issued by the Group, cash flow hedge instruments, derivatives used for interest-rate portfolio hedge, debt securities at amortised cost or at fair value through equity, and non-trading instruments at fair value through profit or loss.

More specifically, the “Net interest income” line item includes:

- net interest income from loans and advances, including interest, transaction costs, fees and commissions included in the initial value of the loan. These items are calculated using the effective interest method, and recognised in the profit and loss account over the life of the loan;
- net interest income from debt securities held by the Group, which are measured at amortised cost or at fair value through equity (for the interest calculated using the effective interest method), and from non-trading debt securities at fair value through profit or loss (for the contractual accrued interest);
- net interest income from cash flow hedges, which are used in particular to hedge the interest rate risk on variable-rate assets and liabilities. Changes in the fair value of cash flow hedges are recorded in equity. The amounts recorded in equity over the life of the hedge are transferred to “Net interest income” as and when the cash flows from the hedged item are recognised as profit or loss in the income statement.

Interest income and expense on fair value hedge derivatives are included with the interest generated by the hedged item. Similarly, interest income and expense arising from derivatives used for economic hedge of transactions designated as at fair value through profit or loss are allocated to the same line items as the interest income and expense relating to the underlying transactions.

The main factors affecting the level of net interest income are the relative volumes of interest-earning assets and interest-bearing liabilities and the spread between lending and funding rates. Net interest income is also affected by the impact of hedging transactions, and, to a lesser extent, exchange rate fluctuations.

Volumes of interest-earning assets and interest-bearing liabilities can be affected by various factors, in addition to general market conditions and growth in the Group’s lending activities (either organically or through acquisitions). One such factor is the Group’s business mix, such as the relative proportion of capital allocated to interest-generating as opposed to fee-generating businesses.

The other principal factor affecting net interest income is the spread between lending and funding rates, which itself is influenced by several factors. These include central bank funding rates (which affect both the yield on interest-earning assets and the rates paid on sources of funding, although not always in a linear and simultaneous manner), the proportion of funding sources represented by non-interest bearing customer deposits, government decisions to raise or lower interest rates on regulated savings accounts, the competitive environment, the relative weight of the Group’s various interest-bearing products, which have different margins as a result of different competitive environments, and the Bank’s hedging strategy and accounting treatment of hedging transactions.

Net Interest income decreased by 9% to EUR 19,058 million for the year ended 31 December 2023. This variation is attributable to the combination of the decrease in net income on interest rate portfolio hedge instruments (-EUR 1,940 million in 2023, compared with -EUR 500 million in 2022), the decrease in net income from financial instruments at amortised cost (EUR 18,269 million in 2023, compared with EUR 19,390 million in 2022), the decrease in net income from non-trading instruments at fair value through profit or loss (-EUR 1,211 million in 2023, compared with -EUR 220 million in 2022), and the increase on financial instruments designated as at fair value through equity (EUR 1,856 million in 2023, compared with EUR 738 million in 2022).

## **NET COMMISSION INCOME**

Net commission income includes commissions on customer transactions, securities and derivatives transactions, financing and guarantee commitments, and asset management and other services. Net commission income decreased by -3.4%, from EUR 10,165 million in 2022 to EUR 9,821 million in 2023.

Insurance activity fees are included in “Net income from insurance activities”.

## **NET GAIN ON FINANCIAL INSTRUMENTS AT FAIR OR MODEL VALUE THROUGH PROFIT OR LOSS**

This line item includes all profit and loss items relating to financial instruments managed in the trading book, to financial instruments designated as at fair value through profit or loss by the Group under the fair value option and to non-trading debt securities that do not meet the criteria required to be recognised at amortised cost or at fair value through equity (other than interest income and expense on the last two categories, which are recognised under “Net interest income” as presented above). It also includes gains and losses on non-trading equity instruments that the Group did not choose to measure at fair value through equity. This includes both capital gains and losses on the sale and the marking to fair value of these instruments, along with dividends from equity securities.

This line item also includes gains and losses due to the ineffectiveness of fair value hedges, cash flow hedges, and net foreign investment hedges.

The gains and losses resulting from cash flows and the remeasurement of financial instruments, either cash or derivatives, must be appreciated as a whole in order to give a fair representation of the profit or loss resulting from trading activities.

Net gains on financial instruments as at fair or model value through profit or loss increased by +11% from EUR 9,352 million in 2022 to EUR 10,346 million in 2023.

The income from items designated as at fair value through profit or loss are partly offset by changes in value of the derivative instruments hedging these assets.

## NET GAIN ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH EQUITY

Net gains on financial instruments at fair value through equity correspond to gains and losses realised on debt securities recognised at fair value through equity and to dividends from equity securities that the Group chose to recognise at fair value through equity.

Changes in fair value of these assets are initially recognised under “Changes in assets and liabilities recognised directly in equity”. Upon sale of these assets, realised gains or losses are recognised in the profit or loss account under “Net gains on financial instruments at fair value through equity” for debt securities, or transferred to retained earnings for equity securities.

Net gains on financial instruments at fair value through equity amounted to EUR 28 million in 2023 and EUR 138 million in 2022.

## NET INCOME FROM INSURANCE ACTIVITIES

Net income from insurance activities includes insurance service result and financial result. Insurance service result includes revenue from services relating to a group of insurance contracts compensated by related insurance service expenses. Financial result includes investment return compensated by related net finance income or expenses from insurance contracts.

Net income from insurance activities increased by EUR 419 million compared with 2022 and amounted to EUR 2,320 million in 2023.

## NET INCOME FROM OTHER ACTIVITIES

This item includes, among other things, net income from investment property, assets held under operating lease and property development activities. Net income from other activities increased by 41.9%, from EUR 2,982 million in 2022 to EUR 4,235 million in 2023. This change is mainly due to a EUR 915 million increase in Net income from assets held under operating leases.

## OPERATING EXPENSES, DEPRECIATION AND AMORTISATION

| <i>In millions of euros</i>  | <b>Year to<br/>31 Dec. 2023</b> | <b>Year to<br/>31 Dec. 2022<br/><i>restated according<br/>to IFRS 17 and 9</i></b> | <b>Change<br/>(2023/2022)</b> |
|--|---------------------------------|--|-------------------------------|
| Operating expenses   | (28,713)                        | (27,560)   | +4.2%                         |
| Depreciation, amortisation and impairment of property, plant and equipment and intangible assets | (2,243)                         | (2,304)  | -2.6%                         |
| <b>TOTAL OPERATING EXPENSES, DEPRECIATION, AND AMORTISATION</b>                                  | <b>(30,956)</b>                 | <b>(29,864)</b>  | <b>+3.7%</b>                  |

Operating expenses, depreciation and amortisation increased by +3.7%, from -EUR 29,864 million in 2022 to -EUR 30,956 million in 2023.

## GROSS OPERATING INCOME FROM CONTINUING ACTIVITIES

The Group's gross operating income dropped by -4.2% to EUR 14,918 million for the year ended 31 December 2023 (compared with EUR 15,566 million for the year ended 31 December 2022), mainly due to the increase in operating expenses (+3.7%).

## COST OF RISK AND OTHER NET LOSSES FOR RISK ON FINANCIAL INSTRUMENTS

| <i>In millions of euros</i>                                | <b>Year to<br/>31 Dec. 2023</b> | <b>Year to 31<br/>Dec. 2022<br/><i>restated according<br/>to IFRS 17 and 9</i></b> | <b>Change<br/>(2023/2022)</b> |
|--|---------------------------------|--|-------------------------------|
| Net allowances to impairment                               | (2,596)                         | (2,440)  | +6.4%                         |

| Losses on irrecoverable loans                              | (561)                           | (717)  | -21.8%                        |
| Act on assistance to borrowers in Poland                   |                                 | (189)  | ns                            |
| <b>TOTAL COST OF RISK FOR THE PERIOD</b>                   | <b>(2,907)</b>                  | <b>(3,003)</b>   | <b>-3.2%</b>                  |
| <b>OTHER NET LOSSES FOR RISK ON FINANCIAL INSTRUMENTS</b>  | <b>(775)</b>                    | <b>-</b>   | <b>NS</b>                     |

### COST OF RISK

This line item represents the net amount of impairment losses recognised for credit risks inherent in the Group's intermediation activities, as well as any impairment loss relating to counterparty risks on over-the-counter derivative instruments.

The Group's cost of risk amounted to EUR 2,907 million in 2023, a decrease of -3.2% compared with 2022.

The decrease in cost of risk in 2023 is mainly due to the decrease of EUR 1,087 million in cost of risk related to assets and commitments classified in stage 1 and 2 offset by an increase of +EUR 991 million in cost of risk related to impaired assets and commitments (stage 3).

As at 31 December 2023, the total amount of doubtful loans, securities and commitments, net of collateral, amounted to EUR 19.2 billion (compared with EUR 19.3 billion as at 31 December 2022), and the related impairment amounted to EUR 13.8 billion, compared with EUR 14 billion as at 31 December 2022. The coverage ratio was at 72% at 31 December 2023, compared with 73% at 31 December 2022.

More detailed information on the cost of risk per business line is available in chapter 4, note 4 *Segment Information*, paragraph *Income by business segment*.

### OTHER NET LOSSES FOR RISK ON FINANCIAL INSTRUMENTS

The corresponding expected and realised cash flow losses are now presented in "Other net losses for risk on financial instruments".

In 2023, the expense thus recognised mainly related to mortgage loans in Poland amounting to EUR 450 million (compared with EUR 157 million at 31 December 2022, presented as "Revenues") and foreign currency loans issued by BNP Paribas Personal Finance amounting to EUR 221 million (compared with EUR 130 million at 31 December 2022, presented as "Revenues").

## OPERATING INCOME FROM CONTINUING ACTIVITIES

In total, operating income decreased by -10.6%, from EUR 12,563 million in 2022 to EUR 11,236 million for the year ended 31 December 2023. This change mainly resulted from the increase in operating expenses (+3.7%) and in other net losses for risk on financial instruments.

## NET INCOME ATTRIBUTABLE TO EQUITY HOLDERS

| <i>In millions of euros</i>                        | <b>Year to 31 Dec. 2023</b> | <b>Year to 31 Dec. 2022</b><br><i>restated according to IFRS 17 et 9</i> | <b>Change (2023/2022)</b> |
|--|-----------------------------|--|---------------------------|
| <b>OPERATING INCOME FROM CONTINUING ACTIVITIES</b> | <b>11,236</b>               | <b>12,563</b>  | <b>-10.6%</b>             |

### SHARE OF EARNINGS OF EQUITY-METHOD ENTITIES

The share of earnings of equity-method entities decreased from EUR 655 million in 2022 to EUR 593 million in 2023.

### NET GAIN ON NON-CURRENT ASSETS

This item includes net realised gains or losses on sales of tangible and intangible assets used in operations and on sales of investments in consolidated undertakings.

Net gains on fixed assets increased by +EUR 149 million (-EUR 104 million in 2023 compared with -EUR 253 million in 2022). In 2023, this item includes the impact of the hyperinflationary situation in Türkiye according to IAS 29 for -EUR 272 million, the loss of control of UkrSibbank in Ukraine for EUR 433 million, and the disposal of Axepta SpA in Italy for +EUR 204 million in 2022.

### CHANGE IN VALUE OF GOODWILL

No change in the value of goodwill was recognised in 2023, compared with EUR 249 million in 2022 (of which EUR 245 million in badwill on the takeover of control of bpost bank).

### INCOME TAX EXPENSE

The Group recorded an income tax expense of -EUR 3,266 million in 2023, a decrease compared with the income tax expense of -EUR 3,653 million recorded in 2022.

### NET INCOME FROM DISCONTINUED ACTIVITIES

The net income from discontinued activities amounted to EUR 2,947 million in 2023 (related to the net capital gain on the disposal of the retail and commercial banking activities in the United States operated by the BancWest cash-generating unit compared with EUR 687 million in 2022).

### MINORITY INTERESTS

The share of earnings attributable to minority interests in consolidated companies increased by +EUR 31 million (EUR 431 million in 2023 compared with EUR 400 million in 2022).

## 3.5 Recent events

### PRODUCTS AND SERVICES

---

BNP Paribas regularly introduces new products and services for its customers. More information is available on the Group's websites, including in the press releases at [group.bnpparibas](https://group.bnpparibas) and [invest.bnpparibas](https://invest.bnpparibas).

### ACQUISITIONS AND PARTNERSHIPS

---

Since 1 February 2024, date of publication of the 2023 annual results, no significant events have occurred that should be mentioned in this section.

## 3.6 Outlook

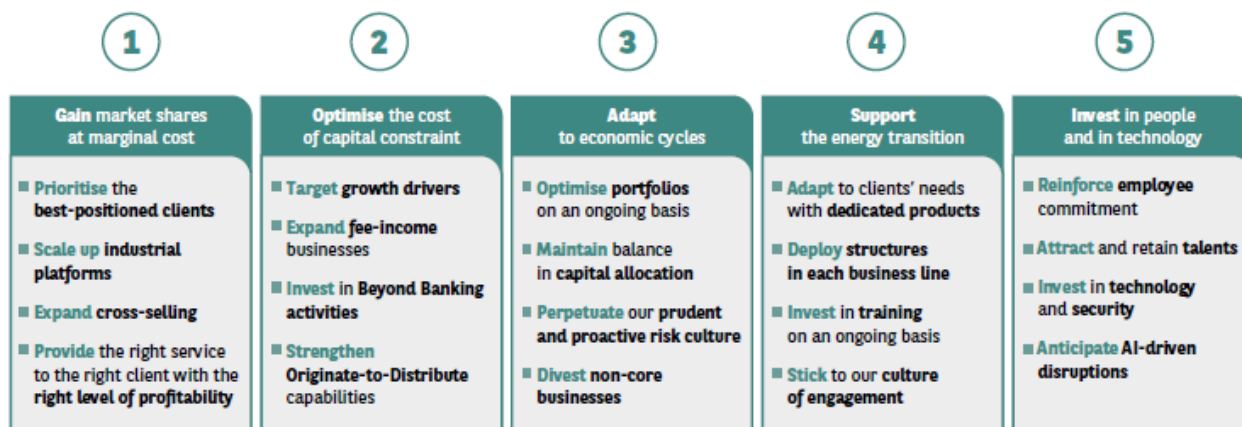

### 2024 TREND

On the strength of its diversified model, **BNP Paribas should continue to grow faster than its underlying economy and to gain market share**, thus offsetting a deterioration in the economic environment that is now more marked than in the economic baseline scenario. Nonetheless, various decisions by public authorities (ECB mandatory reserves, Belgian bank levy and Belgian government bonds) marked 2023.

Taken together, they have the effect of bringing the projected 2025 ROTE into the range of 11.5% to 12%. Especially affected by the current cycle, Personal Finance and Real Estate initiated robust adaptation plans in 2023 and should return to their nominal profitability as early as 2026. On the strength of its long-term strategy and the return to normal at Personal Finance and Real Estate, **BNP Paribas is confident in its capacity to deliver 12% ROTE as early as 2026**.

In order to present a consistent reference with the presentation of the financial statements and results for the year 2024, and in particular to take into account the end of the constitution of the Single Resolution Fund from 1 January 2024, a restatement<sup>1</sup> of the quarterly series for 2023 was published on 29 February 2024. The restatement leads, in particular, to retaining an amount of EUR 200 million corresponding to the assumption of a similar contribution to local bank taxes in the divisions and business lines, and to reallocating to “Corporate Centre” an amount of approximately EUR 800 million in contribution to the SRF which is not intended to continue from 2024. This restatement has no impact on the Group’s results for 2023 and is not included in section 3.2. Results by division/business line in this document.

#### THE MEDIUM-TERM STRATEGY IS REAFFIRMED TO ADDRESS THE CHALLENGES OF THE BANKING SECTOR

### 2022-2025 STRATEGIC PLAN

#### Growth, Technology & Sustainability 2025

As a reminder, the BNP Paribas Group presented its Growth, Technology & Sustainability 2025 plan on 8 February 2022.

During the presentation of its 2023 annual results, BNP Paribas reiterated its vision of the challenges faced by the banking sector and its long term strategy, in addition to its GTS 2025 strategic plan.

BNP Paribas relies on leading platforms, notably in Europe: in flow businesses (cash management, trade finance and factoring); in capital market businesses; in specialised businesses, for instance in full-service leasing with Arval, or in sustainable investment management. These fully integrated platforms provide the ability to serve clients in a comprehensive and unique way in Europe and internationally and hence to develop strong client franchises, in particular in the corporate, institutional, Private Banking and affluent segments.

This global and complete approach, thus enables the building of strong relationships with clients, accompanying their development throughout economic cycles, creating multiple and diversified growth opportunities. It ensures the development of volumes and market share and growth at marginal cost.

<sup>1</sup> Restatement – 2023 quarterly series in the 2024 format (invest.bnpparibas).

This distinctive model translates in an organisation based on three solid pillars, fully integrated focussing on the needs of clients and partners: Corporate & Institutional Banking (CIB); Commercial & Personal Banking and Services (CPBS), which encompasses all the Group's Commercial and Personal Banking<sup>1</sup> as well as Specialised Businesses<sup>2</sup> such as BNP Paribas Personal Finance or Arval; and Investment & Protection Services (IPS), which brings together Wealth and Asset Management businesses<sup>3</sup> and Insurance.

Leveraging on the strengths of its platforms and favourably positioned client franchises with the full benefit of its integrated operating model, the Group is ideally placed to deliver profitable growth, while making technology and industrialisation a hallmark of its development, scaling up sustainable finance and social and environmental responsibility as well as developing its employees' potential and engagement.

Accordingly, and building on the strength of its model, the Group shall maintain disciplined organic growth while gaining market share at marginal cost, thus generating new growth opportunities and substantial economies of scale.

The plan takes into account the achievement of the ramp-up of the Single Resolution Fund in 2023. It nonetheless includes an assumption of a stabilisation of similar contributions to local levies at EUR 200 million annually from 2024.

In particular, on 1 February 2024, the Group reaffirmed its objective of generating a positive jaws effect each year and 2 points higher on average<sup>4</sup>, as well as its cumulative recurring cost savings targets of EUR 2.3 billion by 2025 (EUR 1.1 billion already achieved at the end of 2023).

## Technology and industrialisation at the heart of our model

The Group has implemented a transformation plan in all its businesses, aiming to establish a new customer and employee experience, to accelerate digitalisation, and to improve operational efficiency. The successful 2017-2020 plan resulted in a decrease of the cost-income ratio by more than 2 points between 2017 and 2021 and recurring cost savings of almost EUR 3.1 billion (vs. an initial objective of EUR 2.7 billion).

Industrialisation of processes combined with strong digitalisation of customer interactions, (digital interactions tripled at Domestic Markets between 2017 and 2021), a gradual deployment of smart sourcing with now more than 18,000 employees in shared service centres, an intense use of artificial intelligence, with more than half of use cases dedicated to operating efficiency in 2021, have been key levers contributing structurally to the Group's operational efficiency and enhancing customer and employee experience.

Technology and industrialisation continue to serve as the foundation of the Group's model, increasing its operational efficiency, enhancing customer efficiency and ability to better serve clients and partners.

Six levers will contribute to delivering positive jaws effects throughout the period of the plan. These are: intensive use of artificial intelligence, data and robotics; a strong deployment of a secured use of cloud technologies; a broad APIsation of the IT system; the use of smart sourcing and the rollout of pooled service centres; an amplification of the "make/buy/share" strategy; and an accelerated convergence of European technological platforms.

These initiatives, implemented by all divisions, will sustain an improvement in the cost/income ratio of all divisions. They will also sustain the creation of enough manoeuvring room to self-fund the transformation of activities and investments tied to business lines.

## Scaling up sustainable finance and social and environmental responsibility

The Group is guided by three major strategic paths in accelerating its commitments to sustainable finance and social and environmental responsibility, along with the five priority areas aligned with the customer objectives and the United Nations' Sustainable Development Goals – savings, investments and sustainable financing; transition towards carbon neutrality; circular economy; natural capital & biodiversity; and combatting exclusion.

It has undertaken an alignment of portfolios to achieve carbon-neutrality objectives while laying out a CO<sub>2</sub> emissions reduction trajectory corresponding to financing of the sectors with the highest levels of emissions and aligning business lines with shared objectives taking into account client transitions.

The integrated model and all businesses are fully mobilised and committed to supporting clients in the transition towards a sustainable and low-carbon economy through, in particular, the Low-Carbon Transition Group, an organisation of 200 professionals dedicated to support clients in accelerating their transition.

Lastly, the Group strengthens its processes and steering tools to support evolving needs and standards, and will strengthen its governance.

As a reminder, the Group aims to mobilise EUR 350 billion by 2025 through loans and bond issues covering environmental and social topics<sup>5</sup>, as well as to reach EUR 300 billion in sustainable and responsible investments by 2025<sup>1</sup>.

<sup>1</sup> Commercial & Personal Banking in France, Commercial & Personal Banking in Belgium, BNL banca commerciale, Commercial & Personal Banking in Luxembourg, Europe-Mediterranean and BancWest.

<sup>2</sup> Arval & Leasing Solutions, BNP Paribas Personal Finance, New Digital Businesses (including Nickel and Floa) and Personal Investors.

<sup>3</sup> Wealth Management, Asset Management, Real Estate and Principal Investments.

<sup>4</sup> 2022-2025 CAGR of revenues less 2022-2025 CAGR of the Group's operating expenses excluding Bank of the West.

<sup>5</sup> Corporate, institutional and individual loans tied to environmental and social issues and annual sustainable bonds issuances.

BNP Paribas stood out in 2023 with a **strong acceleration in financing low-carbon energy production<sup>2</sup> and in exiting the financing of fossil fuel production<sup>3</sup>**. Its stock of low-carbon energy production credit exposure now accounts for 65%<sup>4</sup> of its total stock of energy production loans. **The 80% target initially set for 2030 has been moved forward to 2028, with a goal of 90% by 2030.** As of the end of 2023, the ratio of financing flows granted by BNP Paribas to oil and gas extraction and production companies compared to financing flows to renewable energy projects was 1 to 11.

## Development strategies individualised by division

On the back of performing and nimble bank and services, trusted companions, “for & beyond Banking”, Commercial, Personal Banking and Services (CPBS) further improves the recommendation from customers and employees, simplifies and broadens its offering of products and services through an industrialised and resilient operating model combined with client relationships supported by a new balance between human and digital.

CPBS strengthens its leadership in Europe in corporate and Private Banking and accelerates the profitable growth of its Specialised Businesses at marginal cost. As Retail Banking activities are still facing headwinds, the division undertakes a strategic repositioning through more intense segmentation and changes in operating models.

On 1 February 2024, CPBS adjusted its average annual revenue growth target to 4.5% per annum for the period from 2021 to 2025<sup>(3)</sup> to take into account the impact of the authorities' decisions (non remuneration of reserve requirements, Belgian State bonds) and the repositioning of Personal Finance.

**Investment & Protection Services (IPS)** aims to become a reference European player in protection, savings and sustainable investments by strengthening its offering of products and services and its distribution network and by consolidating its leadership in social and environmental responsibility with the full backing of businesses that are digital, efficient and tech-savvy.

IPS relies on three strategic pillars to foster growth, fortifies its positions and captures new growth opportunities: the acceleration of development of financial savings, the roll-out of a transversal franchise in private assets, and the strengthening of its leadership in sustainable financing. It builds up on four key levers making the most of the integrated model, moving to the next level on digitalisation, data and artificial intelligence, deploying new ways of working while optimising the operating model.

On 1 February 2024, IPS adjusted its objectives to reflect the impact of the environment, particularly on the Real Estate business and IFRS 17 and IFRS 9. It is aiming for an average annual revenue growth target of around 6.5% over the period from 2023 to 2025.

With the ambition of being the Europe-based partner of corporate and institutional clients on the long term, **Corporate & Institutional Banking (CIB)** pursues a strategy that is more relevant than ever, with the goal of becoming the first Europe-based CIB among global players. As of end 2023, CIB became the 1<sup>st</sup> European CIB in EMEA<sup>5</sup> with increased market share<sup>6</sup>. CIB builds on the strength of BNP Paribas' integrated model, technological platforms and sustainability leadership strengthening its capacity to connect the needs of corporate and institutional clients, while continuing to win market share in a consolidating sector.

CIB continues to build on its core assets, supporting clients in their transition towards a sustainable and low-carbon economy and moving technological platforms to the next level to serve clients. It pursues and deepens on key structural levers with the full backing of the integrated model and enhances its operating model and efficiency. Lastly, CIB steps up with key transforming initiatives in particular the development of a solid equity franchise and the acceleration of interregional dynamics.

CIB unlocks the full potential of its distinctive, sustainable and integrated model, with above-market growth in its revenues.

On 1 February 2024, CIB revised upwards its objectives for all of its business lines, confirming the success of its long-term strategy and is targeting average annual growth in its revenues of more than 6% over the period from 2021 to 2025.

## Event subsequent to the Board of directors' meeting of 31 January 2024

The Group confirms that the Board of directors will propose to the Shareholders' Annual General Meeting on 14 May 2024 the distribution of a dividend of EUR 4.60 in cash, equivalent to a 50% pay-out ratio of 2023 distributable income. This distribution will be raised to 60% of 2023 distributable income with the launch of the EUR 1.055 billion buyback programme<sup>(4)</sup> on 4 March 2024 following the authorisation from the ECB.

On 13 March 2024, the Group confirmed the growth trajectory in Net Income, Group Share, with a 2024 Net Income higher than 2023 Distributable Net Income. With a pay-out ratio of 60%<sup>7</sup>, this should allow the Group to return a total of about 20 billion euros<sup>8</sup> to its shareholders in 2024, 2025 and 2026. The capital gradually redeployed since 2022, following the sale of Bank of

the West, is expected to generate a return on invested capital of more than 16% in 2025. The Group also announced recurring operating efficiency measures of about EUR 400 million bringing the target of the 2022-2025 plan to 2.7 billion euros.

## INFORMATION ON TRENDS

---

Information on trends (Macroeconomic conditions and Legislation and regulations applicable to financial institutions) are described in the section on *Principal and Emerging Risks for the year* in the *Risks and Capital Adequacy* chapter.

### 3.7 Financial structure

The Groupe has a solid financial structure.

**The common equity Tier 1 ratio stood at 13.2%<sup>1</sup> as of 31 December 2023**, down by 20 basis points compared to 30 September 2023, due mainly to:

- the placing of fourth quarter 2023 results into reserves after taking a 60% payout ratio into account, net of growth in risk-weighted assets (0 bp); and
- the effect of the adjustments related to the distributable Net Income (-20 bps).

Other impacts on the ratio were limited overall.

**The common equity Tier 1 ratio was up by 90 basis points compared to 31 December 2022**, due mainly to:

- the closing of the Bank of the West sale on 1 February 2023 net of the share buyback programme and the redeployment of capital (+100 bps);
- the effect of the adjustments related to the distributable Net Income (-30 bps);
- the placing of 2023 results into reserves after taking a 60% payout ratio into account, net of growth in risk-weighted assets and their optimisation (+30 bps);
- the impact of the application of IFRS 17, on the updating of models and regulations in 1Q23 (-10 bps).

Other impacts on the ratio were limited overall.

**The leverage ratio<sup>2</sup>** stood at 4.6% as of 31 December 2023.

The Liquidity Coverage Ratio<sup>3</sup> (end of period) stood at the high level of 148% as of 31 December 2023.

The immediately available liquidity reserve<sup>4</sup> amounted to EUR 474 billion as of 31 December 2023, equivalent to more than one year of room to manoeuvre compared to market resources.

## 3.8 Alternative Performance Measures (APM) – Article 223-1 of the AMF’s General regulation

| Alternative Performance Measures  | Definition  | Reason for use  |
|---|---|---|
| <b>Insurance P&amp;L aggregates (Revenues, Operating expenses, Gross operating income, Operating income, Pre-tax income)</b>  | <p>Insurance P&amp;L aggregates (Revenues, Gross operating income, Operating income, Pre-tax income) excluding the volatility generated by the fair value accounting of certain assets through profit and loss (IFRS 9) transferred to Corporate Centre; Gains or losses realised in the event of divestments, as well as potential long-term depreciations are included in the Insurance income profit and loss account.</p> <p>A reconciliation with Group P&amp;L aggregates is provided in the tables “Quarterly Series”.</p>   | Presentation of the Insurance result reflecting operational and intrinsic performance (technical and financial)   |
| <b>Corporate Centre P&amp;L aggregates</b>  | <p>P&amp;L aggregates of “Corporate Centre, including restatement of the volatility (IFRS 9) and attributable costs (internal distributors) related to Insurance activities”, following the application from 1 January 2023 of IFRS 17 “insurance contracts” in conjunction with the application of IFRS 9 for insurance activities, including:</p> <ul style="list-style-type: none"> <li>▪ Restatement in Corporate Centre revenues of the volatility to the financial result generated by the IFRS 9 fair value recognition of certain Insurance assets;</li> <li>▪ Operating expenses deemed “attributable to insurance activities”, net of internal margin, are recognised in deduction from revenues and no longer booked as operating expenses. These accounting entries relate exclusively to the Insurance business and Group entities (excluding the Insurance business) that distribute insurance contracts (known as internal distributors) and have no effect on gross operating income. The impact of entries related to internal distribution contracts is borne by the “Corporate Centre”.</li> </ul> <p>A reconciliation with Group P&amp;L aggregates is provided in the tables “Quarterly Series”</p>  | Transfer to Corporate Centre of the impact of operating expenses “attributable to insurance activities” on internal distribution contracts in order not to impede the readability of the financial performance of the various business lines. |
| <b>Operating division profit and loss account aggregates (revenues, net interest revenue, operating expenses, gross operating income, operating income, pre-tax income)</b> | <p>Sum of CPBS’ profit and loss account aggregates (with Commercial &amp; Personal Banking’ profit and loss account aggregates, including 2/3 of Private Banking in France, Italy, Belgium, Luxembourg, Germany, Poland and in Türkiye), IPS and CIB.</p> <p>BNP Paribas Group profit and loss account aggregates = operating division profit and loss account aggregates + Corporate Centre profit and loss account aggregates.</p> <p>Reconciliation with Group profit and loss account aggregates is provided in the tables “Results by Core Business”.</p> <p>Net interest revenue mentioned in Commercial &amp; Personal Banking includes the net interest margin (as defined in note 3.a of the financial statements), as well as, to a lesser extent, other revenues (as defined in notes 3.c, 3.d and 3.e of the financial statements), excluding fees (note 3.b of the financial statements). P&amp;L aggregates of Commercial &amp; Personal Banking or Specialised Businesses distributing insurance contracts exclude the impact of the application of IFRS 17 on the accounting presentation of operating expenses deemed “attributable to insurance activities” in deduction of revenues and no longer operating expenses, with the impact carried by Corporate Centre.</p> | Representative measure of the BNP Paribas Group’s operating performance   |

| Alternative Performance Measures  | Definition  | Reason for use  |
|---|---|---|
| <b>Profit and loss account aggregates of Commercial &amp; Personal Banking activity with 100% of Private Banking</b>                      | Profit and loss account aggregate of a Commercial & Personal Banking activity including the whole profit and loss account of Private Banking<br>Reconciliation with Group profit and loss account aggregates is provided in the tables "Quarterly series".  | Representative measure of the performance of Commercial & Personal Banking activity including the total performance of Private Banking (before sharing the profit & loss account with the Wealth Management business, Private Banking being under a joint responsibility of Commercial & Personal Banking (2/3) and Wealth Management business (1/3)) |
| <b>Profit and loss account aggregates, excluding PEL/CEL effects (revenues, gross operating income, operating income, pre-tax income)</b> | Profit and loss account aggregates, excluding PEL/CEL effects.<br>Reconciliation with Group profit and loss account aggregates is provided in the "Quarterly series" tables.  | Representative measure of the aggregates of the period excluding changes in the provision that accounts for the risk generated by PEL and CEL accounts during their lifetime  |
| <b>Cost/income ratio</b>  | Cost to income ratio  | Measure of operational efficiency in the banking sector   |
| <b>Cost of risk/Customer loans at the beginning of the period (in basis points)</b>   | Cost of risk (in €m) divided by customer loans at the beginning of the period<br>Cost of risk does not include "Other net losses for risk on financial instruments"   | Measure of the risk level by business in percentage of the volume of outstanding loans  |
| <b>Evolution of operating expenses excluding IFRIC 21</b>   | Change in operating expenses excluding taxes and contributions subject to IFRIC 21.   | Representative measure of the change in operating expenses' excluding the taxes and contributions subject to IFRIC 21 booked almost entirely in the 1 <sup>st</sup> half of the year, given in order to avoid any confusion compared to other quarters  |
| <b>Return on Equity (ROE)</b>   | Details of the ROE calculation are disclosed in the Appendix "Return on Equity and Permanent Shareholders' Equity" of the results' presentation   | Measure of the BNP Paribas Group's return on equity   |
| <b>Return on Tangible Equity (ROTE)</b>   | Details of the ROTE calculation are disclosed in the Appendix "Return on Equity and Permanent Shareholders' Equity" of the results' presentation  | Measure of the BNP Paribas Group's return on tangible equity  |
| <b>Distributable Net Income</b>   | P&L aggregates up to the net income adjusted in accordance with the announcements made in February 2023 to reflect the Group's intrinsic performance in 2023, pivotal year, after the sale of Bank of the West on 1 february 2023 but also as the last expected year of the ramp-up of the Single Resolution Fund, marked by extraordinary items.<br>Adjustments are detailed in the 2023 results' presentation: <ul style="list-style-type: none"> <li>▪ include the effect of the anticipation of the end of the ramp-up of the Single Resolution Fund in 2023;</li> <li>▪ exclude the net income of entities intended to be sold (application of IFRS 5) (notably the capital gain on the sale of Bank of the West) and additional items related to the sale of Bank of the West;</li> <li>▪ exclude extraordinary items such as the extraordinary negative impact of the hedging adjustment related to changes in the TLTRO terms decided by the ECB in the fourth quarter 2022 and extraordinary provisions for litigation.</li> </ul> The distributable net income is used to calculate the ordinary distribution in 2023 as well as to monitor the Group's performance in 2023 | Measure of BNP Paribas Group's net income reflecting the Group's intrinsic performance in 2023, pivotal year, post-impact of the sale of Bank of the West and the last expected year of the contribution to the ramp-up of the Single Resolution Fund, marked by extraordinary items  |

| Alternative Performance Measures                          | Definition   | Reason for use   |
|---|--|--|
| <b>Net income Group share excluding exceptional items</b> | Net income attributable to equity holders excluding exceptional items<br>Details of exceptional items are disclosed in the slide “Main Exceptional Items” of the results’ presentation   | Measure of BNP Paribas Group’s net income excluding non-recurring items of a significant amount or items that do not reflect the underlying operating performance, notably restructuring, adaptation, IT reinforcement and transformation costs. |
| <b>Doubtful loans’ coverage ratio</b>                     | Relationship between stage 3 provisions and impaired outstandings (stage 3), balance sheet and off-balance sheet, netted for collateral received, for customers and credit institutions, including liabilities at amortised cost and debt securities at fair value through equity (excluding insurance business) | Measure of provisioning for doubtful loans   |

## METHODOLOGY – COMPARATIVE ANALYSIS AT CONSTANT SCOPE AND EXCHANGE RATES

The method used to determine the effect of changes in scope of consolidation depends on the type of transaction (acquisition, sale, etc.). The underlying purpose of the calculation is to facilitate period-on-period comparisons.

In case of acquired or created entity, the results of the new entity are eliminated from the constant scope results of current-year periods corresponding to the periods when the entity was not owned in the prior-year.

In case of divested entities, the entity’s results are excluded symmetrically for the prior year for quarters when the entity was not owned.

In case of change of consolidation method, the policy is to use the lowest consolidation percentage over the two years (current and prior) for results of quarters adjusted on a like-for-like basis.

Comparative analysis at constant exchange rates are prepared by restating results for the prior-year quarter (reference quarter) at the current quarter exchange rate (analysed quarter). All of these calculations are performed by reference to the entity’s reporting currency.

## REMINDER

**Net banking income (NBI):** throughout the document, the terms “Net Banking Income” and “Revenues” are used interchangeably.

**Operating expenses:** sum of salary and employee benefit expenses, other operating expenses and depreciation, amortisation and impairment of property, plant and equipment. Throughout the whole document, the terms operating expenses or costs can be used indifferently.

The sum of the values indicated in the tables and analyses may differ slightly from the reported total due to rounding.

**Operating divisions:** they consist of 3 divisions:

- **Corporate and Institutional Banking (CIB)** including: Global Banking, Global Markets, and Securities Services;
- **Commercial, Personal Banking & Services (CPBS)** including:
  - Commercial & Personal Banking in France, Belgium, Italy, Luxembourg, and Europe-Mediterranean,
  - Specialised Businesses, with Arval & Leasing Solutions; BNP Paribas Personal Finance; New Digital Businesses (including Nickel, Lyf, etc.) & Personal Investors;
- **Investment & Protection Services (IPS)** including: Insurance, Wealth and Asset Management, which includes Wealth Management, Asset Management, Real Estate and Principal Investments.

(1) Related mainly to the sale of Bank of the West.;

- (d) Section 4 entitled "Consolidated Financial Statements for the Year Ended 31 December 2022" on pages 193 to 337 shall be deleted in its entirety and replaced with the following:

# "4 CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEAR ENDED 31 DECEMBER 2023

*The Board of directors of BNP Paribas approved the Group consolidated financial statements on 31 January 2024.*

*The consolidated financial statements of the BNP Paribas Group are presented for the years ended 31 December 2023 and 31 December 2022. In accordance with Annex I of European Delegated Regulation (EU) 2019/980, the consolidated financial statements for the year ended 31 December 2021 are provided in the universal registration document filed with the Autorité des Marchés Financiers on 24 March 2023 under number D.23-0143.*

On 18 December 2021, the Group concluded an agreement with BMO Financial Group for the sale of 100% of its retail and commercial banking activities in the United States operated by the BancWest cash-generating unit. The terms of this transaction fall within the scope of application of IFRS 5 relating to groups of assets and liabilities held for sale (see note 9.e *Discontinued activities*) leading to isolate the "Net income from discontinued activities" on a separate line. A similar reclassification is made in the statement of net income and changes in assets and liabilities recognised directly in equity and in the cash flow statement. Following the receipt of regulatory approvals, the transaction was finalised on 1 February 2023.

## 4.1 Profit and loss account for the year ended 31 December 2023

## 4.6 Notes to the financial statements prepared in accordance with IFRS as adopted by the European Union

### NOTE 1 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES APPLIED BY THE GROUP

---

#### 1.A APPLICABLE ACCOUNTING STANDARDS

The consolidated financial statements of the BNP Paribas Group have been prepared in accordance with international accounting standards (International Financial Reporting Standards – IFRS), as adopted for use in the European Union<sup>1</sup>. Accordingly, certain provisions of IAS 39 on hedge accounting have been excluded.

Information on the nature and extent of risks relating to financial instruments as required by IFRS 7 “Financial Instruments: Disclosures” and to insurance contracts as required by IFRS 17 “Insurance Contracts”, along with information on regulatory capital required by IAS 1 “Presentation of financial statements” are presented in chapter 5 of this amendment to the 2022 Universal Registration Document. This information, which is an integral part of the notes to the consolidated financial statements of the BNP Paribas Group at 31 December 2023, is covered by the opinion of the Statutory Auditors on the financial statements, and is identified in the management report by the word “Audited”. Section 4 of chapter 5, paragraph *Exposures, provisions and cost of risk provides*, in particular, IFRS 7 information on credit risk exposures and related impairment broken down according to whether the underlying loans are performing or non-performing, by geographic area and by industry.

- Since 1 January 2023, BNP Paribas Group's insurance entities have applied IFRS 17 “Insurance Contracts” published in May 2017, amended in June 2020 and adopted by the European Union in November 2021, including the exemption provided for in article 2 of regulation 2021/2036 regarding annual cohorts. The transition date for IFRS 17 is 1 January 2022 for the purposes of the opening balance sheet of the comparative period required by the standard.

As the Group deferred the application of IFRS 9 “Financial Instruments” for its insurance entities until the entry into force of IFRS 17, they therefore apply this standard from 1 January 2023.

In addition, the entry into force of IFRS 17 brings into effect various amendments to other standards, including IAS 1 for presentation, IAS 16 and IAS 40 for the valuation and presentation of real estate assets, IAS 28 for exemptions from the equity method and IAS 32 and IFRS 9 for own equity instruments and other securities issued by the Group.

Finally, the amendment to IFRS 17 “Initial application of IFRS 17 and IFRS 9 – Comparative information” published by the IASB in December 2021 and adopted by the European Union on 9 September 2022 allows insurance companies applying IFRS 9 and IFRS 17 for the first time simultaneously to present 2022 comparative data as if IFRS 9 was already applied, using an “overlay” approach. The Group applied this optional approach for all financial instruments, including those derecognised in 2022, for both classification and measurement purposes.

#### Transition from IFRS 4 to IFRS 17

IFRS 17 applies retroactively to all contracts outstanding at the transition date, *i.e.* 1 January 2022 due to the mandatory comparative period. Three transition methods may be used: a full retrospective approach and, if this cannot be implemented, a modified retrospective approach or an approach based on the fair value of the contracts at the transition date.

The majority of entities controlled by the Group have applied the modified retrospective approach and, to a lesser extent, for some portfolios, an approach based on the fair value of contracts at the transition date.

As a matter of fact, not all the necessary information was available or was not sufficiently granular, in particular due to systems migration and data retention requirements, to apply a full retrospective approach. Moreover, the full retrospective approach would have required reconstituting management's assumptions and intentions in previous periods.

The objective of the modified retrospective approach is to achieve a result that is as close as possible to the result that would have been obtained through the retrospective application of the standard, based on reasonable and supportable information available without undue costs or effort.

Thus, the entities concerned applied the modified retrospective approach to most portfolios of existing contracts, whether in Protection or Life/Savings, according to the principles below.

---

<sup>1</sup> The full set of standards adopted for use in the European Union can be found on the website of the European Commission at: [https://ec.europa.eu/info/business-economy-euro/company-reporting-and-auditing/company-reporting\\_en](https://ec.europa.eu/info/business-economy-euro/company-reporting-and-auditing/company-reporting_en)

**For Protection contracts valued according to the general model,** the principle of the modified retrospective approach consists in reconstituting liabilities at the initial recognition date based on their valuation at the transition date, by retroactively reconstituting movements between the two dates with simplifications:

- cash flows at inception are estimated by adding the actual cash flows recorded between the two dates, to the amount at the transition date;
- the original discount rate can be determined with interest rate curves simulating those at the date of first recognition;
- the changes in the adjustment for non-financial risk between the inception date and the transition date can be estimated based on release patterns observed on similar contracts.

For liabilities for remaining coverage that are reconstituted in this way at the inception date, the contractual service margin at inception (if any), less any acquisition costs paid in the interim period, is amortised based on the services provided in the period prior to the transition, in order to determine the amount of the remaining contractual service margin at that date, less any remaining acquisition costs.

When contracts are grouped into a single group on the transition date, the discount rate on that date or an average rate can be used.

The effect of the change in the discount rate on liabilities is recognised in the profit and loss account, unless the option to split financial changes between profit and loss and shareholders' equity is retained. Choosing this option requires the amount carried in shareholders' equity at the transition date to be recalculated from the inception rate for the liability for remaining coverage and from the rate at the date of claims occurrence for the liability for incurred claims. Where such reconstitution is not possible, the amount shown in equity is zero.

For the purposes of this reconstitution, the simplifications mainly covered the following:

- reconstitution of the annual cohorts or consolidation into a single group of contracts at the transition date according to available data;
- the reconstitution of fulfilment cash flows and unamortised acquisition costs;
- the release of the risk adjustment between the date of issuance of the contracts and the transition date;
- discount rates (the rate at inception in the case of a reconstitution by annual cohorts or an average rate in the case of a consolidation into a single group of contracts at the transition date);
- the amount transferred to changes in equity that may be reclassified to profit or loss at the transition date in respect of changes in the discount rate, that was reconstituted based on historical rates or reset to zero if such a reconstitution is not achievable.

**For Protection contracts valued according to the simplified method,** the reserves for remaining coverage were generally determined at transition from the previous reserves for unearned premiums, net of acquisition costs. The incurred claims reserves arising from these contracts consist of expected cash flows and risk adjustments for non-financial risks at the transition date. When cash flows were discounted and for portfolios for which the disaggregation option of financial changes between profit and loss account and shareholders' equity was chosen, the amount carried in changes in equity that may be reclassified to profit or loss at the transition date in relation to changes in the discount rate was reconstituted based on the historical rates or set to zero if such a reconstitution was not achievable.

**For Life/Savings contracts valued under the variable fee approach,** the modified retrospective approach also consists in reconstituting the liability at the inception date, starting from the liability at the transition date. However, for these contracts, the standard provides that the contractual services margin at the transition date is determined using the following approach:

- the realisable value of the underlying assets at the transition date is first diminished by the fulfilment cash flows (discounted cash flows and risk adjustment) at that date;
- to this amount are added the income received from the policyholders and changes in the risk adjustment, less the acquisition cashflows paid during the interim period;
- the contractual service margin net of the acquisition costs initially reconstituted is then amortised until the transition date to reflect the services provided to that date, as well as the remaining acquisition costs.

The main simplifications in implementing this approach were as follows:

- existing contracts were grouped according to the planned post-transition segmentation, without a breakdown in annual cohorts, in line with the election of the exemption provided for by the European regulation;
- for general funds common to participating and non-participating contracts and to equity, the underlying assets were defined on the basis of the breakdown used to calculate policyholders' participation;
- the contractual services margin at the transition date was reconstituted:
  - based on the fair value of the underlying assets less fulfilment cash flows at the transition date;
  - by adding the historical margins which were rolled over up to the transition date, using the same approach as that to be used after the transition, taking into account the "over-performance" on assets; and
  - deducting any remaining acquisition costs;
- the amount recorded in changes in equity that may be reclassified to profit or loss at the transition date as an adjustment for accounting mismatches was determined using the fair value of the underlying assets recognised in equity at the transition date.

Finally, under the fair value method, the contractual service margin at the transition date was determined as the difference at the transition date between the realisable value determined without taking into account the amount payable on demand and the fulfilment cash flows. This approach was used on some non-material portfolios when the modified retrospective approach could not be implemented. For these portfolios, the fair value was estimated based on a Solvency 2 valuation and, in the particular case of a recent business combination dating from 2018, based on the amount allocated to the contracts during the acquisition price allocation process.

## Transition from IAS 39 to IFRS 9

Financial assets and liabilities of insurance entities are managed by portfolios corresponding either to the insurance liabilities they back up or to the own funds. The business models were therefore determined according to these portfolios at the transition date to IFRS 9 (see note 2 *IFRS 17 and IFRS 9 First time application impacts*).

## Amendments to other standards related to IFRS 17

The Group also applied the changes in IAS 40 and IAS 16 resulting from IFRS 17, leading to the measurement of property held as underlying assets of direct participating contracts at fair value through profit or loss. It also applied the amendments to IAS 32 and IFRS 9, making it possible to maintain on the balance sheet financial assets issued by the Group that are held as assets underlying direct participating contracts and are measured at fair value through profit or loss.

Business combinations (including goodwill) prior to the transition date were not modified except for the cancellation of specific intangible assets under IFRS 4.

- In relation to the IBOR and Eonia rates reform, at the end of 2018 the Group launched a global transition programme, involving all business lines and functions. The aim of the programme was to manage and implement the transition from the old benchmark interest rates to the new ones in major jurisdictions and currencies (euro, pound sterling, US dollar, Swiss franc and Japanese yen), while reducing the risks associated with this transition and meeting the deadlines set by the competent authorities. The Group contributed to market-wide workshops with central banks and financial regulators.

In Europe, the Eonia-€STR transition, which was purely technical given the fixed link between these two indices, was finalised at the end of December 2021 while the maintenance of Euribor on a *sine die* basis was confirmed.

Publication of JPY synthetic Libor was discontinued at the end of 2022. Regarding synthetic GBP Libor, the publication of the 1-month and 6-month settings ceased in March 2023, thereby only leaving the 3-month setting, which will subsist until March 2024.

In the United States, the decision was taken to continue publishing the USD Libor until mid-2023, and a legislative solution was passed at the federal level in the first quarter of 2022 to address legacy US-law governed contracts. In early April 2023, the FCA (Financial Conduct Authority) announced its decision to compel ICE BA (as benchmark administrator) to continue publication of 1-month, 3-month and 6-month USD Libor after 30 June 2023 and until 30 September 2024, using a synthetic methodology.

Through the implementation and execution of a detailed transition plan, the Group finalised its migration to the new reference rates.

In September 2019, the IASB published "Phase 1" amendments to IAS 39 and IFRS 7, amending the hedge accounting requirements so that hedges affected by the benchmark interest rate reform could continue despite the uncertainty during the transition of the hedged items or hedging instruments to the reformed benchmark rates. These amendments, endorsed by the European Commission on 15 January 2020, have been applied by the Group since 31 December 2019.

In August 2020, the IASB published "Phase 2" amendments to IFRS 9, IAS 39, IFRS 7, IFRS 4 and IFRS 16 introducing several changes applicable during the effective transition to the new benchmark interest rates. These amendments allow for changes in the contractual cash flows of financial instruments resulting from the IBOR rates reform to be treated as a simple reset of their variable interest rate, provided, however, that such changes are made on an economically equivalent basis. They also allow the continuation of hedging relationships, subject to amendments to their documentation to reflect changes in hedged instruments, hedging instruments, hedged risk, and/or the method for measuring effectiveness during the transition to the new benchmark rates.

These amendments, adopted by the European Commission in December 2020, have been applied by the Group since 31 December 2020 to maintain its existing hedging relationships which have been modified as a result of the transition to the new RFRs.

- Further to the Pillar II recommendations of the Organisation for Economic Cooperation and Development (OECD) in relation to the international tax reform, the European Union adopted on 14 December 2022 the 2022/2523 directive instituting a minimum corporate income tax for international groups, effective 1 January 2024.

To clarify the directive's potential impacts, the IASB issued on 23 May 2023 a series of amendments to IAS 12 "Income Taxes", which were adopted by the European Union on 8 November 2023. In accordance with the provisions of these amendments, the Group applies the mandatory and temporary exception not to recognise deferred taxes associated with this additional taxation.

Based on the available information, the impact of the Pillar II reform are expected to be non-material for the Group once adopted. Income before tax and corporate income tax by country are presented in chapter 8 of this amendment to the 2022 Universal Registration Document (part 8.6, section II. *Profit and Loss account items and headcount by country*).

- In France, changes resulting from the pension reform enacted on 14 April 2023 constitute a change in post-employment benefits, based on IAS 19 § 104. The non-material impact of this change was recorded in the profit and loss account for the period.

The introduction of other standards, amendments and interpretations that are mandatory as from 1 January 2023, in particular the amendments to IAS 1 "Presentation of financial statements", IAS 8 "Changes in accounting estimates and errors" and "IAS 12 Income Tax", had no effect on the Group's financial statements at 31 December 2023.

The Group did not early adopt any of the new standards, amendments, and interpretations adopted by the European Union, when the application in 2023 was optional.

## **1.B CONSOLIDATION**

### **1.b.1 Scope of consolidation**

The consolidated financial statements of BNP Paribas include entities that are controlled by the Group, jointly controlled, and under significant influence, with the exception of those entities whose consolidation is regarded as immaterial to the Group. Companies that hold shares in consolidated companies are also consolidated.

Subsidiaries are consolidated from the date on which the Group obtains effective control. Entities under temporary control are included in the consolidated financial statements until the date of disposal.

### **1.b.2 Consolidation methods**

#### **Exclusive control**

Controlled enterprises are fully consolidated. The Group controls a subsidiary when it is exposed, or has rights, to variable returns from its involvement with the entity and has the ability to affect those returns through its power over the entity.

For entities governed by voting rights, the Group generally controls the entity if it holds, directly or indirectly, the majority of the voting rights (and if there are no contractual provisions that alter the power of these voting rights) or if the power to direct the relevant activities of the entity is conferred on it by contractual agreements.

Structured entities are entities established so that they are not governed by voting rights, for instance when those voting rights relate to administrative tasks only, whereas the relevant activities are directed by means of contractual arrangements. They often have the following features or attributes: restricted activities, a narrow and well-defined objective and insufficient equity to permit them to finance their activities without subordinated financial support.

For these entities, the analysis of control shall consider the purpose and design of the entity, the risks to which the entity is designed to be exposed and to what extent the Group absorbs the related variability. The assessment of control shall consider all facts and circumstances able to determine the Group's practical ability to make decisions that could significantly affect its returns, even if such decisions are contingent on uncertain future events or circumstances.

In assessing whether it has power, the Group considers only substantive rights which it holds or which are held by third parties. For a right to be substantive, the holder must have the practical ability to exercise that right when decisions about the relevant activities of the entity need to be made.

Control is reassessed if facts and circumstances indicate that there are changes to one or more of the elements of control.

Where the Group contractually holds the decision-making power, for instance where the Group acts as fund manager, it shall determine whether it is acting as agent or principal. Indeed, when associated with a certain level of exposure to the variability of returns, this decision-making power may indicate that the Group is acting on its own account and that it thus has control over those entities.

Minority interests are presented separately in the consolidated profit and loss account and balance sheet within consolidated equity. The calculation of minority interests takes into account the outstanding cumulative preferred shares classified as equity instruments issued by subsidiaries, when such shares are held outside the Group.

As regards fully consolidated funds, units held by third-party investors are recognised as debts at fair value through profit or loss, inasmuch as they are redeemable at fair value at the subscriber's initiative.

For transactions resulting in a loss of control, any equity interest retained by the Group is remeasured at its fair value through profit or loss.

#### **Joint control**

Where the Group carries out an activity with one or more partners, sharing control by virtue of a contractual agreement which requires unanimous consent on relevant activities (those that significantly affect the entity's returns), the Group exercises joint control over the activity. Where the jointly controlled activity is structured through a separate vehicle in which the partners have rights to the net assets, this joint venture is accounted for using the equity method. Where the jointly controlled activity is not structured through a separate vehicle or where the partners have rights to the assets and obligations for the liabilities of the jointly controlled activity, the Group accounts for its share of the assets, liabilities, revenues and expenses in accordance with the applicable IFRS.

**Significant influence**

Companies over which the Group exercises significant influence or associates are accounted for by the equity method. Significant influence is the power to participate in the financial and operating policy decisions of a company without exercising control. Significant influence is presumed to exist when the Group holds, directly or indirectly, 20% or more of the voting rights of a company. Interests of less than 20% can be included in the consolidation scope if the Group effectively exercises significant influence. This is the case for example for entities developed in partnership with other associates, where the BNP Paribas Group participates in strategic decisions of the enterprise through representation on the Board of directors or equivalent governing body, or exercises influence over the enterprise's operational management by supplying management systems or senior managers, or provides technical assistance to support the enterprise's development.

Changes in the net assets of associates (companies accounted for under the equity method) are recognised on the assets side of the balance sheet under "Investments in equity-method entities" and in the relevant component of shareholders' equity. Goodwill recorded on associates is also included under "Equity-method investments".

Whenever there is an indication of impairment, the carrying amount of the investment consolidated under the equity method (including goodwill) is subjected to an impairment test, by comparing its recoverable value (the higher of value-in-use and market value less costs to sell) to its carrying amount. Where appropriate, impairment is recognised under "Share of earnings of equity-method entities" in the consolidated income statement and can be reversed at a later date.

If the Group's share of losses of an equity-method entity equals or exceeds the carrying amount of its investment in this entity, the Group discontinues including its share of further losses. The investment is reported at nil value. Additional losses of the equity-method entity are provided for only to the extent that the Group has contracted a legal or constructive obligation or has made payments on behalf of this entity.

Where the Group holds an interest in an associate, directly or indirectly through an entity that is a venture capital organisation, a mutual fund, an open-ended investment company or similar entity such as an investment-related insurance fund, it may elect to measure that interest at fair value through profit or loss.

Realised gains and losses on investments in consolidated undertakings are recognised in the profit and loss account under "Net gain on non-current assets".

The consolidated financial statements are prepared using uniform accounting policies for similar transactions and other events occurring in similar circumstances.

### **1.b.3 Consolidation rules**

#### **Elimination of intragroup balances and transactions**

Intragroup balances arising from transactions between consolidated enterprises, and the transactions themselves (including income, expenses and dividends), are eliminated. Profits and losses arising from intragroup sales of assets are eliminated, except where there is an indication that the asset sold is impaired. Unrealised gains and losses included in the value of financial instruments at fair value through equity are maintained in the consolidated financial statements.

By way of exception, amendments to IAS 32 and IFRS 9 allow intra-group assets to be retained in the balance sheet if they are held as underlying components of direct participating contracts. These assets are measured at fair value through profit or loss. These are:

- own shares by amendment to IAS 32;
- financial liabilities issued by the entity in amendment to IFRS 9.

These provisions are applied by the Group's insurance entities that issue direct participating contracts, the underlying elements of which include securities issued by the Group either directly or through consolidated investment entities.

#### **Translation of accounts expressed in foreign currencies**

The consolidated financial statements of BNP Paribas are prepared in euros.

The financial statements of enterprises whose functional currency is not the euro are translated using the closing rate method. Under this method, all assets and liabilities, both monetary and non-monetary, are translated using the spot exchange rate at the balance sheet date. Income and expense items are translated at the average rate for the period.

Financial statements of the Group's subsidiaries located in hyperinflationary economies, previously adjusted for inflation by applying a general price index, are translated using the closing rate. This rate applies to the translation of assets and liabilities as well as income and expenses.

Differences arising from the translation of balance sheet items and profit and loss items are recorded in shareholders' equity under "Exchange differences", and in "Minority interests" for the portion attributable to outside investors. Under the optional treatment permitted by IFRS 1, the Group has reset to zero all translation differences, by booking all cumulative translation differences attributable to shareholders and to minority interests in the opening balance sheet at 1 January 2004 to retained earnings.

On liquidation or disposal of some or all of an interest held in a foreign enterprise located outside the Eurozone, leading to a change in the nature of the investment (loss of control, loss of significant influence or loss of joint control without keeping a significant influence), the cumulative exchange difference at the date of liquidation or sale is recognised in the profit and loss account.

Should the percentage of interest change without leading to a modification in the nature of the investment, the exchange difference is reallocated between the portion attributable to shareholders and that attributable to minority interests if the entity is fully consolidated; if the entity is consolidated under the equity method, it is recorded in profit or loss for the portion related to the interest sold.

### **1.b.4 Business combinations and measurement of goodwill**

#### **Business combinations**

Business combinations are accounted for using the purchase method.

Under this method, the acquiree's identifiable assets and liabilities assumed are measured at fair value at the acquisition date except for non-current assets classified as assets held for sale which are accounted for at fair value less costs to sell.

The acquiree's contingent liabilities are not recognised in the consolidated balance sheet unless they represent a present obligation on the acquisition date and their fair value can be measured reliably.

The cost of a business combination is the fair value, at the date of exchange, of assets given, liabilities incurred or assumed, and equity instruments issued to obtain control of the acquiree. Costs directly attributable to the business combination are treated as a separate transaction and recognised through profit or loss.

Any contingent consideration is included in the cost, as soon as control is obtained, at fair value on the date when control was acquired. Subsequent changes in the value of any contingent consideration recognised as a financial liability are recognised through profit or loss.

The Group may recognise any adjustments to the provisional accounting within 12 months of the acquisition date.

Goodwill represents the difference between the cost of the combination and the acquirer's interest in the net fair value of the identifiable assets and liabilities of the acquiree at the acquisition date. Positive goodwill is recognised in the acquirer's balance sheet, while negative goodwill is recognised immediately in profit or loss, on the acquisition date. Minority interests are measured at their share of the fair value of the acquiree's identifiable assets and liabilities. However, for each business combination, the Group can elect to measure minority interests at fair value, in which case a proportion of goodwill is allocated to them. To date, the Group has never used this latter option.

Goodwill is recognised in the functional currency of the acquiree and translated at the closing exchange rate.

On the acquisition date, any previously held equity interest in the acquiree is remeasured at its fair value through profit or loss. In the case of a step acquisition, the goodwill is therefore determined by reference to the acquisition-date fair value.

Since the revised IFRS 3 has been applied prospectively, business combinations completed prior to 1 January 2010 were not restated for the effects of changes to IFRS 3.

As permitted under IFRS 1, business combinations that took place before 1 January 2004 and were recorded in accordance with the previously applicable accounting standards (French GAAP), had not been restated in accordance with the principles of IFRS 3.

Specificities relating to insurance contracts acquired through business combinations are set out in note 1.g.2 in the paragraph *Recognition and derecognition*.

### **Measurement of goodwill**

The BNP Paribas Group tests goodwill for impairment on a regular basis.

#### ***Cash-generating units***

The BNP Paribas Group has split all its activities into cash-generating units<sup>1</sup> representing major business lines. This split is consistent with the Group's organisational structure and management methods, and reflects the independence of each unit in terms of results and management approach. It is reviewed on a regular basis in order to take account of events likely to affect the composition of cash-generating units, such as acquisitions, disposals and major reorganisations.

#### ***Testing cash-generating units for impairment***

Goodwill allocated to cash-generating units is tested for impairment annually and whenever there is an indication that a unit may be impaired, by comparing the carrying amount of the unit with its recoverable amount. If the recoverable amount is less than the carrying amount, an irreversible impairment loss is recognised, and the goodwill is written down by the excess of the carrying amount of the unit over its recoverable amount.

#### ***Recoverable amount of a cash-generating unit***

The recoverable amount of a cash-generating unit is the higher of the fair value of the unit less costs to sell, and its value in use.

Fair value is the price that would be obtained from selling the unit at the market conditions prevailing at the date of measurement, as determined mainly by reference to actual prices of recent transactions involving similar entities or on the basis of stock market multiples for comparable companies.

Value in use is based on an estimate of the future cash flows to be generated by the cash-generating unit, derived from the annual forecasts prepared by the unit's management and approved by Group Executive Management, and from analyses of changes in the relative positioning of the unit's activities on their market. These cash flows are discounted at a rate that reflects the return that investors would require from an investment in the business sector and region involved.

## **1.C TRANSLATION OF FOREIGN CURRENCY TRANSACTIONS**

The methods used to account for assets and liabilities relating to foreign currency transactions entered into by the Group, and to measure the foreign exchange risk arising on such transactions, depend on whether the asset or liability in question is classified as a monetary or a non-monetary item.

### **Monetary assets and liabilities<sup>2</sup> expressed in foreign currencies**

Monetary assets and liabilities expressed in foreign currencies are translated into the functional currency of the relevant Group entity at the closing rate. Foreign exchange differences are recognised in the profit and loss account, except for those arising from financial instruments designated as a cash flow hedge or a net foreign investment hedge, which are recognised in shareholders' equity.

### **Non-monetary assets and liabilities expressed in foreign currencies**

Non-monetary assets may be measured either at historical cost or at fair value. Non-monetary assets expressed in foreign currencies are translated using the exchange rate at the date of the transaction (*i.e.* date of initial recognition of the non-monetary asset) if they are measured at historical cost, and at the closing rate if they are measured at fair value.

<sup>1</sup> As defined by IAS 36.

<sup>2</sup> Monetary assets and liabilities are assets and liabilities to be received or paid in fixed or determinable amounts of cash.

Foreign exchange differences relating to non-monetary assets denominated in foreign currencies and recognised at fair value (equity instruments) are recognised in profit or loss when the asset is classified in “Financial assets at fair value through profit or loss” and in equity when the asset is classified under “Financial assets at fair value through equity”.

## **1.D FINANCIAL INFORMATION IN HYPERINFLATIONARY ECONOMIES**

The Group applies IAS 29 to the presentation of the accounts of its consolidated subsidiaries located in countries whose economies are in hyperinflation.

IAS 29 presents a number of quantitative and qualitative criteria to assess whether an economy is hyperinflationary, including a cumulative, three-year inflation rate approaching or exceeding 100%.

All non-monetary assets and liabilities of subsidiaries in hyperinflationary countries, including equity and each line of the income statement has been restated on the basis of changes in the Consumer Price Index (CPI). This restatement between 1 January and the closing date resulted in the recognition of a gain or loss in its net monetary situation, recognised under “Net gain on non-current assets”. Financial statements of these subsidiaries are translated into euros at the closing rate.

In accordance with the provisions of the IFRIC’s decision of March 2020 on classifying the effects of indexation and translation of accounts of subsidiaries in hyperinflationary economies, the Group has opted to present these effects (including the net book value effect at the date of the initial application of IAS 29) within changes in assets and liabilities recognised directly through equity related to exchange differences.

Since 1 January 2022, the Group has applied IAS 29 to the presentation of the accounts of its consolidated subsidiaries located in Türkiye.

## **1.E NET INTEREST INCOME, COMMISSIONS AND INCOME FROM OTHER ACTIVITIES**

### **1.e.1 Net interest income**

Income and expenses relating to debt instruments measured at amortised cost and at fair value through shareholders’ equity are recognised in the income statement using the effective interest rate method.

The effective interest rate is the rate that ensures the discounted value of estimated future cash flows through the expected life of the financial instrument or, when appropriate, a shorter period, is equal to the carrying amount of the asset or liability in the balance sheet. The effective interest rate measurement takes into account all fees received or paid that are an integral part of the effective interest rate of the contract, transaction costs, and premiums and discounts.

Commissions considered as an additional component of interest are included in the effective interest rate and are recognised in the profit and loss account in “Net interest income”. This category includes notably commissions on financing commitments when it is considered that the setting up of a loan is more likely than unlikely. Commissions received in respect of financing commitments are deferred until they are drawn and then included in the effective interest rate calculation and amortised over the life of the loan. Syndication commissions are also included in this category for the portion of the commission equivalent to the remuneration of other syndication participants.

### **1.e.2 Commissions and income from other activities**

Commissions received with regards to banking and similar services provided (except for those that are integral part of the effective interest rate), revenues from property development and revenues from services provided in connection with lease contracts fall within the scope of IFRS 15 “Revenue from Contracts with Customers”.

This standard defines a single model for recognising revenue based on principles set out in five steps. These five steps enable to identify the distinct performance obligations included in the contracts and allocate the transaction price among them. The income related to those performance obligations is recognised as revenue when the latter are satisfied, namely when the control of the promised goods or services has been transferred.

The price of a service may contain a variable component. Variable amounts may be recognised in the income statement only if it is highly probable that the amounts recorded will not result in a significant downward adjustment.

### **Commission**

The Group records commission income and expense in profit or loss either:

- over time as the service is rendered when the client receives continuous service. These include, for example, certain commissions on transactions with customers when services are rendered on a continuous basis, commissions on financing commitments that are not included in the interest margin, because the probability that they give rise to the drawing up of a loan is low, commissions on financial collateral, clearing commissions on financial instruments, commissions related to trust and similar activities, securities custody fees, *etc.*

Commissions received under financial guarantee commitments are deemed to represent the initial fair value of the commitment. The resulting liability is subsequently amortised over the term of the commitment, in commission income; or

- at a point in time when the service is rendered, in other cases. These include, for example, distribution fees received, loan syndication fees remunerating the arrangement service, advisory fees, *etc.*

## Income from other activities

Income from property development as well as income from services provided in connection with lease contracts is recorded under "Income from other activities" in the income statement.

As regards property development income, the Group records it in profit or loss:

- over time, when the performance obligation creates or enhances an asset over which the customer obtains control as it is created or enhanced (e.g. work in progress controlled by the client on the land on which the asset is located, *etc.*), or where the service performed does not create an asset that the entity could otherwise use and gives it an enforceable right to payment for performance completed to date. This is the case for contracts such as VEFA (sale in the future state of completion) in France;
- at completion in other cases.

Regarding income from services provided in connection with lease contracts, the Group records them in profit or loss as the service is rendered, *i.e.* in proportion to the costs incurred for maintenance contracts.

## 1.F FINANCIAL ASSETS AND LIABILITIES

Financial assets are classified at amortised cost, at fair value through shareholders' equity or at fair value through profit or loss depending on the business model and the contractual features of the instruments at initial recognition.

Financial liabilities are classified at amortised cost or at fair value through profit or loss at initial recognition.

Financial assets and liabilities are recognised in the balance sheet when the Group becomes a party to the contractual provisions of the instrument. Purchases and sales of financial assets made within a period established by the regulations or by a convention in the relevant marketplace are recognised in the balance sheet at the settlement date.

### 1.f.1 Financial assets at amortised cost

Financial assets are classified at amortised cost if the following two criteria are met: the business model objective is to hold the instrument in order to collect the contractual cash flows and the cash flows consist solely of payments relating to principal and interest on the principal.

#### Business model criterion

Financial assets are managed within a business model whose objective is to hold financial assets in order to collect cash flows through the collection of contractual payments over the life of the instrument.

The realisation of disposals close to the maturity of the instrument and for an amount close to the remaining contractual cash flows, or due to an increase in the counterparty's credit risk is consistent with a business model whose objective is to collect the contractual cash flows ("collect"). Sales imposed by regulatory requirements or to manage the concentration of credit risk (without an increase in the asset's credit risk) are also consistent with this business model when they are infrequent or insignificant in value.

#### Cash flow criterion

The cash flow criterion is satisfied if the contractual terms of the debt instrument give rise, on specified dates, to cash flows that are solely repayments of principal and interest on the principal amount outstanding.

The criterion is not met in the event of a contractual characteristic that exposes the holder to risks or to the volatility of contractual cash flows that are inconsistent with those of a non-structured or "basic lending" arrangement. It is also not satisfied in the event of leverage that increases the variability of the contractual cash flows.

Interest consists of consideration for the time value of money, for the credit risk, and for the remuneration of other risks (e.g. liquidity risk), costs (e.g. administration fees), and a profit margin consistent with that of a basic lending arrangement. The existence of negative interest does not call into question the cash flow criterion.

The time value of money is the component of interest - usually referred to as the "rate" component - which provides consideration for only the passage of time. The relationship between the interest rate and the passage of time must not be modified by specific characteristics that could call into question the respect of the cash flow criterion.

Thus, when the variable interest rate of the financial asset is periodically reset at a frequency that does not match the duration for which the interest rate is established, the time value of money may be considered as modified and, depending on the significance of that modification, the cash flow criterion may not be met. Some financial assets held by the Group present a mismatch between the interest rate reset frequency and the maturity of the index, or interest rates indexed to an average of benchmark rate. The Group has developed a consistent methodology for analysing this alteration of the time value of money.

Regulated rates meet the cash flow criterion when they provide consideration that is broadly consistent with the passage of time and do not expose to risks or volatility in the contractual cash flows that would be inconsistent with those of a basic lending arrangement (example: loans granted in the context of *Livret A* savings accounts).

Some contractual clauses may change the timing or the amount of cash flows. Early redemption options do not call into question the cash flow criterion if the prepayment amount substantially represents the principal amount outstanding and the

interest thereon, which may include reasonable compensation for the early termination of the contract. For example, as regards loans to retail customers, the compensation limited to 6 months of interest or 3% of the capital outstanding is considered reasonable. Actuarial penalties, corresponding to the discounted value of the difference between the residual contractual cash flows of the loan, and their reinvestment in a loan to a similar counterparty or in the interbank market for a similar residual maturity are also considered as reasonable, even when the compensation can be positive or negative (*i.e.* “symmetric” compensation). An option that permits the issuer or the holder of a financial instrument to change the interest rate from floating to fixed rate does not breach the cash flow criterion if the fixed rate is determined at origination, or if it represents the time value of money for the residual maturity of the instrument at the date of exercise of the option. Clauses included in financing granted to encourage the sustainable development of companies which adjust the interest margin depending on the achievement of environmental, social or governance (ESG) objectives and disclosed in chapter 7 of this amendment to the 2022 Universal Registration Document, do not call into question the cash flow criterion when such an adjustment is considered to be minimal. Structured instruments indexed to ESG market indices do not meet the cash flow criterion.

In the particular case of financial assets contractually linked to payments received on a portfolio of underlying assets and which include a priority order for payment of cash flows between investors (“tranches”), thereby creating concentrations of credit risk, a specific analysis is carried out. The contractual characteristics of the tranche and those of the underlying financial instrument portfolios must meet the cash flow criterion and the credit risk exposure of the tranche must be equal to or lower than the exposure to credit risk of the underlying pool of financial instruments.

Certain loans may be “non-recourse”, either contractually, or in substance when they are granted to a special purpose entity. That is in particular the case of numerous project financing or asset financing loans. The cash flow criterion is met as long as these loans do not represent a direct exposure on the assets acting as collateral. In practice, the sole fact that the financial asset explicitly gives rise to cash flows that are consistent with payments of principal and interest is not sufficient to conclude that the instrument meets the cash flow criterion. In that case, the particular underlying assets to which there is limited recourse shall be analysed using the “look-through” approach. If those assets do not themselves meet the cash flow criterion, the existing credit enhancement is assessed. The following aspects are considered: structuring and sizing of the transaction, own funds level of the structure, expected source of repayment, price volatility of the underlying assets. This analysis is applied to “non-recourse” loans granted by the Group.

The “financial assets at amortised cost” category includes, in particular, loans granted by the Group, as well as reverse repurchase agreements and securities held by the Group ALM Treasury in order to collect contractual flows and meeting the cash flow criterion.

## Recognition

On initial recognition, financial assets are recognised at fair value, including transaction costs directly attributable to the transaction as well as commissions related to the origination of the loans.

They are subsequently measured at amortised cost, including accrued interest and net of repayments of principal and interest during the past period. These financial assets are also subject from their initial recognition, to the measurement of a loss allowance for expected credit losses (note 1.f.5).

Interest is calculated using the effective interest method determined at inception of the contract.

### 1.f.2 Financial assets at fair value through shareholders’ equity

#### Debt instruments

Debt instruments are classified at fair value through shareholders’ equity if the following two criteria are met:

- business model criterion: financial assets are held in a business model whose objective is achieved by both holding the financial assets in order to collect contractual cash flows and selling the financial assets (“collect and sale”). The latter is not incidental but is an integral part of the business model;
- cash flow criterion: the principles are identical to those applicable to financial assets at amortised cost.

The securities held by the Group ALM Treasury in order to collect contractual flows or to be sold and meeting the cash flow criterion are in particular classified in this category.

On initial recognition, financial assets are recognised at their fair value, including transaction costs directly attributable to the transaction. They are subsequently measured at fair value and changes in fair value are recognised, under a specific line of shareholders’ equity entitled “Changes in assets and liabilities recognised directly in equity that may be reclassified to profit or loss”. These financial assets are also subject to the measurement of a loss allowance for expected credit losses on the same approach as for debt instruments at amortised cost. The counterparty of the related impact in cost of risk is recognised in the same specific line of shareholders’ equity. On disposal, changes in fair value previously recognised in shareholders’ equity are reclassified to profit or loss.

In addition, interest is recognised in the income statement using the effective interest method determined at the inception of the contract.

#### Equity instruments

Investments in equity instruments such as shares are classified on option, and on a case-by-case basis, at fair value through shareholders’ equity (under a specific line). On disposal of the shares, changes in fair value previously recognised in equity are

not recognised in profit or loss. Only dividends, if they represent remuneration for the investment and not repayment of capital, are recognised in profit or loss. These instruments are not subject to impairment.

Investments in mutual funds puttable to the issuer do not meet the definition of equity instruments. They do not meet the cash flow criterion either, and thus are recognised at fair value through profit or loss.

### 1.f.3 Financing and guarantee commitments

Financing and financial guarantee commitments that are not recognised at fair value through profit or loss are presented in the note relating to financing and guarantee commitments. They are subject to the measurement of a loss allowance for expected credit losses. These loss allowances are presented under “Provisions for contingencies and charges”.

### 1.f.4 Regulated savings and loan contracts

Home savings accounts (*Comptes Épargne-Logement* – “CEL”) and home savings plans (*Plans d'Épargne Logement* – “PEL”) are government-regulated retail products sold in France. They combine a savings phase and a loan phase which are inseparable, with the loan phase contingent upon the savings phase.

These products contain two types of obligations for BNP Paribas: an obligation to pay interest on the savings for an indefinite period, at a rate set by the government at the inception of the contract (in the case of PEL products) or at a rate reset every six months using an indexation formula set by law (in the case of CEL products); and an obligation to lend to the customer (at the customer's option) an amount contingent upon the rights acquired during the savings phase, at a rate set at the inception of the contract (in the case of PEL products) or at a rate contingent upon the savings phase (in the case of CEL products).

The Group's future obligations with respect to each generation (in the case of PEL products, a generation comprises all products with the same interest rate at inception; in the case of CEL products, all such products constitute a single generation) are measured by discounting potential future earnings from at-risk outstandings for that generation.

At-risk outstandings are estimated on the basis of a historical analysis of customer behaviour, and are equivalent to:

- for the loan phase: statistically probable loans outstanding and actual loans outstanding;
- for the savings phase: the difference between statistically probable outstandings and minimum expected outstandings, with minimum expected outstandings being deemed equivalent to unconditional term deposits.

Earnings for future periods from the savings phase are estimated as the difference between the reinvestment rate and the fixed savings interest rate on at-risk savings outstanding for the period in question. Earnings for future periods from the loan phase are estimated as the difference between the refinancing rate and the fixed loan interest rate on at-risk loans outstanding for the period in question.

The reinvestment rate for savings and the refinancing rate for loans are derived from the swap yield curve and from the spreads expected on financial instruments of similar type and maturity. Spreads are determined on the basis of actual spreads on fixed-rate home loans in the case of the loan phase and products offered to individual clients in the case of the savings phase. In order to reflect the uncertainty of future interest rate trends, and the impact of such trends on customer behaviour models and on at-risk outstandings, the obligations are estimated using the Monte-Carlo method.

Where the sum of the Group's estimated future obligations with respect to the savings and loan phases of any generation of contracts indicates a potentially unfavourable situation for the Group, a provision is recognised (with no offset between generations) in the balance sheet in “Provisions for contingencies and charges”. Movements in this provision are recognised as interest income in the profit and loss account.

### 1.f.5 Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders' equity

The impairment model for credit risk is based on expected losses.

This model applies to loans and debt instruments measured at amortised cost or at fair value through equity, to loan commitments and financial guarantee contracts that are not recognised at fair value, as well as to lease receivables, trade receivables and contract assets.

#### General model

The Group identifies three “stages” that each correspond to a specific status with regards to the evolution of counterparty credit risk since the initial recognition of the asset.

- 12-month expected credit losses (“stage 1”): if at the reporting date, the credit risk of the financial instrument has not increased significantly since its initial recognition, this instrument is impaired at an amount equal to 12-month expected credit losses (resulting from the risk of default within the next 12 months);
- lifetime expected credit losses for non-impaired assets (“stage 2”): the loss allowance is measured at an amount equal to the lifetime expected credit losses if the credit risk of the financial instrument has increased significantly since initial recognition but the financial asset is not considered credit-impaired or doubtful;
- lifetime expected credit losses for credit-impaired or doubtful financial assets (“stage 3”): the loss allowance is also measured for an amount equal to the lifetime expected credit losses.

This general model is applied to all instruments within the scope of IFRS 9 impairment, except for purchased or originated credit-impaired financial assets and instruments for which a simplified model is used (see below).

The IFRS 9 expected credit loss approach is symmetrical, *i.e.* if lifetime expected credit losses have been recognised in a previous reporting period, and if it is assessed in the current reporting period that there is no longer any significant increase in credit risk since initial recognition, the loss allowance reverts to a 12-months expected credit loss.

As regards interest income, under “stages” 1 and 2, it is calculated on the gross carrying amount. Under “stage 3”, interest income is calculated on the amortised cost (*i.e.* the gross carrying amount adjusted for the loss allowance).

### **Definition of default**

The definition of default is aligned with the Basel regulatory default definition, with a rebuttable presumption that the default occurs no later than 90 days past due. This definition takes into account the EBA guidelines of 28 September 2016, notably those regarding the thresholds applicable for the counting of past-due and probation periods.

The definition of default is used consistently for assessing the increase in credit risk and measuring expected credit losses.

### **Credit-impaired or doubtful financial assets**

#### **Definition**

A financial asset is considered credit-impaired or doubtful and classified in “stage 3” when one or more events that have a detrimental impact on the estimated future cash flows of that financial asset have occurred.

At an individual level, objective evidence that a financial asset is credit-impaired includes observable data regarding the following events: the existence of accounts that are more than 90 days past due; knowledge or indications that the borrower is experiencing significant financial difficulties, such that a risk can be considered to have arisen regardless of whether the borrower has missed any payments; concessions with respect to the credit terms granted to the borrower that the lender would not have considered had the borrower not been in financial difficulty (see section *Restructuring of financial assets for financial difficulties*).

#### **Specific cases of purchased or originated credit-impaired assets**

In some cases, financial assets are credit-impaired at initial recognition.

For these assets, no loss allowance is recorded on initial recognition. The effective interest rate is calculated taking into account the lifetime expected credit losses in the initial estimated cash flows. Any change in lifetime expected credit losses since initial recognition, positive or negative, is recognised as a loss allowance adjustment in profit or loss.

#### **Simplified model**

The simplified approach consists in accounting for a loss allowance corresponding to lifetime expected credit losses since initial recognition, and at each reporting date.

The Group applies this model to trade receivables with a maturity shorter than 12 months.

### **Significant increase in credit risk**

A significant increase in credit risk may be assessed on an individual basis or on a collective basis (by grouping financial instruments according to common credit risk characteristics), taking into account all reasonable and supportable information and comparing the risk of default of the financial instrument at the reporting date with the risk of default of the financial instrument at the date of initial recognition.

Assessment of deterioration is based on the comparison of the probabilities of default derived from the ratings on the date of initial recognition with those existing at the reporting date.

There is also, according to the standard, a rebuttable presumption that the credit risk of an instrument has significantly increased since initial recognition when the contractual payments are more than 30 days past due.

In the consumer credit specialist business, a significant increase in credit risk is also considered when a past due event has occurred within the last 12 months, even if it has since been regularised.

The principles applied to assess the significant increase in credit risk are detailed in note 3.g *Cost of risk*.

### **Measurement of expected credit losses**

Expected credit losses are defined as an estimate of credit losses (*i.e.* the present value of all cash shortfalls) weighted by the probability of occurrence of these losses over the expected life of the financial instruments. They are measured on an individual basis, for all exposures.

In practice, for exposures classified in stage 1 and stage 2, expected credit losses are measured as the product of the probability of default (“PD”), Loss Given Default (“LGD”) and exposure at default (“EAD”), discounted at the effective interest rate of the exposure (EIR). They result from the risk of default within the next 12 months (stage 1), or from the risk of default over the maturity of the facility (stage 2). In the consumer credit specialist business, because of the specificity of credit exposures, the methodology used is based on the probability of transition to term forfeiture, and on discounted loss rates after term forfeiture. These parameters are measured on a statistical basis for homogeneous populations.

For exposures classified in stage 3, expected credit losses are measured as the value, discounted at the effective interest rate, of all cash shortfalls over the life of the financial instrument. Cash shortfalls represent the difference between the cash flows that are due in accordance with the contract, and the cash flows that are expected to be received. Where appropriate, the estimate of expected cash flows takes into account a cash flow scenario arising from the sale of the defaulted loans or groups of loans. Proceeds from the sale are recorded net of costs to sell.

The methodology developed is based on existing concepts and methods (in particular the Basel framework) on exposures for which capital requirement for credit risk is measured according to the IRBA methodology. This method is also applied to portfolios for which capital requirement for credit risk is measured according to the standardised approach. Besides, the Basel framework has been adjusted in order to be compliant with IFRS 9 requirements, in particular the use of forward-looking information.

### **Maturity**

All contractual terms of the financial instrument are taken into account, including prepayment, extension and similar options. In the rare cases where the expected life of the financial instrument cannot be estimated reliably, the residual contractual term is used. The standard specifies that the maximum period to consider when measuring expected credit losses is the maximum contractual period. However, for revolving credit cards and overdrafts, in accordance with the exception provided by IFRS 9 for these products, the maturity considered for measuring expected credit losses is the period over which the entity is exposed to credit risk, which may extend beyond the contractual maturity (notice period). For revolving credits and overdrafts to non-retail counterparties, the contractual maturity can be used, for example if the next review date is the contractual maturity as they are individually managed.

### **Probabilities of Default (PD)**

Probability of Default is an estimate of the likelihood of default over a given time horizon.

The determination of the PD is based on the Group's internal rating system, which is described in chapter 5 of this amendment to the 2022 Universal Registration Document (section 5.4 *Credit risk – Credit risk management policy*). This section describes how environmental, social and governance (ESG) risks are taken into account in credit and rating policies, notably with the introduction of a new tool: the *ESG Assessment*.

The measurement of expected credit losses requires the estimation of both 1-year probabilities of default and lifetime probabilities of default.

1-year PDs are derived from long term average regulatory “through the cycle” PDs to reflect the current situation (“Point in Time” or “PIT”).

Lifetime PDs are determined based on the rating migration matrices reflecting the expected changes in the rating of the exposure until maturity, and the associated probabilities of default.

### **Loss Given Default (LGD)**

Loss Given Default is the difference between contractual cash flows and expected cash flows, discounted using the effective interest rate (or an approximation thereof) at the default date. LGD is expressed as a percentage of the Exposure At Default (EAD).

The estimate of expected cash flows takes into account cash flows resulting from the sale of collateral held or other credit enhancements if they are part of the contractual terms and are not accounted for separately by the entity (for example, a mortgage associated with a residential loan), net of the costs of obtaining and selling the collateral.

For guaranteed loans, the guarantee is considered as integral to the loan agreement if it is embedded in the contractual clauses of the loan, or if it was granted concomitantly to the loan, and if the expected reimbursement amount can be attached to a loan in particular (*i.e.* absence of pooling effect by means of a tranching mechanism, or the existence of a global cap for a whole portfolio). In such case, the guarantee is taken into account when measuring the expected credit losses. Otherwise, it is accounted for as a separate reimbursement asset.

The LGD used for IFRS 9 purposes is derived from the Basel LGD parameters. It is adjusted for downturn and conservatism margins (in particular regulatory margins), except for margins for model uncertainties.

### **Exposure At Default (EAD)**

Exposure At Default (EAD) of an instrument is the anticipated outstanding amount owed by the obligor at the time of default. It is determined by the expected payment profile taking into account, depending on the product type: the contractual repayment schedule, expected early repayments and expected future drawings for revolving facilities.

### **Forward-looking information**

The amount of expected credit losses is measured on the basis of probability-weighted scenarios, in view of past events, current conditions and reasonable and supportable economic forecasts.

The principles applied to take into account forward-looking information when measuring expected credit losses are detailed in note 3.g *Cost of risk*.

### **Write-offs**

A write-off consists in reducing the gross carrying amount of a financial asset when there are no longer reasonable expectations of recovering that financial asset in its entirety or a portion thereof, or when it has been fully or partially forgiven. The write-off is recorded when all other means available to the Bank for recovering the receivables or guarantees have failed, and also generally depends on the context specific to each jurisdiction.

If the amount of loss on write-off is greater than the accumulated loss allowance, the difference is recognised as an additional impairment loss in “Cost of risk”. For any recovery once the financial asset (or part thereof) is no longer recognised on the balance sheet, the amount received is recorded as a gain in “Cost of risk”.

### **Recoveries through the repossession of the collateral**

When a loan is secured by a financial or a non-financial asset serving as a guarantee and the counterparty is in default, the Group may decide to exercise the guarantee and, depending on the jurisdiction, it may then become owner of the asset. In such a situation, the loan is written-off against the asset received as collateral.

Once ownership of the asset is effective, it is recognised at fair value and classified according to the intent of use.

### **Restructuring of financial assets for financial difficulties**

A restructuring due to the borrower’s financial difficulties is defined as a change in the terms and conditions of the initial transaction that the Group is considering only for economic or legal reasons related to the borrower’s financial difficulties.

For restructurings not resulting in derecognition of the financial asset, the restructured asset’s gross carrying amount is reduced to the discounted amount, using the original effective interest rate of the asset, of the new expected future flows. The change in the gross carrying amount of the asset is recorded in the income statement in “Cost of risk”.

The existence of a significant increase in credit risk for the financial instrument is then assessed by comparing the risk of default after the restructuring (under the revised contractual terms) and the risk of default at the initial recognition date (under the original contractual terms). In order to demonstrate that the criteria for recognising lifetime expected credit losses are no longer met, good payment behaviour will have to be observed over a certain period of time.

When the restructuring consists of a partial or total exchange against other substantially different assets (for example, the exchange of a debt instrument against an equity instrument), it results in the extinction of the original asset and the recognition of the assets remitted in exchange, measured at their fair value at the date of exchange. The difference in value is recorded in the income statement in “Cost of risk”.

Modifications to financial assets that are not due to a borrower’s financial difficulties, or granted in the context of a moratorium (*i.e.* commercial renegotiations) are generally analysed as the early repayment of the former loan, which is then derecognised, followed by the set-up of a new loan at market conditions. If there is no significant repayment penalty, they consist in resetting the interest rate of the loan at market conditions, with the client being in a position to change lender and not encountering any financial difficulties.

### **Probation periods**

The Group applies observation periods to assess the possible return to a better stage. Accordingly, a 3-month probation period is observed for the transition from stage 3 to stage 2 which is extended to 12 months in the event of restructuring due to financial difficulties.

For the transition from stage 2 to stage 1, a probation period of two years is observed for loans that have been restructured due to financial difficulties.

#### **1.f.6 Cost of risk**

Cost of risk includes the following items of profit or loss:

- impairment gains and losses resulting from the accounting of loss allowances for 12-month expected credit losses and lifetime expected credit losses (“stage 1” and “stage 2”) relating to debt instruments measured at amortised cost or at fair value through shareholders’ equity, loan commitments and financial guarantee contracts that are not recognised at fair value as well as lease receivables, contract assets and trade receivables;
- impairment gains and losses resulting from the accounting of loss allowances relating to financial assets (including those at fair value through profit or loss) for which there is objective evidence of impairment (“stage 3”), write-offs on irrecoverable loans and amounts recovered on loans written-off.

It also includes expenses relating to fraud and to disputes inherent to the financing activity.

#### **1.f.7 Financial instruments at fair value through profit or loss**

##### **Trading portfolio and other financial assets measured at fair value through profit or loss**

The trading portfolio includes instruments held for trading (trading transactions), including derivatives.

Other financial assets measured at fair value through profit or loss include debt instruments that do not meet the “collect” or “collect and sale” business model criterion or that do not meet the cash flow criterion, as well as equity instruments for which the fair value through shareholders’ equity option has not been retained. Finally financial assets may be designated as at fair value

through profit or loss if this enables the entity to eliminate or significantly reduce a mismatch in the measurement and accounting treatment of assets and liabilities that would otherwise arise if they were to be classified in separate categories.

All those financial instruments are measured at fair value at initial recognition, with transaction costs directly posted in profit or loss. At the reporting date, they are measured at fair value, with changes presented in "Net gain/loss on financial instruments at fair value through profit or loss". Income, dividends, and realised gains and losses on disposal related to held-for-trading transactions are accounted for in the same profit or loss account.

### **Financial liabilities designated as at fair value through profit or loss**

Financial liabilities are recognised under option in this category in the two following situations:

- for hybrid financial instruments containing one or more embedded derivatives which otherwise would have been separated and accounted for separately. An embedded derivative is such that its economic characteristics and risks are not closely related to those of the host contract;
- when using the option enables the entity to eliminate or significantly reduce a mismatch in the measurement and accounting treatment of assets and liabilities that would otherwise arise if they were to be classified in separate categories.

Changes in fair value due to the own credit risk are recognised under a specific heading of shareholders' equity.

### **1.f.8 Financial liabilities and equity instruments**

A financial instrument issued or its various components are classified as a financial liability or equity instrument, in accordance with the economic substance of the legal contract.

Financial instruments issued by the Group are qualified as debt instruments if the entity in the Group issuing the instruments has a contractual obligation to deliver cash or another financial asset to the holder of the instrument. The same applies if the Group is required to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the Group, or to deliver a variable number of the Group's own equity instruments.

Equity instruments result from contracts evidencing a residual interest in an entity's assets after deducting all of its liabilities.

#### **Debt securities and subordinated debt**

Debt securities and subordinated debt are measured at amortised cost unless they are recognised at fair value through profit or loss.

Debt securities are initially recognised at the issue value including transaction costs and are subsequently measured at amortised cost using the effective interest method.

Issued bonds redeemable or convertible into own equity may contain a debt component and an equity component, determined upon initial recognition of the transaction. In this case, they will be qualified as compound financial instruments.

In this respect, the Group has elected to record contingent convertible bonds issued, without maturity, when convertible into a variable number of own shares on the occurrence of a predetermined trigger event (e.g. a decrease in the solvency ratio below a threshold), as compound instruments, to the extent that the coupons on these bonds are paid discretionarily.

#### **Equity instruments**

The term "own equity instruments" refers to shares issued by the parent company (BNP Paribas SA) and by its fully consolidated subsidiaries. External costs that are directly attributable to an issue of new shares are deducted from equity net of all related taxes.

Own equity instruments held by the Group, also known as treasury shares, are deducted from consolidated shareholders' equity irrespective of the purpose for which they are held. Gains and losses arising on such instruments are eliminated from the consolidated profit and loss account.

When the Group acquires equity instruments issued by subsidiaries under the exclusive control of BNP Paribas, the difference between the acquisition price and the share of net assets acquired is recorded in retained earnings attributable to BNP Paribas shareholders. Similarly, the liability corresponding to put options granted to minority shareholders in such subsidiaries, and changes in the value of that liability, are offset against minority interests, with any surplus offset against retained earnings attributable to BNP Paribas shareholders. Until these options have been exercised, the portion of net income attributable to minority interests is allocated to minority interests in the profit and loss account. A decrease in the Group's interest in a fully consolidated subsidiary is recognised in the Group's accounts as a change in shareholders' equity.

Financial instruments issued by the Group and classified as equity instruments (e.g. undated super subordinated notes) are presented in the balance sheet in "Capital and retained earnings".

Distributions from a financial instrument classified as an equity instrument are recognised directly as a deduction from equity. Similarly, the transaction costs of an instrument classified as equity are recognised as a deduction from shareholders' equity.

Own equity instrument derivatives are treated as follows, depending on the method of settlement:

- as equity instruments if they are settled by physical delivery of a fixed number of own equity instruments for a fixed amount of cash or other financial asset. Such instruments are not revalued;

- as derivatives if they are settled in cash or by choice by physical delivery of the shares or in cash. Changes in value of such instruments are taken to the profit and loss account.

If the contract includes an obligation, whether contingent or not, for the bank to repurchase its own shares, the bank recognises the debt at its present value with an offsetting entry in shareholders' equity.

### 1.f.9 Hedge accounting

The Group retained the option provided by the standard to maintain the hedge accounting requirements of IAS 39 until the future standard on macro-hedging is entered into force. Furthermore, IFRS 9 does not explicitly address the fair value hedge of the interest rate risk on a portfolio of financial assets or liabilities. The provisions in IAS 39 for these portfolio hedges, as adopted by the European Union, continue to apply.

Derivatives contracted as part of a hedging relationship are designated according to the purpose of the hedge.

Fair value hedges are particularly used to hedge interest rate risk on fixed-rate assets and liabilities, both for identified financial instruments (securities, debt issues, loans, borrowings) and for portfolios of financial instruments (in particular, demand deposits and fixed-rate loans).

Cash flow hedges are particularly used to hedge interest rate risk on floating-rate assets and liabilities, including rollovers, and foreign exchange risks on highly probable forecast foreign currency revenues.

At the inception of the hedge, the Group prepares formal documentation which details the hedging relationship, identifying the instrument, or portion of the instrument, or portion of risk that is being hedged, the hedging strategy and the type of risk hedged, the hedging instrument, and the methods used to assess the effectiveness of the hedging relationship.

On inception and at least quarterly, the Group assesses, in consistency with the original documentation, the actual (retrospective) and expected (prospective) effectiveness of the hedging relationship. Retrospective effectiveness tests are designed to assess whether the ratio of actual changes in the fair value or cash flows of the hedging instrument to those in the hedged item is within a range of 80% to 125%. Prospective effectiveness tests are designed to ensure that expected changes in the fair value or cash flows of the derivative over the residual life of the hedge adequately offset those of the hedged item. For highly probable forecast transactions, effectiveness is assessed largely on the basis of historical data for similar transactions.

Under IAS 39 as adopted by the European Union, which excludes certain provisions on portfolio hedging, interest rate risk hedging relationships based on portfolios of assets or liabilities qualify for fair value hedge accounting as follows:

- the risk designated as being hedged is the interest rate risk associated with the interbank rate component of interest rates on commercial banking transactions (loans to customers, savings accounts and demand deposits);
- the instruments designated as being hedged correspond, for each maturity band, to a portion of the interest rate gap associated with the hedged underlying;
- the hedging instruments used consist exclusively of "plain vanilla" swaps;
- prospective hedge effectiveness is established by the fact that all derivatives must, on inception, have the effect of reducing interest rate risk in the portfolio of hedged underlying. Retrospectively, a hedge will be disqualified from hedge accounting once a shortfall arises in the underlying specifically associated with that hedge for each maturity band (due to prepayment of loans or withdrawals of deposits).

The accounting treatment of derivatives and hedged items depends on the hedging strategy.

In a fair value hedging relationship, the derivative instrument is remeasured at fair value in the balance sheet, with changes in fair value recognised in profit or loss in "Net gain/loss on financial instruments at fair value through profit or loss", symmetrically with the remeasurement of the hedged item to reflect the hedged risk. In the balance sheet, the fair value remeasurement of the hedged component is recognised in accordance with the classification of the hedged item in the case of a hedge of identified assets and liabilities, or under "Remeasurement adjustment on interest rate risk hedged portfolios" in the case of a portfolio hedging relationship.

If a hedging relationship ceases or no longer fulfils the effectiveness criteria, the hedging instrument is transferred to the trading book and accounted for using the treatment applied to this category. In the case of identified fixed-income instruments, the remeasurement adjustment recognised in the balance sheet is amortised at the effective interest rate over the remaining life of the instrument. In the case of interest rate risk hedged fixed-income portfolios, the adjustment is amortised on a straight-line basis over the remainder of the original term of the hedge. If the hedged item no longer appears in the balance sheet, in particular due to prepayments, the adjustment is taken to the profit and loss account immediately.

In a cash flow hedging relationship, the derivative is measured at fair value in the balance sheet, with changes in fair value taken to shareholders' equity on a separate line, "Changes in fair value recognised directly in equity". The amounts taken to shareholders' equity over the life of the hedge are transferred to the profit and loss account under "Net interest income" as and when the cash flows from the hedged item impact profit or loss. The hedged items continue to be accounted for using the treatment specific to the category to which they belong.

If the hedging relationship ceases or no longer fulfils the effectiveness criteria, the cumulative amounts recognised in shareholders' equity as a result of the remeasurement of the hedging instrument remain in equity until the hedged transaction itself impacts profit or loss, or until it becomes clear that the transaction will not occur, at which point they are transferred to the profit and loss account.

If the hedged item ceases to exist, the cumulative amounts recognised in shareholders' equity are immediately taken to the profit and loss account.

Whatever the hedging strategy used, any ineffective portion of the hedge is recognised in the profit and loss account under "Net gain/loss on financial instruments at fair value through profit or loss".

Hedges of net foreign currency investments in subsidiaries and branches are accounted for in the same way as cash flow hedges. Hedging instruments may be foreign exchange derivatives or any other non-derivative financial instrument.

### **1.f.10 Determination of fair value**

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants in the principal market or most advantageous market, at the measurement date.

The Group determines the fair value of financial instruments either by using prices obtained directly from external data or by using valuation techniques. These valuation techniques are primarily market and income approaches encompassing generally accepted models (e.g. discounted cash flows, Black-Scholes model, and interpolation techniques). They maximise the use of observable inputs and minimise the use of unobservable inputs. They are calibrated to reflect current market conditions and valuation adjustments are applied as appropriate, when some factors such as model, liquidity and credit risks are not captured by the models or their underlying inputs but are nevertheless considered by market participants when setting the exit price.

The unit of measurement is the individual financial asset or financial liability but a portfolio-based measurement can be elected, subject to certain conditions. Accordingly, the Group retains this portfolio-based measurement exception to determine the fair value when some group of financial assets and financial liabilities and other contracts within the scope of the standard relating to financial instruments with substantially similar and offsetting market risks or credit risks is managed on the basis of a net exposure, in accordance with the documented risk management strategy.

Assets and liabilities measured or disclosed at fair value are categorised into the three following levels of the fair value hierarchy:

- Level 1: fair values are determined using directly quoted prices in active markets for identical assets and liabilities. Characteristics of an active market include the existence of a sufficient frequency and volume of activity and of readily available prices;
- Level 2: fair values are determined based on valuation techniques for which significant inputs are observable market data, either directly or indirectly. These techniques are regularly calibrated and the inputs are corroborated with information from active markets;
- Level 3: fair values are determined using valuation techniques for which significant inputs are unobservable or cannot be corroborated by market-based observations, due for instance to illiquidity of the instrument and significant model risk. An unobservable input is a parameter for which there are no market data available and that is therefore derived from proprietary assumptions about what other market participants would consider when assessing fair value. The assessment of whether a product is illiquid or subject to significant model risks is a matter of judgment.

The level in the fair value hierarchy within which the asset or liability is categorised in its entirety is based upon the lowest level input that is significant to the entire fair value.

For financial instruments disclosed in Level 3 of the fair value hierarchy, and marginally some instruments disclosed in Level 2, a difference between the transaction price and the fair value may arise at initial recognition. This "Day One Profit" is deferred and released to the profit and loss account over the period during which the valuation parameters are expected to remain non-observable. When parameters that were originally non-observable become observable, or when the valuation can be substantiated in comparison with recent similar transactions in an active market, the unrecognised portion of the day one profit is released to the profit and loss account.

### **1.f.11 Derecognition of financial assets and financial liabilities**

#### **Derecognition of financial assets**

The Group derecognises all or part of a financial asset when the contractual rights to the cash flows of the asset expire, or when the Group transfers the asset – either on the basis of a transfer of the contractual rights to its cash flows, or by retaining the contractual rights to receive the cash flows of the asset while assuming an obligation to pay the cash flows of the asset under an eligible pass-through arrangement – as well as substantially all the risks and rewards of the asset.

Where the Group has transferred the cash flows of a financial asset but has neither transferred nor retained substantially all the risks and rewards of ownership of the financial asset and has not in practice retained control of the financial asset, the Group derecognises the financial asset and then records separately, if necessary, an asset or liability representing the rights and obligations created or held as part of the transfer of the asset. If the Group has retained control of the financial asset, it maintains it on its balance sheet to the extent of its continuing involvement in that asset.

Upon the derecognition of a financial asset in its entirety, a gain or loss on disposal is recognised in the profit and loss account for an amount equal to the difference between the carrying amount of the asset and the value of the consideration received, adjusted where appropriate for any unrealised gain or loss previously recognised directly in equity.

If all these conditions are not met, the Group retains the asset in its balance sheet and recognises a liability for the obligations arising on the transfer of the asset.

## **Derecognition of financial liabilities**

The Group derecognises all or part of a financial liability when the liability is extinguished, *i.e.* when the obligation specified in the contract is extinguished, cancelled or expired. A financial liability may also be derecognised in the event of a substantial change in its contractual terms or if exchanged with the lender for an instrument with substantially different contractual terms.

## **Repurchase agreements and securities lending/borrowing**

Securities temporarily sold under repurchase agreements continue to be recognised in the Group's balance sheet in the category of securities to which they belong. The corresponding liability is recognised at amortised cost under the appropriate "Financial liabilities at amortised cost" category on the balance sheet, except in the case of repurchase agreements contracted for trading purposes, for which the corresponding liability is recognised in "Financial liabilities at fair value through profit or loss".

Securities temporarily acquired under reverse repurchase agreements are not recognised in the Group's balance sheet. The corresponding receivable is recognised at amortised cost under the appropriate "Financial assets at amortised cost" category in the balance sheet, except in the case of reverse repurchase agreements contracted for trading purposes, for which the corresponding receivable is recognised in "Financial assets at fair value through profit or loss".

Securities lending transactions do not result in derecognition of the lent securities, and securities borrowing transactions do not result in recognition of the borrowed securities on the balance sheet. In cases where the borrowed securities are subsequently sold by the Group, the obligation to deliver the borrowed securities on maturity is recognised on the balance sheet under "Financial liabilities at fair value through profit or loss".

## **1.f.12 Offsetting financial assets and financial liabilities**

A financial asset and a financial liability are offset and the net amount presented in the balance sheet if, and only if, the Group has a legally enforceable right to set off the recognised amounts, and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

Repurchase agreements and derivatives that meet the two criteria set out in the accounting standard are offset in the balance sheet.

## **1.G INSURANCE ACTIVITIES**

### **1.g.1 Investments related to insurance activities**

IFRS 9 is applied in the same way as other Group entities (see note 1.f).

Investments of insurance activities include investment property which are measured at fair value as underlying assets of direct participating contracts.

### **1.g.2 Insurance contracts**

The Group applies IFRS 17 to insurance contracts issued, reinsurance contracts issued and held, and discretionary investment contracts issued (if the entity also issues insurance contracts).

The main IFRS 17 contracts issued by the Group correspond to:

- contracts covering risks related to persons or property; and
- life or savings contracts.

These contracts are described in note 6.d *Assets and liabilities related to insurance contracts*.

### **Prior separation of components covered by other standards and not closely related**

When insurance or investment contracts with discretionary participation include components, which would fall within the scope of another standard if they were separate contracts, an analysis must be carried out to determine whether these components should be accounted for separately. Thus:

- an embedded derivative is separated from the host insurance contract and accounted for under IFRS 9 when its economic characteristics and risks are not closely related to those of the host contract;
- an investment component corresponds to the amount that the insurer is required to repay to the insured in all cases whether the insured event occurs or not. It is separated from the host insurance contract and accounted for under IFRS 9 when it is distinct from the host insurance contract and when equivalent contracts could be sold separately in the same market or legal area. It is not separated if it is closely linked to the host contract. Changes in a non-distinct investment component (and in particular related payments) are not recognised in the profit and loss account;
- a promise to transfer to the policyholder distinct goods or services other than the services of the insurance contract is separated from the host insurance contract and accounted for under IFRS 15.

**Insurance contracts**

An insurance contract is a contract under which a party, the issuer, assumes a significant insurance risk for another party, the policyholder, by agreeing to indemnify the policyholder if a specified uncertain future event, the insured event, is detrimental to the policyholder.

An insurance risk is significant if, and only if, an insured event can cause the insurer to pay significant additional amounts in any scenario, excluding scenarios that are devoid of commercial substance. A contract transfers a significant insurance risk only if there is a scenario with a commercial substance in which there is a possibility that the issuer will incur a loss based on the present value.

**Investment contracts with discretionary participating features**

Investment contracts do not expose the insurer to significant insurance risk. They are within the scope of IFRS 17 if they are issued by entities that also issue insurance contracts.

Discretionary participation is defined as the contractual right to receive, in addition to an amount that is not at the issuer's discretion, additional amounts that are likely to represent a significant portion of the total benefits provided under the contract, the timing or amount of which is contractually left to the issuer's discretion and that are contractually based on the returns arising from a defined set of contracts or type of contract or on the realised and/or unrealised investment returns from a defined set of assets held by the issuer, or the result of the entity or fund issuing the contract.

## Accounting and measurement

### Aggregation of contracts

Insurance contracts are accounted and measured by groups of contracts within portfolios of contracts covering similar risks and managed together. Groups of contracts are determined according to their expected profitability at inception: onerous contracts, profitable contracts with a low risk of becoming onerous, and others. A group of contracts may contain only contracts issued no more than one year apart (corresponding to an annual “cohort”), except where the optional exemption provided for in the European regulation applies (for life-savings contracts).

For creditor protection insurance (CPI), personal protection insurance and other non-life risks, the Group uses the following discriminatory criteria when constructing portfolios of homogeneous contracts: legal entity, nature of the risks and partner, distributor. The reinsurance contracts accepted shall follow the same principles.

For life and savings contracts, the Group uses the following criteria for insurance portfolios: legal entity, product and underlying assets. Savings and retirement contracts are classified in separate portfolios (including in the period prior to the transition) due to the existence of a risk of longevity in retirement contracts.

For reinsurance contracts held, the Group uses the following criteria: legal entity, underlying item and partner. A portfolio can sometimes correspond to a single reinsurance treaty.

### Recognition and derecognition

A group of insurance contracts (or reinsurance contracts held) is recognised from the earliest of the following dates: the beginning of the period of coverage of the group of contracts, the date on which the first payment of a policyholder in the group becomes due (or, in the absence of such a date, when the first payment is received) and, in the case of a group of onerous contracts, the date on which the group becomes onerous.

A group of reinsurance contracts held is recognised from the beginning of the period of coverage of the group of reinsurance contracts held or, if the reinsurance was contracted in anticipation of the coverage of an underlying group of onerous insurance contracts, on the first recognition of that onerous group.

On initial recognition of portfolios of insurance contracts acquired as part of a business combination or a separate transfer, groups of contracts acquired are treated as if the contracts had been issued at the date of the transaction. The consideration received or paid in exchange for the contracts is treated as an approximation of the premiums received for the purpose of calculating the contractual service margin at initial recognition from this amount. In the case of a business combination within the scope of IFRS 3, the consideration received or paid is the fair value of the contracts at that date. For onerous contracts, the excess of the fulfilment cash flows over the consideration paid or received is recognised in the goodwill (or the profit resulting from an acquisition on advantageous terms) if it is a business combination and in a separate transfer, in the profit and loss account. For profitable contracts, the difference is recorded as a contractual service margin. In addition, an asset for cash flows related to acquisition costs must be recognised, for its fair value, for the acquisition costs related to the renewal of existing insurance contracts or for the acquisition costs already paid by the acquired company for future contracts.

An insurance contract shall be derecognised when the obligation it covers is extinguished, by payment or maturity, or if the terms of the contract are amended in such a way that the accounting treatment of the contract would have been substantially different if those amendments had originally existed. The derecognition of a contract entails the adjustment of the fulfilment cash flows, the contractual services margin and the coverage units of the group in which it was included.

### General measurement model (Building Block Approach – BBA)

The general model for the measurement of insurance contracts is the best estimate of the future cash flows to be paid or received necessary to meet contractual obligations. This estimate should reflect the different possible scenarios and the effect of the options and guarantees included in the contracts within the limit or “contract boundary”. The determination of this contract boundary requires an analysis of the rights and obligations arising from the contract and, in particular, of the insurer’s ability to change its price to reflect the risks. This leads, for example, to the exclusion of tacit renewals if the tariff can be amended or to the inclusion of such renewals if not.

Cash flows are discounted to reflect the time value of money. They correspond only to cash flows attributable to insurance contracts either directly or through allocation methods: premiums, acquisition and contract management costs, claims and benefits, indirect costs, taxes and depreciation of tangible and intangible assets.

The cash flows estimate is supplemented by an explicit risk adjustment to cover the uncertainty for non-financial risk. These two elements constitute the fulfilment cash flows of the contracts. A contractual service margin is added representing the expected gain or loss on future services related to a group of contracts.

If the contractual service margin is positive, it is shown on the balance sheet within the insurance contract’s measurement and amortised as the services are rendered; if negative, it is recognised immediately in the income statement. The original loss (or “loss component”) is monitored extra-accounting to allow for the subsequent recognition of the insurance service revenue.

Acquisition costs are deducted from the contractual service margin of the group of contracts to which they relate.

At each reporting date, the carrying amount of a group of insurance contracts is the sum of the liabilities for the remaining coverage which include the fulfilment cash flows related to future services (best estimate and risk adjustment) and the contractual service margin remaining at that date, and of the liabilities for incurred claims which include the best estimate of the

cash flows and the risk adjustment, without any contractual service margin. The assumptions used to estimate future cash flows and the non-financial risks adjustment are updated, as well as the discount rate, to reflect the situation at the reporting date.

The contractual service margin is adjusted for changes in the estimates of non-financial assumptions related to future services, capitalised at inception rate, and then amortised in the income statement for services rendered over the period in the insurance service revenue. In the case of contracts which become onerous, after consumption of the contractual service margin, the loss is recognised in the reporting period. In the case of onerous contracts that become profitable again as a result of favourable changes in assumptions, the contractual service margin is only reconstituted after offsetting the loss component.

The release of expected fulfillment flows (cash flow estimates and risk adjustments) for the period, except for the amount allocated to the loss component, is recorded in insurance service revenue. The change in estimates related to past service is recognised in insurance service expenses.

The Group includes the change in the adjustment for non-financial risk in its entirety in the insurance service result.

The Group records in equity the effect of the change in the discount rate. The expense of unwinding the discount is recorded in "insurance financial income or expenses" based on the initial rate (the inception rate for the liability for remaining coverage, and the rate at claims occurrence date for the liability for incurred claims). The difference between the value of liabilities discounted at the rate fixed at initial date and the value of those same liabilities estimated using current discount rate is recognised in equity. The effect on liabilities of changes in financial variables, in particular the indexation of benefits under the contract, is also recognised in equity.

Creditor protection insurance (CPI), personal protection insurance and other non-life risks are measured either according to the general model or, if the conditions are met, using the simplified approach. The same treatment applies to reinsurance contracts assumed or held.

The discount rate is based on the risk-free rate adjusted for the illiquidity of the liabilities.

The risk adjustment is determined using the quantile method.

The coverage unit used to amortise the contractual service margin is derived from the risk premium earned during the period.

#### **Measurement model for contracts with direct participation features (Variable Fee Approach – VFA)**

Direct participating contracts are insurance or investment contracts for which:

- the contractual terms specify that the policyholder is entitled to a share of a clearly defined portfolio of underlying assets;
- the insurer expects to pay the policyholder a sum corresponding to a substantial portion of the return on the fair value of the underlying assets;
- the insurer expects that any change in the amounts to be paid to the policyholder is, in a substantial proportion, attributable to the change in the fair value of the underlying assets.

Compliance with these conditions is monitored on the underwriting date and is not reviewed later.

For these contracts, for which the insurer has to pay the policyholder an amount corresponding to the fair value of clearly identified underlying assets, less a variable compensation, a specific model (called the "Variable Fee Approach") has been developed by adapting the general model.

At each reporting date, liabilities related to these contracts are adjusted for the return earned and changes in the fair value of the underlying assets: the policyholders' share is recorded in the contract fulfillment cash flows against insurance financial income or expense and the insurer's share corresponding to the variable fee is included in the contractual service margin.

The contractual service margin is also adjusted for the effect of changes in cash flows that do not vary according to the returns on the underlying assets and that relate to future services: estimation of cash flows, risk adjustment, changes in the time value effect of money and changes in the financial risks that do not result from the underlying assets (for example, the effect of financial guarantees).

Changes in the fulfillment cash flows that do not change in connection with the yields of underlying assets and that relate to past service events are recognised in the profit and loss account.

Due to the mechanism for allocating the change in the value of the underlying assets between the policyholders and the insurer, the result of these contracts is in principle mainly represented by the release of the fulfillment cash flows and the amortisation of the contractual service margin. When the underlying assets fully support the liabilities and are measured at fair value through profit or loss, the financial result under these contracts should be nil. The Group has chosen the option of reclassifying in shareholders' equity the change in the liabilities related to the underlying assets that are not measured at fair value through profit or loss.

Life and savings contracts meeting the above definition of direct participating contracts are valued using the variable fee approach. When these contracts include a surrender value, it meets the definition of a non-distinct investment component and changes in that investment component (including related payments) are therefore not recognised in the income statement.

The Group has chosen to apply the option introduced by the European regulation not to divide the portfolios of participating contracts based on intergenerational mutualisation by annual cohort. This option is applied to insurance contracts and investment contracts with discretionary participation that are eligible to the variable fee approach, euro mono-supports or multi-supports including a euro fund, for which the policyholders' profit-sharing is mutualised between the different generations of

policyholders in France, Italy and Luxembourg. As a result of this choice, the assessment of the onerousness is made on the basis of the portfolio and not on the basis of the annual cohorts.

The contract boundary includes future payments as long as the applicable pricing is not modifiable (e.g. acquisition or management loadings), as well as the annuity phase in service when contracts provide for a mandatory annuity.

The discount rate is based on the risk-free rate, extrapolated over the duration exceeding the period for which observable data are available and adjusted by a liquidity premium on the basis of the underlying assets to reflect the illiquidity of the liabilities.

The risk adjustment is determined using the cost of capital method including future payments without considering the risk of mass lapses.

The coverage unit used to amortise the contractual service margin is the change in savings due to policyholders (determined at present value), adjusted to take into account the impact of the real return on financial or property assets compared to the actuarial neutral risk projection.

#### **Simplified measurement model (Premium Allocation Approach – PAA)**

Short-term contracts (less than one year) may be measured using a simplified approach known as the premium allocation approach, also applicable to longer-term contracts if it leads to results similar to those of the general model in terms of liability for the remaining coverage. For profitable contracts, the liability for the remaining coverage is measured based on the deferral of premiums collected according to a logic similar to that used under IFRS 4. Onerous contracts and liabilities for incurred claims are valued according to the general model. Liabilities for incurred claims are discounted if the expected settlement of claims takes place one year after the date of occurrence. In this case, the option of classifying the effect of changes in the discount rate in equity is also applicable.

The Group has chosen the option of deferring acquisition costs over the coverage duration and therefore presenting them as a deduction of the deferred premiums.

Liabilities for incurred claims are discounted if the expected settlement of claims takes place after one year from the date of occurrence. The discount expense is recognised in insurance financial income or expenses as in the general model. In this case, the option to classify the effect of changes in the discount rate into equity is also applicable. The Group has retained this option for the liabilities for incurred claims.

At each reporting date, the adjustment of liabilities for remaining coverage and for incurred claims is recognised in profit or loss.

Creditor insurance (ADE), personal protection insurance and other non-life insurance contracts, and reinsurance contracts assumed or held, are measured using the simplified approach if the conditions are met.

#### **Treatment of the reinsurance**

The reinsurance ceded is also treated according to the general or simplified model, but the equivalent of the contractual service margin represents the expected gain or loss on the reinsurance and may be positive or negative. If a reinsurance contract immediately offsets the losses of an underlying group of onerous contracts, the reinsurance gain is recognised immediately in profit or loss. This “loss recovery component” is used to record amounts that are subsequently presented in net income.

In addition, contract execution flows include the reinsurer’s risk of non-performance.

Reinsurance contracts held are measured by the Group using the simplified approach or the general model.

#### **Presentation in the balance sheet and in the profit and loss**

The Group has chosen to present the investments of insurance activities and their results separately from the financial assets and liabilities of banking activities.

Financial income or expenses from issued insurance contracts are presented separately between the profit and loss account and shareholders’ equity for portfolios for which this breakdown has been deemed relevant, as allowed by the standard. For the Protection contracts liabilities measured under the general model and for the liabilities for incurred claims arising from contracts measured under the simplified model, this choice for portfolio classification was made by taking into account both the effects in the profit and loss account of the undiscounting of the liabilities and the accounting treatment of the assets backing them. For contracts measured using the variable fee approach, this choice was made to offset any accounting mismatch that may exist in the profit and loss account between the effect of changes in fair value from insurance or investment liabilities and that from the underlying assets when these are not recognised at fair value through profit or loss.

Insurance contracts may be distributed and managed by non-insurance entities of the Group that are remunerated as such by commissions paid by insurance entities. The measurement model for insurance contracts requires projecting in the contract fulfilment cash flows the acquisition and management costs that will be paid in the future and presenting in the profit and loss account, the release of the estimated costs for the period on the one hand, and on the other, the actual costs. For commissions between consolidated companies in the Group, the Group restates the internal margin on the balance sheet and in the profit and loss account (in the breakdown of insurance liabilities and the related results between cash flows and contractual service margin) by presenting as insurance service expenses the portion of the general expenses (excluding internal margins) of the banking entities that can be attributed to the insurance activity. The internal distributors’ margins are determined based on standardised management data for each of the related networks.

#### **Effect of accounting estimates in interim financial statements**

The Group has elected under IFRS 17 to record in its annual financial statements the effects of changes in accounting estimates relating to insurance contracts issued or held, without taking into account estimates previously made in its interim financial statements.

## 1.H PROPERTY, PLANT, EQUIPMENT AND INTANGIBLE ASSETS

Property, plant and equipment and intangible assets shown in the consolidated balance sheet are composed of assets used in operations and investment property. Rights-of-use related to leased assets (see note 1.i.2) are presented by the lessee within fixed assets in the same category as similar assets held.

Assets used in operations are those used in the provision of services or for administrative purposes, and include non-property assets leased by the Group as lessor under operating leases.

Investment property comprises property assets held to generate rental income and capital gains.

Investment property is recognised at cost, except for those held as underlying assets under participating direct contracts (as amended by IAS 40), which are measured at fair value through profit or loss and presented in the balance sheet under "Investments related to insurance activities" (see note 1.g.1).

Property, plant and equipment and intangible assets are initially recognised at purchase price plus directly attributable costs, together with borrowing costs where a long period of construction or adaptation is required before the asset can be brought into service. By way of exception, property occupied by the holder entity that is an underlying component of direct participating contracts is measured at fair value (by amendment to IAS 16).

Software developed internally by the BNP Paribas Group that fulfils the criteria for capitalisation is capitalised at direct development cost, which includes external costs and the labour costs of employees directly attributable to the project.

Subsequent to initial recognition, property, plant and equipment and intangible assets are measured at cost less accumulated depreciation or amortisation and any impairment losses.

The depreciable amount of property, plant and equipment and intangible assets is calculated after deducting the residual value of the asset. Only assets leased by the Group as the lessor under operating leases are presumed to have a residual value, as the useful life of property, plant and equipment and intangible assets used in operations is generally the same as their economic life.

Property, plant and equipment and intangible assets are depreciated or amortised using the straight-line method over the useful life of the asset. Depreciation and amortisation expense is recognised in the profit and loss account under "Depreciation, amortisation and impairment of property, plant and equipment and intangible assets".

Where an asset consists of a number of components which may require replacement at regular intervals, or which have different uses or generate economic benefits at different rates, each component is recognised separately and depreciated using a method appropriate to that component. The BNP Paribas Group has adopted the component-based approach for property used in operations and for investment property.

The depreciation periods used for office property are as follows: 80 years or 60 years for the shell (for prime and other property respectively); 30 years for facades; 20 years for general and technical installations; and 10 years for fixtures and fittings.

Software is amortised, depending on its type, over periods of no more than 8 years in the case of infrastructure developments and 3 years or 5 years in the case of software developed primarily for the purpose of providing services to customers.

Software maintenance costs are expensed as incurred. However, expenditure that is regarded as upgrading the software or extending its useful life is included in the initial acquisition or production cost.

Depreciable property, plant and equipment and intangible assets are tested for impairment if there is an indication of potential impairment at the balance sheet date. Non-depreciable assets are tested for impairment at least annually, using the same method as for goodwill allocated to cash-generating units.

If there is an indication of impairment, the new recoverable amount of the asset is compared with the carrying amount. If the asset is found to be impaired, an impairment loss is recognised in the profit and loss account. This loss is reversed in the event of a change in the estimated recoverable amount or if there is no longer an indication of impairment. Impairment losses are taken to the profit and loss account in "Depreciation, amortisation and impairment of property, plant and equipment and intangible assets".

Gains and losses on disposals of property, plant and equipment and intangible assets used in operations are recognised in the profit and loss account in "Net gain on non-current assets".

Gains and losses on disposals of investment property are recognised in the profit and loss account in "Income from other activities" or "Expense on other activities".

## 1.I LEASES

Group companies may either be the lessee or the lessor in a lease agreement.

### 1.i.1 Group company as lessor

Leases contracted by the Group as lessor are categorised as either finance leases or operating leases.

#### Finance leases

In a finance lease, the lessor transfers substantially all the risks and rewards of ownership of an asset to the lessee. It is treated as a loan made to the lessee to finance the purchase of the asset.

The present value of the lease payments, plus any residual value, is recognised as a receivable. The net income earned from the lease by the lessor is equal to the amount of interest on the loan and is taken to the profit and loss account under "Interest income". The lease payments are spread over the lease term and are allocated to reduction of the principal and to interest such that the net income reflects a constant rate of return on the net investment outstanding in the lease. The rate of interest used is the rate implicit in the lease.

Impairments of lease receivables are determined using the same principles as applied to financial assets measured at amortised cost.

#### Operating leases

An operating lease is a lease under which substantially all the risks and rewards of ownership of an asset are not transferred to the lessee.

The asset is recognised under property, plant and equipment in the lessor's balance sheet and depreciated on a straight-line basis over its useful life. The depreciable amount excludes the residual value of the asset. The lease payments are taken to the profit and loss account in full on a straight-line basis over the lease term. Lease payments and depreciation expenses are taken to the profit and loss account under "Income from other activities" and "Expense on other activities".

### 1.i.2 Group company as lessee

Lease contracts concluded by the Group, with the exception of contracts whose term is shorter than or equal to 12 months and low-value contracts, are recognised in the balance sheet in the form of a right-of-use on the leased asset presented under fixed assets, along with the recognition of a financial liability for the rent and other payments to be made over the leasing period. The right-of-use assets is amortised on a straight-line basis and the financial liabilities are amortised on an actuarial basis over the lease period. Dismantling costs corresponding to specific and significant fittings and fixtures are included in the initial right-of-use estimation, in counterparty of a provision liability.

The key hypotheses used by the Group for the measurement of rights of use and lease liabilities are the following:

- the lease term corresponds to the non-cancellable period of the contract, together with periods covered by an extension option if the Group is reasonably certain to exercise this option. In France, the standard commercial lease contract is the so-called "three, six, nine" contract for which the maximum period of use is nine years, with a first non-cancellable period of three years followed by two optional extension periods of three years each; hence, depending on the assessment, the lease term can be of three, six or nine years. When investments like fittings or fixtures are performed under the contract, the lease term is aligned with their useful lives. For tacitly renewable contracts, with or without an enforceable period, related right of use and lease liabilities are recognised based on an estimate of the reasonably foreseeable economic life of the contracts, minimal occupation period included;
- the discount rate used to measure the right of use and the lease liability is assessed for each contract as the interest rate implicit in the lease, if that rate can be readily determined, or more generally based on the incremental borrowing rate of the lessee at the date of signature. The incremental borrowing rate is determined considering the average term (duration) of the contract;
- when the contract is modified, a new assessment of the lease liability is made taking into account the new residual term of the contract, and therefore a new assessment of the right of use and the lease liability is established.

## 1.J ASSETS HELD FOR SALE AND DISCONTINUED OPERATIONS

Where the Group decides to sell assets or a group of assets and liabilities and it is highly probable that the sale will occur within 12 months, these assets are shown separately in the balance sheet, on the line "Assets held for sale". Any liabilities associated with these assets are also shown separately in the balance sheet, on the line "Liabilities associated with assets held for sale". When the Group is committed to a sale plan involving loss of control of a subsidiary and the sale is highly probable within 12 months, all the assets and liabilities of that subsidiary are classified as held for sale.

Once classified in this category, assets and the group of assets and liabilities are measured at the lower of carrying amount or fair value less costs to sell.

Such assets are no longer depreciated. If an asset or group of assets and liabilities becomes impaired, an impairment loss is recognised in the profit and loss account. Impairment losses may be reversed.

Where a group of assets and liabilities held for sale represents a cash-generating unit, it is categorised as a “discontinued operation”. Discontinued operations include operations that are held for sale, operations that have been shut down, and subsidiaries acquired exclusively with a view to resell.

In this case, gains and losses related to discontinued operations are shown separately in the profit and loss account, on the line “Net income from discontinued activities”. This line includes after tax profits or losses of discontinued operations, after tax gain or loss arising from remeasurement at fair value less costs to sell, and after tax gain or loss on disposal of the operation.

## **1.K EMPLOYEE BENEFITS**

Employee benefits are classified into four categories:

- short-term benefits, such as salary, annual leave, incentive plans, profit-sharing and additional payments;
- long-term benefits, including compensated absences, long-service awards, and other types of cash-based deferred compensation;
- termination benefits;
- post-employment benefits, including top-up banking industry pensions and retirement bonuses in France and pension plans in other countries, some of which are operated through pension funds.

### **Short-term benefits**

The Group recognises an expense when it has used services rendered by employees in exchange for employee benefits.

### **Long-term benefits**

These are benefits, other than short-term benefits, post-employment benefits and termination benefits. This relates, in particular, to compensation deferred for more than 12 months and not linked to the BNP Paribas share price, which is accrued in the financial statements for the period in which it is earned.

The actuarial techniques used are similar to those used for defined-benefit post-employment benefits, except that the revaluation items are recognised in the profit and loss account and not in equity.

### **Termination benefits**

Termination benefits are employee benefits payable in exchange for the termination of an employee's contract as a result of either a decision by the Group to terminate a contract of employment before the legal retirement age, or a decision by an employee to accept voluntary redundancy in exchange for these benefits. Termination benefits due more than 12 months after the balance sheet date are discounted.

### **Post-employment benefits**

In accordance with IFRS, the BNP Paribas Group draws a distinction between defined-contribution plans and defined-benefit plans.

Defined-contribution plans do not give rise to an obligation for the Group and do not require a provision. The amount of the employer's contributions payable during the period is recognised as an expense.

Only defined-benefit schemes give rise to an obligation for the Group. This obligation must be measured and recognised as a liability by means of a provision.

The classification of plans into these two categories is based on the economic substance of the plan, which is reviewed to determine whether the Group has a legal or constructive obligation to pay the agreed benefits to employees.

Post-employment benefit obligations under defined-benefit plans are measured using actuarial techniques that take demographic and financial assumptions into account.

The net liability recognised with respect to post-employment benefit plans is the difference between the present value of the defined-benefit obligation and the fair value of any plan assets.

The present value of the defined-benefit obligation is measured on the basis of the actuarial assumptions applied by the Group, using the projected unit credit method. This method takes into account various parameters, specific to each country or Group entity, such as demographic assumptions, the probability that employees will leave before retirement age, salary inflation, a discount rate, and the general inflation rate.

When the value of the plan assets exceeds the amount of the obligation, an asset is recognised if it represents a future economic benefit for the Group in the form of a reduction in future contributions or a future partial refund of amounts paid into the plan.

The annual expense recognised in the profit and loss account under “Salaries and employee benefits”, with respect to defined-benefit plans includes the current service cost (the rights vested by each employee during the period in return for service

rendered), the net interests linked to the effect of discounting the net defined-benefit liability (asset), the past service cost arising from plan amendments or curtailments, and the effect of any plan settlements.

Remeasurements of the net defined-benefit liability (asset) are recognised in shareholders' equity and are never reclassified to profit or loss. They include actuarial gains and losses, the return on plan assets and any change in the effect of the asset ceiling (excluding amounts included in net interest on the defined-benefit liability or asset).

## **1.L SHARE-BASED PAYMENTS**

Share-based payment transactions are payments based on shares issued by the Group, whether the transaction is settled in the form of equity or cash of which the amount is based on trends in the value of BNP Paribas shares.

### **Stock option and share award plans**

The expense related to stock option and share award plans is recognised over the vesting period, if the benefit is conditional upon the grantee's continued employment.

Stock options and share award expenses are recorded under salary and employee benefits expenses, with a corresponding adjustment to shareholders' equity. They are calculated on the basis of the overall plan value, determined at the date of grant by the Board of directors.

In the absence of any market for these instruments, financial valuation models are used that take into account any performance conditions related to the BNP Paribas share price. The total expense of a plan is determined by multiplying the unit value per option or share awarded by the estimated number of options or shares awarded vested at the end of the vesting period, taking into account the conditions regarding the grantee's continued employment.

The only assumptions revised during the vesting period, and hence resulting in a remeasurement of the expense, are those relating to the probability that employees will leave the Group and those relating to performance conditions that are not linked to the price value of BNP Paribas shares.

### **Share price-linked cash-settled deferred compensation plans**

The expense related to these plans is recognised in the year during which the employee rendered the corresponding services.

If the payment of share-based variable compensation is explicitly subject to the employee's continued presence at the vesting date, the services are presumed to have been rendered during the vesting period and the corresponding compensation expense is recognised on a pro rata basis over that period. The expense is recognised under salary and employee benefits expenses with a corresponding liability in the balance sheet. It is revised to take into account any non-fulfilment of the continued presence or performance conditions and the change in BNP Paribas share price.

If there is no continued presence condition, the expense is not deferred, but recognised immediately with a corresponding liability in the balance sheet. This is then revised on each reporting date until settlement to take into account any performance conditions and the change in the BNP Paribas share price.

## **1.M PROVISIONS RECORDED UNDER LIABILITIES**

Provisions recorded under liabilities (other than those relating to financial instruments, employee benefits and insurance contracts) mainly relate to restructuring, claims and litigation, fines and penalties.

A provision is recognised when it is probable that an outflow of resources embodying economic benefits will be required to settle an obligation arising from a past event, and a reliable estimate can be made of the amount of the obligation. The amount of such obligations is discounted, where the impact of discounting is material, in order to determine the amount of the provision.

## **1.N CURRENT AND DEFERRED TAX**

The current income tax charge is determined on the basis of the tax laws and tax rates in force in each country in which the Group operates during the period in which the income is generated.

Deferred taxes are recognised when temporary differences arise between the carrying amount of an asset or liability in the balance sheet and its tax base.

Deferred tax liabilities are recognised for all taxable temporary differences other than:

- taxable temporary differences on initial recognition of goodwill;
- taxable temporary differences on investments in enterprises under the exclusive or joint control of the Group, where the Group is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future.

Deferred tax assets are recognised for all deductible temporary differences and unused carryforwards of tax losses only to the extent that it is probable that the entity in question will generate future taxable profits against which these temporary differences and tax losses can be offset.

Deferred tax assets and liabilities are measured using the liability method, using the tax rate which is expected to apply to the period when the asset is realised or the liability is settled, based on tax rates and tax laws that have been or will have been enacted by the balance sheet date of that period. They are not discounted.

Deferred tax assets and liabilities are offset when they arise within the same tax group, they fall under the jurisdiction of a single tax authority, and there is a legal right to offset.

As regards the assessment of uncertainty over income tax treatments, the Group adopts the following approach:

- the Group assesses whether it is probable that a taxation authority will accept an uncertain tax treatment;
- any uncertainty shall be reflected when determining the taxable profit (loss) by considering either the most likely amount (having the higher probability of occurrence), or the expected value (sum of the probability-weighted amounts).

Current and deferred taxes are recognised as tax income or expenses in the profit and loss account, except for those relating to a transaction or an event directly recognised in shareholders' equity, which are also recognised in shareholders' equity. This concerns in particular the tax effect of coupons paid on financial instruments issued by the Group and qualified as equity instruments, such as undated super subordinated notes.

When tax credits on revenues from receivables and securities are used to settle corporate income tax payable for the period, the tax credits are recognised on the same line as the income to which they relate. The corresponding tax expense continues to be carried in the profit and loss account under "Corporate income tax".

## **1.0 CASH FLOW STATEMENT**

The cash and cash equivalents balance is composed of the net balance of cash accounts and accounts with central banks, and the net balance of interbank demand loans and deposits.

Changes in cash and cash equivalents related to operating activities reflect cash flows generated by the Group's operations, including those relating to financial investments of insurance activities and negotiable certificates of deposit.

Changes in cash and cash equivalents related to investing activities reflect cash flows resulting from acquisitions and disposals of subsidiaries, associates or joint ventures included in the consolidated Group, as well as acquisitions and disposals of property, plant and equipment excluding investment property and property held under operating leases.

Changes in cash and cash equivalents related to financing activities reflect the cash inflows and outflows resulting from transactions with shareholders, cash flows related to bonds and subordinated debt, and debt securities (excluding negotiable certificates of deposit).

## **1.P USE OF ESTIMATES IN THE PREPARATION OF THE FINANCIAL STATEMENTS**

Preparation of the financial statements requires managers of core businesses and corporate functions to make assumptions and estimates that are reflected in the measurement of income and expense in the profit and loss account and of assets and liabilities in the balance sheet, and in the disclosure of information in the notes to the financial statements. This requires the managers in question to exercise their judgement and to make use of information available at the date of the preparation of the financial statements when making their estimates. The actual future results from operations where managers have made use of estimates may in reality differ significantly from those estimates, mainly according to market conditions. This may have a material effect on the financial statements.

This applies in particular to:

- the analysis of the cash flow criterion for specific financial assets;
- the measurement of expected credit losses. This applies in particular to the assessment of significant increase in credit risk, the models and assumptions used to measure expected credit losses, the determination of the different economic scenarios and their weighting;
- the analysis of renegotiated loans, in order to assess whether they should be maintained on the balance sheet or derecognised;
- the assessment of an active market, and the use of internally developed models for the measurement of the fair value of financial instruments not quoted in an active market classified in "Financial assets at fair value through equity", or in "Financial instruments at fair value through profit or loss", whether as assets or liabilities, and more generally calculations of the fair value of financial instruments subject to a fair value disclosure requirement;
- the assumptions applied to assess the sensitivity to each type of market risk of the market value of financial instruments and the sensitivity of these valuations to the main unobservable inputs as disclosed in the notes to the financial statements;
- the appropriateness of the designation of certain derivative instruments such as cash flow hedges, and the measurement of hedge effectiveness;
- impairment tests performed on intangible assets;
- the estimation of residual assets values under simple lease agreements. These values are used as a basis for the determination of depreciation as well as any impairment, notably in relation to the effect of environmental considerations on the evaluation of future prices of second-hand vehicles;
- the deferred tax assets;
- the measurement of insurance liabilities and assets, and investment contracts with discretionary participation, by groups of contracts, on the basis of discounted and probability weighted future fulfilment cash flows, based on assumptions that can be derived from market or entity-specific data, and the recognition of the results of such contracts on the basis of the services rendered over the coverage period;

- the measurement of uncertainty over income tax treatments and other provisions for contingencies and charges. In particular, while investigations and litigations are ongoing, it is difficult to foresee their outcome and potential impact. Provision estimation is established by taking into account all available information at the date of the preparation of the financial statements, in particular the nature of the dispute, the underlying facts, the ongoing legal proceedings and court decisions, including those related to similar cases. The Group may also use the opinion of experts and independent legal advisers to exercise its judgement.

## NOTE 2 IFRS 17 AND IFRS 9 FIRST TIME APPLICATION IMPACTS

### IFRS 17 AND IFRS 9 FIRST TIME APPLICATION IMPACTS ON THE BALANCE SHEET AT 31 DECEMBER 2022

The transition from IFRS 4 to IFRS 17 leads to the removal through equity of assets and liabilities of insurance contracts recognised in accordance with the previous standard net of deferred tax effects: insurance liabilities, reinsurance assets held, and deferred policyholders' participation arising from "shadow accounting". Receivables and payables related to insurance or reinsurance contracts were not cancelled but are included in the new measurement of insurance liabilities and assets.

The main impacts linked to the first time application of IFRS 4 and IFRS 17 at 31 December 2022 are:

**(a)** the removal of insurance assets and liabilities recognised under IFRS 4:

- on the assets side, -EUR 5.2 billion within "Investments and other assets related to insurance activities": -EUR 2.3 billion linked to reinsurance assets held, mainly mathematical reserves, and -EUR 2.9 billion in respect of deferred profit-sharing arising from shadow accounting,
- on the liabilities side, -EUR 221.6 billion of insurance contract liabilities previously recorded as "Technical reserves and other insurance liabilities";

**(b)** the recognition of "Liabilities related to insurance contracts" for +EUR 209.8 billion, including:

- the best estimate of future fulfilment cash flows together with the risk adjustment and the contractual service margin measured in accordance to IFRS 17;
- other assets and liabilities linked to insurance contracts (mainly policyholders' receivables and payables).

The methods used at transition date for the measurement of the insurance contracts are described in note 1.a *Applicable accounting standards – Transition from IFRS 4 to IFRS 17*.

**(c)** The application of the amendment to IFRS 9 enabling the recognition in the balance sheet of financial assets issued by the Group that are held as underlying items of direct participating contracts and are measured at fair value through profit or loss. Consequently, "Investments and other assets related to insurance activities" increased by +EUR 2 billion, against, on the liabilities side, an increase of +EUR 0.8 billion in "Issued debt securities at fair value through profit or loss" and +EUR 1.2 billion in "Debt securities at amortised cost";

**(d)** The Group also applies the amendments to IAS 40 and IAS 16 resulting from IFRS 17, leading to measure at fair value through profit or loss of the buildings held as underlying items of direct participating contracts and recognise +EUR 1.6 billion within "Investments and other assets related to insurance activities";

**(e)** "Financial liabilities related to insurance activities" previously recorded as "Issued debt securities" for +EUR 5.7 billion or as "Other insurance liabilities" have been combined under the same line;

**(f)** The application of IFRS 17 and IFRS 9 results in a -EUR 0.6 billion impact to equity attributable to shareholders, net of tax effect at 31 December 2022.

At 1 January 2022, this impact was -EUR 1.6 billion of which +EUR 0.5 billion related to the transition from IAS 39 to IFRS 9 and -EUR 2.1 billion related to the transition from IFRS 4 to IFRS 17.

**IFRS 9 AND IFRS 17 FIRST TIME APPLICATION IMPACTS ON “INVESTMENTS AND OTHER ASSETS RELATED TO INSURANCE ACTIVITIES”**

Financial assets and liabilities of insurance entities are managed by portfolios corresponding to the insurance liabilities they back up or to the own funds. The business models were therefore determined according to these portfolios at the transition date to IFRS 9.

Under the business model and cash flow criteria, debt instruments are largely classified according to the “collect and sell” model, except for those representing unit-linked contracts, debt instruments held by consolidated UCITS and managed at disposal value, which are measured at fair value through profit or loss. Certain specific assets are designated as at fair value through profit or loss. Most equity instruments are measured at fair value through profit or loss, except for certain assets backing own-funds and non-participating contracts portfolios, which are measured at fair value through equity. Non-consolidated funds classified as available-for-sale financial assets under IAS 39 have been reclassified at fair value through profit or loss. The treatment of derivatives remains unchanged, including for hedge accounting, for which the principles of IAS 39 continue to be applied by the Group (see note 1.f.9).

## NOTE 3 NOTES TO THE PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31 DECEMBER 2023

### 3.A NET INTEREST INCOME

The BNP Paribas Group includes in “Interest income” and “Interest expense” all income and expense calculated using the effective interest method (interest, fees and transaction costs) from financial instruments measured at amortised cost and financial instruments measured at fair value through equity.

These items also include the interest income and expense of non-trading financial instruments the characteristics of which do not allow for recognition at amortised cost or at fair value through equity, as well as of financial instruments that the Group has designated as at fair value through profit or loss. The change in fair value on financial instruments at fair value through profit or loss (excluding accrued interest) is recognised under “Net gain on financial instruments at fair value through profit or loss”.

Interest income and expense on derivatives accounted for as fair value hedges are included with the revenues generated by the hedged item. Similarly, interest income and expense arising from derivatives used to hedge transactions designated as at fair value through profit or loss is allocated to the same accounts as the interest income and expense relating to the underlying transactions.

In the case of a negative interest rates related to loans and receivables or deposits from customers and credit institutions, they are accounted for in interest expense or interest income respectively.

Net interest income notably includes an expense of EUR 938 million due to the adjustment of economic hedges consecutive to the changes in the TLTRO terms and conditions mentioned below.

Net interest income includes funding costs related to Global Markets, whose revenues are mainly accounted for in “Net gain on financial instruments at fair value through profit or loss” (see note 3.c), as well as to Arval, whose income from operating leases is presented in note 3.e.

The evolution of the net interest income is therefore to be analysed in conjunction with those observed for these lines.

Interest income on individually impaired loans amounted to EUR 342 million for the year ended 2023, compared to EUR 287 million for the year ended 2022.

The Group subscribed to the TLTRO III (*Targeted Longer-Term Refinancing Operations*) programme, as modified by the Governing Council of the European Central Bank in March 2020, in December 2020 and in October 2022 (see note 5.g). The Group achieved the lending performance thresholds that enabled it to benefit from favourable interest rate conditions applicable for each of the reference period, namely:

- over the two special interest periods (*i.e.* from June 2020 to June 2022): the average deposit facility rate (“DFR”) -50 basis points, or -1%;
- over the next period (*i.e.* from June 2022 to November 2022): the average of the DFR between the TLTRO III initial date of subscription and 22 November 2022, *i.e.* for the main draws, -0.36% for the June 2020 tranche and -0.29% for the March 2021 tranche;
- over the last period (since 23 November 2022): the average of the DFR between 23 November 2022 and the redemption date. The average effective interest rate for the latter period was 3.15% (1.64% until 31 December 2022 and 3.31% for the year 2023).

This floating interest rate is considered as a market rate since it is applicable to all financial institutions meeting the lending criteria defined by the European Central Bank. The effective interest rate of these financial liabilities is determined for each reference period, its two components (reference rate and margin) being adjustable; it corresponds to the nominal interest rate. The addition of the last interest period in October 2022 is part of the European Central Bank’s monetary policy and is therefore not considered a contractual amendment according to IFRS 9 but a revision of the market rate.

### 3.C NET GAIN ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS

Net gain on financial instruments measured at fair value through profit or loss includes all profit and loss items relating to financial instruments held for trading, financial instruments that the Group has designated as at fair value through profit or loss, non-trading equity instruments that the Group did not choose to measure at fair value through equity, as well as debt instruments whose cash flows are not solely repayments of principal and interest on the principal or whose business model is not to collect cash flows nor to collect cash flows and sell the assets.

These income items include dividends on these instruments and exclude interest income and expense from financial instruments designated as at fair value through profit or loss and instruments whose cash flows are not only repayments of principal and interest on the principal or whose business model is not to collect cash flows nor to collect cash flows and sell the assets, which are presented in "Net interest income" (see note 3.a).

| <i>In millions of euros</i>   | <b>Year to</b>      |   |
|---|---------------------|---|
|   | <b>31 Dec. 2023</b> | <b>31 Dec. 2022</b><br><i>restated</i><br><i>according to</i><br><i>IFRS 17 and 9</i> |
| <b>Financial instruments held for trading</b>                                   | <b>13,801</b>       | <b>(2,023)</b>  |
| Interest rate and credit instruments  | 8,948               | (6,014)   |
| Equity financial instruments  | 3,184               | (3,268)   |
| Foreign exchange financial instruments  | 5,452               | 5,898   |
| Loans and repurchase agreements   | (4,515)             | (1,326)   |
| Other financial instruments   | 732                 | 2,687   |
| <b>Financial instruments designated as at fair value through profit or loss</b> | <b>(3,985)</b>      | <b>11,328</b>   |
| <b>Other financial instruments at fair value through profit or loss</b>         | <b>565</b>          | <b>143</b>  |
| <b>Impact of hedge accounting</b>   | <b>(35)</b>         | <b>(96)</b>   |
| Fair value hedging derivatives  | (1,247)             | (9,123)   |
| Hedged items in fair value hedge  | 1,212               | 9,027   |
| <b>NET GAIN ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS</b>   | <b>10,346</b>       | <b>9,352</b>  |

Gains and losses on financial instruments designated as at fair value through profit or loss are mainly related to instruments for which changes in value may be compensated by changes in the value of economic hedging derivative financial instruments held for trading.

Net gain on financial instruments held for trading in 2023 and 2022 includes a non-material amount related to the ineffective portion of cash flow hedges.

Potential sources of ineffectiveness can be the differences between hedging instruments and hedged items, notably generated by mismatches in the terms of hedged and hedging instruments, such as the frequency and timing of interest rate resetting, the frequency of payments and the discounting factors, or when hedging derivatives have a non-zero fair value at the inception date of the hedging relationship. Credit valuation adjustments applied to hedging derivatives are also sources of ineffectiveness.

Cumulated changes in fair value related to discontinued cash flow hedge relationships, previously recognised in equity and included in 2023 in profit and loss accounts are not material, whether the hedged item ceased to exist or not.

### 3.D NET GAIN ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH EQUITY

| <i>In millions of euros</i>   | <b>Year to<br/>31 Dec. 2023</b> | <b>Year to<br/>31 Dec. 2022<br/><i>restated<br/>according to<br/>IFRS 17 and 9</i></b> |
|---|---------------------------------|--|
| Net gain on debt instruments  | (56)                            | 9  |
| Dividend income on equity instruments                                 | 84                              | 129  |
| <b>NET GAIN ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH EQUITY</b> | <b>28</b>                       | <b>138</b>   |

Interest income from debt instruments is included in note 3.a *Net interest income*, and impairment losses related to potential issuer default are included in note 3.g *Cost of risk*.

### 3.E NET INCOME FROM OTHER ACTIVITIES

| <i>In millions of euros</i>                        | <b>Year to 31 Dec. 2023</b> |                 |              | <b>Year to 31 Dec. 2022<br/><i>restated according to IFRS 17 and 9</i></b> |                 |              |

### 3.F OPERATING EXPENSES

| <i>In millions of euros</i>  | <b>Year to<br/>31 Dec. 2023</b> | <b>Year to<br/>31 Dec. 2022<br/><i>restated<br/>according to<br/>IFRS 17 and 9</i></b> |
|--|---------------------------------|--|
| Salary and employee benefit expense for banking activities   | (17,775)                        | (16,877)   |
| Other operating expenses for banking activities  | (11,221)                        | (11,026)   |
| <i>of which external services and other operating expenses</i>                                     | (8,865)                         | (8,611)  |
| <i>of which taxes and contributions<sup>(1)</sup></i>  | (2,356)                         | (2,415)  |
| Insurance activities non-attributable costs (note 6.b)   | (758)                           | (713)  |
| Reclassification of expenses incurred by internal distributors attributable to insurance contracts | 1,041                           | 1,056  |
| <b>OPERATING EXPENSES</b>  | <b>(28,713)</b>                 | <b>(27,560)</b>  |

(1) Contributions to the Single Resolution Fund, including exceptional contributions, amounted to EUR 1,002 million for year ended 2023 compared with EUR 1,256 million for the year ended 2022.

Taxes and contributions, including those related to insurance activities, amounted to EUR 2,442 million for the year ended 2023 (compared to EUR 2,510 million for the year ended 2022).

Expenses directly attributable to insurance contracts are presented in “Net income from insurance activities”. These costs consist mainly of distribution commissions paid for the acquisition of the contracts and other costs necessary for handling the contracts. They are included in the fulfilment expenses within the “Insurance service result” (see note 6.a).

Expenses attributable to insurance contracts include the operating expenses incurred by the Group banking networks to distribute insurance contracts. Related costs are assessed on the basis of the commissions paid by the insurance entities to the internal distributors less their margin. These costs are excluded from “Operating expenses” to be included in the contracts fulfilment cash flows through the “Reclassification of expenses incurred by internal distributors attributable to insurance contracts”.

Operating costs not directly attributable to insurance contracts are included in “Operating expenses”.

Reconciliation by type and by function of insurance activities operating expenses is presented in note 6.b.

### 3.G COST OF RISK

The general model for impairment described in note 1.f.5 used by the Group relies on the following two steps:

- assessing whether there has been a significant increase in credit risk since initial recognition; and
- measuring impairment allowance as either 12-month expected credit losses or lifetime expected credit loss (*i.e.* loss expected at maturity).

Both steps rely on forward-looking information.

#### Significant increase in credit risk

At 31 December 2022, BNP Paribas revised its criteria for assessing the significant increase in credit risk in line with the recommendations issued by the European Banking Authority and the European Central Bank.

Previously, except for the consumer credit specialist business, the credit risk deterioration was mainly evaluated based on changes in the internal credit rating, an indicator of the average 1-year probability of default through the cycle. In order to fully consider forward-looking information, the new criteria use the probability of default to maturity, which is derived from the internal rating, incorporating the expected consequences of changes in macroeconomic scenarios, as the main indicator.

Under these new criteria, credit risk is assumed to have significantly increased, and the asset is classified in stage 2, if the probability of default to maturity of the instrument has increased at least threefold since its origination. This relative variation criterion is supplemented by an absolute variation criterion of the default probability of 400 basis points.

Furthermore, for all portfolios (except for the consumer credit specialist business):

- the facility is assumed to be in stage 1 when its 1-year “Point in Time” probability of default (PiT PD) is below 0.3% at the reporting date, since changes in probability of default due to credit downgrades in this zone are not material, and therefore not considered “significant”;
- when the 1-year PiT PD is greater than 20% at the reporting date, given the Group's credit issuance practices, the deterioration is considered significant, and the facility is classified in stage 2 (as long as the facility is not credit-impaired).

In the consumer credit specialist business, the existence of a payment incident during the last 12 months, potentially regularised, is considered to be an indication of significant increase in credit risk and the facility is therefore classified in stage 2.

The table below shows a comparison between the previous and the new criteria for assessing the significant increase in credit risk:

|                   |                              | Stage 1 presumption                          | Deterioration from origination leading to transfer to stage 2   | Stage 2 presumption                       |
|-------------------|------------------------------|--|---|---|
| Previous criteria | Retail                       | One year probability of default* < 0.25%     | $\frac{\text{One year probability of default}}{\text{One year probability of default at origination}} > 4$ or<br>Rating downgrade $\geq 6$ notches  | One year probability of default > 10%     |
|                   | Small and Medium Enterprises | Rating $\leq 4-$                             | Rating downgrade $\geq 6$ notches   | Rating $\geq 9+$                          |
|                   | Large Corporates             |  | Rating downgrade $\geq 3$ notches   |   |
| New criteria      |                              | One year PiT probability of default** < 0.3% | $\frac{\text{Lifetime PiT probability of default}}{\text{Lifetime PiT probability of default at origination}} > 3$ or<br>Variation of lifetime PiT probability of default since origination > 400 bps | One year PiT probability of default > 20% |

\* Probability of default through the cycle.

\*\* "Point in Time" (PiT) probability of default including forward-looking.

Credit risk is assumed to have increased significantly since initial recognition and the asset is classified in stage 2 in the event of late payment of more than 30 days or restructuring due to financial difficulties (as long as the facility is not credit-impaired). Since 31 December 2023, performing corporate clients placed under credit watch are systematically downgraded to stage 2.

In the first half of 2022, the internal ratings of the Russian counterparties (including the sovereign rating) were systematically downgraded to take into account recent events, thus leading to the transfer of their outstandings to stage 2. However, given the Group's limited level of exposure to this country, this deterioration had no significant effect on the cost of risk.

## Forward-Looking Information

The Group considers forward-looking information both when assessing significant increase in credit risk and when measuring Expected Credit Losses (ECL).

Regarding the measurement of expected credit losses, the Group has chosen to use 4 macroeconomic scenarios by geographic area covering a wide range of potential future economic conditions:

- a baseline scenario, consistent with the scenario used for budgeting;
- a favourable scenario, capturing situations where the economy performs better than anticipated;
- an adverse scenario, corresponding to the scenario used for the Group's quarterly stress tests;
- a severe scenario corresponding to a shock of magnitude greater than that of the adverse scenario.

The link between the macroeconomic scenarios and the ECL measurement is mainly achieved through a modelling of the probabilities of default and deformation of migration matrices based on internal rating (or risk parameter). The probabilities of default determined according to these scenarios are used to measure expected credit losses in each of these scenarios.

The Group's setup is broken down by sector to take into account the heterogeneity of sectoral dynamics when assessing the probability of default for corporates.

Forward-looking information is also considered when determining the significant deterioration in credit risk. As a matter of fact, the probabilities of default used as the basis for this assessment include forward-looking multi-scenario information in the same way as for the calculation of the expected losses.

The weight to be attributed to the expected credit losses calculated in each of the scenarios is defined as 50% for the baseline scenario, and:

- the weight of the three alternative scenarios is defined according to the position in the credit cycle. In this approach, the adverse scenario carries more weight in situations at the upper end of the cycle than those at the lower end of the cycle, in anticipation of a potential downturn in the economy;
- the weight of the favourable scenario is at least 10% and at most 40%;
- the total weight of adverse scenarios fluctuates symmetrically with the favourable also within a range of 10% to 40%; with a severe component representing 20% of this weight with a minimum weight of 5%.

When appropriate, the ECL measurement can take into account asset sale scenarios.

## Macroeconomic scenarios

The four macroeconomic scenarios are defined over a three-year projection horizon. They correspond to:

- a baseline scenario, which describes the most likely path of the economy over the projection horizon. This scenario is updated on a quarterly basis and is prepared by the Group Economic Research Department in collaboration with various experts within the Group. Projections are designed for each key market of the Group (France, Italy, Belgium, the United States, and the Eurozone) using key macroeconomic variables (Gross Domestic Product - GDP - and its components, unemployment rate, consumer prices, interest rates, foreign exchange rates, oil prices, real estate prices, *etc.*) which are key drivers for modeling risk parameters used in the stress test process;
- an adverse scenario, which describes the impact of the materialisation of some of the risks weighing on the baseline scenario, resulting in a much less favourable economic path than in the baseline scenario. The GDP shock is applied with varying magnitudes, but simultaneously, to the economies under consideration. Generally, these assumptions are broadly consistent with those proposed by the regulators. The calibration of shocks on other variables (*e.g.* unemployment, consumer prices, interest rates, *etc.*) is based on models and expert judgment;
- a severely adverse scenario, which is an aggravated version of the adverse scenario;
- a favourable scenario, which reflects the impact of the materialisation of some of the upside risks for the economy, resulting in a more favourable economic path. The favourable shock on GDP is deducted from the structural adverse shock on GDP in such a way that the probabilities of the two shocks are equal on average over the cycle. Other variables (*e.g.* unemployment, inflation, interest rates, *etc.*) are defined in the same way as in the adverse scenario.

The link between the macroeconomic scenarios and the measurement of the ECL is complemented by an approach allowing to take into account anticipation aspects not captured by the models in the generic approach. This is particularly the case when unprecedented events in the historical chronicle taken into account to build the models occur or are anticipated, or when the nature or amplitude of change in macroeconomic parameter calls into question past correlations. Thus, the situation of high inflation and the current and projected level of interest rates correspond to aspects not observed in the reference history. In this context, the Group has developed an approach to take into account the future economic outlook when assessing the financial strength of counterparties. This approach involves projecting the impact of higher interest rates on customers' financial ratios, notably considering their level of indebtedness. Credit ratings and associated probabilities of default are revalued based on these simulated financial ratios. This approach is also used to anticipate the effect of lower prices of commercial properties.

### Baseline scenario

Global activity decelerated in 2023, in a context of tight financial conditions and still high inflation. Global GDP is expected to grow by 2.8% on annual average (compared with 3.3% in 2022), mainly reflecting weaker developments among European economies. In the Eurozone, activity growth is expected to have decelerated to 0.5% in 2023 (while, at 30 June 2023, it was expected to reach 0.7%), reflecting much less dynamic domestic demand (both in terms of consumption and investment). The US economy has proved more resilient than initially anticipated and is assumed to grow by 2.3% in 2023 (while, at 30 June 2023, it was expected to grow by only 0.9%). In 2024, economic conditions are expected to be sluggish among advanced economies, with growth rates slightly below 1% in both the Eurozone and the US.

While inflation has receded at a quite rapid pace in the course of 2023, it has remained significantly above central bank targets in many countries. This high inflation environment has pushed central banks to implement the most pronounced monetary tightening in recent decades.

The main central banks (European Central Bank, US Federal Reserve) may have completed their monetary policy tightening cycle by the end of 2023. They are expected to keep their monetary stance broadly unchanged for a few months. Both short-term and long-term interest rates have reached levels not seen since the years 2000 and are expected to remain relatively high for some time. Tight financial conditions should thus continue to weigh on activity in 2024.

The graph below presents a comparison of Eurozone GDP projections used in the baseline scenario for the calculation of ECLs on 31 December 2023 and 31 December 2022.

#### EUROZONE GDP: INDEX BASE 100 AT THE FOURTH QUARTER OF 2019

#### MACROECONOMIC VARIABLES, BASELINE SCENARIO AT 31 DECEMBER 2023

| <i>(annual averages)</i>             | 2023  | 2024  | 2025  | 2026  |

### Adverse and severely adverse scenarios

The adverse and severely adverse scenarios are based on the assumption that certain downside risks will materialise, resulting in much less favourable economic paths than in the baseline scenario.

The following main risks are identified:

- **Geopolitical risks and globalisation developments.** Geopolitical risks have increased significantly in recent years, contributing to a fracturing of the global economy. Geopolitical tensions can weigh on the global economy through various channels, including shocks on commodity prices, financial markets, business confidence, supply chains and trade. Such developments are susceptible to lead simultaneously to higher inflation developments and weaker activity, complicating the task of central banks. The growing use of international sanctions also increases the possible magnitude of consequences of such events;
- **A greater impact of tight monetary conditions.** The marked tightening of monetary policy in response to high inflation over past quarters has led to much higher short-term and long-term interest rates than in previous years. This has already weighed on activity, notably through weaker developments in most interest rate sensitive sectors, in particular the real estate sector. These negative consequences could extend further given the usual delays between the increase in rates and its effect on the economy. In a more unfavourable economic context, tighter financial conditions, combined with weaker activity developments could lead to weaker trends (than assumed in the baseline scenario) regarding credit, investment, residential and commercial real estate prices, and lead to higher default rates;
- **More fragile public finances.** The fact that debt-to-GDP ratios are high increases risks related to public finances in an environment of high interest rates and weak growth. These combined developments could give birth in some countries to market tensions (widening sovereign bond spreads) and affect activity through several channels (higher interest rates, reduced government spending, higher taxes).

The adverse and severe scenarios assume the materialisation of these identified latent risks from the first quarter of 2024.

While downside risks are shared by the adverse and the severely adverse scenarios, the impacts are assumed to be markedly higher in the severely adverse scenario, due to both more pronounced direct shocks (e.g. higher commodity prices) and the development of a negative spiral between key driving factors (e.g. activity, public debt, bond yields, equity markets).

Among the considered countries, GDP levels in the adverse scenario stand between 7.8% and 11.1% lower than in the baseline scenario at the end of the shock period. In particular, this deviation reaches 9% on average in both the Eurozone and the United States.

In the severe scenario, GDP levels stand between 11.6% and 16.2% lower than in the baseline scenario at the end of the shock period. This deviation reaches 13.2% in both the Eurozone and the United States.

### Scenario weighting and cost of risk sensitivity

At 31 December 2023, the weight of the favourable scenario considered by the Group was 33%, and 12% for the adverse scenario and 5% for the severe scenario. At 31 December 2022, the weight of the favourable scenario was 34% and 16% for the adverse scenario (the severe scenario was introduced in the first half 2023).

The sensitivity of the amount of expected credit losses for all financial assets at amortised cost or at fair value through equity and credit commitments is assessed by comparing the estimated expected credit losses resulting from the weighting of the above scenarios with that resulting from each of the two alternative scenarios:

- an increase in ECL of 23%, or EUR 1,150 million according to the adverse scenario (22% at 31 December 2022);
- a decrease in ECL of 12%, or EUR 600 million according to the favourable scenario (7% at 31 December 2022).

### Post-model adjustments

Post-model adjustments are made when system limitations are identified in a particular context, for instance, in the case of insufficient statistical data to reflect the specific situation in the models. Post-model adjustments are also considered to take into account, where applicable, the consequences of climatic events on expected credit losses.

#### ▪ Adaptation of the ECL assessment process to factor in the specific nature of the health crisis:

Conservative adjustments were taken into account when the models used were based on indicators that show unusual levels in the context of the health crisis and the support programmes, such as the increase in deposits and the decrease in past due events for retail customers and entrepreneurs.

For the consumer credit specialist business, a conservative adjustment had been considered in 2020 for loans that benefitted from a moratorium. In 2021, this adjustment was reversed in connection with the satisfactory return to payment observed on these loans. However, a conservative adjustment was made to compensate for the atypical level of late payments.

These post-model adjustments were reversed in 2022.

▪ **Adaptation of the ECL assessment process to factor in the significant rise in inflation and in interest rates:**

Additional adjustments were made in 2022 to take into account the effects of inflation and interest rate hikes when this effect is not directly estimated by the models. For example, within the consumer credit specialist business, adjustments were considered for the categories of customers most sensitive to the gradual decline in the level of their net income.

Part of these adjustments were integrated into the models in 2022 and in the first half of 2023, leading to a decrease in the post-model adjustments.

All of these adjustments represent 4.5% of the total amount of expected credit losses at 31 December 2023, compared to 6.1% at 31 December 2022.

(1) Including disposals.

(2) Including amortisation.

In 2023, the volume of financial assets at amortised cost was stable compared to previous year and amounted to EUR 1,022 billion (see note 5.e *Financial assets at amortised cost*) of which EUR 877 billion in loans and advances to customers.

Loans and advances to customers classified in stage 1 increased by EUR 15 billion over the year, while stage 2 outstandings decreased by EUR 14 billion. This evolution mainly reflects a deterioration in activity during the first half of 2023 that was less pronounced than in the forecasts made for the 31 December 2022 closing. This situation is reflected both in the consequences of the change in the GDP scenarios, and in the effects of the interest rate increase projections on customers' financial ratios, thus leading to the return to stage 1 of outstandings previously transferred to stage 2 and to provision reversals without stage transfer. The systematic classification into stage 2, for the corporate category, of performing clients under credit watch as of 31 December 2023 led to limited transfers of outstandings from stage 1 to stage 2.

Besides, in relation to the deterioration in activity, transfers to stage 3 for EUR 8.6 billion were higher than in 2022, particularly for corporate clients (see note 5.f *Impaired financial assets*).

These combined effects led to a net reversal of impairment on stage 1 and 2 in 2023. The provisioning ratio for loans and advances to customers classified in stage 2 remained stable at 3.2% at 31 December 2023.

(1) Including disposals.

(2) Including amortisation.

## 3.H OTHER NET LOSSES FOR RISK ON FINANCIAL INSTRUMENTS

In 2023, the Group modified its accounting policy relating to the risk of loss of cash flows on financial instruments granted that are not linked to the counterparty's default, such as legal risks calling into question the validity or enforceability of such contracts.

The effect on expected cash flows due to these risks is now considered as a change in the contract's cash flows, in accordance with IFRS 9 B5.4.6, and is recorded as a decrease in the gross value of the asset. It was previously recognised separately in accordance with IAS 37 in "Provisions for risks and charges" (see note 5.n). Expected losses on derecognised financial instruments, as is the case when loans have been repaid, continue to be recognised in accordance with IAS 37.

The corresponding expected and realised cash flow losses are now presented in "Other net losses for risk on financial instruments".

In 2023, the expense thus recognised mainly related to mortgage loans in Poland amounting to EUR 450 million (compared with EUR 157 million at 31 December 2022, presented as "Revenues") and foreign currency loans issued by BNP Paribas Personal Finance amounting to EUR 221 million (compared with EUR 130 million at 31 December 2022, presented as "Revenues").

### 3.I NET GAIN ON NON-CURRENT ASSETS

| <i>In millions of euros</i>   | <b>Year to</b>      |   |
|---|---------------------|---|
|   | <b>31 Dec. 2023</b> | <b>31 Dec. 2022</b><br><i>restated according to IFRS 17 and 9</i> |
| Gain or loss on investments in consolidated undertakings (note 9.d) | 29                  | (257)   |
| Gain or loss on tangible and intangible assets                      | 139                 | 7   |
| Results from net monetary position                                  | (272)               | (3)   |
| <b>Net gain on non-current assets</b>                               | <b>(104)</b>        | <b>(253)</b>  |

According to IAS 29 in connection with the hyperinflation situation of the economy in Türkiye, the line "Results from net monetary positions" mainly includes the effect of the evolution of the consumer price index in Türkiye on the valuation of non-monetary assets and liabilities (-EUR 563 million) and on accrued income from the Turkish government bonds portfolio indexed to inflation and held by Turk Ekonomi Bankasi AS (+EUR 291 million, reclassified from interest margin) in 2023 (respectively - EUR 434 million and +EUR 431 million in 2022).

### 3.J CORPORATE INCOME TAX

| Impact of previously unrecognised deferred taxes (tax losses and temporary differences)                          | 432                         | -3.9%           |   |                 |
| Impact of the hyperinflation in Türkiye  | (202)                       | 1.9%            | (188)   | 1.6%            |
| Other items  | (327)                       | 2.9%            | 22  | -0.2%           |
| <b>Corporate income tax expense from continuing activities</b>   | <b>(3,266)</b>              | <b>29.3%</b>    | <b>(3,653)</b>  | <b>29.7%</b>    |
| <i>Current tax expense for the year to 31 December</i>   | <i>(3,063)</i>              |                 | <i>(2,844)</i>  |                 |
| <i>Deferred tax expense for the year to 31 December (note 5.i)</i>   | <i>(203)</i>                |                 | <i>(809)</i>  |                 |

(1) Restated for the share of profits in equity-method entities and goodwill impairment.

(2) Contribution to the Single Resolution Fund and other non-deductible banking taxes.

## NOTE 4 SEGMENT INFORMATION

---

The Group is composed of three operating divisions:

- **Corporate & Institutional Banking (CIB)** which covers Global Banking, Global Markets and Securities Services;
- **Commercial, Personal Banking & Services (CPBS)** which covers Commercial & Personal Banking in the Eurozone, with Commercial & Personal Banking in France (CPBF), Commercial & Personal Banking in Italy (BNL bc), Commercial & Personal Banking in Belgium (CPBB) and Commercial & Personal Banking in Luxembourg (CPBL); Commercial & Personal Banking outside the Eurozone, which is organised around Europe-Mediterranean, to cover Central and Eastern Europe and Türkiye. Lastly, it also covers specialised businesses (Arval, BNP Paribas Leasing Solutions, BNP Paribas Personal Finance, BNP Paribas Personal Investors and New Digital Businesses like Nickel, Floa, Lyf);
- **Investment & Protection Services (IPS)** which covers Insurance (BNP Paribas Cardif), Wealth and Asset Management (BNP Paribas Asset Management, BNP Paribas Wealth Management and BNP Paribas Real Estate), Management of the BNP Paribas Group's portfolio of unlisted and listed industrial and commercial investments (BNP Paribas Principal Investments).

Other Activities mainly include activities related to the Group's central treasury function, some costs related to cross-business projects, the residential mortgage lending business of Personal Finance (a significant part of which is managed in run-off), and certain investments.

They also include non-recurring items resulting from applying the rules on business combinations. In order to provide consistent and relevant economic information for each core business, the impact of amortising fair value adjustments recognised in the net equity of entities acquired and restructuring costs incurred in respect to the integration of entities, have been allocated to the "Other Activities" segment. The same applies to transformation, adaptation and IT reinforcement costs relating to the Group's savings programmes.

In addition, Other Activities carry the impact, related to the application of IFRS 17, of the reclassification as a deduction from revenues of the operating expenses "attributable to insurance contracts" of the Group's business lines (other than Insurance) that distribute insurance contracts (*i.e.* internal distributors), in order not to disrupt the readability of their financial performance. This is also the case for the impact of the volatility on the financial result generated by the recognition at fair value through profit or loss of assets backing insurance entities' equity or non-participating contracts. In the event of divestment connected to this portfolio, the realised gains or losses are allocated to the revenues of the Insurance business line.

Inter-segment transactions are conducted at arm's length. The segment information presented comprises agreed inter-segment transfer prices.

The capital allocation is carried out on the basis of risk exposure, taking into account various conventions relating primarily to the capital requirement of the business as derived from the risk-weighted asset calculations required under capital adequacy rules. Normalised equity income by segment is determined by attributing to each segment the income of its allocated equity. The capital allocation to segments is based on a minimum of 11% of weighted assets. The breakdown of balance sheet by core business follows the same rules as the breakdown of the profit or loss by core business.

In order to be comparable with the presentation format used since 1 January 2023, the year ended 31 December 2022 of this note has been restated for the following effects as if they had occurred on 1 January 2022.

- Following the sale of Bank of the West on 1 February 2023, it was decided to apply IFRS 5 standard relating to groups of assets and liabilities held for sale to the management income. As a result, the contribution of Bank of the West in 2022 and the capital gain related to the sale in 2023 are both presented separately. Accordingly, in the profit and loss account, profits and losses are reclassified on a separate line "Net income from discontinued activities".
- Since 1 January 2023, the Group has applied IFRS 17 "Insurance contracts", as well as IFRS 9 for its insurance entities (see note 1.a). The main effects are:
  - operating expenses deemed "attributable to insurance contracts" are recognised in deduction of revenues and no longer booked in operating expenses. These accounting entries apply only to Insurance and to Group entities (other than in the Insurance business line) that distribute insurance contracts (*i.e.* internal distributors) and have no impact on gross operating income;
  - the impact of the volatility on the financial result generated by the recognition at fair value through profit or loss of assets backing insurance entities' equity and non-participating contracts is presented in "Other Activities". Accordingly, "Other Activities" revenues reflect, for 2022, the impact of volatility relating to the unfavourable market context;
  - capital gains from the Savings activity are now integrated in the contractual service margin and are recognised over the entire duration of insurance contracts. Accordingly, Insurance Revenues recorded a decrease for 2022 due to the impact of capital gains which offset the impact of volatility on the 2022 financial result.
- Internal transfers of activities and results were made, particularly at Global Markets (following BNP Paribas' acquisition of Exane, which closed on 13 July 2021) and within Commercial & Personal Banking in Belgium (*e.g.* transfer of some individual clients, SMEs in particular to the corporate segment in relation with the commercial reorganisation). These changes have no impact on the Group's results as a whole but only on their analytical breakdown in 2022.

Information by business segment relating to goodwill is presented in note 5.m *Goodwill*.

### Information by geographic area

The geographic split of segment results, assets and liabilities is based on the region in which they are recognised for accounting purposes, adjusted as per the managerial origin of the business activity. It does not necessarily reflect the counterparty's nationality or the location of operational businesses.

## NOTE 5 NOTES TO THE BALANCE SHEET AT 31 DECEMBER 2023

### 5.A FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS

#### Financial assets and liabilities at fair value through profit or loss

Financial assets and financial liabilities at fair value through profit or loss consist of held-for-trading transactions - including derivatives, of certain liabilities designated by the Group as at fair value through profit or loss at the time of issuance and of non-trading instruments whose characteristics prevent their accounting at amortised cost or at fair value through equity.

Detail of these assets and liabilities is provided in note 5.d.

#### Financial liabilities designated as at fair value through profit or loss

Financial liabilities at fair value through profit or loss mainly consist of issued debt securities, originated and structured on behalf of customers, where the risk exposure is managed in combination with the hedging strategy. These types of issued debt securities contain significant embedded derivatives, which changes in value may be compensated by changes in the value of economic hedging derivatives.

The redemption value of debt issued and designated as at fair value through profit or loss at 31 December 2023 was EUR 89,910 million (EUR 71,721 million at 31 December 2022).

#### Other financial assets measured at fair value through profit or loss

Other financial assets at fair value through profit or loss are financial assets not held for trading:

- debt instruments that do not meet the criteria defined by IFRS 9 to be classified as financial instruments at “fair value through equity” or at “amortised cost”:
  - their business model is not to “collect contractual cash flows” nor “collect contractual cash flows and sell the instruments”, and/or
  - their cash flows are not solely repayments of principal and interest on the principal amount outstanding;

- equity instruments that the Group did not choose to classify as at “fair value through equity”.

## Derivative financial instruments

The majority of derivative financial instruments held for trading are related to transactions initiated for trading purposes. They may result from market-making or arbitrage activities. BNP Paribas actively trades in derivatives. Transactions include trades in “ordinary” instruments such as credit default swaps, and structured transactions with complex risk profiles tailored to meet the needs of its customers. The net position is in all cases subject to limits.

Some derivative instruments are also contracted to hedge financial assets or financial liabilities for which the Group has not documented a hedging relationship, or which do not qualify for hedge accounting under IFRS.

Interest rate risk and foreign exchange risk management strategies are described in chapter 5 – Pillar 3 of this amendment to the 2022 Universal Registration Document (section 5.7 – *Market risk – Market risk related to banking activities*). Quantitative information related to foreign currency borrowings used for net investment hedges is also mentioned in this chapter.

The table below presents the detail of fair value hedge relationships for identified financial instruments and portfolios of financial instruments that are continuing at 31 December 2023:

|   | Hedging instruments     |                            |                            |   | Hedged instruments      |   |                             |   |
|---|-------------------------|----------------------------|----------------------------|---|-------------------------|---|-----------------------------|---|
|   |                         |                            |                            | Cumulated changes in fair value used as the basis for recognising ineffectiveness | Carrying amount - asset | Cumulated changes in fair value - asset | Carrying amount - liability | Cumulated changes in fair value - liability |
| <i>In millions of euros, at 31 December 2023</i>  | <b>Notional amounts</b> | <b>Positive fair value</b> | <b>Negative fair value</b> |   |                         |   |                             |   |

(1) Are included in this section the notional amounts of hedging derivatives and of swaps that reverse the interest rate positions, thus reducing the hedge relationship, when the hedged item still exists, for respectively EUR 121,183 million for derivatives hedging loans and receivables and EUR 103,261 million for derivatives hedging deposits.

An asset or a liability or set of assets and liabilities, can be hedged over several periods of time with different derivative financial instruments. Besides, some hedges are achieved by the combination of two derivative instruments. In this case, the notional amounts add up and their total amount is higher than the hedged amount. The first situation is observed more particularly for interest rate risk hedged portfolios and the second for hedges of issued debt securities.

As regards discontinued fair value hedge relationships where the derivative contract was terminated, the cumulated amount of revaluation remaining to be amortised over the residual life of the hedged instruments amounts to EUR 1,143 million in assets at 31 December 2023, and to -EUR 166 million in liabilities, for hedges of portfolios of financial instruments. At 31 December 2022, these amounts were EUR 1,399 million in assets and -EUR 138 million in liabilities.

Regarding hedges of identified instruments, the cumulated amount of revaluation remaining to be amortised over the residual life of the hedged instruments amounts to EUR 105 million in assets at 31 December 2023. At 31 December 2022, this amount was EUR 111 million in assets.

The notional amount of cash flow hedge derivatives is EUR 241,125 million at 31 December 2023. Changes in assets and liabilities recognised directly in equity amount to EUR 189 million. At 31 December 2022, the notional amount of cash flow hedge derivatives was EUR 213,866 million and changes in assets and liabilities recognised directly in equity amounted to - EUR 245 million.

The tables below present the notional amounts of hedging derivatives by maturity at 31 December 2023 and at 31 December 2022:

| <i>In millions of euros, at 31 December 2023</i> | Maturity date    |                       |                |                  |

| <b>TOTAL FINANCIAL ASSETS AT FAIR VALUE THROUGH EQUITY</b> | <b>52,549</b> | <b>182</b>   | <b>38,066</b> | <b>(243)</b> |

Debt securities at fair value through equity include EUR 109 million classified as stage 3 at 31 December 2023 (EUR 108 million at 31 December 2022). For these securities, the credit impairment recognised in the profit and loss account has been charged to the negative changes in value recognised in equity for EUR 102 million at 31 December 2023 (EUR 100 million at 31 December 2022).

The option to recognise certain equity instruments at fair value through equity was retained in particular for shares held through strategic partnerships and shares that the Group is required to hold in order to carry out certain activities.

During the year ended 31 December 2023, the Group sold several of these investments and a net gain of EUR 9 million was transferred to "retained earnings" (EUR 267 million for the year ended 31 December 2022).

## 5.D MEASUREMENT OF THE FAIR VALUE OF FINANCIAL INSTRUMENTS

### Valuation process

BNP Paribas has retained the fundamental principle that it should have a unique and integrated processing chain for producing and controlling the valuations of financial instruments that are used for the purpose of daily risk management and financial reporting. All these processes are based on a common economic valuation which is a core component of business decisions and risk management strategies.

Economic value is composed of mid-market value, to which valuation adjustments are made.

Mid-market value is derived from external data or valuation techniques that maximise the use of observable and market-based data. Mid-market value is a theoretical additive value which does not take account of i) the direction of the transaction or its impact on the existing risks in the portfolio, ii) the nature of the counterparties, and iii) the aversion of a market participant to particular risks inherent in the instrument, the market in which it is traded, or the risk management strategy.

Valuation adjustments take into account valuation uncertainty and include market and credit risk premiums to reflect costs that could be incurred in case of an exit transaction in the principal market.

Fair value generally equals the economic value, subject to limited adjustments, such as own credit adjustments, which are specifically required by IFRS standards.

The main valuation adjustments are presented in the section below.

### Valuation adjustments

Valuation adjustments retained by BNP Paribas for determining fair values are as follows:

**Bid/offer adjustments:** the bid/offer range reflects the additional exit cost for a price taker and symmetrically the compensation sought by dealers to bear the risk of holding the position or closing it out by accepting another dealer's price.

BNP Paribas assumes that the best estimate of an exit price is the bid or offer price, unless there is evidence that another point in the bid/offer range would provide a more representative exit price.

**Input uncertainty adjustments:** when the observation of prices or data inputs required by valuation techniques is difficult or irregular, an uncertainty exists on the exit price. There are several ways to gauge the degree of uncertainty on the exit price such as measuring the dispersion of the available price indications or estimating the possible ranges of the inputs to a valuation technique.

**Model uncertainty adjustments:** these relate to situations where valuation uncertainty is due to the valuation technique used, even though observable inputs might be available. This situation arises when the risks inherent in the instruments are different from those available in the observable data, and therefore the valuation technique involves assumptions that cannot be easily corroborated.

**Future Hedging Costs adjustments (FHC):** this adjustment applies to positions that require dynamic hedging throughout their lifetime leading to additional bid/offer costs. Calculation methods capture these expected costs in particular based on the optimal hedging frequency.

**Credit valuation adjustment (CVA):** the CVA adjustment applies to valuations and market quotations whereby the credit worthiness of the counterparty is not reflected. It aims to account for the possibility that the counterparty may default and that BNP Paribas may not receive the full fair value of the transactions.

In determining the cost of exiting or transferring counterparty risk exposures, the relevant market is deemed to be an inter-dealer market. However, the determination of CVA remains judgemental due to i) the possible absence or lack of price discovery in the inter-dealer market, ii) the influence of the regulatory landscape relating to counterparty risk on the market participants' pricing behaviour and iii) the absence of a dominant business model for managing counterparty risk.

The CVA model is grounded on the same exposures as those used for regulatory purposes. The model attempts to estimate the cost of an optimal risk management strategy based on i) implicit incentives and constraints inherent in the regulations in force and their evolutions, ii) market perception of the probability of default, and iii) default parameters used for regulatory purposes.

**Funding valuation adjustment (FVA):** when valuation techniques are used for the purpose of deriving fair value, funding assumptions related to the future expected cash flows are an integral part of the mid-market valuation, notably through the use of appropriate discount rates. These assumptions reflect what the Bank anticipates as being the effective funding conditions of the instrument that a market participant would consider. This notably takes into account the existence and terms of any collateral agreement. In particular, for non- or imperfectly collateralised derivative instruments, they include an explicit adjustment to the interbank interest rate.

**Own-credit valuation adjustment for debts (OCA) and for derivatives (debit valuation adjustment - DVA):** OCA and DVA are adjustments reflecting the effect of credit worthiness of BNP Paribas, on respectively the value of debt securities designated as at fair value through profit or loss and derivatives. Both adjustments are based on the expected future liability profiles of such instruments. The own credit worthiness is inferred from the market-based observation of the relevant bond issuance levels. The DVA adjustment is determined after taking into account the Funding Valuation Adjustment (FVA).

Thus, the carrying value of debt securities designated as at fair value through profit or loss is decreased by EUR 198 million at 31 December 2023, compared with a decrease in value of EUR 160 million at 31 December 2022, *i.e.* a +EUR 38 million variation recognised directly in equity that will not be reclassified to profit or loss.

## Instrument classes and classification within the fair value hierarchy for assets and liabilities measured at fair value

As explained in the summary of significant accounting policies (note 1.f.10), financial instruments measured at fair value are categorised into a fair value hierarchy consisting of three levels.

31 December 2023

| In millions of euros, at                    | Financial instruments held for trading |                  |            |                | Instruments at fair value through profit or loss not held for trading |               |               |               | Financial assets at fair value through equity |              |            |               |
|---|--|------------------|------------|----------------|---|---------------|---------------|---------------|---|--------------|------------|---------------|
|   | Level 1                                | Level 2          | Level 3    | Total          | Level 1   | Level 2       | Level 3       | Total         | Level 1                                       | Level 2      | Level 3    | Total         |
| <b>Securities</b>                           | <b>171,172</b>                         | <b>30,482</b>    | <b>571</b> | <b>202,225</b> | <b>1,205</b>  | <b>1,079</b>  | <b>7,125</b>  | <b>9,409</b>  | <b>44,707</b>                                 | <b>7,095</b> | <b>747</b> | <b>52,549</b> |

Transfers between levels may occur when an instrument fulfils the criteria defined, which are generally market and product dependent. The main factors influencing transfers are changes in the observation capabilities, passage of time, and events during the transaction lifetime. The timing of recognising transfers is determined at the beginning of the reporting period.

During the year 2023, the main transfers between Level 1 and Level 2 are related to the reclassification of equity derivatives from Level 1 to Level 2 due to the reassessment of the observable nature of the associated valuation parameters.

## Description of main instruments in each level

The following section provides a description of the instruments in each level in the hierarchy. It describes notably instruments classified in Level 3 and the associated valuation methodologies.

For main trading book instruments and derivatives classified in Level 3, further quantitative information is provided about the inputs used to derive fair value.

### Level 1

This level encompasses all derivatives and securities that are quoted continuously in active markets.

Level 1 includes notably equity securities and liquid bonds, shortselling of these instruments, derivative instruments traded on organised markets (futures, options, *etc.*). It includes shares of funds and UCITS, for which the net asset value is calculated on a daily basis, as well as debt representative of shares of consolidated funds held by third parties.

## Level 2

**The Level 2 stock of securities** is composed of securities which are less liquid than the Level 1 bonds. They are predominantly corporate debt securities, government bonds, mortgage-backed securities, fund shares and short-term securities such as certificates of deposit. They are classified in Level 2 notably when external prices for the same security can be regularly observed from a reasonable number of market makers that are active in this security, but these prices do not represent directly tradable prices. This comprises amongst other, consensus pricing services with a reasonable number of contributors that are active market makers as well as indicative runs from active brokers and/or dealers. Other sources, such as primary issuance market, may also be used where relevant.

**Repurchase agreements** are classified predominantly in Level 2. The classification is primarily based on the observability and liquidity of the repo market, depending on the underlying collateral and the maturity of the repo transaction.

**Debts issued** designated as at fair value through profit or loss, are classified in the same level as the one that would apply to the embedded derivative taken individually. The issuance spread is considered observable.

**Derivatives** classified in Level 2 comprise mainly the following instruments:

- vanilla instruments such as interest rate swaps, caps, floors and swaptions, credit default swaps, equity/foreign exchange (FX)/commodities forwards and options;
- structured derivatives for which model uncertainty is not significant such as exotic FX options, mono- and multi-underlying equity/funds derivatives, single curve exotic interest rate derivatives and derivatives based on structured rates.

The above derivatives are classified in Level 2 when there is a documented stream of evidence supporting one of the following:

- fair value is predominantly derived from prices or quotations of other Level 1 and Level 2 instruments, through standard market interpolation or stripping techniques whose results are regularly corroborated by real transactions;
- fair value is derived from other standard techniques such as replication or discounted cash flows that are calibrated to observable prices, that bear limited model risk and enable an effective offset of the risks of the instrument through trading Level 1 or Level 2 instruments;
- fair value is derived from more sophisticated or proprietary valuation techniques but is directly evidenced through regular back-testing using external market-based data.

Determining whether an over-the-counter (OTC) derivative is eligible for Level 2 classification involves judgement. Consideration is given to the origin, transparency and reliability of external data used, and the amount of uncertainty associated with the use of models. It follows that the Level 2 classification criteria involve multiple analysis axis within an “observability zone” whose limits are determined by i) a predetermined list of product categories and ii) the underlying and maturity bands. These criteria are regularly reviewed and updated, together with the applicable valuation adjustments, so that the classification by level remains consistent with the valuation adjustment policy.

## Level 3

**Level 3 securities** of the trading book mainly comprise units of funds and unlisted equity shares measured at fair value through profit or loss or through equity.

Unlisted private equities are systematically classified as Level 3, with the exception of UCITS with a daily net asset value, which are classified in Level 1 of the fair value hierarchy.

Shares and other unlisted variable income securities in Level 3 are valued using one of the following methods: a share of revalued net book value, multiples of comparable companies, future cash flow method, multi-criteria approach.

**Repurchase agreements, mainly long-term or structured repurchase agreements on corporate bonds and ABSs:** the valuation of these transactions requires proprietary methodologies given the bespoke nature of the transactions and the lack of activity and price discovery in the long-term repo market. The curves used in the valuation are corroborated using available data such as recent long-term repo trade data and price enquiry data. Valuation adjustments applicable to these exposures are commensurate with the degree of uncertainty inherent in the modelling choices and amount of data available.

**Debts issued** designated as at fair value through profit or loss, are classified in the same level as the one that would apply to the embedded derivative taken individually. The issuance spread is considered observable.

### Derivatives

**Vanilla derivatives** are classified in Level 3 when the exposure is beyond the observation zone for rate curves or volatility surfaces, or relates to less liquid markets such as tranches on old credit index series or emerging markets interest rates markets. The main instruments are:

- **Interest rate derivatives:** exposures mainly comprise swap products in less liquid currencies. Classification is driven by the lower liquidity of some maturities, while observation capabilities through consensus may be available. The valuation technique is standard, and uses external market information and extrapolation techniques;
- **Credit derivatives (CDS):** exposures mainly comprise CDSs beyond the maximum observable maturity and, to a much lesser extent, CDSs on illiquid or distressed names and CDSs on loan indices. Classification is driven by the lack of liquidity while observation capabilities may be available notably through consensus. Level 3 exposures also comprise CDS and Total Return Swaps (TRS) positions on securitised assets. These are priced along the same modelling techniques as the underlying bonds, taking into consideration the funding basis and specific risk premium;

- **Equity derivatives:** exposures essentially comprise long dated forward or volatility products or exposures where there is a limited market for optional products. The marking of the forward curves and volatility surfaces beyond the maximum observable maturity relies on extrapolation techniques. However, when there is no market for model input, volatility or forward is generally determined on the basis of proxy or historical analysis.

Similarly, long-term transactions on equity baskets are also classified in Level 3, based on the absence of equity correlation observability on long maturities.

These vanilla derivatives are subject to valuation adjustments linked to uncertainty on liquidity, specialised by nature of underlying and liquidity bands.

**Structured derivatives** classified in Level 3 predominantly comprise hybrid products (FX/Interest Rates hybrids, Equity hybrids), credit correlation products, prepayment-sensitive products, some stock basket optional products and some interest rate optional instruments. The main exposures are described below, with insight into the related valuation techniques and on the source of uncertainty:

- **Structured interest rate options** are classified in Level 3 when they involve currencies where there is not sufficient observation or when they include a quanto feature where the pay-off is measured with a forex forward fixed rate (except for the main currencies). Long term structured derivatives are also classified in Level 3;
- **Hybrid FX/Interest rate products** essentially comprise a specific product family known as Power Reverse Dual Currency (PRDC) when there is material valuation uncertainty. When valuation of PRDCs requires sophisticated modelling of joint behaviour of FX and interest rate, and is notably sensitive to the unobservable FX/interest rate correlations, such products are classified as Level 3. PRDCs valuations are corroborated with recent trade data and consensus data;
- **Securitisation swaps** mainly comprise fixed-rate swaps, cross-currency or basis swaps whose notional is indexed to the prepayment behaviour of some underlying portfolio. The estimation of the maturity profile of securitisation swaps is corroborated by statistical estimates using external historical data;
- **Forward volatility options** are generally products whose pay-off is indexed to the future variability of a rate index such as volatility swaps. These products involve material model risk as it is difficult to infer forward volatility information from market-traded instruments. The valuation adjustment framework is calibrated to the uncertainty inherent in the product, and to the range of uncertainty from the existing external consensus data;
- **Inflation derivatives** classified in Level 3 mainly comprise swap products on inflation indices that are not associated with a liquid indexed bond market, optional products on inflation indices (such as caps and floors) and other forms of inflation indices involving optionality on the inflation indices or on the inflation annual rate. Valuation techniques used for inflation derivatives are predominantly standard market models. Proxy techniques are used for a few limited exposures. Although the valuations are corroborated through monthly consensus data, these products are classified as Level 3 due to their lack of liquidity and some uncertainties inherent in the calibration;
- the valuation of **bespoke CDOs** requires correlation of default events when there is material valuation uncertainty. This information is inferred from the active index tranche market through a proprietary projection technique and involves proprietary extrapolation and interpolation techniques. Multi-geography CDOs further require an additional correlation assumption. Finally, the bespoke CDO model also involves proprietary assumptions and parameters related to the dynamic of the recovery factor. CDO modelling is calibrated on the observable index tranche markets, and is regularly back-tested against consensus data on standardised pools. The uncertainty arises from the model risk associated with the projection and geography mixing technique, and the uncertainty of associated parameters, together with the recovery modelling;
- **N to Default baskets** are other forms of credit correlation products, modelled through standard copula techniques. The main inputs required are the pair-wise correlations between the basket components which can be observed in the consensus and the transactions. Linear baskets are considered observable;
- **Equity and equity-hybrid correlation products** are instruments whose pay-off is dependent on the joint behaviour of a basket of equities/indices leading to a sensitivity of the fair value measurement to the correlation amongst the basket components. Hybrid versions of these instruments involve baskets that mix equity and non-equity underlyings such as commodity indices, or foreign exchange rates. Only a subset of the Equity/index correlation matrix is regularly observable and traded, while most cross-asset correlations are not active. Therefore, classification in Level 3 depends on the composition of the basket, the maturity, and the hybrid nature of the product. The correlation input is derived from a proprietary model combining historical estimators, and other adjustment factors, that are corroborated by reference to recent trades or external data. The correlation matrix is essentially available from consensus services, and when a correlation between two underlying instruments is not available, it might be obtained from extrapolation or proxy techniques.

These structured derivatives are subject to specific valuation adjustments to cover uncertainties linked to liquidity, parameters and model risk.

#### **Valuation adjustments (CVA, DVA and FVA)**

The valuation adjustment for counterparty credit risk (CVA), own-credit risk for derivatives (DVA) and the explicit funding valuation adjustment (FVA) are deemed to be unobservable components of the valuation framework and therefore classified in Level 3. This does not impact, in general cases, the classification of individual transactions into the fair value hierarchy. However, a specific process allows to identify individual deals for which the marginal contribution of these adjustments and related uncertainty is significant and justifies classifying these transactions in Level 3.

The table below provides the range of values of main unobservable inputs for the valuation of Level 3 financial instruments. The ranges displayed correspond to a variety of different underlying instruments and are meaningful only in the context of the

valuation technique implemented by BNP Paribas. The weighted averages, where relevant and available, are based on fair values, nominal amounts or sensitivities.

The main unobservable parameters used for the valuation of debt issued in Level 3 are equivalent to those of their economic hedge derivative. Information on those derivatives, displayed in the following table, is also applicable to these debts.

| Risk classes              | Balance sheet valuation<br>(in millions of euros) |           | Main product types composing the Level 3 stock within the risk class   | Valuation technique used for the product types considered   | Main unobservable inputs for the product types considered   | Range of unobservable input across Level 3 population considered | Weighted average     |
|---------------------------|---|-----------|--|---|---|--|----------------------|
|                           | Asset   | Liability |  |   |   |  |                      |
| Repurchase agreements     | 188   | 632       | Long-term repo and reverse-repo agreements   | Proxy techniques, based amongst other on the funding basis of a benchmark bond pool that is actively traded and representative of the repo underlying | Long-term repo spread on private bonds (High Yield, High Grade) and on ABSs                       | 0 bp to 152 bp   | 30 bp <sup>(a)</sup> |
| Interest rate derivatives | 1,384   | 1,928     | Hybrid Forex/Interest rate derivatives   | Hybrid Forex interest rate option pricing model   | Correlation between FX rate and interest rates. Main currency pairs are EUR/JPY, USD/JPY, AUD/JPY | -16% to 52%  | 8% <sup>(a)</sup>    |
|                           |   |           | Hybrid inflation rates/Interest rate derivatives   | Hybrid inflation interest rate option pricing model   | Correlation between interest rates and inflation rates mainly in Europe.                          | 10% to 32%   | 29%                  |
|                           |   |           | Floors and caps on inflation rate or on the cumulative inflation (such as redemption floors), predominantly on European and French inflation | Inflation pricing model   | Volatility of cumulative inflation  | 1.3% to 11.7%  | <sup>(b)</sup>       |
|                           |   |           |  |   | Volatility of the year-on-year inflation rate   | 0.5% to 2.8%   |                      |
|                           |   |           | Forward Volatility products such as volatility swaps, mainly in euros  | Interest rate option pricing model  | Forward volatility of interest rates  | 0.5% to 1.0%   | <sup>(b)</sup>       |
|                           |   |           | Balance-guaranteed fixed rate, basis or cross currency swaps, predominantly indexed on European collateral pools                             | Prepayment modelling<br>Discounted cash flows   | Constant prepayment rates   | 0% to 18%  | 2% <sup>(a)</sup>    |
| Credit derivatives        | 764   | 1,623     | Collateralised Debt Obligations and index tranches for inactive index series   | Base correlation projection technique and recovery modelling  | Base correlation curve for bespoke portfolios   | 29% to 99%   | <sup>(b)</sup>       |
|                           |   |           |  |   | Recovery rate variance for single name underlyings  | 0% to 25%  | <sup>(b)</sup>       |
|                           |   |           | N-to-default baskets   | Credit default model  | Default correlation   | 48% to 84%   | 49% <sup>(a)</sup>   |
|                           |   |           | Single name Credit Default Swaps (other than CDS on ABSs and loans indices)  | Stripping, extrapolation and interpolation  | Credit default spreads beyond observation limit (10 years)  | N.A.   | 99 bp                |
|                           |   |           |  |   | Illiquid credit default spread curves (across main  | 3 bp to 2,824 bp <sup>(1)</sup>                                  | 76 bp <sup>(c)</sup> |

| Risk classes       | Balance sheet valuation<br>(in millions of euros) |           | Main product types composing the Level 3 stock within the risk class | Valuation technique used for the product types considered | Main unobservable inputs for the product types considered<br><br>tenors) | Range of unobservable input across Level 3 population considered | Weighted average   |
|--------------------|---|-----------|--|---|--|--|--------------------|
|                    | Asset   | Liability |  |   |  |  |                    |
| Equity derivatives | 2,875   | 6,146     | Simple and complex derivatives on multi-underlying baskets on stocks | Various volatility option models                          | Unobservable equity volatility   | 0% to 122% <sup>(2)</sup>  | 30% <sup>(d)</sup> |
|                    |   |           |  |   | Unobservable equity correlation  | 15% to 98%   | 50% <sup>(c)</sup> |

(1) The upper bound of the range relates to building, retail and services sector issuers that represent an insignificant portion of the balance sheet (CDSs with illiquid underlying instruments).

(2) The upper part of the range relates to 7 equities representing a non-material portion of the balance sheet on options with equity underlying instruments. Including these inputs, the upper bound of the range would be around 196%.

(a) Weights based on relevant risk axis at portfolio level.

(b) No weighting, since no explicit sensitivity is attributed to these inputs.

(c) Weighting is not based on risks, but on an alternative methodology in relation with the Level 3 instruments (present value or notional).

(d) Simple averaging.

## Table of movements in level 3 financial instruments

For Level 3 financial instruments, the following movements occurred during the year ended 2023:

|   | Financial assets  |   |   |                | Financial liabilities   |  |                 |
|---|---|---|---|----------------|---|--|-----------------|
|   | Financial instruments at fair value through profit or loss held for trading | Financial instruments at fair value through profit or loss not held for trading | Financial assets at fair value through equity | TOTAL          | Financial instruments at fair value through profit or loss held for trading | Financial instruments designated as at fair value through profit or loss | TOTAL           |
| <i>In millions of euros</i>   |   |   |   |                |   |  |                 |
| <b>AT 31 DECEMBER 2022</b>  |   |   |   |                |   |  |                 |
| <i>restated according to IFRS 17 and 9</i>  | <b>7,041</b>  | <b>8,684</b>  | <b>944</b>                                    | <b>16,669</b>  | <b>(10,079)</b>   | <b>(19,199)</b>  | <b>(29,278)</b> |
| Purchases   | 812   | 1,442   | 154   | <b>2,408</b>   |   |  | -               |
| Issues  |   |   |   | -              |   | (5,229)  | <b>(5,229)</b>  |
| Sales   | (903)   | (1,791)   | (162)   | <b>(2,856)</b> | 39  |  | <b>39</b>       |
| Settlements <sup>(1)</sup>  | (3,019)   | (98)  | (66)  | <b>(3,183)</b> | (3,416)   | 1,355  | <b>(2,061)</b>  |
| Transfers to Level 3  | 2,797   | 36  |   | <b>2,833</b>   | (1,799)   | (359)  | <b>(2,158)</b>  |
| Transfers from Level 3  | (3,347)   |   | (90)  | <b>(3,437)</b> | 2,527   | 429  | <b>2,956</b>    |
| Gains (or losses) recognised in profit or loss with respect to transactions expired or terminated during the period | 981   | 486   | (1)   | <b>1,466</b>   | (3,421)   | (757)  | <b>(4,178)</b>  |
| Gains (or losses) recognised in profit or loss with respect to unexpired instruments at the end of the period       | 2,233   | (5)   |   | <b>2,228</b>   | 5,669   | (12)   | <b>5,657</b>    |
| Items related to exchange rate movements  | 3   | (67)  | (18)  | <b>(82)</b>    | (3)   |  | <b>(3)</b>      |
| Changes in fair value of assets and liabilities recognised in equity  |   |   | (14)  | <b>(14)</b>    |   |  | -               |
| <b>AT 31 DECEMBER 2023</b>  | <b>6,598</b>  | <b>8,687</b>  | <b>747</b>                                    | <b>16,032</b>  | <b>(10,483)</b>   | <b>(23,772)</b>  | <b>(34,255)</b> |

(1) For the assets, includes redemptions of principal, interest payments as well as cash inflows and outflows relating to derivatives. For the liabilities, includes principal redemptions, interest payments as well as cash inflows and outflows relating to derivatives the fair value of which is negative.

Transfers out of Level 3 of derivatives include mainly the update of the observability tenor of certain yield curves, and of market parameters related to repurchase agreements and credit transactions but also the effect of derivatives becoming only or mainly sensitive to observable inputs due to the shortening of their lifetime.

Transfers into Level 3 of instruments at fair value reflect the effect of the regular update of the observability zones.

Transfers have been reflected as if they had taken place at the beginning of the reporting period.

The Level 3 financial instruments may be hedged by other Level 1 and Level 2 instruments, the gains and losses of which are not shown in this table. Consequently, the gains and losses shown in this table are not representative of the gains and losses arising from management of the net risk on all these instruments.

### Sensitivity of fair value to reasonably possible changes in level 3 assumptions

The following table summarises those financial assets and financial liabilities classified as Level 3 for which alternative assumptions in one or more of the unobservable inputs would change fair value significantly.

The amounts disclosed are intended to illustrate the range of possible uncertainty inherent to the judgement applied when estimating Level 3 parameters, or when selecting valuation techniques. These amounts reflect valuation uncertainties that prevail at the measurement date, and even though such uncertainties predominantly derive from the portfolio sensitivities that prevailed at that measurement date, they are not predictive or indicative of future movements in fair value, nor do they represent the effect of market stress on the portfolio value.

In estimating sensitivities, BNP Paribas either remeasured the financial instruments using reasonably possible inputs, or applied assumptions based on the valuation adjustment policy.

For the sake of simplicity, the sensitivity on cash instruments that are not relating to securitised instruments was based on a uniform 1% shift in the price. More specific shifts were however calibrated for each class of the Level 3 securitised exposures, based on the possible ranges of the unobservable inputs.

For derivative exposures, the sensitivity measurement is based on the credit valuation adjustment (CVA), the explicit funding valuation adjustment (FVA) and the parameter and model uncertainty adjustments related to Level 3.

Regarding the credit valuation adjustment (CVA) and the explicit funding valuation adjustment (FVA), the uncertainty was calibrated based on prudent valuation adjustments described in the technical standard "Prudent Valuation" published by the European Banking Authority. For other valuation adjustments, two scenarios were considered: a favourable scenario where all or a portion of the valuation adjustment is not considered by market participants, and an unfavourable scenario where market participants would require twice the amount of valuation adjustments considered by BNP Paribas for entering into a transaction.

|   | 31 December 2022           |                                     |                            |                            |
|---|----------------------------|-------------------------------------|----------------------------|----------------------------|
|   | 31 December 2023           | restated according to IFRS 17 and 9 |                            |                            |
| <i>In millions of euros, at</i>                       | Potential impact on income | Potential impact on equity          | Potential impact on income | Potential impact on equity |
| Debt securities                                       | +/-6                       | +/-2                                | +/-8                       | +/-3                       |
| Equities and other equity securities                  | +/-68                      | +/-5                                | +/-56                      | +/-5                       |
| Loans and repurchase agreements                       | +/-20                      |                                     | +/-42                      |                            |
| Derivative financial instruments                      | +/-586                     |                                     | +/-576                     |                            |

## Deferred margin on financial instruments measured using techniques developed internally and based on inputs partly unobservable in active markets

Deferred margin on financial instruments ("Day One Profit") primarily concerns the scope of financial instruments eligible for Level 3 and to a lesser extent some financial instruments eligible for Level 2 where valuation adjustments for uncertainties regarding parameters or models are not negligible compared to the initial margin.

The Day One Profit is calculated after setting aside valuation adjustments for uncertainties as described previously and released to profit or loss over the expected period for which the inputs will be unobservable. The unamortised amount is included under "Financial instruments at fair value through profit or loss" as a reduction in the fair value of the relevant transactions.

## 5.F IMPAIRED FINANCIAL ASSETS (STAGE 3)

The following tables present the carrying amounts of impaired financial assets carried at amortised cost and of impaired financing and guarantee commitments, as well as related collateral and other guarantees.

The amounts shown for collateral and other guarantees correspond to the lower of the value of the collateral or other guarantee and the value of the secured assets.

| Other changes  | (2,644)       | (2,274)       |
| <b>IMPAIRED EXPOSURES (STAGE 3) AT CLOSING BALANCE</b> | <b>25,570</b> | <b>25,517</b> |

## 5.G FINANCIAL LIABILITIES AT AMORTISED COST DUE TO CREDIT INSTITUTIONS AND CUSTOMERS

| <i>In millions of euros, at</i>          | <b>31 December 2023</b> | <b>31 December 2022</b><br><i>restated according to IFRS 17 and 9</i> |
|--|-------------------------|---|
| <b>Deposits from credit institutions</b> | <b>95,175</b>           | <b>124,718</b>  |
| On demand accounts                       | 10,770                  | 12,538  |
| Interbank borrowings <sup>(1)</sup>      | 54,825                  | 104,135   |
| Repurchase agreements                    | 29,580                  | 8,045   |
| <b>Deposits from customers</b>           | <b>988,549</b>          | <b>1,008,056</b>  |
| On demand deposits                       | 542,133                 | 592,269   |
| Savings accounts                         | 152,636                 | 162,354   |
| Term accounts and short-term notes       | 292,491                 | 253,210   |
| Repurchase agreements                    | 1,289                   | 223   |

(1) Interbank borrowings from credit institutions include term borrowings from central banks, of which EUR 18 billion of TLTRO III at 31 December 2023 compared to EUR 67 billion at 31 December 2022 (see note 3.a Net Interest Income).

## 5.H DEBT SECURITIES AND SUBORDINATED DEBT

This note covers all issued debt securities and subordinated debt measured at amortised cost and designated as at fair value through profit or loss.

### DEBT SECURITIES DESIGNATED AT FAIR VALUE THROUGH PROFIT OR LOSS (NOTE 5.A)

| <b>Issuer/Issue date</b><br><i>In millions of euros, at</i> | <b>Currency</b> | <b>Original amount in foreign currency (millions)</b> | <b>Date of call or interest step-up</b> | <b>Interest rate</b>    | <b>Interest rate reset</b> | <b>Conditions precedent for coupon payment<sup>(1)</sup></b> | <b>31 December 2023</b> | <b>31 December 2022</b><br><i>restated according to IFRS 17 and 9</i> |

| BNP Paribas Fortis Dec. 2007 <sup>(3)</sup>                 | EUR             | 3,000   | Dec.-14                                 | 3-month Euribor +200 bp |                            | A  | 717                     | 660   |

(1) Conditions precedent for coupon payment:

A Coupon payments are halted should the issuer have insufficient capital or the underwriters become insolvent or when the dividend declared for Ageas shares falls below a certain threshold.

(2) After agreement from the banking supervisory authority and at the issuer's initiative, redeemable subordinated debt issues may contain a call

provision authorising the Group to redeem the securities prior to maturity by repurchasing them in the stock market, via public tender offers, or in the case of private placements over the counter. Debt issued by BNP Paribas SA or foreign subsidiaries of the Group via placements in the international markets may be subject to early redemption of the capital and early payment of interest due at maturity at the issuer's discretion on or after a date stipulated in the issue particulars (call option), or in the event that changes in the applicable tax rules oblige the BNP Paribas Group issuer to compensate debt-holders for the consequences of such changes. Redemption may be subject to a notice period of between 15 and 60 days, and is in all cases subject to approval by the banking supervisory authorities.

- (3) Convertible And Subordinated Hybrid Equity-linked Securities (CASHES) issued by BNP Paribas Fortis (previously Fortis Banque) in December 2007.

The CASHES are perpetual securities but may be exchanged for Ageas (previously Fortis SA/NV) shares at the holder's sole discretion at a price of EUR 239.40. However, as of 19 December 2014, the CASHES will be automatically exchanged into Ageas shares if their price is equal to or higher than EUR 359.10 for twenty consecutive trading days. The principal amount will never be redeemed in cash. The rights of the CASHES holders are limited to the Ageas shares held by BNP Paribas Fortis and pledged to them.

Ageas and BNP Paribas Fortis have entered into a Relative Performance Note (RPN) contract, the value of which varies contractually so as to offset the impact on BNP Paribas Fortis of the relative difference between changes in the value of the CASHES and changes in the value of the Ageas shares.

Since 1 January 2022, the liability is no longer eligible to prudential own funds.

- (1) *Conditions precedent for coupon payment:*
- B Payment of the interest is mandatory, unless the Board of directors decides to postpone these payments after the shareholders' General Meeting has officially noted that there is no income available for distribution, where this occurs within the 12-month period preceding the due date for payment of the interest. Interest payments are cumulative and are payable in full once dividend payments resume;*
- C Payment of the interest is mandatory, unless the Board of directors decides to postpone these payments after the shareholders' General Meeting has validated the decision not to pay out a dividend, where this occurs within the 12-month period preceding the due date for payment of the interest. Interest payments are cumulative and are payable in full once dividend payments resume. The bank has the option of resuming payment of interest arrears, even where no dividend is paid out;*
- D Payment of the interest is mandatory, except for cases of regulatory deficiency, in agreement with the regulator, or of suspension of payments. Interest payments are cumulative and are payable in full, once coupon payments resume, or, if these events occur before, when the issuance is redeemed or when the issuer is liquidated;*
- E Payment of the interest is at full discretion and could be cancelled in whole or in part if the relevant regulator notifies based on its assessment of the financial and solvency situation of the issuer. Interest Amounts on the notes will be non-cumulative, once coupon payments resume.*
- (2) *See reference relating to "Debt securities at fair value through profit or loss".*
- (3) *The participating notes issued by BNP Paribas SA may be repurchased as provided for in the law of 3 January 1983. The number of notes in the market is 1,434,092.*
- (4) *Depending on net income subject to a minimum of 85% of the TMO rate and a maximum of 130% of the TMO rate.*
- (5) *As from 31 December 2023, these securities are no longer eligible to prudential own funds.*
- (6) *The instruments issued by BNP Paribas SA in August 2023 are contingent convertible securities classified as financial liabilities in accounting and eligible to Additional Tier 1 capital (see note 1.f.8).*

In order to determine the amount of the tax loss carryforwards recognised as assets, the Group conducts every year a specific review for each relevant entity based on the applicable tax regime, notably incorporating any time limit rules, and a realistic projection of their future revenue and charges in line with their business plan.

Deferred tax assets recognised on tax loss carryforwards are mainly related to BNP Paribas Fortis for EUR 132 million at 31 December 2023, with a 2-year expected recovery period (unlimited carryforward period).

Unrecognised deferred tax assets totalled EUR 541 million at 31 December 2023 (of which EUR 491 million of tax loss carryforwards) compared with EUR 1,585 million at 31 December 2022 (of which EUR 1,331 million of tax loss carryforwards), amount restated according to IFRS 17 and 9.

## Investment property

Land and buildings leased by the Group as lessor under operating leases are recorded in "Investment property".

The estimated fair value of investment property accounted for at amortised cost at 31 December 2023 is EUR 702 million, compared with EUR 736 million at 31 December 2022.

## Operating leases

Operating leases and investment property transactions are in certain cases subject to agreements providing for the following minimum future payments:

| <i>In millions of euros, at</i>  | <b>31 December 2023</b> | <b>31 December 2022</b><br><i>restated according<br/>to IFRS 17 and 9</i> |
|--|-------------------------|---|
| <b>Future minimum lease payments receivable under non-cancellable leases</b> | <b>10,718</b>           | <b>8,221</b>  |
| <i>Payments receivable within 1 year</i>                                     | <i>4,570</i>            | <i>3,613</i>  |
| <i>Payments receivable after 1 year but within 5 years</i>                   | <i>6,105</i>            | <i>4,582</i>  |
| <i>Payments receivable beyond 5 years</i>                                    | <i>43</i>               | <i>26</i>   |

Future minimum lease payments receivable under non-cancellable leases are payments that the lessee is required to make during the lease term.

## Intangible assets

Other intangible assets include leasehold rights, goodwill and trademarks acquired by the Group.

## Amortisation and provision

Net depreciation and amortisation expense for the year ended 31 December 2023 was EUR 2,224 million, compared with EUR 2,284 million for the year ended 31 December 2022.

The net increase in impairment on property, plant, equipment and intangible assets taken to the profit and loss account for the year ended 31 December 2023 amounted to EUR 19 million, compared with EUR 20 million for the year ended 31 December 2022.

## 5.M GOODWILL

The Group carried out a detailed analysis of goodwill to identify whether impairments were necessary in connection with the health crisis.

This analysis is based in particular on the assumptions of economic scenarios (see note 3.g).

The cash-generating units (CGU) to which goodwill is allocated are:

**Global Banking:** Global Banking combines financing solutions to corporates, all transaction banking products, corporate finance advisory services in mergers and acquisitions and primary equity activities.

**Global Markets:** Global Markets provides investment, hedging, financing and research services across asset classes, to corporate and institutional clients – as well as private and retail banking networks. The sustainable, long-term business model of Global Markets connects clients to capital markets throughout EMEA (Europe, Middle East & Africa), Asia Pacific and the Americas, with innovative solutions and digital platforms. Global Markets includes activities of Global Macro (Foreign Exchange,

Global Rates, Local Markets, Commodity Derivatives), Global Credit (DCM Bonds, Credit, Securitisation) and Global Equities (Equities, Cash Equities and Prime Services).

**Securities Services:** Securities Services provides integrated solutions for all actors involved in the investment cycle, sell side, buy side and issuers. BNP Paribas is one of the major global players in securities services.

**Arval:** Specialist in vehicle long-term leasing and mobility, Arval offers corporates (from multinational companies to small and medium companies), employees and individuals tailored solutions that optimise their mobility.

**Leasing Solutions:** BNP Paribas Leasing Solutions uses a multi-channel partnership approach (sales *via* referrals, partnerships, direct sales and banking networks) to offer corporate and small business clients an array of leasing and rental solutions, ranging from equipment financing to fleet outsourcing.

**Personal Finance:** BNP Paribas Personal Finance is the Group's consumer credit specialist. Through its brands and partnerships such as Cetelem, Cofinoga, Findomestic, AlphaCredit or Stellantis Financial Services, Personal Finance provides a full range of consumer loans at point of sale (retail stores and car dealerships) or through its customer relation centres and websites and mobile applications. The business line, in some countries outside the Domestic Markets, is integrated into the BNP Paribas Group's retail banking.

**Personal Investors:** BNP Paribas Personal Investors is a digital specialist of banking and investment services. Based in Germany and India, it provides a wide range of banking, savings and long and short-term investment services to individual clients *via* the internet, and also on the phone and face-to-face. In addition to its activities destined to private clients, Personal Investors offers its services and IT platform to independent financial consultants, asset managers and FinTechs.

**New Digital Businesses:** they include the account management service "Nickel" and Floa since January 2022. Nickel is open to all, without any conditions regarding income, deposits or personal wealth, and without any overdraft or credit facility. This service, which operates in real time using the latest technology, is available through over 10,000 points of sale in France, Spain, Belgium, Portugal and Germany. Floa offers consumers split payments, mini-loans and bank cards. The Company is a partner of major e-retailers, key players in travel and FinTechs, for which it develops tailor-made services. Already leader in France in payment facilities, Floa is present in Spain, Belgium, Italy and Portugal.

**Asset Management:** BNP Paribas Asset Management is the dedicated asset management business line of the BNP Paribas Group and offers services to individual investors (through internal distributors – BNP Paribas private and retail banking – and external distributors), to corporates and to institutional investors (insurance companies, retirement funds, official institutions). Its aim is to offer an added value based on a broad range of expertise throughout its active management of equities and bonds, its activity of private debt, private asset and real asset management and its multi-asset, quantitative and solutions division.

**Insurance:** BNP Paribas Cardif, a world leader in personal insurance, has designed, developed and marketed savings and protection products and services to protect individuals, their projects and their assets. BNP Paribas Cardif also offers products in damage insurance, health insurance, budget insurance, revenue and means of payment insurance, unexpected event protection (unemployment, accident, death, theft or breakage) or the protection of private digital data to meet the evolution of customers' needs.

**Real Estate:** BNP Paribas Real Estate serves the needs of its clients, whether institutional investors, corporates, public entities or individuals, at all stages of the life cycle of their property (from the conception of a construction project to its daily management).

**Wealth Management:** Wealth Management encompasses the Private Banking activities of BNP Paribas and serves a clientele of wealthy individuals, shareholder families and entrepreneurs seeking a one-stop shop for all their wealth management and financial needs.

Goodwill impairment tests are based on three different methods: observation of transactions related to comparable businesses, share price data for listed companies with comparable businesses, and discounted future cash flows (DCF).

If one of the two comparables-based methods indicates the need for impairment, the DCF method is used to validate the results and determine the amount of impairment required.

The DCF method is based on a number of assumptions in terms of future revenues, expenses and cost of risk (cash flows) based on medium-term business plans over a period of five years. Cash flow projections beyond the 5-year forecast period are based on a growth rate to perpetuity and are normalised when the short-term environment does not reflect the normal conditions of the economic cycle.

The key parameters which are sensitive to the assumptions made are the cost of capital, the cost/income ratio, the cost of risk and the growth rate to perpetuity.

Cost of capital is determined on the basis of a risk-free rate, an observed market risk premium weighted by a risk factor based on comparables specific to each cash-generating unit. The values of these parameters are obtained from external information sources.

Allocated capital is determined for each cash-generating unit based on the "Common Equity Tier One" regulatory requirements for the legal entity to which the cash-generating unit belongs, with a minimum of 7%.

The growth rate to perpetuity used is 2% for mature economies in Europe. For CGUs implemented in countries with high levels of inflation, a specific add-on is taken into account (calculated according to inflation rates disclosed by external sources).

The following table shows the sensitivity of the valuation of the Personal Finance cash-generating unit to changes in the value of parameters used in the DCF calculation: the cost of capital, the cost/income ratio in terminal value, the cost of risk in terminal value and the growth rate to perpetuity.

**SENSITIVITY OF THE MAIN GOODWILL VALUATIONS TO A 10-BASIS POINT CHANGE IN THE COST OF CAPITAL, A 1% CHANGE IN THE COST/INCOME RATIO IN TERMINAL VALUE, A 5% CHANGE OF THE COST OF RISK IN TERMINAL VALUE AND A 50-BASIS POINT CHANGE IN THE GROWTH RATE TO PERPETUITY**

| <i>In millions of euros</i>        | <b>Personal Finance</b> |
|------------------------------------|-------------------------|
| <b>Cost of capital</b>             | <b>10.3%</b>            |
| Adverse change (+10 basis points)  | (150)                   |
| Positive change (-10 basis points) | 154                     |
| <b>Cost/income ratio</b>           | <b>46.4%</b>            |
| Adverse change (+1%)               | (372)                   |
| Positive change (-1%)              | 372                     |
| <b>Cost of risk</b>                | <b>(1,719)</b>          |
| Adverse change (+5%)               | (504)                   |
| Positive change (-5%)              | 504                     |
| <b>Growth rate to perpetuity</b>   | <b>2.0%</b>             |
| Adverse change (-50 basis points)  | (218)                   |
| Positive change (+50 basis points) | 246                     |

Concerning the cash-generating unit Personal Finance, there would be no need to depreciate even by using, for the impairment test, the four most unfavourable variations in the table.

## 5.N PROVISIONS FOR CONTINGENCIES AND CHARGES

### PROVISIONS FOR CONTINGENCIES AND CHARGES BY TYPE

| Provisions for credit commitments<br>(note 3.g)           | 1,430         | (56)         | (45)           | (59)       | 1,270     |               |
| Provisions for litigations                                | 1,172         | 411          | (337)          | (241)      | 1,005     |               |
| Other provisions for contingencies<br>and charges         | 1,274         | 104          | (174)          | 482        | 1,686     |               |
| <b>TOTAL PROVISIONS FOR<br/>CONTINGENCIES AND CHARGES</b> | <b>10,040</b> | <b>1,933</b> | <b>(1,799)</b> | <b>246</b> | <b>98</b> | <b>10,518</b> |

In 2023, the Group modified its accounting policy relating to the risk of loss of cash flows on financial instruments granted that are not linked to the counterparty's default, such as legal risks calling into question the validity or enforceability of such contracts (see note 3.h).

The effect on expected cash flows due to these risks is now considered as a change in the contract's cash flows, in accordance with IFRS 9 B5.4.6, and is recorded as a decrease in the gross value of the asset. It was previously recognised separately in accordance with IAS 37 in "Provisions for risks and charges" (see note 5.n). Expected losses on derecognised financial instruments, as is the case when loans have been repaid, continue to be recognised in accordance with IAS 37.

As a result, EUR 313 million previously presented in "Provisions for litigations" were deducted from "Financial assets at amortised cost".

As of 31 December 2023, reserves related to the uncertainty on the residual value of Arval's vehicles previously recognised as a decrease in assets were included in "Other provisions for contingencies and charges".

## PROVISIONS AND DISCOUNT FOR HOME SAVINGS ACCOUNTS AND PLANS

## 5.0 OFFSETTING OF FINANCIAL ASSETS AND LIABILITIES

The following tables present the amounts of financial assets and liabilities before and after offsetting. This information, required by IFRS 7, aims to enable the comparability with the accounting treatment applicable in accordance with generally accepted accounting principles in the United States (US GAAP), which are less restrictive than IAS 32 as regards offsetting.

"Amounts set off on the balance sheet" have been determined according to IAS 32. Thus, a financial asset and a financial liability are offset and the net amount presented on the balance sheet when, and only when, the Group has a legally enforceable right to set off the recognised amounts and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously. Amounts set off derive mainly from repurchase agreements and derivative instruments traded with clearing houses.

The “impacts of master netting agreements and similar agreements” are relative to outstanding amounts of transactions within an enforceable agreement, which do not meet the offsetting criteria defined by IAS 32. This is the case of transactions for which offsetting can only be performed in case of default, insolvency or bankruptcy of one of the contracting parties.

“Financial instruments given or received as collateral” include guarantee deposits and securities collateral recognised at fair value. These guarantees can only be exercised in case of default, insolvency or bankruptcy of one of the contracting parties.

Regarding master netting agreements, the guarantee deposits received or given in compensation for the positive or negative fair values of financial instruments are recognised in the balance sheet in accrued income or expenses and other assets or liabilities.

## 5.P TRANSFERS OF FINANCIAL ASSETS

Financial assets that have been transferred but not derecognised by the Group are mainly composed of securities sold temporarily under repurchase agreements or securities lending transactions, as well as securitised assets. The liabilities associated to securities temporarily sold under repurchase agreements consist of debts recognised under the “repurchase agreements” heading. The liabilities associated to securitised assets consist of the securitisation notes purchased by third parties.

## NOTE 6 NOTES RELATED TO INSURANCE ACTIVITIES

### 6.A NET INCOME FROM INSURANCE ACTIVITIES

The various income and expenses of insurance contracts are broken down in the "Net income from insurance activities" as follows:

- "Insurance revenue" include revenue from insurance activities related to groups of insurance contracts issued. Insurance revenue reflects the provision of services relating to a group of contracts in an amount corresponding to the consideration to which the insurer expects to be entitled in exchange for those services;
- "Insurance service expenses": actual charges attributable to insurance contracts incurred over the period, changes related to past and current service, amortisation of acquisition costs, and the loss component for onerous contracts;
- "Investment return";
- "Net finance income or expenses from insurance contracts" include the change in the carrying amount of insurance contracts resulting from the undiscounting effect, and the financial risk including changes in financial assumptions.

| <i>In millions of euros</i>                             | <b>Year to<br/>31 Dec. 2023</b> | <b>Year to 31<br/>Dec. 2022<br/><i>restated</i><br/>according to<br/>IFRS 17 and 9</b> |
|---|---------------------------------|--|
| Insurance revenue                                       | 8,945                           | 8,759  |
| Insurance service expenses <sup>(1)</sup>               | (6,786)                         | (6,619)  |
| Investment return                                       | 10,254                          | (12,077)   |
| Net finance income or expenses from insurance contracts | (10,093)                        | 11,838   |
| <b>NET INCOME FROM INSURANCE ACTIVITIES</b>             | <b>2,320</b>                    | <b>1,901</b>   |

(1) Insurance service expenses include attributable expenses which amounted to -EUR 3,723 million for the year ended 2023, compared to -EUR 3,641 million for the year ended 2022 (see note 6.b).

### Insurance service result

"Insurance service result" includes:

- "Insurance revenue": for contracts under the variable fee approach and under the building block approach it represents the release of fulfilment insurance contracts cash flows over the period (excluding changes in investment component and the amount allocated to the loss component), change in the non-financial risk adjustment, amortisation of the contractual service margin for services provided over the period, the amount allocated for the amortisation of acquisition cost, and experience adjustments related to premiums.

For contracts under the variable fee approach, the amortisation of the margin on contractual services is determined after adjusting the difference between the real-world expected financial return and the risk-neutral projection. The main financial assumptions underlying the calculation of the real-world expected financial return are those adopted by the Group over the horizon of the strategic plan. Beyond this horizon, the interest rate and return assumptions used are determined in line with those underlying the risk-neutral projection.

The recovery of insurance acquisition cash flows corresponds to the portion of the premiums that relate to recovering these cash flows and the same amount is recognised as an expense on the line "Amortisation of insurance acquisition cash flows".

For contracts under the simplified measurement model, revenue represents expected cash flows over the period;

- "Insurance service expenses" include incurred and past claims expenses of the period (excluding repayments of investment component) and other expenses that have been incurred related to insurance activities. Other insurance service expenses

include the amortisation of insurance acquisition cash flows; changes that relate to past services and changes that relate to future services. This line includes also the operating expenses and depreciation and amortisation attributable to insurance contracts;

- "Net expenses from reinsurance contracts held" are service expenses from reinsurance net of amounts recovered from reinsurers.

## Financial result

“Financial Result” includes “Investment return” and “Net finance income or expenses from insurance contracts.”

“Investment return” includes net income from financial instruments and from investment properties.

“Changes in fair value of underlying items of direct participation contracts” reflects the changes in value of underlying investments for the amount which was not recognised directly in equity, and excluding the portion of these changes adjusting the contract service margin.

“Other insurance financial expenses” measured under the general model and under the simplified model represent the change in technical liabilities arising from financial risks (discount rates variations, forex rates, time value and financial variations expected in the contracts) for the amount which was not recognised directly in equity.

Level 1 includes notably equity securities and liquid bonds, derivative instruments traded on organised markets (futures, options, etc.), shares of funds and UCITS, for which the net asset value is calculated on a daily basis.

Level 2 includes equity securities, government bonds, corporate debt securities, shares of funds and UCITS, and over-the-counter derivatives.

Level 3 includes units of funds and unlisted equity shares which are mainly company shares and venture capital.

#### TABLE OF MOVEMENTS IN LEVEL 3 FINANCIAL INSTRUMENTS

For financial instruments in Level 3, the following variations occurred during the period:

|  | Financial assets   |   |               | Financial liabilities                                      |                |

The option to recognise certain equity instruments at fair value through equity was retained in particular for shares held through strategic partnerships and shares that the Group is required to hold in order to carry out certain activities.

During the year ended 31 December 2023, the Group sold several of these investments and a net gain of EUR 26 million was transferred to "retained earnings" (EUR 59 million for the year ended at 31 December 2022).

**INVESTMENT PROPERTIES FAIR VALUE**

The fair value of investment properties amounts to EUR 7.5 billion at 31 December 2023, compared with EUR 8.8 billion at 31 December 2022.

The entire non-listed real estate portfolio is appraised by one or more independent third parties. Experts have professional rules for carrying out these assessments.

For buildings that are directly held, experts use three main methods:

- the method by which similar transactions are compared;
- the rate of return method (rate applied to a rental basis);
- the discounted cash flow method.

The final value retained by the expert may be a compromise between these three methods.

**FAIR VALUE OF FINANCIAL INSTRUMENTS CARRIED AT AMORTISED COST**

**6.D ASSETS AND LIABILITIES RELATED TO INSURANCE CONTRACTS**

The main insurance contracts issued by the Group are:

- contracts covering risks related to persons or property: creditor protection insurance (CPI), personal protection insurance and other non-life risks, and reinsurance contracts accepted from other insurers for these types of risks. These contracts are measured under the general model (building block approach - BBA) or the premium allocation approach (PAA) for contracts with a duration of at most one year;
- life or savings contracts: single and multi-support contracts, with or without insurance risk, including a discretionary participation, and unit-linked contracts with a minimum coverage in the event of death. These contracts are measured under the variable fee approach (VFA).

The insurance contracts issued by BNP Paribas Group entities cover risks of death (guarantees in the event of death), longevity (guarantees in the event of life, for example life annuities), morbidity (guarantees in the event of disability), disability, health (medical coverage), unemployment, civil liability, and property damage.

Life or savings contracts are considered to be insurance contracts if they include a survival risk (in the case of retirement contracts with a mandatory annuity) or a death risk (in the case of unit-linked contracts with a minimum death guarantee and savings contracts with a guarantee of an additional amount in the case of death).

Savings contracts invested in a euro fund, and multi-support contracts invested in unit-linked assets and in a euro fund are considered as investment contracts with discretionary participating features under the variable fee approach.

Insurance and reinsurance contracts issued and reinsurance contracts held are presented on the assets or liabilities side of the balance sheet according to the overall position of the portfolios to which they belong.

| <b>NET (ASSETS) OR LIABILITIES AT 31 DECEMBER 2023<sup>(1)</sup></b> | <b>197,789</b> | <b>1,603</b> | <b>16,275</b> | <b>215,667</b> |

- (1) Including receivables and liabilities attributable to insurance contracts for a net asset of EUR 501 million at 31 December 2023, compared to a net asset of EUR 504 million at 31 December 2022.
- (2) Including an experience adjustment that amounted to +EUR 38 million for the year ended 2023 and to -EUR 33 million for the year ended 2022.
- (3) Including finance income and expenses recognised directly in equity.

## EXPECTED AMORTISATION SCHEDULE FOR THE CONTRACTUAL SERVICE MARGIN

The schedule presents the amortisation of the contractual service margin to be recognised over time in profit or loss for protection contracts under the general model and for saving contracts under the variable fee approach. For the latter, it considers the over performance of financial assets compared to a risk-neutral measurement.

| In millions of euros, at | 31 December 2023 | 31 December 2022<br>restated<br>according to<br>IFRS 17 and 9 |
|--------------------------|------------------|---|
|                          |                  |   |
| Less than 5 years        | 6,734            | 6,793   |
| 5 to 10 years            | 5,183            | 4,709   |
| More than 10 years       | 4,358            | 5,563   |
| <b>TOTAL</b>             | <b>16,275</b>    | <b>17,065</b>   |

## DISCOUNT RATES AND ADJUSTMENT FOR NON-FINANCIAL RISK

The table below presents the average discount rates used in the measurement of savings and protection contracts for the main horizons of the euro curve.

|          | 31 December 2023 |            | 31 December 2022<br>restated according to IFRS 17 and 9 |            |
|----------|------------------|------------|---|------------|
|          | Savings          | Protection | Savings   | Protection |
| 1 year   | 4.00%            | 3.36%      | 3.64%   | 2.67%      |
| 5 years  | 2.96%            | 2.32%      | 3.60%   | 2.92%      |
| 10 years | 3.03%            | 2.39%      | 3.56%   | 3.07%      |
| 15 years | 3.10%            | 2.47%      | 3.50%   | 3.07%      |
| 20 years | 3.04%            | 2.41%      | 3.29%   | 2.85%      |
| 40 years | 3.04%            |            | 3.10%   |            |

The difference between the Savings and Protection yield curves is equal to that of their respective illiquidity premium.

- For savings contracts measured under the variable fee approach, the discounting rate consists of the risk-free rate, extrapolated over the duration exceeding the period for which observable data are available and adjusted for a liquidity premium determined based on the underlying assets and reflecting the illiquidity of liabilities.

The risk adjustment is determined according to the cost of capital method, including future payments and excluding massive lapses. It is measured within a confidence range of 60-70%. This one corresponds to a level of confidence of 65% at 31 December 2023 (64% at 31 December 2022).

- For protection contracts measured under the general model and for liabilities for incurred claims under the simplified approach, the discounting rate consists of the risk-free rate adjusted to reflect the illiquidity of liabilities.

The level of confidence used in determining the adjustment for non-financial risks for the main countries is 70% (based on the quantile method).

## 6.E RISK SENSITIVITY

### Market risk: rate risk and asset value variation

Sensitivity of the valuation of financial assets and liabilities related to insurance contracts, on the profit or loss and on equity to a variation of +/-50bps of interest rates and to a variation of +/-10% of the equity market and real estate market.

The table below presents impacts before tax:

| In millions of euros, at                | 31 December 2023                      |                                |            |                            |                                |            |
|---|---------------------------------------|--------------------------------|------------|----------------------------|--------------------------------|------------|
|   | Potential impact on income            |                                |            | Potential impact on equity |                                |            |
|   | related to investments <sup>(1)</sup> | related to insurance contracts | Net impact | related to investments     | related to insurance contracts | Net impact |
| +50 bps variation of interest rate risk | (225)                                 | 206                            | (19)       | (3,662)                    | 3,330                          | (332)      |
| -50 bps variation of interest rate risk | 239                                   | (220)                          | 19         | 3,662                      | (3,330)                        | 332        |
| +10% variation of equity market         | 1,834                                 | (1,760)                        | 74         | 61                         |                                | 61         |
| -10% variation of equity market         | (1,834)                               | 1,760                          | (74)       | (61)                       |                                | (61)       |
| +10% variation of real estate market    | 1,062                                 | (1,031)                        | 31         | 37                         |                                | 37         |
| -10% variation of real estate market    | (1,062)                               | 1,031                          | (31)       | (37)                       |                                | (37)       |

(1) Except financial assets representing unit-linked contracts.

The sensitivity was measured for most significant countries, i.e. France, Italy and Luxembourg.

For savings contracts measured under the variable fee approach, changes in the value of underlying financial assets are largely offset by changes in the value of liabilities, as contractual service margin is positive.

Potential impacts on profit and loss and equity are mainly due to non-participating contracts and to assets backing insurance entities' equity.

### Liquidity risk

The table below presents the schedule of the present value of future cash flows for all insurance contracts excluding reinsurance.

| In millions of euros, at | 31 December 2022 |                                     |
|--------------------------|------------------|-------------------------------------|
|                          | 31 December 2023 | restated according to IFRS 17 and 9 |
| 1 year                   | 7,094            | 5,966                               |
| 1 to 2 years             | 6,274            | 5,358                               |
| 2 to 3 years             | 6,179            | 5,263                               |
| 3 to 4 years             | 6,074            | 5,165                               |
| 4 to 5 years             | 5,598            | 4,756                               |
| 5 to 10 years            | 19,511           | 21,237                              |
| More than 10 years       | 148,819          | 143,321                             |
| <b>TOTAL</b>             | <b>199,549</b>   | <b>191,066</b>                      |

For participating contracts, amounts payable on demand correspond to surrender values of saving contracts.

|                                 | 31 December 2023         |                 | 31 December 2022                           |                 |

The Group's annual contribution to the European Union's Single Resolution Fund may be partly in the form of an irrevocable payment commitment (IPC) guaranteed by a cash deposit of the same amount. Where the resolution of an institution involves the fund, the fund may call all or part of the IPC received.

The irrevocable payment commitment is qualified as contingent liabilities. A provision is established if the probability of a commitment call by the fund exceeds 50%. Since this probability is estimated to be below this threshold, no provision was recognised by the Group at 31 December 2023.

These commitments amounted to EUR 1,261 million at 31 December 2023 (compared with EUR 969 million at 31 December 2022).

Cash provided as collateral is remunerated and recognised as a financial asset at amortised cost.

## 7.C SECURITIES COMMITMENTS

In connection with the settlement date accounting for securities, commitments representing securities to be delivered or securities to be received are the following:

| <i>In millions of euros, at</i> | <b>31 December 2023</b> | <b>31 December 2022</b><br><i>restated according to IFRS 17 and 9</i> |
|---------------------------------|-------------------------|---|
| Securities to be delivered      | 23,159                  | 17,325  |
| Securities to be received       | 21,384                  | 17,263  |

## 7.D OTHER GUARANTEE COMMITMENTS

### FINANCIAL INSTRUMENTS GIVEN AS COLLATERAL

| <i>In millions of euros, at</i>  | <b>31 December 2023</b> | <b>31 December 2022</b><br><i>restated according to IFRS 17 and 9</i> |
|--|-------------------------|---|
| <b>Financial instruments (negotiable securities and private receivables) lodged with central banks and eligible for use at any time as collateral for refinancing transactions after haircut</b> | <b>87,881</b>           | <b>132,938</b>  |
| <i>Used as collateral with central banks</i>   | 20,560                  | 67,792  |
| <i>Available for refinancing transactions</i>  | 67,321                  | 65,146  |
| <b>Securities sold under repurchase agreements</b>   | <b>519,731</b>          | <b>371,552</b>  |
| <b>Other financial and similar assets pledged as collateral for transactions with credit institutions, financial customers or subscribers of covered bonds issued by the Group<sup>(1)</sup></b> | <b>323,491</b>          | <b>239,761</b>  |

(1) Notably including "Société de Financement de l'Économie Française" and "Caisse de Refinancement de l'Habitat" financing.

The fair value of financial instruments given as collateral or transferred under repurchase agreements by the Group that the beneficiary is authorised to sell or reuse as collateral amounted to EUR 726,703 million at 31 December 2023 (EUR 523,321 million at 31 December 2022).

### 8.B POST-EMPLOYMENT BENEFITS

IAS 19 distinguishes between two categories of plans, each handled differently depending on the risk incurred by the entity. When the entity is only committed to paying a fixed amount, stated as a percentage of the beneficiary's annual salary, for example, to an external entity handling payment of the benefits based on the assets available for each plan member, it is described as a defined-contribution plan. Conversely, when the entity's obligation is to manage the financial assets funded through the collection of contributions from employees and to bear the cost of benefits itself or to guarantee the final amount subject to future events, it is described as a defined-benefit plan. The same applies if the entity entrusts management of the collection of premiums and payment of benefits to a separate entity but retains the risk arising from management of the assets and/or from future changes in the benefits.

#### Main Defined-contribution pension plans for Group entities

The BNP Paribas Group has implemented over the past few years a wide campaign of converting defined-benefit plans into defined-contribution plans.

Thus, in France, the BNP Paribas Group pays contributions to mandatory state and complementary pension schemes. BNP Paribas SA and certain subsidiaries have set up a complementary defined-contribution pension plan under a company-wide agreement. Under this plan, employees will receive an annuity or a lump sum on retirement in addition to the pension paid by mandatory schemes.

Since defined-benefit plans have been closed to new employees in most countries outside France, they are offered the benefit of joining defined-contribution pension plans.

In Italy, the plan introduced by BNL is funded by employer contributions (4.2% of salaries) and employee contributions (2% of salaries). Employees can also make additional voluntary contributions.

In the United Kingdom, the employer contributes 12% of salaries for the majority of employees; employees can make additional voluntary contributions.

In the US, the bank matches the voluntary contributions made by employees, within certain limits.

The amount paid into defined-contribution post-employment plans for the year ended 31 December 2023 was EUR 791 million, compared with EUR 720 million for the year ended 31 December 2022 (including amount paid by entities which are insurance companies).

The breakdown by major contributors is determined as follows:

| <b>Contribution amount</b><br><i>In millions of euros</i> | <b>Year to 31 Dec. 2023</b> | <b>Year to 31 Dec. 2022</b><br><i>restated according to IFRS 17 and 9</i> |
|---|-----------------------------|---|
| France  | 386                         | 353   |
| Italy   | 106                         | 90  |
| UK  | 62                          | 64  |
| Türkiye   | 39                          | 26  |
| Hong Kong   | 29                          | 26  |
| Luxembourg  | 30                          | 28  |
| USA   | 27                          | 25  |
| Others  | 112                         | 108   |
| <b>TOTAL</b>  | <b>791</b>                  | <b>720</b>  |

## Main defined-benefit pension plans for Group entities and indemnities payable on retirement

### Defined-benefit plans

In Belgium, BNP Paribas Fortis funds a defined-benefit plan, based on final salary and number of years of service, for its management and employees who joined the bank before its pension plans were harmonised on 1 January 2002. Actuarial liabilities under this scheme are pre-funded at 91% at 31 December 2023 (compared with 88% at 31 December 2022) through insurance companies.

BNP Paribas Fortis senior managers joining before 1 January 2015 are covered by a top-up pension plan, paying a lump sum based on the number of years of service and final salary. This plan is pre-funded at 94% at 31 December 2023 (90% at 31 December 2022) through insurance companies.

In Belgium, employees benefit from a defined-contribution scheme with a legal obligation for the employer to guarantee a minimum return on financial assets invested. Thus, a provision was recognised for these schemes, as this guarantee is not entirely covered by the insurance company.

In France, BNP Paribas pays a top-up banking industry pension arising from rights acquired to 31 December 1993 by retired employees and active employees in service at that date. At 31 December 2023, the Group's residual obligations for these employees were recognised on the balance sheet in full.

The defined-benefit plans previously granted to some Group senior managers have all been closed to new employees and converted into top-up type schemes. The amounts allocated to residual beneficiaries, subject to their presence within the Group at retirement, were fixed when these schemes were closed. At 31 December 2023, these pension plans were funded at 264% through insurance companies (221% at 31 December 2022).

In the United Kingdom, defined-benefit pension plans (pension funds) still exist but are closed to new employees. Under these plans, the defined pension is generally based on final salary and number of years of service. Pension schemes are managed by independent management bodies (Trustees). At 31 December 2023, obligations for all UK entities were 118% covered by financial assets, compared with 125% at 31 December 2022.

In Switzerland, liabilities relate to top-up pension plans based on the principle of defined-contribution schemes with guaranteed returns, paying an annuity under pre-defined terms. These schemes are managed by a foundation. At 31 December 2023, obligations were 111% covered by financial assets, compared with 121% at 31 December 2022.

In the United States, defined-benefit pension plans are based on annual vesting rights to a lump sum comprising a pension expressed as a percentage of annual salary and paying interest at a pre-defined rate. These plans are closed to new entrants and have offered almost no new vesting rights. At 31 December 2023, the obligation was 87% covered by financial assets, (85% at 31 December 2022).

In Germany, liabilities are mainly related to defined-benefit pension plans, closed to new employees. Under these plans, the defined pension is generally based on the number of years of service and final salary. They offer the payment of an annuity under pre-defined terms. At 31 December 2023, the obligation was 66% covered by financial assets, (70% at 31 December 2022).

In Türkiye, the main pension plan replaces the national pension scheme and should eventually be transferred to the Turkish State. This plan offers guarantees exceeding the minimal legal requirements. At the end of 2023, obligations under this plan are fully funded by financial assets held with an external foundation; these financial assets exceeding the related obligations, this surplus is not recognised as an asset by the Group.

### Other post-employment benefits

Group employees also receive various other contractual post-employment benefits, such as indemnities payable on retirement, determined according to minimal legal requirements (Labour Code, collective agreements) or according to specific company-level agreements.

In France, the obligations for these benefits are funded through a contract held with a third-party insurer. At 31 December 2023, this obligation was 127% covered by financial assets, compared with 132% at 31 December 2022.

The law of 14 April 2023 changed the age and quarters criteria required to settle pension rights. The specificities of this law have been taken into account for the determination of the present value of the obligation under IFRS, with a decrease impact of its value of EUR 22 million.

In other countries, the obligations of the Group related to other post-employment benefits are mainly concentrated in Italy, where vested rights up to 31 December 2006 were frozen.

## MAIN ACTUARIAL ASSUMPTIONS USED TO CALCULATE OBLIGATIONS

In the Eurozone, United Kingdom and United States, the Group discounts its obligations using the yields of high quality corporate bonds, with a term consistent with the duration of the obligations.

The ranges of rates used are as follows:

|             | <b>31 December 2023</b> |   | <b>31 December 2022<br/><i>restated according to IFRS 17 and 9</i></b> |   |
|-------------|-------------------------|---|--|---|
| <i>In %</i> | <b>Discount rate</b>    | <b>Compensation<br/>increase rate<sup>(1)</sup></b> | <b>Discount rate</b>   | <b>Compensation<br/>increase rate<sup>(1)</sup></b> |
| Belgium     | 3.00% / 3.60%           | 3.30% / 4.10%                                       | 1.90% / 3.80%  | 3.30% / 5.00%                                       |
| UK          | 4.40% / 5.30%           | 2.00% / 3.40%                                       | 3.50% / 4.90%  | 2.00% / 3.30%                                       |
| France      | 3.00% / 3.60%           | 2.90% / 3.10%                                       | 3.30% / 3.80%  | 2.10% / 3.65%                                       |
| Switzerland | 1.40% / 1.60%           | 1.80% / 2.00%                                       | 2.00% / 2.15%  | 1.75% / 2.00%                                       |
| USA         | 4.70% / 5.30%           | 2.50%   | 4.90% / 5.00%  | 2.50%   |
| Italy       | 3.00% / 3.60%           | 3.00% / 3.10%                                       | 1.90% / 3.60%  | 2.10% / 3.20%                                       |
| Germany     | 3.20% / 3.70%           | 2.00% / 2.90%                                       | 2.30% / 3.80%  | 2.00% / 2.90%                                       |
| Türkiye     | 23.10%                  | 18.80%  | 10.60%   | 8.50%   |

(1) Including price increases (inflation)

Average discount rates weighted by obligation amounts are as follows:

- In the Eurozone: 3.16% at 31 December 2023 (3.54% at 31 December 2022);
- In the United Kingdom: 4.51% at 31 December 2023 (4.78% at 31 December 2022);
- In Switzerland: 1.40% at 31 December 2023 (2.15% at 31 December 2022).

The impact of a 100 bps change in discount rates on the present value of post-employment benefit obligations is as follows:

| Change in the present value of obligations<br><i>In millions of euros, at</i> | 31 December 2023         |                          | 31 December 2022<br><i>restated according to IFRS 17 and 9</i> |                          |
|---|--------------------------|--------------------------|--|--------------------------|
|   | Discount rate<br>-100bps | Discount rate<br>+100bps | Discount rate<br>-100bps                                       | Discount rate<br>+100bps |
|   |                          |                          |  |                          |
| Belgium   | 231                      | (168)                    | 201  | (175)                    |
| UK  | 170                      | (137)                    | 187  | (147)                    |
| France  | 88                       | (75)                     | 92   | (78)                     |
| Switzerland   | 148                      | (119)                    | 133  | (107)                    |
| USA   | 15                       | (13)                     | 18   | (15)                     |
| Italy   | 10                       | (9)                      | 12   | (11)                     |
| Germany   | 27                       | (21)                     | 26   | (20)                     |
| Türkiye   | 11                       | (9)                      | 13   | (10)                     |

Inflation assumptions used for the valuations of the Group obligations are determined locally depending on the monetary area, except for the Eurozone for which the assumption is determined centrally.

Average discount rates weighted by obligation amounts are as follows:

- in the Eurozone: 2.27% at 31 December 2023 (2.43% at 31 December 2022);
- in the United Kingdom: 2.94% at 31 December 2023 (3.03% at 31 December 2022);
- in Switzerland: 1.25% at 31 December 2023 (1.25% at 31 December 2022).

The impact of a +100 bps increase in inflation rates on the present value of post-employment benefit obligations is as follows:

| Change in the present value of obligations<br><i>In millions of euros, at</i> | 31 December 2023          |                           | 31 December 2022<br><i>restated according to IFRS 17 and 9</i> |                           |
|---|---------------------------|---------------------------|--|---------------------------|
|   | Inflation rate<br>+100bps | Inflation rate<br>+100bps | Inflation rate<br>+100bps                                      | Inflation rate<br>+100bps |
|   |                           |                           |  |                           |
| Belgium   | 133                       | 148                       |  |                           |
| UK  | 100                       | 126                       |  |                           |
| France  | 88                        | 92                        |  |                           |
| Switzerland   | 8                         | 8                         |  |                           |
| Italy   | 7                         | 8                         |  |                           |
| Germany   | 16                        | 14                        |  |                           |
| Türkiye   | 11                        | 12                        |  |                           |

Variation effects of discount and inflation rates presented above are not cumulative.

(1) In France, the breakdown of plan assets reflects the breakdown of the general fund of the insurance company through which the Group's obligations are funded.

The Group introduced an asset management governance for assets backing defined-benefit pension plan commitments, the main objectives of which are the management and control of the risks in terms of investment.

It sets out investment principles, in particular, by defining an investment strategy for plan assets, based on financial objectives and risk management, to specify the way in which plan assets have to be managed, *via* financial management servicing contracts.

The investment strategy is based on an assets and liabilities management analysis that should be realised at least every three years for plans with assets in excess of EUR 100 million.

## Post-employment healthcare benefits

The Group offers some healthcare benefit plans for retired employees, mainly in Belgium.

The present value of post-employment healthcare benefit obligations stood at EUR 78 million at 31 December 2023, compared with EUR 83 million at 31 December 2022.

## 8.C OTHER LONG-TERM BENEFITS

BNP Paribas offers its employees various long-term benefits, mainly long-service awards, the ability to save up paid annual leave in time savings accounts, and certain guarantees protecting them in the event they become incapacitated. The net provision amounted to EUR 462 million at 31 December 2023 (EUR 453 million at 31 December 2022).

As part of the Group's variable compensation policy, annual deferred compensation plans are set up for certain high-performing employees or pursuant to special regulatory frameworks. Under these plans, payment is deferred over time and is subject to the performance achieved by the business lines, divisions and Group.

Since 2013, BNP Paribas has introduced a Group loyalty scheme with a cash payment, at the end of a three-year to four-year vesting period, which fluctuates according to the Group's intrinsic performance. The aim of this loyalty scheme is to make different categories of managerial staff partners in the Group's development and profitability objectives. These personnels are representative of the Group's talent and the breadth of its managerial framework, *i.e.* senior managers, managers in key positions, line managers and experts, high-potential managers, high-performing young executives with good career development prospects and key contributors to the Group's results.

The amounts allocated under this plan are linked to changes in the Group's operational performance over the duration of the plan (for 80%) and to the achievement of the Group's corporate social responsibility (CSR) targets (for 20%). These ten targets are in line with the four pillars on which the Group's CSR policy is based. In addition, the final payment is subject to continuous service within the Group between the grant date and the payment date, provided that the Group's operating income and pre-tax income for the year prior to payment are strictly positive. For employees subject to special regulatory frameworks, this loyalty scheme is adjusted in accordance with the CRD European Directive.

The net obligation related to deferred compensation plans and loyalty schemes amounts to EUR 1,033 million at 31 December 2023 (EUR 1,017 million at 31 December 2022).

## 8.D TERMINATION BENEFITS

BNP Paribas has implemented a number of voluntary redundancy plans and headcount adaptation plans for employees who meet certain eligibility criteria. The obligations to eligible active employees under such plans are provided for as soon as a bilateral agreement or a bilateral agreement proposal for a particular plan is made.

In 2023, BNP Paribas Personal Finance subgroup implemented a voluntary departure plan in France in respect of which a provision of EUR 215 million was established.

| Provision for voluntary departure, early retirement plans, and headcount adaptation plans | 482                     | 270  |

## 8.E SHARE-BASED PAYMENTS

As part of the Group's variable remuneration policy, deferred annual compensation plans offered to certain high-performing employees or set up pursuant to special regulatory frameworks may entitle beneficiaries to variable compensation settled in cash but linked to the share price, payable over several years.

## Variable compensation for employees, subject to special regulatory frameworks

Since the publication of the Decree by the French Ministry of Finance on 13 December 2010, and following the provisions of the European Directive CRD 4 of 26 July 2013, modified by the CRD 5 Directive of 20 May 2019, transposed into the French law in the Monetary and Financial Code by the Ordinance of 20 February 2014, and the Ordinance of 21 December 2020, as well as the Decrees and Orders of 3 November 2014 and 22 December 2020 and the Delegated European Regulation of 25 March 2021, the variable compensation plans apply to Group employees performing activities that may have a material impact on the Group's risk profile.

Under these plans, payment is deferred over time and is contingent on the performance achieved by the business lines, core businesses and Group.

Sums will mostly be paid in cash linked to the increase or decrease in the BNP Paribas share price.

## Deferred variable compensation for other Group employees

Sums due under the annual deferred compensation plans for high-performing employees are partly paid in cash linked to the increase or decrease in the BNP Paribas share price.

(1) Transactions realised in the framework of an activity of trading and arbitrage transactions on equity indices.

Throughout the year 2023, BNP Paribas SA bought back on the market then cancelled 86,854,237 of its own shares in accordance with the decision made by the Board of directors on 6 February 2023.

At 31 December 2023, the Group holds 946,529 BNP Paribas shares representing an amount of EUR 51 million, which were deducted from equity.

### Undated super subordinated notes eligible as Tier 1 regulatory capital

BNP Paribas SA has issued undated super subordinated notes which pay a fixed, fixed adjustable or floating-rate coupon and are redeemable at the end of a fixed period and thereafter at each coupon date or every five years.

On 3 January 2022, BNP Paribas SA redeemed the July 2006 issue, for an amount of EUR 150 million. These notes paid a 5.45% fixed-rate coupon.

On 12 January 2022, BNP Paribas SA issued undated super subordinated notes for an amount of USD 1,250 million which pay a 4.625% fixed-rate coupon. These notes could be redeemed at the end of a period of 5 years. If the notes are not redeemed in 2027, a US 5-year Constant Maturity Treasury rate coupon will be paid half-yearly. This issue is eligible to Additional Tier 1 capital.

On 19 January 2022, BNP Paribas SA redeemed the June 2007 issue, for an amount of USD 1,100 million. These notes paid a 7.195% fixed-rate coupon.

On 14 March 2022, BNP Paribas SA redeemed the December 2016 issue, for an amount of USD 750 million. These notes paid a 6.75% fixed-rate coupon.

On 17 June 2022, BNP Paribas SA redeemed the June 2015 issue, for an amount of EUR 750 million, at the first call date. These notes paid a 6.125% fixed-rate coupon.

On 16 August 2022, BNP Paribas SA issued undated super subordinated notes for an amount of USD 2,000 million which pay a 7.75% fixed-rate coupon. These notes could be redeemed at the end of a period of 7 years. If the notes are not redeemed in 2029, a US 5-year Constant Maturity Treasury rate coupon will be paid half-yearly. This issue is eligible to Additional Tier 1 capital.

On 6 September 2022, BNP Paribas SA issued undated super subordinated notes for an amount of EUR 1,000 million which pay a 6.875% fixed-rate coupon. These notes could be redeemed at the end of a period of 7 years and 3 months. If the notes are not redeemed in 2029, a mid-swap rate EUR 5-year coupon will be paid half-yearly. This issue is eligible to Additional Tier 1 capital.

On 17 November 2022, BNP Paribas SA issued undated super subordinated notes for an amount of USD 1,000 million which pay a 9.25% fixed-rate coupon. These notes could be redeemed at the end of a period of 5 years. If the notes are not redeemed in 2027, a US 5-year Constant Maturity Treasury rate coupon will be paid half-yearly. This issue is eligible to Additional Tier 1 capital.

On 11 January 2023, BNP Paribas SA issued undated super subordinated notes for an amount of EUR 1,250 million which pay a 7.375% fixed-rate coupon. These notes could be redeemed at the end of a period of 7 years. If the notes are not redeemed in 2030, a mid-swap rate EUR 5-year coupon will be paid half-yearly. This issue is eligible to Additional Tier 1 capital.

On 28 February 2023, BNP Paribas SA issued undated super subordinated notes for an amount of SGD 600 million which pay a 5.9% fixed-rate coupon. These notes could be redeemed at the end of a period of 5 years. If the notes are not redeemed in 2028, a SGD SORA 5-year rate coupon will be paid half-yearly. This issue is eligible to Additional Tier 1 capital.

The following table summarises the characteristics of these various issues:

(1) Net of shares held in treasury by Group entities.

BNP Paribas has the option of not paying interest due on these undated super subordinated notes. Unpaid interest is not carried forward.

For notes issued before 2015, the absence of coupon payment is conditional on the absence of dividend payment on BNP Paribas SA ordinary shares or on undated super subordinated note equivalents during the previous year. Interest due is payable once dividend payment on BNP Paribas SA ordinary shares resumes.

The contracts relating to these undated super subordinated notes contain a loss absorption clause. Under the terms of this clause, in the event of insufficient regulatory capital, the nominal value of the notes may be reduced in order to serve as a new basis for the calculation of the related coupons until the capital deficiency is made up and the nominal value of the notes is increased to its original amount.

The proceeds from these issues are recorded in equity under "Capital and retained earnings". In accordance with IAS 21, issues denominated in foreign currencies are recognised at their historical value based on their translation into euros at the issue date. Interest on the instruments is treated in the same way as dividends.

At 31 December 2023, the BNP Paribas Group held EUR 12 million of undated super subordinated notes which were deducted from shareholders' equity.

## Earnings per share

Basic earnings per share are calculated by dividing the net income for the period attributable to holders of ordinary shares by the weighted average number of ordinary shares outstanding during the period. The net income attributable to ordinary shareholders is determined by deducting the net income attributable to holders of preferred shares.

Diluted earnings per share correspond to the net income for the period attributable to holders of ordinary shares, divided by the weighted average number of shares outstanding as adjusted for the maximum effect of the conversion of dilutive equity instruments into ordinary shares. In-the-money stock subscription options are taken into account in the diluted earnings per share calculation, as are performance shares granted under the Global Share-Based Incentive Plan. Conversion of these instruments would have no effect on the net income figure used in this calculation. All stock option and performance share plans are expired.

(1) *The net profit used to calculate basic and diluted earnings per share is the net profit attributable to equity shareholders, adjusted for the remuneration on the undated super subordinated notes issued by BNP Paribas SA (treated as preferred share equivalents), which for accounting purposes is handled as dividends, as well as the related foreign exchange gain or loss impact recognised directly in shareholders' equity in case of repurchase.*

The Board of directors will propose to the Annual General Meeting on 14 May 2024, a dividend per share of EUR 4.60 out of the 2023 net income (against EUR 3.90 out of the 2022 net income).

The proposed distribution amounted to EUR 5,274 million, against EUR 4,744 million paid in 2023.

This distribution is raised to 60% of the 2023 net income with a share buyback programme of EUR 1,055 million, initiated on 4 March 2024, after having received the authorisation from the European Central Bank.

## MAIN MINORITY INTERESTS

The assessment of the material nature of minority interests is based on the contribution of the relevant subsidiaries to the Group balance sheet (before elimination of intra-group balances and transactions) and to the Group profit and loss account.

### Commitments to repurchase minority shareholders' interests

In connection with the acquisition of certain entities, the Group granted minority shareholders put options on their holdings.

The total value of these commitments, which are recorded as a reduction in shareholders' equity, amounted to EUR 510 million at 31 December 2023, compared with EUR 361 million at 31 December 2022.

## 9.C LEGAL PROCEEDINGS AND ARBITRATION

BNP Paribas (the "Bank") is party as a defendant in various claims, disputes and legal proceedings (including investigations by judicial or supervisory authorities) in a number of jurisdictions arising in the ordinary course of its business, including *inter alia* in connection with its activities as market counterparty, lender, employer, investor and taxpayer.

The related risks have been assessed by the Bank and are subject, where appropriate, to provisions disclosed in note 5.n *Provisions for contingencies and charges* of the consolidated financial statements at December 31, 2023; a provision is recognised when it is probable that an outflow of resources embodying economic benefits will be required to settle an obligation arising from a past event and a reliable estimate can be made of the amount of the obligation.

The main contingent liabilities related to pending legal, governmental, or arbitral proceedings as of 31 March 2024 are described below. The Bank currently considers that none of these proceedings is likely to have a material adverse effect on its financial position or profitability; however, the outcome of legal or governmental proceedings is by definition unpredictable.

The Bank and certain of its subsidiaries are defendants in several actions pending before the United States Bankruptcy Court for the Southern District of New York brought by the Trustee appointed for the liquidation of Bernard L. Madoff Investment Securities LLC ("BLMIS"). These actions, known generally as "clawback claims", are similar to those brought by the BLMIS Trustee under the U.S. Bankruptcy Code and New York state law against numerous institutions, and seek recovery of amounts allegedly received by BNP Paribas entities from BLMIS or indirectly through BLMIS-related "feeder funds" in which BNP Paribas entities held interests.

As a result of certain decisions of the Bankruptcy Court and the United States District Court between 2016 and 2018, the majority of the BLMIS Trustee's actions were either dismissed or substantially narrowed. However, those decisions were either reversed or effectively overruled by subsequent decisions of the United States Court of Appeals for the Second Circuit issued on 25 February 2019 and 30 August 2021. As a result, the BLMIS Trustee refiled certain of these actions and, as of end May 2023, has asserted aggregate claims of approximately USD 1.2 billion. BNP Paribas has substantial and credible defenses to these actions and is defending against them vigorously.

Litigation was brought in Belgium by minority shareholders of the previous Fortis Group against the Société fédérale de Participations et d'Investissement, Ageas and BNP Paribas seeking (amongst other things) damages from BNP Paribas as restitution for part of the BNP Paribas Fortis shares that were contributed to BNP Paribas in 2009, on the ground that the transfer of these shares was null and void. On 29 April 2016, the Brussels Commercial court decided to stay the proceedings until the resolution of the pending Fortis criminal proceeding in Belgium. The criminal proceeding, in which the Public Prosecutor had requested a dismissal, is definitively closed, as the Council Chamber of the Brussels Court of first instance issued on 4 September 2020 a ruling (which since became final) that the charges were time-barred. Certain minority shareholders are continuing the civil proceedings against BNP Paribas and the Société fédérale de Participations et d'Investissement before the Brussels Commercial court; BNP Paribas continues to defend itself vigorously against the allegations of these shareholders. Hearings on the matter before the Brussels Commercial court are scheduled for September and October 2024.

On 26 February 2020, the Paris Criminal Court found BNP Paribas Personal Finance guilty of misleading commercial practice and concealment of this practice. BNP Paribas Personal Finance was ordered to pay a fine of EUR 187,500 and damages and legal fees to the civil plaintiffs. On 28 November 2023, the Paris Court of Appeals upheld the Paris Criminal Court's decision relating to misleading commercial practice and the concealment of those practices. As for the damages owed to the civil plaintiffs, though the Paris Court of Appeals adjusted the calculation methodology, the majority of the damages had already been paid by provisional enforcement of the Paris Criminal Court's judgment. An agreement was also entered into with the "Consommation Logement Cadre de Vie" association to settle the case with customers wishing to do so.

Like many other financial institutions in the banking, investment, mutual funds and brokerage sectors, the Bank has received or may receive requests for information from, or be subject to investigations by supervisory, governmental or self-regulatory agencies. The Bank responds to such requests and cooperates with the relevant authorities and regulators and seeks to address and remedy any issues that may arise.

In 2023, BNP Paribas premises (along with those of other financial institutions) were searched by the French financial prosecutor's office; BNP Paribas was informed that the office had opened a preliminary investigation relating to French securities transactions.

Save as disclosed above, there are no governmental, legal or arbitration proceedings (including any such proceedings which are pending or threatened of which the Bank is aware) that may have or have had, in the previous twelve months, any significant effects on the financial position or the profitability of the Bank and/or the BNP Paribas Group.

## **9.D BUSINESS COMBINATIONS AND LOSS OF CONTROL OR SIGNIFICANT INFLUENCE**

### **Operation of 2023**

#### **Partnership with Stellantis**

On 3 April 2023, BNP Paribas Personal Finance became the exclusive partner of Stellantis captive company in its financing activities across three strategic markets: Germany, Austria and the United Kingdom.

This operation involved the purchase of three entities in these three countries, in conjunction with the sale of activities to various Stellantis joint ventures in France, Italy and Spain.

This restructuring increased the Group's balance sheet by EUR 8 billion, in particular in financial assets at amortised cost, and led to the recognition of a net gain on disposal of EUR 54 million and of a goodwill of EUR 143 million.

### **Operations of 2022**

#### **bpost bank**

On 3 January 2022, BNP Paribas Fortis purchased the residual 50% stake in bpost bank.

The Group BNP Paribas took therefore exclusive control of this entity and fully consolidated it from the first quarter of 2022.

Consequently, this operation increased the Group's balance sheet by EUR 12 billion at the acquisition date, in particular EUR 11 billion in financial assets at amortised cost and led to the recognition of goodwill of EUR 245 million in the profit and loss account.

### **Axepta SpA**

On 4 January 2022, Banca Nazionale del Lavoro sold 80% of its stake of Wordline Merchant Services Italia (ex-Axepta SpA).

The Group BNP Paribas lost exclusive control of this entity but kept a significant influence.

The disposal led to the recognition of a result of EUR 204 million on the line "Net gain on non-current assets".

The residual stake of 20% was consolidated using the equity method for its remeasured value, including goodwill of EUR 41 million.

### **Floa**

On 31 January 2022, BNP Paribas purchased 100% of Floa.

The Group BNP Paribas took exclusive control of this entity and fully consolidated it from the first quarter of 2022.

The Group's balance sheet increased by EUR 2 billion at the acquisition date, in particular in financial assets at amortised cost.

The goodwill related to this operation was EUR 122 million.

### **UkrSibbank**

In the context of the conflict in Ukraine, the Group reassessed the nature of control over its subsidiary UkrSibbank and concluded to the loss of exclusive control, and the maintain of a significant influence. This situation led the Group to consolidate the entity using the equity method from 1 March 2022.

The loss of exclusive control involved the recognition of a loss on disposal of -EUR 159 million and the reclassification to the profit and loss account of cumulated changes in assets and liabilities for exchange differences of -EUR 274 million, in "Net gain on non-current assets".

The Group's balance sheet decreased by EUR 2 billion at the date of loss of exclusive control, in particular in financial assets at amortised cost.

### **Terberg Leasing Group BV**

On 30 November 2022, Arval Service Lease purchased 100% of Terberg Leasing Group BV.

The Group BNP Paribas took exclusive control of these entities and fully consolidated them from the last quarter of 2022.

The Group's balance sheet increased by EUR 1 billion at the acquisition date, in particular in tangible assets.

The goodwill related to this operation was EUR 92 million.

## **9.E DISCONTINUED ACTIVITIES**

On 18 December 2021, BNP Paribas concluded an agreement with BMO Financial Group for the sale of 100% of its retail and commercial banking activities in the United States, operated by the BancWest cash-generating unit, for a total consideration of USD 16.3 billion in cash.

The transaction was closed on 1 February 2023 following receipt of all regulatory approvals by BMO Financial Group.

The group of assets covered by the agreement comprises most of the entities of the homogeneous BancWest set (see reference D2 in note 9.k *Scope of consolidation*).

As required by IFRS 5 related to groups of assets and liabilities held for sale, the Group's consolidated financial statements are adapted to present BancWest separately since December 2021:

- the assets are reclassified on a separate line of the balance sheet "Assets held for sale";
- the liabilities are also reclassified in a separate line "Liabilities associated with assets held for sale";
- amounts accounted for in equity for the revaluation of assets and liabilities are presented separately in the statement of net income and changes in assets and liabilities recognised directly in equity;
- revenues and expenses are reclassified in a separate line "Net income from discontinued activities" in the profit and loss statement. This income includes revenues and expenses from internal transactions with BancWest, provided that, following the sale, the Group will no longer receive these revenues or incur these expenses;
- the net change in cash and cash equivalents is isolated in the cash flow statement.

The disposal realised on 1 February 2023 resulted in EUR 87 billion decrease in "Assets held for sale".

The net capital gain on the disposal amounted to EUR 2.9 billion.

## 9.F SIGNIFICANT RESTRICTIONS IN SUBSIDIARIES, JOINT VENTURES AND ASSOCIATES

### Significant restrictions related to the ability of entities to transfer cash to the Group

The ability of entities to pay dividends or to repay loans and advances depends, *inter alia*, on local regulatory requirements for capitalisation and legal reserves, as well as the entities' financial and operating performance. During 2023, none of the BNP Paribas Group entities were subject to significant restrictions other than those related to regulatory requirements.

### Significant restrictions relative to the Group's ability to use the assets lodged in consolidated structured entities

Access to the assets of consolidated structured entities in which third-party investors have invested is limited inasmuch as these entities' assets are reserved for the holders of units or securities. These assets total EUR 42 billion at 31 December 2023 (EUR 37 billion at 31 December 2022).

### Significant restrictions related to the Group's ability to use assets pledged as collateral or under repurchase agreements

The financial instruments pledged by the BNP Paribas Group as collateral or under repurchase agreements are presented in notes 5.p and 7.d.

### Significant restrictions related to liquidity reserves

Significant restrictions related to liquidity reserves correspond to the mandatory deposits placed with central banks presented in chapter 5 of this amendment to the 2022 Universal Registration Document under *Liquidity risk*.

### Assets representative of unit-linked insurance contracts

Assets representative of unit-linked insurance contracts designated as at fair value through profit or loss, which amounts to EUR 95.8 billion at 31 December 2023 (compared with EUR 88.5 billion at 31 December 2022 restated according to IFRS 17 and 9), are held for the benefit of the holders of these contracts.

## 9.G STRUCTURED ENTITIES

The BNP Paribas Group is engaged in transactions with sponsored structured entities mainly through its activities of securitisation of financial assets - as either originator or sponsor, fund management and specialised asset financing.

In addition, the BNP Paribas Group is also engaged in transactions with structured entities that it has not sponsored, notably in the form of investments in funds or securitisation vehicles.

The method for assessing control for structured entities is detailed in note 1.b.2. *Consolidation methods*.

### Consolidated structured entities

The main categories of consolidated structured entities are:

**ABCP (Asset-Backed Commercial Paper) conduits:** the ABCP securitisation conduits Starbird and Matchpoint fund securitisation transactions managed by the BNP Paribas Group on behalf of its customers. Details on how these are financed and the Group's risk exposure are presented in chapter 5 of this amendment to the 2022 Universal Registration Document under *Securitisation as sponsor on behalf of clients/Short-term refinancing*.

**Proprietary securitisation:** proprietary securitisation positions originated and held by the BNP Paribas Group are detailed in chapter 5 of this amendment to the 2022 Universal Registration Document under *Proprietary securitisation activities (originator)*.

**Funds managed by the Group:** the BNP Paribas Group structures different types of funds for which it may act as fund manager, investor, custodian or guarantor. These funds are consolidated when the Group is both the manager and a significant investor and is therefore exposed to variable returns.

### Unconsolidated structured entities

The BNP Paribas Group has entered into relations with unconsolidated structured entities in the course of its business activities to meet the needs of its customers.

### Information relative to interests in sponsored structured entities

The main categories of unconsolidated sponsored structured entities are as follows:

**Securitisation:** the BNP Paribas Group structures securitisation vehicles for the purposes of offering customers financing solutions for their assets, either directly or through consolidated ABCP conduits. Each vehicle finances the purchase of customers' assets (receivables, bonds, *etc.*) primarily by issuing bonds backed by these assets and whose redemption is linked to their performance.

**Funds:** the Group structures and manages funds to offer investment opportunities to its customers. Dedicated or public funds are offered to institutional and individual customers and are distributed and commercially monitored by the BNP Paribas Group. The entities of the BNP Paribas Group responsible for managing these funds may receive management fees and performance commission. The BNP Paribas Group may hold units in these funds, as well as units in funds dedicated to the insurance activity not managed by the BNP Paribas Group.

**Asset financing:** the BNP Paribas Group establishes and finances structured entities that acquire assets (aircraft, ships, etc.) intended for lease, and the lease payments received by the structured entity are used to repay the financing, which is guaranteed by the asset held by the structured entity.

**Other:** on behalf of its customers, the Group may also structure entities which invest in assets or are involved in debt restructuring.

An interest in an unconsolidated structured entity is a contractual or non-contractual link that exposes the BNP Paribas Group to variable returns from the performance of the entity.

The Group's assets and liabilities related to the interests held in sponsored structured entities are as follows:

| <i>In millions of euros, at 31 December 2023</i>                       | <b>Securitisation</b> | <b>Funds</b>   | <b>Asset<br/>Financing</b> | <b>Others</b> | <b>Total</b>   |

(1) The size of sponsored structured entities equals the total assets of the structured entity for securitisation vehicles, the net asset value for funds (excluding management mandates) and the structured entity's total assets or the amount of the BNP Paribas Group's commitment for asset financing and other structures.

The BNP Paribas Group's maximum exposure to losses on sponsored structured entities is the carrying amount of the assets, excluding, for financial assets at fair value through equity, changes in value taken directly to equity, as well as the nominal amount of the financing commitments and guarantee commitments given and the notional amount of credit default swaps (CDS) sold.

### Information relative to interests in non-sponsored structured entities

The main interests held by the BNP Paribas Group when it acts solely as an investor in non-sponsored structured entities are detailed below:

- **units in funds that are not managed by the Group, which are held by the Insurance business line:** as part of the asset allocation strategy corresponding to investments related to the premiums for unit-linked contracts or for the general fund, the Insurance business line subscribes to units of structured entities. These short- or medium-term investments are held for their financial performance and meet the risk diversification criteria inherent to the business. They amounted to EUR 26 billion at 31 December 2023 (EUR 27 billion at 31 December 2022). Changes in value and the majority of the risks associated with these investments are borne by policyholders in the case of assets representative of unit-linked contracts, and by the insurer in the case of assets representative of the general fund;
- **other investments in funds not managed by the Group:** as part of its trading business, the BNP Paribas Group invests in structured entities without any involvement in either managing or structuring these entities (investments in mutual funds, securities funds or alternative funds), particularly as economic hedge for structured products sold to customers. The Group also invests in minority holdings in investment funds, in support of companies, as part of its venture capital business. These investments amounted to EUR 12 billion at 31 December 2023 (8 billion at 31 December 2022);

- **investments in securitisation vehicles:** the breakdown of the Group's exposure and the nature of the securities held are presented in chapter 5 of this amendment to the 2022 Universal Registration Document in the section *Securitisation as investor*.

Besides, in the framework of its asset financing activity, the BNP Paribas Group provides financing to structured entities that are established by and for its clients and whose purpose is to acquire assets (aircraft, ships, etc.) intended for lease to those same clients. These financings amount to EUR 6 billion at 31 December 2023 (EUR 4 billion at 31 December 2022).

## 9.H COMPENSATION AND BENEFITS AWARDED TO THE GROUP'S CORPORATE OFFICERS

The Group's corporate officers, their spouse and their dependent children are considered related parties.

The remuneration and benefits policy relating to the Group's corporate officers, as well as the detailed information on an individual basis, are presented in chapter 2 *Corporate governance* of this amendment to the 2022 Universal Registration Document.

### REMUNERATION AND BENEFITS AWARDED TO THE GROUP'S CORPORATE OFFICERS AND TO DIRECTORS REPRESENTING THE EMPLOYEES

| <i>In euros</i>  | <b>Year to 31<br/>Dec. 2023</b> | <b>Year to 31<br/>Dec. 2022</b> |
|--|---------------------------------|---------------------------------|
| <b>Gross remuneration</b>  |                                 |                                 |
| Gross remuneration paid during the year including benefits in kind   | 9,319,675                       | 9,220,047                       |
| Remuneration linked to the term of directorship (paid to the trade unions)   | 428,648                         | 415,328                         |
| <b>Welfare benefits:</b> premiums paid by BNP Paribas during the year  | 26,788                          | 26,494                          |
| <b>Post-employment benefits</b>  | 1,141,635                       | 1,123,483                       |
| <b>Share-based payments:</b> conditional long-term incentive plan (LTIP) - fair value at grant date <sup>(1)</sup> | 1,404,857                       | 1,748,965                       |

(1) Valuation according to the method described in note 8.e.

At 31 December 2023, no corporate officer is eligible for a contingent collective defined-benefit top-up pension plan.

#### Remuneration linked to the term of directorship paid to members of the Board of directors

Remuneration linked to the term of directorship paid to all members of the Board of directors in 2023 amounts to EUR 1,540,000, unchanged compared to 2022. The amount paid in 2023 to members other than corporate officers was EUR 1,410,484 compared with EUR 1,413,560 in 2022.

#### Loans, advances and guarantees granted to the Group's corporate officers

At 31 December 2023, the total outstanding loans granted directly or indirectly to the Group's corporate officers and their spouse and dependent children amounted to EUR 5,770,986 (EUR 5,179,096 at 31 December 2022). These loans representing normal transactions were carried out on an arm's length basis.

## 9.I OTHER RELATED PARTIES

Other related parties of the BNP Paribas Group comprise consolidated companies (including entities consolidated under the equity method) and entities managing post-employment benefit plans offered to Group employees (except for multi-employer and multi-industry schemes).

Transactions between the BNP Paribas Group and related parties are carried out on an arm's length basis.

#### Relations between consolidated companies

A list of companies consolidated by the BNP Paribas Group is provided in note 9.k *Scope of consolidation*. Transactions and outstanding balances between fully-consolidated entities are eliminated. The tables below show transactions with entities accounted for under the equity method.

### Group entities involved in certain post-employment benefit plans offered to group employees

In Belgium, BNP Paribas Fortis funds a number of pension schemes managed by AG Insurance in which the BNP Paribas Group has a 25% equity interest.

In other countries, post-employment benefit plans are generally managed by independent fund managers or independent insurance companies, and occasionally by Group companies, in particular BNP Paribas Asset Management.

At 31 December 2023, the value of plan assets managed by Group companies or by companies over which the Group exercises significant influence was EUR 3,864 million (EUR 3,689 million at 31 December 2022). Amounts received by Group companies in the year to 31 December 2023 totalled EUR 5 million and were mainly composed of management and custody fees (EUR 5 million at 31 December 2022).

## 9.J FAIR VALUE OF FINANCIAL INSTRUMENTS CARRIED AT AMORTISED COST

The information supplied in this note must be used and interpreted with the greatest caution for the following reasons:

- these fair values are an estimate of the value of the relevant instruments at 31 December 2023. They are liable to fluctuate from day to day as a result of changes in various parameters, such as interest rates and credit quality of the counterparty. In particular, they may differ significantly from the amounts actually received or paid on maturity of the instrument. In most cases, the fair value is not intended to be realised immediately, and in practice might not be realised immediately. Consequently, this fair value does not reflect the actual value of the instrument to BNP Paribas as a going concern;
- most of these fair values are not meaningful, and hence are not taken into account in the management of the commercial banking activities which use these instruments;
- estimating a fair value for financial instruments carried at historical cost often requires the use of modelling techniques, hypotheses and assumptions that may vary from bank to bank. This means that comparisons between the fair values of financial instruments carried at historical cost as disclosed by different banks may not be meaningful;
- the fair values shown below do not include the fair values of finance lease transactions, non-financial instruments such as property, plant and equipment, goodwill and other intangible assets such as the value attributed to demand deposit portfolios or customer relationships. Consequently, these fair values should not be regarded as the actual contribution of the instruments concerned to the overall valuation of the BNP Paribas Group.

(1) Finance leases excluded.

The valuation techniques and assumptions used by BNP Paribas ensure that the fair value of financial assets and liabilities carried at amortised cost is measured on a consistent basis throughout the Group. Fair value is based on prices quoted in an active market when these are available. In other cases, fair value is determined using valuation techniques such as discounting of estimated future cash flows for loans, liabilities and debt securities at amortised cost, or specific valuation models for other financial instruments as described in note 1, *Summary of significant accounting policies applied by the BNP Paribas Group*. The description of the fair value hierarchy levels is also presented in the accounting principles (see note 1.f.10). In the case of loans, liabilities and debt securities at amortised cost that have an initial maturity of less than one year (including demand deposits) or of most regulated savings products, fair value equates to carrying amount. These instruments have been classified in Level 2, except for loans to customers, which are classified in Level 3.

## 9.K SCOPE OF CONSOLIDATION

BNP Paribas, a *société anonyme* (Public Limited Company), registered in France, is the Group's lead company, which holds key positions in its three operating divisions: Corporate & Institutional Banking (CIB), Commercial, Personal Banking & Services (CPBS) and Investment & Protection Services (IPS).

During the year, the parent company did not change its name. BNP Paribas has its principal place of business in France and its head office is located at 16 boulevard des Italiens 75009 Paris, France.

(e) At 31 December 2023, the securitisation funds Wisdom include 13 funds (Wisdom Puhua Leasing 2021-2 & 3 Asset-Backed Securities, Wisdom Puhua Leasing 2022-1 Asset-Backed notes, Wisdom Puhua Leasing 2022-1 to 3 Asset-Backed Securities, Wisdom Puhua Leasing 2023-1 & 2 Asset-Backed notes, Wisdom Puhua Leasing 2023-1 & 2 Asset-Backed securities, Wisdom Puhua Leasing Zhixing 2023-1 & 2 Asset-Backed notes, Wisdom Puhua Leasing Xinghe 2023-1 Asset-Backed Securities).

As requested by the ANC 2016 regulation, the list of entities that are controlled by the Group, jointly controlled or under significant influence, but excluded from the scope of consolidation since their contribution to the consolidated financial statements would be immaterial to the Group, and the list of equity investments, are available on the "Regulated Information" page of the <https://invest.bnpparibas.com> website.

#### Changes in the scope of consolidation

##### New entries (E) in the scope of consolidation

- E1 Passing qualifying thresholds
- E2 Incorporation
- E3 Purchase, gain of control or significant influence

##### Removals (S) from the scope of consolidation

- S1 Cessation of activity (dissolution, liquidation, etc.)
- S2 Disposal, loss of control or loss of significant influence
- S3 Passing qualifying thresholds
- S4 Merger, Universal transfer of assets and liabilities

##### Variance (V) in voting or ownership interest

- V1 Additional purchase
- V2 Partial disposal
- V3 Dilution
- V4 Increase in %

##### Miscellaneous

- D1 Consolidation method change not related to fluctuation in voting or ownership interest
- D2 Entities of a business held for sale
- D3 Following the additional purchase of interest by BNP Paribas Group in 2022, Compagnie pour le Financement des Loisirs was fully consolidated.
- D4 Following the partial disposal by the Group in 2022, Worldline Merchant Services Italia SPA was consolidated under the equity method
- D5 Following the additional purchase of interest by BNP Paribas Group in 2022, bpost bank was fully consolidated.
- D6 Following the partial disposal by the Group in 2022, Baroda BNPP AMC Private Ltd was consolidated under the equity method
- D7 Following the additional acquisition carried out by the Group, Arval Relsa and its subsidiaries are now fully consolidated.
- D8 Following the additional acquisition carried out by the Group, Kantox Holding and its subsidiaries are now fully consolidated.
- D9 Following the additional purchase of interest by the Group on 16 October 2023, Luizaseg Seguros SA is now fully consolidated.

Equity \* Controlled but non-material entities consolidated under the equity method as associates

FV Joint control or investment in associates measured at fair value through profit or loss

- (s) Structured entities
- (t) Securitisation funds

##### Prudential scope of consolidation

- (1) French subsidiaries for which supervision of prudential requirements is complied with through the supervision on a consolidated basis of BNP Paribas SA, in accordance with article 7.1 of Regulation n°575/2013 of the European Parliament and of the Council.
- (2) Entities consolidated under the equity method in the prudential scope.
- (3) Jointly controlled entities under proportional consolidation in the prudential scope.
- (4) Collective investment undertaking excluded from the prudential scope.

| <i>of which fees paid to statutory auditors in France for services other than those required for their statutory audit engagements</i> | 1,739         |             | 2,353                  |             | 1,046         |             | 5,138         |             |

Audit fees paid to external auditors who are not part of the network of the external auditors certifying the individual and consolidated financial statements of BNP Paribas SA, as mentioned in the above table, amount to EUR 3,990 thousand for the year 2023 (EUR 786 thousand in 2022). Variation is mainly explained by the appointment of BDO as joint external auditor of the Personal Finance Business Line entities in 2023.

This year, services other than the ones required for the statutory audit mainly refer to issuance of attestation of accounting and financial information, review of the quality of the internal control as per the international standards (such as ISAE 3402) within the framework of services provided to customers, especially in the Securities and the Asset Management Business Lines, expertise on the Bank's transformation projects, technical consultations on specific issues and assessment of the compliance of the entity's framework with Law/Regulation.

## 4.7 Statutory Auditors' report on the consolidated financial statements

*This is a free translation into English of the Statutory Auditors' report issued in French and is provided solely for the convenience of English speaking readers. This report includes information specifically required by European regulations or French law, such as information about the appointment of Statutory Auditors. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.*

For the year ended 31 December 2023

To the Shareholders,

### Opinion

In compliance with the engagement entrusted to us by your Annual General Meeting, we have audited the accompanying consolidated financial statements of BNP Paribas SA for the year ended 31 December 2023.

In our opinion, the consolidated financial statements give a true and fair view of the assets and liabilities and of the financial position of the Group at 31 December 2023 and of the results of its operations for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

The audit opinion expressed above is consistent with our report to the Financial Statements Committee.

### Basis for opinion

#### Audit framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under these standards are further described in the Responsibilities of the Statutory Auditors relating to the audit of the consolidated financial statements section of our report.

#### Indépendance

We conducted our audit engagement in compliance with the independence rules provided for in the French Commercial Code (Code de commerce) and the French Code of Ethics (Code de déontologie) for Statutory Auditors for the period from 1 January 2023 to the date of our report, and, in particular, we did not provide any non-audit services prohibited by article 5(1) of Regulation (EU) No. 537/2014.

### Emphasis of matter

Without qualifying our opinion, we draw your attention to the impact of the change in accounting policy relative to the application as from 1 January 2023 of IFRS 17 "Insurance Contracts" and IFRS 9 "Financial Instruments" on portfolios of financial instruments of insurance businesses as presented in Notes 1a, 1g, 1p and 2 as well as in the other notes to the consolidated financial statements presenting quantified data related to the impact of these changes.

### Justification of assessments – Key audit matters

In accordance with the requirements of articles L.821-53 and R.821-180 of the French Commercial Code relating to the justification of our assessments, we inform you of the key audit matters relating to the risks of material misstatement that, in our professional judgement, were the most significant in our audit of the consolidated financial statements, as well as how we addressed those risks.

These matters were addressed as part of our audit of the consolidated financial statements as a whole, and therefore contributed to the opinion we formed as expressed above. We do not provide a separate opinion on specific items of the consolidated financial statements.

## Assessment of credit risk and measurement of impairment losses (stages 1, 2 and 3) on customer loan portfolios

*(See Notes 1.f.5, 1.f.6, 1.p, 3.g, 5.e, 5.f, 5.n and 9.e to the consolidated financial statements)*

| Description of risk  | How our audit addressed this risk  |
|--|--|
| <p>BNP Paribas recognises impairment losses to hedge the credit risks inherent to its banking intermediation activities. In a context still marked by considerable uncertainty relating to the macro-economic environment, the measurement of expected credit losses for customer loan portfolios required the BNP Paribas Group to exercise greater judgement and to take into account assumptions, in particular in order to:</p> <ul style="list-style-type: none"> <li>▪ assess the significant deterioration in credit risk to classify outstandings in stage 1, stage 2, or stage 3 according to geographical region and industry. As specified in Note 3.g to the consolidated financial statements, the bank continued to develop its criteria for assessing the material increase in credit risk in line with the recommendations issued by the European Banking Authority and the European Central Bank;</li> <li>▪ prepare macro-economic projections which are integrated into both the criteria for recognising the deterioration and in the measurement of expected credit losses;</li> <li>▪ estimate the amount of expected credit losses according to the different stages and taking into account the current macro-economic environment and the absence of any comparable historical situation. In particular, as specified in Note 3.g, certain additional adjustments or forecasts not included in the models in a generic approach are made to take into account the impacts of inflation, rate hikes and rising commercial property prices where these effects are not directly estimated by the models.</li> </ul> <p>At 31 December 2023, total outstanding customer loans exposed to credit risk amounted to EUR 877 billion, while total impairment losses stood at EUR 18 billion.</p> <p>We deemed the assessment of credit risk and the measurement of impairment losses to be a key audit matter insofar as management is required to exercise judgement and make estimates as regards credit granted to companies, particularly in the context of persistent uncertainty caused by geopolitical tensions, particularly the war in Ukraine and the Middle East and economic tensions, with inflation and interest rates that remained high in 2023.</p> | <p>We assessed the relevance of BNP Paribas' internal control system, particularly its adaptation to the uncertain environment, and tested the manual and computerised controls for assessing credit risk and measuring expected losses.</p> <p>During our work, we focused on:</p> <ul style="list-style-type: none"> <li>▪ classification of outstandings by stage: we assessed whether the change of risks was taken into account in estimating the indicators applicable to the various business lines to measure the significant deterioration in credit risk;</li> <li>▪ measurement of expected losses (stages 1, 2 and 3): <ul style="list-style-type: none"> <li>▪ assisted by our credit risk experts and relying on the internal system for independent validation of BNP Paribas' models, we assessed the methodologies as well as the assumptions underlying the macro-economic projections used by BNP Paribas across the various business lines, the proper integration of said projections into the information system and the effectiveness of the data quality controls;</li> <li>▪ we paid particular attention to the additional provisions recognised to take account of the uncertainties described above. we assessed the reasonableness of the methodologies used, the underlying assumptions, the relevance of the results obtained and the control procedures implemented;</li> <li>▪ with regard to impairment losses on outstanding loans to companies classified in stage 3, we verified that a periodic review of the credit risk of counterparties under surveillance had been carried out by BNP Paribas and, based on a sample of counterparties, assessed the assumptions and data used by management to estimate impairment.</li> </ul> </li> </ul> <p>In addition, we examined the disclosures in the notes to the consolidated financial statements with respect to credit risk and particularly the disclosures required by IFRS 9 and IFRS 7.</p> |

## Valuation of financial instruments

(See Notes 1.f.7, 1.f.10, 1.p, 3.a, 3.c, 5.a and 5.d to the consolidated financial statements)

| Description of risk  | How our audit addressed this risk  |
|--|--|
| <p>As part of its trading activities, BNP Paribas holds financial instruments (assets and liabilities) which are recognised in the balance sheet at market value.</p> <p>Market value is determined according to different approaches, depending on the type of instrument and its complexity: (i) using directly observable quoted prices (instruments classified in level 1 of the fair value hierarchy); (ii) using valuation models whose main inputs are observable (instruments classified in level 2); and (iii) using valuation models whose main inputs are unobservable (instruments classified in level 3).</p> <p>The valuations obtained may be subject to additional value adjustments to take into account certain specific trading, liquidity or counterparty risks.</p> <p>The techniques adopted by management to measure these instruments may therefore involve significant judgement as regards the models and data used.</p> <p>At 31 December 2023, financial instruments represented EUR 719 billion (of which EUR 7 billion for level 3 instruments) under assets and EUR 655 billion (of which EUR 10 billion for level 3 instruments) under liabilities.</p> <p>In light of the materiality of the outstandings and the judgement used to determine market value, we deemed the measurement of financial instruments to be a key audit matter, in particular the measurement of level 3 instruments given the use of unobservable inputs.</p> | <p>Assisted by our valuation experts, we verified that the key controls used by BNP Paribas with respect to the valuation of financial instruments function properly, in particular those relating to:</p> <ul style="list-style-type: none"> <li>the approval and regular review by management of the risks of the valuation models;</li> <li>the independent verification of the valuation inputs;</li> <li>the determination of value adjustments.</li> </ul> <p>Based on a sample, our valuation experts:</p> <ul style="list-style-type: none"> <li>analysed the relevance of the assumptions and inputs used;</li> <li>analysed the results of the independent review of the inputs by BNP Paribas;</li> <li>performed independent counter valuations using our own models.</li> </ul> <p>We also analysed, on a sample basis, any differences between the valuations obtained and collateral calls with counterparties.</p> <p>In addition, we examined the disclosures in the notes to the consolidated financial statements with respect to the valuation of financial instruments.</p> |

## General IT controls

| Description of risk  | How our audit addressed this risk  |
|--|--|
| <p>The reliability and security of IT systems plays a key role in the preparation of BNP Paribas SA's consolidated financial statements.</p> <p>We thus deemed the assessment of the general IT controls of the infrastructures and applications that contribute to the preparation of accounting and financial information to be a key audit matter.</p> <p>In particular, a system for controlling access rights to IT systems and authorisation levels based on employee profiles represents a key control for limiting the risk of inappropriate changes to application settings or underlying data.</p> | <p>For the main systems used to prepare accounting and financial information, assisted by our IT specialists, our work consisted primarily in:</p> <ul style="list-style-type: none"> <li>obtaining an understanding of the systems, processes and controls which underpin accounting and financial data;</li> <li>assessing the general IT controls (application and data access management, application changes/developments management and IT operations management) on key systems (in particular accounting, consolidation and automatic reconciliation applications);</li> <li>examining the control for the authorisation of manual accounting entries;</li> <li>performing additional audit procedures, where appropriate;</li> <li>taking into account the cybersecurity risk increased by the crisis in Ukraine and the widespread use of remote working.</li> </ul> |

## Impact of the first-time application of IFRS 17 “Insurance Contracts” and valuation of insurance contract liabilities in the “Retirement savings” businesses

*(See Notes 1.a, 1.g, 1.p, 2 and 6 to the consolidated financial statements)*

| Description of risk   | How our audit addressed this risk   |
|---|---|
| <p>The entry into force of IFRS 17 “Insurance Contracts” as from 1 January 2023 has resulted in significant changes to the rules for measuring and recognising insurance liabilities as well as changes in presentation of the financial statements. The standard applies retrospectively to insurance contracts outstanding at the transition date of 1 January 2022.</p> <p>The first-time application of IFRS 17 resulted in an impact of a negative EUR 2.1 billion on opening equity at 1 January 2022 for the BNP Paribas Group (refer to the Statement of changes in shareholders’ equity) and led to the recognition of a contractual service margin of EUR 18.6 billion. Note 1.a to the consolidated financial statements describes the accounting methods chosen (mainly application of the modified retrospective approach (MRA) by BNP Paribas) and the specific assumptions made by the Group at the transition date, depending on the type of contract (Protection or Retirement-savings) and the methods used for the valuation of liabilities under IFRS 17 (general model, simplified model or variable fee approach).</p> <p>At 31 December 2023, insurance liabilities measured in accordance with IFRS 17 represented a net amount of EUR 217 billion, compared with EUR 209 billion at 31 December 2022 (see Note 6.d). The accounting methods and assumptions used by the Group to estimate insurance liabilities are described in Note 1.g.2, which specifies that insurance contracts in the Retirement-savings segment, known as participating contracts, are valued using the variable fee accounting model. These contracts represent most of the insurance liabilities (EUR 212 billion at 31 December 2023 compared with EUR 204 billion at 31 December 2022) as indicated in Note 6.e.</p> <p>In determining the impact of the transition, management’s judgements and assumptions focused in particular on the justification for using the modified retrospective approach and the simplifying methodologies and assumptions used to estimate the contractual service margin and the non-financial risk adjustment at the transition date.</p> <p>Insurance liabilities include the determination of the best estimate of the present value of cash flows to be paid or received to meet contractual obligations to policyholders, a non-financial risk adjustment based on a confidence level adopted by the Group and taking into account risk diversification, and a contractual service margin representing the unearned profit that will be recognised as services are rendered. The valuation of these insurance liabilities according to the variable fee approach is based on complex actuarial models using data and assumptions relating to future periods, such as determining the discount rate, policyholder behaviour laws, future management decisions, non-financial risk adjustment and the definition of assumptions for returns on so-called real-world assets, used for the release to income of the contractual service margin. Changes and updates to the inputs used are likely to have a significant impact on the amount of insurance liabilities in the Retirement-savings segment.</p> <p>The significant changes in the measurement and recognition of insurance liabilities introduced by the application of this new accounting standard and the significant judgements</p> | <p>With the assistance of our actuarial modelling specialists, our audit procedures mainly consisted in:</p> <ul style="list-style-type: none"> <li>▪ reviewing and assessing the relevance of the method deployed by the BNP Paribas Group to implement IFRS 17 and the adaptation of the governance responsible for validating IFRS 17 models, the inputs and assumptions to be applied at the closing date and the financial impact on the estimate of net insurance liabilities;</li> <li>▪ reviewing and assessing the relevance of the processes and controls defined by management to determine the impact of the adoption of IFRS 17 on the consolidated financial statements at 1 January 2022 and on the comparative financial statements at 31 December 2022;</li> <li>▪ assessing the compliance of the accounting policies applied by the Group with the provisions of IFRS 17. We paid particular attention to the simplifying assumptions used to apply the modified retrospective approach at the transition date;</li> <li>▪ examining the eligibility of retirement savings contracts for the variable fee approach and ensuring it is correctly applied;</li> <li>▪ analysing the main inputs used at the closing date to calculate the insurance assets and liabilities of retirement savings contracts, and assessing their relevance in light of the external information available and the Group’s own management data. These procedures include assessing the adequacy of any changes in assumptions, inputs or modelling;</li> <li>▪ testing, using sampling techniques, the reliability of the underlying data used in the projection models and calculations of insurance liabilities;</li> <li>▪ examining the internal control environment of the IT systems used to calculate the insurance assets and liabilities of retirement savings contracts;</li> <li>▪ testing the key controls implemented by the Group (including data quality at each calculation stage) to guarantee the reliability of the financial information produced;</li> <li>▪ carrying out an independent calculation of the best estimate of the cash flows based on a sample of retirement savings insurance liabilities;</li> <li>▪ implementing procedures for the analytical review of model outputs.</li> </ul> <p>In addition, we examined the information disclosed in the notes to the financial statements, including information on risk sensitivity.</p> |

made by management described above led us to deem the impact of the first-time application of IFRS 17 “Insurance Contracts” and valuation of insurance contract liabilities in the “Retirement savings” businesses as a key audit matter.

---

## **Specific verifications**

As required by legal and regulatory provisions and in accordance with professional standards applicable in France, we performed the specific verifications on the information pertaining to the Group presented in the Board of Directors’ management report.

We have no matters to report as to its fair presentation and its consistency with the consolidated financial statements.

We attest that the Group management report includes the consolidated non-financial information statement required under article L.225-102-1 of the French Commercial Code. However, in accordance with article L.823-10 of the French Commercial Code, we have not verified the fair presentation and consistency with the consolidated financial statements of the information given in that statement, which will be the subject of a report by an independent third party.

## **Other verifications and information pursuant to legal and regulatory requirements**

### **Presentation of the consolidated financial statements included in the annual financial report**

In accordance with professional standards applicable to the Statutory Auditors’ procedures for annual and consolidated financial statements presented according to the European single electronic reporting format, we have verified that the presentation of the financial statements to be included in the annual financial report referred to in paragraph I of article L.451-1-2 of the French Monetary and Financial Code (*Code monétaire et financier*) and prepared under the Chief Executive Officer’s responsibility, complies with this format, as defined by European Delegated Regulation No. 2019/815 of 17 December 2018. As it relates to the consolidated financial statements, our work included verifying that the markups in the financial statements comply with the format defined by the aforementioned Regulation.

On the basis of our work, we conclude that the presentation of the consolidated financial statements to be included in the annual financial report complies, in all material respects, with the European single electronic reporting format.

Due to the technical limitations inherent to block tagging the consolidated financial statements in the European single electronic reporting format, the content of some of the tags in the notes may not be rendered identically to the accompanying consolidated financial statements.

### **Appointment of the Statutory Auditors**

We were appointed Statutory Auditors of BNP Paribas SA by the Annual General Meetings held on 23 May 2006 for Deloitte & Associés, 26 May 1994 for PricewaterhouseCoopers Audit and 23 May 2000 for Mazars.

At 31 December 2023, Deloitte & Associés, PricewaterhouseCoopers Audit and Mazars were in the eighteenth, the thirtieth and the twenty-fourth consecutive year of their engagement, respectively.

## **Responsibilities of management and those charged with governance for the consolidated financial statements**

Management is responsible for preparing consolidated financial statements giving a true and fair view in accordance with International Financial Reporting Standards as adopted by the European Union and for implementing the internal control procedures it deems necessary for the preparation of consolidated financial statements that are free of material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Company’s ability to continue as a going concern, disclosing, as applicable, matters related to going concern, and using the going concern basis of accounting, unless it expects to liquidate the Company or to cease operations.

The Financial Statements Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risk management systems, as well as, where applicable, any internal audit systems, relating to accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

## **Responsibilities of the Statutory Auditors relating to the audit of the consolidated financial statements**

### **Objective and audit approach**

Our role is to issue a report on the consolidated financial statements. Our objective is to obtain reasonable assurance about whether the consolidated financial statements as a whole are free of material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect

a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions taken by users on the basis of these consolidated financial statements.

As specified in article L.821-55 of the French Commercial Code, our audit does not include assurance on the viability or quality of the Company's management.

As part of an audit conducted in accordance with professional standards applicable in France, the Statutory Auditors exercise professional judgement throughout the audit.

They also:

- identify and assess the risks of material misstatement in the consolidated financial statements, whether due to fraud or error, design and perform audit procedures in response to those risks, and obtain audit evidence considered to be sufficient and appropriate to provide a basis for their opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of the internal control procedures relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management and the related disclosures in the notes to the consolidated financial statements;
- assess the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of the audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the Statutory Auditors conclude that a material uncertainty exists, they are required to draw attention in the audit report to the related disclosures in the consolidated financial statements or, if such disclosures are not provided or are inadequate, to issue a qualified opinion or a disclaimer of opinion;
- evaluate the overall presentation of the consolidated financial statements and assess whether these statements represent the underlying transactions and events in a manner that achieves fair presentation;
- obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. The Statutory Auditors are responsible for the management, supervision and performance of the audit of the consolidated financial statements and for the opinion expressed thereon.

#### **Report to the Financial Statements Committee**

We submit a report to the Financial Statements Committee which includes, in particular, a description of the scope of the audit and the audit programme implemented, as well as the results of our audit. We also report any significant deficiencies in internal control that we have identified regarding the accounting and financial reporting procedures.

Our report to the Financial Statements Committee includes the risks of material misstatement that, in our professional judgement, were the most significant for the audit of the consolidated financial statements and which constitute the key audit matters that we are required to describe in this report.

We also provide the Financial Statements Committee with the declaration provided for in article 6 of Regulation (EU) No. 537/2014, confirming our independence within the meaning of the rules applicable in France, as defined in particular in articles L.821-27 to L.821-34 of the French Commercial Code and in the French Code of Ethics for Statutory Auditors. Where appropriate, we discuss any risks to our independence and the related safeguard measures with the Financial Statements Committee.

- (e) Section 5 entitled "Risks and Capital Adequacy – Pillar 3" on pages 338 to 663 shall be deleted in its entirety and replaced with the following:

# "5 RISKS AND CAPITAL ADEQUACY – PILLAR 3

The purpose of Pillar 3 relative to market discipline is to complement the minimum capital requirements (Pillar 1) and the supervisory review process (Pillar 2) with a set of disclosures completing the usual financial disclosures.

Chapter 5 presents the information relative to the BNP Paribas Group's risks and in this respect meets:

- the requirements of eighth part of Regulation (EU) No. 2019/876 of 20 May 2019 on prudential requirements<sup>(1)</sup> for credit institutions and investment firms. This regulation is set out in the various technical standards published by the European Commission and European Banking Authority aimed at improving the comparability of information published by the institutions. The format and references of the Pillar 3 tables are in line with the entry into application on 28 June 2021 of Implementing Regulation (EU) No. 2021/637;
- the accounting standards requirements relating to the nature and the extent of the risks. Some information required by accounting standards IFRS 7, IFRS 4 and IAS 1 is included in this chapter and covered by the opinion of the Statutory Auditors on the consolidated financial statements. This information is identified by the mention "[Audited]" and should be read as being part of the notes to the consolidated financial statements;
- the transparency and disclosure requirements for prudential information on the management of ESG risks and, in particular, the physical and transition risks related to climate change, in accordance with article 449a of Regulation (EU) No. 2019/876 (CRR 2) and in accordance with the content provided by the European Banking Authority (EBA) in the technical implementation standard (ITS) adopted on 28 November 2022.

The Basel current measures (known as Basel 3), approved in November 2010, strengthen the ability of banks to withstand economic and financial shocks of all kinds by introducing a series of regulatory provisions. The content of this reform was transposed into European law in Directive 2013/36/EU (CRD 4) and Regulation (EU) No. 575/2013 of 26 June 2013 (CRR), supplemented in June 2019 by Directive (EU) No. 2019/878 (CRD 5) and Regulation (EU) No. 2019/876 (CRR 2).

The regulatory framework of Basel 3 had the following main impacts:

- **strengthened solvency:**

The Basel 3 rules lead to harmonise the definition of capital and strengthen the ability of financial institutions to absorb losses.

A detailed description of the composition of regulatory capital is given under *Regulatory capital* in section 5.2 *Capital management and capital adequacy*.

Rules on calculating risk-weighted assets were also revised to strengthen related capital requirements. These calculation rules are detailed by risk type in the corresponding sections.

Strengthened solvency is implemented through the Single Supervisory Mechanism (SSM) overseen by the ECB and the application of the European Banking Authority (EBA) Supervisory Review and Evaluation Process (SREP) guidelines.

The BNP Paribas Group, identified as a "financial conglomerate", is subject to additional supervision. As a financial conglomerate, the Group's own funds cover the capital requirements for banking activities as well as insurance activities (see *Capital adequacy and capital planning* in section 5.2 *Capital management and capital adequacy*);

- **monitoring of a leverage ratio:**

The main purpose of the leverage ratio is to act as a supplementary measure to the risk-based capital requirements (backstop principle). The minimum requirement is applicable since 1 January 2024 and was preceded by intermediate requirements applicable since 28 June 2021 and 1 January 2023.

The minimum requirement applicable and the Group's leverage ratio are presented under *Capital management and capital planning* in section 5.2 *Capital management and capital adequacy*;

- **liquidity management:**

The implementation of liquidity requirements with the introduction of a short-term liquidity ratio (Liquidity Coverage Ratio – LCR) and a long-term liquidity ratio (Net Stable Funding Ratio – NSFR) is presented in section 5.8 *Liquidity risk*.

The minimum liquidity coverage ratio has been set at 100% of total net cash outflows during the 30-day stress period;

<sup>1</sup> The disclosures required under article 450 concerning the Group's compensation policy are available in the Compensation of regulated employees section of the Investor Relations website: <https://invest.bnpparibas.com/en/compensation-regulated-employees>.

▪ **monitoring of the bank resolution scheme:**

The monitoring of bank resolution scheme introduced on 1 January 2016 has been accompanied, since 27 June 2019, by a TLAC (Total Loss Absorbing Capacity) minimum ratio applicable to global systemically important banks (G-SIBs).

This requirement is supplemented in Europe by the introduction of an MREL (Minimum Requirement for own funds and Eligible Liabilities) ratio applicable since 1 January 2024, with an intermediate requirement applicable since 1 January 2022 (see *Capital adequacy and capital planning* in section 5.2 *Capital management and capital adequacy*).

Furthermore, on 7 December 2017, the Group of Governors and Heads of Supervision (GHOS) approved the reforms finalising the Basel 3 regulatory framework. They consist of a revision of the framework for credit risk, credit valuation adjustment (CVA – Credit Value Adjustment) risk, and operational risk, as well as the introduction of a floor for the calculation of risk-weighted assets when an internal method is used. These proposals were supplemented by the fundamental review of the trading book (FRTB) in January 2019 and the CVA risk in July 2020. Transposition of Basel 3 finalisation into European law was initiated by the European Commission with the publication on 27 October 2021 of draft CRR 3 and CRD 6 amendments providing for gradual entry into force from 1 January 2025.

In chapter 5, the figures shown may not appear to add up in certain columns and rows due to rounding.

**Certification and governance**

I, the undersigned, Lars Machenil, Chief Financial Officer (CFO) of the BNP Paribas Group, hereby confirm that the information contained in chapter 5 *Risks and capital adequacy – Pillar 3* is, to the best of my knowledge, compliant with the requirements of eighth part of Regulation (EU) No. 2019/876 (CRR 2).

Paris, 15 March 2024.

The BNP Paribas Group operates all of its activities within the framework of a robust internal control system.

Control plans and procedures are in place within the Group to ensure the proper compliance of the information contained in the management report.

A committee, chaired by the Deputy Chief Financial Officer, has examined chapter 5 and verified that the controls have been carried out and that the regulatory requirements in terms of publication have been complied with, including the provisions of article 432 of Regulation (EU) No. 2019/876 (CRR 2) relating to non-material, sensitive and confidential information.

Since 1 January 2023, the Group's insurance entities have applied IFRS 17 "Insurance Contracts" and IFRS 9, deferred for these entities until IFRS 17 comes into force. The non-materiality of this first application to equity (see note 2 IFRS 17 and IFRS 9 first time application impacts to the consolidated financial statements) and the treatment of insurance entities under the equity method in the prudential scope lead to a limited impact on the information in chapter 5.

On 1 February 2023, the Group announced the closing of the sale of its retail and commercial banking activities in the United States operated by Bank of the West to BMO Financial Group for total consideration of USD 16.3 billion. The transaction generated an exceptional capital gain (net of tax) of EUR 2.9 billion and a positive impact on the Group's Common Equity Tier 1 (CET1) ratio of 170 basis points, i.e. a EUR 11.6 billion release of Tier 1 capital. At 31 December 2022, Bank of the West contributed mainly to the Group's credit risk and operational risk for EUR 47.9 billion and EUR 3.7 billion respectively of risk-weighted assets.

In 2023, the Group carried out a share buyback programme for a total amount of EUR 5 billion, including EUR 4 billion in order to offset the effect of the dilution of net earnings per share due to the sale of the commercial banking activities in the United States operated by Bank of West. At 31 December 2023, the programme was fully implemented and the shares acquired were all cancelled. BNP Paribas' share capital was thus reduced by 7% compared to 31 December 2022.

## 5.1 Annual risk survey

### KEY FIGURES

---

## REGULATORY RATIOS

### Change in Group solvency

The Group has a solid financial structure. The CET1 ratio stands at 13.2%<sup>1</sup> as at 31 December 2023, increasing by 90 basis points compared to 31 December 2022. This is explained by:

- the closing of the sale of Bank of the West on 1 February 2023, net of the share buyback programme and redeployed capital (+100 bps);
- the effect of the adjustment in distributable net income (-30 bps);
- the 2023 results after taking a 60% payout ratio into account, net of the change in risk-weighted assets and their optimisation (+30 bps);
- the impact of the application of IFRS 17 and the updating of models and regulations<sup>2</sup> in the 1<sup>st</sup> quarter (-10 bps);
- the other effects, which are limited overall on the ratio.

The Group's CET1 ratio is significantly higher than requirements at 31 December 2023 at 9.79% and as well requirements notified by the European Central Bank at 10.20 % applicable from 2 January 2024.

The capital structure is solid and the trajectory of the CET1 ratio is in line with the target of 12% after implementation of the new CRR3 regulation.

The leverage ratio stands at 4.58% at 31 December 2023, compared to 4.36% at 31 December 2022, an increase of +22 bps. It is well above the 3.75% leverage requirement in force at 31 December 2023. This requirement has been 3.85% (excluding Pillar 2 guidance) since 1 January 2024.

As at 31 December 2023, the Group's TLAC ratio stands at 28.15% of risk-weighted assets, without using the preferred senior debt eligible within the limit of 3.5% of the risk-weighted assets. The Group is thus above the applicable minimum level of requirement which is 22.40% at 31 December 2023 and 22.58% at 2 January 2024.

As at 31 December 2023, the Group TLAC ratio stands at 8.44% of the leverage exposure. This ratio should be compared to a minimum requirement of 6.75% at 2 January 2024.

As at 31 December 2023, the Group MREL ratio stands at 30.92% of the risk-weighted assets. This ratio should be compared to a minimum requirement of 26.55% at 2 January 2024.

As at 31 December 2023, the Group MREL ratio stands at 9.27% of the leverage exposure. This ratio should be compared to a minimum requirement of 5.91% at 2 January 2024.

As at 31 December 2023, the Group subordinated MREL ratio stands at 28.15% of the risk-weighted assets. This ratio should be compared to a minimum requirement of 20.47% at 2 January 2024.

As at 31 December 2023, the Group subordinated MREL ratio stands at 8.44% of the leverage exposure. This ratio should be compared to a minimum requirement of 5.82% at 2 January 2024.

The evolution of these ratios illustrates the Group's ability to continuously adapt and the strength of its balance sheet.

### Key regulatory ratios

The capital ratio data below take into account the transitional provisions related to the introduction of IFRS 9 (Article 473a of Regulation (EU) No. 2020/873). The impact of these transitional measures on regulatory capital and regulatory ratios is presented under Regulatory capital (see Table 16 IFRS9-FL).

On 4 March 2024, the Group announced the launch of the share buyback programme scheduled for 2024 for a maximum amount of EUR 1.055 billion and for which authorisation was obtained from the European Central Bank.

At 23 April 2024, the programme has been fully implemented.

<sup>1</sup> CRD 5; including IFRS 9 transitional provisions.

<sup>2</sup> Including IFRS 9 phasing.

(1) In accordance with Regulation (EU) No. 2019/876, article 72b paragraphs 3 and 4, some preferred senior debt instruments (amounting to EUR 22,057 million as at 31 March 2024) were eligible within the limit of 3.5% of risk-weighted assets. The Group did not use this option at 31 March 2024

## RISK-WEIGHTED ASSETS BY RISK TYPE AND BY BUSINESS LINE

FIGURE 1: RISK-WEIGHTED ASSETS BY RISK TYPE(\*)

(\*) Breakdown at 31 December 2023.

Most of the Group's exposures are subject to credit risk. Market risk is limited to 4% of the Group's risk-weighted assets as at 31 December 2023.

FIGURE 2: RISK-WEIGHTED ASSETS BY BUSINESS LINE(\*)

(\*) Breakdown at 31 December 2023.

As at 31 December 2023, the Group's risks are well spread and no single business makes up more than 20% of the Group's risk-weighted assets. Commercial, Personal Banking & Services account for 54% of risk-weighted assets.

## OTHER KEY FIGURES

**FIGURE 3: CREDIT RISK EXPOSURE BREAKDOWN BY GEOGRAPHIC REGION<sup>(\*)</sup>**

(\*) Breakdown at 31 December 2023.

As at 31 December 2023, the Group's exposure was mainly concentrated in Europe (74%). See the section *Credit risk diversification* in section 5.4 *Credit risk* for more details about the diversification of the Group's exposures.

**FIGURE 4: CREDIT RISK EXPOSURE BREAKDOWN BY ASSET CLASS<sup>(\*)</sup>**

(\*) Breakdown at 31 December 2023.

Exposure to central governments and central banks, credit institutions, other financial corporations and non-financial corporations represented 80% of total exposure as at 31 December 2023, *versus* 79% as at 31 December 2022.

**TABLE 3: DOUBTFUL LOANS ON GROSS OUTSTANDINGS RATIO**

|  | 31 December 2023 | 31 December 2022 |

|--|-----------------------------|-----------------------------|
| <b>IMMEDIATELY AVAILABLE LIQUIDITY RESERVE<sup>(*)</sup></b> | <b>474</b>                  | <b>461</b>                  |

(\*) Liquid market assets or eligible to central banks ("counterbalancing capacity") taking into account prudential standards, notably US standards, minus intra-day payment systems needs.

## RISK FACTORS

The main categories of risks inherent in the BNP Paribas Group's business are presented below and defined in the sections of chapter 5. They can be measured through risk-weighted assets or other quantitative or qualitative indicators, to the extent risk-weighted assets are not relevant (for example, for liquidity and funding risk).

As a reminder, the financial and other information as at 31 December 2022 contained in these risk factors comprise, unless otherwise indicated, the results of Bank of the West based on a prudential vision. They are therefore presented excluding the effect of the application of IFRS 5 on groups of assets and liabilities held for sale. The financial and other information as at 31 December 2023 contained in these risk factors do not include the activities operated by of Bank of the West, which was sold on 1 February 2023.

| <b>TOTAL</b>  | <b>704</b>                  | <b>745</b>                  |

More generally, the risks to which the BNP Paribas Group is exposed may arise from a number of factors related, among others, to changes in its macroeconomic or regulatory environment or factors related to the implementation of its strategy and its business.

The material risks specific to the BNP Paribas Group's business, determined based on the circumstances known to the management as of the date of this document, are thus presented below under seven principal categories, in accordance with Article 16 of the UK Prospectus Regulation: credit risk, counterparty risk and securitisation risk in the banking book; operational risk; market risk; liquidity and funding risk; risks related to the macroeconomic and market environment; regulatory risks; and risks related to the BNP Paribas Group's growth in its current environment.

The Group's risk management policies have been taken into account in assessing the materiality of these risks; in particular, risk-weighted assets factor in risk mitigation elements to the extent eligible in accordance with applicable banking regulations.

## **1. CREDIT RISK, COUNTERPARTY RISK AND SECURITISATION RISK IN THE BANKING BOOK**

At 31 December 2023, the BNP Paribas Group's credit risk exposure broke down as follows: corporates (43%), central governments and central banks (25%), retail customers (24%), credit institutions (4%), other risk assets (2%) and equities (1%). At 31 December 2023, 33% of the Bank's credit exposure was comprised of exposures in France, 16% in Belgium and Luxembourg, 10% in Italy, 21% in other European countries, 9% in North America, 6% in Asia and 5% in the rest of the world. The BNP Paribas Group's risk-weighted assets subject to this type of risk amounted to EUR 535 billion at 31 December 2023, or 77% of the total risk-weighted assets of the BNP Paribas Group, as compared to EUR 580 billion at 31 December 2022, representing 78% of the total risk-weighted assets of the BNP Paribas Group.

At 31 December 2023, BNP Paribas Group's exposure to counterparty risk was: 37% to the corporate sector, 12% to governments and central banks, 23% to credit institutions and investment firms, and 28% to clearing houses. By product, BNP Paribas Group's exposure at 31 December 2023, excluding CVA ("Credit Valuation Adjustment") risk, is comprised of: 41% in OTC derivatives, 40% in repurchase transactions and securities lending/borrowing, 9% in listed derivatives and 10% in contributions to the clearing houses' default funds. The level of this counterparty risk varies over time, depending on fluctuations in market parameters affecting the potential future value of the covered transactions. In addition, CVA risk measures the risk of losses related to CVA volatility resulting from fluctuations in credit spreads associated with the counterparties to which the BNP Paribas Group is subject to risk. The risk-weighted assets subject to counterparty credit risk amounted to EUR 45 billion at 31 December 2023, or 6% of the total risk-weighted assets of the BNP Paribas Group, as compared to EUR 42 billion at 31 December 2022, or 6% of the total risk-weighted assets of the BNP Paribas Group. With regard to risk related to securitisation of the banking book, the bulk of the BNP Paribas Group's

commitments are recorded in the prudential banking portfolio. Securitised exposures are essentially those generated by the BNP Paribas Group. Thus, the securitisation positions held or acquired by the BNP Paribas Group may be categorised by its role in the securitisation transaction: of the exposures as at 31 December 2023, the BNP Paribas Group was originator of 42%, was sponsor of 35% and was investor of 23%. The risk-weighted assets subject to this type of risk amounted to EUR 17 billion at 31 December 2023, i.e. 2% of the total risk-weighted assets for the BNP Paribas Group, compared to EUR 16 billion at 31 December 2022, or 2% of the total risk-weighted assets for the BNP Paribas Group.

### **1.1 A substantial increase in new provisions or a shortfall in the level of previously recorded provisions exposed to credit risk and counterparty risk could adversely affect the BNP Paribas Group's results of operations and financial condition.**

Credit risk and counterparty risk impact the BNP Paribas Group's consolidated financial statements when a customer or counterparty is unable to honour its obligations and when the book value of these obligations in the BNP Paribas Group's records is positive. The customer or counterparty may be a bank, a financial institution, an industrial or commercial enterprise, a government or a government entity, an investment fund, or a natural person. If the default rate of customers or counterparties increases, the BNP Paribas Group may have to record increased charges or provisions in respect of irrecoverable or doubtful loans (Stage 3) or performing loans (Stages 1 and 2), in response to a deterioration in economic conditions or other factors, which may affect its profitability.

As a result, in connection with its lending activities, the BNP Paribas Group regularly establishes provisions, which are recorded on its income statement in the line item Cost of Risk. In 2023, these provisions amounted to EUR 2,907 million compared to EUR 3,003 million in 2022. This amount reflects write-backs of provisions on performing loans in an amount of EUR 517 million in 2023, and provisions on doubtful loans of EUR 1,833 million, excluding Personal Finance's cost of risk. At 31 December 2023, the cost of risk does not include other net charges for risk on financial instruments (i.e. charges relating to risks that call into question the validity or enforceability of financial instruments). These charges amount to EUR 775 million as at 31 December 2023, and in 2023 they included the extraordinary impact of provisions for litigation relating to mortgage loans in Poland (EUR 450 million), provisions for litigation relating to Personal Finance (EUR 221 million) and provisions for credit risk (EUR 104 million).

The BNP Paribas Group's overall level of provisions is based on its assessment of prior loss experience, the volume and type of lending being conducted, industry standards, past due loans, economic conditions and other factors related to the recoverability of various loans or statistical analysis based on scenarios applicable to asset classes. The BNP Paribas Group seeks to establish an appropriate level of provisions.

Although the BNP Paribas Group seeks to establish an appropriate level of provisions, its lending businesses may have to substantially increase their provisions for loan losses or sound receivables in the future as a result of deteriorating economic conditions or other causes.

For example, provisions increased in 2020 primarily due to the early *ex-ante* recognition of potential losses related to the effects of the health crisis (Stages 1 and 2 provisions on performing loans in accordance with IFRS 9). Any significant increase in provisions for loan losses or a significant change in the BNP Paribas Group's estimate of the risk of loss inherent in its portfolio of non-impaired loans, as well as the occurrence of loan losses in excess of the related provisions, could have a material adverse effect on the BNP Paribas Group's results of operations and financial condition.

For reference, at 31 December 2023, the ratio of doubtful loans to total loans outstanding was 1.7% and the coverage ratio of these doubtful commitments (net of guarantees received) by provisions was 71.7%, against 1.7% and 72.5%, respectively, as at 31 December 2022.

While the BNP Paribas Group seeks to reduce its exposure to credit risk and counterparty risk by using risk mitigation techniques such as collateralisation, obtaining guarantees, entering into credit derivatives and entering into netting agreements, it cannot be certain that these techniques will be effective to offset losses resulting from counterparty defaults that are covered by these techniques. Moreover, the BNP Paribas Group is also exposed to the risk of default by the party providing the credit risk coverage (such as a counterparty in a derivative or a loan insurance contract) or to the risk of loss of value of any collateral. In addition, only a portion of the BNP Paribas Group's overall credit risk and counterparty risk is covered by these techniques. Accordingly, the BNP Paribas Group has very significant exposure to these risks.

## **1.2 The soundness and conduct of other financial institutions and market participants could adversely affect the BNP Paribas Group.**

The BNP Paribas Group's ability to engage in financing, investment and derivative transactions could be adversely affected by the soundness of other financial institutions or market participants. Financial institutions are interrelated as a result of trading, clearing, counterparty, funding or other relationships. As a result, defaults by one or more States or financial institutions, or even rumours or questions about one or more financial institutions, or the financial services industry generally, may lead to market-wide liquidity problems and could lead to further losses or defaults. The BNP Paribas Group has exposure to many counterparties in the financial industry, directly and indirectly, including clearing houses, brokers and dealers, commercial banks, investment banks, mutual and alternative investment funds, and other institutional clients with which it regularly executes transactions. The BNP Paribas Group may also be exposed to risks related to the increasing involvement in the financial sector of players and the introduction of new types of transactions subject to little or no regulation (e.g. unregulated funds, trading venues or crowdfunding platforms). Credit and counterparty risks could be exacerbated if the collateral held by the BNP Paribas Group cannot be realised, it decreases in value or it is liquidated at prices not sufficient to recover the full amount of the loan or derivative exposure due to the

BNP Paribas Group or in the event of the failure of a significant financial market participant such as a central counterparty.

For reference, counterparty risk exposure related to financial institutions was EUR 45 billion at 31 December 2023, or 23% of the BNP Paribas Group's total counterparty risk exposure, and counterparty risk exposure related to clearing houses was EUR 56 billion, or 28% of the BNP Paribas Group's total counterparty risk exposure, compared with rates of 13% and 33%, respectively, as at 31 December 2022.

In addition, fraud or misconduct by financial market participants can have a material adverse effect on financial institutions due in particular to the interrelated nature of the financial markets. An example is the fraud perpetrated by Bernard Madoff that came to light in 2008, as a result of which numerous financial institutions, including the BNP Paribas Group, announced losses or exposure to losses in substantial amounts. The BNP Paribas Group remains the subject of various claims in connection with the Madoff matter; see note 9.c *Legal proceedings and arbitration* to its consolidated financial statements for the year ended 31 December 2023.

Losses resulting from the risks summarised above could materially and adversely affect the BNP Paribas Group's results of operations.

## **2. OPERATIONAL RISK**

The BNP Paribas Group's risk-weighted assets subject to operational risk amounted to EUR 59 billion euros at 31 December 2023, or 8% of the total risk-weighted assets of the BNP Paribas Group, and EUR 62 billion at 31 December 2022, or 8% of the total risk-weighted assets of the BNP Paribas Group. The breakdown of losses by type of operational risk for the 2015-2023 period is rebalanced following the exit from the reference period of the comprehensive settlement with the US authorities in 2014. The main type of operational risk incidents remains the "Clients, products and business practices" category, followed by process failures, including errors in executing or processing transactions, and then external fraud. Between 2015 and 2023, other types of risk in operational risk consisted of external fraud (22%), business disruption and systems failure (4%), employment practices and workplace safety (3%), internal fraud (1%) and damage to physical assets (1%).

## **2.1 The BNP Paribas Group's risk management policies, procedures and methods may leave it exposed to unidentified or unanticipated risks, which could lead to material losses.**

The BNP Paribas Group devotes significant resources to developing its risk management policies, procedures and assessment methods and intends to continue to do so in the future. Nonetheless, the BNP Paribas Group's risk management techniques and strategies may not be fully effective in mitigating its risk exposure in all economic and market environments within which the BNP Paribas Group operates. These techniques and strategies could also prove to be ineffective against all types of risk, particularly risks that the BNP Paribas Group may have failed to identify or anticipate. The BNP Paribas Group's ability to assess the creditworthiness of its customers, or risk parameters, such as the value of its assets and the effectiveness of its hedges, or to measure risks adequately if, as a result of market turmoil or in certain market environments such as those experienced in recent years, the models and approaches it uses become less predictive of future behaviour, valuations, assumptions or estimates. Some of the BNP Paribas Group's qualitative tools and metrics for managing risk are based on its use of observed historical market behaviour. The BNP Paribas Group applies statistical and other tools to these observations to arrive at quantifications of its risk exposures. The process the BNP Paribas Group uses to estimate losses inherent in its credit exposure or estimate the value of certain assets requires difficult, subjective, and complex judgments, including forecasts of economic conditions and how these economic predictions might impair the ability of its borrowers to repay their loans or impact the value of assets, which may, during periods of market disruption or substantial uncertainty, be incapable of accurate estimation and, in turn, impact the reliability of the process. These tools and metrics may fail to predict future risk exposures, e.g. if the BNP Paribas Group does not anticipate or correctly evaluate certain factors in its statistical models, or upon the occurrence of an event deemed extremely unlikely by the tools and metrics. This would limit the BNP Paribas Group's ability to manage its risks. The BNP Paribas Group's losses could therefore be significantly greater than the historical measures indicate. In addition, the BNP Paribas Group's quantified modelling does not take all risks into account. Its more qualitative approach to managing certain risks could prove insufficient, exposing it to material unanticipated losses.

## **2.2 An interruption in or a breach of the BNP Paribas Group's information systems may cause substantial losses of client or customer information, damage to the BNP Paribas Group's reputation and result in financial losses.**

As with most other banks, the BNP Paribas Group relies heavily on communications and information systems to conduct its business. This dependency has increased with the spread of mobile and online banking services, the development of cloud computing, and more generally the use of new technologies. Any failure or interruption or breach in security of these systems could result in failures or interruptions in the BNP Paribas Group's customer relationship management, general ledger, deposit, servicing and/or loan organisation systems or could cause the BNP Paribas Group to incur significant costs in recovering and verifying lost data. The BNP Paribas Group cannot provide assurances that such failures or interruptions will not occur or, if they do occur, that they will be adequately addressed.

In addition, the BNP Paribas Group is subject to cybersecurity risk, or risk caused by a malicious and/or fraudulent act, committed virtually, with the intention of manipulating information (confidential data, bank/insurance, technical or strategic), processes and users, in order to cause material losses to the BNP Paribas Group's subsidiaries, employees, partners and clients and/or for the purpose of extortion (ransomware). An increasing number of companies (including financial institutions) have in recent years experienced intrusion attempts or even breaches of their information technology security, some of which have involved sophisticated and highly targeted attacks on their computer networks. Because the techniques used to obtain unauthorised access, disable or degrade service, steal confidential data or sabotage information systems have become more sophisticated, change frequently and often are not recognised until launched against a target, the BNP Paribas Group and its third-party service providers may be unable to anticipate these techniques or to implement in a timely manner effective and efficient countermeasures. Any failures of or interruptions in the BNP Paribas Group's information systems or those of its providers and any subsequent disclosure of confidential information related to any client, counterpart or employee of the BNP Paribas Group (or any other person) or any intrusion or attack against its communication system could cause significant losses and have an adverse effect on the BNP Paribas Group's reputation, financial condition and results of operations. Regulatory authorities now consider cybercriminality to be a growing systemic risk for the financial sector. They have stressed the need for financial institutions to improve their resilience to cyber-attacks by strengthening internal IT monitoring and control procedures. A successful cyber-attack could therefore expose the Group to a regulatory fine, especially should any personal customer data be lost.

Moreover, the BNP Paribas Group is exposed to the risk of operational failure or interruption of a clearing agent, foreign markets, clearing houses, custodian banks or any other financial intermediary or external service provider used by the BNP Paribas Group to execute or facilitate financial transactions. Due to its increased interaction with clients, the BNP Paribas Group is also exposed to the risk of operational malfunction of the latter's information systems. The BNP Paribas Group's communications and data systems and those of its clients, service providers and counterparties may also be subject to malfunctions or interruptions as a result of cyber-crime or cyber-terrorism. The BNP Paribas Group cannot guarantee that these malfunctions or interruptions in its own systems or those of other parties will not occur or that in the event of a cyber-attack, these malfunctions or interruptions will be adequately resolved.

### **2.3 Reputational risk could weigh on the BNP Paribas Group's financial strength and diminish the confidence of clients and counterparties in it.**

Considering the highly competitive environment in the financial services industry, a reputation for financial strength and integrity is critical to the BNP Paribas Group's ability to attract and retain customers. The BNP Paribas Group's reputation could be harmed if the means it uses to market and promote its products and services were to be deemed inconsistent with client interests. The BNP Paribas Group's reputation could also be damaged if, as it increases its client base and the scale of its businesses, its overall procedures and controls dealing with conflicts of interest fail, or appear to fail, to address them properly. Moreover, the BNP Paribas Group's reputation could be damaged by employee misconduct, fraud or misconduct by financial industry participants to which the BNP Paribas Group is exposed, a restatement of, a decline in, or

corrections to its results, as well as any adverse legal or regulatory action, such as the settlement the BNP Paribas Group entered into with the US authorities in 2014 for violations of US laws and regulations regarding economic sanctions. The loss of business that could result from damage to the BNP Paribas Group's reputation could have an adverse effect on its results of operations and financial position.

## **3. MARKET RISK**

BNP Paribas Group is exposed to market risk mainly through trading activities carried out by the business lines of its Corporate & Institutional Banking (CIB) operating division, in particular in Global Markets, which represented 17% of the BNP Paribas Group's revenue in 2023. BNP Paribas Group's trading activities are directly linked to economic relations with clients of these business lines, or indirectly as part of its market making activity. In addition, the market risk relating to the BNP Paribas Group's banking activities covers its interest rate and foreign exchange rate risks in connection with its activities as a banking intermediary. The "operating" foreign exchange risk exposure relates to net earnings generated by activities conducted in currencies other than the functional currency of the entity concerned. The "structural" foreign exchange risk position of an entity relates to investments in currencies. The BNP Paribas Group uses the concepts of standard rate risk and structural rate risk in measuring interest rate risk. Standard rate risk corresponds to the general case for a given transaction. Structural rate risk is the interest rate risk relating to own funds and non-interest-bearing current accounts. If the BNP Paribas Group's hedging strategies prove ineffective or provide only a partial hedge, the BNP Paribas Group could incur losses which could have a negative impact on its operating results as well as its financial condition. BNP Paribas' market risk based on its activities is measured by "Value at Risk" (VaR), and various other market indicators (stressed VaR, Incremental Risk Charge, Comprehensive Risk Measure for credit correlation portfolio) as well as by stress tests and sensitivity analysis compared with market limits.

The risk-weighted assets subject to this type of risk amounted to EUR 29 billion at 31 December 2023, or almost 4% of the BNP Paribas Group's total risk-weighted assets, compared to EUR 26 billion at 31 December 2022, or 3% of the total risk-weighted assets of the BNP Paribas Group.

### **3.1 The BNP Paribas Group may incur significant losses on its trading and investment activities due to market fluctuations and volatility.**

The BNP Paribas Group maintains trading and investment positions in the debt, currency, commodity and equity markets, and in unlisted securities, real estate and other asset classes, including through derivative contracts. These positions could be adversely affected by extreme volatility in these markets, *i.e.* the degree to which prices fluctuate over a particular period in a particular market, regardless of market levels. Moreover, volatility trends that prove substantially different from the BNP Paribas Group's expectations may lead to losses relating to a broad range of other products that the BNP Paribas Group uses, including swaps, forward and future contracts, options and structured products.

To the extent that the BNP Paribas Group owns assets, or has net long positions, in any of those markets, a market downturn could result in losses from a decline in the value of its positions. Conversely, to the extent that the BNP Paribas Group has sold assets that it does not own, or has net short positions in any of those markets, a market upturn could, in spite of the existing limitation of risks and control systems, expose the BNP Paribas Group to potentially substantial losses as it attempts to cover its net short positions by acquiring assets in a rising market.

The BNP Paribas Group may from time to time hold a long position in one asset and a short position in another, in order to hedge transactions with clients and/or in view of benefitting from changes in the relative value of the two assets. If, however, the relative value of the two assets changes in a direction or manner that the BNP Paribas Group did not anticipate or against which its positions are not hedged, it might realise a loss on those paired positions. Such losses, if significant, could adversely affect the BNP Paribas Group's results and financial condition. In addition, the BNP Paribas Group's hedging strategies may not be suitable for certain market conditions.

If any of the variety of instruments and strategies that the BNP Paribas Group uses to hedge its exposure to various types of risk in its businesses is not effective, the Group may incur losses. Many of its strategies are based on historical trading patterns and correlations. For example, if the BNP Paribas Group holds a long position in an asset, it may hedge that position by taking a short position in another asset where the short position has historically moved in a direction that would offset a change in the value of the long position. However, the hedge may only be partial, or the strategies used may not protect against all future risks or may not be fully effective in mitigating the BNP Paribas Group's risk exposure in all market environments or against all types of risk in the future. Unexpected market developments may also reduce the effectiveness of the BNP Paribas Group's hedging

strategies. In addition, the manner in which gains and losses resulting from certain ineffective hedges are recorded may result in additional volatility in the BNP Paribas Group's reported earnings.

The BNP Paribas Group uses a "Value at Risk" (VaR) model to quantify its exposure to potential losses from market risks, and also performs stress testing with a view to quantifying its potential exposure in extreme scenarios (see *Market Risk Stress Testing Framework* in section 5.7 *Market risk* of this amendment to the 2022 Universal Registration Document at 31 December 2023). However, these techniques rely on statistical methodologies based on historical observations, which may turn out to be unreliable predictors of future market conditions. Accordingly, the BNP Paribas Group's exposure to market risk in extreme scenarios could be greater than the exposures predicted by its quantification techniques.

More generally, the volatility of financial markets resulting from disruptions or deteriorations in macroeconomic conditions could adversely affect the BNP Paribas Group's trading and investment positions in the debt, currency, commodity and equity markets, as well as its positions in other investments such as commercial real estate. For reference, and as indicated below, the revenues of Global Markets, the main business line of the Corporate & Institutional Banking (CIB) division, which handles the BNP Paribas Group's trading activities, accounted for 17% of the BNP Paribas Group's revenues in 2023. Severe market disruptions and extreme market volatility have occurred often in recent years (including in 2023) and may persist or resurface, which could result in significant losses for the BNP Paribas Group. Such losses may extend to a broad range of trading and hedging products, including swaps, forward and future contracts, options and structured products. The volatility of financial markets makes it difficult to predict trends and implement effective trading strategies. It also weighs on the primary equity and bond markets, as in 2022 and 2023, affecting the activity of Corporate & Institutional Banking.

### **3.2 The BNP Paribas Group may generate lower revenues from commission and fee-based businesses during market downturns and declines in activity.**

Commissions received by the BNP Paribas Group represented 21% of its revenues in 2023. Financial and economic conditions affect the number and size of transactions for which the BNP Paribas Group provides securities underwriting, financial advisory and other Investment Banking services. These revenues, which include fees from these services, are directly related to the number and size of the transactions in which the BNP Paribas Group participates and can thus be significantly affected by economic or financial changes that are unfavourable to its Investment Banking business and clients. In addition, because the fees that the BNP Paribas Group charges for managing its clients' portfolios are in many cases based on the value or performance of those portfolios, a market downturn that reduces the value of its clients' portfolios or increases the amount of withdrawals would reduce the revenues it receives from its asset management, equity derivatives and Private Banking businesses. Independently of market changes, the development of index portfolios or the below-market performance by the BNP Paribas Group's mutual funds may lead to reduced revenues from the BNP Paribas Group's asset management business, and increased withdrawals and reduced inflows for these vehicles. A reduced level of net banking income from the abovementioned commission and fee-based businesses may have a material adverse impact on the BNP Paribas Group's financial results.

### **3.3 Adjustments to the carrying value of the BNP Paribas Group's securities and derivatives portfolios and the BNP Paribas Group's own debt could have an adverse effect on its net income and shareholders' equity.**

The carrying value of the BNP Paribas Group's securities and derivatives portfolios and certain other assets, as well as its own debt, in its balance sheet, is adjusted as of each financial statement date. As at 31 December 2023, on the assets side of the BNP Paribas Group's balance sheet, financial instruments at fair value through profit or loss, derivative financial instruments used for hedging purposes and financial assets at fair value through shareholders' equity amounted to EUR 731 billion, EUR 22 billion and EUR 53 billion respectively. In the liabilities column, financial instruments at fair value through profit or loss and derivative financial instruments used for hedging purposes amounted to EUR 741 billion and EUR 38 billion, respectively, at 31 December 2023. Most of the adjustments are made on the basis of changes in fair value of the BNP Paribas Group's assets or debt during an accounting period, with the changes recorded either in the income statement or directly in shareholders' equity. Changes that are recorded in the income statement, to the extent not offset by opposite changes in the value of other assets, affect the BNP Paribas Group's consolidated revenues and, as a result, its net income. A downward adjustment of the fair value of the BNP Paribas Group's securities and derivatives portfolios may lead to reduced shareholders' equity and, to the extent not offset by opposite changes in the value of the BNP Paribas Group's liabilities, the BNP Paribas Group's capital adequacy ratios may also be lowered. The fact that fair value adjustments are recorded in one accounting period does not mean that further adjustments will not be needed in subsequent periods.

## **4. LIQUIDITY AND FUNDING RISK**

The liquidity risk of the BNP Paribas Group can be assessed through its short-term liquidity ratio ("Liquidity Coverage Ratio – LCR") which analyses the coverage of net cash outflows at 30 days in a stress scenario. The Group's period end LCR was 148% as at 31 December 2023. The liquidity reserve was EUR 474 billion as at 31 December 2023.

#### **4.1 The BNP Paribas Group's access to and cost of funding could be adversely affected by a resurgence of financial crises, worsening economic conditions, rating downgrades, increases in sovereign credit spreads or other factors.**

The financial crisis, the Eurozone sovereign debt crisis as well as the general macroeconomic environment, at times during a period around fifteen years ago adversely affected the availability and cost of funding for European banks. This was due to several factors, including a sharp increase in the perception of bank credit risk due to exposure to sovereign debt in particular, credit rating downgrades of sovereigns and of banks, and debt market speculation. Many European banks, including the BNP Paribas Group, at various points during these periods experienced restricted access to wholesale debt markets for institutional investors and to the interbank market, as well as a general increase in their cost of funding. More recently, in the context of the health crisis, the European Central Bank (ECB) also set up refinancing facilities designed to foster the banks' financing of the economy (Targeted Longer-Term Refinancing Options or "TLTRO"), on which the BNP Paribas Group has drawn. Such adverse credit market conditions may reappear in the event of a change in monetary policy (as seen, for example, with the worsening inflation and rapid rise of interest rates, as well as the end of "quantitative easing" and the changes to the TLTRO terms and conditions, in 2022 and 2023), a recession, prolonged stagnation of growth, deflation, "stagflation" (sluggish growth accompanied by inflation), another sovereign debt crisis, new forms of financial crises, factors relating to the financial industry or the economy in general (including the economic consequences of the invasion of Ukraine or the conflict in the Middle East) or to the BNP Paribas Group in particular. In such a case, the effect on the liquidity, balance sheet strength and cost of funding of European financial institutions in general or the BNP Paribas Group in particular could be materially adverse and have a negative impact on the BNP Paribas Group's results of operations and financial condition.

#### **4.2 Protracted market declines can reduce the BNP Paribas Group's liquidity, making it harder to sell assets and possibly leading to material losses. Accordingly, the BNP Paribas Group must ensure that its assets and liabilities properly match in order to avoid exposure to losses.**

In some of the BNP Paribas Group's businesses, particularly Global Markets (which represented 17% of the BNP Paribas Group's revenue in 2023) and Asset/Liability Management, protracted market movements, particularly asset price declines, can reduce the level of activity in the market or reduce market liquidity. These developments can lead to material losses if the BNP Paribas Group cannot close out deteriorating positions in a timely way. This is particularly true for assets that are intrinsically illiquid. Assets that are not traded on stock exchanges or other public trading markets, such as certain derivative contracts between financial institutions, may have values that the BNP Paribas Group calculates using models rather than publicly-quoted prices. Monitoring the deterioration of prices of assets like these is difficult and could lead to significant unanticipated losses (see section 5.8 *Liquidity risk*, paragraph *Stress tests and liquidity reserve* of this amendment to the 2022 Universal Registration Document at 31 December 2023).

The BNP Paribas Group is exposed to the risk that the maturity, interest rate or currencies of its assets might not match those of its liabilities. The timing of payments on certain of the BNP Paribas Group's assets is uncertain and, if the BNP Paribas Group receives lower revenues than expected at a given time, it might require additional market funding in order to meet its obligations on its liabilities. While the BNP Paribas Group imposes strict limits on the gaps between its assets and its liabilities as part of its risk management procedures, it cannot be certain that these limits will be fully effective to eliminate potential negative effects arising from asset and liability mismatches.

#### **4.3 Any downgrade of the Group's credit ratings could weigh heavily on the profitability of the Group.**

Credit ratings have a significant impact on the BNP Paribas Group's liquidity. The BNP Paribas Group is rated by four ratings agencies: Standard & Poor's, Moody's, Fitch and DBRS. On 24 April 2023, Standard & Poor's confirmed the long-term rating of BNP Paribas SA's deposits and senior preferred debt rating as A+, and its short-term rating as A-1 with a stable outlook. On 3 July 2023, Fitch maintained its long-term deposits and senior preferred debt rating for BNP Paribas SA at AA- and its short term deposits and senior preferred debt rating for BNP Paribas SA at F1+ and revised its outlook to stable. On 15 February 2024, Moody's confirmed its long-term deposits and senior preferred debt rating as Aa3, and its short-term rating as P-1, with a stable outlook. On 21 June 2023, DBRS confirmed BNP Paribas SA's senior preferred debt rating as AA(low), and its short-term rating as R-1(middle), with a stable outlook. A downgrade in the BNP Paribas Group's credit rating could affect the liquidity and competitive position of the Group. It could also increase the BNP Paribas Group's borrowing costs, limit access to the capital markets or trigger additional obligations under its covered bonds or under certain bilateral provisions in some trading, derivative or collateralised financing contacts.

In addition, the BNP Paribas Group's cost of obtaining long-term unsecured funding from market investors is also directly related to its credit spreads, which in turn depend to a certain extent on its credit ratings. Increases in credit spreads can significantly increase the BNP Paribas Group's cost of funding. Changes in credit spreads are continuous, market-driven, and subject at times to unpredictable and highly volatile movements. Credit spreads are also influenced by market perceptions of the BNP Paribas Group's creditworthiness. Furthermore, credit spreads may be influenced by movements in the cost to purchasers of credit default swaps referenced to the BNP Paribas Group's debt obligations, which are influenced both by the credit quality of those obligations, and by a number of market factors that are beyond the control of the BNP Paribas Group.

## 5. RISKS RELATED TO THE MACROECONOMIC AND MARKET ENVIRONMENT

### 5.1 Adverse macroeconomic and financial conditions have in the past had and may in the future significantly affect on the BNP Paribas Group and the markets in which it operates.

The BNP Paribas Group's business is affected by changes in the financial markets and more generally by trends in economic conditions in France (25% of the Group's revenues at 31 December 2023), other countries in Europe (52% of the Group's revenues at 31 December 2023) and the rest of the world (23% of the Group's revenues at 31 December 2023). A deterioration in the markets and the economic environment in the countries where the BNP Paribas Group operates has in the past had, and could again in the future have, various impacts including the following:

- adverse economic conditions affecting the business and operations of the BNP Paribas Group's customers, reducing credit demand and trading volume and resulting in an increased rate of default on loans and other client receivables, in part as a result of the deterioration of the financial capacity of companies and households. Since the beginning of 2024, this risk has materialised in the form of slow or weak growth in various regions of the world and a risk of recession in certain regions (including the Eurozone) as a result, in particular, of the 2022 and 2023 interest rate increases as well as specific effects (e.g. the real estate crisis in China and the commercial real estate crisis in the United States), in line with the central scenario drawn up by the BNP Paribas Group's Economic Research unit, forecasting an average annual increase in world GDP of 2.8% for 2023 (versus 3.3% in 2022) and increases in Eurozone and US GDP of 0.5% and 2.3% respectively for 2023 and around 1% for these two zones for 2024. Finally, in 2024, as in 2023, the global and Eurozone economies will be particularly sensitive to inflation and, consequently, to interest rates, as well as to the impact of geopolitical events;
- a decline in market prices (or an increase in volatility) of bonds, equities and commodities affecting the businesses of the BNP Paribas Group, including in particular trading, Investment Banking and asset management revenues. Indeed, high volatility over a long period can lead to financial asset market corrections (particularly the riskiest assets) and thus generate losses for the BNP Paribas Group. In addition, a sudden change in the level and structure of volatility, or the rapid alternation of periods of strong market rises and falls over a shorter period, may make it difficult or more costly to hedge certain structured products, thereby increasing the risk of loss for the BNP Paribas Group;
- macroeconomic or monetary policies adopted in response to actual or anticipated economic conditions could have consequences, anticipated or not, on market parameters such as interest rates and foreign exchange rates, which in turn can affect the BNP Paribas Group's businesses that are most exposed to market risk. This risk, which is pronounced in 2023 due to the significant and rapid monetary tightening carried out by central banks in 2022 and 2023, remains relevant in 2024 (see section 5.2 *Significant interest rate changes, and in particular the interest rate increases in 2022 and 2023 following a prolonged period of low interest rates, could adversely affect the BNP Paribas Group's results of operations and financial condition*);
- the favourable perception of economic conditions, whether globally or in specific sectors, can lead to the formation of speculative asset bubbles, and corrections when conditions change. This risk persists in 2024 after the recent monetary tightening, particularly in specific sectors such as commercial real estate and leveraged finance (see section 5.2 *Significant interest rate changes, and in particular the rise in interest rates in 2022 and 2023 following a prolonged period of low interest rates, could adversely affect the BNP Paribas Group's results of operations and financial condition*). For example, falling valuations and fewer transactions in the commercial real estate sector are tightening financing conditions and increasing investor uncertainty in this market, which may affect the financial strength of market participants and hence asset quality. The BNP Paribas Group's gross on- and off-balance sheet exposure to commercial real estate represented 3.9% of its total on- and off-balance sheet exposure as at 31 December 2023 and the BNP Paribas Group's Exposure-at-default (EAD) represented 3.8% of its total EAD as at 31 December 2023. With regard to commercial real estate in the United States, the BNP Paribas Group's EAD represented 0.09% of its total EAD as at 31 December 2023; and
- significant one-off economic disruptions related to, or adverse economic consequences resulting from, various specific adverse political or geopolitical events (such as the global financial crisis of 2008, the European sovereign debt crisis of 2011, the recession caused, in 2020 and 2021, by the Covid-19 pandemic, or high inflation and rising interest rates as well as geopolitical shocks, for example, the invasion of Ukraine in 2022 and the emergence of conflict in the Middle East in 2023) having a substantial impact on all of the BNP Paribas Group's businesses, in particular by increasing the volatility and costs of funding sources, deteriorating asset quality and financial market corrections, potentially exacerbated by a reduction in market liquidity and hence the ability to sell certain categories of assets at fair market value or at all. These disruptions could also entail, in particular, a decline in transaction commissions and consumer loans by the effect, whether temporary or permanent, of geopolitical events on the economic conditions in which the BNP Paribas Group operates.

While by definition the occurrence of such adverse geopolitical events is difficult to predict, in 2024 they could include the worsening or extension of the conflict resulting from the invasion of Ukraine and in the Middle East, which could in particular affect the energy market and/or supply chains generally, the occurrence of a sovereign debt crisis (high level of public debt post-pandemic, rapid increase in (re)financing costs, aggravating exchange rate effects, particularly for borrowers exposed to the US dollar) and the materialisation of various political risks such as, for example, a deadlock in the US Congress or uncertainty linked to elections (2024 being a busy election year).

## **5.2 Significant interest rate changes, and in particular the interest rate increases in 2022 and 2023 following a prolonged period of low interest rates, could adversely affect the BNP Paribas Group's results of operations and financial condition.**

Interest rates rose significantly in 2022 and 2023 after many years of low interest rates. In this context, the BNP Paribas Group's results have been, and could continue to be significantly affected in a number of ways. The increase in interest rates increases the cost of funding for the Group through higher interest rates on liabilities such as short-term deposits, commercial paper and bonds, as well as the risk of arbitrage by customers between non-interest-bearing deposits and interest-bearing deposits (compounded in France by policy decisions to increase rates on regulated savings, including to levels above the return received by banks on the same deposits). This increase in the cost of funding could create an imbalance and a reduction in net interest margin as a result of the BNP Paribas Group holding a significant portfolio of loans originated in a low interest rate environment. The Group may also have difficulty (in particular due to the usury rate in France) promptly reflecting higher interest rates in new mortgage or other fixed-rate consumer or corporate loans, while the cost of customer deposits and hedging costs would increase more rapidly. In addition, the ECB modified in 2022 and 2023 the instruments it used previously to implement "quantitative easing" and enhance bank liquidity e.g. the creation of a "transmission protection instrument" and the amendment of the conditions of its longer-term refinancing operations (TLTRO III); as the Group hedges its overall interest rate position, any change in the terms and conditions affecting these instruments may lead to adjustments in this hedge, which has had and could have an adverse impact on the results of the BNP Paribas Group. As a result of these adjustments, the BNP Paribas Group recorded an extraordinary charge of EUR 938 million against its net banking income at 31 December 2023.

Moreover, a portfolio comprising significant amounts of lower-interest loans and fixed-income assets as a result of an extended period of low interest rates would (in a rapidly rising market interest-rate environment) be expected to decline in value. If the Group's hedging strategies are ineffective or provide only a partial hedge against such a change in value, it could incur significant losses.

Higher interest rates increase financial expense for borrowers and may strain their ability to meet their debt obligations. Moreover, any rate increase that is sharper or more rapid than expected could threaten economic growth in the European Union, the United States and elsewhere. These effects could test the resilience of the BNP Paribas Group's loan and bond portfolios, which could lead to an increase in doubtful loans and defaults. More generally, the end of accommodating monetary policies, in particular by the US Federal Reserve and the ECB, has led, and could continue to lead, to sharp corrections in certain markets or assets (e.g., non-investment grade corporate and sovereign borrowers, certain sectors of equities and real estate, particularly commercial, and leveraged finance) that particularly benefitted from the prolonged period of low interest rates and high liquidity and adversely affect market participants. For example, in early 2024, the commercial real estate crisis affected the share prices of many US regional banks, as well as the financial condition of some major real estate developers. More generally, such corrections could potentially be contagious to financial markets generally, including by the effect of substantially increased volatility and heightened investor mistrust, generally or in relation to certain sectors, including the banking sector due to its exposure to the commercial real estate market or other sectors particularly affected by rising interest rates. The BNP Paribas Group's operations could as a result be significantly disrupted with a consequential material adverse effect on its business, results of operations and financial condition.

## **5.3 Given the global scope of its activities, the BNP Paribas Group is exposed to country risk and to changes in the political, macroeconomic or financial contexts of a region or country.**

The BNP Paribas Group monitors country risk and takes it into account in the fair value adjustments and cost of risk recorded in its financial statements. However, a significant change in political or macroeconomic environments may require it to record additional charges or to incur losses beyond the amounts previously written down in its financial statements. In addition, factors specific to a country or region in which the BNP Paribas Group operates could make it difficult for it to carry out its business and lead to losses or impairment of assets.

At 31 December 2023, the BNP Paribas Group's loan portfolio consisted of receivables from borrowers located in France (33%), Belgium and Luxembourg (16%), Italy (10%), other European countries (21%), North America, (9%), Asia (6%) and the rest of the world (5%). Adverse economic or regulatory conditions that particularly affect these countries and regions would have a significant impact on the BNP Paribas Group. For example, the introduction by the Polish government in July 2022 of a law allowing borrowers under mortgage loans, generally at variable rates, to suspend payments for eight months in the 2022-2024 period led the Group (operating in Poland through BNP Paribas Bank Polska) to record an exceptional negative impact of EUR 204 million in the third quarter of 2022. As another example, hyperinflation in Türkiye negatively affected the 2023 results of the BNP Paribas Group. Moreover, the BNP Paribas Group has significant exposures in countries outside the OECD, which are subject to risks that include political instability, unpredictable regulation and taxation, expropriation and other risks that are less present in more developed economies.

In addition, the BNP Paribas Group is present in Ukraine, through its subsidiary UkrSibbank in which it holds a 60% stake alongside the European Bank for Reconstruction and Development (40%). In the context of the conflict in Ukraine, the Group reassessed the nature of the control exercised over its subsidiary and concluded to the loss of exclusive control, and the maintain of a significant influence. This situation led the Group to consolidate this entity using the equity method as from 1 March 2022 as described in note 9.d *Business combinations and loss of control or significant influence* to the consolidated financial statements for the year ended 31 December 2023. At 31 December 2023, the Group's exposure resulting from UkrSibbank's business, was insignificant.

With regard to Russia, which is subject to extensive economic sanctions imposed in particular by the European Union, the United States and the United Kingdom, gross on- and off- balance sheet exposures of the BNP Paribas Group to this country represented 0.03% of the BNP Paribas Group's gross exposures on- and off- balance sheet at 31 December 2023. The Group is diligently monitoring developments in the situation in conjunction with the authorities concerned and, in particular, the reactions of the international community with regard to economic sanctions.

## 6. REGULATORY RISKS

### 6.1 Laws and regulations adopted in recent years, as well as current and future legislative and regulatory developments, may significantly impact the BNP Paribas Group and the financial and economic environment in which it operates.

Laws and regulations taking effect in recent years in the jurisdictions in which the BNP Paribas Group operates (in particular in France, Europe and the United States) have substantially changed, and in the future could potentially continue to substantially change, the environment in which the BNP Paribas Group and other financial institutions operate.

The most recent measures applicable to financial institutions such as the BNP Paribas Group adopted include in particular:

- More stringent “prudential” (i.e. capital solvency, liquidity) requirements, in particular for global systemically important banks, such as the BNP Paribas Group, and under the 26 June 2013 Regulation of the European Parliament and Council (as amended from time to time, the “CRR”), as well as changes to the risk-weighting methodologies and methods of using internal models that have led and could lead to increased capital requirements.
- In respect of minimum capital requirements in October 2021, the European Commission adopted a legislative package to finalise the implementation within the European Union of the Basel III agreement adopted by the Group of Central Governors and Heads of Supervision (GHOS). In the impact assessment accompanying this legislative package, the European Commission estimated, on the basis of an EBA impact study dated December 2020 and of additional European Commission estimates for some EU specific adjustments, that the implementation of the final Basel III standards may result in an average increase in total minimum capital requirements ranging between 6.4% and 8.4% after full implementation of the reform. On the basis of the EBA's updated impact analysis taking into account the combined effect of the reform and the potential consequences of the health crisis, the European Commission opted to apply the new capital requirements to EU banks as from 1 January 2025, with a phase-in period during which the requirements will be gradually increased through 2030 (and 2032 for certain requirements). On this basis, the Group has indicated a potential increase of 7% in its risk-weighted assets at the date of the first application announced for 1 January 2025, which implies a potential 7% increase in total minimum capital requirements resulting from the finalisation of Basel 3 fully loaded. This estimate is subject to change depending on potential changes in the draft text, in the Group and the macroeconomic context. In June 2023, negotiations resulted in a provisional agreement between the Council and the European Parliament, which was validated in December 2023, and should be formally adopted by the European Parliament in the second quarter of 2024.
- Strengthening of the powers of existing supervisory bodies and the creation of new supervisory authorities, for example under the Single Resolution Mechanism (the SRM) placing the BNP Paribas Group under the direct supervision of the ECB.
- Enhancement of recovery and resolution regimes, in particular the adoption of the Bank Recovery and Resolution Directive of 15 May 2014, as amended from time to time (the “BRRD”), in order to ensure that losses are borne largely by creditors and shareholders of banks and to thus minimise losses borne by taxpayers.
- Establishment of national resolution funds by the BRRD and the creation of the Single Resolution Board (the SRB) by the European Parliament and Council of the European Union in a resolution dated 15 July 2014 (as amended from time to time, the “SRM Regulation”), which is authorised to initiate resolution proceedings for banking institutions such as the BNP Paribas Group, and the Single Resolution Fund (the SRF), funded via annual contributions from financial institutions. In 2023, the BNP Paribas Group's contribution was EUR 1,002 million.
- Restrictions on certain types of activities by commercial banks (in particular proprietary trading) considered as speculative and thus either prohibited or having to be ring-fenced in subsidiaries, and subject to specific capital and funding requirements.
- Prohibitions or restrictions on fees for certain types of financial products or activities.
- Establishment of national deposit guarantee schemes and a proposed European deposit guarantee scheme or deposit insurance which will gradually cover all or part of the guarantee schemes of participating countries.
- Increased internal control, risk management and reporting requirements with respect to certain activities.
- Implementation of regulatory stress tests (including in relation to climate change risk) which could lead to additional regulatory capital requirements (see *Market Risk Stress Testing Framework* in section 5.7 *Market risk of this amendment to the 2022 Universal Registration Document at 31 December 2023*).
- Greater powers granted to the relevant authorities to combat money laundering and terrorism financing, in particular through the creation of a new European authority for countering money laundering and financing of terrorism, endorsed by the Council and the European Parliament under a provisional agreement dated 13 December 2023.
- More stringent governance and conduct of business rules and restrictions and increased taxes on employee compensation over specified levels.

- Changes in securities regulation, in particular of financial instruments (including shares and other securities issued by entities of the BNP Paribas Group); measures to improve the transparency, efficiency and integrity of financial markets and in particular the regulation of high frequency trading, more extensive market abuse regulations, increased regulation of certain types of financial products including mandatory reporting of derivative and securities financing transactions, requirements either to mandatorily clear, or otherwise mitigate risks in relation to over-the-counter derivative transactions (including through posting of collateral in respect of non-centrally cleared derivatives).
- Regulations of market infrastructures such as trading platforms, clearing houses, central depositories and securities delivery and settlement systems.
- Introduction of enhanced disclosure requirements, including through the introduction of new disclosure requirements (i) on how banking groups providing asset management services such as the BNP Paribas Group integrate sustainability risks or negative impacts, sustainable investment objectives or the promotion of environmental or social attributes when making investment decisions, (ii) on how and to what extent banking groups themselves finance or develop economic activities that can be considered environmentally sustainable as defined in the European Taxonomy and (iii) in terms of sustainability, certified by an independent third party, making it possible to analyse the impact of the BNP Paribas Group's business on ESG issues and the manner in which these issues affect its business, its results of operations and its financial condition, in accordance with the texts transposing the Corporate Sustainability Reporting Directive ("CSRD"), applicable progressively since 1 January 2024.
- Strengthened transparency and disclosure requirements on CSR risk management, including physical and transitional risks related to climate change, and the introduction of new requirements for the integration of climate risk into the risk measurement and management systems of banking groups, including through the publication of proposals for banks to manage and disclose climate risk.
- Multiplication of measures that are not specific to financial institutions, such as measures relating to the investment fund sector or those promoting technological innovation such as "open data" access, the development of the regulation of payment services, crowdfunding and fintechs.

Existing measures, as well as those (by definition unpredictable) which could be adopted in the future, could in particular reduce the BNP Paribas Group's ability to allocate and apply its capital and financing resources, limit its ability to diversify its risks, reduce the availability of certain financing and liquidity resources, increase the cost of financing, increase the cost of compliance, increase the cost or reduce the demand for its products and services, require it to effect internal reorganisations, structural changes or reallocations, affect its ability to conduct certain activities or to attract and/or retain talent, facilitate the entry of new players in the financial services sector or affect the business model of the BNP Paribas Group and, more generally, affect its competitiveness and profitability, which could have a significant impact on its business, financial condition and results of operations.

## **6.2 The BNP Paribas Group may incur substantial fines and other administrative and criminal penalties for non-compliance with applicable laws and regulations, and may also incur losses in related (or unrelated) litigation with private parties.**

The BNP Paribas Group is subject to regulatory compliance risk. This risk is exacerbated by the adoption by different countries of multiple and occasionally diverging and even conflicting legal or regulatory requirements. Besides damage to the BNP Paribas Group's reputation and private rights of action (including class actions), non-compliance could lead to material legal proceedings, fines and expenses (including fines and expenses in excess of recorded provisions), public reprimand, enforced suspension of operations or, in extreme cases, withdrawal by the authorities of operating licences. This risk is further exacerbated by continuously increasing regulatory scrutiny of financial institutions as well as substantial increases in the quantum of applicable fines and penalties. Moreover, litigation by private parties against financial institutions has substantially increased in recent years. Accordingly, the BNP Paribas Group faces significant legal risk in its operations. The volume and amount of damages claimed in litigation, regulatory proceedings and other adversarial proceedings against financial services firms have substantially increased in recent years and may increase further. The BNP Paribas Group may record provisions in this respect as indicated in note 5.n *Provisions for contingencies and charges* to the consolidated financial statements for the year ending 31 December 2023.

Regarding the Cease and Desist Order issued jointly by the French *Autorité de contrôle prudentiel et de résolution* and the US Federal Reserve Board of Governors on 30 June 2014, related to violations by the Bank of US laws and regulations on economic sanctions (which resulted among other things in a fine of USD 8.9 billion) the *Secrétariat Général de l'Autorité de contrôle prudentiel et de résolution* informed BNP Paribas on 19 January 2024 of its conclusion that the Group had fully complied with the provisions of the Cease and Desist Order and that it would no longer monitor the BNP Paribas Group's compliance. On 6 February 2024, the Federal Reserve Board of Governors also announced the termination of the Cease and Desist Order and a related enforcement action.

The BNP Paribas Group is also currently involved in various litigations and investigations as summarised in note 9.c *Legal proceedings and arbitration* to the consolidated financial statements for the year ended 31 December 2023. It may become involved in other litigation or investigations at any time. No assurance can be given that an adverse outcome in one or more of such matters would not have a material adverse effect on the BNP Paribas Group's operating results for any particular period.

### **6.3 The BNP Paribas Group could experience an unfavourable change in circumstances, causing it to become subject to a resolution proceeding or a restructuring outside of resolution: BNP Paribas Group security holders could suffer losses as a result.**

The BRRD, the Ordinances of 20 August 2015 and 21 December 2020 transposing it, and the SRM Regulation as amended from time to time, confer upon the ACPR or the SRB the power to commence resolution proceedings for a banking institution, such as the BNP Paribas Group, with a view to ensure the continuity of critical functions, to avoid the risks of contagion and to recapitalise or restore the viability of the institution. These powers must be implemented so as to ensure that losses, subject to certain exceptions, are borne first by shareholders, then by holders of additional capital instruments qualifying as Tier 1 (such as super subordinated bonds) and Tier 2 (such as subordinated bonds), then by the holders of senior non-preferred debt and finally by the holders of senior preferred debt, all in accordance with the insolvency ranking in normal insolvency proceedings. For reference, the BNP Paribas Group's medium- to long-term wholesale financing at 31 December 2023 consisted of the following: EUR 14.9 billion in hybrid Tier 1 debt, EUR 20.7 billion in Tier 2 subordinated debt, EUR 1.6 billion in subordinated debt not included in own funds, EUR 73.5 billion in senior unsecured non-preferred debt, EUR 91.5 billion in senior unsecured preferred debt and EUR 15.5 billion in senior secured debt.

Resolution authorities have broad powers to implement resolution measures with respect to institutions and groups subject to resolution proceedings, which may include (without limitation): the total or partial sale of the institution's business to a third party or a bridge institution, the separation of assets, the replacement or substitution of the institution as obligor in respect of debt instruments, the full or partial write-down of capital instruments, the dilution of capital instruments through the issuance of new equity, the full or partial write-down or conversion into equity of debt instruments, modifications to the terms of debt instruments (including altering the maturity and/or the amount of interest payable and/or imposing a temporary suspension on payments), discontinuing the listing and admission to trading of financial instruments, the dismissal of managers or the appointment of a special manager (*administrateur spécial*).

Certain powers, including the full or partial write-down of capital instruments, the dilution of capital instruments through the issuance of new equity, the full or partial write-down or conversion into equity of additional capital instruments qualifying as Tier 1 (such as super subordinated bonds) and Tier 2 (such as subordinated bonds), can also be exercised outside of resolution proceedings and/or pursuant to the European Commission's State Aid framework if the institution requires exceptional public financial support.

The implementation of these tools and powers with respect to the BNP Paribas Group may result in significant structural changes to the BNP Paribas Group (including as a result of asset or business sales or the creation of bridge institutions) and in a partial or total write-down, modification or variation of claims of shareholders and creditors. Such powers may also result, after any transfer of all or part of the BNP Paribas Group's business or separation of any of its assets, in the holders of securities (even in the absence of any such write-down or conversion) being left as the creditors of the BNP Paribas Group whose remaining business or assets are insufficient to support the claims of all or any of the creditors of the Group.

## **7. RISKS RELATED TO THE BNP PARIBAS GROUP'S GROWTH IN ITS CURRENT ENVIRONMENT**

### **7.1 Should the BNP Paribas Group fail to implement its strategic objectives or to achieve its published financial objectives, or should its results not follow stated expected trends, the trading price of its securities could be adversely affected.**

In connection with the publication of its results for the year ended 31 December 2021, the BNP Paribas Group announced its 2025 strategic plan. The plan includes financial and operational objectives. In connection with the publication of its results for the year ended 31 December 2023 the Group revised its objectives for 2025 to take into account the deterioration of the macroeconomic environment, particularly in Europe, the negative effect of European public policy decisions and the trajectory of certain business lines particularly affected by the current cycle. The BNP Paribas Group's actual results could vary significantly from these trends for a number of reasons, including the materialisation of one or more of the risks described in this section. If the BNP Paribas Group's results do not follow these trends, its financial condition and the price of its securities, as well as its financing costs, could be affected.

Additionally, the Group is pursuing an ambitious corporate social responsibility (CSR) policy and is committed to making a positive impact on society with concrete achievements. In 2022, the BNP Paribas Group strengthened its commitment to a sustainable economy and accelerated decarbonation strategies, with the signing of the Net-Zero Banking Alliance, the Net-Zero Asset Owner Alliance, and the Net-Zero Asset Manager initiative. The Group is thus taking strong positions, as a founding member of the United Nations Principles for Responsible Banking, which commits it to align its strategy with the Paris Agreement and the Sustainable Development Goals (SDGs). As part of the Group's 2022-2025 strategic plan, it aims to mobilise EUR 350 billion in ESG- related loans and bond issuances (loans to companies, institutions and individuals covering environmental and social issues and annual sustainable bonds issuances) and to have EUR 300 billion in sustainable responsible investments under management by 2025 (BNP Paribas Asset Management European open funds classified articles 8 and 9 as defined by SFDR). In addition, in 2019, as part of the fight against climate change, the BNP Paribas Group made new commitments to reduce its exposure to thermal coal to zero by 2030 in the OECD and by 2040 for the rest of the world. At the end of 2022, the BNP Paribas Group published its first climate alignment report and its targets for reducing carbon

emission intensity by 2025 and is taking the necessary measures to align its credit portfolios with its carbon neutrality commitments. Finally, in January 2023, the Group strengthened its social commitment policy and is working alongside its clients as part of a global approach to the transition to a sustainable, low-carbon economy. Building on the expertise developed through the Low-Carbon Transition Group, the Group announced new objectives that will result in an acceleration in the financing of low-carbon energy production and a reduction in the financing of fossil fuel production by 2030. If the Group fails to meet these targets, which depend in part on factors beyond its control, its reputation could be affected.

## **7.2 The BNP Paribas Group may experience difficulties integrating businesses following acquisition transactions and may be unable to realise the benefits expected from such transactions.**

The BNP Paribas Group regularly undertakes merger and acquisition transactions. It has in particular announced its intention to allocate part of the proceeds from the sale of Bank of the West to acquisitions. The BNP Paribas Group's most recent major such transactions were the integration of Deutsche Bank's Prime Brokerage & Electronic Execution platform in 2019, the acquisition of 100% of Exane, previously 50% owned by BNP Paribas, in 2021, the acquisition of 100% of Floa in 2022 and the acquisition of Kantox in 2023. Successful integration and the realisation of synergies require, among other things, proper coordination of business development and marketing efforts, retention of key members of management, policies for effective recruitment and training as well as the ability to adapt information and computer systems. Any difficulties encountered in combining operations could result in higher integration costs and lower savings or revenues than expected. There will accordingly be uncertainty as to the extent to which anticipated synergies will be achieved and the timing of their realisation. Moreover, the integration of the BNP Paribas Group's existing operations with those of the acquired operations could interfere with its respective businesses and divert management's attention from other aspects of the BNP Paribas Group's business, which could have a negative impact on the BNP Paribas Group's business and results. In some cases, moreover, disputes relating to acquisitions may have an adverse impact on the integration process or have other adverse consequences, including financial ones.

Although the BNP Paribas Group undertakes an in-depth analysis of the companies it plans to acquire, such analyses often cannot be complete or exhaustive. In the event that the BNP Paribas Group is unable to conduct comprehensive due diligence prior to an acquisition, it may acquire doubtful or troubled assets or businesses that may be unprofitable or have certain potential risks that only materialise after the acquisition. The acquisition of an unprofitable business or a business with materialised risks may have a significant adverse effect on the BNP Paribas Group's overall profitability and may increase its liabilities.

## **7.3 The BNP Paribas Group's current environment may be affected by the intense competition amongst banking and non-banking operators, which could adversely affect the BNP Paribas Group's revenues and profitability.**

Competition is intense in all of the BNP Paribas Group's primary business areas in France and the other countries in which it conducts a substantial portion of its business, including other European countries and the United States. Competition in the banking industry could intensify as a result of consolidation in the financial services area, as a result of the presence of new players in the payment and the financing services area or the development of crowdfunding platforms, as well as the continuing evolution of consumer habits in the banking sector. While the BNP Paribas Group has launched initiatives in these areas, such as the debut of Hello bank! and its acquisition of Nickel or Floa, competitors subject to less extensive regulatory requirements or to less strict capital requirements (e.g. debt funds, shadow banks), or benefiting from economies of scale, data synergies, technological innovation (e.g. Internet and mobile operators, digital platforms, fintechs), or free access to customer financial data could be more competitive by offering lower prices and more innovative services to address the new needs of consumers. New technologies that facilitate or transform transaction processes and payment systems, such as blockchain technologies and related services, or that could significantly impact the fundamental mechanisms of the banking system, such as central bank digital currencies, have been developed in recent years or could be developed in the near future. While it is difficult to predict the effects of these developments and the regulations that apply to them, the use of such technology could nevertheless reduce the market share of banks, including the BNP Paribas Group, secure investments that otherwise would have used technology used by more established financial institutions, such as the BNP Paribas Group or, more broadly, lead to the emergence of a different monetary system in which the attractiveness of using established financial institutions such as the BNP Paribas Group would be affected. If such developments continue to gain momentum, particularly with the support of governments and central banks, if the BNP Paribas Group is unable to respond to the competitive environment in France or in its other major markets by offering more attractive, innovative and profitable product and service solutions than those offered by current competitors or new entrants or if some of these activities were to be carried out by institutions other than banks, it may lose market share in key areas of its business or incur losses on some or all of its activities. In addition, downturns in the economies of its principal markets could add to the competitive pressure, through, for example, increased price pressure and lower business volumes for the BNP Paribas Group and its competitors. It is also possible that the imposition of more stringent requirements (particularly capital requirements and business restrictions) on large or systemically significant financial institutions that new players may not be subject to could lead to distortions in competition in a manner adverse to large private-sector institutions such as the BNP Paribas Group.

## **7.4 The BNP Paribas Group could experience business disruption and losses due to risks related to environmental, social and governance ("ESG") issues, particularly relating to climate change, such as transition risks, physical risks or liability risks.**

The BNP Paribas Group is exposed to risks related to climate change, either directly through its own operations or indirectly through its financing and investment activities. There are two main types of risks related to climate change: (i) transition risks, which result from changes in the behaviour of economic and financial actors in response to the implementation of energy

policies or technological changes for a transition to a low-carbon economy; and (ii) physical risks, which result from the direct impact of climate change on people and property through extreme weather events or long-term risks such as rising water levels or increasing temperatures. Physical risk can spread throughout the value chain of the BNP Paribas Group's clients, which can lead to a payment default and thus generate financial losses, while the process of reducing emissions is likely to have a significant impact on all sectors of the economy by affecting the value of financial assets and corporate profits.

In addition, liability risks may flow from both categories of risk. They correspond to the financial compensation that can be claimed by individuals, companies, governments or non-governmental organisations (NGOs) that may be affected by climate change events, activities or effects and who would seek to hold actors in the financial sector accountable for financing, facilitating or otherwise contributing to such events, activities, or effects. In recent years, activism by shareholders, activist funds, NGOs and others, particularly on ESG issues, has been directed against many public companies. These initiatives include requiring companies to disclose material information about their ESG-related actions and commitments and, in some cases, seeking to force them to make strategic and business changes. In some jurisdictions, financial sector actors may also face legal action from individuals, companies, governments or NGOs, groups or private persons.

Policy and regulatory initiatives and frameworks, including at the French, European Union and international levels, concerning climate change and sustainability, as well as voluntary and joint commitments through industry alliances, create increasing legal, regulatory and reputational

risks. The ESG regulatory framework is constantly changing, evolving and continuing to evolve rapidly. It includes, among other things, requirements in terms of disclosure and the integration of climate risks into risk measurement and management systems, as well as a general duty of care (see section 6.1 *Laws and regulations adopted in recent years*, as well as current and future legislative and regulatory developments, may significantly impact the BNP Paribas Group and the financial and economic environment in which it operates). These initiatives and frameworks overlap in some respects and are not always consistent in their objectives, resulting in regulatory complexity and, in some cases, a lack of clarity and difficulty in interpretation. Non-compliance by the Group in its business and disclosure with these and other regulatory requirements, as well as any other regulations concerning the transition to a lower carbon economy, climate change, sustainability or energy-related investments, could have a negative impact on its business, the value of its investments and its reputation.

BNP Paribas does not consider ESG risks as a stand-alone risk category, but rather as factors affecting various risk categories such as credit, market and operational risks. Accordingly, BNP Paribas is progressively integrating the assessment of these risks into its risk management system. As explained in detail in section 7 of this amendment to the 2022 Universal Registration Document at 31 December 2023, ESG risk factors, including the subset of climate and environmental risk factors, are among the risk factors taken into account by contributors to the Group's risk identification process and to which they apply a risk assessment based on short to medium-term (three or four years) as well as longer-term scenarios. In 2022, the Group identified several major risk factors that are directly or indirectly linked to climate change, including possible changes in the insurance and reinsurance markets; customer expectations and the impact of consumerism; investors' financial expectations; climate change and the energy transition; threats to health and the environment; and the focus on banks' role in ESG matters generally. The Group monitors these risks in the conduct of its business, in the conduct of its counterparties' business, and in its investments on its own behalf and on behalf of third parties. In this respect, the specific credit policies and the General Credit Policy have been enhanced as from 2012 and 2014, respectively, with the addition of clauses relating to social and environmental responsibility. In addition, the development of regulatory requirements in this area could lead to an increase in litigation against financial institutions in relation to climate change and other related issues. The Group could thus be held liable for transaction execution failings such as inadequate assessment of the environmental, social and governance criteria of certain financial products.

In addition, sector-specific policies including to rule out financing certain sectors defined by ESG criteria have also been implemented and the BNP Paribas Group will have to adapt its business and in particular its counterparty screening accordingly in order to achieve its strategic objectives (see section 7.1 *Should the BNP Paribas Group fail to implement its strategic objectives or to achieve its published financial objectives, or should its results not follow stated expected trends, the trading price of its securities could be adversely affected*). Specifically, by way of example, the results of the Group's ESG analysis may lead it to withdraw from a client relationship (unsatisfactory results), place a client relationship under review and regular monitoring (intermediate results), or enter into a new (or continue an existing) client relationship (satisfactory results). Similarly, the Group's assessment of the effectiveness of ESG risk management at the investee entity may lead it to divest from existing investments or affect its decision whether to make new investments. Notwithstanding its efforts to combat climate change and monitor the related risks, the physical, transitional or liability risks related to climate change, or any delay or failure to implement ESG risk management, could have a material adverse effect on the Group's business, financial condition or reputation.

## **7.5 Changes in certain holdings in credit or financial institutions could have an impact on the BNP Paribas Group's financial position.**

Certain classes of assets may carry a high risk-weight of 250%. They include: credit or financial institutions consolidated under the equity method within the prudential scope (excluding insurance); significant financial interest in credit or financial institutions in which the BNP Paribas Group holds a stake of more than 10%; and deferred tax assets that rely on future profitability and arise from temporary differences.

The risk-weighted assets carrying a risk-weight of 250% amounted to EUR 19 billion at 31 December 2023, or 3% of the total risk-weighted assets of the BNP Paribas Group. They amounted to EUR 20 billion at 31 December 2022, or 3% of the Group's total risk-weighted assets. If the BNP Paribas Group increases the amount of high risk-weighted assets (either by increasing the

proportion of such high risk-weighted assets in its overall asset portfolio or due to an increase of the regulatory risk-weighting applicable to these assets), its capital adequacy ratios may be lowered.

## TOP AND EMERGING RISKS

---

The identification and monitoring of top and emerging risks are central to BNP Paribas' approach to risk management.

These risks are identified, analysed and managed thanks to different work and analyses carried out by the RISK Function, the divisions and the businesses, and through several committees. They notably give rise to:

- a close follow-up of macroeconomic and financial conditions with the objective of organising them into a hierarchy with regard to the consequences for Group portfolio and designing adverse scenarios. This close monitoring is delivered quarterly to the General Management as well as to the Internal Control, Risk Management and Compliance Committee (CCIRC) through a dashboard presented by RISK;
- a close monitoring of the risk profile in accordance with the directives and thresholds approved by the Board of directors;
- cross-functional policies on concentration or corporate social responsibility among others;
- market and liquidity risk decisions made by Group ALM Treasury Committee (or Group ALCo, see *Governance* in section 5.3 *Risk management*) and the Financial Markets Risk Committee (FMRC);
- key decisions made by committees with respect to specific transactions at the highest level;
- proposals for new activities or new products;
- portfolio and businesses reviews by Risk & Development Policy Committees (RDPC), on topics selected by the Group's Executive Management for the upcoming year;
- proactive and forward-looking discussions on emerging risks and their impacts on the Bank's risk profile in the Risk Anticipation Committee;
- an analysis and a monitoring of changes to the regulatory framework and their consequences on the Bank's capital and liquidity management as well as on its activities.
- the Group's sustainable finance strategy and commitments validated by the Sustainable Finance Strategic Committee (SFSC). This committee also decides on the main lines of sustainable finance's commercial policy and monitors their operational implementation. Where necessary, it also validates cross-functional infrastructure choices ensuring the expertise and consistency of the implementation of regulatory requirements and the commitments made by the Group in methods, analyses, risk management, data, tools, standards and reporting related to sustainable finance.

## TOP RISKS

A top risk is defined as having:

- the potential to have a material impact, across a business area or geographical area, on the financial results, reputation or sustainability of the Group;
- the potential to occur in the near future.

The top risks to which the Group is exposed are described below.

### Macroeconomic environment

Given the nature of the Bank's business, the Bank and its results are particularly sensitive to macroeconomic and market conditions in Europe.

Global activity decelerated in 2023, in a context of still high interest rates and inflation. According to the latest IMF projections of January 2024, global GDP grew by only 3.1% (compared with 3.5% in the previous year), mainly reflecting weakening of European economies. In the Eurozone, activity growth indeed decelerated with a growth of 0.5% (compared with +3.4% in the previous year), reflecting much less dynamic domestic demand, both in terms of consumption and investment.

While inflation has receded at a quite rapid pace in the course of 2023, it has remained significantly above central bank targets in many countries. This high inflation environment has pushed central banks to implement the most pronounced monetary tightening in recent decades.

The main central banks have most likely completed their interest rate hiking cycle in the second half of 2023. Both short-term and long-term interest rates have reached levels not seen since the years 2000 and are expected to remain relatively high for some time. These rate conditions should thus continue to weigh on activity in 2024.

In this context, the following risk categories can be identified:

#### Risks related to high inflation, supply chain disruptions and tensions on commodity markets

Inflation has receded at a quite rapid pace since late 2022 and is generally expected to continue to moderate in 2024, reflecting both reduced tensions in some specific sectors (energy, food) and a modest pace of activity growth. However, the risk that inflation remains durably above central bank targets remains. In the short term, key factors developments seem worth

monitoring from this point of view, such as the possible impacts of geopolitical tensions, the risk of shocks on commodity prices, and labour market developments. In a medium-term perspective, the energy transition also carries inflationary risks.

The risks of supply chain disruptions and shortages of inputs are likely to remain key themes in the years ahead. First, geopolitical tensions generate risks from this point of view (e.g. enforcement of sanctions). Second, the transition towards a low-carbon economy increases the competition for commodities that may not be easily available in sufficient quantities. These difficulties could lead to price volatility. They could also directly affect activity (lack of inputs or unprofitable production) and lead to difficulties in the most exposed sectors (losses, defaults).

### **Risks linked to the impact of higher interest rates, in particular for the real estate sector and indebted economic agents**

The high levels of interest rates generate risks for the economy and the financial system and are susceptible to trigger unfavourable market reactions (equity market, foreign exchange, capital flows).

Interest-rate sensitive sectors are more exposed than others. In particular, the downward trend in the real estate sector (residential and commercial) has materialised in many countries and has not come to an end yet in most cases (additional price corrections expected in the coming quarters).

More generally, in the private sector, some economic agents with high levels of debt may find it more difficult to pay off their debt, especially when variable interest rates are applied. The modest growth environment adds to such risks, notably through weaker expected labour market developments.

The combination of low growth and higher interest rates also increases pressures on public finances, especially given the increase in public debt observed in many countries in recent years, due to the health crisis and the high inflation environment. In this context, fiscal policy is expected to contribute less to growth in the near future than in previous years. The related tensions (higher sovereign spreads) are a risk in the presence of less favourable deficit trajectories than previously anticipated.

The vulnerability of some economies of emerging countries to these risks could lead to a deterioration in the rating of these countries by agencies, which can be followed by an increase in risk premiums and debt servicing. The Group's exposure in emerging countries is limited.

### **Geopolitical and geoeconomic fragmentation risks**

Geopolitical risks have increased significantly in recent years. Beyond the invasion of Ukraine and its economic consequences (e.g. gas prices, food prices), the situation in the Middle East seems susceptible to generate significant risks for the global economy, depending on developments. These conflicts, combined with other geopolitical tensions between the US and China, are contributing to some fragmentation of the global economy.

Türkiye holds a key position in this context, due to its geographical location and complex and variable relationships with various major actors. The worsening of the situation in the Middle East adds another dimension. These geopolitical risks combine with economic risks related to high inflation and the associated depreciation of its currency over the recent period. The Group presence in Türkiye is primarily through its TEB subsidiary. At 31 December 2023, the Group generated 2.0% of its pre-tax operating income in this country (see section 8.6 *Profit and loss account items and headcount by country* in chapter 8 *General information*).

Geopolitical tensions can weigh on the global economy through various channels, including shocks on commodity prices, financial markets, business confidence, supply chains and trade. Such developments are susceptible to lead to higher inflation developments and weaker activity developments simultaneously, complicating the task of central banks. The growing use of international sanctions also increases the possible magnitude of consequences of such events.

### **Laws and regulations applicable to financial institutions**

Recent and future changes in the laws and regulations applicable to financial institutions may have a significant impact on the Bank. Measures recently adopted or of which implementing measures are still under elaboration, that have or are likely to have an impact on the Bank notably include prudential regulations with the finalisation of Basel 3 published by the Basel Committee in December 2017, supplemented by the Fundamental Review of the Trading Book (FRTB) in January 2019 and of CVA risk (Credit Value Adjustment) in July 2020, which introduces a revision of the credit risk, operational risk, market risk and CVA risk measurement in the calculation of risk-weighted assets. The new Basel framework also provides for the gradual introduction of an overall floor which will be based on standardised approaches. These measures are due to come into force once they are transposed into European law. To this end, on 27 October 2021, the European Commission published a draft transposition of the Basel Accord in the form of amendments to the CRR and CRD. The European Union Council and the European Parliament have settled their positions. Negotiations between the three institutions have been completed and adoption of the finalised text is expected to take place in the first half of 2024. This text also provides for the issuance by the EBA of a number of regulatory or implementing technical standards as well as guidelines.

For a more detailed description, see risk factor 6.1 *Laws and regulations adopted in recent years, as well as current and future legislative and regulatory developments, may significantly impact the BNP Paribas Group and the financial and economic environment in which it operates.*

Moreover, in this strengthened regulatory context, the risk of non-compliance with existing laws and regulations, in particular those relating to the protection of the interests of customers and personal data, is a significant risk for the banking industry, potentially resulting in significant losses and fines<sup>1</sup>. In addition to its compliance system, which specifically covers this type of risk, the Group places the interest of its customers, and more broadly that of its stakeholders, at the heart of its mechanism. Thus, the Code of conduct adopted by the Group in 2016, updated in 2021, sets out detailed values and rules of conduct in this area.

## Environmental risks

The BNP Paribas Group is exposed to risks related to climate change, based on a double materiality approach, either directly through its own operations or for certain of its assets or indirectly through its financing and investment activities.

The main risk factors related to climate change are as follows:

- transition risk factors resulting from a change in the behaviour of economic and financial agents in response to the implementation of energy policies, change in regulation, technological innovations or changes in consumer preferences;
- physical risk factors resulting from the direct impact of climate change on people, corporates and assets due to extreme weather events or long-term shifts in climate patterns such as rising sea levels or rising temperatures;
- in addition, consequences in terms of reputation and liability may arise from these risk factors as a consequence of potential negative impacts that the Group may have either directly or indirectly on the climate or if its public commitments or disclosures are not perceived as accurate by some of its stakeholders. They may end up with potential disputes, claims for compensation, legal proceedings brought against a company, a State or a financial institution that could be held liable by any stakeholder or citizen who has suffered from climate change. In line with international work and in particular that of the Network of Supervisors and Central Banks for Greening the Financial System (NGFS), BNP Paribas considers the risks associated with the emergence of legal proceedings related to climate change for companies and investors, including liability risks, as a subset of physical and transition risks.

BNP Paribas has set up a monitoring on the potential impact of these risk factors in the conduct of its business, in that of its counterparties or in its investments on its own behalf or on behalf of third parties. The Group thus integrates these risk factors into its risk management process and gradually strengthens their assessment, as the methodologies for measuring and analysing these factors and their impact on traditional risks, in particular, those relating to credit quality, are developed.

For more details, please see risk factor 7.4 *The BNP Paribas Group could experience business disruption and losses due to risks related to environmental, social and governance ("ESG") issues, particularly relating to climate change, such as transition risks, physical risks or liability risks* as well as the measures taken and commitments made by the Group in this area in paragraph Commitment 3: *Robust management of Environmental, social and governance risks* of chapter 7.

## Cyber security and technology risk

BNP Paribas' ability to do business is intrinsically tied to the fluidity of electronic transactions as well as the protection and security of information and technology assets.

The technological change is accelerating with the digital transformation and the resulting increase in the number of communications circuits, dependency on systemic technological infrastructure, proliferation in data sources, growing process automation, and greater use of electronic banking transactions.

The progress and acceleration of the technological changes needed to respond to customer requirements are giving cybercriminals new options for altering, stealing and disclosing data. Attacks are more frequent, with a bigger reach and sophistication across all sectors, including financial services. Besides, in the current context of geopolitical tensions and development of hybrid war, cyber threat is heightened.

The outsourcing of a number of processes also is likely to expose the Group to structural cybersecurity and technology risks which can lead to the appearance of potential attack vectors that cybercriminals can exploit.

In this context, the Group has reinforced its lines of defence dedicated to managing technological and cybersecurity risks (see the paragraph *Cybersecurity and technology* in section 5.9 *Operational Risk*) and operational standards are regularly adapted to support the Bank's digital evolution and innovation while managing existing and emerging threats (such as cyber-crime, espionage, etc.).

<sup>1</sup> Risk factors: 6.2 *The BNP Paribas Group may incur substantial fines and administrative and other criminal penalties for non-compliance with applicable laws and regulations and may also incur losses in related (or unrelated) litigation with private parties.*

## EMERGING RISKS

An emerging risk is defined as a new or evolving risk which potential impact could be material in the future but is currently not fully known or is difficult to quantify.

The Group identified emerging risks related to insurance and reinsurance markets technological innovations, the evolving regulatory environment, as well as certain health, demographic and societal risks.

### Evolutions in insurance and reinsurance markets

Insurance and re-insurance play a critical role in the financial management of disaster risks, organising mutualisation, absorbing the costs of damage and losses and supporting post-disaster economic recovery by providing a source of funds for recovery and reconstruction.

With the intensification of extreme weather events associated with climate change and the progression of the claims' frequency and severity, one can already observe structural changes there is a risk, over the coming years that:

- substantial increase of insurance deductibles and premiums;
- multiplication of exceptions in insurance contracts;
- certain risks becoming non-insurable;
- difficulties of reinsurance facing catastrophic risks progression.

In this context, financial institutions have to develop a particular vigilance with regard to the effectiveness of insurance protections from which they, directly or indirectly, benefit.

### Technological innovations

Technological developments related to the growing use of data in all production, marketing, and distribution processes, and to data sharing among economic players (producers, suppliers, and customers) will impact the economic models of clients and counterparties in a lasting way. These impacts, which are sometimes hard to assess in a context where new standards, economic balances, and regulatory entities are in the process of evolving and adapting, are being analysed internally by industry experts focused on the economic sectors most exposed to this evolution.

In addition, the use of algorithms and artificial intelligence techniques, which are becoming increasingly sophisticated, combined with the spectacular development of computing power (with the emblematic emergence of quantum computing), considerably modifies decision-making and exposes people to risks of a new nature with, notably, a modified relationship with information and truth (appearance of "post-truth" concept) and even reality and standardised behaviour that can quickly affect certain markets. The emergence of decentralised finance and digital assets based on distributed ledger technologies (blockchain) and the development of digital currencies of central banks are changes that may ultimately have a structural impact on the banking sector.

Furthermore, in this regard, the Group's competitive environment is undergoing profound change, with the presence of fintech, emerging new players in the activities of the financial sector as GAFAM (Google, Apple, Facebook, Amazon, Microsoft, actors that concentrate a very substantial part of numerical power) and technological innovations which disrupt the traditional value chains of Group businesses, and place the quality of the customer experience, and the use of new technologies to reduce the cost of low added-value operations, as their competitive factors. Maintenance of the Group's information systems must be done in this context of evolving value chains and increasing protection needs (of systems, data, etc.). The Group is deploying a proactive strategy in this area to adapt its activities to these major technological developments and promote some industrial cooperation with fintech players. This strategy and the initiatives developed could nevertheless prove to be insufficient and introduce a risk of a competitive nature.

### Evolving regulatory environments

In addition to the regulatory measures recently adopted or pending adoption, and already cited as top risks, the trend towards growing complexity and regional differences in the bank regulatory environment and related supervision is creating relative uncertainty over future developments, compliance costs, and proper performance risk concerning the various measures. The Group has established an active monitoring system for its regulatory environment, enabling it to minimise these risks.

Possible future divergence by type of regulated entity, for example, depending on their degree of innovation, may introduce risk of a competitive nature.

### Health risks

The threat presented by bacteria, viruses, parasites or fungi that cause uncontrolled spread of infectious diseases leading to widespread fatalities and economic disruption, is a growing concern. It is aggravated by the resistance developed by bacteria to antibiotics, by viruses to antivirals or by fungi to antifungals, a situation that heightens the probability of large-scale health problems.

Furthermore, sanitary risk perspectives are clouded by the possible effects of climate change and man-made nature damages that are heightening the risk of emergence and re-emergence of diseases or pathogenic agents, known or new, leading to widespread infections or pandemics, thus pushing healthcare systems to the brink of failure.

In this context, a new widespread infection or pandemic, with a bacterial, viral or fungal origin, potentially resistant to antibiotics, antiviral drugs or other treatments, and therefore difficult to eradicate, is an increasing concern, and that becomes more and more preoccupying.

Despite the experience gained with health crisis linked to the Covid-19, such an infection could lead to new failures in infrastructure and production chains, with significant consequences for all stakeholders.

### Demographic risk

Demographic transition (decrease in fertility rate, increase in life expectancy) is a major underlying development in many countries. In the years and decades to come, it will have a significant impact on economic growth, but also on health and retirement budgets, and on savings and consumption behaviour.

### Societal issues

In addition to responses designed to meet its customers' changing needs, the Group is, on a more general basis, adapting its responses to the expectations of the society in which it operates in terms of how it conducts its business, respect for human rights and environmental protection. Thus, in a context where societal fragmentation and polarisation risks grow, banks must deal with the increasing sensitivity of their customers and partners to environmental, social and governance issues.

The BNP Paribas Group Code of conduct defines standards of conduct in line with the values and missions determined by the Bank.

The risks associated with changes in the macroeconomic and market environment are described in the following section *Risk factors*<sup>1</sup>.

The analyses relating to certain sectors are set out in the *Exposures, provisions and cost of risk* paragraph in section 5.4 *Credit risk*.

The risk principles are presented in the Risk Appetite Statement approved by the Board of directors (see *Risk Appetite* in section 5.3 *Risk management*).

## 5.2 Capital management and capital adequacy

### SCOPE OF APPLICATION

---

The prudential scope of application defined in Regulation (EU) No. 575/2013 on capital requirements is not the same as the accounting scope of consolidation whose composition concerns the application of IFRS as adopted by the European Union. The notes to the consolidated financial statements cover the accounting consolidation scope.

The consolidation principles and the scope of consolidation in accordance with the accounting consolidation method used are described respectively in notes 1.b *Consolidation* and 9.k *Scope of consolidation* to the consolidated financial statements.

### PRUDENTIAL SCOPE

In accordance with banking regulation, BNP Paribas Group has defined a prudential scope to monitor capital ratios calculated on a consolidated basis. Its specificities are as follows:

- insurance companies (primarily BNP Paribas Cardif and its subsidiaries) that are fully consolidated within the accounting scope are consolidated under the equity method in the prudential scope;
- unregulated entities of the real estate services (BNP Paribas Real Estate) and long-term vehicle leasing (Arval<sup>2</sup>) businesses that are fully consolidated within the accounting scope are consolidated under the equity method within the prudential scope;
- jointly controlled entities are consolidated under the equity method in the accounting scope and under the proportional consolidation method in the prudential scope.

As a reminder, on 31 December 2022, the Bank of the West entities sold to BMO financial group were fully consolidated without the application of IFRS 5 (see note 9.e *Discontinued activities* to the consolidated financial statements).

The differences between the accounting and prudential scopes of consolidation are summarised in the table below.

<sup>1</sup> In particular, risk factor 5.3 Given the global scope of its activities, the BNP Paribas Group is exposed to country risk and to changes in the political, macroeconomic or financial contexts of a region or country.

<sup>2</sup> As from 1 July 2024, the entities, under exclusive control, of the Arval business line will be fully consolidated within the prudential scope.

TABLE 7: DIFFERENCES BETWEEN THE ACCOUNTING AND PRUDENTIAL SCOPES (EU LI3)

31 December 2023

| Name of the entity  | Method of accounting consolidation | Method of regulatory consolidation |                            |               | Neither consolidated nor deducted from own funds | Description of the entity         |
|---|------------------------------------|------------------------------------|----------------------------|---------------|--|-----------------------------------|
|   |                                    | Full consolidation                 | Proportional consolidation | Equity method |  |                                   |
| BNP Paribas Cardif and its subsidiaries <sup>(*)</sup>                    | Full consolidation                 |                                    |                            | x             |  | Insurance                         |
| BNPP SB Re  | Full consolidation                 |                                    |                            | x             |  | Insurance                         |
| BNPP Vartry Reinsurance DAC   | Full consolidation                 |                                    |                            | x             |  | Insurance                         |
| Darnell DAC   | Full consolidation                 |                                    |                            | x             |  | Insurance                         |

| <i>In millions of euros</i> | Accounting scope | Adjustment of insurance companies | Other adjustments related to consolidation methods <sup>(*)</sup> | FinRep prudential scope | Adjustment related to the impact of IFRS 5 <sup>(*****)</sup> | Prudential scope | Reference to capital table (see Appendix 2) |
|-----------------------------|------------------|-----------------------------------|---|-------------------------|---|------------------|---|
|-----------------------------|------------------|-----------------------------------|---|-------------------------|---|------------------|---|

(\*) Adjustment of jointly controlled entities under proportional consolidation for prudential scope, which are consolidated using the equity method within the accounting scope, and of the unregulated entities of BNP Paribas Real Estate and Arval consolidated using the equity method within the prudential scope which are fully consolidated within the accounting scope.

(\*\*) Debt eligible as additional Tier 1 capital is recognised in equity.

(\*\*\*) Debt eligible as additional Tier 2 capital is presented as its notional value (excluding accrued interest and revaluation of the hedged component).

(\*\*\*\*) Unadjusted data from the first application of IFRS 17.

(\*\*\*\*\*) See note 9.e Discontinued activities to the consolidated financial statements at 31 December 2023.

The following table shows the breakdown of the different categories of assets and liabilities recognised on the Bank's prudential balance sheet by regulatory risk type. The sum of the amounts thus broken down is not necessarily equal to the net carrying values of the prudential scope, because some items may be subject to capital requirements for several types of risk.

**TABLE 9: PRUDENTIAL BALANCE SHEET BY RISK TYPE (EU LI1-B)**

The following table shows the main differences between the amounts of accounting exposure on the prudential balance sheet (see previous table) and the amounts of exposure used for regulatory purposes, based on the different types of risk, except market risk. Indeed, for the latter, the main regulatory measure used by the Group is Value at Risk (VaR), which reflects the sensitivity of the Bank's trading book to the different market parameters (see Market risk exposure section 5.7 *Market risk*). Therefore the VaR amount does not relate directly to the net carrying value of the assets and liabilities subject to market risk.

| Other adjustments   | 7,138                 |                                    |                          |                       |
| <b>EXPOSURE AMOUNTS CONSIDERED FOR REGULATORY PURPOSES</b>  | <b>1,956,389</b>      | <b>221,870</b>                     | <b>92,038</b>            |                       |
| <sup>(*)</sup> Includes deferred tax assets depending on future profits and significant participations in financial sector entities, subject to 250% risk-weight.<br><sup>(**)</sup> The main regulatory measure used by the Group for counterparty risk is the EEPE (Effective Expected Positive Exposure). The features of the valuation model are described in the paragraph Counterparty risk measurement in section 5.6 Counterparty risk. |                       |                                    |                          |                       |

The exposure amounts used for regulatory purposes are presented:

- in section 5.4 for credit risk;
- in section 5.5 for securitisation positions in the banking book;
- in section 5.6 for counterparty credit risk;
- in section 5.7 for market risk.

## SIGNIFICANT SUBSIDIARIES

Aggregate information on the risk-weighted assets of BNP Paribas' significant subgroups and subsidiaries are given as Group contribution in Appendix 4 to this chapter.

The following subgroups are considered significant, based on the criterion that their risk-weighted assets amount to more than 3% of the Group's total risk-weighted assets (excluding entities consolidated under the equity method) at 31 December 2023:

- BNP Paribas Fortis;
- Banca Nazionale del Lavoro (BNL);
- BNP Paribas Personal Finance;
- BGL BNP Paribas.

The risk-weighted assets reported correspond to the sub-consolidation scope of the four subgroups. Thus, BGL BNP Paribas subgroup is also included in BNP Paribas Fortis. subgroups respectively.

The significant restrictions relating to the Group's ability to transfer cash within the entities are described in note 9.f *Significant restrictions in subsidiaries, joint ventures and associates* to the consolidated financial statements.

Subsidiaries whose prudential requirements are supervised as part of the consolidated supervision of BNP Paribas SA, in accordance with article 7.1 of Regulation (EU) No. 575/2013, are identified in the scope of consolidation in note 9.k *Scope of consolidation* to the consolidated financial statements, under reference (1).

Compliance with capital requirements at the individual level of each entity that does not have an exemption is verified at the level of their respective division or business line. As at 31 December 2023, the Group's entities had a capital level that complied with regulatory requirements.

## REGULATORY CAPITAL

---

The BNP Paribas Group is required to comply with the French regulation that transposes European Directives on "Access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms" and "Financial Conglomerates".

In the various countries in which the Group operates, BNP Paribas also complies with specific regulatory ratios in line with procedures controlled by the relevant supervisory authorities. These ratios mainly address the issues of capital adequacy, risk concentration, liquidity and asset/liability mismatches.

As at 1 January 2014, Regulation (EU) No. 575/2013, establishing the methods for calculating the solvency ratio, defines it as the ratio between the regulatory capital and the sum of:

- the amount of risk-weighted assets for credit and counterparty risks, calculated using the standardised approach or the Internal Ratings-Based Approach (IRBA) depending on the particular entity or the activity of the Group concerned;
- capital requirements for market risk, for credit valuation adjustment risk and for operational risk, multiplied by a factor of 12.5.

## BREAKDOWN OF REGULATORY CAPITAL

Regulatory capital is divided into three categories (Common Equity Tier 1 capital, Additional Tier 1 capital and Tier 2 capital), which consist of equity and debt instruments, to which regulatory adjustments have been made.

### Common Equity Tier 1 capital

Common Equity Tier 1 capital instruments mainly comprise:

- the consolidated equity attributable to shareholders restated for the anticipated distribution of result and undated super subordinated notes, which are ineligible for this category;
- minority interest reserves of regulated entities, adjusted for their capitalisation surplus.

The main regulatory adjustments are as follows:

- gains and losses generated by cash flow hedges;
- adjustments to the value of instruments measured at fair value required by prudent valuation;
- goodwill and other intangible assets, net of deferred tax liabilities. Since 31 December 2020, in accordance with Regulation (EU) No. 2020/2176, certain software products have benefited from a specific prudential amortisation allowing the application of a preferential weighting instead of a deduction from CET1 capital;
- net deferred tax assets that rely on future profitability and arising from tax loss carry-forwards;
- expected losses on equity exposures;
- share of expected losses on outstanding loans measured using the Internal Ratings-Based Approach (IRBA) which is not covered by provisions and other value adjustments;

- negative difference between the amount of the provision recognised for each non-performing exposure and the minimum provisioning level as defined in article 47a of Regulation (EU) No. 2019/630;
- securitisation tranches for which the Group has opted for the own funds deduction instead of a 1,250% weighting.

Treasury shares held or granted a buy-back authorisation are deducted from this category.

**TABLE 11: TRANSITION FROM CONSOLIDATED EQUITY TO COMMON EQUITY TIER 1 (CET1) CAPITAL**

| Other prudential adjustments   | (1,824)                     | (1,462)                     |
| <b>COMMON EQUITY TIER 1 (CET1) CAPITAL</b>                                     | <b>92,857</b>               | <b>91,828</b>               |

(\*) In 2023, the Group carried out a share buyback programme for a total amount of EUR 5 billion, including EUR 4 billion to offset the effect of the dilution of net earnings per share related to the sale of 100% of its commercial banking activities in the United States by Bank of the West. At 31 December 2023, the shares acquired under this repurchase programme were all cancelled. BNP Paribas' share capital was thus reduced by 7% compared to 31 December 2022.

(\*\*) The ordinary distribution as at 31 December 2022 included -EUR 962 million under a share buyback programme carried out in 2023. The planned ordinary distribution at 31 December 2023 takes into account -EUR 1,055 million in respect of the distribution in the form of a share buyback programme initiated on 4 March 2024, after receiving authorisation from the European Central Bank.

The table below shows the calculation of value adjustments applied to instruments measured at fair value, related to the prudent valuation requirements subject to a deduction from Common Equity Tier 1 capital.

### **Additional Tier 1 capital**

Additional Tier 1 capital is mainly composed of subordinated debt instruments with the following characteristics:

- they are perpetual and include no redemption incentive;
- they are not held by the bank, its subsidiaries or any company in which the Group holds 20% or more of the capital;
- they have a capacity to absorb losses;
- they may include a buy back option, five years after the issue date at the earliest, exercisable at the issuer's discretion (subject to authorisation by the supervisor);
- they have remuneration arising from distributable elements that may be cancelled, with no requirements for the bank.

This category is also composed of non-eligible minority reserves in common equity within their limit of eligibility.

Authorisations to redeem Additional Tier 1 own capital instruments are deducted from this category.

### **Tier 2 capital**

Tier 2 capital is composed of subordinated debt with no buy back incentive, as well as non-eligible minority reserves in Tier 1 capital within their limit of eligibility. A prudential discount is applied to the subordinated debt with less than five years of residual maturity.

Prudential deductions from Tier 2 capital primarily concern:

- Tier 2 capital components in significant financial entities;
- Tier 2 own capital instrument buy back authorisations.

### **Composition and evolution of regulatory capital**

The detail of regulatory capital and regulatory adjustments is presented in Appendix 2 Regulatory capital – Detail.

The table presenting the details of the debt instruments recognised as capital, as well as their characteristics, in accordance with the template (EU CCA) required by implementing Regulation No. 2021/637, is available in the BNP Paribas Debt section of the Investor Relations website: <https://invest.bnpparibas/en/search/debt/documents/documentation-on-programs-and-issuances>.

### Transitional arrangements relating to regulatory capital

Under Regulation (EU) No. 575/2013 (CRR), the calculation methods introduced by Basel 3 were implemented gradually until 1 January 2022. Since 2019, the items still subject to these transitional arrangements were subordinated debt issued prior to 31 December 2011, eligible under prior regulations but not eligible under Basel 3, to which a declining eligibility threshold applied. These transitional arrangements expired on 1 January 2022, and the instruments concerned were all called before 31 December 2021, with the exception of one Tier 1 instrument and of six Tier 2 instruments, all of which having no prudential value as at 31 December 2023.

Regulation (EU) No. 2019/876 (CRR 2), which came into force on 27 June 2019, introduces additional eligibility criteria for Tier 1 and 2 regulatory capital which supplement those provided for by Regulation (EU) No. 575/2013. Instruments that were previously eligible under CRR, although not fulfilling these additional requirements may, eventually, be recognised in a less subordinated category, for a transitional period that may extend up to 2025. A Tier 2 capital instrument of EUR 31 million lost its eligibility on 1 January 2022, as issued by an *ad hoc* entity (article 63(a) CRR). In addition, at 31 December 2023, there were no longer any Tier 1 capital instruments eligible for the transitional arrangements in force until June 2025, because they were issued under the law of countries outside the European Union without a bail-in clause (articles 52(1)(p) and 63(n) CRR); the stock of Tier 2 capital instruments eligible for the same provisions amounted to EUR 2.3 billion.

The details of the instruments concerned by these transitional provisions, describing their eligibility period and the main characteristics in relation to the CRR/CRR 2 Regulations and the EBA's opinion published on 21 October 2020, on the appropriate treatment of instruments ineligible at the end of 2021 in relation to the CRR criteria, are available on the Group's investor relations website: <https://invest.bnpparibas/en/search/debt/documents/documentation-on-programs-and-issuances>.

Regulation (EU) No. 2017/2395 and Regulation (EU) No. 2020/873 define the transitional measures relating to the introduction of IFRS 9. These measures mitigate the impact of the increase in expected credit losses related to the application of new standard on CET1 capital until 2024. The Group has been applying these transitional measures since 31 March 2020 in accordance with the ECB recommendation. The Bank has opted for the arrangements relating to the calculation of the exposure value calculated under the standardised approach, defined in paragraph 4 and paragraph 7 point b) in article 473a.

<sup>(1)</sup> The Group opted for the deductive approach rather than a weighting of 1,250%. The amount of securitisation exposures in the banking book deducted from own funds stands at EUR 239 million at 31 March 2024 (270 million at 31 December 2023).

## RISK-WEIGHTED ASSETS MOVEMENTS IN 2023

The change in risk-weighted assets can be broken down into the following effects:

- asset size effect: impact stemming from the variation in exposures (EAD) and impact related to the efficient securitisation programmes and credit insurance initiated by the Group;
- asset quality effect: impact stemming from the change in risk parameters (Probability of Default, Loss Given Default for the internal ratings-based approach, and risk weighting for the standardised approach, *etc.*);
- model update effect: impact stemming from changes in the use of internal models (introduction of a new model, deployment on a new exposure scope, annual recalibration or review of risk parameters, application of add-ons, *etc.*);
- methodology and policy effect: impact stemming from changes in methodology and the establishment of new regulatory requirements having an impact on the calculation of risk-weighted assets;
- acquisition and disposal effect: impact stemming from changes in the scope of consolidation;
- currency effect: impact stemming from fluctuations in foreign exchange rates on exposures.

| <b>TOTAL</b>   | <b>744,851</b> | <b>8,668</b> | <b>(11,006)</b> | <b>2,135</b> | <b>875</b> | <b>(48,708)</b> | <b>(3,836)</b> | <b>10,715</b> | <b>(41,156)</b> | <b>703,694</b> |

The main reasons explaining the -EUR 41 billion decrease in risk-weighted assets in 2023 are:

- a -EUR 49 billion decrease related to perimeter effects, linked to Bank of the West disposal net of Stellantis acquisition;
- a +EUR 19 billion increase in line with business activity net of the impact of the efficient securitisation transactions initiated by the Group;
- a -EUR 11 billion decrease induced by improvement of risk parameters;
- a -EUR 4 billion decrease due to currency effects, linked to the depreciation of the US dollar and of the Turkish lira compared to the euro.

Comments on the main changes in 2023 for each type of risk are detailed in the various appropriate sections.

The breakdown of risk-weighted assets by domain reflects the Group's diversified business mix, with 54% devoted to Commercial, Personal Banking & Services (Including 36% for Commercial & Personal Banking and 18% for Specialised Businesses), 34% to Corporate & Institutional Banking, 6% to Investment & Protection Services and 6% to Corporate Center.

The decrease in the Group's risk-weighted assets was EUR 41.2 billion over 2023, with:

- a EUR 55.5 billion decrease in Commercial & Personal Banking risk-weighted assets, mainly linked to the sale of Bank of the West;
- a EUR 2.6 billion decrease in Corporate & Institutional Banking, including EUR 5.8 billion in Global Banking;
- a EUR 10.6 billion increase in Specialised Businesses, driven by Personal Finance;
- a EUR 0.4 billion increase in Investment & Protection Services.

### Transitional arrangements relating to risk-weighted assets

Since 31 March 2020, the Group applies the provisions of Regulation (EU) No. 2017/2395 on transitional measures relating to the introduction of IFRS 9 for the calculation of risk-weighted assets for credit risk. Since 30 June 2020, the Group has also applied the provisions of Regulation (EU) No. 2020/875 supplementing these transitional measures (see Table 16: *Effect of the application of the transitional arrangements for IFRS 9 accounting standard*).

## CAPITAL ADEQUACY AND CAPITAL PLANNING

---

### CAPITAL ADEQUACY

The BNP Paribas Group is required to comply with a range of regulations:

- European banking regulations under the CRR and CRD, which also cover banking supervision;
- regulation relating to financial conglomerates in respect of additional supervision of its banking and insurance activities. BNP Paribas' insurance business is governed by Solvency II insurance regulations.

Within the context of the Single Supervisory Mechanism, the ECB thus became the direct supervisor of BNP Paribas as of 4 November 2014. The ECB draws on the competent national supervisory authorities in fulfilling this role.

### Requirements under banking regulations and supervision

With respect to Pillar 1, the Group is required to meet:

- a minimum Common Equity Tier 1 (CET1) capital ratio of 4.5%;
- a minimum Tier 1 capital ratio of 6%;
- a minimum Total capital ratio of 8%.

#### Additional requirements known as buffers

In addition to the minimum capital requirements regarding Pillar 1, BNP Paribas has to maintain additional CET1 capital buffers:

- the capital conservation buffer is equal to 2.5% of the risk-weighted assets. The aim of this buffer is to absorb losses in a situation of intense economic stress;
- the following two buffers were defined to limit systemic institutions failure risk. Only the highest of these two buffers is applicable:
  - the buffer for Global Systemically Important Banks (G-SIBs) consists of a surcharge of CET1 capital defined by the Financial Stability Board based on the methodology developed by the Basel Committee, which corresponds to the global systemic importance of banks. Global systemic importance is measured in terms of the impact a bank's failure can have on the global financial system and the wider economy.

The measurement approach of the global systemic importance is indicator-based. The selected indicators reflect the size of banks, their interconnectedness, the use of banking information systems for the services they provide, their global cross-jurisdictional activity and their complexity. The methodology is described in the document published in July 2013 by the Basel Committee, entitled *Global systemically important banks: updated assessment methodology and the higher loss absorbency requirement (BCBS 255)*.

The values of G-SIBs indicators at 31 December 2023 are presented in GSIB1 format in Appendix 3 *Countercyclical capital buffers and G-SIB buffer*.

The Group received the notification from the *Autorité de contrôle prudentiel et de résolution* (ACPR), dated 27 November 2023, that it was on the 2023 list of global systemically important financial institutions in sub-category 2, corresponding to its score in the database at end 2022.

As a result, the G-SIB buffer requirement for the Group applying from 1 January 2024 remain unchanged compared to the previous requirement at 1.5% of the total amount of risk exposures.

- the buffer for Domestic Systemically Important Banks (D-SIBs) aims to strengthen the capital requirements for institutions whose failure would have an impact on their national economy. The D-SIBs buffer for BNP Paribas is set at 1.5% until to 2024;
- the systemic risk buffer aims to limit systemic or macro prudential non-cyclical risks in the long term. This is not significant for the Group;

- the countercyclical capital buffer is defined as a surcharge of CET1 capital whose purpose is to adjust over time to increase the capital requirements in periods when credit growth is accelerating and reduce them in slower periods. A rate may be activated in each country by a discretionary decision from the appointed national authority. In view of the notified rates by country, the BNP Paribas countercyclical capital buffer is 0.40% at 31 December 2023 and 0.58% from 2 January 2024 compared with 0.09% at 31 December 2022 (see Appendix 3 *Countercyclical Capital Buffer and G-SIB Buffer*).

## Pillar 2 requirement

With respect to supervision, the second Pillar of the Basel Agreement provides that the supervisor shall determine whether the policies, strategies, procedures and arrangements implemented by the Group on the one hand, and the capital held on the other hand, are adequate for risk management and risk coverage purposes. This evaluation exercise by the supervisors to determine the adequacy of mechanisms and capital with respect to bank risk levels is designated in the regulations under the term SREP (Supervisory Review and Evaluation Process).

ICAAP (Internal Capital Adequacy Assessment Process) is the process by which institutions assess the adequacy of their own funds with their internal measurements of the capital needed to cover the risks generated by their usual activities. ICAAP is used for the annual SREP.

Within the BNP Paribas Group, the ICAAP is based on two key principles, as articulated in the European Central Bank's Guide on ICAAP: the assessment of the Group's adequate level of available capital to cover the capital needed in the internal perspective, and the forward-looking capital planning.

In the ICAAP, the adequacy of available capital to the risks borne by the Group is assessed in the internal perspective, using a comprehensive quantification of the capital needs generated by the Pillar 1 risks specified by Basel regulations, as well as by the Pillar 2 risks identified as material within the framework of the Group's risk identification system. In this perspective, capital needs to cover Pillar 1 and Pillar 2 risks are assessed using internal quantitative approaches, supplemented, as necessary, by qualitative approaches and dedicated monitoring frameworks.

Capital planning is based on the most recent actual and estimated financial data available at the time. This data is used to project future capital resources and requirements, in particular by taking into account regulatory requirements, factoring in the Group's goal of maintaining a first-class credit rating to protect its origination capability, its business development targets and anticipated regulatory changes.

Capital planning consists in comparing regulatory requirements and the capital ratio targets defined by the Group with future projected capital requirements, then testing their robustness in different scenarios, including stressed macroeconomic environments.

## Notification of SREP results

The results of the SREP process are notified annually to BNP Paribas Executive Management by the ECB. The requirements applying for the year 2024 were notified on 1 December 2023.

The SREP decision comprises two items: a requirement known as the "Pillar 2 requirement" ("P2R"), and a non-public guidance called "Pillar 2 guidance" ("P2G"). Following the SREP assessment conducted by the ECB in 2023, the requirements that the Group must meet under Pillar 2 since 1 January 2024 are the following:

- 1.11% for CET1 capital;
- 1.40% for Tier 1 capital;
- 1.77% for total capital.

The leverage ratio requirement that the Group must comply with on a consolidated basis from 1 January 2024 is 3.85% (excluding Pillar 2 guidance) including a P2R of 0.10%.

## Capital requirements

**The Group's CET1 ratio, Tier 1 ratio and total capital ratio must at all times satisfy the following requirements corresponding to the limits of applicable distribution restrictions (Maximum Distributable Amount – MDA):**

- the minimum CET1 ratio, Tier 1 ratio and total capital ratio, respectively, in accordance with article 92 (1) points a), b) and c) of the CRR;
- the Pillar 2 requirement;
- the combined buffer requirement defined in article 128 (6) of CRD 5, as transposed into the respective national law.

**TABLE 20: OVERALL CAPITAL REQUIREMENTS**

|  | 31 December<br>2023 | 31 December<br>2024 |
|--|---------------------|---------------------|
| CET1: Minimum requirements (Pillar 1)            | 4.50%               | 4.50%               |
| CET1: <i>Pillar 2 requirement</i> <sup>(1)</sup> | 0.88%               | 1.11%               |

|  |               |               |
|--|---------------|---------------|
| Combined Buffer Requirement  | 4.40%         | 4.69%         |
| <i>of which capital conservation buffer</i>                        | 2.50%         | 2.50%         |
| <i>of which G-SIBs buffer</i>                                      | 1.50%         | 1.50%         |
| <i>of which Countercyclical capital buffer<sup>(*)</sup></i>       | 0.40%         | 0.69%         |
| <i>of which Systemic capital buffer<sup>(***)</sup></i>            | 0.00%         | 0.00%         |
| <b>OVERALL CET1 CAPITAL REQUIREMENT</b>                            | <b>9.79%</b>  | <b>10.31%</b> |
| Tier 1 (CET1 + AT1): Minimum requirement (Pillar 1)                | 6.00%         | 6.00%         |
| Tier 1: <i>Pillar 2 requirement<sup>(*)</sup></i>                  | 1.18%         | 1.40%         |
| Combined Buffer Requirement  | 4.40%         | 4.69%         |
| <b>OVERALL TIER 1 CAPITAL REQUIREMENT</b>                          | <b>11.58%</b> | <b>12.09%</b> |
| Total capital: Tier 1 (CET1 + AT1): Minimum requirement (Pillar 1) | 8.00%         | 8.00%         |
| Total capital: <i>Pillar 2 requirement<sup>(*)</sup></i>           | 1.57%         | 1.77%         |
| Combined Buffer Requirement  | 4.40%         | 4.69%         |
| <b>OVERALL TOTAL CAPITAL REQUIREMENT</b>                           | <b>13.97%</b> | <b>14.46%</b> |

(\*) Only the Pillar 2 requirement is made public. Since 2020, the P2R has taken into account the application of Article 104a of Directive (EU) No 2019/878.

(\*\*) Countercyclical capital buffers as at 31 December 2023 and anticipated as at 31 December 2024 take into account the applicable rate increases applicable in 2023 (see Appendix 3: Countercyclical capital buffer and G-SIB buffer).

(\*\*\*) Since 30 June 2023, non-applicability of the sectoral systemic risk buffer (SyRB) on mortgage portfolios in Belgium at BNP Paribas Group consolidated level.

The CET1 capital requirement is 9.79% at 31 December 2023 (excluding Pillar 2 guidance), in view of the capital conservation buffer at 2.5%, a G-SIB buffer at 1.5%, the countercyclical buffer at 0.40% and a Pillar 2 requirement at 0.88%.

At 31 December 2023, BNP Paribas' CET1 ratio stands at 13.20%<sup>1</sup>, well above the minimum requirement level applicable in 2023 notified by the European Central Bank. Compared to 31 December 2022, the CET1 ratio increased by around 90 basis points as at 31 December 2023, is mainly explained by:

- the closing of the sale of Bank of the West on 1 February 2023, net of the share buyback programme and redeployed capital (+100 bps);
- the effect of the adjustment in distributable net income (-30 bps);
- the 2023 results after taking a 60% payout ratio into account, net of the change in risk-weighted assets and their optimisation (+30 bps);
- The impact of the application of IFRS 17 and the updating of models and regulations<sup>2</sup> at the 1<sup>st</sup> quarter (-10 bps);
- the other effects, which are limited overall on the ratio.

<sup>1</sup> CRD 5, including IFRS 9 transitional arrangements.

<sup>2</sup> Including IFRS 9 phasing.

FIGURE 5: MDA RESTRICTION THRESHOLD

As a reminder, since 1 January 2022, the Group is subject to a restriction threshold applicable to distributions on the basis of the MREL requirement (M-MDA, see paragraph *MREL*). This constraint is non-binding because it is higher than the distance to the distribution restriction thresholds.

Since 1 January 2023, the Group is subject to a restriction threshold applicable to distributions on the basis of the leverage ratio requirement (L-MDA, see paragraph *Leverage ratio*).

The capital surplus over the thresholds for distribution restriction is the lesser of the four amounts calculated respectively in relation to CET1, Tier 1, total capital and leverage ratio requirements based on exposure. At 31 December 2023, the excess of total capital over the restriction thresholds applicable to distributions was EUR 19.5 billion.

BNP Paribas ratios are monitored and managed centrally, on a consolidated basis. Where a French or international entity is required to comply with banking regulations at its own level, its ratios are also monitored and managed directly by the entity (see paragraph *Capital management at local level*).

### Requirements applicable to the Insurance business

BNP Paribas' insurance business is governed by Solvency II, the standard for calculating the solvency coverage ratio (Directive 2009/138/EC as transposed into French law).

The objective of Solvency II is to:

- integrate the concepts of risks and risk appetite;
- harmonise the insurance regulatory regimes across Europe;
- give more power to supervisory authorities.

Solvency II is divided into three pillars aiming to:

- Pillar 1: assess solvency using what is known as an economic capital-based approach;
- Pillar 2: implement qualitative requirements, *i.e.* governance and risk management rules that include a forward-looking approach to risk assessment. This assessment is called ORSA (Own Risk & Solvency Assessment);
- Pillar 3: improve the transparency of the insurance business by making solvency the cornerstone of disclosures to the public and the supervisory authority.

The BNP Paribas Cardif group complies with this regulation both in terms of risk management and governance, as well as calculation and reporting. Solvency II-related data as at 31 December 2022 are available in the Solvency and Financial Condition Report (SFCR) for the BNP Paribas Cardif group, published on the institutional website <https://www.bnpparibascardif.com/en>.

Insurance risks are introduced in section 5.10 *Insurance risks*.

Solvency II sets out two capital requirements:

- the Solvency Capital Requirement (SCR);
- the Minimum Capital Required (MCR) or, for groups, the SCR Group Minimum.

The SCR (Solvency Capital Requirement) is the level of own funds required to absorb a full series impacts after accounting for the correlation between risks. It is calibrated to cover such an event with a return period of 200 years within a one-year timescale (Value at Risk at 99.5%). The BNP Paribas Cardif SCR is evaluated by means of the standard formula laid down by the regulation.

The capital management policy of BNP Paribas Cardif aims notably to ensure that the prudential solvency requirements are met, to cover at least 100% of the SCR defined within the scope of the ORSA assessment and to structure own funds so that the best balance can be found between the share capital, subordinated debt and other own funds elements, complying with the limits and levels laid down by regulations.

At 31 December 2022, own funds eligible for the Solvency Capital Requirement stood at EUR 15,882 million. The amount of SCR was EUR 9,717 million and the SCR coverage ratio was 163%. Eligible own funds for the SCR Group Minimum amounted to EUR 12,329 million. The amount of SCR Group Minimum was EUR 3,611 million, and the SCR Group Minimum coverage ratio was 341%.

The Solvency Report at 31 December 2023 will be published on 17 May 2024.

### Compliance with the regulation on the additional supervision of financial conglomerates

As a bancassurer, the BNP Paribas Group is also subject to additional supervision as a financial conglomerate, pursuant to European Directive 2002/87/EU, supplemented by Delegated Regulation 342/2014 of the European Commission and implemented into French law by the Order of 3 November 2014.

The financial conglomerates directive has established additional prudential supervision, added to the rules existing in the banking and insurance sectors, because it has introduced additional constraints on capital adequacy, the monitoring of large exposures, and intragroup transactions.

A financial conglomerate is required to meet additional capital adequacy requirements on a consolidated basis. The purpose is to require sufficient capital to cover both banking sector and insurance sector risks, while eliminating multiple gearing.

The capital surplus or shortfall results from the difference between the financial conglomerate's equity capital and the solvency requirements applicable to the banking and insurance industries:

- the financial conglomerate's capital is determined based on the sector's solvency rules (CRR for the banking sector and Solvency II for the insurance sector);
- the requirements for the financial conglomerate are determined on the basis of banking sector requirements, calculated according to the CRR 2 and CRD 5 rules, including all capital buffers as well as the requirement resulting from the SREP 2022 applicable in 2023, and on the basis of the solvency capital requirement (SCR) for the insurance sector, calculated in accordance with the Solvency II regulation.

In calculating the financial conglomerate's capital adequacy, the requirements and deductions of insurance entities are treated in compliance with Solvency II rules in replacement of the rules defined in the CRR. The latter consist primarily of a 370% weighting of investments in equities treated according to the simple weighting method (see *Equities under the simple weighting method* in section 5.4 *Credit risk*).

Governance for the prudential supervision of financial conglomerates falls to the Capital Committee, which meets quarterly under the Chairmanship of the Chief Financial Officer.

As at 31 December 2023, BNP Paribas Group, as a financial conglomerate, had capital of EUR 134.1 billion compared to a total requirement of EUR 105.0 billion, which represents a capital surplus of EUR 29.2 billion.

**TABLE 21: FINANCIAL CONGLOMERATES – OWN FUNDS AND CAPITAL ADEQUACY RATIO (EU INS2)**

|                             |   | a                   | a                   |

| <i>In millions of euros</i> |   |                     |                     |
| 1                           | Supplementary own fund requirements of the financial conglomerate ( <i>amount</i> ) | 29,177              | 26,250              |
| 2                           | Capital adequacy ratio of the financial conglomerate (%)                            | 127.80%             | 123.91%             |

## RECOVERY AND RESOLUTION

Following the 2008/2009 financial crisis, international banking regulatory bodies adopted a series of regulations and directives based on the recommendations of the Financial Stability Board to facilitate the authorities' management of crises involving financial institutions and limit the impact of a potential collapse on the economy and public finances. They provide for:

- powers and instruments for the supervisory authorities to allow for better anticipation and oversight of the recovery of banks in difficulty, particularly by means of recovery plans;
- powers and instruments for the resolution authorities in order to implement orderly resolution of a bank that would not have been able to recover by itself and would be placed in resolution. This is based among other things on the resolution documents and detailed reports required from banks to enable authorities to prepare resolution plan;
- the addition of further regulatory requirements for institutions. These requirements, which overlap quite widely, aim to ensure a sufficient quantity of liabilities able to absorb losses or be converted into equity. In particular, they consist of:
  - a TLAC (Total Loss Absorbing Capacity) ratio for Global Systemically Important Banks (G-SIBs),
  - a MREL (Minimum Requirement for own funds and Eligible Liabilities) ratio applicable to all European institutions;
- bail-in rules for banks, with a review of the ranking of creditors including a category of TLAC and MREL eligible debt (non-preferred senior) created in 2016, plus the creation in 2014 of the Single Resolution Fund, at European level, financed by the banks, with the aim of avoiding any recourse to public assistance.

The recommendations of the Financial Stability Board were transposed into French banking law in July 2013, introducing in particular the obligation to create recovery and resolution plans, and giving resolution powers for the ACPR (*Autorité de contrôle prudentiel et de résolution*).

On a European level, Directive 2014/59/EU (BRRD – Bank Recovery and Resolution Directive) was passed in 2014 and has been transposed into the law of all European Union Member States. This directive, as well as Regulation (EU) No. 806/2014 (SRM Regulation – Single Resolution Mechanism Regulation) of 2014 and various additional delegated regulations, form all of the current regulations governing the recovery and resolution of European financial institutions. Following the European Commission proposal of November 2016, the amendments contained in the BRRD2 and in the SRMR2 were approved and published in the Official Journal on 7 June 2019. In France, the transposition of the BRRD2 directives was finalised on 21 December 2020.

### Recovery Plan

The recovery plan, prepared at Group level, describes the possible recovery options if the Group were to find itself in a distressed situation. It contains information needed by the authorities to understand the Group's operations, resilience and capacity to absorb losses.

BNP Paribas submitted its updated Recovery Plan to its supervisor, the ECB, in September 2023. The Single Resolution Board (SRB) and other authorities can obtain the Recovery Plan from the ECB.

Prepared in accordance with the Financial Stability Board's recommendations and the provisions of the French Monetary and Financial Code, this Recovery Plan was submitted to the Board of director's Internal Control, Risk Management and Compliance Committee (CCIRC) for review and then to the Board of directors for approval (see chapter 2 *Corporate governance and internal control*).

The new version of the Plan includes updated figures and takes account of changes in the Group's organisation and activities. It is accompanied by a detailed description of the recovery scenarios used and the impacts of the recovery options identified. It also takes account of the comments of the ECB and the Recovery College's participating authorities, which met in March 2023, as well as developments in European regulations. It also incorporates lessons learned from dry runs conducted regularly by BNP Paribas on certain aspects of the plan with the participation of the Executive Management and the ECB.

This Recovery College, organised under the auspices of the ECB, brings together the authorities of the member countries of the European Union in which BNP Paribas has a presence, as well as the European Banking Authority.

### Resolution documentation

In 2023, the Group submitted a set of documents to the *Autorité de contrôle prudentiel et de résolution* (ACPR) to be forwarded to the Single Resolution Board (SRB). These documents contain information needed by the authorities to prepare a plan for the potential resolution of BNP Paribas.

Since 2016, the Group provides annually a series of documents. These include an analytical declaration of the BNP Paribas SA and its subsidiaries' liabilities (Liability Data Report), required by the SRB to carry out its analyses of future requirements for liabilities eligible for bail-in, as well as various financial analyses, a presentation on the Group's organisational structure and analyses of its critical functions and operational continuity in resolution. These statements are in line with the requirements formalised by the EBA (on behalf of the Commission).

In 2023, BNP Paribas took also part in a series of working meetings of the SRB, the ACPR and other EU bank resolution authorities, under the auspices of the SRB. The purpose of these meetings, is to deepen the SRB's analyses of the Group's capacity to deal with a potential resolution.

The Crisis Management Group (CMG) and the Resolution College met in January 2024 in view to approve the resolution plan drafted by the SRB.

The resolution strategy privileged by the SRB for major institutions such as the Group includes “bail-in” which, in contrast to “bail-out”, involves the absorption of losses through BNP Paribas SA’s internal resources. This implies the cancellation or reduction in the nominal value of a debt and/or its complete or partial conversion into equity. For major centralised banking institutions such as the Group, this resolution strategy is applied at a Single Point of Entry (SPE), *i.e.* BNP Paribas SA, regardless of where the losses occur within the Group.

With regard to the US authorities, the Group presented a resolution plan for its activities in the United States, pursuant to Rule 165(d) of the Dodd-Frank Act in December 2021. The next version of the resolution plan will be submitted at end-March 2025.

## TLAC

In accordance with Regulation (EU) No. 2019/876, Global Systemically Important Banks (G-SIBs) have been subject to a two-fold TLAC requirement since 27 June 2019. This requirement includes, on the one hand, a minimum ratio expressed as a percentage of the risk-weighted assets, and, on the other hand, a minimum ratio expressed as a percentage of the leverage ratio exposure.

At 31 December 2023, the minimum TLAC requirement for the Group stood at 22.40% of the risk-weighted assets taking into account:

- a 18% TLAC minimum requirement;
- a 4.40% combined buffer requirement, in view of the capital conservation buffer at 2.5%, the G-SIBs buffer at 1.5% and the countercyclical capital buffer at 0.40%.

From 1 January 2022, the Group’s minimum TLAC requirement amounts to 6.75% of leverage exposure.

(\*) Outstanding principal amount.

At 31 December 2023, the Group's TLAC ratio broadly exceeds the applicable minimum level of requirement.

This ratio stood at 28.15% of risk-weighted assets, without using senior preferred debt, which are eligible up to a limit of 3.5% of risk-weighted assets. It amounted to 8.44% of leverage ratio total exposure measure.

The debts issuance targets aiming at satisfying these requirements and their nature are described in the section *Wholesale funding trends based on regulatory changes* in section 5.8 *Liquidity risk*.

| 10                   | of which perpetual instruments                                   | 116,227                       | 14,823                       |   |   |   | 131,050 |

(\*) The data presented correspond to the scope of the resolution entity, BNP Paribas SA.

(\*\*) According to the Appendix on insolvency ranking in the jurisdictions of the Banking Union published by the Single Resolution Board, participating notes are classified in rank 4. However, the ranking clauses of BNP Paribas SA's deeply subordinated notes (AT1) indicate that these notes are subordinated to participating notes. The participating notes are thus presented between ranks 2 and 3.

(\*\*\*) Amounts before regulatory adjustments.

(\*\*\*\*) Outstanding principal amount.

(\*) The data presented correspond to the scope of the resolution entity, BNP Paribas SA.

(\*\*) According to the Appendix on the insolvency ranking in the jurisdictions of the Banking Union published by the Single Resolution Board, participating notes are classified in rank 4. However, the ranking clauses of BNP Paribas SA's deeply subordinated notes (AT1) indicate that these notes are subordinated to participating notes. The participating notes are thus presented between ranks 2 and 3.

(\*\*\*) Amounts before regulatory adjustments.

(\*\*\*\*) Outstanding principal amount.

## MREL

The total Minimum Requirement for own funds and Eligible Liabilities (MREL) applies to all European Union credit institutions and investment firms from 1 January 2024.

In accordance with the regulations (BRRD, Article 45i(3) and implementing regulation EU 2021/763 Recital 10 and Articles 9 and 10) Institutions are required to publish the MREL requirements to which they are subject and the liabilities with which they comply since 1 January 2024.

The resolution authorities have notified the Group of an intermediate MREL which applies from 1 January 2022. At 31 December 2023, the Group exceeded the expected intermediate MREL requirement and the distance above the minimum requirement ("M-MDA") was greater than the distance applicable to the distribution restriction thresholds ("MDA") calculated in relation to the capital requirements (see paragraph Overall capital requirements).

At 31 December 2023, the Group's MREL ratio stood at 30.92% of risk-weighted assets. The Group was thus above the minimum requirement level of 26.55% applicable on 2 January 2024.

At 31 December 2023, the Group's MREL ratio stood at 9.27% of leverage exposures. This ratio is to be compared to a minimum requirement of 5.91% applicable on 2 January 2024.

At 31 December 2023, the Group's subordinated MREL ratio stood at 28.15% of risk-weighted assets, compared to a minimum requirement of 20.47% applicable on 2 January 2024.

At 31 December 2023, the Group's MREL ratio stood at 8.44% of leverage exposures, compared to a minimum requirement of 5.82% applicable on 2 January 2024.

## Changes in regulations

BNP Paribas closely tracks the regulatory developments relating to banks recovery and resolution.

It noted in particular the Eurogroup statement of June 2022<sup>1</sup> that required a targeted review of the Crisis Management and Deposit Insurance (CMDI) framework (BRRD, SRMR and DGSD), the Commission published a proposal on 18 April 2023. This proposal is currently being discussed by the European Parliament and the Council. BNP Paribas closely follows these discussions. At this stage, the legislative process is expected to be completed by 2025 or even 2026.

## LEVERAGE RATIO

The leverage ratio's main objective is to serve as a complementary measure to the risk-based capital requirements (back-stop principle). It is calculated as the ratio between Tier 1 capital and an exposure measure calculated using on- and off-balance sheet commitments valued using a prudential approach. In particular, derivatives and repurchase agreements are also adjusted.

At European level, the leverage ratio requirement is applied gradually in accordance with the provisions contained in the CRR:

- up to 28 June 2021, the leverage ratio was the subject of a statement submitted to the ECB and a disclosure requirement under Pillar 3;
- from 29 June 2021 to 31 December 2022, institutions were subject to a minimum leverage ratio requirement of 3%;
- From 1 January 2023, Global Systemically Important Banks (G-SIBs) are subject to an additional leverage requirement of 50% of the institution's G-SIBs buffer (see paragraph *Capital adequacy*) and a new distribution threshold applying to the leverage ratio. The distance applicable to the distribution restriction thresholds ("L-MDA") is calculated in relation to the capital requirements (see paragraph *Overall capital requirements*). The leverage ratio requirement thus stood at 3.75% at 31 December 2023, compared with 3% at 31 December 2022.

## Processes used to manage the risk of excessive leverage

Monitoring of the leverage ratio is one of the responsibilities of the Capital Committee (as described in the section *Capital management* hereafter).

## Factors that had an impact on the leverage ratio during the period to which the disclosed leverage ratio refers

The leverage ratio stood at 4.58% at 31 December 2023 compared to 4.36% at 31 December 2022. It was well above the 3.75% leverage requirement in force at 31 December 2023, as well as that applicable from 1 January 2024 of 3.85%.

**TABLE 24: LEVERAGE RATIO – ITEMISED**

| EU-6                        | Exposures to regional governments, MDB, international organisations and PSE not treated as sovereigns                  | 37,386           | 38,724           |
| EU-7                        | Institutions   | 27,376           | 29,795           |
| EU-8                        | Secured by mortgages of immovable properties   | 184,067          | 205,730          |
| EU-9                        | Retail exposures   | 228,618          | 246,598          |
| EU-10                       | Corporate  | 355,974          | 383,742          |
| EU-11                       | Exposures in default   | 13,369           | 12,844           |
| EU-12                       | Other exposures (e.g. equity, securitisations, and other non-credit obligation assets)                                 | 196,154          | 184,511          |

(\*) Securities Financing Transactions: repurchase agreements and securities borrowing/lending

Pursuant to article R.511-16-1 of French Monetary and Financial Code, BNP Paribas' asset yield (*i.e.* net accounting income divided by the total balance sheet on a consolidated basis) was 0.42% in 2023 compared to 0.38% in 2022.

## CAPITAL MANAGEMENT [Audited]

To ensure the Group's sustainability, the Bank must maintain an adequate level of capital with respect to the risks to which it is exposed in the course of its activities and strategy. Capital is a rare and strategic resource, which requires stringent, clearly defined, rigorous management according to an approach, which takes account of the needs and demands of stakeholders, including shareholders, supervisors, creditors and depositors.

### OBJECTIVES

BNP Paribas' capital management:

- is governed by policies and procedures which make it possible to understand, document and supervise capital management practices throughout the Bank;
- takes risk measurement into account to determine the use of the capital;
- considers capital requirements and resources under normal operating conditions, as well as under situations of severe, but plausible stress;
- presents a forward-looking vision of the Bank's capital adequacy to the Executive Management;
- allocates the capital constraint to the business lines in keeping with their strategic objectives;
- complies with the Internal Capital Adequacy Assessment Process (ICAAP) and is consistent with the Risk Appetite Framework;
- is monitored by an appropriate governance.

### CAPITAL MANAGEMENT AT CENTRAL LEVEL

BNP Paribas' capital management aims to ensure and verify that the Group has adequate capital to comply with the regulatory capital ratios, as well as specific requirements, for instance to operate as a Global Systemically Important Bank. To ensure its capital adequacy, the Group abides by the following principles:

- maintaining the capital at an appropriate level in view of BNP Paribas' activities, risk appetite, growth and strategic initiatives;

- maintaining BNP Paribas' capital at a level which complies with regulatory requirements;
- keeping a balance between capital adequacy and return on capital;
- meeting its obligations to creditors and counterparties, at each due date;
- continuing to operate as a financial intermediary.

## Governance

The governance of the development, approval and update of the capital planning process is handled by two committees:

- **the Risk-Weighted Assets Committee:** it is jointly chaired by the Chief Financial Officer and the Chief Risk Officer, and comprises the operational divisions' Chief Financial Officers and Chief Risk Officers. The committee meets quarterly to examine forecasts of the Group's risk-weighted assets in the context of the budget cycle and updating of its estimates.

The Risk-Weighted Assets Committee is tasked with:

- monitoring and discussing the forecasts of the Group's risk-weighted assets for each business line,
- identifying the main assumptions underlying these forecasts and checking their accuracy,
- identifying any evolution factors and quantifying their impacts,
- proposing adjustments if required;
- **the Capital Committee:** it meets at least quarterly and is chaired by the Group Chief Financial Officer. The committee's mission is to validate the Group's targets in terms of solvency ratios and loss absorbing capacity requirements in case of resolution (TLAC and MREL) as well as the trajectory to achieve these targets; monitor compliance with this trajectory; and, where necessary, propose corrective measures, consistent with the Group's Risk Appetite Statement. The committee ensures, in this respect, internal capital adequacy is taken into account in the ICAAP as well as in the results of the global stress tests processes.

The Capital Committee is tasked with:

- monitoring, validating and anticipating changes in the business lines' risk-weighted assets as well as changes in the Group's prudential ratios, in central scenario and adverse scenario, and monitoring these indicators relative to the Group's Risk Appetite, which is stated in the Risk Appetite Statement. This includes solvency ratios, leverage ratio, TLAC/MREL ratios, capital adequacy of the financial conglomerate, *etc.*,
- identifying any evolution factors and quantifying their impacts,
- defining trends in short and medium terms capital consumption (at least 3 years) and proposing or reporting the ensuing arbitrages to the Group's Executive Committee,
- monitoring internal capital adequacy as part of the ICAAP,
- monitoring potential regulatory changes,
- monitoring the sensitivity of the CET1 ratio to changes in exchange rates,
- validating management buffers applicable to the aforementioned ratios,
- monitoring the impacts of global stress test results,
- monitoring the implementation of the supervisor's decisions that have an impact on the Group's solvency ratio or the amount of its risk-weighted assets.

The Capital Committee is also the Group's competent Executive Management authority for all issues related to the internal credit and operational risk model and the methodologies used in the ICAAP.

## Monitoring indicators

Capital management at the consolidated level rests on the following indicators:

- **the solvency ratios:**

BNP Paribas uses the CET1 ratio as its main internal capital management indicator;

- **risk-weighted assets:**

The risk-weighted assets are calculated per business line and per type of risk. The change in risk-weighted assets is analysed per type of effect (in particular: volume effect, parameters effect, perimeter effect, currency effect and method effect);

- **the leverage ratio:**

It reports the amount of Tier 1 capital to a measure of both on- and off-balance sheet exposures using a prudential approach. In particular, derivatives and repurchase agreements are adjusted;

- **notional equity:**

The capital allocation transfers the capital constraints to all Group divisions and thus represents a major constraint concerning the Group's development and management. The evaluation of the business lines' performance includes the analysis of their pre-tax Return On Notional Equity (RONE) indicators. The equity component of this ratio is the notional equity, which corresponds to the business lines' consumption of capital.

This management rests on two major processes which are closely linked:

- a detailed quarterly analysis of actual capital consumption by divisions/business lines and of the Group's solvency ratios, as well as quarterly forecasts of these indicators throughout the year;
- the yearly budget process, which plays a central role in the strategic planning process.

## CAPITAL MANAGEMENT AT LOCAL LEVEL

The Group has to allocate available capital among its different entities. To ensure a free and efficient flow of capital throughout the Group, the capital allocation process within the Group is centralised at head office level. It is mainly based on two principles: compliance with local regulatory requirements and analysis of the local business needs of the entity and growth prospects. In line with these two principles, the aim is to minimise capital dispersion.

Local Chief Financial Officers are responsible for the daily management and reporting of their subsidiaries' capital requirements. When a capital need arises, it is analysed on a case-by-case basis by dedicated teams at Group level, taking into consideration the subsidiary's present position, its future strategy as well as the Group's one in the relevant country, the entity's growth prospects and the macroeconomic environment. Furthermore, each year, the Group manages the subsidiaries' earnings repatriation process. The Group general policy stipulates that the entire distributable profit of every entity, including retained earnings, must be paid out. This policy ensures that the capital remains centralised at the BNP Paribas SA level and also contributes to reducing the foreign exchange risk. Exceptions are considered on a case-by-case basis.

Local Chief Executive Officers are responsible for ensuring the subsidiary's ongoing financial viability and competitiveness in terms of capital, where relevant. However, any capital action requested by a subsidiary is assessed by and subject to authorisation from head office.

In addition, every year the Group examines the branches' capital allocations in order to maintain an adequate level of capital in light of the different regulations.

## 5.3 Risk management [Audited]

### GOVERNANCE

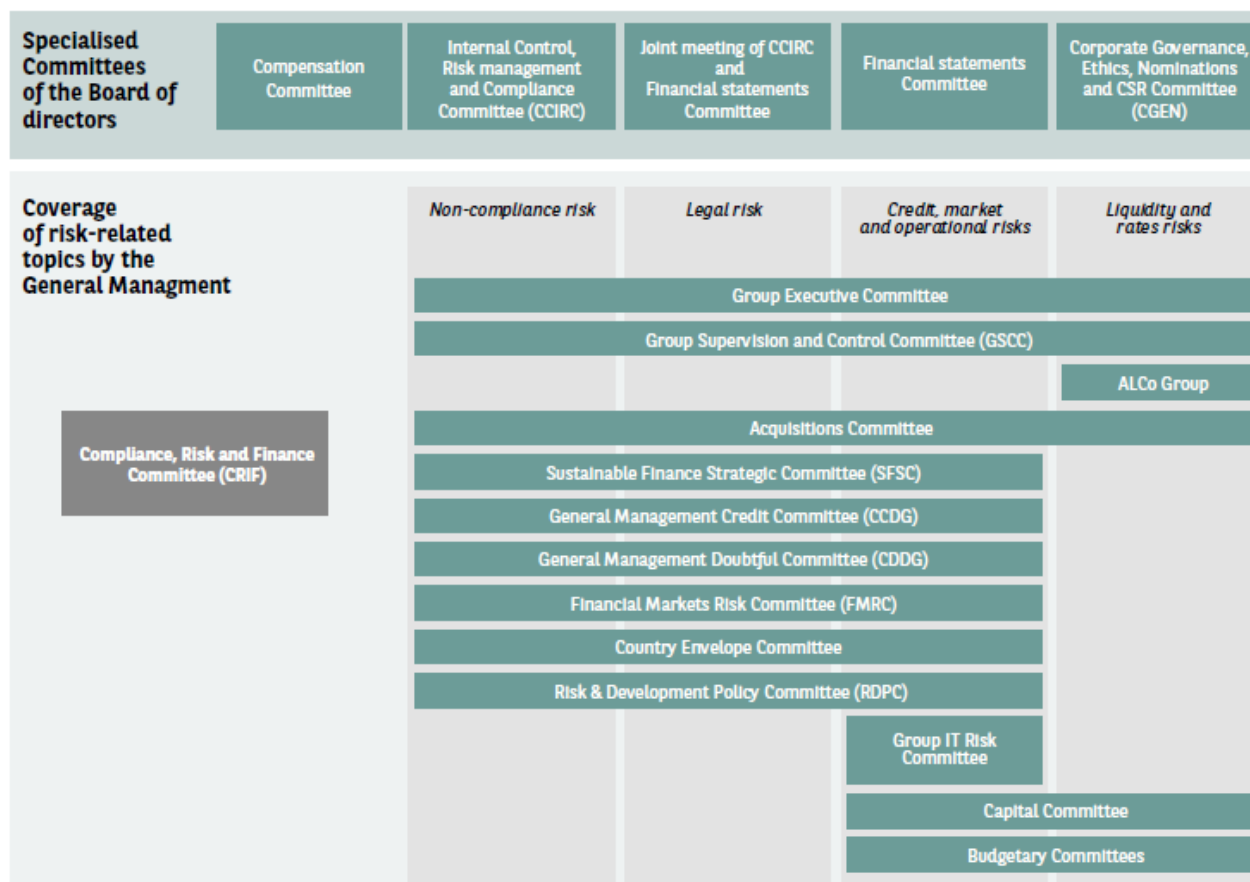

---

The specialised committees of the Board of directors (see part 2.1.2, Corporate governance of BNP Paribas of chapter 2 *Corporate governance and internal control*), which examine the risks taken and the risk policies on a Group scale, are:

- the Internal control, risk management and compliance Committee (CCIRC);
- the Joint Committee that combines the CCIRC and the Financial statements Committee;
- the Corporate governance, ethics, nominations and CSR Committee (CGEN).

In line with the Group's Risk Appetite Statement, Executive Management provides broad guidelines for risk management through Group-level governance bodies of which the main ones are shown in the diagram below:

**FIGURE 6: OVERVIEW OF GROUP LEVEL GOVERNING BODIES COVERING RISK-RELATED TOPICS**

Main Group-level governance bodies have the following roles:

- Capital Committee, described under Capital management in section 5.2 *Capital management and capital adequacy*, validates the Group's objectives in terms of solvency ratios and Total Loss Absorbing Capacity (TLAC and MREL) requirements in case of resolution as well as the trajectory to achieve these targets, monitors the compliance with this trajectory and, when relevant, proposes corrective actions to achieve target solvency ratios. As the Group's competent Executive Management authority for all issues related to the internal credit and operational risks model, the Capital Committee is informed of decisions made in the MARCo Committees (Model Approval and Review Committee);
- Group ALM Treasury Committee (Group ALCo) is responsible for the management of the liquidity risk, interest rate risk in the banking book and structural foreign exchange risk over the whole Group.
- Group Supervision and Control Committee (GSCC) brings together the Group's control functions at Executive Management level and takes a Group-wide approach to tackling all aspects of risk exposure;
- Acquisitions Committee decides on acquisitions, disposals and external partnerships for operations under its jurisdiction as part of the Group's general investment approval procedure. The Acquisitions Committee reviews the strategic relevance of the proposed projects from the Group's point of view, as well as the various components of the business plans, including synergies and execution risks. In particular, it ensures the intrinsic profitability of projects (measured by Return on Investment), as well as the impact on the Group's solvency, liquidity and profitability, and their adequacy with the Group's Risk Appetite Statement.
- the Sustainable Finance Strategic Committee (SFSC) aims to validate the Group's sustainable finance strategy and commitments in this area. It approves the overall strategy in terms of sustainable finance, decides the main focuses of sustainable finance commercial policies and monitors their operational implementation. Where necessary, it also validates cross-functional infrastructure choices ensuring expertise and consistency in the implementation of regulatory requirements and the Group's commitments in methods, analyses, risk management, data, tools, standards and reporting related to sustainable finance.
- the General Management Credit Committee (CCDG) is the Group's highest authority concerning credit and counterparty risks. This committee decides primarily on credit requests exceeding the amount of individual delegations attributed to divisions and business lines or relating to transactions of a specific nature or which would deviate from the principles of the

General Credit Policy. A Compliance representative may attend CCDG meetings when an opinion on financial security is needed;

- the General Management Doubtful Committee (CDDG) is the Group's highest level decision-making committee in terms of specific provisioning and recognitions of losses relative to the Group's customer exposures;
- the Financial Markets Risk Committee (FMRC) is the body which governs the Group's risk profile of the capital markets activities; its tasks include, among others, analysing market and counterparty risks and setting limits for capital markets activities;
- the Country Envelope Committees determine the Group's risk appetite by setting limits for medium-to-high-risk countries in view of risk in relation to country, market conditions, business strategies and aspects of risk and compliance;
- the Risk & Development Policy Committees (RDPC) have the dual objective of defining an appropriate risk policy for any given subject which may be a business activity, a product, a geographic area (region or country), a customer segment or economic sector, and of investigating development opportunities in relation to the subject in question;
- the Group IT Risk Committee (GITRC) defines and oversees the Group's IT risk profile. This is the highest authority in terms of technological and cybersecurity risk management.

## RISK MANAGEMENT ORGANISATION

---

### POSITION OF THE CONTROL FUNCTIONS

Risk management is central to the banking business and is one of the cornerstones of operations for the BNP Paribas Group. BNP Paribas has an internal control system covering all types of risks to which the Group may be exposed, organised around three lines of defence (see section 2.4 *Internal Control* in chapter 2 *Corporate governance and internal control*):

- as the first line of defence, internal control is the business of every employee, and the heads of the operational activities are responsible for establishing and running a system for identifying, assessing and managing risks according to the standards defined by the functions exercising an independent control in respect of the second line of defence;
- the main control functions within BNP Paribas ensuring the second line of defence are the Compliance, RISK and LEGAL Functions. Their Heads report directly to Chief Executive Officer and account for the performance of their missions to the Board of directors via its specialised committees;
- General Inspection provides a third line of defence. It is responsible for the periodic control.

### GENERAL RESPONSIBILITIES OF THE RISK AND COMPLIANCE FUNCTIONS

Responsibility for managing risks primarily lies with the divisions and business lines that are at the origin of the underlying transactions. RISK continuously performs a second-line control over credit and counterparty risks, market risk, interest rate and foreign exchange rate risks on the banking book, liquidity risks, insurance risks, and operational risk, including technological and cybersecurity risks, over data protection risks, modelling risks and environmental and social risk factors, as well as the associated governance risks. As part of this role, it must ascertain the soundness and sustainability of the business commercial developments and their overall alignment with the risk appetite target set by the Group. RISK's remit includes formulating recommendations on risk policies, analysing the risk portfolio on a forward-looking basis, approving customers loans and trading limits, guaranteeing the quality and effectiveness of monitoring procedures, controlling the maturity of the processes and underlying operational risks and defining or validating risk measurement methods. RISK is also responsible for ensuring that all the risk implications of new businesses or products have been adequately assessed.

Compliance deals identically with risks related to financial security (money laundering, terrorist financing, corruption and influence peddling), market integrity, protection of clients, professional ethics, tax regulations applicable to customers and laws governing banking activities.

Its mission is to provide, through its opinions and decisions, as well as through its supervision and second level-controls, a reasonable assurance as to the effectiveness and consistency of the compliance system over operations and the protection of its reputation.

### ORGANISATION OF THE RISK AND COMPLIANCE FUNCTIONS

#### Approach

The RISK organisation fully complies with the principles of independence, vertical integration, and decentralisation issued by the Group's Management for the Group's main control functions (Compliance, RISK, LEGAL, and a third line of defence, General Inspection). Hence within RISK:

- all the teams in charge of risks, including those in operating entities have been integrated in the function with reporting lines to the Chief Risk Officers of these entities;
- the Chief Risk Officers of the entities report to RISK.

This organisation enables the governance of risk management activities to be strengthened, especially regarding model risk management, through RISK Independent Review and Control (RISK IRC) team, reporting directly to the Chief Risk Officer (CRO) which groups together the teams in charge of the independent review of the risk methodologies and models. This team is also in charge of the independent review of operational risk of RISK Function, with the organisation described in section 5.9 *Operational risk*.

In accordance with international standards and French regulations, Compliance manages the system for monitoring compliance and reputation risks for all of the Group's businesses in France and abroad. The system for monitoring non-compliance and reputation risks is described in section 5.9.

Independent and hierarchically integrated on a global basis, Compliance brings together all employees reporting to the function. Its organisation is based on its guiding principles (independence, integration, decentralisation and subsidiarity of the function, dialogue with the business lines) through local teams (operating divisions, CPBS, IPS and CIB), areas of expertise, and departments in charge of transverse missions.

### **Role of the Chief Risk Officer**

The Group Chief Risk Officer reports directly to the Chief Executive Officer and sits on the Executive Committee of BNP Paribas. He has line authority over all RISK employees. He can veto the decisions which are not in line with the Risk Appetite Statement, concerning the risks under RISK competency. The Group Chief Risk Officer has no connection, in terms of authority, with the Heads of Core Businesses, business lines and territories. He also has direct and independent access to the Board of directors of BNP Paribas, via the Internal Control, Risk management and Compliance Committee (CCIRC).

This positioning serves the following purposes:

- ensuring the objectivity of risk control, by removing any involvement in commercial relationships;
- making sure senior management is warned of any deterioration in risk and is rapidly provided with objective and comprehensive information on the status of risks;
- enabling the dissemination, throughout the Bank, of high and uniform risk management standards and practices;
- ensuring the quality of risk assessment methods and procedures by calling on professional risk managers in charge of evaluating and enhancing these methods and procedures in light of the best practices implemented by international competitors.

### **Role of the Chief Compliance Officer**

The Chief Compliance Officer reports to the Chief Executive Officer and is a member of the BNP Paribas Executive Committee. She has direct and independent access to the Board of directors and in particular to its specialised committee, the Internal Control, Risk management and Compliance Committee (CCIRC), and can thus inform it of any event likely to have a significant impact on the Group. Lastly, the CCIRC periodically interviews her, without the effective managers being present.

The Chief Compliance Officer has no operational activity outside of the non-compliance and reputation risk management framework and no commercial activity, which guarantees her independence of action. She exercises hierarchical supervision over all the Compliance teams within the various business units, geographical areas and functions.

# RISK CULTURE

---

## ONE OF THE GROUP'S CORE FOUNDING PRINCIPLES

The BNP Paribas Group has a strong risk and compliance culture.

Executive Management has chosen to include the risk culture in three of its key corporate culture documents:

- Code of conduct:

The Group adopted a new Code of conduct in 2016. It applies to all employees and defines the rules for our conduct in line with the core values of our corporate culture. For example, employees are reminded in the Code of conduct that the Group's interests are protected by responsible risk-taking in a strict control environment. The Code of conduct, updated in 2021, also includes rules for protecting customers' interests, financial security, market integrity, professional ethics and anti-bribery and corruption, which all play an important role in mitigating non-compliance and reputation risks;

- Responsibility Charter:

Executive Management drew up a formal Responsibility Charter, inspired by the Group's core values (the "BNP Paribas Way"), management principles and Code of conduct. One of the four commitments is "Being prepared to take risks, while ensuring close risk control".

The Group sees rigorous risk control as part of its responsibility, both to clients and to the financial system as a whole. The Bank's decisions on the commitments it makes are reached after a rigorous and concerted process, based on a strong, shared risk culture which pervades all levels of the Group. This is true both for risks linked to lending activities, where loans are granted only after in-depth analysis of the borrower's situation and the project to be financed, and for market risks arising from transactions with clients – these are assessed on a daily basis, tested against stress scenarios, and subject to limits.

As a strongly diversified Group, both in terms of geography and businesses, BNP Paribas is able to balance risks and their consequences as they materialise. The Group is organised and managed in such a way that any difficulties arising in one business area will not jeopardise another in the Bank;

- the Group's mission and commitments:

The mission of BNP Paribas is to finance the economy and advise its clients, by supporting them with their projects, their investments, and the management of their savings, guided by strong ethical principles. Through these activities, BNP Paribas wants to have a positive impact on stakeholders and on society, and be one of the most trustworthy players in the sector. BNP Paribas' 12 commitments as a Responsible Bank include in particular the commitment to apply the highest ethical standards and rigorously manage environmental, social, and governance risks (see section 7.2 *Economic Responsibility: financing the economy in an ethical manner*).

## SPREADING THE RISK CULTURE

Robust risk management and control is an integral part of the Bank's principles. A culture of risk management and control has always been one of its top priorities.

In addition to the various training programmes in support of this ambition, there are numerous awareness and acculturation initiatives at global and local level within different entities. These include some examples of teams of experts dedicated to acculturating employees to new developments in certain risk categories: cyber risks, ESG risks, legal risks.

BNP Paribas launched the Risk Culture, a Group-wide initiative, giving it the objective of reinforcing the communication of the best practices in risk management. Sponsored by four functions: Compliance, LEGAL, Human Resources (HR), and RISK, Risk Culture is designed for the benefit of all staff and intervenes on all types of risks to which the Group may be exposed, including credit, market, liquidity, operational, non-compliance, regulatory, environmental and social risks.

Taking an adaptive and participative approach, this initiative supports the business lines and functions in their process of understanding risks, for example in transformation projects or when onboarding new employees. In particular, it takes special care to ensure that conduct and behaviour requirements are well integrated, beyond the mission of transmitting knowledge. It provides entities with resources that they can use for their information, acculturation and support for employee skills development in all aspects of the risk culture.

In conjunction with operating entities, Risk Culture actions mainly consist of:

- ensuring the dissemination of information and professional development in the area of risk management, by means of conferences and the publication of educational articles or videos;
- facilitating the sharing of knowledge between the various players in the Bank, in particular changes in the Bank's business lines, news on regulatory requirements and new ways of working. The experts of the Group are invited to expand documentary resources which can be accessed by employees through various communication channels available within the Group;
- relay, if necessary by adapting from one entity to another, actions to raise awareness of good risk practices carried out on the initiative of other entities.

In all its initiatives, Risk Culture promotes the six fundamental risk management practices that are key to developing a robust risk culture. They serve as a reminder to staff about the importance of clearly understanding and anticipating risks with a long-term perspective, being disciplined with risks taken and reporting swiftly and transparently on risk management.

Lastly, the risk culture is also spread throughout the Group by linking compensation to performance and risk (see chapter 7, section 7.3 *A competitive compensation policy*), under a system that was strengthened in this area since 2015 for those employees whose decisions entail a significant risk component.

## RISK APPETITE

---

### DEFINITION AND OBJECTIVES

The Group does not have a specific risk appetite target, but some risks are inherent to its business and therefore to the achievement of its strategic objectives. It has prepared a Risk Appetite Statement and Risk Appetite Framework, which should be seen as the Group's formal statement of its tolerance to the risks to which it is exposed as it implements its strategy.

The Risk Appetite Statement is approved on a yearly basis, or more frequently if necessary, by the Board of directors on the proposal of Executive Management. Consistent with the Group's strategy and in light of the environment in which it operates, this document sets out the qualitative risk principles it intends to follow in its business activities, as well as a quantitative mechanism for supervising the Group's risk profile indicators through quantitative metrics and thresholds. This system covers both the quantifiable and non-quantifiable risks to which it is exposed.

The Group's risk appetite is determined by Executive Management, during various committees it chairs (CCDG, FMRC, Group ALCo, Capital Committee), which are tasked with managing the Group's different types of risk exposure. The Group's strategic processes, such as budget, capital and liquidity management, are in line with the Risk Appetite Statement. Certain Risk Appetite Statement indicators are included in the budget exercise and their expected values in the budget are cross-checked against the thresholds in the Risk Appetite Statement.

The Group's Risk Appetite Statement reflects the core values of its risk culture. It states that the Group's risk culture and its commitments as a responsible bank are at the heart of its strategy. The statement reaffirms the Group's mission: to finance the economy, advise its clients and help to finance their projects, guided by strong ethical principles. The Group's strategy underpinning its risk appetite is founded on the core principles that have guided its development: a balance between business activities to deliver profitability and stability, a customer-focused business model and an integrated banking model to optimise services to the latter. This strategy also factors developments in the banking industry, including the trend towards a digital model, and a macroeconomic situation marked by higher inflation and interest rates than in recent years, in a context of particularly critical geopolitical risk, while certain sectors of the economy show higher levels of risk.

### RISK PRINCIPLES

The risk principles aim to define the types of risk the Group is prepared to accept in support of its business strategy.

They include the following in particular:

- diversification and risk-adjusted profitability:

The Group seeks to generate sustainable, client-driven, risk adjusted profits. Sustainable profitability will be achieved based on selectivity and controlled evolution of BNP Paribas assets, and the pursuit of a diversified business model. Whilst the Group accepts some level of earnings volatility, it remains attentive to contain, at all times, the level of maximum potential losses in an adverse scenario;

- solvency and profitability:

BNP Paribas has sufficient capital to cope with stress scenarios and to meet regulatory capitalisation standards in force. In the course of serving its clients, BNP Paribas accepts exposure to risks when it earns a proper return over an acceptable time frame, and when its potential impacts seem acceptable;

- funding and liquidity:

the Group ensures that the diversification of and balance between its resources and uses of funds correspond to a conservative funding strategy, allowing it to withstand adverse liquidity scenarios. The Group makes sure that it complies with the regulatory liquidity ratios in force;

- credit risk:

The Group only accepts exposure on customers it knows well, based on comprehensive information, and pays close attention to the structure of the financing it grants. The Group builds and maintains a diversified risk portfolio, avoiding large concentrations (especially on single names, industries and countries) and ensures that it complies with the concentration policies in force;

- market risk:

The Group manages market risks (interest rates, equities, currencies, commodities) within the following framework:

- for activities in the capital markets that are customer-focused, BNP Paribas intends to keep its market risk profile in line with this customer-focused business mode,
- interest rate risk associated with its banking book with the aim of stabilising its results on an ongoing basis to within acceptable limits;
- operational risk:

The Group aims to protect its customers, employees and shareholders from operational risk. To do so it has developed a risk management infrastructure based on identifying potential risks, strategies to mitigate risk, and actions to raise awareness of these risks. Some specific risks have resulted in the definition of dedicated principles, in particular:

- non-compliance risk:

The Group is committed to compliance with all applicable laws and regulations. It undertakes to implement a system to manage the risk of non-compliance, including through special programs dedicated to the most important regulations for its business,

- information, communication and technology risk:

The Group endeavours to reduce the risks related to the security of its information through various awareness actions, enhanced supervision of outsourced activities, heightened protection of terminals, incident monitoring, and a technology watch over IT vulnerabilities and attacks;

- insurance activities:

BNP Paribas Cardif is exposed mainly to credit, underwriting and market risks. The entity closely monitors its exposures and profitability, taking into account its risks and the adequacy of its capital with regard to solvency rules. It endeavours to contain potential losses in adverse scenarios at acceptable levels;

- risk associated with social and environmental responsibility:

The Group is particularly sensitive to its customers' performance in terms of social and environmental responsibility, believing that this could have a material impact on its customers' risk profile and, consequently, their solvency, in addition to being a major reputational risk. BNP Paribas takes social and environmental risks into consideration when assessing customer-related risks. The Group also tracks these risks as part of the conduct of its own business, the conduct of its counterparties' business and of its investments on its own behalf or on behalf of third parties.

## SUPERVISION OF RISK PROFILE INDICATORS

The Risk Appetite Statement sets out the indicators that measure the Group's risk profile for its risk exposure categories.

Risk level thresholds are assigned to each metric. When these thresholds are reached, they trigger an established process to inform Executive Management and the Board of directors, and if need be, to implement action plans.

These indicators are monitored quarterly in the risk dashboards presented to the CCIRC.

For example, the following ratios (described in the Key figures of section 5.1 Annual Risk survey) are included in the Risk Appetite statement indicators:

- the solvency ratios (CET1, Tier 1, total own funds, TLAC, MREL and leverage ratio);
- the balance of the breakdown of risk-weighted assets by business line;
- the cost of risk on loans outstandings (in annualised basis points) and doubtful loans on gross outstandings ratio;
- the liquidity ratios (LCR and NSFR).

## STRESS TESTING

---

To ensure dynamic risk supervision and management, the Group has implemented a comprehensive stress testing framework.

### STRESS TESTING FRAMEWORK

The stress testing framework forms an integral part of the risk management and financial monitoring system and is used with a threefold objective of forward-looking risk management, planning of regulatory resources and liquidity requirements, and optimisation of the deployment of these resources within the Group, mainly through the Group's and its main entities' ICAAP and ILAAP processes.

#### Different types of stress tests

There are two types of stress tests:

- regulatory stress tests:

These involve primarily the stress tests requested by the European Banking Authority, the European Central Banks, or any other supervisory authority.

In 2023, BNP Paribas took part in the EU-wide stress test organized by the European Banking Authority and the European Central Bank. The exercise was conducted across a panel of 70 banks representing 75% of total assets of the banking system in the European Union. As in previous years, macroeconomic scenarios and a certain number of methodological assumptions were applied to all banks for comparison purposes. A macroeconomic stress scenario was used to test the impact on exposure to credit, market and operational risks, and revenue (net interest income and commissions) and applied to the P&L account, risk weighted assets and capital aggregates.

In 2022, the ECB had conducted a climate stress test among 104 financial institutions under its supervision. The ECB did not disclose any bank-specific information. The exercise demonstrated the good level of progress achieved by BNP Paribas in climate stress testing. The Group recognises the relevance of scenario analysis to assess the possible impacts of climate risk, given its forward-looking nature. The Group however also considers that climate stress testing is a developing activity, which is less mature than traditional stress tests involving macro-economic or capital markets scenarios. Results of climate scenarios analyses should be used in a way that reflects this lesser maturity.

BNP Paribas has participated in early 2024 in the One-off Fit-for-55 climate risk scenario analysis organised by the European Banking Authority under the mandate it received jointly with EIOPA and ESMA from the European Commission to assess the ability of the European financial sector to participate in the financing of energy transition, and more specifically the level of investment required for the European Union to meet its commitment of reducing greenhouse gas emissions by 55% by 2030.

In 2024, BNP Paribas will also participate in the Cyber Resilience Stress Test organised by the European Central Bank.

- internal stress tests:
  - stress tests dedicated to risk anticipation: they contribute to the forward-looking risk management, in particular of credit, market, counterparty, interest rates in the banking book, operational, activity and liquidity risks. The results of the transverse stress tests are used, among other purposes, to formulate the Bank's risk appetite and periodically measure its risk profile. They are periodically submitted to Group Executive Management as well as the Board of directors' Internal Control, Risk Management and Compliance Committee (CCIRC) through the quarterly Group risk dashboard. Moreover, *ad hoc* stress testing is performed, when appropriate, within Risk & Development Policy Committees, portfolio reviews or Country Strategic Committees to identify and assess areas of vulnerability within the Group's portfolios,
  - stress tests for the budget process: they contribute to three-year capital planning. Stress tests are carried out annually as part of the budget process and are included in the ICAAP and the ILAAP. They are reviewed at divisional and business line level before being consolidated at Group level to provide a comprehensive view of the impact on the Bank's capital, liquidity and earnings.

The calculated final output is a range of projected Group's solvency ratios, as well as possible adjustment measures. The scenarios used, the outcomes of the stress tests and the proposed possible adjustment measures (such as reducing exposures to a sub-segment, cost reduction initiatives, or changes in funding or liquidity policies, *etc.*) are included in the budget synthesis report presented to the Group Executive Management and to the Board of directors at the end of the budget process. In addition, in the Group's ICAAP, its solvency can be analysed in adverse scenarios other than an adverse budget scenario, defined by risk topics occasionally identified by the Group,

- reverse stress tests: they are conducted as part of the Bank's recovery and resolution plan and ICAAP. Reverse stress tests consist of identifying scenarios likely to result in a drop in the Bank's solvency ratios to levels set in advance in line with the methods of use in question. These exercises enable any areas where the Bank is fragile in terms of changes in certain risk factors to be detected and facilitate in-depth analyses of the remedial actions that could be implemented by business lines or Group-wide.

## Governance and implementation

This stress testing framework is based on a well-defined governance, with responsibilities shared between the Group and operating entities in order to encourage operational integration and relevance and in particular to develop internal stress test practices required for proper risk management and Group resource planning.

Finance, RISK and ALM Treasury functions have created a shared team, Stress Testing and Financial Simulations ("STFS"), responsible for developing stress testing, ICAAP, internal capital and capital planning across the Group's entities and activities.

The STFS team is responsible in particular for:

- the definition and the implementation of the Group's target structure in terms of stress testing and ICAAP while covering the associated organisational issues, modelisation, IT systems and governance;
- the performance of all of the Group's stress testing exercises, relying in particular on existing teams within the RISK and Finance Functions;
- the support of the stress test and ICAAP initiatives of the Group's business lines and legal entities in order to ensure overall consistency and streamline procedures;
- the coordination of the Group's financial simulation system and its adaptation to the challenges of SREP;
- the Group's risk identification process;
- the production of the Group's ICAAP report and, for certain risks, the quantification of internal capital.

Stress test methodologies are tailored to the main categories of risk and subject to independent review.

Stress tests may be run at Group, business line or portfolio level, dedicated to one or more risk types and on a more or less large number of variables depending on the pursued objective. Where appropriate, the results of quantitative models may be adjusted on the basis of expert judgement.

Since its creation, the Group's stress testing framework has evolved continuously in order to integrate the most recent developments in stress tests, whether in terms of methodologies or improved operational integration in the Group's management processes. The stress test framework by type of risks is detailed in sections 5.4 *Credit risk*, 5.6 *Counterparty credit risk* and 5.7 *Market risk*. In this context, the Group is engaged in the development of a climate stress testing infrastructure, covering scenarios (see below), data and models and methodologies, as well as encompassing both transition and physical risks, which are the two main risk types into which climate risk materialises.

## INTERNAL STRESS TEST SCENARIO DEFINITION

In stress testing exercises, it is common practice to distinguish the baseline scenario from one or several alternative scenarios. A macroeconomic scenario is typically a set of macroeconomic and financial variables (GDP and its components, inflation, employment and unemployment, interest and exchange rates, stock prices, commodity prices, *etc.*) projected over a given future period.

### Macroeconomic stress tests

#### Baseline scenario

The baseline scenario is considered as the most likely scenario over the projection horizon. The baseline scenario is constructed by Group Economic Research in collaboration with various functions and business lines possessing a specific expertise, in particular:

- Group ALM Treasury for interest rates;
- Wealth Management for equity indices;
- BNP Paribas Real Estate regarding commercial real estate;
- local economists when regional expertise is required;
- Stress Testing & Financial Simulations (STFS) for coordination and overall consistency of the scenario.

The global scenario is made up of regional and national scenarios (Eurozone, France, Italy, Belgium, Spain, Germany, United Kingdom, Poland, Türkiye, United States, Japan, China, India, Russia, *etc.*) consistent with each other.

#### Alternative scenarios

Depending on the exercise, one or more alternative scenarios may be used for stress tests.

STFS produces three types of alternative scenarios on a regular basis, in collaboration with the same functions and business lines as those requested in the central scenario: an adverse scenario, a severe scenario and a favourable scenario.

- The adverse scenario describes one or several potential shocks to the economic and financial environment – *i.e.* the materialisation of one or several risks to the baseline scenario – over the projection horizon. An adverse scenario is thus always designed in relation to a baseline scenario. The shocks associated with the adverse scenario are translated in the set of macroeconomic and financial variables listed above in the form of deviations from their value in the baseline scenario.
- The severe scenario is an aggravated version of the adverse scenario.
- The favourable scenario reflects the impact of the materialisation of risks with a positive effect on the economy.

#### Construction of scenarios

The baseline, adverse, severe and favourable scenarios are revised quarterly to monitor the Bank's risk appetite metrics and credit provision calculations within the framework of IFRS 9 (see note 2. *IFRS 17 and IFRS 9 first time application impacts* to the consolidated financial statements).

They are validated in meetings involving the Group Executive Management for scenarios used in the Group's budget process (second and third quarters of the year). For the other two quarterly exercises in March and December, scenarios are validated jointly by the Group Chief Risk Officer and the Group Chief Financial Officer.

The scenarios are then used to calculate expected losses (or profit and loss impact in the case of market risks) over the year for all Group portfolios:

- for portfolios exposed to credit or counterparty risk and for the equity portfolio of the banking book: this calculation measures the impact of the scenario on the cost of risk and risk-weighted assets due to the deterioration of the portfolio quality resulting from the macroeconomic scenario, or adverse moves in equity prices. Credit risk stress tests are performed on the Bank's entire portfolio for all regions and all prudential portfolios, namely Retail, Corporates and Institutions;
- for market portfolios: the changes in value and their profit and loss impact are calculated by simulating a one-time shock, which is consistent with the overall scenario.

The above calculations and related methodologies for stress tests on credit and market risks are coordinated centrally at Group level by STFS team. They also involve various teams of experts at Group and territory's levels in their implementation and design.

Lastly, in an adverse budget scenario, risks appertaining to the Group and its business activities and not forming part of the adverse macroeconomic scenario are added. They are identified and quantified either by the Group's businesses or centrally for those likely to impact the Group as a whole.

### Climate stress tests

Beyond macroeconomic stress tests, the field of climate stress tests is developing rapidly. In this context, the Group is engaged in the analysis, adaptation and creation of transition and physical risk scenarios.

With regard to the risk of transition, the analysis and adaptation works are based at this stage on the work of the NGFS (Network for Greening the Financial System), pioneer in this field. For the Group's internal requirements in terms of climate stress tests, the NGFS scenarios can be adjusted and adapted, so that they are more in touch with most recent developments (e.g. at the macroeconomic level) or that they are more specifically adapted to the Group's portfolios. In addition, in collaboration with other companies and institutions, the Group is taking part in the Iris initiative to define transition scenarios with more precise sectoral aspects that are relevant to assess transition risk.

The physical risk scenarios used by the Group at this stage focus on geographies with significant Retail Banking activities in Europe.

## 5.4 Credit risk

Credit risk is the consequence resulting from the likelihood that a borrower or counterparty will fail to meet its obligations in accordance with agreed terms. The probability of default and the expected recovery on the loan or receivable in the event of default are key components of the credit quality assessment.

### EXPOSURE TO CREDIT RISK

The following table shows the gross exposure of all of the BNP Paribas Group's assets exposed to credit risk. The banking book securitisation positions as well as derivatives and repurchase agreements exposed to counterparty risk are excluded from this section and presented respectively in section 5.5 and 5.6.

In accordance with Implementing Regulation (EU) No. 2021/637, equity exposures under the standardised approach and using the simple weighting method are included in this section.

The main differences between the carrying amounts of the prudential balance sheet and the risk exposure amounts used for regulatory purposes are presented in Table 10 in the *Scope of Application* section of section 5.2 *Capital management and capital adequacy*.

These gross exposure amounts do not take into account guarantee and collateral received by the Group in its normal credit risk management operations (see section *Credit risk mitigation techniques*).

**TABLE 25: CREDIT RISK EXPOSURE BY ASSET CLASS AND APPROACH**

| Exposure<br>In<br>millions<br>of euros | 31 December 2023 |   |  | 31 December 2022 |   |  | Variation |          |   |

| <b>TOTAL</b>  | <b>1,432,594</b> | <b>383,007</b> | <b>13,593</b> | <b>1,829,194</b> | <b>1,465,071</b> | <b>479,186</b> | <b>12,133</b> | <b>1,956,389</b> | <b>(127,195)</b> | <b>(112,577)</b> |

(\*) In the following paragraphs, standardised credit risk exposures are reported according to the regulatory standardised classification.

(\*\*) Institutions asset class comprises credit institutions and investment firms, including those recognised in other countries. It also includes some exposures to regional and local authorities, public sector agencies and multilateral development banks that are not treated as central government authorities.

(\*\*\*) Other non credit-obligation assets include tangible assets, accrued income and residual values.

Exposure related to loan acquisitions on the secondary market in 2023 only accounts for a marginal amount.

## TRENDS IN CREDIT RISK EXPOSURE

The -EUR 113 billion decrease in credit risk exposure is mostly related to the disposal of Bank of the West in the first quarter of 2023. Currency effects with an impact on the exposure trend of -EUR 15 billion, particularly with the depreciation of the US dollar (-EUR 11 billion) and Turkish lira (-EUR 5 billion), partially offset by the appreciation of Polish Zloty (+EUR 3 billion) compared to the euro.

Excluding the currency effects, the main changes by exposure class are the following:

- the -EUR 42.0 billion decrease in retail exposures, following the disposal of Bank of the West coupled with a decrease on residential and commercial real estate loan activities at CPBS, notably in France (-EUR 5 billion) and to a lesser extent in Italy (-EUR 1 billion).
- the -EUR 37.3 billion decrease in central governments and central banks arising from the sale of Bank of the West jointly with a reduction of liquidity placed in the European Central Bank;
- the -EUR 30.0 billion decrease in corporate mostly explained by the sale of Bank of the West and the decrease of CPBS in France (-EUR 4.8 billion), offset by an increase in activity driven by CIB (+EUR 6 billion), mainly split between Americas and Europe, and by CPBS (+EUR 4 billion), primarily in Germany (+EUR 3.4 billion), followed by Belgium (+EUR 2.7 billion) and United Kingdom (+EUR 2.5 billion).

## APPROACHES USED TO CALCULATE CAPITAL REQUIREMENTS

BNP Paribas has opted for the most advanced approaches allowed under Basel 3. In accordance with the European Directive and its transposition into French law, in 2007 the supervisor authorised the Group to use internal models to calculate capital requirements starting on 1 January 2008.

For credit risk, the share of gross exposures under the IRBA approach is 78% at 31 December 2023, up slightly compared to 31 December 2022.

This significant scope includes in particular Corporate & Institutional Banking (CIB), Commercial & Personal Banking in France (CPBF), Commercial & Personal Banking in Belgium (CPBB), BNL bc, Personal Finance and Commercial & Personal Banking in Luxembourg (CPBL).

The IRBA scope nevertheless excludes certain entities such as those subsidiaries in the Europe-Mediterranean business lines.

Within the scope of equity exposures, the Group has mainly opted for the simple weighting method.

### FIGURE 7: GROSS CREDIT RISK EXPOSURE BY APPROACH

At 31 December 2023

At 31 December 2022

The amounts and percentages below are presented net of provisions for credit risk.

(2) Exposure value used as a measure of exposure for the purpose of leverage ratio, pursuant to Article 249 of Regulation (EU) No. 2019/876.

# CREDIT RISK MANAGEMENT POLICY

---

## CREDIT POLICIES [Audited]

The Bank's lending activities are governed by the Global Credit Policy. It applies to all Group activities that generate credit or counterparty risk. The Global Credit Policy provides general principles (including the risk assessment and decision-making process, adherence to the highest standards of compliance and ethics) applicable to all credit risk, as well as specific principles applicable to country risk, sector risks, clients selection and the transaction structures. It is supplemented by specific policies tailored to each type of business or counterparty.

These credit policies are regularly updated in line with developments in the credit environment in which the Group operates.

### Corporate Social and Environmental Responsibility (CSR)

Since 2012, clauses on Corporate Social and Environmental Responsibility (CSR) are included in specific new credit policies or when existing policies are updated.

Furthermore, sectoral policies and financing exclusions for certain sectors presenting significant Environmental, Social and Governance (ESG) challenges (described in the Commitment 3, section of chapter 7, *Systematic integration and management of Environmental, social and governance risks (ESG)*) have been implemented since 2011 and steadily strengthened since then. These risks are also analysed in the context of sector reviews and country envelope limits.

The Group is also taking a number of steps to improve the incorporation of ESG risks factors, especially those linked to climate change, in its credit risk system. Within this context, the Group continues to strengthen the ESG assessment of its clients to make it more systematic and to better understand the ESG risk profile associated.

### Expanding the ESG analysis of corporate customers thanks to a risk assessment tool: the ESG Assessment

BNP Paribas takes ESG criteria into account in its decision-making processes. ESG criteria are integrated into the Know Your Client (KYC) as well as into the Global Credit policy and, when more precise criteria are deemed relevant, in specific credit policies.

In addition to the current ESG risk assessment framework (sectoral policies, specific credit policies), an ESG assessment tool has been deployed since June 2021: ESG Assessment, which progressively replaces previous set-ups. It makes it possible to identify, assess and monitor the ESG performance and risks of corporate customers according to the specific characteristic of each of their sectors, with a common approach within the Group for a given customer segment.

The assessment aims to perform an ESG analysis at business group level as part of the credit process, a key pillar of banking financing activities, thus integrating ESG criteria with the other analysis parameters included in the assessment of the counterparty's credit profile

The ESG Assessment covers the environmental (climate, biodiversity), social (health and safety at work, consumer protection and impact on communities) and governance (business ethics) dimensions through a set of questions, supplemented by an analysis of controversies affecting the client. The questionnaires developed in this context are specific to each sector in order to better integrate the challenges and issues specific to their activities.

This tool makes it possible to assess clients' compliance with the Group's sectoral policies, as well as the maturity of their ESG strategy and its implementation.

The deployment of ESG Assessment, included in the credit files for all large corporate business groups regardless of their activity, enables the RISK Function to exercise greater control over the ESG dimensions during credit committees on a documented basis. Currently designed for large companies, this framework has been adapted and will be extended to additional customer segments (corporates with a turnover of more than EUR 50 million and financial institutions) starting from 2024.

## INDIVIDUAL DECISION-MAKING PROCEDURES [Audited]

A system of discretionary credit delegations has been established, under which all lending decisions must be approved by managers or representatives of the business teams, with the concurrence of a formally designated RISK representative. Approvals are systematically evidenced in writing, possibly electronically either by means of a signed approval form or in the minutes of formal Credit Committee meetings. Discretionary credit delegations correspond to aggregate commitments by business group and vary according to internal credit ratings and the specific nature of the business concerned. All transactions proposed are subject to a detailed review of the borrower's current and future position. The review, conducted when granting the transaction and updated at least on an annual basis, is designed to ensure the Group has a comprehensive understanding of the borrower and can monitor any potential changes in its situation. Certain types of lending commitments, such as loans to financial institutions, sovereign loans and loans to customers operating in certain industries that are exposed to cyclical risks or to a rapid pace of change, are subject to specific authorisation procedures and require the sign-off of an industry expert or designated specialist. In Retail Banking, simplified procedures are applied, based on statistical decision-making aids.

Credit applications must comply with the Bank's Global Credit Policy and any relevant specific policies. Material exceptions undergo a special approval process. Before making any commitments, BNP Paribas carries out an in-depth review of any known development plans of the borrower, and ensures that it has thorough knowledge of all the structural aspects of the borrower's operations and that adequate monitoring will be possible.

The General Management Credit Committee (CCDG) is the highest level Group committee for all decisions related to credit and counterparty risk. It has in particular ultimate decision-making authority for all credit applications notably for amounts in excess of individual discretionary credit delegations or applications that would not comply with the Global Credit Policy.

## MONITORING AND PORTFOLIO MANAGEMENT PROCEDURES [Audited]

### Monitoring exposures

A comprehensive risk monitoring system is organised around control units, which are responsible for ensuring that lending commitments comply with the credit decision, that credit risk reporting data are reliable and that risks are effectively monitored. Daily irregular exception reports are produced and various early warning tools are used to identify early the deterioration of credit risks. The various monitoring levels are carried out under the supervision of RISK. Non-performing loans or those placed under credit watch (see *Exposures, provisions and cost of risk*) are overseen more closely via dedicated quarterly committee meetings (see the *Governance* part of section 5.3 *Risk management*). To supplement this mechanism, the Doubtful Committee meets on a monthly basis to validate the proposed changes in individual provisions for doubtful loans for which an adjustment is necessary based on expected financial flows.

The responsibilities of the control teams include the monitoring of exposures against approved authorisations, covenants, and guarantees. This allows the identification of any signs of deterioration against the risk profile approved by the Credit Committee. Control teams flag up (to the RISK teams and business units) any cases that fail to comply with Credit Committee decisions and oversee their resolution. In some cases, a specific alert is sent to the senior management of RISK and of the relevant business unit. These are mainly where exceptions remain unresolved and/or where there are serious indications of deterioration in the risk profile compared with that approved by the Credit Committee.

Furthermore, since 2018 the General Credit Policy has included specific checks to be conducted for loans granted to clients presenting high leverage ratios, in accordance with European Central Bank guidelines.

### Overall portfolio management and monitoring

The selection and careful evaluation of individual risks taken are supported by a monitoring and risk control system based on more aggregated portfolio levels in terms of division/business line, regions, industry, business/product.

The overall portfolio management policy, including concentration of risk by single name, industry and country, is based on this monitoring system and Group Risk Committees review all reports and analyses produced:

- risk concentration by country is managed through country risk limits that are set at the appropriate level of delegated authority for each country. The Group, which is naturally present in most economically active areas endeavours to avoid excessive concentrations of risk in countries with a high geopolitical risk or unstable political structures or which economic position has been undermined. Country envelope limits are reviewed at least once a year, and quarterly reports are drawn up on their use;
- the Group closely monitors individual concentrations, in particular on business groups, corporates, banks or sovereign debts. These concentrations are reported in the quarterly risk report to CCIRC. Related policies implemented by the Group are described under *Credit risk diversification* of this section;
- regular reviews by the Group are carried out of portfolios in certain industries, either because of the magnitude of the Group's exposure to the sector or because of sector-specific risks, such as the cyclical nature of the industry or rapid technological developments. In these reviews, special focus is placed on ESG issues in potentially sensitive sectors. The Group draws on the expertise of the relevant business lines and independent industry specialists working in RISK (Industry and Sector Studies). These reviews provide Executive Management, and if appropriate the CCIRC, with an overview of the Group's exposure to the sector under consideration, and assist it to decide on strategic guidelines. As an illustration, in 2023, an internal portfolio review was undertaken on Petrol & Gas, electricity generation, commercial real estate, Metals & Mining, and automotive;
- Stress tests assess portfolio vulnerabilities by measuring the impact of various adverse scenarios. They are conducted on a quarterly basis on the entire portfolio and on an *ad hoc* basis on sub-portfolios to identify any concentrations. They help to ensure that the Bank's credit risk exposure is in line with its risk appetite.

Lastly, BNP Paribas may use credit risk transfer instruments, such as securitisation programmes, credit derivatives or credit insurance, to mitigate individual risks, reduce portfolio concentration or cap potential losses arising from crisis scenarios.

## IMPAIRMENT VALUATION PROCEDURES [Audited]

The Group applies the impairment procedures described below for all loans subject to impairment (see note 1.f.5 *Impairment of financial assets at amortised cost and of debt instruments at market value through shareholders' equity* to the consolidated financial statements):

- impairment valuation procedure for performing loans:

A loss allowance for loans in stage 1 or stage 2 is constituted by each operating division based on an estimation of expected credit losses. This is validated on a quarterly basis during a committee meeting attended by the Chief Financial Officer and Chief Risk Officer of each operating division. Estimations of expected credit losses result from the default risk in the coming twelve months for financial instruments whose credit risk has not significantly increased since initial recognition (stage 1) or upon maturity for unimpaired loans whose credit risk has significantly increased since initial recognition (stage 2). A tool used by most of the Group's business lines enables calculations to be performed based on the parameters of the rating system described below and integrating the potential impact of macroeconomic and sectoral dynamics;

- impairment valuation procedure for defaulted exposures:

Monthly, RISK reviews corporate, bank and sovereign loans, requiring a review of their impairment, to determine the amount of any decrease in value to be recognised, either by reducing the carrying amount or by recording a provision for impairment, in accordance with applicable accounting standards (see note 1.f.5 *Impairment of financial assets measured at amortised cost and debt instruments measured at fair value through shareholders' equity* to the consolidated financial statements). The Group uses various methodologies (expert opinions, statistical calculations) for defaulted exposures to retail customers. These impairments are referred to as stage 3. The amount of this impairment loss is based on the present value of probable recovered net cash flows issued from several scenarios, including from the possible realisation of the collateral held. The amount of this impairment loss is based on the present value of probable recovered net cash flows under various scenarios and including from the possible realisation of the collateral held. Estimated expected cash flows also includes a cash flow scenario from the possible sale of non-performing loans or all loans. Proceeds from the sale is net of costs associated to the sale.

## **RATING SYSTEM** [Audited]

Each counterparty is rated internally by the Group using uniform principles, regardless of the approach used to calculate regulatory capital requirements.

The Bank has a comprehensive internal rating system compliant with regulatory requirements regarding capital adequacy. A periodic assessment and control process has been deployed within the Bank to ensure that the system is appropriate and correctly implemented. The system was formally validated by the supervisor in December 2007 and is inspected on a regular basis.

For loans to institutions, corporates, sovereigns and specialised lendings, the system is based on three parameters: the counterparty's probability of default (PD) expressed via a rating, the Global Recovery Rate (GRR) or its complement, Loss Given Default (LGD), which depends on the structure of the transaction, and the Credit Conversion Factor (CCF) which estimates the off-balance sheet exposure at risk.

There are twelve counterparty ratings. Ten cover performing clients with credit assessments ranging from "excellent" to "very concerning", and two relate to clients classified as in default, as per the definition by the banking supervisor.

Confirmation or amendments to the probability of default parameters and GRR applicable to each transaction are reviewed at least once a year as part of the loan approval process or annual credit review. These are based on the combined expertise of business line staff and, as a second look, the RISK representatives (who have the final say in case of disagreement). It uses appropriate tools including analysis aids and credit scoring systems. The decision to use these tools and the choice of technique depends on the nature of the risk.

For retail counterparties, the system is also based on three parameters: Probability of Default (PD), the Global Recovery Rate (GRR) and the Credit Conversion Factor (CCF). On the other hand, rating methods are applied automatically to determine the loan parameters.

Internal estimates of risk parameters are used in the Bank's day-to-day management in line with regulation recommendations. Thus, apart from calculating capital requirements, they are used for example when setting delegated limits, granting new loans or reviewing existing loans to measure profitability, determine impairments and for book analyses.

**TABLE 27: INDICATIVE MAPPING OF INTERNAL COUNTERPARTY RATING WITH AGENCY RATING SCALE AND AVERAGE EXPECTED PD**

|                      | Internal rating<br>BNP Paribas | LT<br>Issuer/Unsecured<br>issuer's ratings<br>S&P/Fitch | Average expected PD |

|                      | 2                              | A+/A  | 0.03%               |
|                      | 2-                             | A-  | 0.04%               |
|                      | 3+/3/3-                        | BBB+  | 0.06% to 0.10%      |
|                      | 4+/4/4-                        | BBB   | 0.13 to 0.21%       |
|                      | 5+/5/5-                        | BBB-  | 0.26% to 0.48%      |
| Non-Investment Grade | 6+                             | BB+   | 0.69%               |
|                      | 6/6-                           | BB  | 1.00% to 1.46%      |
|                      | 7+/7                           | BB-   | 2.11% to 3.07%      |
|                      | 7-                             | B+  | 4.01%               |
|                      | 8+/8/8-                        | B   | 5.23% to 8.06%      |
|                      | 9+/9/9-                        | B-  | 9.53% to 13.32%     |
|                      | 10+                            | CCC   | 15.75%              |
|                      | 10                             | CC  | 18.62%              |
|                      | 10-                            | C   | 21.81%              |
| Default              | 11                             | D   | 100%                |
|                      | 12                             | D   | 100%                |

The Group has developed an indicative equivalence between the Bank's internal ratings and the long-term issuer ratings assigned by the major rating agencies. Nevertheless, the Bank has a much broader clientele than just those counterparties rated by an external rating agency. An indicative equivalence is not relevant in Retail Banking. It is used when the internal ratings are assigned or reviewed in order to identify any differences between the Bank's assessment of a borrower's probability of default and that of one or more of the rating agencies. However, the internal ratings do not aim to reproduce or even approximate the external ratings. There are significant variances in both directions within the portfolio. Some counterparties rated 6 or 7 by BNP Paribas could be considered Investment Grade by the rating agencies.

For further details, see the sections Internal rating system – sovereign, financial institution, corporate and specialised financing portfolios and Internal rating system specific to retail customers.

## CREDIT RISK STRESS TESTING

Quantitative models have been developed and are used to connect credit risk and rating migration parameters with macroeconomic and financial variables projected in stress testing scenarios (see section 5.3 *Stress testing*), for historical data as well as the relevant forecast period.

The quality of the methods used is guaranteed by:

- strict governance in terms of the separation of duties and responsibilities;
- a review of existing systems (models, methodologies, tools) by an independent entity;

- periodic evaluation of the effectiveness and pertinence of the system as a whole.

This governance is based on internal policies and procedures, the supervision of the Credit Risk Stress Testing Committees by business line and the integration of the stress tests within the risk management system.

The central stress testing framework is consistent with the structure defined in the EBA guidelines for European stress tests:

- it is based on the parameters used to calculate capital requirements (regulatory EAD, PD and LGD);
- the expected loss conditional to the macroeconomy is used as a measure of the cost of risk resulting from new defaults;
- the stressed cost of risk is supplemented with impacts on stage 1 and 2 provisions and provisions on the outstanding non-performing loans;
- the regulatory capital stress testing is performed on the basis of rating migrations, default events, and the stressed regulatory PD used in calculating regulatory capital requirements.

Stress testing of credit risk is used in the evaluation of the Group's risk appetite, and more specifically during portfolio reviews. They are based on models integrated into the risk management and financial planning processes, shared with the provisions calculation system and the internal economic measurement of capital requirements.

The system was strengthened and adapted to the evolution of the risk environment:

- it integrates consideration of the heterogeneity of sectoral trajectories according to scenarios, in particular in high inflation and energy transition contexts;
- the Forward Looking Adjustment of Internal Rating (FLAIR) approach makes it possible to include in the projections developments that are unparalleled in the recent historical period or likely to lead to rapid changes in the relationships observed historically between variables. This system is used to take into account the impact of the rise in recent interest rates and contributes to the assessment of climate change risks.

The Bank has developed a partnership with the *Centre de Mathématiques appliquées de l'Ecole Polytechnique en France* (CMAP) to ensure access to the most advanced scientific knowledge in the measurement of climate change risks, cyber risks, uncertainty and extreme events more generally.

## CREDIT RISK DIVERSIFICATION

---

The Group's gross exposure to credit risk stands at EUR 1,815 billion at 31 December 2023, a decrease compared to 31 December 2022 with EUR 1,944 billion. This decrease is mainly due to the disposal of Bank of the West. This portfolio, which is analysed below in terms of its diversification, comprises all exposures to credit risk shown in Table 25, excluding equity exposures under the simple weighting method, shown in the section *Credit risk: equities under the simple weighting method*.

These exposure amounts are based on the gross carrying value of the financial assets. They do not include collateral taken by the Group in its normal credit risk management operations (see section *Credit risk mitigation techniques*).

No single counterparty gives rise to an excessive concentration of credit risk, due to the size of the business and the high level of industrial and geographical diversification of the client base. The breakdown of credit risks by industry and by region is presented in the tables hereafter.

This risk is mainly assessed through the monitoring of the indicators shown below.

### SINGLE NAME CONCENTRATION

The single name concentration risk of the portfolio is subject to regular monitoring. It is assessed on the basis of the total commitments at client or business group level and is based on two types of monitoring:

#### Monitoring of large exposures

Article 395 of Regulation (EU) No. 575/2013 of 26 June 2013 establishes a limit of 25% of the Bank's capital for exposure by business group (after exemptions and taking credit risk mitigation techniques into account).

BNP Paribas is well below the concentration thresholds set by this regulation. The exposure (as defined above) of a client or a group of connected clients never exceeds 10% of the Bank's eligible capital.

#### Monitoring through individual "single name" concentration policies

The single name concentration risks are part of the Group's concentration policies. They are meant to identify and closely monitor any single business group with an excessive concentration of risk to proactively manage individual concentrations relative to the Group's Risk Appetite Statement.

## BREAKDOWN BY REGULATORY ASSET CLASS

TABLE 28: CREDIT RISK EXPOSURE BY ASSET CLASS AND APPROACH TYPE

| Exposure<br><i>In millions of euros</i>  | 31 December<br>2023 | 31 December<br>2022 |
|--|---------------------|---------------------|
| Central governments or central banks   | 432,341             | 454,775             |

(\*) Immovable property financing exposures whose risk profile may be affected by market conditions.

## **GEOGRAPHIC DIVERSIFICATION**

Country risk is the sum of the risks on all exposures to obligors in the country concerned. It is not the same as sovereign risk, which is the sum of all exposures to the central government and its various branches. Country risk reflects the Bank's exposure to a given economic and political environment, which are taken into consideration when assessing counterparty quality.

The geographic breakdown shown below is based on the counterparty's country of residence.

The geographic breakdown of the portfolios is balanced. In 2023, the Group was particularly attentive to geopolitical risks and the economic performance of emerging countries.

TABLE 29: CREDIT RISK EXPOSURE BY GEOGRAPHIC REGION

## CREDIT RISK: INTERNAL RATINGS-BASED APPROACH (IRBA)

The internal rating system developed by the Group covers the entire Bank. The IRBA framework, validated in December 2007, covers the portfolio described in *Approaches used to calculate capital requirements* in the section entitled *Exposure to credit risk*.

The Group has developed specific internal models adapted for the most common categories of exposure and clients in its loan portfolio. BNP Paribas bases these developments on internal data gathered over long periods. Each of these models is developed and maintained by a specialist team, in conjunction with relevant RISK and business line experts. Moreover, verification is performed to ensure compliance with the floors set by the regulation on these models. The Bank does not use models developed by external suppliers.

IRBA credit models are developed and used within a control system comprising three lines of defence:

- models producing internal estimates of the risk parameters are developed and maintained by specialised RISK teams, which also perform annual backtesting of each model in production;
- another RISK team, which reports directly to the Group Chief Risk Officer, conducts independent reviews of the models. Three types of review are carried out: systematic before a model is implemented, annual when reviewing backtesting carried out by the first line, and finally periodic, covering all the IRBA models used in the Bank according to an auditing plan that takes into account a risk-based approach;
- finally, each year, the General Inspectorate conducts an overall assessment of the models and their governance, and conducts a detailed review of an identified risk area.

In addition, the first and second line of defence RISK teams regularly report the most important information to Bank management and senior management, through:

- the Capital Committee, which is the competent Executive Management authority for issues relating to internal credit models, and which, as such, is informed of the main decisions taken concerning these models, annually reviews the results of backtesting and receives a summary of the results of the independent review of the models; and
- the Internal Control, Risk Management and Compliance Committee (CCIRC), a body appointed by the Board of directors, which receives a quarterly qualitative dashboard detailing the major risk-related events over the quarter and a metric based on the recommendations of the independent review team.

Counterparty rating (or the Probability of Default) and the Loss Given Default are determined either using purely statistical models for portfolios with the highest degree of granularity (loans to individuals or to very small enterprises) or a combination of models and expert judgement based on indicative values.

Loss Given Default is defined as the loss that the Bank would suffer in the event of the counterparty's default in times of economic downturn, as required by regulations. For each transaction, it is measured using the recovery rate for a senior unsecured exposure to the counterparty, adjusted for any risk mitigation techniques (collateral or guarantees). Amounts recoverable against these mitigants are estimated each year using conservative assumptions as well as haircuts calibrated to reflect economic downturn conditions.

The Bank models its own conversion factors on financing commitments by using internal default data. Conversion factors are used to measure the off-balance sheet exposure at risk in the event of a default. This parameter is assigned automatically depending on the transaction type for all portfolios and therefore, is not determined by the Credit Committees.

Internal estimates of risk parameters are used in the Bank's day-to-day management in line with regulation recommendations. Thus, apart from calculating capital requirements, they are used, for example, when setting delegated limits, granting new loans or reviewing existing loans to measure profitability, determining stage 1 and stage 2 impairment and for book analyses.

**TABLE 32: MAIN MODELS: PD, LGD AND CCF/EAD**

| Modelled parameter | Portfolio                                      | Number of models | Model and methodology                        | Number of years – Default/loss data | Main asset class   |
|--------------------|--|------------------|--|-------------------------------------|--|
| <b>PD</b>          | Sovereigns                                     | 1                | Qualitative                                  | > 10 years                          | Central governments and central banks                                      |

## BACKTESTING

Each one of the three credit risk parameters (PD, LGD, CCF/EAD) is backtested annually in order to check the performance and conservatism of every model and business segment of the Bank.

Backtesting of a Probability of Default's model primarily aims at ensuring that the ratings attributed internally by the PD model are more conservative than the default rates observed during the year for the population under the scope of this model. When external ratings are available, for clients covered by low default portfolio's model, they are also used to challenge the conservatism of our internal ratings.

Backtesting of Loss Given Default's model is only based on exposures that are on default and includes both closed and open files. The Long Run Average LGD is compared with the corresponding LGD Estimated from the model applied to the relevant application scope. The Time-to-Workout is defined as the period during which the institution realises the vast majority of the recoveries and it is used as the largest period for which recoveries are expected. When a recovery process is operationally closed, or reaches the Time-to-Workout (*i.e.* pseudo-closed), the observed LGD is calculated using all observed cashflows (recoveries, cost of recoveries and additional drawings) discounted back to the default date and compared with the outstanding at default (which may include additional drawings when relevant). When the recovery process is open or incomplete, the future recoveries are estimated until the Time-to-Workout by extrapolating the historical recoveries, and potentially as well the additional drawings, observed for the underlying population.

For both PD and LGD backtesting, additional tests are performed to assess and track over years the data representativeness, the stability, the risk differentiation as well as the correct calibration and conservatism of the model. In case any of these dimensions has deteriorated, or if any major alert is threatening the model's relevancy, a recalibration can be proposed or even, in more extreme cases, a redevelopment of the model.

All this work is reviewed annually in the Capital Committee (see section 5.2 under *Capital management*). The results from the backtesting are also certified internally by an independent team and the results sent to the supervisor. Any change is submitted to the supervisor for approval, in line with the regulation.

The following tables present an overview of the performance of the models for regulatory risk parameters PD and LGD within the context of the Group's IRBA scope

For constructing the PD tables (see Tables 33, 34, 35 and 36 after), each obligor is assigned to its correspondent class of [Portfolio x PD Scale] and then the indicators of each class are computed as follows:

- Observed average default rate: The number of obligors falling in default during the observed year divided by the number of performing obligors at the end of the previous year;
- Average PD weighted by the number of debtors: Average, of the 1-year probability of default attributed to each performing obligor by PD internal models;
- Exposure weighted average PD: Average (weighted by the exposure of each obligor) of the 1-year probability of default attributed to each performing obligor by PD internal models;
- Average historical annual default rates: Average (weighted by the number of historical years observed) of the yearly observed average default rates (defined above).

For constructing the LGD tables (see Table 37 after), each facility is assigned to one of the six pre-defined types of Portfolios and then the indicators are computed as follows:

- Arithmetical average of the estimated LGD: Average (weighted by the number of facilities) of the rates of loss in the event of default attributed by internal LGD models to each performing facility;
- Arithmetical average of the historic LGD observed: Average (weighted by the number of facilities) of the rates of loss in the event of default historically observed for each facility having been in default.

**TABLE 33: BACKTESTING OF PD ON CENTRAL GOVERNMENTS, CENTRAL BANKS AND INSTITUTIONS  
PORTFOLIO (EU CR9)**
